**QUININE**—Continues to meet with a good demand, the market being firm at 26c. for bulk in 100-ounce tins. The undertone of the markets throughout the world continues very strong, a position which reflects the effect of the price maintenance agreement of Java growers of cinchona bark and European manufacturers of quinine salts. The importations of quinine for the eight months ending February were 1,630,634 ounces, valued \$327,496, as against 2,030,676 ounces, valued at \$344,796 for the corresponding period in 1913, and 1,979,305 ounces,

valued at \$302,071 for 1912. The importation of cinchona bark for the corresponding period ending February, 1914, amounted to 1,822,007 pounds, valued at \$218,008.

**COD LIVER OIL**—Reports show a stronger feeling abroad, but quotations in this market are unchanged, jobbers asking 80c.@ 90c. per gallon for Norwegian. By the barrel \$20@ \$23 is quoted; half-barrels, \$12@ \$13.50 each. Cable advices to hand report total Lofoten catch of season to March 20 as 11,600,000 fish, yielding 8,256 barrels, against 10,000,000 fish, yielding \$100 barrels of oil in corresponding period last year. Total all Norway to date, 60,000,000 fish, with yield of 38,730 barrels of oil, against 40,600,000 fish, with yield of 22,285 barrels last year.

**MENTHOL**—Cable dispatches indicate a higher market abroad, but these reports have not affected the local situation, jobbers quoting \$3.55@ \$3.80 per pound for crystal, and 30c.@ 35c. per ounce.

**SAFFRON**—American (safflower) is higher, owing to the disturbed conditions in Mexico, the country of production, and the fact that stocks are concentrated in few hands, ruling prices being 80c.@ 90c. per pound. Some dealers predict still higher prices.

**SAFFRON**—Spanish (true Valencia) is firmer owing to the fact that supplies here are considerably reduced, due to the action of the custom authorities who have compelled the return of several consignments to the country of production on the ground of adulteration. Quotations have been advanced to \$13@ \$13.25 per pound.

**CANTHARIDES**—Russian remains firm at present prevailing prices, being in rather light supply.

**ARNICA ROOT**—Is firm and higher, jobbers having advanced their quotations to 50c.@ 55c. per pound.

**BELLADONNA LEAVES**—A growing scarcity has compelled dealers to again advance quotations for German, the ruling prices being 65c.@ 70c. per pound.

**LAVENDER FLOWERS**—Lack quotable change, but the tendency of the market is upward owing to persistent reports of diminishing supplies. Present quotations range from 30c.@ 45c. per pound as to quality and size of order.

**SANTONINE**—Owing to the recent advance made by German manufacturers who have the contracts for producing this anthelmintic for the Russian Government monopoly, quotations have been marked up to \$36 per pound, or \$2.45@ \$2.55 per ounce, the trend of prices being still upward.

**SUGAR OF MILK**—Powdered is lower, 15c.@ 18c. per pound being the ruling quotations.

**OIL CLOVES**—The market continues quiet and featureless, and quotations have declined to \$1.15@ \$1.25 per pound.

**OIL CUBEK**—This product is also lower and the demand light. Jobbers quote \$3.50@ \$3.75 per pound.

**OIL SANDALWOOD**—Owing to the keen competition among domestic manufacturers, prices have been reduced to \$5.75@ \$6 per pound for English. The decline marks a somewhat anomalous condition, as the cost of the wood from which the oil is distilled is exceedingly high.

**CALAMUS ROOT**—White, peeled and split root is in considerable demand and higher, prices ranging from 30c.@ 36c. per pound.

**HYDRASTINE**—Following a revision of the schedule of manufacturers, jobbers have marked down their quotations for this alkaloid and its salts as follows: Alkaloid, C.P., \$28@ \$30; hydrochloride, \$28@ \$30; sulphate, \$28@ \$30 per ounce.

**ACETPHENETIDINE**—U.S.P. quality is quotably higher, \$1.12@ \$1.28 per pound being asked. A scarcity of benzol, toluol and other coal-tar products has been reported by manufacturers of these chemicals.

**MOLYBDIC ACID**—Continues to advance, C.P. being quoted at \$6.50 per pound, and 45c. per ounce. Ammonium molybdate is also higher, 26c.@ 30c. per ounce being asked. This salt is extensively used as a reagent in connection with a solution

of nitric acid for phosphoric acid, with which it forms a yellow precipitate, insoluble in acids, but soluble in ammonium hydroxide.

**AMMONIUM SALTYALF**—Is lower, as also the corresponding potassium salt, the former being quoted at 55c.@60c. per pound, and the latter at 10c.@12c. per ounce.

**BALMONEY LEAVES**—Pressed are in greater demand and higher, \$1.55, \$1.05 per pound, being the prevailing figures.

## Notes on Imported Drugs.

The exports of papain from Ceylon last year amounted to 18,548 pounds. The increasing output of this digestive extract from *Carica papaya* is shown in the exports from Ceylon, which, for the past three calendar years are given as follows:

Countries to which exported	1911	1912	1913			
	Pounds. Value.	Pounds. Value.	Pounds. Value.			
Belgium	.....	76	\$74	376	\$610	
Denmark	2,007	\$3,698	1,708	2,322	2,555	4,121
United Kingdom	4,354	6,591	9,088	11,138	12,705	14,368
United States	550	\$11	2,048	2,907	2,912	4,243
Total	6,611	11,100	12,920	19,441	18,548	23,382

Consul Moser's declared exports, as published in the *Daily* for March 30, 1914, showed \$8,118 worth of papain exported from Ceylon to the United States during 1913. Probably some shipments ascribed as going to Europe also eventually reached the United States.

Imports of licorice root into the United States in the fiscal year 1912 totaled 74,680,270 pounds, having a returned customs value of \$0.018 per pound, and in the fiscal year of 1913, 105,032,429 pounds, having a unit value of \$0.017. The root entered free of duty until October 3, 1913, when the new tariff made it dutiable at one-quarter cent per pound. Brewers of beer and the pharmaceutical trade are the chief buyers of the root. Licorice paste and extracts imported for consumption in 1912 weighed 934,692 pounds, having a value of \$0.125 per pound and at foreign point of shipment, and in 1913, 796,222 pounds, unit value \$0.128. The paste and extracts, which were dutiable at 2½ cents per pound prior to October 3, 1913, were made dutiable thereafter at 1 cent per pound. The imports of paste and extracts on which duty was remitted totalled 26,726 pounds in 1912 and 36,055 pounds in 1913, this going mainly into plug tobacco made in bonded warehouses for export.

The position of colocynth abroad is somewhat of an unknown quantity. A report from abroad states that an attempt was made recently by Syrian dealers to create a monopoly in order to obtain better prices, but it is at present uncertain whether this measure can be carried through. Values have, however, arrived at such a low level that dealers in Syria can scarcely derive any profit. During the last few years, in consequence of the large stocks from previous crops and on account of the unprofitable prices, hardly any collection has taken place. The large stocks have been considerably reduced, and especially whole apples without loose seed are scarce and increased prices are asked.

## INFORMATION WANTED.

"Can you give us the name and address of the manufacturer of 'Sure,' a liniment used a great deal by foreigners? The address on the bottle is 'The Barnagan Co., New York,' but letters sent are returned stamped 'Not Found.'"

"Who are the manufacturers of De Grath's 'Electric Oil'?"

### Bogus Druggist Swindling in Manhattan.

One of the city representatives of Parke, Davis & Co. who operates on the upper East Side in Manhattan, reports as follows: "For the past two weeks or so a man giving the name of Sussman, Grosman, etc., calls upon a druggist and gives him the following story: 'I am Mr. Sussman from Nyack. As I am anticipating buying a store in New York City, and

being a stranger, I called upon Mr. O. W. Smith, of Parke and Davis, who informs me that your store is for sale.' He says he has a certified check for \$300 to show that he means business, and on the strength of this the druggist takes him around the place, with the conclusion that this party steals all the cocaine, heroin, morphine, or anything which isn't nailed down. I called upon Mr. Rothenberg Friday and in the course of our conversation I told him to be on the lookout for this party, as this fakir had been in five stores ahead of me on that day, and I tried to get him myself. In other stores, after he is in a while, he says he lost his pocket-book with his ticket and \$16.85. More than one druggist gave him more than his fare home. I certainly would like to meet this man for a few moments as he has caused a lot of annoyance to you and to me."

## SELF-PURIFICATION FOR DRUGGISTS AND PHYSICIANS.

Retail druggists have been protesting because in a recent paragraph we declared that some of them sell habit-forming drugs illegally, says *Collier's*. "Is it fair," ask the druggists of Pittsfield, Mass., "to praise a firm at the expense of others for obeying the law?" All firms and all druggists are alike to us. The firm we praised for announcing that it would not sell drugs except by prescription of the family physician is no dearer to us than the druggists of Pittsfield or Wilkes-Barre. We know that "druggists as a class are workers for the public good." So are physicians. Yet we may condemn Dr. John J. Van Horn, of New York, convicted April 8 for selling morphine illicitly, without stigma on the rest of the medical profession. Do the pharmacists for a moment maintain that they have no black sheep in their fold? Charles B. Towns found that even among the best-known of the wholesalers methods were so lax that he could obtain without the slightest difficulty quantities of drugs by simply sending his order signed with the name of a non-existent physician. No question was raised; evidently not even a directory was opened before filling the orders. Let but the druggists scrutinize carefully all drug prescriptions, let them demand stringent registration laws, careful Government oversight; let them, in short, purge themselves of those who traffic in darkness and ruin for untold thousands of people, and we shall be the first to praise them. Our chief object in the paragraph they disliked so much was to stir up precisely the interest in self-purification that we seem in a measure to have succeeded in arousing.

## Pills and Potions.

**The Lilly Company**, of Attleboro, Mass., has been incorporated, with a capital of \$25,000, to deal in drugs and chemicals. The incorporators are George F. Lilly, Cornelius E. Dunn and Ralph C. Estes.

**The American Toilet Goods Company**, of Boston, has been granted a charter in Maine, with a capital of \$100,000. The incorporators are George B. Dodge, Willis H. Lowe and Earl S. Rowell, all of Boston.

**Blue Laws Enforced in Pennsylvania**.—H. C. Wolfe, a druggist of Verona, Pa., was fined \$25 recently on a charge of selling cigars, candy and soda water on Sunday. He paid the fine under protest and will appeal to higher court.

**Ernst O. Engstrom**, of Pittsfield, Mass., has been appointed examiner in technical pharmacy by the faculty of the Massachusetts College of Pharmacy. He will examine members of the graduating classes upon this branch of their training in connection with the final examinations of the college.

**Claude O. Yates**, of Austin, Tex., has been appointed State Pure Food and Drug Commissioner to fill the vacancy caused by the resignation of Dr. J. S. Abbott, who has accepted a position with the Bureau of Chemistry in Washington. Mr. Yates is a well-known chemist and druggist and of the firm of Yates & Cornwell, of Austin.

**The Pitman-Meyers Co.**, pharmaceutical chemists, of Indianapolis, by unanimous vote of the stockholders, has changed its name to the Pitman-Moore Company. There has been no change in personnel. Harry C. Moore, whose name now becomes part of the corporate name of the firm, has been president and general manager of the business for several years.

# THE PHARMACEUTICAL ERA.

PUBLISHED ON THE FIRST OF EACH MONTH.

**D. O. HAYNES & Co.** . . . *Publishers*  
 NO. 3 PARK PLACE, NEW YORK.

Telephone, 7646 Barclay. Cable Address, "Era, New York."

### SUBSCRIPTION RATES:

Single Copies, 15 cents.

Domestic Rates to U.S., Cuba, Hawaii, Porto Rico,  
 the Philippines and Mexico.....\$1.00 a year  
 To Canada, postpaid..... 1.50 a year  
 To Foreign Countries in Postal Union..... 2.00 a year

THE ERA PRICE LIST with Subscription, 50c. a Copy.

PRICES INCLUDE POSTAGE AND PAYABLE IN ADVANCE.

REMIT by P.O. or Express Order or New York Draft payable  
 to order of **D. O. Haynes & Co.** Add 10 cents for collection charges  
 if you send local check.

Published at No. 3 Park Place, Borough of Manhattan, New  
 York, by D. O. Haynes & Co., a corporation: President and treasur-  
 er, D. O. Haynes; vice-president, E. J. Kennedy; secretary,  
 N. W. Haynes. Address of Officers is No. 3 Park Place, New York.

### ELIMINATION OF GUARANTY LEGEND.

FROM a careful consideration of the views of many in the drug trade, and more especially of the comments of a representative number of manufacturers and jobbers, which appear elsewhere in this issue of the ERA, the probable effect of the food inspection decision relating to guaranties by manufacturers and other parties to protect dealers by prohibiting the use of the guaranty legend and serial number on packages of food and drugs is not one of demoralization. Under this decision the legend "guaranteed under the food and drugs act" is held to be misleading and deceptive, and its use, as also the use of a serial number, is prohibited after May 1, 1915, the operation of the regulation in so far as this requirement is concerned, being postponed until that date in order that manufacturers may have an opportunity to use up their present stock of labels.

Those who have followed the operation of the Food and Drugs Act since the beginning are aware that this is not the Government's first experience with the language of the "guaranty legend," and many of them will bear witness that the changes ordered by the authorities have cost manufacturers an immense amount of money and the destruction of millions of labels in an effort to comply with the various requirements. So great were the difficulties involved and the sacrifices that had to be made by manufacturers in changing over the first form of the legend to include the name of the guarantor, that the Government was compelled to extend the time for the enforcement of the amended regulation fully two years after the issuance of the order.

If this experience counts for anything, manufacturers and distributors in all fairness should be allowed a sufficient time in which to use up their present stock of labels. One year, the period named by the Secretaries in the Inspection Decision, is insufficient. The hard and arbitrary enforcement of this provision means a great deal to manufacturing pharmacists particularly, many of whom have from 3000 to 5000 articles in their lists, a number of which are necessarily slow sellers, but for which enough labels have been printed to supply the demand for years. To order the destruction of this entire stock entails a hardship and expense on the manufacturer that practically amounts to confiscation without any compensation.

The enforcement of this part of the decision would not work such a hardship if the manufacturer could be permitted to use up his present stock of labels by cancelling, if necessary, by means of a pen or other device, the words and figures of the guaranty legend and serial number now printed upon the labels. This change in the regulations which involves what appears to be a needless waste and expense should be thoroughly considered by those responsible for the enforcement of the law before deciding definitely this important question. If one is to be guided by the experience gained when the last change was made in the form of the guaranty legend, one year is altogether too short a period for the elimination of the serial number on labels already printed, and the time limit now proposed should be extended. The legend was originally printed on the labels by manufacturers in good faith and in the belief of a continued policy on the part of the Government, and, while requiring every manufacturer to hereafter make his guaranty a part of his invoice or bill of lading as set forth in the decision, some means should be found whereby labels now printed could be used, even though the binding force of the guaranty legend thus appearing should be declared nugatory and void.

The change in the method of procedure will necessitate a much closer scrutiny of goods on the part of jobbers and dealers, and this means additional work. But there is some ground for the belief that elimination of the guaranty legend and serial number from foods and drugs will tend to increase the quality of such products, in that it will make it more difficult for inferior products to find ready distribution through conscientious and reliable dealers from the fact that upon them will be put the responsibility of assuring themselves of the quality of the goods instead of simply assuring themselves that the labels carry a legend and serial number. It will also squeeze the endeavors of the unscrupulous manufacturer who has endeavored to profit by the mistaken belief of many possible customers that the presence of the guaranty legend was evidence that the Federal Government had in some way certified to the excellence of products so labeled. The great majority of the 58,818 manufacturers who have filed guaranties and obtained serial numbers with the Secretary of Agriculture have acted in good faith in this requirement, however, and some consideration should be given by those in authority for the time and expense to which they have been put in attempting to comply with the requirement which is now to be overruled.

The same reasons for the discontinuance of the guaranty legend and serial number on the labels of foods and drugs will apparently apply with equal force to the requirement of printing serial numbers on the labels of insecticides, and a ruling on this question has been asked of the Government.

#### PHARMACISTS AS MERCHANTS.

The principal point emphasized in the contributions printed in this issue upon the general topic "What Retail Druggists Really Need" is this:

*"The better the merchant the more successful the druggist."* And this is not in any sense an argument against what has been understood to be "ethical pharmacy." The new druggist believes that it is unethical to lag behind, to drone along in the same manner as, perhaps, his grandfather was wont to do in some little, dark-cornered, drug-scented apothecary shop. Failure is not ethical, as it is a stigma upon the profession; success is the culmination of true ethical conduct, since it implies knowledge of medicaments, of processes, of methods, and something more than surface information as to every one of the many diverse lines which enter into modern drug merchandising, and an intelligent handling of all the newly-applied agents for the prevention and cure of disease.

The modern druggist believes that it is unethical to hide his light under a bushel. He has, at the expenditure of both time and money, fitted himself to cater to the needs of his public; his training is continuous, for in pharmacy, as in perhaps no other commercial profession outside the trilogy—medicine, chemistry, pharmacy—the necessity for study and experiment is constant. The pharmacist of even 20 years ago—if he had been so isolated by force of circumstances as to be unable to keep pace with pharmaceutical, biological and chemical discovery and progress—would be almost helpless in the systematized, departmentized, vaccine- and serum-handling pharmacy of today.

Believing, as he does, that applied knowledge cannot but be ethical if utilized for the benefit of patrons and of his community, the modern druggist uses publicity to inform his public that he is fitted by education and by the completeness of his stock and equipment to meet even the latest demands of medical science in a scientific manner. To minimize the value of his training and equipment and to render both useless by failing to acquaint his public with his ability, by means of intelligent publicity, presupposes a lack of comprehension of the real responsibilities of a pharmacist to his public, and would necessitate a waste of time, effort and investment, which is far removed from true ethics. Ethics imply full utilization of possibilities, not hide-bound prejudices nor habitual personal and business inertia, enwrapped in a mantle of "pharmaceutical responsibility" which merely serves to hide the deficiencies beneath.

#### NON-SECRET REMEDY MISREPRESENTATION.

That the status of a "non-secret" remedy is one of misrepresentation has long been the opinion of many in the drug trade. In the long run there is nothing to be gained by holding oneself out to be a manufacturer when the facts are all against one. This is especially true when the courts place the responsibility for the character of the remedy on the individual who claims to be the manufacturer. That the real manufacturer of the "non-secret" is not liable and that the seller whose name is printed on the remedy is responsible, in so far as the ultimate consumer is concerned, is the decision of the Massachusetts courts.

Such a decree was handed down in a prosecution under the public health law of that State which provides that the proprietor of a wholesale or retail drug store shall be responsible for the quality and strength of all drugs sold by him "except those articles sold in the original packages of the manufacturer, and those articles known as patent or proprietary medicines." It appears that a female customer called at the store of a local druggist and asked for a laxative. The clerk sold her a preparation labeled to the effect that the contents were manufactured by the druggist, although such was not a fact. Suit was brought against the druggist on the ground that the preparation contained a dangerous substance instead of a harmless laxative, the evidence of which was substantiated. The druggist defended himself on the theory that he was not the manufacturer, the court, however, ruling that druggists who represented themselves as being manufacturers become personally liable for the misrepresentation.

That the status of the average "non-secret" is illegitimate and fostered by misrepresentation is a well-known fact, and while this decision places the responsibility for its being upon the seller, it also emphasizes the principle repeatedly handed down by the tribunals of the land that the highest degree of care must be used by the druggist to prevent injury from the use of his compounds, because, in the theory of the law, he is held to a special degree of responsibility corresponding with his superior knowledge. How the druggist can reconcile this dictum to "fathering" some of the so-called "non-secrets" on the market is a problem we cannot attempt to explain.

#### PHARMACEUTICAL EXPERIMENT STATION No. 1

THE recent organization and appointment of a staff by the Board of Regents of the University of Wisconsin for the "first pharmaceutical experiment station," as noted in our news columns, is in keeping with the trend of modern educational methods for correlating teaching systems and investigations with present-day conditions. The establishment of the station also marks an advance in the development of pharmacy along scientific lines. That the legislators should be prevailed upon to provide for such an institution, also speaks well for the pharmacists of the State, more especially the members of the Wisconsin Pharmaceutical Association, whose initiative and influence brought about the passage of the act establishing the station.

The practical value of the experiment station in developing a basis for teaching agriculture has long been an accepted fact, and these institutions have contributed not a little toward the development of a more rational and progressive industry on the part of the farming community. The influence of this work has not been without its effect, and the extension of the idea in the foundation of a pharmaceutical experiment station is but another step in this line of progress. We believe the movement is bound to grow and that it will be developed in other States as a consequence of the realization of

the need of more substantial and fundamental studies which deal with the principles and more closely follow the methods of scientific investigation in order to give results of more permanent value and more general application. This idea is emphasized in the wording of the act itself, and so long as those in charge of the work keep in view the practical results to be obtained, they will render great benefits to pharmacy. Any thorough scientific investigation of the problems underlying the successful production of medicinal plants, or other work related to pharmacy, is sure to make for the betterment of the public and pharmacists.

In this legislation the word "co-operation" has an important place, and the proposed work of the station branches out along two different but correlated lines, viz., scientific, as in the study and dissemination of information that will lead to the proper cultivation of medicinal plants and the production of high-grade vegetable drugs in the State, and to serve the public by co-operating with pharmacists and physicians in securing the best medicines for the sick that pharmaceutical science and art can provide, and by working with the commissions and agencies already established by the State to bring about such results. In this legislation there is exhibited a spirit of altruism and helpfulness not often shown in measures which are proposed for enactment into laws.

That the results of the "first pharmaceutical experiment station" will justify the efforts of the Wisconsin pharmacists who inaugurated the movement for its establishment, we have no reason to doubt. It is an old saying that the practice of the pharmacist is often ahead of the proof of the theorist, but in these latter days many of us are willing to admit that the work of the theorist is often of great practical benefit to the pharmacist. Not that the work of the "station" will be all theory, but that theory and scientific investigation will be combined to produce practical results for the benefit of the public, which, from the viewpoint of government must be first considered, and for the pharmacist who, if he lives up to his opportunities, is sure to profit more than any other class.

#### A CHANGE IN POLICY.

THE annual meeting of the Proprietary Association of America, recently held in this city, was marked by what might be termed the adoption of a policy of aggressive progressiveness. The charge has been made, and it was reiterated by speakers at the meeting, that the manufacturers of proprietary remedies have lacked the inclination to "fight back" when accused of questionable advertising methods or lack of professional ethics in both the manufacture and distribution of their goods. But, following the suggestion by President Cheney, and an address by a Southern advertising man who launched a few exercises on the body politic, the association decided to employ trained men to follow up reported cases of deaths or injuries through the use of proprietary medicines, with a view to getting at the actual facts, and then submitting the

truth in newspapers and magazines which have led the army of "patent medicine" vilifiers.

The proprietary men take the ground, and in this their position is logical, that there is no necessity for the growth of a sentiment against the use of their products, and they believe that this growth is deliberately fostered by physicians and by others. From now on "pure food" advertising on the part of the proprietary men will be joined with aggressive responses to any attacks made upon proprietaries as a class. The policy will still be one of "watchful waiting," but there will be no hesitation as to what shall be done when the watchers unearth an unjust attack, or a prejudiced criticism. There is no lack of ability, trained technical skill nor business acumen among the members of the Proprietary Association, and if they carry the war into the camp of their critics the result cannot but prove beneficial to all concerned.

#### THE NEW PHARMACOPOEIA.

INTEREST in the forthcoming edition of the Pharmacopoeia is evidenced in various sections of the country, and a number of indications as to the character of the book are reflected in various pages of this issue of the ERA. In the first place, attention is called to another instalment of the proposed new descriptions and standards which appear in somewhat condensed form, giving in outline the requirements that it is expected will obtain for some 30 official drugs derived from the vegetable or animal kingdoms. As will be noted, the language employed in describing the various drugs is technical and specific, and such as might well be expected of a book of standards. Just how much of this can be utilized by the physician in the practice of his profession remains to be seen, but enough is shown in what has already been made public to convince any one that the book has been largely evolved by pharmacists and chemists, and as such, will figure more in the pharmacy and laboratory than in the doctor's office.

Another reference to the forthcoming book appears in our report of Prof. Remington's address before the recent meeting of the New York Branch of the A. Ph. A., printed on another page. According to Prof. Remington, the work of revision is fast approaching completion and the book is soon to be printed. It will contain the same requirements as to strength and dosage of all powerful preparations as those provided by the leading pharmacopoeias of the world. That similar standards or requirements could be exacted of all official preparations, desirable as such practice might be in many respects, is not possible under present conditions, and so for many of the drugs, we shall follow as we have done in previous editions, the definitions and standards evolved by ourselves, and especially so for those substances that are peculiar to American practice and usage. Taken altogether, the indications point to the production of a pharmacopoeia of which the American pharmacist can well be proud. As now seems probable, there will be 725 articles in the new book, as compared with 955

articles in the text of the present Pharmacopoeia, and 994 articles in the U. S. P. of 1890.

#### THE NEW ERA FORMULARY.

A CONSTANT and increasing revenue is to be derived from the manufacture and sale of cleaning fluids, disinfectants, insecticides, and the hundreds of preparations or compounds used in the household or shop, that is, if the druggist will only take advantage of letting customers know that he can supply their wants in this direction. Opportunities of this character come to hand almost every day. The demand is constant and the druggist has the qualifications. It is to meet just such conditions that the new ERA Formulary has been compiled and published. In this collection of more than 8000 formulas by actual count, there are formulas that will appeal to workers in almost every field of endeavor. In the division devoted to toilet preparations there are hundreds of formulas which not only tell how to make a given specialty, but they carry with them suggestions as to what might be profitably exploited in a given field. The great number of these easy-to-make, inexpensive preparations on the market is the evidence of the great demand for ready-made specialties, a demand the druggist should and can supply, if he will equip himself for the work. A hint is all that is necessary to start the thinking processes of many individuals, but when the suggestion and formula for a preparation or specialty are furnished, almost any practical worker should become a manufacturer and make money by his labors.

FOR weeks past pre-convention rhetoric has been drifting into the stores of pharmacists like the waves of the ever-rolling sea, setting forth in language bristling with adjectives the attractions of this or that place and what the druggist will experience if he will only attend the forthcoming meeting of his State pharmaceutical association. If words are of any value, the recipients of these invitations should even now have completed their arrangements to be present and help along the calling in which they make their living, and incidentally, prepare to have a good time. By all means attend these meetings; the arrangements for transportation are most favorable, and generous programmes have been prepared. But there are weightier reasons why the pharmacist should attend the meeting of his State association. These organizations are, and always have been, a channel for the dissemination of knowledge, and their work tends to unify the efforts of pharmacists whether in the direction of educational standards, legislative enactments, or of matters vital to trade. June and July are "association months," and if you have not already declared your intention to attend the proposed gathering of pharmacists in your own State, you should do so at once. The money expense for such a holiday is negligible when compared with the results you are likely to gain by measuring your own success or failure with that of other pharmacists.

IN our account of the original application of vacuum evaporation to the preparation of pharmaceutical extracts, which appears in this issue of the ERA, we trust that we have placed an obstacle in the way of the further progress of the mistaken notion that Dr. Alexander Marcet is responsible for the invention. An error in an oft-consulted German index of scientific papers seems to have given the false idea its initial impetus, and it is high time that its career was cut short, the more so since there are indications that this mistake in credit is to be given a new lease of life in a work soon to appear abroad. It is interesting to note that Barry's apparatus was in use, without essential modification, as late as 25 years

ago. The apparatus of Lentz, described in Hager's "Handbuch," differs in no important detail from the original design of Barry, save that the condenser is placed directly above the still, as in the old alembic, instead of being connected with the evaporator by a tube. Inefficient and all too simple as the old form was, it yet served to point the way to the only proper method of making extracts without deterioration, and as the pioneer in the scientific manufacture of this important class of galenicals, the homage of all pharmacists is due to John T. Barry.

PHARMACISTS of New York who are employers of labor should note that the Attorney-General of the State has rendered an opinion which makes it clear that the Walters law enacted by the last Legislature, and recently signed by the Governor, re-establishes the operation of the State Pharmacy law over the hours of labor of all employees in pharmacies, and that regardless of their sex or occupation, or whether they are registered as pharmacists or apprentices or not. This amendment to the public health law is printed elsewhere in this issue of the ERA, and provides that the hours shall be so arranged that an employee shall be entitled to and shall receive at least one afternoon and evening off in each week and in addition thereto shall receive one full day off in two consecutive weeks. The passage of this amendment settles the contention of the officials who endeavored to apply the provisions of the State labor law to the working hours of the employees in pharmacies, and establishes the fact that the pharmacy law is comprehensive enough to regulate the practice of pharmacy.

## BOOKS REVIEWED

**EPIDEMIOLOGIC STUDIES OF ACUTE ANTERIOR POLIOMYELITIS.** By Wade H. Frost. 8vo., 258 pages. Bulletin No. 90, Hygienic Laboratory, United States Public Health Service, Washington, D. C.

**THE CAUSE OF DEATH FROM SUBDURAL INJECTIONS OF SERUM.** By Worth Hale, and Some new Cholera Selective Media, by Joseph Goldberger. 8vo., 43 pages. Bulletin No. 91, Hygienic Laboratory, United States Public Health Service, Washington, D. C.

The first of these bulletins comprises a report of the studies that have been carried out for three consecutive years relating to the causation, intensity and extent of the various outbreaks of the dread disease known as acute anterior poliomyelitis, the material forming the basis of the studies being derived from an investigation of the disease in Iowa in 1910, in Cincinnati in 1911, and in Buffalo and Batavia in 1912. The essential facts brought out by the experimental studies of the numerous workers who have investigated the disease are that the specific cause of poliomyelitis is a minute micro-organism, a so-called virus, capable of cultivation in vitro on suitable media. The facts presented tend to show that the infection is and has been endemic, at least in this country, for a number of years, and that the disease is constantly present, especially and most persistently in large cities. The immunity of adults from the disease, however, appears to be relatively greater in large, thickly-populated cities than in smaller towns, especially greater than in rather remote rural sections. It is noted, also, that in large cities epidemic outbreaks are confined more exclusively to children under five years of age. This is explained by the fact that persons residing in densely-populated large cities have been more generally immunized in early life than have those living in more remote rural sections, as would be expected, considering the greater chances for contact in large cities.

Dr. Hale's studies, reported in Bulletin No. 91, tend to substantiate Kramer's contention that trikresol is a dangerous preservative for sera which are to be introduced into the subarachnoid space, or in any way whereby they will be brought directly in contact with the vital nervous centers. It would appear that death may result from the introduction of antimeningitis serum containing such a preservative, and on this account an effort should be made to discover a serum preservative which would not have the peculiarly toxic action of the agent named on the central nervous system. Failing in that, antimeningitis serum should be dispensed in sterile containers free from any preservative.

As a result of the experiments recorded by Dr. Goldberger in his studies on "Some New Cholera Selective Media," which forms Part 2 of this bulletin, the author would choose and recommend for use as a culture medium the alkaline-egg-pepton solution, his reason therefor being based on considerations of ease and simplicity of preparation as well as reasonable cost.

**BIOCHEMIC DRUG ASSAY METHODS** with special reference to the pharmacodynamic standardization of drugs. By Paul S. Pittenger, Ph.G., Ph.C., Phar.D., instructor in pharmacodynamics, departments of pharmacy and chemistry, Medico-Chirurgical College, Philadelphia, etc.; edited by F. E. Stewart, M.D., Ph.G., professor of materia medica and botany, Medico-Chirurgical College, Philadelphia, etc. 12mo., 158 pages. Cloth, \$1.50. Philadelphia. P. Blakiston's Son & Co.

This manual, according to the author, is intended for students of pharmacy, pharmaceutical chemistry and medicine, and for the use of experts engaged in laboratories devoted to drug standardization work. In this book, as might be expected, the author takes up in order most of the well-known organic drugs which cannot be satisfactorily assayed by chemical methods, such as digitalis, ergot, cannabis indica, etc. The introductory chapter is devoted to a discussion of the importance of assay methods, definitions, history, drugs requiring biochemic assay, variation of non-standardized preparations, deterioration, and type methods available for the physiologic study and standardization of vegetable and animal drugs. These considerations are further developed under the following chapter headings: Cardiac Stimulants and Depressants; Epinephrine and Products of the Suprarenal Gland; Ergot; Pituitary Extracts; Cannabis Indica; Technique and Apparatus Employed, and Solutions. Supplementing the text are 80 illustrations and diagrams which add not a little to the value of the work. This book is commended to students, but it should also prove of service to pharmacists who have had little or no training in this particular field, yet who wish to have at command general information relating to the biochemic methods employed in drug assaying.

**PROCEEDINGS OF THE THIRD ANNUAL MEETING** of the National Association of Manufacturers of Medicinal Products. 8vo., 219 pages. Cloth.

This volume contains the proceedings of the annual meeting of the above-named association held at the Waldorf-Astoria Hotel, this city, on Feb. 10 and 11, of the present year, as also a list of the officers and various committees, the roll of membership, and a transcript of the constitution and by-laws of the association. The membership, according to the secretary's report, now numbers 30, representative of the leading manufacturers of medicinal products in the United States. A perusal of the volume shows that the members of this association also have their troubles in meeting the varying provisions of the laws and regulations obtaining in the several States, and any effort the members may make in bringing about greater uniformity in the requirements of the food and drug laws is sure to benefit the drug trade as a whole. The volume carries several full-page portraits, among them being the front piece delineating the features of Frank G. Ryan, who served as president of the association from its organization until February of the present year.

**SYNONYMS AND ANTONYMS.** An alphabetical list of words in common use, grouped with others of similar and opposite meaning. By Edith B. Ordway, author of "The Etiquette of Today," "Slips of Speech and Punctuation," etc. 12mo., 292 pages. Cloth, \$1.00 net. New York. Sully and Kleinteich.

To those who are occasionally called upon to put their thoughts in writing, or who are entrusted with general office correspondence, this book will supply a material want, as it will give to the user a certain command in the choice of words that will best express his thought, and at the same time enable him to make a selection that will at least, as our old friend Roget would say, "save him the cost of a clumsy paraphrase or the labor of a tortuous circumlocution." The lists of words given in the book number about 5000, while the synonyms and antonyms comprise several thousand more different words, quite enough to satisfy all ordinary demands for help of this character. So far as we have discovered, the compiler's work shows a keen sense of discrimination in her selection of words, somewhat substantiating the publishers' claim that the "book contains thousands of words with their opposites which will not be found in any other volume."

## Changes in the New Pharmacopoeia — Third Instalment — Standards for Drugs.\*

*Constitution of the Board of Definitions and Standards for Drugs and Chemicals. Animal Origin submitted to the Convention for its incorporation into the next Pharmacopoeia.*  
 Board of Definitions and Standards  
 Convention, Philadelphia, Pa., 28 May 1914

**GAMBIR**—A drug, extract prepared from decoctions of the leaves and twigs of *Ourouparia Gambir* (Hunter) Baillon (Fam. Rubiaceæ). Usually in cubical or rectangular pieces from 2 to 30 mm. in diameter; externally pale grayish-brown to reddish-brown, more or less dull and porous; inside, internally of a light brown or dull earthy color; incoherent, taste bitterish and very astringent. Upon scraping a piece of gambir and mounting the separated fragments in hydrated chloral T.S. and examining them under the microscope, numerous acicular crystals, from 0.010 to 0.030 mm. in length, should separate at the edges of the fragments which gradually dissolve leaving a few thick-walled, non-glandular hairs, which when entire, may be 0.350 mm. in length; a few fragments of leaves may also be present showing either epidermal cells or small, narrow tracheæ with spiral or annular markings; a few starch grains either single or compound, of variable shape and from 0.005 to 0.015 mm. in diameter; a number of bacteria may also be present. Macerate 1 gm. of gambir with 50 cc. of water and filter. Separate portions of this filtrate should give an intense green color with dilute ferric chloride T.S. and no precipitate with copper sulphate T.S. Not less than 65 per cent. of gambir should be soluble in water and not less than 60 per cent. should be soluble in alcohol. Ash changed from "not more than 5 per cent." to "not exceeding 9 per cent."

**Gelsemium**—Rhizome, cylindrical, usually in pieces from 3 to 20 cm. in length, and from 3 to 30 mm. in diameter; externally light yellowish-brown, longitudinally wrinkled, with purplish-brown, longitudinal lines and transverse fissures; the upper surface with a few stem-scars, the under and side portions with numerous roots and root-scars; fracture tough, splintery; internally light brown or pale yellow, bark thin, wood distinctly radiate, excentral, pith disintegrated; odor slight; taste bitter. Roots, light brown; fracture one-half transverse, the other oblique or splintery. Powder: Dark yellow, tracheæ with bordered pores, numerous and conspicuous, spiral tracheæ few; bast-fibres and tracheids long and narrow, strongly lignified; starch grains spherical, from 0.004 to 0.008 mm. in diameter; calcium oxalate in monoclinic prisms from 0.015 to 0.030 mm. in length; occasional groups of stone cells or sclerenchymatous fibres, the walls being very thick, porous and strongly lignified.

**Gentiana**—In nearly cylindrical, sometimes branching pieces, of variable length, from 5 to 35 mm. in thickness; externally yellowish-brown, the rhizome portion annulate, the roots longitudinally wrinkled; fracture short and uneven when dry, but tough and flexible when damp; internally yellowish-brown, the bark from 0.5 to 2 mm. in thickness, separated from the somewhat spongy, woody portion by a dark brown cambium zone; odor strong, characteristic; taste slightly sweetish, then strongly and persistently bitter. Powder: Light brown or yellowish-brown, consisting chiefly of parenchymatous cells with fragments of scalariform or reticulate tracheæ; starch grains few or none. Stone cells and sclerenchymatous fibres are absent (absence of endocarp of *Olea Europea* Linné). Ash not exceeding 6 per cent.

**Glycyrrhiza**—Botanical sources now given as *Glycyrrhiza glabra* Linné var. *typica* Regel et Herder, or *Glycyrrhiza glabra* Linné var. *glandulifera* Regel et Herder. Spanish Licorice (also known as Italian, Levant, Turkish or Arabian Licorice). Nearly cylindrical, upper portion more or less knotty, usually in pieces from 14 to 20 cm. or more in length, and from 5 to 20 mm. in thickness; externally yellowish-brown or dark brown, longitudinally wrinkled, the thinner rhizomes being often with prominent alternate buds, the thicker rhizomes with distinct corky patches; fracture coarsely fibrous; internally lemon-yellow, radiate, bark 1 to 3 mm. in thickness; wood porous, in narrow wedges, rhizome with small pith; odor distinct;

taste sweetish and slightly acid. Russian Licorice: Nearly cylindrical, somewhat tapering, sometimes split longitudinally, from 15 to 30 cm. in length, and from 1 to 5 cm. in diameter, when deprived of the outer corky layer it is externally pale lemon-yellow; fracture coarsely fibrous, internally lemon-yellow; wood radially cleft; odor distinct; taste sweetish. Microscopical characteristics are given for both varieties of licorice in powdered form. Ash not exceeding 7 per cent.

**Granatum**—The dried bark of the stem and root of *Punica Granatum* Linné (Fam. Punicaceæ) with not more than 2 per cent. of wood and other foreign matter. Stem Bark: Mostly in somewhat flattened or transversely curved pieces, to some extent in quills, 2 to 8 cm. in length; bark 0.5 to 3.5 mm. in thickness; outer surface yellowish to grayish-brown, with grayish patches of foliaceous lichens with their brownish-black apothecia, longitudinally wrinkled, also marked with small broadly elliptical lenticels and with more or less abraded patches of cork; inner surface light yellow or yellowish-brown, finely striate; fracture short, smooth, inner bark yellowish-green; odor slight; taste astringent, somewhat bitter and nauseous. Root Bark: In transversely curved pieces; externally brownish-yellow to dark brown and with irregular patches of cork; internally dark yellow, the medullary rays extending nearly to the outer surface. Microscopical characteristics of the powdered drug are given. Ash not exceeding 16 per cent. *Granatum* should not be kept longer than one year.

**Grindelia**—The dried leaves and flowering tops of *Grindelia camporum*, Greene, or *Grindelia cuneifolia* Nuttall, or *Grindelia squarrosa* (Pursh) Dunal (Fam. Compositæ), with not more than 10 per cent. of stems and other foreign matter. Stems with attached branches and terminated with resinous flower-heads; stems cylindrical, not exceeding 2 mm. in diameter, light yellow or rose colored, with alternate leaf-scars, occasionally with basal portions of leaves, occasionally more or less irregularly flexuous and coated with resin especially at the nodes; leaves usually separate and more or less broken and varying in shape when entire from oblong and lanceolate to oblanceolate-spatulate and cuneate-spatulate, 1 to 7 cm. in length, mostly sessile or amplexicaule and more or less sharply serrate or evenly spinosely toothed, pale yellow to yellowish-green, very resinous, somewhat coriaceous and brittle; bracts of flowering branches almost entire and usually more or less spreading; heads more or less resinous, viscid, many-flowered, either conical-urceolate or depressed-urceolate, involucre 5 to 20 mm. in breadth, composed of numerous imbricated bracts with more or less recurved tips; ray florets yellow, ligulate and pistillate; disk florets yellow, tubular and perfect; pappus of 2 or 3 mostly unequal, linear awns about the length of the disk florets; disk achenes more or less ovoid or oblong, more or less compressed or triquetrous, and either bi-auriculate or broadly unidentate or with a broad truncate, corky-thickened summit; odor balsamic; taste aromatic and bitter, resinous.

**Guaiacum**—In irregular, or in large, nearly homogeneous masses, occasionally in more or less rounded or ovoid tears, enclosing fragments of vegetable tissues; externally greenish-gray-brown, the fractured surface having a glassy lustre, the thin pieces being translucent and varying in color from yellowish to reddish-brown; odor balsamic; taste slightly acid. Guaiac should melt at from 80° to 90°C. It is readily soluble in alcohol, ether, chloroform, creosote, and in solutions of the alkalies or of hydrated chloral T.S. It is sparingly soluble in carbon disulphide or benzene.

**Guarana**—Powder: Light pinkish-brown; consisting mostly of irregular masses of parenchyma containing more or less altered starch grains; unaltered starch grains occasional, varying from spherical and polygonal to ellipsoidal and broadly ovoid, from 0.010 to 0.025 mm. in diameter; occasional fragments with narrow elongated sclerenchymatous cells, the walls being thick, yellowish and non-lignified. Add 0.001 gm. of powdered Guarana to a slide, upon which a drop of hydrochloric acid has previously been placed, add a drop of gold chloride T.S. and allow the mixture to stand for a few minutes. Beginning at the edge of the mount, crystals of caffeine-gold chloride should be separate in the form of orthorhombic plates and needles, the latter usually occurring in spheroidal aggregates and finally forming branching groups.

**Humulus**—Hops may include not more than 2 per cent. of

\*Permission to use granted by the Chairman of the Board of Trustees, United States Pharmacopoeial Convention.

stems, leaves and other foreign matter. Scales "imbricated." Color described as strong and characteristic, becoming disagreeable and valerian-like on aging. Ash not exceeding 8 per cent. Hops should be dried at a temperature not exceeding 70° C. and should be kept in air-tight containers protected from the light.

*Hydrastis*—The drug may include not more than 2 per cent. of stems, leaves and other foreign matter. Rhizome horizontal or oblique, sub-cylindrical and usually more or less flexuous, 1 to 5 cm. in length and 2 to 7 mm. in diameter, occasionally with stem-bases; externally yellowish or grayish-brown, marked by numerous stem scars and more or less annulate from scars of bud-scales, otherwise deeply longitudinally wrinkled, and on the under and lateral portions arise numerous long, filiform roots which are easily detached; fracture short, waxy; internally of a deep yellow color and consisting mostly of parenchyma enclosing an interrupted circle of small fibro-vascular bundles; odor distinct; taste bitter. Microscopical characteristics of powdered drug are given.

*Hyoscyamus*—The dried leaves and flowering or fruiting tops of *Hyoscyamus niger* Linné (Fam. Solanaceæ). Usually much wrinkled, with numerous stems and with the flowering or fruiting tops intermixed; leaves when entire attaining a length of 25 cm. and a breadth of 10 cm., ovate or ovate-oblong, very inequilateral, the lower with short petioles, the upper sessile, summits acute, margins coarsely and angularly 1- to 4-toothed or lobed, grayish-green, glandular-hairy, particularly on the lower surfaces; flowers nearly sessile with an urn-shaped unequally 5-toothed calyx and a campanulate corolla which in the fresh state is of a yellowish color; fruit a 2-locular pyxis, and enclosed in a large urn-shaped calyx with 5 acute teeth; odor heavy, distinct; taste somewhat bitter and acrid. Stems from 3 to 7 cm. in length and from 2 to 5 mm. in thickness, nearly cylindrical or somewhat compressed, longitudinally wrinkled and hairy. Microscopical characteristics of powdered drug are outlined. The presence of the leaves of *Hyoscyamus muticus* Linné in either the crude or powdered drug of *hyoscyamus* may be determined by the characteristic branching non-glandular hairs occurring on both the stems and leaves of *H. muticus*. Ash not exceeding 30 per cent.

*Ipecacuanha*—Ipecac may contain not more than 10 per cent. of stems. Rio Ipecac: In cylindrical pieces, curved and sharply flexuous, occasionally branched, from 3 to 15 cm. in length, and from 2.4 to 4 mm. in thickness; externally dark brown, closely annulated with thickened, incomplete rings, and usually exhibiting transverse fissures with vertical sides; fracture of bark short, of wood tough, bark very thick, light brown, easily separable from the yellowish-white wood; odor very slight, peculiar, the dust sternutatory; taste bitter and nauseous, somewhat acrid. Stems cylindrical, attaining a length of 10 cm. and a thickness of 2 mm., dark brown, finely longitudinally wrinkled and with a few elliptical scars. Carthagenia Ipecac: Cylindrical or slenderly fusiform, more or less tortuous, from 3 to 12 cm. in length, and from 4 to 6.5 mm. in thickness; externally grayish-brown, the annulations usually not so numerous as in Rio Ipecac, occasionally transversely fissured and with circular scars of roots; bark 2 mm. in thickness, dark brown, smooth, somewhat horny, and easily separable from the light brown wood. Stems attaining a length of 10 cm. and a thickness of from 2 to 3 mm., cylindrical, somewhat zigzag, due to the prominent nodes with their elliptical stem-scars, grayish or dark brown and longitudinally wrinkled; bark thin.

*Jalapa*—Fusiform, irregularly ovoid or pyriform, upper end more or less rounded, lower end slightly tapering, the large roots often incised or cut into pieces; from 4 to 15 cm. in length, from 12 to 60 mm. in diameter; externally dark brown, longitudinally wrinkled or furrowed and with numerous lentils; hard, compact, not fibrous; when broken internally, dark brown, mealy or waxy, bark 1 to 2 mm. in thickness, outer bundles separated from outer cortical layer by a distinct brown cambium zone; odor slight but peculiar, smoky and sweetish; taste sweetish and acrid.

*Kino*—The spontaneously dried juice. In small, angular fragments, usually considerably less than 15 mm. in diameter, varying in color from a dark reddish-brown to reddish-black, brittle; when crushed upon a slide and examined under the microscope, the angular fragments are more or less translucent with a glass-like, conchoidal surface, the thinner pieces having a yellowish-red or deep brownish-red color, the pieces often being marked by nearly parallel, curved or straight lines; inodorous; taste

very astringent; when masticated it colors the saliva pinkish. Kino is only partly soluble in cold water, and not less than 40 per cent. should be soluble in boiling water, the latter upon cooling and filtering should show a faintly acid reaction, give a dark green precipitate with ferric chloride T.S., and a reddish-violet color with alkalies. Alcoholic extractive not less than 45 per cent. Moisture content not more than 12 per cent. Ash not exceeding 3 per cent.

*Krameria*—The drug may include not more than 5 per cent. of stems. The family name changed from "Krameriaceæ" to Leguminosæ. Peruvian Rhatany: It consists of a knotty, several- to many-headed crown with numerous branching roots; the latter rarely attaining a length of 50 cm. and usually less than 1 cm. in thickness, cylindrical, somewhat tapering, flexuous or wavy and very flexible, externally light reddish-brown or brownish-red, more or less marked with dark, scaly cork, especially in the upper portion, otherwise nearly smooth, somewhat longitudinally wrinkled and devoid of transverse fissures; fracture of bark slightly fibrous, of wood tough and splintery, the pinkish-brown bark less than one-third of the radius, the wood yellowish or pinkish-white and finely radiate; inodorous; wood nearly tasteless, bark astringent. Savanilla Rhatany and Para Rhatany. Roots usually separate, less flexuous and tapering than those of Peruvian Rhatany, and usually not exceeding 12 mm. in thickness; externally purplish-brown or chocolate brown and marked with numerous fissures, fracture less tough than that of Peruvian Rhatany, internally the bark and wood darker, the bark about two-fifths or more of the radius and more astringent than that of Peruvian Rhatany. Aqueous extractive not less than 9 per cent. Ash not exceeding 5 per cent.

*Lactucarium*—Treat lactucarium with boiling water and filter; the filtrate should be clear while hot, but on cooling it should become turbid; the filtrate should not be colored blue by iodine T.S. (absence of starch) and should also become clear upon the addition of ammonia water or alcohol. An alcoholic solution of lactucarium should give not more than a faint green color upon the addition of a drop of ferric chloride T.S. (absence of tannin). Dry the drug at a temperature not exceeding 70° C. for powdering. Ash not exceeding 10 per cent.

*Leptandra*—Leptandra may include not more than 5 per cent. of stems and other foreign matter. Rhizome usually of horizontal growth nearly cylindrical, somewhat branched, from 4 to 10 cm. in length and from 4 to 13 mm. in diameter; externally grayish-brown to dark reddish-brown, annulate from circular scars of bud-scales, upper surface with short stem remnants; occasionally with buds, and numerous circular stem-scars, from the under and lateral portions arise numerous coarse roots; fracture very tough and woody, branches readily separable from the main rhizome; internally bark rather thin, dark brown and resinous, wood about the same thickness as the bark, light brown and porous, pith large, more or less hollow, the color being similar to that of the bark; nearly odorless, taste very bitter and acrid. Roots from 1 to 10 cm. in length and from 1 to 2 mm. in diameter; externally dark brown to purplish-brown, smooth and faintly longitudinally wrinkled; fracture short; internally with a thick brownish-black bark and small light brown central cylinder.

*Limonis Cortex*—The outer rind of the fresh ripe fruit of *Citrus medica Limonum* (Risso) Hooker filius (Fam. Rutaceæ). The outer, lemon-yellow or dark yellow layer recently separated by grating or paring and consisting of an epidermal layer, numerous parenchyma cells containing yellow chromoplasts and large oil-reservoirs with globules of the volatile oil; odor highly fragrant, distinct; taste pungently aromatic. Under the microscope sections of the fresh fruit when mounted in fixed oils, show an epidermal layer composed of small tabular cells, a hypodermal layer containing numerous plastids, a mesocarp with colorless, thin-walled parenchyma and large, elliptical oil reservoirs; parenchyma cells containing a layer of granular protoplasm adhering to the walls and occasionally membrane crystals of calcium oxalate, which are irregularly polygonal in shape, polarize light strongly and from 0.015 to 0.025 mm. in diameter.

*Linum*—Flaxseed may include not more than 3 per cent. of other harmless fruits, seeds and foreign matter. Ovate, or oblong-lanceolate, flattened obliquely pointed at one end, 3 to 5 mm. in length; externally chestnut-brown, very smooth and shiny, the raphe extending as a distinct, light yellow ridge along one edge; easily cut with the finger-nail, internally olive-green, oily; odor slight; taste mucilaginous and oily. Microscopical

characteristics are given. Linseed or Flaxseed Meal: Light olive-brown with reddish-brown fragments; fragments very coarse and the cellular tissues are the same as those of the powder. The dried Linseed or Flaxseed and Linseed Meal or Flaxseed Meal should be recently prepared and free from impurities and should be kept in tightly closed containers containing a few drops of carbon tetrachloride or chloroform to keep free from time to time to prevent the attack by insects. Ash content not exceeding 6 per cent.

*Lactaria* Family name changed from "Campanulaceæ" to "Lactariaceæ". Stems cylindrical, coarsely and irregularly furrowed; leaves occasionally purplish and with numerous spreading hairs; leaves alternate, usually more or less broken, when entire, lanceolate or oblong, 2 to 9 cm. in length, abruptly pointed or irregularly serrate-denticulate, the teeth with a yellowish-brown gland-like apex, pale green and with scattered, bristly hairs; petiole either wanting or 1 mm. in length; flowers in long racemes with short pedicels, calyx tube ovoid, 5-toothed, corolla tubular, 3 to 4 mm. in length, 5-parted, the upper 2-lobed portion cleft nearly to the base; stamens with anthers united above into a curved tube enclosing the bifid stigmas; capsules ovoid or ellipsoidal, 5 to 8 mm. in length, light brown, wholly inferior and enclosing numerous brownish, oblong and coarsely reticulate seeds; odor slight; taste strongly acid. Powder: Dark green, odor irritating; fragments of seed-coat composed of more or less polygonal cells with thick, yellowish walls; isolated, non-glandular hairs elongated-conical, 0.300 to 0.600 mm. in length; fragments of stem with tracheæ showing annular or spiral thickenings or simple pores associated with narrow wood-fibers, the walls of the latter being rather thin, more or less lignified and porous; fragments of epidermis of leaf with elliptical stomata, 0.025 mm. in length, and usually with 3 or 4 neighboring cells; pollen grains nearly spherical, 0.015 to 0.030 mm. in diameter. Ash not exceeding 8 per cent.

*Lupulinum*—A granular powder, bright yellowish-brown, having the characteristic odor and taste of hops; becoming darker in color, disagreeable and valerian-like in odor on aging, when it is unfit to use. Under the microscope the glandular trichomes are somewhat globular or ellipsoidal, 0.150 to 0.200 mm. in diameter, consisting of a single layer of secreting cells assuming the form of a shallow cup, from the inner surface of which the cuticle has been separated by the secreted yellowish-brown oleoresin. Ash changed from "not more than 10 per cent." to "not exceeding 16 per cent."

*Lycopodium*—The spores of *Lycopodium clavatum* Linné (Fam. Lycopodiaceæ), with not more than 2 per cent. of impurities. Microscopical characteristics are given. *Lycopodium* should show very few, if any, pollen grains of species of Pine, the latter being 0.040 to 0.070 mm. in diameter, and consisting of three parts, a central, convex, generative cell separating the two spherical cells or wings which are blackish, due to the inclusion of air. Ash changed from "not exceeding 5 per cent." to "not exceeding 3 per cent."

*Matricaria*—The dried flower-heads of *Matricaria Chamomilla* Linné (Fam. Compositæ), with not more than 5 per cent. of stems and foreign matter. Flower-heads composed of a few white ray florets and numerous yellow disk florets on a conical, more or less hollow receptacle, the latter being 3 to 10 mm. in breadth; disk flowers tubular, perfect, and without a pappus; ray flowers 10 to 20, pistillate, corolla white, 3-toothed, and 4-veined, usually reflexed, involucre hemispherical, composed of 20 to 30 imbricated, oblanceolate, and pubescent scales; peduncles light green to brownish-green, longitudinally furrowed, more or less twisted and attaining a length of 2.5 cm.; achenes somewhat obovoid and faintly 3- to 5-ribbed, pappus none or only a slight membranous crown; odor pleasant, aromatic; taste aromatic and bitter. Ash not exceeding 13 per cent.

*Mentha Piperita*—Leaves more or less crumpled and frequently detached from the stems; stems quadrangular, 1 to 2 mm. in diameter, nearly glabrous except for a few scattered reflexed hairs; leaves when entire ovate-oblong to oblong-lanceolate, petioles 4 to 15 mm. in length, slightly pubescent, lamina 1 to 9 cm. in length, acute and sharply serrate, light green to purplish-brown, upper surfaces nearly glabrous, lower surfaces glandular-hairy especially on the veins; flower-whorls in oblong or oval spikes which are usually compact, or somewhat interrupted at the base, 1 to 1.5 cm. in breadth, rounded

at the summit, and in fruit attaining a length of 3 to 7 cm. Other botanical characteristics are noted.

*Mentha Viridis*—Leaves more or less crumpled and mixed with a large proportion of the light brown or purplish-colored stems occasionally with their characteristic opposite branches; stems distinctly quadrangular, 1 to 3 mm. in width, nearly glabrous; leaves when entire oblong- or ovate-lanceolate, unequally serrate, nearly sessile or with a petiole less than 5 mm. in length, of a bright green color and somewhat glandular-hairy on the under surfaces; flowers in clusters arranged oppositely and in more or less interrupted or crowded, lanceolate, acute or acutish spikes; odor slightly pungent, characteristic; taste aromatic, characteristic but not followed by a cooling sensation.

*Moschus*—Known in commerce as Tonquin or Tibetan musk. Usually in small, irregular granules, not more than 2 mm. in thickness, blackish, with a few light brown fragments and becoming somewhat grayish on aging; shiny and somewhat oily; odor peculiar, penetrating, powerful and persistent; taste aromatic and bitterish. Add a few granules of musk to 2 cc. of water in a watch crystal and stir with a glass rod, a light brown solution should be obtained. The undissolved portion should consist of irregular fragments containing a fine granular substance, numerous rod-like bacteria and occasionally the hyphae of a fungus. Add a drop of iodine T.S. to a slide containing a few granules of musk and examine under the microscope; none of the particles should be colored blue or bluish-black (absence of starch); other tests are given. Musk, when dried to constant weight in a desiccator over sulphuric acid, should not lose more than 15 per cent. of moisture.

*Myristica*—Ovoid or ellipsoidal, 20 to 30 mm. in length and about 20 mm. in thickness; externally light brown to dark brown, consisting of the reticulately furrowed perisperm, the broad end with a large, circular, upraised scar from which arises a furrow extending to the chalaza; easily cut, the surface having a waxy lustre and mottled by reason of the light brown perisperm penetrating into the yellowish-brown endosperm; a longitudinal section through the middle of the large scar shows a small irregular cavity with the more or less shrunken remains of the embryo, and usually containing a growth of mold; odor slightly aromatic, taste agreeably aromatic. Microscopical characteristics and tests for powdered drug are given. Ash not exceeding 5 per cent. Broken and wormy kernels should be rejected.

*Myrrha*—A gum-resin obtained from one or more species of *Commiphora* (Fam. Burseraceæ). Microscopical characteristics of powdered drug added. Statements about emulsion with water, its insolubility and non-swelling in water, and the nitric acid test on an alcoholic solution omitted. Not less than 35 per cent. of myrrh should be soluble in alcohol. Ash not exceeding 8.5 per cent.

*Nux Vomica*—Orbicular, nearly flat, occasionally irregularly bent, 10 to 30 mm. in diameter, 4 to 5 mm. in thickness; externally grayish or greenish-gray, covered with appressed hairs giving it a silky lustre, hilum indicated by a circular scar at the center of one of the flattened sides, and connected with the micropyle by a ridge; the micropyle very hard when dry; internally showing a thin and hairy seed-coat and a large grayish-white endosperm at one end of which is embedded a small embryo, with 2 broadly ovate 5- to 7-nerved cotyledons; inodorous; taste persistently bitter. Powder: Light gray; consisting chiefly of thick-walled, endosperm cells containing globules of a fixed oil and a few small aleurone grains, and fragments of strongly lignified, non-glandular hairs, the walls of the latter possessing large, circular, or long, slit-like pores. In the tissues of the adhering pulp occur a few small, nearly spherical starch grains. The color test with potassium dichromate and sulphuric acid omitted. Ash not exceeding 3.5 per cent.

*Opii Pulvis*—Temperature for drying changed from "not exceeding 85°C." to "not exceeding 70°C." Light brown, consisting chiefly of yellowish-brown to brownish-red, more or less irregular and granular fragments varying from 0.015 to 0.150 mm. in diameter; a few fragments of strongly lignified thick-walled, 4- to 5-sided or narrowly elongated, epidermal cells of the poppy capsule; and very few fragments of tissues of poppy leaves, poppy capsules, and *Rumex* fruits.

(Continued in July ERA)

## Hydrogen Peroxide Solution.\*

By J. STANLEY WHITE, PH.C.

**H**YDROGEN peroxide solution, according to the British Pharmacopoeia of 1893, is an aqueous solution containing approximately 3 per cent. of H<sub>2</sub>O<sub>2</sub>. The B.P. further states that it is prepared by the interaction of water, barium peroxide, and a dilute mineral acid at a temperature below 10°C. The product, however, is notoriously unstable, and anyone who has followed the correspondence recently in *The Pharmaceutical Journal* must have been struck by the extraordinary difference in strength met with in commercial samples, all of which are stated to be up to B.P. standard.

Hydrogen peroxide solution was first discovered in 1818 by a French chemist named Thenard, who prepared dilute solutions of it by the action of hydrochloric acid on barium peroxide. Although hydrochloric acid has been largely replaced by other acids, the method of manufacture today is practically identical with the method employed nearly a hundred years ago. Although the 3 per cent. solution is the official strength, and the one nearly always employed, it is of interest to note that by subjecting concentrated solutions to the action of a freezing mixture Staedel succeeded in obtaining a crop of columnar crystals, consisting of pure peroxide. Another method consists in distilling aqueous solutions of peroxide under diminished pressure, and by this means obtaining a distillate of 100 per cent. strength. The product, however, is extremely explosive, and its preparation fraught with considerable danger. Pure hydrogen peroxide exists as a thick, clear, colorless liquid, having a specific gravity of 1.4996. Needless to say, this dangerous substance is not a commercial product, although a 30 per cent. hydrogen peroxide solution has been on the market for some years, and is stated to be quite neutral and perfectly stable.

Hydrogen peroxide solution, as designated by the B.P., is the preparation most generally employed for medicinal purposes. The preparation should be fairly stable, and usually contains traces of free acids. Although the manufacture of hydrogen peroxide is a comparatively simple process, considerable attention to detail is necessary in order to produce a satisfactory preparation. The purity of the ingredients used, the temperature at which the reaction is carried on, and the dilution of the acid or acids employed are all important factors, and these details are usually carefully guarded by manufacturers. As previously stated, hydrochloric acid was originally employed to decompose the barium peroxide, but this was substituted later by hydrofluoric and hydrofluosilicic acids, both of these acids forming insoluble barium salts. In 1886 phosphoric acid was recommended, and a method which embodied this principle was adopted in the U.S.P. of 1890. No particular acid is now specified in the present U.S.P. or in the British Pharmacopoeia. Barium peroxide is used on account of the fact that it is stable in air, whereas the majority of other peroxides tend to rapidly decompose. The formation of insoluble barium salts, permitting complete removal from the finished solutions, also favors the use of barium peroxide.

The question of stability is extremely important; in fact, it is probable that the reason that hydrogen peroxide has only comparatively recently come into general use was due to the lack of obtaining a suitable preservative. Hydrogen peroxide solution is invariably slightly acid, and the small amount of acid found in nearly all samples is not regarded as an impurity. Although the B.P. does not limit the amount of acid which may be present, yet too much acidity ought certainly to be avoided, as it is more than likely to cause irritation of the tissues to which the peroxide is applied. The U.S.P. prescribes that the amount of acid in 25 cc. of hydrogen peroxide solution shall not be greater than can be neutralized by 2.5 cc. of N/10 NaOH; that is, in terms of H<sub>2</sub>SO<sub>4</sub>, equivalent to 0.049 per cent. It would certainly seem advisable to include an acid limit in the next edition of the British Pharmacopoeia. While it is next to impossible to produce an absolutely neutral solution of hydrogen peroxide solution which is stable, a small percentage of acid undoubtedly aids in preventing decomposition. Alkaline solutions decompose very rapidly, and neutral solutions soon take up sufficient alkali from the glass containers to set up rapid decomposition.

\*From the *Pharmaceutical Journal and Pharmacist*.

The question of preservatives is an important one, although it is known in a general way that acid solutions of peroxide are fairly stable. To some extent alcohol acts as a good preservative, and boric acid, benzoic acid, and salicylic acid have all been employed for the purpose. Undoubtedly the most general preservative is acetanilide, the use of which is stated to be the result of a happy accident. A chemist was endeavoring to prepare a stable compound of acetanilide and hydrogen peroxide. Although unsuccessful, it was noticed that the solutions containing the acetanilide appeared to be much more stable. Apparently the secret was kept for some years, but at the present day the addition of acetanilide is fairly general, especially in solutions of American manufacture. The amount employed is usually 1/100th of a grain to each fl. ounce, the acetanilide being incorporated during the process of manufacture. The extremely small quantity which is employed will, of course, have no therapeutic action. Under some little understood conditions the compound is slowly oxidized to nitrobenzene, which often gives to the solution a faint odor resembling essential oil of almonds.

Some short time ago the writer endeavored to give an explanation of this reaction. It is probable that the nitrobenzene first undergoes hydrolysis to form aniline and acetic acid:

The acetic acid being stable remains unchanged and the aniline undergoes oxidation to form nitrobenzene:

It is a well-known fact in the chemical world that when a body is capable of doing work (hydrogen peroxide solution is a powerful oxidizing agent) it will do that work in preference to breaking up; and it can, therefore, be assumed that prior to the hydrogen peroxide solution decomposing, the above reactions will go on with the production of small quantities of nitrobenzene. Nitrobenzene thus produced apparently undergoes hydrolysis, re-forming aniline and hydrogen peroxide:

In turn this hydrogen peroxide will oxidize the aniline back to nitrobenzene and the action becomes reversible:

Thus the hydrogen peroxide continually having work to do, and being continually re-formed, the initial quantity of acetanilide is never entirely lost (it has, of course, become broken down), and the deterioration of the hydrogen peroxide solution is prevented. The fact that it is possible in the same solution to detect the odor of oil mirbane, while at other times the odor is not noticeable, would also seem to be evidence that this is the probable explanation of its action.

That acetanilide does act in a remarkable manner in preventing decomposition has been proved beyond all doubt. A recent annual report on food and drug products, made by the Connecticut Agricultural Experiment Station, showed that 82.5 per cent. of the samples of hydrogen peroxide containing acetanilide as a preservative complied with the pharmacopoeial requirements, whereas only 22.5 per cent. of the non-acetanilide specimens were up to standard.

It is not generally known that a really stable preparation of hydrogen peroxide solution, preserved with acetanilide, may be actually evaporated down to produce a more concentrated solution, with only a relatively small loss in oxygen content. The following figures were obtained with a well-known brand of B.P. strength by evaporation on a steam bath at normal atmospheric pressure:

	Per cent. H <sub>2</sub> O <sub>2</sub> (Actual content).	Per cent. H <sub>2</sub> O <sub>2</sub> (Actual loss).
1000 cc.....	3.04	0.23
450 cc.....	6.52	0.24
300 cc.....	9.89	0.5
200 cc.....	14.70	5.2
100 cc.....	25.2	17.6
50 cc.....	43.2	

The following figures were obtained by allowing the same solution to evaporate at the ordinary room temperature:

	Per cent. H <sub>2</sub> O <sub>2</sub> (Actual content).	Per cent. H <sub>2</sub> O <sub>2</sub> (Actual loss).
250 cc.....	3.04	0.12
154 cc.....	4.81	1.82
56 cc.....	11.76	

These experiments were, of course, conducted in scrupulously clean vessels, as the presence of foreign organic matter is absolutely detrimental to the solution, and is, in fact, the chief cause of its decomposition.

## VI. Classical Discoveries in Pharmacy — The First Vacuum Pan for Extracts.

CREDIT for the first application of vacuum distillation to the preparation of pharmaceutical extracts, as described in the following article, is often given to Dr. Alexander Marcet, of London. A recent announcement of a new German work, containing the accounts of a number of great discoveries in pharmacy, gives Marcet's name as the author of the paper from which our excerpts have been taken, and even so authoritative a work as Poggendorf's Index includes the treatise under the works of Marcet, and makes no mention of the real author. The misunderstanding has arisen from the fact that while the work was performed and described by John T. Barry, to whom the credit for the innovation is therefore entirely due, the paper was not read by the author, but by Dr. Marcet, before the London Medical and Surgical Society, of which body Marcet was a distinguished member. In addition to being in error regarding the authorship of the work, Poggendorf's Index makes a mistake in the citation, stating that the article is to be found in the *Transactions of the London Medical and Surgical Society*, Vol. 1, 1810. The correct reference is to the above *Transactions*, Vol. 10, 1819, p. 231, the full title being "On a New Method of Preparing Pharmaceutical Extracts, by John T. Barry, Communicated by Doctor Alex. Marcet." The Royal Society's Index of Scientific Papers contains the proper reference and author's name. Translations of Barry's article appear in *Schweigger's Journal der Chemie*, 1820, p. 250, and in *Trommsdorff's Neue Journal der Pharmazie*, Vol. 4, 1820, p. 255.

Unfortunately, while a great deal is known of Marcet's life and achievements, history is silent with regard to the real author of the article which has had such an important bearing on the development of pharmaceutical industry. Apparently, Barry was a worker at Guy's Hospital, in London, where Dr. Marcet held the post of professor of chemistry. It is possible that Barry was employed in some capacity or other in the dispensary. However, all this is merely conjecture. His name does not appear in connection with any other papers that we have thus far been able to locate, except with the patent which he obtained for his new apparatus for vacuum evaporation. His friend and protégé, Marcet, was a native of Switzerland, having been born in Geneva in 1770. Compelled to leave his country on account of political disturbances, he came over to England, and in a few years received the degree of M.D. at Edinburgh University, in 1797. He then made his way to London, and became connected with the long-famous Guy's Hospital. Marcet's chief work is along the lines of medical chemistry, and his analyses of the waters of the ocean, and of the Dead Sea and the River Jordan were made the basis of some early geological speculations.

In outlining the reasons for introducing a new form of apparatus for preparing extracts, Barry states his belief that the difference in the efficacy of several extracts is due largely to decomposition suffered during inspissation. "It is scarcely possible to produce two different parcels of an extract by the common method which shall each possess the same efficacy." Extracts, in those days, were made by evaporation of the aqueous infusions of drugs, although in some cases weak alcoholic infusions were used. The menstruum was chosen, of course, with the intention of extracting all the active ingredients, and the business of preparing an extract was to reduce to a solid state the medicinal parts of the solution.

Barry's account then proceeds:

"In order to prevent the injurious effects of heat on medicinal extracts, I proposed some years since, in conversation on the subject, to conduct the evaporation in vacuo. The low temperature at which fluids are known to boil in exhausted vessels, together with the superior advantage this plan possesses, of preventing the action of oxygen, led me to expect decidedly good effects from its execution.

'The subject selected for the first experiment was a solution of opium. The next was some juice of hemlock. Both of these were evaporated in a water bath, the vessel having been exhausted by an air-pump; and the products exhibited appearances which left no doubt of the superiority of this method for preparing extracts. Accordingly, I decided on carrying the project into execution at some future day; and on shew-

ing a sketch of the necessary apparatus to my partner, William Allen, I had the satisfaction of finding that his opinion supported my own. Soon afterwards it was submitted to my friend Dr. Marcet, who not only gave it his approbation, but so strenuously advised its adoption, that it was concluded on to have the vessels constructed on a large scale. It is remarkable that only a short time before the large apparatus was made this gentleman received from Professor Jaenisch, of Moscow, a communication on the same subject, proposing to prepare extracts in vacuo. Dr. Marcet thought it proper, on that occasion, to advise my not being informed of the plan of the Moscow professor till my own apparatus was finished.

"To persons acquainted with the process of Edward C. Howard for refining sugar, and for which he took out a patent, it may appear that I have small claim to invention for proposing a very similar process for obtaining extracts. The two kinds of apparatus are, however, materially different. I employ no pump or machinery, but produce the exhaustion wholly by steam; and the vacuum is maintained in my vessel by immersion of the whole in water. The difficulty with which air is prevented from finding its way into exhausted vessels seems the chief impediment to conducting evaporations in vacuo. This difficulty, by the simple expedient just mentioned, is completely removed. The apparatus being thus rendered easy of management and less expensive, appeared likely to be employed in some other large manufactures, such as sugar refining and colour making; and on that account I have been induced to take out a patent for it. It is, however, to be recollected by this Society that I have declined having a patent for its pharmaceutical products. Chemists desirous of inspissating extracts in vacuo are therefore at liberty to do it in any apparatus different from that which has been made the subject of my patent; and thus these substances may continue the objects of fair competition as to quality and price.

"Notwithstanding the disadvantageous circumstances which generally attend inspissation in the open air, I have little doubt that many of the extracts might be obtained in that way, of very superior though perhaps not of uniform strength, by complying with certain conditions, which are, however, suited only to the scale of philosophical experiment, or the consumption of an individual practitioner. But it is well known that the trouble attendant on these preparations renders it more convenient to purchase them than to make them. Hence it has become the business of the druggist to supply extracts; and making them on a scale proportionate to his demand, he is obliged, in order to produce rapid evaporation, to subject them to a temperature little, if at all, short of 212°, one that seems to be decidedly injurious. This happens even when the steam bath or the water bath is employed, and extracts so prepared must still be considered as having been partially subjected to the contingencies before mentioned. In fact, it may be stated on good authority that extract of rhubarb, for instance, when inspissated in vacuo, is fully twice as effective as when boiled down in the open air over steam.

"As perhaps it will be satisfactory to the Society to form for themselves a judgment upon the fitness of the method I have adopted, and of the apparatus by which it is carried into effect, I propose here to describe them both. The mode of producing the vacuum, and the manner of maintaining it, have already been mentioned. The degree of exhaustion is, of course, judged of by the column which is supported in the mercurial gage; and I think it will excite some surprise, when it is stated, that although no pump is employed, yet that column is often at a height of 28 inches during rapid ebullition. In fact, it is common to operate with a column not two inches less than the barometer of the day, and at such times the temperature of the boiling fluid is below 100° Fahrenheit, often at 95°; and I am satisfied that by certain improvements this temperature may be reduced to less than 90° in the ordinary process of manufacture. The vessels employed in the apparatus first put up were two; the first of cast iron, polished on its inner surface, serving as the evaporating pan, and situated in a water bath, may be called a

*still.* The head of it leads into the second vessel, which is a large copper sphere, about three times as large as the other, and surrounded at pleasure by cold water; it may be called the *receiver*. In the pipe which connects these two is a large stop-cock, by which their communication with each other can be suspended. The manner of setting it to work is this: the juice or infusion is introduced through a large opening into the polished iron still, which is then closed, made airtight, and covered with water. The stop-cock which leads to the receiver is also shut. In order to produce the vacuum, steam is allowed to rush through the copper sphere until it has expelled all the air, for which five minutes is commonly sufficient; this is known to be effected by the steam issuing uncondensed. At that instant the copper sphere is closed, and the steam is shut off; and then cold water admitted upon its exterior surface. The vacuum thus produced in the copper sphere, which contained about four-fifths of the air of the whole apparatus, is now partially transferred to the still by opening the intermediate stop-cock. Thus four-fifths of the air in the still rushes in to the sphere, and the stop-cock being shut again, a second exhaustion is effected by steam in the same way as the first was; after which a momentary communication is again allowed between the iron still and the receiver; by this means four-fifths of the air remaining after the former exhaustion is expelled. These exhaustions repeated five or six times are usually found sufficient to raise the mercurial column to the height before mentioned. The water bath in which the iron still is immersed is now to be heated until the fluid that is to be inspissated begins to boil, which is known by inspection through a window in the apparatus, made by fastening on airtight a piece of very strong glass; and the temperature at which the boiling is kept up is determined by a thermometer. Ebullition is continued until the fluid is inspissated to the proper degree of consistence, which also is to be judged by its appearance through the glass window. I prefer taking for a single operation as much juice or infusion as will keep the apparatus employed for nearly the whole day. When inspissated sufficiently, the residuum, which we denominate it, is taken out and is fit for use.

"On comparing the temperature employed for ebullition in vacuo with that generally in use, we are led to expect a considerable difference in the sensible qualities of extracts. With some this is the case in a very striking degree. The extract of hemlock is an example; its taste and smell are remarkably different, as is the color both of the solution and feculant parts; it also possesses an extraordinary degree of tenacity, a property which is not generally found in the common extract; it abounds so much with crystallized matter as to produce a gritty sensation when rubbed between the fingers. The extract of belladonna contains a large quantity of crystals of some kind of salt; but I have not succeeded in procuring either of these in a separate state, so as to give them an examination. In some attempts to obtain them pure, and more particularly to discover whether morphine (the new vegetable alkali) was traceable in the narcotic extracts, I became acquainted with the singular fact that phosphoric acid in soluble state is to be found in all the extracts. On further extending the investigation, it was ascertained that this acid, besides that portion of it which exists as phosphate of lime, is contained in a vast variety of vegetables. It would be foreign to the subject of this paper to enumerate the substances that were tried, but I may just mention that all the vegetables that are cultivated seem to contain phosphoric salt in great abundance.

"The extract of taraxacum is another remarkable instance of the difference in the sensible qualities of these preparations; instead of being sweet to the taste and high-coloured, like that prepared in the common way, it is bitter and extremely pale when fresh made; its taste much resembles that of the plant itself. With respect to the strength of extracts made in vacuo, I have not yet gained sufficient information to be able to present a view of the relative proportions which they bear to the common extracts; but I have been informed by several medical friends who have given them a trial, that they found them materially stronger. I deem it almost indispensable to state, that the increased activity of extracts prepared by this new method makes it imperative on those who compound medicines to continue using the *o'd* kind, except when extracts prepared in vacuo are specially prescribed."

The new ERA Formulary, just out. \$5.00 per copy.

## NEW REMEDIES

*Asasan* is a nerve food, of the following composition: Albumen, 8.041 per cent.; lecithin, 2.52 per cent.; sodium glycerophosphate, 1.6 per cent.; fats, 0.9 per cent.; carbohydrates (as glucose), 31 per cent., nutritive salts, 5.63 per cent. Hemoglobin is present in large quantity.

*Calcetin* and *Ferrocactin* are food preparations containing lecithin, used for puppies.

*Calcivit* tablets contain calcium lactate, calcium phosphate, calcium carbonate, a completely soluble milk albumen, and an easily digestible iron preparation.

*Cardiotonin* is a convallaria preparation, with 0.025 g. of caffeine and 0.03 g. of sodium benzoate in 1 cc.

*Cordicura* contains the fluidextracts of *Cactus grandiflorus*, *Adonis*, *Spartium*, *Zea Mays*, *Fucus serratus*, *Moringa*, *Crotogeus oxycantha*, *Convallaria* and *Cascara Sagrada*, as an aromatic sweetened liquid.

*Dial-Ciba*, a new sedative and hypnotic, is diallyl-barbituric acid, being thus closely related to veronal. It melts at 170-171°, is slightly soluble in water, soluble in other solvents, has a slightly bitter taste, and is very stable.

*Eumanase* contains bitterless dried yeast, iron, calcium phosphate, potassium and sodium salts, and is used as an addition to feed in hog cholera.

*Gallena Cure* consists of three preparations, the first containing linseed oil and castor oil, the second containing sassafras extract, taraxacum, sodium chloride, sulphate, and bicarbonate, and yarrow, and the third containing glycerides of arachidic, palmitic, linolic, and oleic acids.

*Glanguional* is a mixture of cinchona bark, valerian, ripe poppies, and potassium bromide, 2 g. being used in a cupful of infusion. Other constituents are present.

*Guayarsin* pills contain hemoglobin, calcium guaiacol-sulphonate, and 0.001 g. of guayarsin in each pill.

*Guayarsin* syrup contains in 10 g. 0.2 g. of calcium guaiacol-sulphonate, 0.05 g. of cinnamic acid, and 0.005 g. of guayarsin, a combination of arsenic and guaiacol.

*Jolasse's Stomach Powders* contain 0.15 g. of belladonna extract, powdered sodium citrate 10 g and calcined magnesia 15 g.

*Otalgan* is a non-aqueous stable solution of 5 per cent. of opium extract and antipyrin in glycerin.

*Pantopon-Atrinal* is a trade name for pantopon-atropine-sulphuric acid, atrinal evidently being the new name for the latter substance.

*Rheuma-Sopium* contains 10 per cent. of salicylic acid, which is incorporated by a special process in a superfatted sodium soap. It is used by inunction in rheumatic affections and pleuritic pains.

*Rotusin* contains maltose, starch, dextrin, protein, and other nitrogenous extractives, fats, fibre, mineral matter and water.

*Scutopon*, an opium preparation, contains 33.2 per cent. of morphine and 25 per cent. of other opium alkaloids.

*Sozogen* pearls are soluble in the intestines, and contain santal oil, salol, kava resin, methylene blue, and probably cubebs.

*Sputolysin* contains 0.03 g. of tartar emetic, 0.1 per cent. of belladonna extract, 1 g. each of balsam of Peru and oil of pine, 0.5 g. of potassium iodide, 2.5 g. of guaiacol, 3 g. of camphor, 5 g. of paraffin oil, 7.5 g. of potassium soap, and 17.5 g. of lanolin, sufficient for six inunctions. Used in tuberculosis.

*Thiophyssem* is the addition product of allylsulphourea and ethyl iodide, containing 46.6 per cent. of iodine.

### Invisible Ink.

According to the *Pharm. Journal*, the following is different from the usual formulas given for compounds under the above title: Make a fairly strong solution of phenolphthalein in alcohol, and use as an ink. The writing with this solution is quite invisible when dry, but when exposed to the vapor of ammonia it becomes pink, and fades again as the ammonia volatilizes. By breathing upon the paper the color disappears almost immediately.

# SELECTED FORMULAS

## Arm Pit Deodorizer.

Talcum .....	8 ounces
Starch .....	2 ounces
Oil of eucalyptus.....	½ dram
Thymol .....	10 grains
Salicylic acid .....	60 grains

Mix the oil, acid, and thymol intimately, add the talcum gradually and in divided portions, mixing well after each addition, then incorporate the starch, mix and sift.

A remedy in paste form that has been recommended consists of carbolic acid, 30 grains; burnt alum, 2 drams; talcum, 2 drams; Orr's root, 1 ounce; cornstarch, 10 ounces; violet extract, 2 ½ drams; glycerin, enough to make a paste.

## Transparent Cosmetic.

Transparent soap .....	8 ounces
Glycerin .....	½ ounce
Water .....	1 ounce
Mucilage of acacia.....	½ ounce
Oil of rose.....	5 drops
Oil of cinnamon.....	10 drops
Oil of lemon.....	20 drops

Cut the soap (which should be one of the common soft brands) into shavings, and heat on a waterbath, along with the water, glycerin and mucilage. Stir constantly, adding water if, on testing a little of the cooled mass, it is found to be too hard. Then add the perfumes, mixed with a dram of spirit, and cast into sticks.

## Bismuth Hair Restorer.

(A)

Bismuth acetate .....	0.5
Glycerin .....	5.0
Water .....	95.0

Mix.

(B)

Bismuth subnitrate .....	125 grains
Solution of potash (10 per cent.),	
Citric acid, of each.....	sufficient
Glycerin .....	3 ounces
Orange-flower water, enough to make..	8 ounces

Triturate the glycerin and bismuth subnitrate together, heat on a water-bath, and add potash solution gradually until the bismuth salt dissolves. Next add citric acid solution until only a faint alkalinity remains. Finally, make up to 8 ounces. This is applied by means of a toothbrush. (*Ch. & Dr.*)

## Bichromate Fly Paper.

Potassium bichromate .....	2 ounces
Sugar .....	1 ounce
Oil of black pepper.....	½ ounce
Alcohol .....	4 fl. ounces
Water .....	24 fl. ounces

Mix thoroughly; macerate for several days, and filter off the liquid. In this solution soak unsized absorbent paper, allow to dry, and again soak and allow to dry.

## Glove Cleaning Paste.

Castile soap .....	8 ounces
Borax .....	1 ounce
Caustic potash .....	1 ounce
Glycerin .....	1 ounce
Alcohol .....	2 ounces
Water .....	42 ounces

Dissolve the borax in 2 pints of water, and bring to a boil; during boiling add the soap in shavings and dissolve. Now add the caustic potash dissolved in the rest of the water and the glycerin, stirring thoroughly to mix. (*Ch. & Dr.*)

## Cement for Uniting Glass and Metal.

(I)

Portland cement .....	2 ounces
Prepared chalk .....	1 ounce
Sand .....	1 ounce
Sodium silicate .....	q.s.

The first three ingredients are mixed into a thick cream with the water-glass.

(2)

Iron filings .....	5 pounds
Sulphur .....	1 ounce
Sal ammoniac .....	2 ounces

Moisten with water and ram tightly into the joint.

## Polishing Cloths.

Pumice stone (in finest powder).....	100 parts
Tripoli (infusorial earth).....	100 parts
Oxalic acid .....	30 parts
Dextrin .....	20 parts
Water .....	a sufficiency

Dissolve the dextrin in the water, add the powders and stir until the latter are thoroughly distributed throughout the liquid. In this dip suitable cloths of a convenient size, and hang them out to dry. The combination of polishing powders may be varied at will.

## Paste for Varnished Surfaces.

Rice starch .....	2 ounces
White glue .....	1 ounce
Acetic acid .....	½ ounce
Oil of cloves.....	20 minims

Soften the glue in cold water, then bring to a boil. Mix the starch with a little cold water and pour into the boiling solution of glue. Finally add the acetic acid and oil of cloves.

## Pencils for Removing Grease Spots.

Oxgall .....	16 parts
Powdered borax .....	8 parts
Magnesia .....	20 parts
Soap powder .....	56 parts

Rub well together and then add sufficient green soap to make into a stiff paste. Roll out into pencils of a convenient size and set aside to dry. In use the end of the pencil is dipped slightly into water and applied to the spot. After rubbing it in, wipe off with a moist sponge.

## Blue Rubber Stamp Ink.

Indigo, in fine powder.....	10 parts
Gum arabic .....	4 parts
Glycerin .....	4 parts
Water .....	3 parts

Dissolve the gum in the water, and mix with the glycerin; then triturate with the indigo until a homogeneous mass is obtained.

## Sheep Dip.

Arsenious acid .....	6 ounces
Dried sodium carbonate.....	6 ounces
Sublimed sulphur .....	4 ounces
Soft soap .....	6 ounces
Water .....	q.s.

Mix the arsenic with the sodium carbonate and sulphur; then boil the mixture with the soft soap and sufficient water to effect solution of the arsenic; next, add more water to produce 16 gallons of sheep dip.

## Cement for Aquarium.

Litharge .....	3 ounces
Fine white sand.....	3 ounces
Plaster of paris.....	3 ounces
Powdered rosin .....	1 ounce
Linseed oil,	
Japan drier, of each, sufficient.	

Mix the first three ingredients, add sufficient linseed oil to make a homogeneous paste, and then add a small quantity of drier. Allow to stand a few hours before using.

## Skin Cream for Collapsible Tubes.

Melt 6 ounces of white vaseline, 1 ounce of white wax, and 5 drams of spermaceti together, and while cooling, incorporate (in a warm mortar) 6 drams of bismuth subchloride. In ½ ounce of alcohol dissolve 6 minims of oil of rose and 1 minim of oil of bitter almond, and add the solution to the vaseline mixture, stirring all until uniform and cold. In cold weather the quantities of wax and spermaceti may be reduced. In place of the oils of rose and bitter almond, the mixture may be perfumed with any desired handkerchief extract.

## FOREIGN ABSTRACTS

### PROGRESS OF RESEARCH ABROAD

#### New Enzyme Studies by Bourquelot—Therapeutic Uses of Potatoes—Curing of Tea, Coffee, Cacao, and Tobacco Compared—Large Seeds Produce Large Plants.

**C**ONTINUING his work on the biochemical synthesis of glucosides and sugars, Professor Bourquelot has studied the action of invertin in alcoholic solutions, determining the strengths at which the ferment ceases to act. An English firm has put on the market a number of medicinal preparations using common potatoes as a base, and recommends them in rheumatic affections. Delassus, having examined a large number of experimental crops of common plants, reports that large seeds produce large plants, and that the rate and amount of development of plants propagated from small seeds are less than from large seeds. A number of analytical notes are presented, including tests for halogen in benzoic acid, the determination of iodine in pills of ferrous iodide, the detection of diacetic acid and acetone in urine, and the estimation of cod liver oil in emulsions.

#### Determination of Silver—

The determination of silver in organic compounds, such as the colloidal albumen combinations, is usually carried out by incinerating the substance, and dissolving the residue in nitric acid, or else the organic matter is destroyed by means of sulphuric acid and permanganate. The first method, when employed in establishments without an effective hood, gives rise to annoying odors, while the second demands considerable time and experience. Stöcker therefore recommends the following method: One g. of the silver compound is dissolved in a roomy flask in 10 cc. of water, 10 cc. of conc. nitric acid, and 10 cc. of 10 per cent. sodium nitrite solution. The nitrous acid evolved decolorizes the solution, and all the silver is converted into nitrate. The excess of nitrous acid is then driven off by heating, foam being destroyed by a few drops of alcohol. The usual titration can then be carried out, with sulphocyanate solution and iron alum. The color change can be easily observed in the yellow solution. The results are said to be in good accord with those afforded by the official D. A.-B. method. (Stöcker, Apoth. Ztg., 1914, p. 344.)

#### New Platinum Mine—

At Wenden, in Westphalia, a new platinum mine will soon begin work. While assaying the ore for copper, lead, and iron, it was unexpectedly found to be rich in platinum, equivalent to 36-70 g. of the metal per cu. m. of rock. Deposits hitherto worked have usually yielded only 6 or 8 g. per cu. m., and the maximum yield does not exceed 40 g. per cu. m. The ore is therefore much richer than any known beds. Samples showing essentially the same figures have been obtained from an area of over two million sq. m. In these new ores, contrary to what is generally met with, not all of the platinum is in the metallic state, part being in some combination soluble in nitric acid. (L'Office Chim., through Pharm. J.)

#### Insoluble Pills of Arsenic and Iron—

In the treatment of anemia with iron and arsenic, it was noted that the steady increase of hemoglobin ceased as soon as the drugs were given in the form of pills, where previously they had been administered in liquid form. Investigation proved that the great majority of the pills passed through the body unchanged. Ninety-three per cent. of the iron and over 80 per cent. of the arsenic had not been absorbed. Schroeder therefore recommends the following formulas: 1. Arsenic, ferrous sulphate, manna, and extract of gentian. 2. The same with the addition of licorice. 3. Arsenic, ferrous sulphate, licorice, and tragacanth. The last formula showed, in a trial, that no pill was recovered from patients thus treated. The pills are also said to be preferable to the liquid preparations, on account of lower cost and absence of alcohol. (Schroeder, Hosp. Tidende., 1913; through Pharm. J.)

#### Synergism of Opium Alkaloids—

Caesar, after making quantitative investigations of this subject, finds that the greatest increase of the activity of mor-

phine is caused by narcotine, but that in ternary systems various unforeseeable effects may be met with. It is therefore certain that the increase in the activity of morphine, brought about by narcotine, is not the final solution of the action of opium. The determination of the toxicity of opium and its preparations supports this view. It is impossible to find the most favorable combination of opium alkaloids, so that it could be calculated mathematically. The composition of opium is always different. At the same time, the best effects of opium are given by a mixture of equal parts of narcotine and morphine, as proved by Straub and the author. (Caesar, Biochem. Z., 1913, No. 4.)

#### Halogens in Benzoic Acid—

In a dry test tube mix thoroughly by means of a glass rod 0.1 g. of benzoic acid and 0.5 g. of mercuric oxide. Heat the mixture, with constant rotation of the tube, in a small flame, until the formation of gas and the glowing of the charred mass have subsided. Cool, add 10 cc. of dilute nitric acid, heat nearly to boiling, and filter. On the addition of silver nitrate, not more than a faint opalescence should be seen. (Wende, Apoth. Ztg., 1914, p. 157.)

#### Adulterations of Cacao Butter—

Lately there have come into European markets a number of lots of cacao butter, which outwardly appeared to be entirely genuine, but which were offered at a price lower than that at which a pure product could be produced. One Dutch preparation, the "Elite" or "Swan" brand, was investigated by Grimme. The solidification point of the fatty acids was lower (44.9-45°) than in guaranteed cacao butter samples used for comparison (48.8-49.2°); and the acids had a light yellow, finely crystalline appearance, as compared with the brownish yellow, coarsely crystalline structure of the acids from the Swan butter. Since the suspected product possessed the proper chemical characteristics, the physical properties were examined more closely. The suspicion that a hardened fat was used could not be confirmed, as there was not the slightest trace of nickel. The study of the critical solution temperatures in absolute alcohol and glacial acetic acid showed the substance to contain an artificial glyceride. The critical solution temperature in 2 volumes of alcohol was 76°, while authentic samples gave corresponding values of 79-80°, and in acetic acid, the same constant was 35° for the suspected butter, as against 65-69° for genuine products. (Grimme, Pharm. Zentralhalle, 1914, p. 285.)

#### Fermentations in Tea, Cacao, Coffee and Tobacco—

Buds and the three upper leaves are gathered from the tea plant. After a loss of about 25 per cent. by drying has taken place, the leaves are rolled on bamboo mats until the juice comes to the surface when the leaves are pressed between the hands, and are then dried over an open fire. The rolling is the most important process, and its purpose is to break up the cells without tearing the leaf, allowing oxygen from the air to penetrate to the cell juices. Fermentation of the tannin therein contained sets in. The best teas are obtained from the leaves which contain the most tannin. Schulte does not believe that bacteria play a part, but ascribes the fermentation solely to enzymes and atmospheric oxygen. Cacao beans are first freed of the hard shells, and then piled in chests, where they remain for from 2 to 10 days. Heat is developed, and the portions of the fruit (mesocarp) still adhering to the beans, are attacked by the yeast in the tropical air. Fermentation of the sugars takes place, forming alcohol, and later on, acetic acid. The object of the fermentation is merely to loosen the bits of mesocarp attached to the beans, and to kill the beans by the high temperature produced. During the subsequent drying, oxygen penetrates the interior of the beans, and changes the astringent substances. Similar processes take place with coffee, for a similar purpose. The berries are partly crushed, and the beans are piled in heaps, where they lie for several days. The hard seed coats are loosened, and can be removed by machines after drying. No acetous fermentation may take place, or the aroma is impaired. The nature of tobacco fermentation is not entirely understood. However, substances like those in tea seem to be present.

Fine tobaccos in Sumatra are fermented for 3 to 5 months. It is thought that many of the nitrogenous constituents are then by changed into acids, and finally into ammonia, nitrates, and organic acids, micro-organisms taking part. (Schulte, *Z. Natur. Genussm.*, 1914, p. 200.)

#### Action of Invertin in Alcohol—

It has been found that alcohol, methyl or ethyl, has a harmful action on the hydrolyzing or synthesizing action of certain ferments, such as alpha-glucosidase and emulsin, except when the alcohol strength is below about 35 per cent. (g. in 100 cc.). With other ferments, as invertin, alcohol is without harmful effect, and in such cases the liquid simply plays the part of a neutral medium, in which the various reactions can proceed. Perhaps it will furnish a medium more favorable than water for the biochemical synthesis of cane sugar, which has not yet been accomplished. The hydrolysis of cane sugar can be followed only by determination of the reducing sugars formed, but it was of interest to study in addition the rotation of the solutions by means of the polarimeter. In order to do so, it was first necessary to determine the rotation of glucose and fructose in methyl and ethyl alcohols of various strengths. It was found that the rotation of fructose in both alcohols decreases with increasing alcohol strength, while that of glucose increases; in other words, a positive change in rotation takes place with both sugars. Tests were made in alcohols containing from 10 to 80 g. in 100 g., to which were added 1 g. of cane sugar, and 0.2 g. of dried top yeast, which had been killed by immersion in strong alcohol. The initial rotation was  $+1.33^\circ$ . In solutions up to and including those containing 40 per cent. of alcohol, hydrolysis was complete, but in 50 per cent. alcohol the ferment was destroyed. In another series, the yeast was macerated in the corresponding strength of alcohol for a week, then filtered off, and the maceration was used for the experiment. Under these conditions action was much slower than with the yeast itself. In ethyl alcohol similar results were obtained. Hydrolysis was complete in alcohols up to 40 per cent., and almost complete in 50 per cent. The second series, using macerations, showed a slowing of the action, but this was apparently not due, as in the first case, to the destruction of the ferment, since invertin which had remained in contact with 90 per cent. alcohol for two months, still possessed hydrolyzing powers. (Bourquelot and Bridel, *J. Pharm. Chim.*, 1914, p. 321.)

#### Influence of Size of Seed on Development of Plant—

The author made a number of experimental growings from selected large and small seeds of the bean, vetch, chick pea, lupine, pumpkin and corn. In all cases the smaller seeds produced smaller plants. The rate and amount of development was less in the case of the smaller seeds; the leaves or leaflets formed were fewer in number and smaller in size; the weight of dry material produced by the two series of growths, checked each month, was always markedly greater from the large seeds' growth. A transverse section of the stem or root of a plant derived from a large seed invariably showed a much greater development of tissues, especially in the number and size of the fibro-vascular bundles. For instance, in the case of a bean derived from a large seed, 18 well-developed fibro-vascular bundles were counted in a section of a stem a month old. In a similar section, from the corresponding plant of a small seed, only 14 or 15 fibro-vascular bundles could be counted. It is evident that the greater amount of reserve material contained in the larger seeds has a favorable influence on the development and growth of the plant. Larger seeds invariably produce more vigorous plants than smaller. (Delassus, *Compt. Rend.*, 1913, p. 1452; through *Pharm. J.*)

#### Acetone and Diacetic Acid in Urine—

Legal's reagent being difficult to keep, it has been modified to contain glacial acetic acid, 10 g.; 10 per cent. solution of sodium nitro-prussiate, 10 cc. This will keep in a corked bottle for several months. To 15 cc. of filtered urine add about 20 drops of reagent, mix, and cautiously add 20 drops of ammonia water, floating it on the surface of the liquid. Acetone, if present to the extent of 1 part in 2000, gives a violet disk at the zone of contact. Acetone is sometimes found unaccompanied by diacetic acid. To detect the latter, dilute the urine with 4 volumes of water, and add drop by drop a 10 per cent. solution of ferric chloride. Normal urine, even if it contains acetone, gives a white, cloudy precipitate. A trace of diacetic acid gives a dark violet precipitate, very clearly marked. These tests are easy to carry out at the

bedside, but it must be borne in mind that they have no relation to each other, and their indications are quite distinct from a diagnostic viewpoint. (*Union Pharm.*, 1914, p. 132.)

#### Synthesis of Alpha Ethyl-Galactoside—

A mixture was prepared containing 95 g. of galactose, 2000 cc. of an aqueous maceration of bottom yeast, 1500 g. of absolute alcohol, and water to make 10,000 cc. After five months in the laboratory, the rotation passed from  $+1.53^\circ$  to  $+1.90^\circ$ , and 0.135 g. of galactose in 100 cc. was found to have gone into combination. The observed rotation agrees exactly with that calculated on the assumption that alpha-ethyl-galactoside was formed. The latter was then extracted in the usual manner, and the residue from the alcoholic solution treated with acetic ether, and on evaporation the latter gave a crop of crystals, which were further purified by acetone and alcohol. The pure substance melts at  $140-142^\circ$ , and has a rotation of  $+185.5^\circ$ , which agrees well with the value found by Fischer. (Herissay and Aulry, *J. Pharm. Chim.*, 1914, p. 327.)

#### Determination of Iodine in Pills of Ferrous Iodide—

Count out 10 pills, place them in a conical flask of 250 cc., and add 10 cc. of a 10 per cent. solution of silver nitrate. Heat over a small flame. Cool, add 50 cc. of fuming nitric acid, and continue to heat on the water bath until the silver iodide has taken on its proper pale yellow color. Add 200 cc. of water, collect the precipitate on a filter, dry it, and wash with ether to remove traces of resins which have escaped destruction by the nitric acid. It is stated that in pills supposed to contain 0.041 g. of iodine, only 0.0335 g. was found. This loss shows that the method needs modification. It is not applicable to pills containing insoluble mineral substances. The excipient recommended by the Codex (honey, licorice powder, and althaea) should be used by manufacturers, so that the iodine may be determinable. (Francois and Lormand, *J. Pharm. Chim.*, 1914, p. 332.)

#### Effect of Soap on Bichloride Solutions—

The opinion has been prevalent, unsupported by any experimental data, that the addition of soap to solution of corrosive sublimate adversely affects the germicidal action. The author proved practically that this is incorrect. The action of soap on a 1:1000 solution of mercuric chloride in no way lessens its bactericidal action. (Martius, *Hygien. Rundschau.*, 1914, p. 125; through *Pharm. J.*)

#### Therapeutic Uses of Potatoes—

Raw potatoes are put into a hydraulic press, and the liquid squeezed out. About half the weight of the potato is in the juice, which is collected. The starch and nitrogenous matter are then removed, leaving the juice containing only the salts. This is then concentrated by heat, and glycerin added as a preservative, the finished preparation, *Extractum Solani Liquidum*, being about five times the strength of the juice, or 10 times the strength of the potato. An ointment made with lard is prepared of the same strength as the extract. A liniment is made by using equal parts of the extract and compound soap liniment, or two parts of the extract and one of soap liniment. Plaster is used in the strength of 1 to 10. Ampules are used, containing the pure extract, sterilized. The preparations are used in synovitis, gout, rheumatism and bruises, chiefly for relieving pain. (Howard, *Lancet*, 1914; through *Chem. Drug.*, 1914, p. 600.)

#### Determination of Oil in Cod Liver Emulsions—

This method makes use of the simplest apparatus, and is sufficiently accurate for determinations in the drug store laboratory. In a 200 cc. flask 20 g. of emulsion are accurately weighed, and 180 g. of distilled water added. After careful shaking, resulting in a uniform, milky liquid, 20 g. are removed, corresponding to 2 g. of emulsion. This amount is transferred to a graduated 100 cc. cylinder, and 10 cc. of alcohol are added and shaken well. Fifty cc. of ether are then added from a pipette, and shaken thoroughly. If desired, 25 cc. of ether can be used, and 25 cc. of petroleum ether added, after first shaking the ether well. In a short time a complete separation into two layers takes place, the upper layer usually amounting to 51-52 cc. Twenty-five cc. of the ethereal layer are then pipetted into a weighed beaker, warmed on the water bath until the odor of ether has vanished, and cooled in a desiccator and weighed. In a 50 per cent. emulsion the residue generally corresponds to 49.5 per cent. of oil, a loss of only 1 per cent. (Feyen, *Pharm. Ztg.*, 1914, p. 252.)

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Nail Bleach Powder.**

(M.C.C.)—Try one of the following formulas taken from the ERA Formulary:

(1)

White castile soap, 1 part; hot water, 16 parts; 10 per cent. zinc chloride solution, q.s. Dissolve the soap in the water, and add the zinc chloride solution until no further precipitation occurs. Let stand over night, pour off the supernatant fluid, wash the precipitate well with water, and dry at the ordinary temperature. Carmine may be added if necessary.

(2)

Powdered rottenstone, 1 ounce; heavy magnesium carbonate, 4 ounces; sodium perborate, 2 ounces; powdered silica, 1 pound. Mix, and tint, if desired.

As a simple "bleach" there is perhaps nothing better than a solution of tartaric acid (30 grains) in rose water (1 fl. ounce).

A "nail polishing stick" is made as follows, although, if desired, the mixture may be worked up into cake form: Putty powder, 8 ounces; carmine, 20 grains; perfume, sufficient; mucilage of tragacanth, sufficient. The powders and perfume are well mixed, massed with mucilage and piped on a pill machine.

**Solid Rouge (Rouge en paste).**

- Carmine ..... 30 grains
- Talc ..... 600 grains
- Gum arabic ..... 50 grains

Powder the ingredients as finely as possible and intimately mix by trituration in a mortar, then form into a paste by the careful addition of water. Pack in very shallow porcelain pots, about 1½ inches in diameter. A darker rouge for persons with brunette complexions is obtained by increasing the proportion of carmine. See also answer to a similar query elsewhere in this department.

**Nail Polish in Paste or Cake Form: Alloxan.**

(L.S.)—The abrasives used in nail polishes are tin oleate or oxide (putty powder), emery powder, powdered pumice stone, kieselguhr, etc. A powder which contains neither tin oxide or kieselguhr and which may suit your purpose, is the following, taken from the ERA Formulary:

- Cinnabar ..... 1 ounce
- Emery powder ..... 1 ounce
- Oil of bitter almond ..... 2 drops

Mix and sift.

By adding a little oil or glycerin, the powder may be converted into a paste, while if the polish is wanted in the form of a cake the addition of a little powdered tragacanth or other adhesive is necessary. Or, the powder may be formed into a cake by incorporating it with a sufficient quantity of mutton suet or a mixture of equal parts of vaseline and hard paraffin.

Alloxan, mesoxalyl urea, was discovered by Liebig and Woehler, and may be prepared by adding crystals of uric acid in small portions at a time to nitric acid, sp. gr. 1.42, until effervescence no longer occurs. On cooling, the alloxan separates in rhombic prisms which are strongly acid and readily soluble in water. Owing to its peculiar properties, it has been recommended for use as a face paint or rouge. When mixed with a greasy body after the manner of cold cream, a white cream results. On exposure to the air by rubbing the cream so made upon the cheek or other part of the skin, the alloxan gradually turns a deep rose color, the color change being due to the oxidizing influence of the atmosphere. According to Piesse,

this product, "used judiciously, creates the most perfect delusion perpetrated by the toilet of fashion." The present price of alloxan is about 25 cents per 1 gram vial. A formula for "rouge alloxan" or "murexide paint" is given in the new ERA Formulary; the product made therefrom being said to be identical with the preparation sold in Austria under the name "Schnuda."

**Liquid for Giving Smoky Flavor to Meat.**

(R.S.C.)—Pyroligneous acid, the source of the acetic acid of commerce, either singly or in combination, is employed to impart a smoky flavor to meat, and also as a preservative. In applying it, the usual procedure is to take the meat out of pickle and dry; with a sponge or brush wash the meat all over with the crude pyroligneous acid, hang up in a cool place, and repeat the application at intervals of a few days until three coats have been applied. A mixture recommended for application to meat as a "liquid smoke" is the following:

Rectified spirit of tar, 2 ounces; alcohol, 4 ounces; mix, and add crude pyroligneous acid, 20 ounces. Shake well, and filter through paper previously well wetted with the acid. Let the meat dry well after salting, then apply the liquid with a brush to one side of the meat, letting it dry on for a few hours; then apply to the other side and after drying for a few hours, hang the meat up for several days. Repeat the process, and in another week the meat is ready to be eaten. One quart of product made according to this formula is said to be enough for application to 250 or 300 pounds of meat. Another formula is the following, which has been published under the title of:

**Smoke Essence for Curing Hams.**

- Barbados tar ..... 30 minims
- Caramel ..... 1 dram
- Port wine ..... 5 drams
- Vinegar ..... 5 drams
- Salt ..... 2 drams
- Water ..... 7 ounces

Macerate several weeks and filter.

Pyroligneous acid is one of the products of the destructive distillation of wood, and in large quantities it can be obtained direct from such distillers or manufacturers, but for your purpose you can doubtless buy all you may want from the large wholesale druggists of Chicago or St. Louis, which obviously are the commercial centers of your territory.

**Hair Tonic Containing Glycerin and Borax.**

(J.C.B.)—Here are two formulas of the character you outline:

(1)

- Cologne ..... 2 ounces
- Quinine sulphate ..... 15 grains
- Tincture of cantharides ..... 2 drams
- Borax ..... 1 dram
- Ammonia water ..... 1 dram
- Glycerin ..... 3 ounces
- Caramel, enough to color (about 1 dram)
- Bay rum, enough to make ..... 16 ounces

Mix and filter.

(2)

- Resorcin ..... 5 drams
- Pilocarpine nitrate ..... 5 grains
- Bay rum ..... 2½ drams
- Rectified spirit ..... 20 ounces
- Tincture of saffron ..... 10 minims
- Saturated solution of boric acid, enough to make ..... 40 ounces

Mix and filter.

These and many similar formulas are to be found in the new edition of the ERA Formulary, a book you should have.

We cannot give the formula for the proprietary preparation to which you refer, although according to the analysis of the chemist of the New Hampshire Board of Health reported some time ago, a sample was found to have 3.56 per cent. of

residue 10 per cent. so gly. m. and cerax or boric acid. There was also 1 and 5/8 per cent. alcohol, one-fifth of which was wood alcohol. Under the Food and Drugs Act the use of the last-named is not permissible in medicinal preparations.

#### Cleaning Shelf Bottles.

(C.D.S.—Please publish in the ERA a formula for a preparation for cleaning shelf bottles.)

So far as we can recall, there is no standard preparation used by pharmacists for cleaning shelfware or shop bottles. It is safe to say, however, that any mixture which can be used for cleaning glassware in general will answer the purpose. A preparation like the following has been recommended:

Powdered pumice stone..... 2 ounces  
Oleate of ammonia..... 3 ounces  
Solution of ammonia, enough to make... 16 ounces

Mix. Shake before using. Apply with a soft cloth, rub clean, and then polish with a soft, dry cloth.

One of the best methods of cleaning shelf bottles is by means of a damp wash-leather prepared by soaking the leather in clean water, carefully squeezing out all the moisture possible, and then rubbing the bottle well with the leather until a brilliant polish is produced. A bottle so polished does not easily show the marks of handling, while the leather, in the case of varnished labels, does not affect the varnish or attack the bottles. As a general proposition, a duster should never be used on shop bottles, as bottles that are so dusted easily show finger-marks and are liable to become dull when climatic changes take place. For shelf bottles which have contained oils, resinous tinctures, thick syrups, etc., and whose outer surfaces are covered with deposits from such preparations, a more vigorous treatment than mere polishing is needed; the labels should be removed and the bottles soaked in a warm alkaline or other solution to remove the resinous or other deposits, the bottles then well-rinsed in water to remove all traces of the cleansing agent, finally replacing the labels and polishing as above directed. By using shelf bottles with protected tops for oils, syrups, etc., the labor of caring for this part of the store furniture is reduced to a minimum.

#### Non-Alcoholic Flavoring Extracts.

(N.E.C.—From a practical standpoint, most of the so-called flavoring extracts of the "non-alcoholic type" are not satisfactory, as it is impossible to make a solution of the ordinary flavoring agents of any degree of concentration with any other solvent than alcohol. However, under the title of non-alcoholic flavoring extracts may be included those flavorings known as oleosaccharates or "oil sugars," a typical process for the manufacture of which is given in the National Formulary, i.e., one drop of the desired flavoring oil being triturated with 30 grains of sugar until a fine powder is obtained.

According to the report of the chemist of the New Hampshire Board of Health one line of flavoring extracts on the market consists of a mixture or emulsion of the different principles with glycerin and what appears to be gum tragacanth in proportions to form a paste. While no working formula so far as we know has been published, it is possible that a heavy emulsion or paste can be made with many essential oils, especially if they are of the terpenes or so-called "soluble" type, by using gum tragacanth as the emulsifying agent, a formula recommended being one part of gum to 10 parts of oil, first putting the oil in a dry bottle, then adding the gum, shaking, and finally adding 72 parts of water and shaking vigorously. Water is then added to produce the desired volume or bulk. Some experimenting is needed to produce a satisfactory preparation of this character. In manufacturing flavoring extracts the idea of eliminating a non-flavoring vehicle like alcohol is a good one, yet when concentration and cost are considered, it is extremely doubtful if any process for making these products can supersede the time-tried and almost universally employed method now in use.

#### A "Shot Gun" Stock Food.

(E.B.—Will you please give in the ERA the proportion or quantity of each ingredient in the following list to form a first-class "stock food tonic"? I have had several calls for such a preparation but have no formula from which to make the same. The list contains gentian, mustard, ginger, licorice, capsicum, charcoal, cinchona bark, rosin weed, columba, elecampane, anise seed, sulphur, ground salt, ground brewers'

grains, cottonseed meal, flaxseed meal, gluten meal, malt sprouts, pea meal, and distiller's grains, the last seven ingredients to be used as diluents."

It would be extremely difficult to find a more highly developed example of "shot-gun prescribing" than that represented in the above proposed formula for a "stock food tonic." On analyzing the various medicinal properties the different drugs are supposed to possess, there is a wonderful duplication, two or three drugs being named which are "simple bitters," a number having similar if not identical stomachic properties, while the "seven diluents" might well be reduced to a much smaller number without impairing the medicinal value of the mixture one whit. However, the following formula is suggested:

Gentian .....	8 pounds
Mustard .....	8 pounds
Ginger .....	8 pounds
Licorice .....	16 pounds
Capsicum .....	4 pounds
Charcoal .....	8 pounds
Cinchona .....	4 pounds
Rosin weed .....	2 pounds
Columba .....	4 pounds
Elecampane .....	2 pounds
Anise seed .....	2 pounds
Sulphur .....	4 pounds
Brewer's grains .....	50 pounds
Cottonseed meal .....	50 pounds
Flaxseed meal .....	100 pounds
Gluten meal .....	25 pounds
Malt sprouts .....	25 pounds
Pea meal .....	150 pounds
Distiller's grains .....	30 pounds

Reduce each substance to a fine powder, then thoroughly mix, the quantities given being sufficient to make 500 pounds of finished product.

As producing typical stock foods of this character we take the following formulas, which are much simpler in the number of ingredients, and in therapeutic value, are probably just as effective.

(1)

Ground linseed oil cake, 500 pounds; fenugreek, 50 pounds; anise seed, 10 pounds; African ginger, 5 pounds; salt, 25 pounds; licorice root, 10 pounds. This mixture is said to have an excellent aroma and will not become wormy.

(2)

Ground oil cake, 200 pounds; miller's shorts, 100 pounds; ground St. John's bread, 100 pounds; fenugreek, 30 pounds; anise seed, 10 pounds; salt, 20 pounds; iron sulphate, 5 pounds; African ginger, 5 pounds. It has been stated that linseed meal in a stock food or condition powder for immediate use is preferable to oil cake, but where the product is likely to remain in stock for a year or more, the large quantity of oil in it is objectionable, causing a rancid odor to be evolved from the packages.

#### Deodorizing Toilet Powder.

(H.H.N.)—"Please publish in the Question Box of the next ERA a formula for a deodorizing powder to be used in the armpits especially."

Any antiseptic toilet powder may be used as an armpit powder to prevent excessive perspiration and to overcome the odor. However, here is a combination which has been particularly recommended for this purpose:

Salicylic acid .....	45 grains
Zinc oxide .....	1 ounce
Orris root .....	2 ounces
Talcum .....	7 ounces
Cumarin .....	1 grain
Oil of bergamot .....	10 drops
Oil of rose .....	20 drops
Tincture of musk .....	5 drops
Carmine solution, q. s. to color.	

Reduce the solids to fine powder separately, mix thoroughly with the other ingredients, and pass the mixture through a fine sieve. Instead of musk, any other perfume may be employed if desired. See also formulas for "Arm Pit Deodorizer" and "Paste," printed in the "Selected Formulas" department.

## WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

### VII. The Woman Pharmacist's Future.

#### INSTITUTIONAL AND RETAIL SPECIALIZATION.

THE trend of the times is toward specialization in all lines, whether it is the making of a chair leg or the balance-wheel of a watch. We no longer expect a man and his helpers to build a house. Specialized workers are called in from architect to final decorators. It is not strange then that the business of "ye old time apothecary" has slowly but surely resolved itself into various well-defined branches, and that women entering the profession may elect that branch which makes an especial appeal to them.

##### Institution Work.

There are features about regular institutional work which are liked by many women workers. The field of hospital pharmacy is a very large one. Every city of any size has several such institutions and smaller cities and towns all over the country boast of their share of these institutions in proportion to their population. The hours and tasks are definitely defined, counter-service is eliminated, and the professional part of the business is magnified. There is opportunity for special study and research work, for becoming more conversant with the needed branches of this kind of work, and for combining it with analytical and bacteriological work.

The drawbacks to some might be the routine part of it and the lack of contact with the surging, restless tide of healthful, active business life. Yet those so engaged find that life comes to them in its intensest forms and the very nature of the routine relieves much of the strain.

There are other forms of regular institutions which employ pharmacists, chemists, etc. The awakening of the public conscience on the question of pure foods and drugs has greatly enlarged this field. Magazines now find it feasible to employ experts for the guidance of their readers. Public laboratories are maintained where the lay individual may have goods of any name or nature tested upon payment of the price; State and National governments also find need for the services of conscientious workers to safeguard the health of people through the products offered for sale.

Occasionally there is an urgent call for an assistant—with a thorough knowledge of pharmacy—who is also a stenographer. Pharmaceutical publications, large wholesale and manufacturing houses often find it difficult to fill this same need. Colleges of medicine and pharmacy are not few in number in our country, numbering up in the hundreds, and many of these offer positions upon the teaching faculty for those properly equipped.

##### Retail Specialization.

Not only are we directed to a particular store for the filling of our needs but to the person in that store who is especially prepared to help us. The small drug store must resolve itself into one of two things, either an institution of allied lines forming a department store on a limited scale, or a single specialized department—prescription for instance.

It will always remain a fact that people will like to deal with those on the other side of the counter who are an authority on the manufacture and use of the articles they sell. This is true whether it be lace or perfumes; washing machines or medicines.

The woman pharmacist who chooses to make a hobby of her business or of *some branch of it can cash in handsomely*, provided she lets the public know she is an authority on perfume, stationery, pure drugs, chemically pure household supplies, such as spices, flavoring extracts, baking powder, etc., etc.

Another part of the retail business in which there is a golden opportunity for the woman pharmacist to specialize is its advertising. The average business is not as carefully advertised as it should be, because the regular workers are so busy they have no time, and those who can be hired to do the

### Topeka Sisters Who Own a Pharmacy.

THERE is a drug store at the corner of Lake avenue and Sixth street, Topeka, Kan., which is at once noticeable for its neatness and detailed order. The proprietors of this business are Miss Lottie Kelly and Miss Lulu Kelly, two wide-awake business women of the city.

Both received their education in the Topeka schools, graduating from the high school, then attended the State University

MISS LOTTIE KELLY

MISS LULU KELLY

of Kansas College of Pharmacy. Miss Lottie Kelly registered in 1903, and Miss Lulu in 1905.

These ladies have lived in Kansas nearly all their lives and have been in the one drug store for nearly 18 years. The business formerly belonged to their father who died in 1912. These sisters were practically raised in the store, and are thoroughly conversant with every detail of the business. They are the only two registered pharmacists in the city owning and managing a store without the assistance of a clerk.

They consider pharmacy as one of the most independent professions a person can follow, and often wonder why more women do not take up the work, as there is such a demand for their services.

"Kelly's Pharmacy" is well and favorably known in their locality.

work are not conversant with the drug business and the timely needs of the people.

To illustrate this point a certain true case may be quoted. During the late Winter days a woman pharmacist who had made something of a study of advertising prepared a display advertisement on cold creams. In this she set forth the need of using both grease and vanishing cream and told how and why it produced a good complexion. She pointed to the dust that would collect on a polished mahogany table and showed how much more would be gathered and absorbed by the moist, oily pores of the skin. Finally, she advised rubbing a good cold cream thoroughly into the pores after which the face and neck were to be wiped off with a piece of clean linen, using firm strokes with which to do it. The advertisement was simple but convincing and embodied knowledge a professional advertisement writer alone would not have possessed. Result—a marked increase in sale of cold creams, the gaining of a number of entirely new customers, and a certain prestige which dignified knowledge always gives. Besides this came a special communication of commendation from hundreds of miles away in which permission was craved to reproduce the advertisement and use it as a piece of national publicity.

All of which merely goes to show that there is a great field for intelligent work when so small an effort produced such marked results.

### Specialization vs. Indifference.

It is often easier to drift than to make for port, easier to follow the line of least resistance than to exercise true initiative for value. In the end the effort that has placed one in the ranks of a leader is forgotten in the greater enjoyment and profit gained.

Those who succeed are those who:

1. They think out a logical course of business action.

2. Having planned a strong, constructive framework, calculate to withstand the strain of competition and the storms of changing conditions, they proceed with quiet determination to fill in the walls and put on the roof.

3. These far-sighted individuals plan to do it, just a little in advance of the crowd who are headed the same way.

This means a successful present and future for the man and woman pharmacist too, and a wealth of solid satisfaction in the bargain.

### Miss Mabel V. Bentley, of Dresden, Ont.

AMONG the Canadian girls who are making a marked success of the profession of pharmacy is Miss Mabel V. Bentley, of Dresden, Ont. Miss Bentley has long made her home in the charming town of Dresden, where she attended both public and continuation schools. Following the completion

MABEL V. BENTLEY

of her academic school education she served an apprenticeship of five busy years with W. H. Switzer, of Dresden, who has been in business for nearly 40 years, and who is recognized as one of the best in the profession of pharmacy.

Miss Bentley followed her practical store and laboratory experience by taking a course at the Ontario College of Pharmacy in Toronto. Desiring to obtain a more varied experience, this ambitious young lady accepted a responsible position with J. S. Armitage, of Paris, Ont., while he was abroad with the famous Canadian bowlers for the Summer.

But the old ties called, and Miss Bentley returned to Mr. Switzer's store and took charge while he spent some time in travel. She is now considering an engagement in the city of Detroit, Mich.

That there is a field in Canadian pharmacy for young women is being constantly proved by the success of those already engaged in the work, and the Canadian public knows that when a young woman has elected to make this her life work, she is to be trusted to make a success of it. Miss Bentley has the confidence of her public because she has merited it. She believes the work to be peculiarly suited to young women who are exact, studious and painstaking.

It is interesting to remark in passing that Dresden is noted as being the home in later years and also the burying-place of "Uncle Tom," Harriet Beecher Stowe's famous hero.

### "MAY DAY BREAKFAST" IN CHICAGO.

Experiences of women in professional life were informally discussed by speakers at a May breakfast of the Woman's Club of the Allied Drug Trade of Chicago in the Hotel Sherman followed by a matinee party. Miss Florence King and Miss Kitty Gordon were guests of honor, the former responding to the "Woman of the Bar" and the latter to "Woman of the Stage." Mrs. William P. Todd sang a group of songs, accompanied by Mrs. J. Rawson Pennington. Mrs. E. G. Earle, chairman of the executive committee of the club, was in charge of the party, assisted by Mrs. A. W. Schroeder, Mrs. P. J. Minter, Mrs. R. H. Hanke, Mrs. Fred C. Starr, Mrs. C. E. Douglas and Mrs. George Moyer.

### A Daughter of Old Kentucky.

MISS CLARA HULSKAMP, of Louisville, Ky., is a Southern professional woman who has made an enviable place for herself in pharmaceutical ranks. She attended the Louisville College of Pharmacy in 1908-1910, passed the State Board examination in 1909, and graduated in 1910.

Her college course was marked by earnestness of purpose, and that Miss Huls-kamp's popularity was in no wise affected by her studiousness is proven by the fact that she was unanimously chosen secretary of her class. Since graduating, Miss Huls-kamp has been associated with her brothers under the firm name of Huls-kamp Bros., Sixth and Kentucky streets.

In October, 1910, this young lady, who is a firm believer in the power of organization, became a member of the Louisville Chapter of the W. O. N. A. R. D. In 1911 she served it as secretary, in 1912 as treasurer, and in 1913 as chairman of the entertainment committee. Her success in these fields is too well known to need comment, last Winter's entertainments in Louisville having been particularly brilliant.

Miss Huls-kamp is deeply interested in all that pertains to the elevation of her chosen profession, and is especially pleased when the women who, like herself, have chosen to follow it, prove themselves equal to the tasks which they meet. She believes that women who are equipped by special education and who have a liking for the work are bound to succeed, both because of feminine adaptability and of the native precision and thoroughness which are theirs.

MISS HULSKAMP

### FLOWERS AND CUT GLASS TO PRESIDENT.

The fourth annual reception of the Chicago Chapter, No. 2, W. O. N. A. R. D., was held at the Hotel LaSalle, Chicago, in April. The guests of honor were Mesdames John C. Bley, Frank B. Hathaway, John F. Smulski and E. G. Reauber and Miss Anna E. Nicholes. Among the numbers on the programme were a group of songs by Miss Harriet M. Smulski, with Miss Hazel Wheeler at the piano; readings by Mrs. C. Houghton White; violin solos by Sigrid Jansen-Hathaway and dancing by Miss Rose Cox and Robert Lewis. Mrs. B. A. C. Hoelzer, president of the organization, received the members, and Mrs. C. D. Collins had charge of the programme.

### AN "AFTERNOON WITH VERDI."

"An Afternoon With Verdi" was the programme presented at the luncheon of the Chicago Woman's Club of the Allied Drug Trade in the Hotel Sherman in April. Mrs. Louise Didier was in charge of the programme, which included a lecture on "Verdi" by Mrs. Mae Amerson Zimmermann and Verdi solos and choral numbers by the Misses Adaline Hogenson, Emelia Ott, Marion Rice, Ferne Gildersleeve, Marion Cole, Florence Lichty, Hazel Arbogast, Faye Leese.

### WILMINGTON CHAPTER, W. O. N. A. R. D.

The annual meeting of Wilmington, Del., Chapter, W. O. N. A. R. D., resulted in the election of the following officers:

Miss Nora Brendle, president; Mrs. Robert Dougherty, 1st vice-president; Mrs. Oscar Draper, 2d vice-president; Mrs. Frederick Gradwohl, 3d vice-president; Mrs. B. R. McCaulley, corresponding secretary; Mrs. Willard E. Smith, recording secretary; Mrs. Norman Downs, treasurer, and Mrs. Walter Morgan, director of publicity.

## DRUG MEN YOU HAVE MET

### Professor Beal Withdraws as Editor.

**P**ROFESSOR J. H. BEAL, who has served as general secretary of the A.Ph.A. since the Boston meeting in 1911, and as editor of the *Journal* since its establishment in January, 1912, has resigned, his letter to the Council of that organization asking that he be immediately relieved so

JAMES H. BEAL

that he can retire from the work of the offices named at an early date. During the past year the condition of his health has been so serious that a few days of unusual mental or physical stress have brought on annoying and alarming symptoms. For this reason, and acting on the advice of his physician, he has asked the Council to relieve him. He feels that he should live out of doors during the Summer so that he can take such exercise as will enable him to put himself in shape for another Winter, and he informs the Council that he never expects to be in condition to again take up any work which will confine him

to an inflexible schedule of duties.

For many years Prof. Beal has been one of the most active men in pharmacy in the United States. He joined the A.Ph.A. in 1892, and was elected to the presidency at the meeting held in Kansas City in 1904. As a debater in the various contests that have been waged in the association, he has had but few equals, and in matters of legislation, his advice has been most eagerly sought, his training as a lawyer having particularly equipped him for this kind of work. As an educator, author and all-around pharmacist he has also gained a well-earned reputation, and his retirement from active life is a cause for much concern on the part of those with whom he has labored so intimately for years. He recommended the selection of Ernest C. Marshall as acting editor and general secretary to fill his place until the Detroit meeting, which arrangement he believes will give the Committee on Publication of the Association plenty of time to settle upon some one for the permanent position as his successor.

### Ephraim Bacon Again Honored.

**E**PHRAIM BACON, of Baltimore, has been appointed for another term of five years on the Maryland Board of Pharmacy, the first term having expired May 1. The appointment came as something of a surprise to druggists throughout the State for the reason that under the law only two of the members of the board may be from Baltimore City, and three from the counties. When Mr. Bacon was named the first time he managed the pharmacy of Dr. Truitt in Roland

Park, which is in Baltimore county, and he thus came under the designation of a county man. After that, however, he bought the store at 30th and Calvert streets, and he has been looked upon since then as a city man. At the present time two other Baltimoreans are members of the board, they being David R. Millard, of Morgan & Millard, and J. Fuller Frames, of J. P. Frames & Son. The status of Mr. Millard, however, is almost as uncertain as that of Mr. Bacon, because, while he conducts one pharmacy in Baltimore, his firm owns another in Roland Park, and he himself lives in Mount Washington, Baltimore county. Evidently, the Governor took the view that Mr. Millard is not to be designated as a city member. Mr. Bacon is a graduate of the Maryland College of Pharmacy, and has been identified with the drug trade in Baltimore ever since his graduation. He has been secretary of the board for a number of years and enjoys a great measure of popularity among his colleagues.

### Fifty Years a Pharmacist.

**D**URING the Easter season Hermann Schelenz, of Cassel, Germany, a pharmacist of international reputation, and the author of the renowned "History of Pharmacy," put behind him the 50th milestone of his professional life. Born April 9, 1848, at Kempen in Posen, he began his apprenticeship at the age of 16, in a shop in Freiburg, Silesia. His studies were later carried on in Berlin and Greifswald, where he passed the State examination in 1873. Two years later he came into possession of the Altstadter apothecary at Rendsburg, Schleswig-Holstein. Here he put into effect his broad ideas of the proper activities of a pharmacy, serving not only to sell and dispense drugs, but also to manufacture pharmaceutical preparations. The laboratory became one of the most important branches of the business, so that affairs were conducted in partial independence of the large industries. The apprentices who came under Schelenz's instruction went forth fully equipped with both practical and theoretical knowledge. Every spare moment was devoted to literary labors. In 1893 he sold his pharmacy, and moved to Cassel two years later, since which time he has been able to give himself up entirely to his favorite pursuit, literary work. In the period of new activity which now began, there have appeared, in addition to many monographs, his "Cosmetics" (1894), "Pharmacognostic Chart" (1876 and 1899), and "Women in the Realm of Aesculapius" (1900).

H. SCHELENZ

The monumental "History of Pharmacy," appearing in 1904, a work of nearly 1000 pages, was the result of 10 years of research among original sources. But his pen was not idle even after this effort, for in 1911 he published a "History of Pharmaceutical-Chemical Distilling Apparatus," followed shortly after by the first volume of a large work on Shakespeare and his knowledge of popular medicine.

Recognition of Schelenz's activity has not been lacking. He is an honorary member of the A.Ph.A., corresponding member of the Austrian Pharmaceutical Society, and the Society of Pharmacy of Antwerp, as well as an honorary member of the Pharmaceutical Association of Lüttich, and a charter member of the Society of the History of Pharmacy, in Paris. For a

long time he was district chairman for Schleswig-Holstein in the Deutscher Apotheker-Verein.

## MOSTLY PERSONAL

"Willie" Sells, pardoned by the Governor of Kansas seven years ago from a life sentence at Lansing penitentiary, has "come back." There are many ways of "beating buck," and just now "Al" Jennings, one of the most dreaded bandits in the West in his day, has been making speeches and writing books, and running for governor of Oklahoma. When "Willie" Sells walked out of the gates of Lansing penitentiary seven years ago he did not have a dollar—today he is the proprietor of a big drug store at 13th street and Garfield avenue, Kansas City, Kan. He has been there three years, and made his entry as a clerk. In 18 months he wanted to buy the place—he had worked and saved every day of the seven years from the date of his discharge. Sells is 44 years old, but does not look it. When he was about 17 his mother, father, brother and sister were found dead—murdered—and "Willie" Sells was convicted of the murder on circumstantial evidence only. The outside world almost to a man never thought him guilty, and his pardon by Gov. Hoch was generally approved. "I met people after my discharge who looked at me as much as to say: 'There goes a convict,' but when I met that kind of a person I held my head high and looked every man straight in the eye. You bet it's a tough job, this 'beating buck' business, and the only way to do it is to work, be honest and show the world the kind of stuff you're made of." Today "beating buck" is not hard for "Willie" Sells. He does not try to hide his past. Everybody knows it, yet believes in him. He is no longer struggling "Willie" Sells, but "W. B. Sells, Druggist," now.

—**J. S. Abbott**, formerly the Dairy and Food Commissioner of Texas, and now the head of the new Federal department under the Department of Agriculture which is virtually a clearing-house to bring Federal and State food and drug officials into closer co-operation, is a man who has made a record. He is a native of Mississippi, where he was born in 1875, a graduate from Buena Vista College (Miss.) with the degree of B.S. (1901), and from the University of Chicago in 1907 with the degree A.B. For six years he was superintendent of schools at San Angelo, Texas, and then instructor in Chemistry at the Dallas (Texas) high school, a position he held at the time of appointment as Dairy and Food Commissioner of Texas by Gov. Campbell. This was in 1907. In 1909 he was appointed by Gov. Colquitt. His work in Texas was of such a nature that he became a National figure, his decisions being often quoted, and his promotion at the time of the reorganization of the National food and drug inspection department, was the natural result of his labors in the Texas field.

—**Henry O. A. Huegel**, former president of the St. Louis R.D.A. and former president of the Missouri Ph.A., who recently sold his drug store at the northeast corner of Grand and Park avenues to A. H. Schulte, said to a correspondent for THE PHARMACEUTICAL ERA that his experience in the retail drug business had taught him that "you can't lay down a set of rules for running a drug store without providing a number of exceptions or variations for every rule." A set of rules, he said, which would bring success to one druggist, probably would not bring success to another druggist. "A man," he said, "might run a drug store in one location in a certain way and win, and if he should attempt to run a store in another location in the same way he might fail. A druggist must meet the conditions of his neighborhood. He can't lay down the rules beforehand; he must feel his way and make each advance a very careful study." Mr. Huegel's idea is to pursue the "watchful waiting" policy and when you see the mouse—spring!

—**Jerry J. Murphy**, acting-president of the Missouri Pharmaceutical Travelers' Association, and a well-known manufacturers' agent in St. Louis, is a busy man just now preparing for the annual convention of the Mo. Ph. A. and of the Travelers at Pertle Springs, beginning June 16-19. He has also been busy explaining why his face appeared in a personal item in the ERA for May in connection with a story in regard to a Bostonian, a happening over which Mr. Murphy

had no control as that was due to a mix-up in cuts in this office. Mr. Murphy in *propria persona* will be at Pertle Springs with his customary "glad hand" for friends, and the head of the Travelers promises something interesting in the way of entertainment for the hundreds of delegates who promise to attend the Missouri conventions who are "all dressed up but with some place to go."

—**Dr. Ira Remsen**, former president of Johns Hopkins University, has been awarded the Willard Gibbs medal, an award of honor in the chemical profession. The presentation took place May 15 under the auspices of the Chicago section of the American Chemical Society. This is the fourth time the medal has been awarded, and Dr. Remsen is the third American chemist to have received the honor. The Willard Gibbs medal was founded five years ago by William A. Converse, who for the last 12 years has been closely associated with the Chicago chapter of the American Chemical Society. The recipient of the medal is chosen by a jury of 12 chemists, six of whom live in the Chicago district. Professor Noyes, of the University of Illinois and editor of the *Journal of the American Chemical Society*, presented the medal.

—**W. H. Kirn**, well-known to the drug trade as chief of Parke, Davis & Co.'s private formula department, sailed for Naples in April, on the Cunarder *Saxonia*. He is accompanied by Mrs. Kirn, by his daughter Margaret, and by William Kirn, Jr., who begins his career as globe-trotter at the mature age of five. After a motor trip in Sicily, Mr. Kirn and his party go to Rome, Florence, Venice, Vienna, and Buda-Pest; thence to Switzerland for a month; later to Germany, France and England, returning to the United States some time in October. Mr. Kirn expects to see a good deal of England and Scotland from an automobile. Just before he left Detroit his numerous friends in the big pharmaceutical plant, where Mr. Kirn has been employed for nearly 25 years, presented him with a beautiful gold watch and chain.

—**Paul Henry Boire**, the new member of the New Hampshire State Board of Pharmacy, has been a resident of that State since 1885, when he settled in Manchester and opened a store there in association with Ex-Mayor Ed. C. Smith. Together they purchased the business of the late John B. Hall, which had been established for more than 60 years, and had been conducted by Mr. Hall for about 35 years. Until May, 1913, Messrs. Boire and Smith operated the store, but at that time the latter sold out his interests. Mr. Boire is a native of Canada, and learned the drug business in the Dominion. He is an Elk, the president of the exclusive Joliet Club of Manchester, and is also a member of the Manchester and Intervale Country clubs. He is married and has two sons.

—**E. G. Swift**, general manager of Parke, Davis & Co., is expected home on June 15 from his long trip around the world, after an absence of nearly nine months. His itinerary embraced England, France, Egypt, India, Ceylon, Java, China, Australia, the Philippines, Japan and the Hawaiian Islands. Mr. Swift's companions on his long journey were Mrs. Swift and his youngest son, Leroy. Since their departure from China, Dr. Selby S. Coleman, manager of the East Indian branch of Parke, Davis & Co. at Bombay, has been a member of the party. Dr. Coleman returns for a thorough posting, a well-earned vacation, and the privilege of making the acquaintance of his infant daughter, who was born in Louisville four months ago.

—**F. J. Simon**, manager of Cusachs drug store, New Orleans, and a member of the Louisiana State Board of Pharmacy, has sent in his resignation as a member of the board, because of the press of other duties. He is highly qualified as a chemist and his services were deeply appreciated by his associates of that body. Mr. Simon has taken an active part in public affairs; he has been a lecturer at Tulane University, and last year declined an important lectureship at Auburn University, Ga. The 82-year-old Cusachs drug store, for 41 years at Canal and Baronne, came under the management of Mr. Simon on Dec. 6, 1910. For the past eight years the store has occupied its own building at Canal and Baronne.

—**E. B. Heimstreet**, superintendent of the Druggists' National Home at Palmyra, Wis., has renewed a five-year lease on the drug store he operates in that town. He was formerly a druggist in Janesville, where his store was recognized as one of the best in Wisconsin. Mr. Heimstreet is known all through the middle West as one of the most progressive pharmacists in

that section of the country; he served as a member of the State Board of Pharmacy from 1882 to 1901; and served for many years as the Secretary of the Wisconsin Ph.A.—from 1880 to 1899—and although withdrawing temporarily, was again elected secretary, a position he is still holding with honor.

—**Mrs. Lois Peirce Hughes**, widow of the late W. J. Hughes, who was well-known in Omaha, Neb., as a druggist at 24th and Farnam streets, is the first "hotel hostess" in this country. She is in charge of the "women's floor" of the Hotel McAlpine in this city. She keeps posted a bulletin of all club events of interest, issues credentials of the New York Women's Club to such visitors as are eligible, and provides guides and escorts for such guests as desire them. She is a consistent club woman herself, and has succeeded in introducing something new in hotel life.

—**H. H. Kopp**, druggist, of 906 Grape street, Syracuse, while placing a display bottle in his show window, was seriously burned through seizing a live electric wire. Fifty people saw him writhing in the window, but no one dared help him until a relative, Shepard Kopp, grasped his coat and pulled the wire from the ceiling connection. Mr. Kopp was having the store remodelled and went to work with the understanding that the electricity had been shut off. Outside of the burns about the hands and the shock he was no worse for the experience.

—**Fritz Lueder**, for 40 consecutive years in the drug business in Peoria, Ill., and for 30 years of that time at the head of a store in South Adams street, has sold out. Only a few months ago the business was moved to the corner of Madison and Liberty streets. It was sold to F. A. Buchholz who, assisted by his brother, will conduct it. Mr. Lueder may re-enter the business, but the *Peoria Herald-Transcript* remarks "that anyone who has followed the drug business for 40 years has really put in 80 years' time and is entitled to retire."

—**Jonathan Dawson**, of Rochester, Ind., on April 14, in honor of the 77th year of his residence in Fulton county, and on the 60th anniversary of his residence in that city, presented to Rochester five acres of land within the corporation limits for park purposes. Mr. Dawson retired recently after having been 38 years in the retail drug business. He is now afflicted with cataract of both eyes, and is nearly blind. He is the father of Geo. V. Dawson, druggist, Rochester, Ind.; and Dr. Byron F. Dawson, druggist, Corning, Cal.

—**A. H. Schulte**, druggist, for 25 years at the corner of Jefferson and Clark avenues, St. Louis, has bought the Henry O. A. Huegel drug store at Park and Grand avenues. His son, A. C. Schulte, will be in charge of Store No. 2. When new fixtures are ready, Schulte will move the store across the street to a new building now occupied by a number of physicians. Mr. Huegel said after the sale that he expected soon to become actively engaged in the drug business, but whether in a retail way he did not know.

—**Mrs. Mary I. Banks**, of Philadelphia, has presented a fund of \$5000 to establish the Clayton French Research Fellowship at the Philadelphia College of Pharmacy. The fellowship is in honor of her father, the late Clayton French, one of the founders of the former wholesale drug firm of French, Richards & Co., which later became the Smith, Kline & French Co. He was also one of the charter members of the Philadelphia Drug Exchange and was closely identified with its work for years.

—**Mrs. B. A. C. Hoelzer**, retiring president of Chicago Chapter, No. 2, W.O.N.A.R.D., was presented with a large cut-glass vase filled with American Beauty roses at the final meeting of that organization for 1913-1914 at the Hotel LaSalle, May 12. The presentation address was made by Mrs. C. A. Storer. Mrs. C. D. Collins, president, and the other officers for 1914-1915 were installed. The first meeting for the Fall and Winter season will be held at the Hotel LaSalle in September.

—**J. A. Ziegler**, a nephew of Dean W. H. Ziegler, of the department of pharmacy, Medical College of South Carolina, has become the manager of Thomas's drug store, Columbia, that State. He holds registration certificates from the examining boards of both the Carolinas, and has had years of experience in the management of up-to-date drug stores. The Thomas store is owned by a company of which O. E. Thomas is president and H. B. Thomas secretary.

—**E. B. Patton**, well-known druggist of Waupun, Wis., recently celebrated his 31st business anniversary by opening his remodelled store to the trade. A general reception was held and the hundreds of visitors to the store were entertained by an orchestra and were presented with candy and souvenirs. The capacity of the store has been increased by the erection of balconies on each side, while a new mezzanine floor has been built, new oak woodwork, new fixtures and a new beamed ceiling have been installed.

—**Harry B. Phelps**, for 4½ years chief of the private formula department of the Baltimore branch of Parke, Davis & Co., has been transferred permanently to Detroit, where he took charge of the department of druggists' promotion. Like the great majority of the men doing the responsible work in Parke, Davis & Co.'s business, Mr. Phelps started at the bottom, and is working his way up steadily by dint of hard work, close study of the business, and native ability.

—**Nathaniel J. Rust**, of Boston, formerly senior member of the wholesale drug firm of Rust, Richardson & Co., is receiving condolences on the death of his wife at their home, 488 Commonwealth avenue, Boston, on April 24. She was married to Mr. Rust in 1863. Beside her husband she is survived by two sons and two daughters, Edgar C. Rust, of Brookline; Nathaniel J. Rust, Jr., of Oregon; Mrs. William W. Cutler, of Brookline, and Miss Martha Rust.

—**E. F. Heffner**, of Lock Haven, Pa., secretary of the Pennsylvania Ph.A., and member of the drug firm of Hilton & Heffner, is busier than ever. His firm has taken over the pharmacy of the late R. L. Fishburne, which is located in the best business section of Lock Haven, and while overseeing the new store—which, by the way, will be known as the Heffner pharmacy—Mr. Heffner will continue in personal charge of the Hilton & Heffner pharmacy.

—**Leon Evans**, of Mayfield, Ky., 1st vice-president of the Kentucky Ph.A., for two years secretary and treasurer of the Kentucky State Rexall Club, and for six years secretary and treasurer of the Graves County R.D.A., is one of the best-known men in the Bluegrass State. He believes in making himself known, both by advertising and by personal contact, and it is asserted that he knows every man, woman and child in Graves county.

—**B. J. Kremer**, the new president of the Wisconsin State Board of Pharmacy, succeeds Otto J. S. Boberg, of Eau Claire, Wis. Mr. Kremer, a well-known druggist of Fond du Lac, has been a member of the board for three years. Edward Williams, the Madison druggist, was re-elected secretary. The next meeting of the Wisconsin board will be held in Madison July 14-17. The board at its last meeting granted certificates to 61 applicants.

—**Arthur R. Stover**, State Chemist of Arkansas, for the past seven years has been at the head of the department of chemistry with the Medical department of the University of Arkansas. He devoted two years to studying chemistry and pharmacy at the University of Kansas, is a graduate in medicine from Washington University, St. Louis, and took post-graduate courses at the University of Chicago and at Harvard.

—**Winfield Scott Taylor, Jr.**, has succeeded his father in the drug business at Perry and Broad streets, Trenton, N. J., beginning June 1. Mr. Taylor, Sr., retains the ownership of the store, but the business management has been turned over to the son who has just passed the State Board examinations. He has also just completed a special course in chemistry at the Philadelphia College of Pharmacy.

—**Prof. A. L. Metz**, of the department of chemistry, Tulane University, and a well-known member of the A.P.A., was recently presented by the American Social Science Institute with a medal in recognition of his distinguished services and effort to advance "science, manufactures and public welfare." The presentation took place in the city hall, New Orleans, Prof. Metz's home city.

—**John Robinson**, clerk in a drug store at 55th street and Lexington avenue, Manhattan, was covered with blazing alcohol recently as the result of an explosion and ran into the street a mass of flames. A truck driver jumped from his feet and wrapped him in a horse blanket, putting out the fire, but not until Robinson was so badly burned that he was removed to a hospital in a serious condition.

—**Henry Sandstrom**, 63, a pioneer druggist of Moline,

Ill., who has conducted a drug store at 1514 Third avenue for years, was stricken with apoplexy soon after opening his place of business on May 8, and was removed to the hospital in a serious condition. He had been the local weather fore-caster for a number of years and was one of the pioneer Swedish residents of Mobile.

—**A. S. Greaves**, a prominent druggist of Boyertown, Pa., was severely lamed on the hip and leg last January when an ointment he was preparing caught fire. Portions of the wound would not heal and it was decided by the physician in charge of the case to resort to skin grafting. Four of Dr. Greaves' friends gave up portions of their skin, and he is now on the road to recovery.

A little girl rushed into T. R. Yarrow's drug store, 29th street and Columbia avenue, Philadelphia, recently, and asked Mr. Yarrow to save her cat. On investigation he found the cat tangled up in the wires at the top of a telegraph pole in front of the store, so he telephoned the police and electric company and finally returned the cat to the little girl's arms, unharmed.

—**Mrs. Katherine Husband**, wife of the late Thomas J. Husband, Jr., who was a prominent druggist of Germantown, Pa., is fighting to prevent her husband's relatives from obtaining a share of his \$100,000 estate. She alleges that a will produced by them, giving Joseph Scaman, a nephew of the druggist, the major part of the estate, is a forgery.

—**E. L. Scholtz**, head of the Scholtz Drug Co.'s chain stores, Denver, Colo., and his wife, are sojourning in California for a time. Mrs. Scholtz has been seriously ill with nervous trouble induced by the high altitude of Denver, and a change in climate and a period of rest at a lower elevation were deemed necessary to regain her health.

—**W. F. Pflueger**, of the Milwaukee Drug Co., probably the best-known traveling drug salesman in Wisconsin, recently returned from a three months' Winter vacation spent at Biloxi, Miss. Mr. Pflueger was accompanied by Mrs. Pflueger. On the trip north Mr. Pflueger spent a day at the Lilly laboratories, Indianapolis.

—**George F. Loar**, of Lewistown, Ill., a prominent druggist of that city, was the victim of a painful accident recently when a barrel of oil he was shifting in his store cellar fell upon his left leg, and fractured it. The break was a serious one, and Mr. Loar was confined to his bed for a number of weeks.

—**S. A. Eckstein**, the well-known Milwaukee druggist, head of the Wright Drug Co., of that city, vice-president of the N. A. R. D. and formerly president of the Wisconsin Ph. A., has been re-elected president of Post B, Travelers' Protective Association, the Milwaukee branch of the National organization.

—**John Wagner**, druggist, who has been in business in McLean, Ill., for almost 40 years, has sold his establishment to Harry G. Walters, of Bloomington, that State. For the past two years Mr. Wagner has been unable to conduct his store because of illness, and his daughter has acted in his stead.

—**E. Burlingame**, manager of the Riker-Hegeman stores in Philadelphia, "ran over" to this city in order to be present at the recent entertainment and ball of the Brookhattan Club, held at Terrace Garden. He was a conspicuous figure visiting among the boxes, shaking hands with his old colleagues.

—**W. B. Roberts**, 60, manager of Thomas' pharmacy, 844 South Fifth street, Louisville, was attacked by an automobile bandit while alone in the store shortly before 10 o'clock one night recently. He was beaten over the head with a revolver, and the cash register was looted. The robber escaped.

—**Russell Davis**, of Hillsboro, Ind., has given up his position with his brother, S. M. Davis, of Waynetown, and has become the pharmacist at the Soldiers' Home, Marion, Ind. He is a this year's graduate from the pharmacy department of Purdue University.

—**George Eskridge**, for many years with the Gatton Drug Co., Galesburg, Ill., has been appointed manager of the West Drug Co. to succeed C. Linderof, resigned. For several months Mr. Eskridge has been operating a store of his own in East Simons street.

—**Frank Schachleiter**, an active worker in the Arkansas Association of Pharmacists, has been named as a member of the Young Men's Chamber of Commerce, Hot Springs, to co-operate with the Business Men's League for civic improvement of that city.

—**D. M. O'Brien**, of Rockland, Mass., has retired from active business after 31 years as a druggist on the "Hill." For 22 years he was in business for himself. His assistant, Fred Delay, who has been with the store since he was a lad, is the new proprietor.

—**Vincent Brubaugh**, formerly employed at the Ralston & Parker drug store in Martins Ferry, O., has just purchased the business and stock of the Woodfield Drug Co., at Woodfield, O. The store is the largest of its character in Monroe county, Ohio.

—**Mr. and Mrs. Charles J. Lynn** have returned to their home in Indianapolis about May 15, after spending some time abroad, visiting England, Russia, Germany and Italy. Mr. Lynn is vice-president and general manager of Eli Lilly & Co.

—**Frank Nelson**, of Lincoln, Ill., a graduate of the pharmacy department of Loyola University, and since his graduation engaged in advanced work in chemistry, has been made the manager of the A. J. Riess drug store in Rock Island.

—**Edwin Sumner**, prominent druggist of Madison, Wis., has resigned from the active management of his drug business, which he has conducted continuously for 55 years, and has been succeeded by Louis D. Sumner, of Sumner & Cramton.

—**Cyril C. Murray**, for many years the Sydney manager of Parke, Davis & Co.'s business in Australia and New Zealand, will visit the home plant in Detroit in June. Mr. Murray comes to the United States every three years.

—**Wade H. McCree**, a graduate of Fisk University, Nashville, Tenn., is the first negro to open and manage a drug store in Des Moines, Ia., at 753 West Ninth street. He is 24 years of age, and was registered in Iowa in 1913.

—**J. H. Ferguson**, of Griggsville, Ill., has sold his drug store and stock to John Siegle, of Pittsfield. Mr. Ferguson, who has been 37 years in the business, retired on account of failing sight and because of the illness of his wife.

—**W. W. Jackson**, better known to some of his friends as "Water Wagon" Jackson, of Jonesboro, Ark., was married recently. Mr. Jackson is a "live wire" in the drug line and the benedicts will welcome him to their ranks.

—**George L. Baldauf**, the Milwaukee druggist, has completed plans for the erection of a new store building at North avenue and 35th street. It is said that the store will be one of the finest in the Milwaukee Northwest Side.

—**Ernest Lee**, for a year and a half prescription clerk at the Peter Houck pharmacy, Gloversville, N. Y., has become a partner in the Broadalbin Drug Co., Broadalbin. He is a graduate of the Albany Medical College.

—**George R. White**, president of the Potter Drug & Chemical Co., and the largest individual taxpayer in Boston, has been named a trustee of the statistics department. He becomes the chairman of the department.

—**Bernard H. Miller**, president of the Miller & Arthur Drug Co., Quincy, Ill., has been confined to the house with a severe attack of la grippe. He was threatened with pneumonia, but the dangerous symptoms passed.

—**Frederick H. Wrede**, formerly with Samuel G. McCotter & Co., and Fred Lange, until recently with the late T. A. Bronson, began business May 1 as brokers in drugs, chemicals, essential oils, etc., at 13 Gold street.

—**Prof. C. M. McKellips**, of the Oregon Agricultural College School of Pharmacy, will put in the Summer months in visiting pharmaceutical educational institutions in Germany, France and Great Britain.

—**Ralph Feig**, a San Francisco druggist, was fatally injured and his mother seriously hurt when an auto which he was driving was upset at Warm Springs, Cal. Four others in the car were not injured.

—**F. M. Rudd**, of Bronson, Mich., was a visitor in the local drug and essential oil trade recently. He said the planting of the new peppermint crop in the West gave indications of an increase in acreage.

—**Aug. F. Glaive**, food and drug inspector of the California State Board of Health at San Francisco, has changed his address to Berkeley, care of the Food and Drug Laboratory, University of California.

—**W. A. Caperton**, sales manager of Eli Lilly & Co., motored with a party of friends to Lake Maxinkuckee in

Northern Indiana recently and spent a few days fishing. A fine catch is reported.

— **Walter S. Loring**—"Loring Your Druggist" of Plymouth, Mass.—has sold his store because of ill-health, to Thomas F. Ryan. Mr. Loring has a host of friends all through Plymouth county.

— **President J. G. Hibbin**, of Princeton, will address the graduates in pharmacy of the Medico-Chirurgical College at the commencement exercises June 5, at the Academy of Music, Philadelphia.

— **Paul R. Fritsche**, the well-known Peoria, Ill. druggist, has opened another drug store on the fifth floor of the Central National Bank building. He will specialize in prescriptions at both stores.

— **W. T. Gilchrist**, one of the best-known druggists in Waukon, Iowa, has been in a precarious condition following an attack of appendicitis, but his ultimate recovery is now assured.

— **M. N. Snyder**, a druggist at 20th and Lake streets, Omaha, for the past 10 years, has retired, having sold his business to Ernest Marsh, formerly city salesman for the A.D.S.

— **Dr. A. W. Miller**, president of Aschenback & Miller, Inc., of Philadelphia, will leave for Europe on the tour conducted under the auspices of the New York German Apothecaries.

— **Eugene L. Sullivan**, a native of Lowell, Mass., but for several years in the drug business in Brockton and Whitman, has been married to Miss Marie A. Brousseau, of Brockton.

— **Ben C. Gilreath**, owner of the Gilreath Drug Co., Cartersville, Ga., has been married to Miss Estelle Strickland, one of the handsomest and most popular girls in Cartersville.

— **Henry L. Green**, the Boston and Worcester, Mass., druggist, has bought a 258-acre farm in Paxton, one of the finest pieces of property in that section of the State.

— **Dr. H. C. Wood, Jr.**, of Philadelphia, a member of the U.S.P. committee of revision, was operated upon for appendicitis recently, and at last reports was convalescent.

— **Frank Gleason**, who has been the assistant manager of the Riker-Jaynes drug store in Haverhill, Mass., has been transferred to the company's store at Lewiston, Me.

— **C. F. Clark**, of 26 Beaver street, this city, has been appointed the New York representative of Barclay & Co., manufacturing chemists of Wilmington, Del.

— **Jay Means**, one of the proprietors of the Means Bros. Drug Co., Wichita, Kan., has been married to Miss Wilma Lytle, of Indianapolis.

— **David Strauss**, the Newark, N. J., druggist, has been reappointed a member of the State Board of Pharmacy by Governor Fielder.

— **Charles Macgregor**, a Detroit, Minn., druggist, is a candidate for county commissioner.

#### Other Recent Deaths.

— **Carl D. S. Fruh**, a widely-known druggist of Philadelphia, died at his home 2445 Ridge avenue, on May 13, after an illness lasting but five days. Mr. Fruh was in his 66th year.

— **John M. Bryan**, 65, for many years a druggist in Indianapolis, both for himself and with others, died recently after a lingering illness. He was a native of Kentucky.

— **F. T. Gehrling**, a druggist formerly employed by the Schramm-Johnson Co., in Salt Lake, Utah, died in Los Angeles recently after an illness of three years.

— **Clarence K. Parks**, a Chicago druggist, and a native of Jonesboro, Ill., and later in business at Anna, that State, is dead from acute Bright's disease.

— **Nathan C. Warren**, druggist of Upland, Pa., died recently in the Chester hospital, after taking an overdose of medicine which contained laudanum.

— **Charles E. Ruch**, 53, who had been in the drug business at 1566 Columbia avenue, Indianapolis, for the past 24 years, died April 29.

— **Louis Finney**, 65, a native of Plymouth, Mass., and a druggist for a number of years in Main street, is dead at the age of 65.

— **Paul A. Davis, Jr.**, a retired chemical manufacturer, of Philadelphia, died May 7. He was 78 years of age.

— **Joseph W. Stenger, Jr.**, 34, for several years a druggist at 1318 Carson street, Pittsburgh, died May 11.

## OBITUARIES

### Sydney H. Carragan.

**S**YDNEY HANSON CARRAGAN, assistant manager of the New York branch, and manager of the Eastern traveling service of Parke, Davis & Co., and for more than 28 years associated with the Detroit house, is dead at the age of 65. He was one of the best-known and, withal, one of the most popular men in the local drug trade, a familiar figure at meetings of the National Wholesale Druggists' Association, of the State Ph.A. and of other pharmaceutical organizations, with a personality which made him a host of friends, in every branch of the drug trade in all sections of the country. He had been suffering with liver trouble for about two years, and died on May 4 at his home, 782 East 17th street, Brooklyn. The funeral was held at his house, and the interment was at Greenwood Cemetery.

S. H. CARRAGAN

Sydney H. Carragan was born at what is now known as Geyserville, near Saratoga Springs, this State, in 1849. He was educated in Saratoga and later in Troy, where he studied civil engineering, and one of his first occupations was as civil engineer and surveyor with the Map and Guide Commission which was appointed to lay out the streets of Bayonne, N. J. Following this he was for a few months with the Keasbey & Mattison Co., but left their employ to join the Eastern traveling force of Parke, Davis & Co. His territory included—at different times—the New England States, New York, New Jersey, Pennsylvania and Maryland, and after some years of this work he was made a general traveling representative. In 1894 he was appointed manager of the Eastern traveling service, and in 1902 this was added the assistant manager's position with the New York branch. He was a stockholder in Parke, Davis & Co., and was also interested in the Takamine Ferment Co.

Mr. Carragan's illness first became serious in the Fall of 1912, and in November of that year he went to Europe for treatment, returning to New York in May, 1913, just a year to a day before his death. During the past 12 months he had visited his office at infrequent intervals. He was a Mason, and members of Manitou Lodge, F. & A. M.; Amity Chapter, R.A.M.; Palestine Chapter, K.T., and Kismet Temple, of the Shrine, were present at the funeral.

Mr. Carragan leaves a widow and two sons, Lester H. and Sydney, the former son being connected with the sales force of Parke, Davis & Co., and the latter with the law firm of Untermeyer, Guggenheimer & Marshall.

#### Oscar Rydstrom.

**O**scar Rydstrom, for nearly 35 years a resident of Buffalo, and the proprietor of a drug store at 705 Broadway, that city, since 1887, is dead after an illness of 18 months. He was born in Sweden in 1848 and came to this country in 1880, taking up his residence in Buffalo. He was a member of the N.A.R.D., the A.D.S. and the Erie County Pharmaceutical Association, and was also identified with the Ellicott Drug Co. He leaves a widow and one brother, who still resides in Mr. Rydstrom's birthplace, Karlsham, Sweden. The funeral was held April 25, when the pallbearers were George Reimann, N. Severin, Frank Haft, A. J. Lockie, Dr. Edward Schwabe and Henry Vogt.

OSCAR RYDSTROM

#### Robert P. Wilson.

**R**obert Patterson Wilson, for more than a half century identified with the drug and shellac trade in New York, died

at his home in Bro. Klyn, April 20. Death was caused by general debility, as he had been ill for the past two years. He was born in New York City in 1848, and early in life entered the employ of D. X. & Morris, and later continued with their successors, D. X. Morris & Co., for about 20 years. He then entered the brokerage business, specializing in shellac. He retired in 1912 because of ill-health.

#### John Bowers Lee.

John B. Lee, for many years a member of the New York wholesale drug firm of Fraser & Lee, died the latter part of April at his apartment at Sherry's, 524 Fifth avenue. He was a native of Cooperstown, N. Y., where he was born 76 years ago, was a graduate of Williams College, and in addition to his connection with the wholesale drug trade was a banker with the firm of Lee, Livingstone & Co., and Lee, Ketcham & Co. He belonged to the Union, Metropolitan, Racquet and Tennis clubs. He retired from active business Feb. 1, 1913.

#### Robert T. Miller.

Robert T. Miller, retired merchant, and one of the most—if not the most—prominent laymen in the Methodist Episcopal Church, died recently at his home in Cincinnati. He was a native of Ohio, having been born in Neville, May 4, 1834. He was in the retail and wholesale drug business from 1857 to 1875, and later entered the oil industry. He was a full York Rite and 33° Scottish Rite Mason.

#### Dr. Carl Laux.

Dr. Carl Laux, 71, pioneer resident of Los Angeles, and one of the founders of the Sun Drug Co., of that city, died recently. He was one of the best-known residents in that city, and held the presidency of the Sun company from the time of its organization in 1900 until two years ago, when he retired from active business life. He leaves a widow, three daughters and three sons.

#### Edward O. Goldthwaite.

Edward O. Goldthwaite, 54, who had been in the drug business in Lynn, Mass., for 24 years, where he conducted one of the leading stores of the city in City Hall Square, died recently at his Summer home at Alton, N. H. He suffered from arterio-sclerosis, and had suffered two slight shocks prior to his death.

### RECENT DEATHS.

—Mrs. Caroline Kampmann, 84, a pioneer resident of San Antonio and one of the wealthiest residents of that city, and also the mother of Mrs. Theodore F. Meyer, wife of Theodore F. Meyer, president of the Meyer Bros. Drug Co., of St. Louis, died recently at her San Antonio home. Mrs. Meyer was in Texas at her mother's bedside at the time of the death and Mr. Meyer went South to join her. Mrs. Kampmann was the owner of a hotel and much other valuable property in San Antonio, and left an estate valued at more than \$1,000,000. The funeral was held from St. Mark's Church in San Antonio, an edifice nearly a half century old, whose architect was the husband of Mrs. Kampmann. Mrs. Kampmann had been a communicant of the church from its opening.

—Herman Frasch, president of the Union Sulphur Co., died May 1, at the age of 62. He was a native of Gaildorf, Wuerttemberg, and soon after he came to this country was placed in charge of the laboratory of Prof. Maisch at the Philadelphia College of Pharmacy. In 1874 he established a laboratory of his own. He soon discovered a method of refining paraffin wax and then moved to Cleveland from Philadelphia and made the chemistry of the petroleum industry his specialty, receiving many patents. In 1890 he applied for a patent upon an improvement in the sulphur-making industry, and by his process was able to tap sulphur deposits at a depth of 1000 feet. By this process a single well delivered more than 400 tons of sulphur a day.

—J. C. Perry, one of the charter members of the Philadelphia Association of Retail Druggists, a member of the first board of directors, and at one time vice-president of that association, is dead after a long illness. He was elected a member of the executive committee of the N. A. R. D. at Detroit in 1900, and served two terms, being succeeded by Charles Kelfuss. The interment was at Napanee, Canada.

—Fred E. Miller, one of the best-known traveling salesmen in Maine, and formerly a druggist in the East Side and Tansey pharmacies in Bangor, is dead at the age of 46. For 19 years he traveled for J. E. Gould & Co., wholesale druggists, of Portland. He was a prominent member of the Maine Ph. A. and was a charter member of the Bangor Council, United Commercial Travelers.

—Charles Woodberry, of Beverly, Mass., one of the most public-spirited and best-known residents of that city, and for many years a leading druggist there, is dead at the age of 67. He succeeded the late A. N. Clark at Cabot and Boyden, and later removed to the corner of Cabot and Broadway, later going to Cabot and Abbott streets. He was an enthusiastic Mason.

—Frank Dempster, 48, who conducted a drug store at Rockford, Ill., killed himself in a back room of his store by drinking a mixture of bichloride of mercury, morphine and carbolic acid. He had been fined for violating the liquor law a few days previous, and is said to have brooded over it. He formerly conducted a drug store in North Dixon, Ill.

—J. H. Elson, of 216 North 18th street, Quincy, Ill., the treasurer of the Monroe Drug Co., died recently at St. Anthony's Hospital, St. Louis, of Bright's disease. He was about 45 years of age. He had entered the employ of E. H. Monroe as a boy, and from that had worked himself up to the treasurership of the company. He was a Mason.

—Irving M. Trowbridge, politician and druggist, of Marseilles, Ill., disappeared on March 10, and was supposed to have committed suicide. This, however, was not verified until recently when his body was found on the banks of the Illinois river. Mr. Trowbridge was a native of Ohio, and was a member of various Masonic bodies.

—George Bauman, president of the City National bank, Oshkosh, Wis., for many years engaged in the drug business in that city, died recently after a brief illness. He was born in Switzerland and settled in Racine, Wis., with his parents in 1844. His former drug store in Oshkosh, Wis., is now conducted by his nephew, L. A. Bauman.

—Capt. George O. Snowden, 79, for 40 years in the book and drug business in Waterloo, Iowa, died suddenly last month. His great-grandfather arrived in Pennsylvania before William Penn and was an intimate friend of George Washington. His grandfather was closely associated with President Andrew Jackson.

—The Rev. L. B. Bullock, a druggist at Manawa, Wis., since his retirement several years ago as a clergyman in the Methodist Episcopal church, died recently after a long illness. Rev. Bullock was a clergyman for 40 years, serving in many Wisconsin pastorates. He was in business with his oldest son John.

—John Hanson, 74, a pioneer druggist of Superior, Wis., died recently of acute gastritis. Mr. Hanson was born in Norway, Sept. 17, 1840, and came to the United States in 1866. He leaves a widow and seven children. For many years he conducted a drug store at 617 Tower avenue, Superior.

—Thomas F. Hammond, 49, of 1201 68th street, Bath Beach (N. Y.), died on May 12, after a long illness with Bright's disease. He was a retired druggist and was formerly in business in Brooklyn. His funeral was at his birthplace, Boonton, N. J.

—Jack M. Asbury, 30, who was connected with the Texas Drug Co., was injured in an accident on the railroad near Santa Rosa, N. M., and died later at the railroad hospital at Tucumcari. The body was taken back to Dallas for burial.

—Tobias Voegeli, father of Thomas and Henry Voegeli, druggists of Minneapolis, and of Fred Voegeli, of Bozeman, Mont., is dead at the age of 81. He had been ill for 10 days with pneumonia. He was a native of Switzerland.

—Mrs. L. S. Woolverton, wife of a former Topeka, Kan., druggist, is dead after being an invalid for several years. Mr. Woolverton moved to Kansas City from Topeka about six years ago.

—John J. Noble, for 45 years a druggist in Newton Center, Mass., died early last month. Nearly all the business men of the section attended the funeral, as well as many of the old residents.

—E. Ripley Sibley, 82, a former successful druggist in Concord, N. H., and later connected with a number of banks and public service companies, died recently in Amesbury, Mass.

## NEWS FROM ASSOCIATIONS

### Proprietary Association Annual Meeting.

**T**HAT good patent medicine represents more real medical brains and tested medical practice than is possessed by any one physician in the country; that it is necessary for the proprietary medicine men to clean house and drive out the fakes and the frauds; that the advertising copy must be ethical "and comply with the requirements of the National Pure Food and Drugs Act," as suggested by President Cheney—were three points hammered home at the convention of the Proprietary Association of America at the Waldorf-Astoria, May 12-14. Naturally, the promulgation of such sentiments aroused considerable feeling and led to "red hot" discussion, but every action taken by the convention was in line with the banishment of substitution, the protection of prices, the abolition of extravagant claims in advertising, and the protection of the public against narcotic drugs. It was further decided that the association should assume the aggressive, and offset inimical reports in the daily press by exact statements of fact. The convention as a whole was one of the most important the association has held since its organization.

All the officers were re-elected with the exception of Secretary and Treasurer Orient C. Pinckney, who reported that his health would not again permit him to serve in the dual capacity. A unanimous standing vote of appreciation was taken by the members following this announcement. The officers for 1914-1915 are:

President, Frank J. Cheney, Toledo, Ohio; 1st vice-president, A. H. Beardsley, Elkhart, Ind.; 2d vice-president, W. H. Gove, Lynn, Mass.; secretary-treasurer, C. P. Tyrell, Syracuse, N. Y.

#### Recommendations of President Cheney.

President Cheney in commenting upon the stand of some newspapers in refusing patent medicine copy said that out of 10,000 advertising propositions sent out by his company to 48 States only 38 were refused because proprietary advertising. He suggested that the great objection was the nature of the copy itself, not the subject, and that copy should be made to comply with the pure food laws. Through the Harrison bill and the Chicago model law he believed the traffic in narcotics could be controlled. Price-protection, uniform weights and measures legislation, and anti-substitution enactments were also urged.

A short address of welcome by President Caswell A. Mayo, of the American Pharmaceutical Association, was followed by a discussion of the Stevens and Metz price-maintenance bills, by J. E. Toms, of the N.W.D.A.

The sensation of the convention was sprung when J. F. Jacobs, an advertising man representing more than 100 religious and other publications in the South, spoke on "Public Opinion as Affecting the Proprietary Business." Mr. Jacobs reminded the members of the fact that very few publications would at present take their advertising, and that many newspapers were beginning to close their columns to patent-medicine ads. He stated that public opinion was apparently strongly against patent medicines, and that some day the pressure might be so great as to demand that "patents" be abolished, as had taken place with the opium traffic in China. It was impossible for publishers to handle the advertisements of proprietaries when public opinion was absolutely against it, and hence it was urgently necessary that the association take immediate steps to educate the public to the fact that the patent-medicine business is an honest, necessary, and reputable trade. Mr. Jacobs stirred up a good deal of feeling when he asserted many manufacturers of patents were ashamed to acknowledge that they made patent medicines, and that it was the regular custom of such men to keep silent whenever proprietaries were attacked, instead of defending themselves. The advertising associations, the publishers, and the public have therefore concluded that their position is indefensible. As a matter of fact, the good patent medicine represents more real brains and tested medical practice than is possessed by any one physician in the country. But first of all, it is necessary to clean house, and put out all frauds and fakes, of which some still exist. The ad. copy must be ethical; it should

read like the talk of the family doctor. Illustrations depicting the ravages of disease should not be used, and there should be no playing on diseased minds, and appealing to agonized and harrowing feelings. The case of a food product in the South was cited, which spent \$400,000 in suits and educational campaigns resulting in a complete reversal of the former unfavorable public opinion. In concluding, Mr. Jacobs asserted that if the patent-medicine men did not get together at once and carry on a similar campaign, they would soon have to answer for it.

Ervin F. Kemp was instantly on his feet. The reason proprietary men do not call themselves patent-medicine manufacturers is, he asserted, because there is no such thing as a patent medicine, according to the U.S. patent laws. The Proprietary Association is an honorable and honest body, and does not make such extravagant claims as the physicians, for instance. "The doctors say: 'You're at death's door, but we'll pull you through.' We don't say anything like that. The American Medical Association spends more than \$100,000 a year to fight proprietaries, but we are honest enough and square enough not to spend a cent to attack them." Advertising associations have no right to talk about "fake" ads., when they try to sell mercerized cotton as silk. Moreover, no opportunity has ever been given the proprietary men for a clear statement of their position. As soon as one of them tries to get a hearing, he is bowled down by the opposition.

William Weiss was proud to be in the proprietary business. He did not think that the association had any frauds or fakes in it, and he did not know of any proprietary men who were ashamed to let it be known that they manufactured such articles. The agitation is being kept up by physicians, and there is less now than six years ago. As for ethical copy, that is very nice, but it will not sell the goods. It has been tried, and ethical copy does not get results.

President Cheney was positive that there are many proprietary men today who, as Mr. Jacobs had pointed out, are ashamed of their business, and amid cries of "No, no" from many other members, he maintained his statement.

Charles C. Green, of the Philadelphia *North American*, an organizer and officer of the National Antisubstitution League, told of the "Get what you ask for" propaganda of that association. A nation-wide publicity plan is being carried on through more than 200 newspapers and other publications to educate the public to demand and insist on getting exactly the article wanted, and to be on its guard against the substituting merchant. It is proposed to issue a licensed emblem, bearing the words: "You get what you ask for here" to all retailers who pledge themselves to banish substitution of any sort. Upon motion, the association endorsed the work of the League.

Fred. K. Fernald, chairman of the committee on relations with the retail trade, reported that general sales had fallen off to some extent, particularly in some localities, due to the competition of the "chain" stores, medicineless fads and the agitation against patent medicines as such. He called attention to page three, line 13, of the Stevens bill, which, he said, would wipe out sub-quantity propositions to dealers. He mentioned this fact in order that it would not be overlooked.

Whidden Graham elaborated upon the Stevens bill, which, he said, is not a finality, but merely something definite for the concentration of the forces favoring the underlying principle of price protection. After considerable discussion, the association went upon record as in favor of a bill to prevent discrimination of prices and to provide for publicity of prices to dealer and the public. The details were left to the executive committee.

Secretary-Treasurer Pinckney reported that the association had 189 active members and 62 associate. There had been 15 resignations. Mr. Pinckney reported a balance on hand from 1913 of \$2385. Receipts during the past year had been in the neighborhood of \$38,000, disbursements were in the sum of \$35,934, and balance on hand, \$2781.

Carl J. Balliett, chairman of the membership committee, reported that 67 new members, 34 associate and 33 active had been taken in. Eleven applications for active membership had been rejected, and five are pending. The total net gain in members is 52.

Ervin F. Kemp reported in his capacity of secretary for various committees, reporting that papers which had conspicuously campaigned against patent-medicine advertising are losing, but urged that whatever the association does to coun-

tract this advertising boycott should be directed to the editorial and not the business department of the newspapers. Mr. Kemp did not agree with Mr. Jacobs about members being ashamed of their business; he had never yet apologized for his business when he had to do that he would retire.

Two propositions to raise funds for work during the present year were presented to the members and each was discussed at great length. One, to increase the dues for active membership to \$100 was tabled until next year. The other, to request all the members to appropriate an assessment of one-fifth of 1 per cent., or \$2 per \$1000, on business done during the past year, was adopted.

A resolution to the effect that the association employ a responsible detective agency to ascertain the facts in every case where death was alleged to be due to patent medicines was unanimously adopted and the details referred to the executive committee for action. In every case of erroneous report editors publishing the same will be requested to retract. The move was taken to stave off inimical legislation.

The members were requested to write letters of protest against Commission bill No. 165, an act regulating the labeling, sale, and advertising of patent and proprietary medicines, etc., in the Philippine Islands. Personal friends of Burton Harrison, Governor-General of the islands, were also requested to write him to use his influence to head off the legislation objected to. The measure takes effect July 1, 1914. President Cheney observed that if members had to publish their formulas in the islands they might as well do it here—in fact, they might as well give up the combinations of their safes.

Charles B. Watson gave an interesting explanation of the anti-substitution movement with which he is connected. An anti-substitution bureau had been proposed and National advertisers are to be asked to set aside a fraction of 1 per cent. of their appropriations to further its work. He said that fully 50 per cent. of the force of National advertising is diverted by substitution.

Harry Good presented resolutions in memoriam of deceased members. Caswell A. Mayo presented a paper on "Opportunities in South America." Mr. Kemp pointed out that litigation under the new Rhode Island pure advertising law had so far mostly concerned department stores.

Attorney George L. Douglass gave an interesting talk, remarking that being located now in the Chicago office and not on the firing line his colleagues, Messrs. Kemp and Thompson, had necessarily pre-empted all the ammunition. George C. Englehardt, of Chicago, delivered a fiery address in the course of which his observations anent the medical profession of this country was enthusiastically received. James W. Morrisson, of Chicago, as an individual and not as a delegate, briefly and wittily addressed the members. Others to speak were James T. Finneran, president of the N.A.R.D.; Dr. Henry C. Lovis, president of the National Association of Manufacturers of Medicinal Products; Dr. Adolph W. Miller, personal representative of George W. Beringer, president of the American Pharmaceutical Association.

One of the most important reports submitted at the convention was that of Harry B. Thompson, the general counsel for the body, in which he called attention to the abolition of the "guarantee label and the serial number" by the Federal authorities, and contended that this action called for demonstration to the public by individual manufacturers that there would be no lowering of quality standards. He stated that the greater part of the proposed legislation adverse to the interests of the manufacturers, or unnecessary, had either been withdrawn or else amended to meet the views of the drug interests, and he further stated that, in his estimation, germicides and bactericides were not properly classified under the provisions of the National insecticide laws.

## They Are Coming This Way, the A.Ph.A.

By **NORMAN I. TAYLOR.**

Anyone who has visited Detroit will readily answer the question—"Why is Detroit the greatest convention city in the world?" Time and space forbid giving the thousand and one reasons here. Needless to say, Detroit fully lives up to the reputation established by its world-wide known slogan, "In Detroit Life Is Worth Living."

By virtue of its location, Detroit is logically the Convention

City of America. Detroit offers the advantage of a wonderful river which is planked on one side by Lake St. Clair and on the other by Lake Erie. Detroit is wealthy in beautiful parks, drives and boulevards—the climate is ideal.

In Detroit this Summer will gather many conventions and—the greatest of these will be the American Pharmaceutical Association gathering on Aug. 24-29. All roads lead toward Detroit. You are expected to be here to partake in the big festivities and listen to the good things which big men who know will impart for your benefit. Your presence will make a big time bigger. There'll be something doing every minute and you'll have the time of your life—don't miss it. Say to yourself "I'll be in Detroit on August 24-29" and—be there.

An efficient entertainment committee has done itself proud. Arrangements are completed. Send your notice to the secretary—tell him you are going to Detroit. You can greatly aid the committee on accommodations by sending notice now. Get your reservation in early. Be a booster—get your fellow pharmacists to come along. As for the programme—there never was a better one. Loosen up. Get away from yourself. Gather in the drug center of the world with big men who are doing big things in a big way. The American Pharmaceutical Association expects every man to do his duty. Omar Khayyam sums it all up into a nutshell by proclaiming—"When all the temple is prepared within—why waits the drowsy worshiper without?" To you all of this means, be in Detroit for Aug. 24-29. *Nuf ced.*

### Alabama Ph.A.

Extensive plans are being made for the entertainment of the Alabama State Pharmaceutical Association at Anniston on June 17-18. Important action is expected on the matter of State food and drug legislation. S. L. Toomer, of Auburn, is president of the association and W. E. Bingham, of Tuscaloosa, secretary.

### Arkansas Ph.A.

The 32d annual convention of the Arkansas Ph.A. and the 8th annual of the pharmaceutical travelers' were held at Little Rock, beginning May 12. R. A. Warren, of Clarksville, presided over the druggists, and C. L. Ferguson over the travelers. The address of welcome was made by Mayor Charles E. Taylor, of Little Rock.

### California State Ph.A.

By a majority vote the members of the California Ph.A. decided to postpone the annual meeting from May to June, and the dates now decided upon are June 16-18 at the Casa del Rey, Santa Cruz, generally admitted to be the finest beach hotel in the State of California.

### Connecticut Ph.A.

The annual meeting of the Connecticut Pharmaceutical Association will be held at the Shoreham, Morris Cove, New Haven, on June 24 and 25. The officers are: President, S. M. Aller, South Norwalk; 1st vice-president, H. E. Purdy, Derby; 2d vice-president, I. H. Levy, West Haven; secretary and treasurer, P. J. Garvin, Bethel.

### Georgia Ph.A.

The 1914 meeting of the Georgia Pharmaceutical Association convenes at Indian Springs for a two-day session June 9-10. As president, Robert C. Wilson will offer the following recommendations for the consideration of the body: A reorganization of the association; revision of the pharmacy laws; renaming and enlarging standing committees, defining their duties; classification of membership into members and registered members, registered members only to have privilege of the ballot; election of officers—nomination of two members for each vacancy a year in advance of election, the secretary to notify every pharmacist in the State in advance of election who the candidates for office shall be; election of board members, same plan as in election of officers; remuneration of board members—place board members on salary, the difference between receipts and expenses to be turned into the general treasury of the association for use in a propaganda campaign. From this source we would have two or three thousand dollars each year with which to conduct this campaign, from which every druggist in the State would reap large profits.

**Illinois Ph.A.**

The annual convention of the Illinois Ph.A. and the I.P. T.A. will be held at the Mineola Hotel, Fox Lake, June 11, 12, 13.

**Kansas Ph.A.**

The 35th annual convention of the Kansas Pharmaceutical Association was held at Hutchinson, beginning May 15, with an address of welcome by Mayor Fred W. Cook, of Hutchinson. By vote at the opening session the druggists pledged themselves to "go into politics" if necessary to obtain funds for the K.U. School of Pharmacy. More help is needed and better laboratory facilities for the analyzing of foods and drugs to support the State food and drug laws. Dean L. E. Sayre, of the school, told of the handicap under which the work is being done at present. The following officers were elected by the State association and by the Travelers' Auxiliary, which met at the same time:

*State Ph.A.*—President, Walter Bangs, Madison; 1st vice-president, J. W. Giesburg, Kansas City; 2d vice-president, E. E. Bloom, Hutchinson; secretary, R. von Riesen, Marysville; assistant secretary, J. M. Brunt, Topeka; treasurer, John Schmitter, Gypsum City; librarian, Dean L. E. Sayre, K.U. School of Pharmacy, Lawrence.

*Travelers' Auxiliary*—President, W. J. Brannaun; 1st vice-president, J. E. Kohler; 2d vice-president, Joe Bailey; 3d vice-president, F. H. Atkinson; secretary-treasurer, Ed. C. Hamill, Kansas City.

The usual entertainments and excursions were programme features, and the auxiliary was the host of the association at the annual banquet at the Bisonte Hotel.

**Kentucky Ph.A.**

The annual meeting of the Kentucky Ph.A. will be held at Lexington in June. The papers and discussions will be under the direction of C. S. Porter and an efficient committee, and the entertainment programme as already planned will be of unusual interest. Dr. Robert M. Allen, director of the Kentucky Experiment Station, will take charge of the programme one afternoon, and the entire Experiment Station will be thrown open to the pharmacists. An exhibition will be held simultaneously with the convention sessions in the ball-room of the Phoenix Hotel.

**Maryland Ph.A.**

The annual meeting of the Maryland Pharmaceutical Association will be held this year at Annapolis, the State capital. The famed old Carvel House has been selected as headquarters, though it is thought that the State House can be secured for the sessions. Governor Goldsborough will be asked to make an address of welcome to the members in attendance, and there are to be other features of a social nature out of the ordinary. The sessions will begin June 23 and continue about four days. Just who will be picked for president to succeed J. Fuller Frames has not yet developed. The local arrangements will be looked after by J. N. Gilbert, a druggist of Annapolis, who has been named local secretary. He will have the assistance of J. Edwin Hengst, of Baltimore, chairman; J. Emory Bond, of the Baltimore branch of Parke, Davis & Co.; G. A. Sohl, H. C. Spetzler, and Charles P. Muth, of Muth Bros. & Co., wholesale druggists of Baltimore. Among the diversions will probably be an excursion to some bay resort, although Annapolis itself offers many of the attractions of a watering place, being situated on the Severn river, and the home of the United States Naval Academy.

**Special Meeting Minnesota State Ph.A.**

A special meeting of the Minnesota Ph.A. was held in Minneapolis in April when a long list of committee and delegate appointments was acted upon. M. A. Lillis, of St. Paul, was elected local secretary. The following delegates were named:

To the N.A.R.D.—W. A. Abbett, Duluth, chairman; Henry Rauch, Minneapolis; H. W. Rietzke, St. Paul.

To the A.Ph.A.—Dean Wulling, Minneapolis; E. L. Newcomb, Minneapolis; A. J. Eckstein, Clear Lake; W. A. Frost, St. Paul.

The following resolutions were passed:

WHEREAS, Untruthful and misleading statements in advertisements lead to fraud and deception, and

WHEREAS, Truthful advertising is necessary to ensure equity among dealers and justice to consumers,

*Be it therefore resolved*, That the Minnesota Pharmaceutical Association energetically protest against all fake and fraudulent advertisements; and be it further

*Resolved*, That the secretary of the association be instructed to give publicity to this resolution.

The resignation of C. T. Heller as a member of the executive committee was accepted, and W. A. Abbett, of Duluth, was elected in his stead.

**Mississippi Ph.A.**

More than 600 druggists of the State are expected at Jackson, June 10-12, for the annual convention of the State Ph.A. The programme of entertainment will be the most elaborate ever attempted by the city, and aside from the purely entertainment features, addresses will be delivered by prominent men. H. M. Todd, Tom Folkes and J. C. McGee are members of the local committee having the entertainment in charge.

**Nebraska Ph.A.**

The 33d annual convention of the Nebraska Pharmaceutical Association will be held at Grand Island, June 23-25. An elaborate programme both of entertainment and for the sessions is being prepared, and liberal prizes are offered for papers and for displays of home-made pharmaceuticals. J. H. Schmidt is president, and J. G. McBride secretary, and at last reports the membership of the association was rapidly approaching the 600 mark.

**New England Branch, A.Ph.A.**

The annual meeting of the branch was held at Hotel Plaza, Boston, when officers for the ensuing year were elected as follows:

President, Fred A. Hubbard, Newton; vice-president, F. W. Archer, Milton; secretary-treasurer, R. Albro Newton, Southborough; chairman committee on professional relations, Frank F. Ernst, Jamaica Plain; chairman committee on membership, William H. Glover, Lawrence.

Dinner was served at 7 o'clock to the branch members and the members of the Boston Association of Retail Druggists, after which the following speakers were heard: John R. Sawyer, William H. Glover, R. A. Newton, Frank P. Ernst and Elie H. LaPierre on "Individual Propaganda"; Fred W. Connolly on "Liquor in the Drug Store," and James F. Finneran on "The Attitude of the State Sealer on Apothecaries' Weights and Measures." This latter subject brought out so much discussion that it was nearly midnight before the meeting adjourned.

**New Jersey Ph.A.**

The 44th annual meeting of the New Jersey Pharmaceutical Association will be held at the Hotel Breslin, Lake Hopatcong, June 16, 17, 18, 19. The Query Committee, of which George M. Beringer, Jr., is chairman, has prepared a list of 25 queries and suggestions for papers, and promises a collection of live, snappy contributions of a practical nature. The entertainment programme includes the president's reception, a whist with refreshments given by the women's auxiliary, an automobile ride to Newton for the ladies with tea at the Cochran House, informal cards, music and dancing, bowling, round trips around the lake, an entertainment by the travelers, and a baseball game and sports.

**North Carolina Ph.A.**

The 35th meeting of the North Carolina Ph.A. will be held at Hendersonville, the "mountain city," on June 17, 18, 19. Many entertainment features are being planned by the local secretary, W. H. Justus, and by J. G. Beard, secretary of the association. C. P. Harper, of Selma, will preside.

**Transportation to N.Y. State Meeting.**

The annual meeting of the New York State Ph.A. will be held at the United States Hotel, Saratoga Springs, June 23-26 inclusive. It was originally planned to hold the convention at Sagamore, Lake George, but owing to the destruction of the hotel by fire, the executive committee found it necessary to find another meeting-place, and Saratoga Springs was chosen. Summer excursion fares will be in effect at the time of the meeting via all lines to the Springs and return, and

tickets will be good up to Oct. 1, and will permit stopovers at any point en route. The following are the rates announced by the transportation committee, of which M. R. Mandelbaum is chairman:

Fares	
New York	\$7.98
Yonkers	7.38
Poughkeepsie	5.03
Albany	2.34
Utica (via Schenectady)	4.44
(via Albany)	5.78
Rome (via Schenectady)	4.99
(via Albany)	6.33
Syracuse (via Schenectady)	6.44
(via Albany)	7.78
Auburn (via Schenectady)	7.44
(via Albany)	7.78
Rochester (via Schenectady)	9.68
(via Albany)	11.02
Buffalo (via Schenectady)	12.32
(via Albany)	13.98
Binghamton	5.93
Elmira	11.73

Fares from other stations in New York State may be had on application to local agent.

#### Ohio State Ph.A.

Edward Schl. of New Philadelphia, president of the Ohio State Pharmaceutical Association, has sent out an earnest letter urging a banner attendance and as general an interest as possible at the 36th annual meeting of the association at Cedar Point, July 7-10 inclusive.

#### Oregon State Ph.A.

The coming State convention of the Oregon State Ph.A. will be the "silver anniversary" of the association, and plans already made indicate the banner meeting of that organization at Newport, the second week in July. The following committees have the meeting in charge:

Trade Interests—A. W. Allen, Portland; D. O. Woodworth, Albany; F. E. Rogers, McMinnville; Leon B. Haskins, Medford; Theo. Laurin, Astoria.

Papers and Queries—J. M. A. Laue, J. M. Ricen, Robert S. Ball, Portland; Prof. C. M. McKellips, Corvallis; W. L. Miller, Portland.

Legislative—Joseph Tallman, Pendleton; Fred Dawson, Albany; A. Kuykendall, Eugene; D. J. Fry, Salem; Dr. W. I. Cotel, Portland.

Programme—W. I. Stock, H. J. Martin, J. M. A. Laue, Ross Plummer and E. A. Robinson, all of Portland.

Exhibits—Fred Dawson, Newport; Ralph Crysler, F. Byerly, W. A. Gradon, Harry Draper, all of Portland.

Entertainment—C. G. Huntley, B. F. Jones, F. C. Pozzi, S. A. Matthieu, J. M. A. Laue, Portland.

#### Pennsylvania Ph.A.

The annual meeting of the Pennsylvania Ph.A. will be held on June 23-25 at the Buena Vista Spring Hotel, Buena Vista, Pa., a favored place for State meetings, as this is the fifth time it has been selected by vote of the members. It is located on the summit of one of the highest peaks of the Blue mountain range, and the sightliness of the location and the excellence of the hotel undoubtedly have a great deal to do with the popularity of Buena Vista as a convention locale.

#### Rhode Island Pharmaceutical Society.

At the recent quarterly meeting of the Rhode Island Pharmaceutical Society, Prof. John E. Groff, of the State Board of Food and Drug Commissioners, discussed "Standardization Difficulties and How to Meet Them." He said: "According to records only about 1 per cent. of all the druggists in Rhode Island find out for themselves whether the drugs used by them are of the proper standard or not." He explained how simple the process is and how short a time is required to make the tests, and urged the co-operation of the druggists with the State officials to maintain the standardization of all official preparations according to approved methods and recognized formularies. Clarence E. Bowmer, secretary of the organization, read an invitation from the Virginia Ph.A. to the Rhode Island organization to be the guests of the Southern organi-

zation in September, the invitation being accepted unanimously. Following the session there was an entertainment with music, monologues, etc. A Dutch supper was served.

#### Texas State Ph.A.

The 35th annual convention of the Texas State Ph.A. will be held in El Paso, Texas, June 16-18. To quote from the announcement: "There will be something doing all the time. Visitors will be given the opportunity of visiting the largest smelting plant in the world, and there will be a trip to the Southwestern Ostrich Farm. There will be an excursion to Ysleta, the oldest town in the United States, and possibly a run over into Mexico to see a bull fight, a chicken fight, and possibly a real fight. There will be a cavalry drill at Fort Bliss, automobile rides, music, smokers, banquets, hesitations, waltzes, tango dancing, and possibly the latest dance—the Rio Grande glide." Athletic sports, and a trip to Cloudcroft over what is termed the finest scenic railway in the world, are added attractions, and Mayor C. E. Kelly, of El Paso, an old-time druggist, has offered a prize of \$100 to the visiting druggist who proves himself the best tango dancer at the meeting.

#### Virginia Ph.A.

The annual convention of the Virginia Ph.A., at which time the Rhode Island Ph.A. will be guests of the association, will be held at the Jefferson Hotel, Richmond, Sept. 15-17. Between 300 and 400 delegates are expected to be present, and the city of Richmond through its committee on advertising and enterprises is expected to expend some \$500 or more in assisting in the entertainment of the guests. E. C. Toone, of the local entertainment committee of the pharmacists, urged such action before the city committee at a recent meeting of the City Council.

#### Women's Ph.A. of the Pacific Coast.

The April meeting of the Women's Pharmaceutical Association of the Pacific Coast was held in the Pacific building, San Francisco, with Mrs. R. E. White, the president, in the chair. Discussions were held on "Isotonic Salt Solutions," "The Preparation of Extract of Malt and Cod Liver Oil," "Methods of Preparing Ichthyol Capsules," "Iodothyrene" and "Thyroidectin." A communication was received from Miss Clarissa Roehr, secretary pro tempore of the San Francisco Branch of the American Pharmaceutical Association, in regard to the May meeting of the San Francisco Branch. Miss Mabel Dolcini read a paper on "Ozone," and Mrs. F. F. Rajotte presented a paper on "Boils." The discussion of the evening was on "The Card-Index for Stock," and Miss Nelson, Mrs. White, Miss Dolcini and Dr. Winslow participated. The May meeting of the association was held on the 22d in the Assembly Hall, Pacific building, San Francisco.

#### Western State Association Meetings.

Arizona—Phoenix, Nov. 12.

California—Santa Cruz, June 16-18.

Idaho—Boise, second week in June.

Oregon—Newport, the second week in July.

Utah—Salt Lake, the latter part of June.

Washington—National Park Inn, Longmire, July 13-15.

#### Dr. Wm. C. Anderson Addresses Brooklyn Ph.A.

The Brooklyn Pharmaceutical Association devoted its May meeting to the consideration of the Stevens bill, Dr. William C. Anderson addressing the members upon that subject. Albert Fischer, a member, also spoke upon the measure.

#### Chicago Branch, A.Ph.A.

The Chicago Branch of the A.Ph.A. was honored at its April meeting with an address by Prof. John Uri Lloyd, of Cincinnati. Prof. Lloyd's subject, "The Evolution of American Materia Medica," led to many reminiscences and his talk was very earnestly received by the audience. Secretary Gathercoal introduced the new A.Ph.A. button, samples of which had been received from Treasurer Whelpley and orders were taken for 20 of the buttons. They were voted very neat in design and excellent in finish. The May meeting was devoted to criticism, favorable and unfavorable, of the changes in the monographs of galenicals for the new Pharmacopoeia as recently published by the Revision Committee. Several pharmacists, members of the branch, led by I. A. Becker, phar-

macist at Michael Reese Hospital, prepared criticisms for presentation at this meeting.

#### City of Washington Branch, A.Ph.A.

The April meeting of the City of Washington branch of the American Pharmaceutical Association was held at the National College of Pharmacy. The director of the National Vaccine and Antitoxin Institute of Washington, D. C., Dr. J. R. Stewart, described to the large number of members and guests, and to the entire senior class of the National College of Pharmacy, present by special invitation, in a most interesting and detailed fashion, the origin and development, manufacture, characteristics, and peculiarities of each vaccine and antitoxin now in practical use, and outlined the character of experimental work now being conducted to increase the scope and efficacy of this form of medication. He supplemented his address with exhibits showing antitoxins in various states of manufacture and with demonstrations of the uses of various types of syringes. Following his address he answered all questions propounded to him concerning this line. When he took his seat he was given a rousing vote of thanks. The May meeting has been postponed until June 6, when the branch will visit the Department of Agriculture drug farms opposite the Arlington National Cemetery, in Virginia, at 1:30 p.m. At this meeting Dr. Stotsberg, who is in charge of the farms, will, after showing the members around, give a talk on drug culture, fake money-making schemes involving such culture, and a number of other subjects interesting to the retail druggist and to the general public.

#### A.Ph.A. Members Celebrate Procter Birthday.

On Saturday, May 2, a number of prominent members of the American Pharmaceutical Association gathered at the Philadelphia College of Pharmacy to honor the memory and to celebrate the birthday of Professor William Procter, Jr. John F. Hancock, of Baltimore, chairman of the committee in charge of the erection of a bronze statue of Professor Procter in Washington, and Edward Berge, the sculptor, exhibited a model of the statue which is to be nine feet high and mounted upon a granite pedestal eight feet high. William Procter, Jr., was born in Baltimore on May 3, 1817, was graduated from the Philadelphia College of Pharmacy in 1837, was elected professor of pharmacy at the College in 1846, became editor of the *American Journal of Pharmacy*, and carried on its work for 20 years. He was one of the founders of the American Pharmaceutical Association in 1852, and later became its president. He was dean of the Philadelphia College of Pharmacy for a long period and was connected with the college for many years until his death in 1874. After a luncheon had been served, the party left by train to visit the grave of Professor Procter at Mt. Holly, N. J. Among those present was Samuel M. Bines, the oldest living graduate of the Philadelphia College of Pharmacy. He was a member of the class of 1848.

#### B. L. MURRAY ADDRESSES N.Y. BRANCH, A.P.H.A.

Presents Extensive Criticisms of U.S.P. Changes and Otto Raubenheimer Replies in Full to Same.

**B**ENJAMIN L. MURRAY addressed the members of the New York Branch of the American Pharmaceutical Association at their May meeting, upon proposed changes in the U.S.P. Mr. Murray stated that he had learned in Philadelphia that the Committee of Revision had done much better work than appears from the bulletins issued. He contended that if pharmacists were to have a pharmacopoeia it should be one easy to use, which could not be said of the present edition. He proposed that every paragraph of the U.S.P. should be numbered. Then, when a reference was given, it would be definite.

Mr. Murray presented numerous examples of a type of articles for which there was not enough use to justify their presence in the Pharmacopoeia. Many queries were made relative to U.S.P. provisions by the speaker. What was a "well closed bottle?" How should magnesium and sodium sulphates be enclosed: some articles were so cheap that no one felt like spending money on containers. What "forms" shall we have in the U.S.P.? For instance, when "large, transparent crystals" are specified, might not the small crystals be suitable?

Provision should be made for deliquescent and efflorescent salts. In many cases the specific gravity is given and must be ascertained at 25° C., a very unhandy temperature. Fifteen degrees C. should be given in parenthesis. The "ash" in the U.S.P. is very unsatisfactory, sometimes no ash being required. When "no appreciable residue" is allowed; what is that, and how about the size of the original sample? Some of the easiest electrolytic assay methods are not included, for example, the silver and copper methods. The first-named is a fine one. Mr. Murray didn't see why it shouldn't be used. He concluded his remarks by picking out about 100 specific instances for criticism.

Otto Raubenheimer undertook the burden of meeting Mr. Murray's criticisms, article by article. Benzin, he stated, was included in the pharmacopoeia because it is used. The same reason applied to purified talc. Relative to the keeping of chemicals, Mr. Raubenheimer thought that the U.S.P. was superior to all others. The "forms" of chemicals was a good criticism. He also agreed upon the difficulty of obtaining specific gravities at 25° C. The question of adopting a standard dropper was briefly discussed in the course of Mr. Raubenheimer's remarks.

Dr. H. V. Army, president of the branch, stated that the sub-committee had discussed the propriety of including a table in the pharmacopoeias for specific gravities at 25° and 15°. As for electrolytic processes, those that will be published in the U.S.P. are merely an opening wedge.

#### PROF. REMINGTON ADDRESSES N.Y. BRANCH.

Delivers Enlightening Talk on Work of Revising the Pharmacopoeia—Dr. Bastedo Opens Discussion.

**P**ROFESSOR JOSEPH P. REMINGTON, chairman of the Committee of Revision of the United States Pharmacopoeia, was the guest of honor and principal speaker at an unusually well attended joint meeting of pharmacists and physicians, held under the auspices of the New York branch of the American Pharmaceutical Association at the New York College of Pharmacy. Dr. Remington's remarks threw a remarkably clear light upon the work of revision, one of the book's severest critics later observing that the speaker had awakened his sympathy for the committee whose task it was to consummate the work. In part, he said that the work of revision was fast approaching completion and the book was soon to be printed. By international agreement it would contain the same strengths and doses for all powerful preparations as do many of the leading pharmacopoeias of the world.

An authoritative international pharmacopoeia, said Professor Remington, is now regarded as a dream of the future. There is no reason why pharmacists cannot unite on doses, but the doctors of the world cannot be made to unite on drugs. The pharmacopoeia must contain drugs used in this country regardless of any particular locality. Professor Remington mentioned the international pharmacopoeia, universal peace and church union practically in the same breath as all being about equally difficult of realization. There is no reason, however, why pharmacists of the world should not accept as many subjects in common as possible.

The speaker compared the unique way in which the U.S.P. is revised with that in vogue with other pharmacopoeias, emphasizing the absence of politics, the small honorariums, the fair representation of both healing professions and the Government, etc., all features of our method. He explained the mode of electing the executive committee and the right of appeal to the general committee for a vote enjoyed, but not as yet exercised, by the chairman and the executive committee. Professor Remington compared the organization for the work of revision with that of the National government. Publicity, he said, is a prominent feature of this revision, but, necessarily, there should be a time limit to the world-wide criticism and comment.

Ament the admission of synthetics, he asserted that to make this possible in our pharmacopoeia the owner must sign an agreement, otherwise he could make any change in color, purity or otherwise, and the U.S.P. would be powerless. The manufacturer could sue for any damages he might believe he had sustained by the inclusion of his product. A manufacturer had recently won such a suit in Holland. A new U.S.P. could not be issued for every change in color, etc.

Volatile oils have been the hardest subjects the committee has had to deal with. In its work the members have had the

and the assistance of many throughout the country and will be carried on in many laboratories. The pharmaceuticals done in any way the work of one man, it is republican, and the work is done by one and the same time.

Other suggestions that the committee could do would be to Latinize the titles. The Latinizing of official titles is a suggestion of old language and to a great extent unnecessary. The new U.S.P. It will not be necessary to revise it for 10 years for a U.S.P. Important amendments will be sent out every so often. The only difficulty in the way of this is one of legality. Would such amendments and alterations be binding in the eyes of the law? It might be made into law by act of Congress.

In conclusion, Professor Remington discoursed upon a number of stereopticon slides depicting pages of the old and new U.S.P.'s. Tentatively, there will be 798 articles in the new U.S.P. The type will not be changed to any great extent. He advised those present to purchase the blue cloth-bound books, as they wore well, and changes might be made within the 10 years. Due to the present method of tanning, the sheep-bound books were always in a rotten condition. The buckram-canvas-bound copies outlast two of the others, the bands tending to strengthen the corners. The lines, as well as the pages, of the new edition will be numbered.

Dr. W. A. Bastedo opened the discussion for the physicians. In the course of his remarks he asserted that many physicians were beginning to say they couldn't see why there should be two books of standards. Why should not the U.S.P. be broad enough to include all standards?

The U.S.P., said Dr. Bastedo, is not a text-book for physicians. It should, if you will, be a reference for physicians. Speaking of patented preparations, he stated that these could not be controlled by the U.S.P. The manufacturer is his own pharmacopoeia and can be held to nothing but the patent laws. There is nothing, not even ethics, to hold the physician to the U.S.P. It should contain only those things requiring standards. As a teacher he used the U.S.P. very little—there is nothing in it to teach, except the strengths of preparations. He thought that it would be an excellent thing for the U.S.P. to recognize abbreviations since all physicians abbreviated as soon as they got to writing prescriptions in number. Dr. Bastedo concluded by stating that he wanted the revision committee to take plenty of time and get out a good complete work.

John Roemer inquired at considerable length as to whether the pharmacopoeia met the demands of pharmacy. He expressed the opinion that some of the sanctity of the book must be shattered before this question is answered.

Other speakers were Dr. Jacob Diner, Mrs. St. Claire M. Ransford-Gay, Thomas Latham, Dr. Virgil Coblentz, Otto Raubenheimer, Professor Charles LaWall, Prof. E. Fullerton Cook and Caspell A. Mayo.

#### G.A.S. TO HOLD ANNUAL OUTING JUNE 18.

College Point, As Usual, To Be Scene of Annual Gathering—Kommers Follows the May Meeting.

THE usual routine of the German Apothecaries' Society meetings was cut short at the May gathering to allow time for the kommers. Otto P. Gilbert, chairman of the entertainment committee, called attention to the society's annual outing at Witzel's Pavilion, College Point, to be held June 18, and announced that the members' society signs would be distributed as soon as the contracts for return in case of withdrawal might be arranged.

Otto Raubenheimer, George T. Riefflin, Felix Hirseman, Carl Baum, Robert C. Medl, George C. Diekman and H. V. Army were appointed as delegates to the N.Y.S.P.A., and \$25 was contributed toward the expense. Otto Raubenheimer and Hugo Kantrowitz were appointed delegates to the N.J. Ph.A.

President Dr. Charles F. Klippert expressed his satisfaction relative to the passage of the Walters bill and called attention to the recent ruling that the word "employees" in that measure meant all drug-store employees. He announced that an explanatory report on the Boylan law would be made at the next meeting.

C. E. Trautmann, of Jersey City Heights, N. J., was elected a member. F. A. Bongarts conveyed the thanks of the pharmacist who had been aided at a previous meeting by taking up

a collection. This aged gentleman had thereby tided over his troubles and his son now has a position.

Otto P. Gilbert officiated as the praeses during the first part of the kommers, which affair was started with a lively march rendered by the society's orchestra consisting of Hellmuth Jarchow (founder of the orchestra), who played cello; C. Windrath, R. Weiner, O. Satzinger, violins; M. Lubalin, viola, and O. Walter, piano.

Paul F. Roemme was in charge of the second part, the fidelitas. Many songs were participated in by all present, a feature being the singing of "Ergo Bibamus," written 30 years ago by the late former secretary Ludwig G. W. Ruprecht, father-in-law of ex-president Charles F. Schleussner. It was sung by all present at one of the society's kommers held on Aug. 14, 1884. Among the contributors to the evening's entertainment were George Leinecker, George Bruns, William Roschen, Max Hirschberg, Woldemar Franz, Carl Wippermann, Fred Schaeffer, Paul Arndt, Van Heemert and others.

#### DR. BROTHERS APPEARS BEFORE KINGS CO. P.H.S.

Evades Pertinent Queries About League But Thinks Society Members Are Conveniently Deaf, Etc.

DR. SAMUEL F. BROTHERS appeared before the members of the Kings County Pharmaceutical Society at its May meeting, held at the Brooklyn College of Pharmacy, in order, it was thought, to explain the purposes of his organization, the American Medico-Pharmaceutical League. Dr. Brothers attended in response to an invitation extended to him by the society following its tabling for a month the appointment of delegates to the League's annual convention at the Hotel Astor. Dr. Brothers was plainly put out because President Smith introduced him as "Mr." Brothers, evidently a slip of the tongue on the former's part, and one for which Mr. Smith immediately apologized.

Dr. Brothers read a paper, after which the members proceeded to interrogate him as to the work his organization had accomplished during its 17 years of existence, the number of persons in attendance at its last convention and on other pertinent points. Dr. Brothers did not answer any of these queries directly while the ERA representative was present. He did observe that some of the members seemed to be conveniently deaf, dumb and blind. A statement in some of the League's literature, taken by the members of the society as an attack upon them, was put up to Dr. Brothers for explanation. Dr. Brothers was willing to apologize for anything he might have said or done, but could not act for the League's executive committee. The society did not appoint delegates.

Dr. Joseph Mayer read a paper upon "Vlemincx's Solution," which will be published in this journal. Treasurer Adrian Paradis reported a balance on hand of \$315. Secretary A. E. Hegeman reported that he had just completed the collection of \$250 in dues. Chairman of committee on supervision, T. J. France, reported that 110 out of 126 senior students had passed their examinations, 147 of 155 juniors and 29 of 31 post-graduates.

Dr. Wm. C. Anderson, committee on legislation, reported that under the Boylan law the members had only to add the patient's name to the narcotic prescription label, since they were already fulfilling the other label requirements. He suggested that they write the patient's and the purchaser's names upon these prescriptions. Dr. Anderson stated that the Labor department's inspectors were still "on the job" despite the passage of the Walters-Seeley bill. Dr. J. H. Rehfuess commented upon the reports to the effect that some up-State druggists were using this new measure as a cloak for the employment of minors under 16 years of age. He characterized this trick as an injustice, and said that it was sure to cause the Labor department to push legislation which would take away some of the privileges druggists now enjoy. Considerable discussion evolved over the question as to whether the Boylan bill superseded the penal code in relation to the renewal of narcotic prescriptions.

H. J. J. Kassebaum, the society's detail man, was instructed to spend several days at Rockaway and Far Rockaway in propaganda work.

#### Opium Conference Called at The Hague.

The third international conference on the opium question has been called to meet at The Hague, beginning June 15.

**BROOKHATTAN CLUB'S ANNUAL FUNCTION.****Organization of Riker-Hegeman Employees Enjoy Vaudeville Entertainment—Many Stay for Dance.**

The Brookhattan Club, membership in which consists of employees of Riker-Hegeman Company, held its third annual entertainment and ball at Terrace Garden on the evening of May 6. The Garden was crowded to capacity with members and their friends, and many of the boxes were occupied by managers, trustees, officials and stockholders of the corporation. The entertainment consisted of seven numbers of high-class vaudeville—right from the theater—which were thoroughly enjoyed. This programme was followed by an order of 24 dances, "without counting all the extras." The Grand-Entree was participated in by several hundred couples. The officers of the club are: Honorary president, J. A. Crane; president, W. T. Keeshan; vice-president, R. Green; treasurer, F. Trube; financial secretary, N. P. McLean; recording secretary, C. D. Chapman. The members of the committee of arrangements were: L. A. Luther, H. C. Baer, C. N. Harlow, D. A. MacCormack, E. P. Hyatt, A. Peralta, G. E. McKeon, C. G. Judge, F. Elsner, A. Catone, P. A. Riley, J. D. Jamieson, D. Walsh, G. F. Platt, C. A. Hewitt, J. M. Shapiro, C. L. Nelson, D. McLaren, H. E. Burget, G. H. Bailey, W. L. Steffens, T. Breen, R. Searles, G. F. Beach, L. Halk and F. Hans.

**Advisory Council Holds Organization Meeting.**

The Advisory Council to the New York City Department of Health held its first meeting on May 1, Commissioner S. S. Goldwater presiding. About 50 members, representing various lines of professional endeavor, were present, among them being Jacob H. Rehfuss, Thomas Lamb, J. Leon Lascoff and Dr. Wm. C. Anderson, who represented the drug trade. The meeting was called for the purpose of organization and will probably be the only one at which all the members will be in attendance, the Council being hereafter broken up into groups which will, when requested, advise the Commissioner relative to action on subjects within their professional jurisdiction. It was hinted, so it is reported, that the restriction of the sale of paregoric and further anti-narcotic regulation would be subjects for early consideration.

**The Long Island Drug Club.**

The April meeting was held at headquarters and with a larger attendance than the previous meeting. The order of business and duties of the club were curtailed and hastened to a finish in order to allow for a social time and refreshments. Twelve new members were accepted and the names of the applicants on the waiting list were handed over to the chairman of the membership committee for further investigation.

**AMONG THE ASSOCIATIONS.**

A very successful sale of food and fancy articles was held at the Massachusetts College of Pharmacy in St. Botolph street by the members of Boston Chapter, W.O.N.A.R.D. Mrs. Mary S. Cooper, of Plymouth, president of the chapter, received informally, at the tea, which was in charge of members of the reception committee. The pourers were Mrs. Blanche Edmonds, Mrs. Atkinson, and Mrs. Olive Lunt Wilson. A chafing-dish supper was served from 5 to 9 o'clock, at which the hostesses were Mrs. William R. Acheson, Mrs. Leopold Bartel, Mrs. Frances J. Connolly, Mrs. Truman Hayes. The committee in charge of the unique event consisted of Mrs. J. F. Waterhouse, chairman of the entertainment committee; Mrs. Ethel T. Corner, chairman of the Household Economics committee; Mrs. William R. Acheson, Mrs. J. A. S. Woodrow, Mrs. H. F. LaPierre, Mrs. Marion Guild, Mrs. Truman Hayes, Mrs. Blanche Edmonds, Mrs. Martha Morey, Mrs. Gertrude Gammon, Mrs. Lillie M. Connolly, Miss Sallie LaPierre, Mrs. Bertha Morrison, Mrs. Ellen Connolly, Mrs. Mary R. Green.

The annual meeting of the Woman's Organization, Boston Association of Retail Druggists, was held at the Hotel Lenox, May 14, when the following officers and committees were elected: Mrs. Mary S. Cooper, of Plymouth, president; Mrs. Frances LaPierre Hayes, 1st vice-president; Mrs. Gertrude Gammon, 2d vice-president; Mrs. Mary R. Green, recording secretary; Mrs. Gertrude H. Bartel, corresponding secretary;

Mrs. Gertrude Ernst, treasurer; Mrs. Lillie M. Connolly, auditor; Mrs. Harriet C. Davis, Mrs. Bertha M. Hubbard, Mrs. Jennie M. Bean, Mrs. Bertha G. Tupper, Mrs. Blanche Edmonds and Mrs. Sarah A. Finneran, directors. Chairman of standing committees: Home economics, Mrs. Ella S. Twitchell; hospitality, Mrs. Olive L. Wilson; legislative, Mrs. Jessie F. Waterhouse; music, Mrs. Susie Magee; philanthropy, Mrs. Amelia A. Kilburn; reception, Mrs. Ethel T. Corner; conservation, Mrs. Martha Morey.

The Rock County Druggists' Association, including in its membership the druggists of Rock county, Wis., held its annual meeting at the Grand Hotel in Janesville, recently, and re-elected J. P. Baker, of Janesville, president, and J. M. Farnsworth, Beloit, secretary and treasurer. The discussions began with a noon-day luncheon and continued until late in the afternoon, the questions of marketing and legislation being the leading topics considered. In the evening a series of interesting pictures were shown at the Myers theater, showing the Druggists' National Home at Palmyra, Wis., and views of natural scenery in Wisconsin.

A reception, luncheon and a programme of music were features at the gentleman's night of Chicago Chapter, No. 2, W.O.N.A.R.D., at the Hotel LaSalle, May 11. Mrs. B. A. C. Hoelzer, president of the organization, and Mrs. C. D. Collins, chairman of the social committee, were in charge of the programme.

The annual meeting of the McLean County (Ill.) R.D.A. was held at Bloomington, when the following officers were elected: President, D. D. Moore; vice-president, C. E. Frison; secretary, H. W. Giese; treasurer, H. J. Frey; trustees, Mark Hayes, Iuri Dunn and R. R. Enlow.

The Nashville Penlar Club has been organized with the following officers: President, D. J. Kuhn; treasurer, G. H. King; secretary, D. S. Sanders.

**SCHOOLS AND COLLEGES****139 RECEIVE DIPLOMAS FROM BROOKLYN C.P.****Dr. Anderson Confers Degrees Upon 110 Graduates and 29 Postgraduates—Dr. Boynton Addresses Class.**

**A**N audience brimful with enthusiasm and made up for the most part of the relatives and friends of the graduates, attended the 23d annual commencement of the Brooklyn College of Pharmacy on the evening of May 14, held at the Brooklyn Academy of Music. The stage was occupied by the 110 graduates, the 29 post-graduates, the trustees, faculty and others participating in the graduation. The Rev. John Williams, M.A., delivered the invocation, after which Dean Dr. William C. Anderson conferred the degrees of Doctor of Pharmacy and presented the diplomas to those so honored. Following the salutatory, which was very ably presented by Joseph Caruso, Dr. Anderson conferred the degree of Graduate in Pharmacy upon 110 Max Weinstein delivered the valedictory address.

Nehemiah Boynton, D.D., delivered the address to the graduates, one phrase of his address, "the appreciation and appropriation of law," being driven home to the audience by anecdote and by constant but forcible repetition. The president of the college, Henry B. Smith, awarded the prizes. Julius Zippin received the post-graduate gold medal; Isidore Hamburger, the senior student gold medal; Jacob Bankoff, senior student silver medal; Isidor Goldenberg, senior student bronze medal; Edward J. Taylor, senior student Anderson medal; William Cohen, junior student silver medal; Sol Greenbaum, post-graduate membership to A.Ph.A., same being represented by a certificate which was tendered Mr. Greenbaum, and Harry A. Read, senior student A.Ph.A. membership. Some amusement was caused by Mr. Cohen, the junior student honored, who after extricating himself from the crowded balcony, marched down the center aisle only to be turned back at the foot of the platform and made to retrace his footsteps and come to the front by another aisle. After Mr. Cohen had made his long march it was the conclusion of some of those present that he had doubly earned his medal.

Henry J. J. Kassebaum, Ph.G., Phar.D., president of the Alumni Association, presented the alumni prize, a compound

professor of the senior student, Jacob Rutes. Professor A. Loeb, secretary of the faculty, read the honor rolls, which are as follows:

Senior Class: Jacob Barkoff, Henry Barrack, Charles Bushel, Solomon H. Chram, Charles Dwork, Isidor Goldenberg, Isidore H. Gorman, Harry Kimmelman, Louis Ludwig, Andrew F. Phillips, Harry A. Read, Jacob Rutes, Joseph Suchoff, Edward J. Taylor and Bessie Weiss.

Junior Class: Paul Anderson, William H. Arndt, Ada Benjamin, Joseph A. Bunscheff, Samuel H. Chester, William Cohen, Samuel M. Fass, Isidor Fine, Samuel B. Frischberg, Anna Grossman, Norman Grushoo, Morris Hirschfeld, Edward Henry, Jacques Klein, William J. Kutz, Samuel Jurow, Rose Zornograph, Francis Levine, Nathan Leventhal, Benjamin Levin, Isaac Masursky, Meyer Menaker, James Paderson, Herman Beck, Bernard Pines, Henry A. Riebeschl, Emanuel Rosenburg, Abraham Rubenberg, Joseph N. Scher, Bernard Schrazer, Henry D. Schwartz, Charles Sharoff, Irving Silver, Samuel Solomon, William Felsely, Samuel Tuchland, Curt Unverferth, Hans Weinberg, Morris Wolf and Ludwig Zwilling.

#### Brooklyn C.P. Graduates Give Dance.

The 1914 class of the Brooklyn College of Pharmacy held its graduation dance on the evening of May 11 at the Arcadia, Brooklyn, the affair being attended by the members of the class, members of the Alumni Association, the junior and post-graduate classes and the faculty. Features were the presentation of a large bouquet of American Beauty roses to Mrs. Prof. Wm. C. Anderson, and an exhibition of the maxixe by Martin H. Kleine, '06, and Miss Charlotte H. Gleeson. The officers of the graduating class were: President, Harry M. Sorowitz; vice-president, Harry A. Read; secretary, Jacob Bankoff; treasurers, Abraham Lerner, Minnie Sachs, Gustave Smith and Max Weinstein.

#### Albany College of Pharmacy.

The 33d annual commencement of the Albany College of Pharmacy was held in the auditorium of the State Education building, 41 members of the graduating class receiving diplomas. The exercises were presided over by Dean Willis G. Tucker, M.D., and the degrees were conferred by Chancellor Richmond, of Union University. The address to the graduates was made by Commissioner of Education Finley, and the prizes were awarded by Prof. G. V. Dillenbeck, Ph.G. Emmanuel Brunt, of Johnstown, won three of the four senior class prizes, taking the Arthur L. Andrews prize for the best standing in all branches; the Charles Newman prize for the best work in chemistry, and the Alumni prize for the best work in pharmacy. Each prize was \$25 in cash. Walter M. Hartman won the Dr. J. M. Bigelow prize of \$25 for the best work in materia medica. Lloyd Arthur Beardsley won the two junior prizes, one of \$25 offered by Charles Gibson for the best examination in all branches, and the Kappa Psi prize of \$10 for the best examination in theoretical pharmacy.

#### New Colorado Chapter of Phi Delta Chi.

Sigma chapter of the pharmaceutical fraternity, Phi Delta Chi, has been organized at the School of Pharmacy, University of Colorado, with 10 active and one honorary member, Dean Homer C. Washburn. The initiation was conducted by Prof. Hansen, of the Nebraska School of Pharmacy, Lincoln, Neb., and Mr. Gessler, of the Iowa School of Pharmacy, Ames, Ia. The ceremony was followed by a banquet at the Boulderado Hotel, at which the visiting professors, Dr. Drinkwater, of Denver, Prof. Washburn and others spoke. The active members of the chapter were formerly organized in what was known as the Pharmacy Club.

#### College of Pharmacy, State University of Iowa.

Five members of the 1914 class passed the last State Board examination: Maude Wieland, Red Oak, Iowa; Nellie Manbeck, Armour, So. Dak.; F. P. Hess, Lone Tree, Iowa; J. F. Kiedaisch, Keokuk, Iowa; B. G. Greene, Traer, Iowa. At the same examination Mrs. Anderson, Dow City, became registered. Mrs. Anderson is the wife of I. A. Anderson, who was graduated in 1909.

At the last meeting of the Mortar and Pestle Society, F. P. Hess, '14, discussed in an interesting way the question of how to make satisfied customers. At the next meeting Dr. C. S. Chase will address the society.

The faculty and members of the senior class were entertained at a reception at the president's house on the evening of May 5.

The State Board of Pharmacy held their annual June examination at Iowa City on Tuesday, June 9.

Dean Tecters accepted an invitation to give the annual convocation address at the University of Nebraska, May 14 at the time of the week of celebration for the pharmacy college.

The annual report of the University Hospital Dispensary under the charge of the pharmacy college shows the following interesting data:

Total number dispensing hours for the year....	911
Total number dispensing hours for the students	360
Total number prescriptions and drug orders for the year .....	30,958
Total amount spent for pharmaceuticals including biological products.....	\$8,000

Approximately 65 per cent. of the preparations were prepared by the pharmacy college with a saving of cost of about \$2600.

#### Kansas City College of Pharmacy.

The 29th annual commencement of the Kansas City College of Pharmacy was held May 7 at Spaulding's Auditorium, when 17 graduates received their diplomas. The dean, Prof. David V. Whitney, presided, and prayer was offered by the Rev. J. B. Swimney. The college medal for the highest general average and the alumni medal for the highest grade in the chemical laboratory work were won by Ralph E. Foster, of Perry, Oklahoma. James F. Flynn, of Kansas City, and Roscoe M. Hutchinson, of Aurora, Mo., won honorable mention. In the junior class Giles E. Wickshire, of Larned, Kan., won the college medal for the highest general average, and Douglas Lauder milk, Harry Kelly and Thomas S. Evilsizer won honorable mention. The party given the graduates by the alumni association was at Drexel Hall, and was a very enjoyable affair. The reception committee was made up of Mr. and Mrs. Alvah Estabrook, Mr. and Mrs. D. Victory Whitney, Mr. and Mrs. J. Glazier Williams, Mr. and Mrs. John B. Massman, Mr. and Mrs. Ben L. Welsh, Dr. and Mrs. Virginius W. Gayle, Dr. and Mrs. L. G. Taylor, Dr. and Mrs. Robert D. Ireland and others.

The faculty and the graduating class were guests of Parke, Davis & Co., at luncheon, two or three days prior to graduation, and after this visited the local house.

Nick S. Neylon, a junior from Paola passed the last Oklahoma State Board examination with exceptionally good grades. He received 95 per cent. in chemistry and 93 per cent. in pharmacy.

The graduating class were the guests of Prof. and Mrs. Whitney, of the McPike Drug Co.; Faxon, Gallagher and of Eli Lilly & Co. during the week preceding commencement.

#### Louisville College of Pharmacy.

The largest graduation class in the history of the Louisville College of Pharmacy received diplomas at the 43d commencement exercises at the Women's Club, Louisville, May 11—29 in all. The diplomas were presented by Simon N. Jones, president of the college, and the address to the graduates was made by the Rev. J. T. Schieffelin. Sterling T. Monroe, of Auburn, Ky., was the valedictorian.

#### University of Maryland.

The graduation exercises of the University of Maryland, including the Department of Pharmacy, were announced for June 1. The graduating class of the Department of Pharmacy includes about 25 members. With the next academic year the requirements of the university as to matriculation will be raised, making it necessary for students to have at least a high school or even a college education, and thus complying with the standards adopted by other leading institutions. Dr. Henry P. Hynson, of the drug firm of Hynson, Westcott & Co., who holds the chair of practical pharmacy and dispensing at the university, has been elected secretary of the Board of Regents of the University.

#### Massachusetts C. of P.

The 46th commencement exercises of the Massachusetts College of Pharmacy were held at Horticultural Hall, Boston, May 14, 32 receiving the degree of graduate in pharmacy, and

seven that of pharmaceutical chemist. The exercises included an address of welcome, by Charles P. Norton; class history, by Edward L. Faucongy; class oration, by Joseph H. Cooney; class prophecy, by Ralph E. Coburn; class will, by Alice G. Coleman; essay by John D. Clancy; farewell address, by Robert E. Bemis. President C. Herbert Packard was the presiding officer, and the address to the graduates was made by Hon. Samuel W. McCall.

#### NEW YORK C. OF P. GRADUATES 138.

**B**EFORE an appreciative audience composed of their sisters and their cousins and their aunts—an audience so enthusiastic that it applauded every feature of the evening, including the invocation—138 young men and women received their degrees at the 84th annual commencement of the College of Pharmacy in the city of New York May 14. Of this number, five were women, and two graduated as food and drug analysts.

Dr. Henry C. Lovis led the class during the opening ceremonies, up to the patriotic decorations of the stage, where the faculty, trustees and officers were already assembled. After a brief address by President Nicholas Murray Butler, of Columbia University, Secretary Thomas F. Main presented the names of the candidates for the degree of Graduate in Pharmacy, which was conferred by President Butler. Dean H. H. Rusby then presented two names as candidates for food and drug certificates. In his address to the graduates, President Butler dwelt on the American viewpoint, by which a man's opportunities furnished the measure of the responsibilities he was expected to assume.

The Alumni prizes for general excellence were presented by Dr. Joseph Weinstein, as follows: 1st prize, gold medal, to Edward J. Kodet; 2d prize, silver medal, to Jacob Marianowsky; 3d prize, bronze medal, to Boris Gourin. The Trustees' special prizes, consisting of small steel engravings of famous Americans valued at \$100, were awarded by Prof. Charles F. Chandler, professor emeritus of chemistry at Columbia, and former president of the college. The first prize, for highest standing in the chemical laboratory, went to Boris Gourin. The second prize, for excelling in the pharmaceutical laboratory, was awarded to Herman J. Godes, and the third prize, for best work in the materia medica laboratory, was received by Edward J. Kodet. The prize of the Italian Pharmaceutical Society, consisting of a gold medal for the highest average in the five laboratory branches, went to Jacob Marianowsky. In presenting the prize, Dr. William Mansfield called attention to the increased attendance of Italian students at the college, the senior class containing 20, and the present junior class 25, as against 5 in all only two years ago.

The roll of honor follows:

Edward J. Kodet, Jacob Marianowsky, Boris Gourin, Herman J. Godes, Harry Gittleman, Michele De Lalla, Brooke J. Davis, William Zibulsky, Cosimo Ligorio, Louis Reiss, Orrin Hertz, Samuel Kaplan and David Chasan. Dr. George C. Diekmann commented favorably on the high standard of scholarship that was being maintained. He stated that the examinations of this year had been more difficult than in any preceding year, yet that the highest graduate this year had received an average mark only 0.17 per cent. lower than the first prize winner of last year, while the last name on this year's honor roll was more than 2 per cent. higher than the corresponding average of 1913.

The valedictory address was delivered by Lucius Angus Williams, of Brockport, N. Y. The invocation and benediction were made by Rev. Raymond C. Knox, chaplain of Columbia University. The music of Van Baar's military band set a high standard for future commencements.

#### N.Y.C.P. Class of 1894 Holds Reunion.

A reunion and dinner to celebrate the 20th anniversary of the graduation of the class of 1894 was held at Cavanagh's, in April, and attended by 52 members of the class and by Professors Coblenz, Ferguson and Madison. The class decided to make it an annual event, and perfected a permanent organization by electing the following officers: President, Hieronimus A. Herold; vice-president, Peter J. Ehrgott; treasurer, Philip Eichler; historian, Nelson S. Kirk; secretary, Frank N. Pond. The dinner was purely a family gathering, only members of the class being present, many of them coming

from distant cities to attend. The speeches were limited to three minutes and every member present was heard from.

#### University of Michigan School of Pharmacy.

Dr. W. S. Hubbard, instructor in food and drug analysis and acting-secretary, who has had charge of Dr. Schlotterbeck's classes during his two years' leave of absence, has resigned. Dr. Hubbard has no definite plans for the future.

C. A. Onweller, Ph.C., '13, has recently purchased an interest in a store in Fayette, Ohio. The new firm is known as Onweller & Onweller.

M. J. Seeley, B.S. (Pharm.), '13, recently had an article on "Vinegar Production and Adulteration" in the *Oregon Countryman*.

R. F. Smith, Swanton, Ohio, and C. P. Field, Grand Rapids, were initiated into the honorary chemical fraternity, Phi Lambda Upsilon, recently. Mr. Smith has the honor of being the only sophomore out of the eight initiations.

Mrs. A. B. Stevens returned to Ann Arbor the first part of May after a year and a half in Southern California, where Professor Stevens has purchased a lemon and orange grove.

Most of the seniors are located for the coming year, and from present indications, there will be about half enough men to fill the positions.

Prof. A. H. Clark, of the University of Illinois School of Pharmacy, spent several days in Ann Arbor recently.

The Summer session of the School of Pharmacy will extend from June 29 to August 21 (eight weeks). The courses will include: Theory of Pharmacy; Manufacturing Pharmacy; Drug Assay; Food and Drug Analysis; Household Chemistry. The course in Food and Drug Analysis is especially recommended to those who desire to prepare for Government positions, while the course in Household Chemistry, with the privilege of taking laboratory work in connection, offers an excellent opportunity for pharmacists and high-school teachers to become familiar with the most important branch of chemistry. The course will be given under the direction of Prof. A. B. Stevens, acting-dean of the School of Pharmacy.

#### Northwestern University School of Pharmacy.

The graduating exercises of Northwestern University School of Pharmacy were held April 15, a class of 56 receiving the degree of Graduate in Pharmacy. The address to the graduating class was delivered by Doctor Charles Louis Mix, secretary of Northwestern University Medical School. Dean John H. Long presented the class with their diplomas, and the degrees were conferred by President A. W. Harris, of the university. The presentation of the class picture was made by Carl Lee Myers, vice-president of the class. The following received diplomas: Paul J. Binek, Maurice D. Blackburn, Clarence E. Buchholz, Victor E. Czarhurski, Elmer L. Dahl, Paul A. Dahl, Joe Donner, Walter F. Deitrich, Brook Farver, Roy A. Fortun, Henry Fox, George Gyllenhammer, Roy L. Haines, Lew B. Hamilton, Walter C. Hanna, Charles S. Hocking, Lloyd Holland, Frank V. Kara, Michael J. Kerwin, Zdenek Koller, Kenneth A. Lea, Robert C. Ledford, Alvin J. D. Lenz, Harry E. Lewis, Robert S. Lothian, Edward A. Luria, William F. McRoberts, Richard H. Merritt, Armand R. Monaco, Clyde R. Moore, James W. Moore, Carl L. Myers, Heman F. Oglesby, John H. O'Leary, Earl R. Palmer, Glen H. Parker, Harold A. Parkison, Jonathan B. Patton, Joseph P. Pavek, James A. Pierce, Hosmer B. Porter, Vernett J. Rees, Thomas E. Ryan, William J. Shelver, Earl F. Shippy, Isadore Shure, John D. Skowron, Kenneth A. Sprinkle, Harry E. Stearns, Nelson M. Thomas, Paul G. Tschaban, Earl C. von Ohlen, Earl G. Wheeler, George Wilcox, Harry C. Wilson, C. M. N. Wroblecki.

#### Buffalo College of Pharmacy.

The alumni of this college in Rochester and vicinity united with the alumni of the other departments of the University of Buffalo in holding the first University Alumni dinner, in the city of Rochester, at the Rochester Club, with an attendance of 125. The Buffalo men went down and returned in a private car, furnishing all the comforts possible for such a trip. A permanent organization was effected in which the pharmacy college was represented by George M. Gilbert as secretary, and Floyd M. Kline as member of the executive committee. Dr. Charles R. Barber, of the class of '82, medical department, was the toastmaster, and Dean Willis G. Gregory,

a medical classmate of Dr. Barber's, spoke for the pharmacy college. Steps were taken to repeat the dinner next Winter. Alumni of the college, who had not met in 10 years renewed their acquaintance, and the affair was a brilliant success.

#### Indianapolis College of Pharmacy.

Twenty-one young men graduated from the Indianapolis College of Pharmacy, Indianapolis, the diplomas being given at a banquet at the Hotel Severin in that city. Frank Lockhart, president of the class, presided. Dr. Ferd. A. Mueller, dean of the college, presented the diplomas. E. H. Niles, of the faculty, also spoke briefly. The Alumni Association elected the following officers: President, E. H. Niles; vice-president, Rex Rudicell; secretary, F. M. Sieg, and treasurer, Frank Lockhart. The junior class also gave a banquet at the Hotel Severin. The officers of the class are: President, Edwin Stuckmeyer; vice-president, James White, and secretary and treasurer, William Jenkins.

#### University of Wisconsin.

Work in prescription practice and pharmaceutical technology will be offered during the Summer session at the University of Wisconsin, located at Madison, in the regular Summer school which will open during the latter part of June. The new courses are primarily for the benefit of apprentices employed in drug stores, who wish to avail themselves of practical training, and it is expected that many will make use of the opportunities offered. Fully-equipped laboratories and a dispensary, containing all of the U.S.P. galenicals, chemicals and crude drugs for comparative study, a milling room and a distilling and extracting room, will be open to the students.

#### Massachusetts College of Pharmacy.

The annual banquet of Mu Chapter, Kappa Psi Fraternity, of the Massachusetts College of Pharmacy, was held at the Copley Square Hotel, Boston, with an attendance of 45. The guests included Dean Bradley, Prof. Elie H. LaPierre, Dr. J. F. Grant and Dr. A. W. Balch. Dr. Leopold Bartel presided, and the committee in charge comprised R. E. Bemis, chairman; E. G. Nagle, R. M. Kallejian, F. J. Wotton, P. A. Barnes and Harry McCormick.

#### Department of Pharmacy, University of Maryland.

The first annual banquet of the class of 1915, Department of Pharmacy, University of Maryland, was held at the New Howard, Baltimore. The president of the class, A. L. H. Sterling, presided and addresses were made by Dr. H. P. Hynson, professor of practical pharmacy and dispensing; Dr. E. F. Kelly, also of the faculty, and W. Ramond Moody, a former professor of Washington College, who discoursed on "College Men and Social Service." The University of Maryland Orchestra furnished music.

#### University of Washington, College of Pharmacy.

The members of the Pharmacy Club were delightfully entertained by Dean and Mrs. C. W. Johnson at the Faculty Club House on the campus recently. Dancing and cards were the diversions of the evening and refreshments were served.

Ray B. Conner, Ph.C., '12, former State drug inspector, of Washington, has accepted a position with the Murgitroyd Drug Co., of Spokane.

The Pharmacy Club gave their annual picnic on May 16 at Evergreen Park, near Bremerton. A launch was chartered and about 30 couples enjoyed the trip across the sound. The day's amusements consisted of games, boating and a visit to the U.S. Navy Yard.

#### Lectures on "Perfumes and Flavors."

Dr. Alois von Isakovic lectured before the Institute of Arts and Sciences and the senior students in organic chemistry at Columbia University at Havemeyer Hall on May 8, taking as his subject "Perfumes and Flavors, the materials utilized, their chemistry, synthesis and practical application." He covered the subject from both the scientific and practical viewpoints, and mentioned a number of new constituents of flower perfumes not commonly known as such. The specimens of constituents of perfumes and flavoring oils from the Chandler Museum of the University, supplied by courtesy of the lecturer, excited much favorable comment. Some of the novel points made by the lecturer will be presented in a forthcoming issue.

#### 100,000 Students Enrolled in Professional Schools.

According to the recent report of the U.S. Bureau of Education there are 100,000 students enrolled in professional schools in the United States this year. The profession of trained nurse has the largest number of students, 34,417. Law comes next with 20,878, medicine, with 17,238; theology, with 10,965; dentistry, with 8015; pharmacy, with 6165; and veterinary science with 2824. New York has the greatest number of students in professional schools, with Illinois second and Pennsylvania, Massachusetts and Missouri following in order.

#### Design for Procter Statue Approved.

A model submitted by Sculptor Edward Berge, of Baltimore, for a statue to be erected in Washington in the memory of the late Prof. William Procter, Jr., has been accepted by a committee of 50 members of the N. J. Ph. A. The committee adopted resolutions requesting the A. Ph. A. to adopt Mr. Berge's design, which calls for a statue 9 feet in height on a pedestal 8 feet high.

## BOARD EXAMINATIONS

### California.

SAN FRANCISCO, May 20.—At the recent examinations held under the direction of the State Board of Pharmacy, the following applicants for registration were successful:

Pharmacists—W. A. Mathison, Harry B. Molyneaux, Hermann Karnell, Philip Diamond, Frank Carlisle, Grover F. Bowman, Geo. M. Asselin, W. C. Paschall, James T. Smith, Rollo H. Hilbert, Arthur Shockey, L. Wrampelmeier, Charles M. Caton, Garrett S. Lohman, W. L. Mason, John Alphonso Sasso, Wilson O. Gibbs, Walter J. Cadman, Bella G. Ginsburg, P. J. Neale, H. C. Heffren, Anthony Tripi, Henry W. Swanson, Gilbert Flores, Cecil M. Carpenter, Reginald H. Winter, Victor O. Saphro, James E. Rawlings, Charles A. Elbott, W. O. Rogers, Kire L. Clock, Percy Geo. Linn, Isidore A. Melnick, Louis A. Hopkins, Dee J. Brown, M. A. Martindale, Alfred Mathews, Agnes D. Fairweather, Lester Gawthrop, Chas. M. Garrett, Mary C. Nolan, G. H. Lewin, Willard E. Frieze, Stanley L. Crandall, Frank M. Boswell, Jr., Basil Raout Clark, Edward A. Yount, Thomas B. Powell, Samuel L. Benson, Wm. Deason McCarroll, Wesley C. Burr, Fred C. Leland, Lew O. Stelzner.

Assistants—Joseph E. Ostrom, Florence M. Dunlap, Walter J. Miles, Carlo Leone, Farrel L. McGowan, John E. Booth, Jos. A. Jaacetti, Harry Wittkopp, John J. Hamilton, Otto K. Gerstner, J. H. Ochsner, George A. Golden, William J. Hannberg, Earl Marshall, Armon W. Malone, Henry Lloyd Miller, H. B. DuPee, William T. Heberlie, Dale L. Cumley, Lewis H. Young, Enos Van Clief, Elwood I. Randle, Geo. W. Tippett, L. H. Rogers, Fay Leonard, Archibald J. Dutcher, David H. Frazer, Fred Osborn, Norman Levin, Edgar C. Vincent, C. J. Foerster, Joseph A. Citron, William E. Armington, Edward Costello, B. LaMoine, Ernest Pagust, James L. Barbanell, Minor C. Kinnicut, Robert E. Miller, Asa Smith, Enrico Gentilini, Louis C. Kinney, F. F. Saldamando, Lester B. Tozier, Nick W. Mandich, Archie R. Hewitt, Robert C. McKnight.

The next examinations will be held in Los Angeles, beginning July 15, and in San Francisco, July 22.

### Delaware.

NEWARK, May 20.—Seventeen candidates took the examination of the Delaware Board of Pharmacy in this city April 1. The following were granted certificates:

Pharmacists—Wilson B. Swain, Trappe, Md.; Emanuel A. Shur, Philadelphia, Pa.; M. Harrison Kaitz, Philadelphia, Pa.; John L. Berk, New York, N. Y.

Assistants—John A. Devine, Wilmington; Morris Citrenbaum, H. Homer Freitag, Chas. F. Klepper, all of Baltimore, Md.

The next examination will be held at Newark, July 1.

### District of Columbia.

WASHINGTON, May 20.—Following the recent examination of applicants for registration as pharmacists the District of Columbia Board of Pharmacy has announced that certificates have been issued to the following named:

Pharmacists—Theodore L. Gill, Israel F. Lear, George R. Davenport, John H. Paine, John A. Murphy, William Thornton, Irving A. Tennyson, Theodore J. Heller, Samuel A. Lantz, Henry J. Johnson, Thomas B. Crisp, Jr., Harry S. Clarke.

The next examinations will be held July 10-11.

### Illinois.

SPRINGFIELD, May 20.—At the April meeting of the Illinois State Board of Pharmacy, held in Chicago, 22 of the 90 candidates for registered pharmacist and 30 of the 77 applicants for assistant pharmacist passed successful examinations. Their names follow:

Registered Pharmacists—Albert F. Anderson, Frank G. Basile, Sander Brichta, Geo. E. Buckman, Henry A. Churchill, John L. Dancy, Joe Donner, Walter A. Endee, Nate Forman, Andrew J. Getz, Joe P. Graf, Roy L. Haines, Philip E. Hildebrandt, Kenneth A. Leo, Fred J. Lorenz, Chas. C. Orr, Irving F. Pearce, Chas. A. Trachman, all of Chicago, and Frank E. Kiley, Cullum; Robt. M. Lyman, Joliet; J. Arnold Michels, El Paso; Harry S. Sponberg, Rockford.

Assistant Pharmacists—Richard J. Anderson, Christopher Barone, Walter Buchrucker, Wm. L. Cunningham, Elmer L. Dahl, Chas. Green, Victor L. Geisritz, Leo J. Hillman, Sylvester H. Hojnacki, Michael Jacobson, Willis C. Kuecka, Frank H. Lindeman, Samuel Lisee, Wm. J. McSherry, James W. Moore, Chas. M. Patera, Jr., Edward R. Riemer, Chas. J. Schultz, Ernest L. Shinkard, Clifford Spalding, Paul Unger, John G. Zarek, all of Chicago, and LeRoy E. Anderson, Moline; Floyd W. Bryant, Elizabeth; Thos. P. Bolger, Woodstock; Guy B. Davis, Abingdon; Cecil W. Hunter, Pesotum; Clarence A. Larson, Moline; Clifford E. McKee, Dixon; Saml. B. Wade, Fairbury.

The next meeting of the board in Chicago for the examination of applicants for registered pharmacist will be held on July 14. Applicants for assistant pharmacist will be examined July 16. The next apprentice examinations throughout the State will be held on Friday, July 3.

### Indiana.

Members of the Indiana State Board of Registration and Examination in Pharmacy with representatives of pharmacy schools of the State held a joint session in Indianapolis recently. Those who attended the meeting were: President, Albert F. Heineman, Valparaiso; secretary, Burton Cassidy, West Terre Haute; Jerome J. Keene, Indianapolis; William H. Fogas, Mt. Vernon, and William H. Rudder, Salem, members of the State Board; E. H. Niles, of the Indianapolis College of Pharmacy; C. B. Jordan, of Purdue University; Prof. Sherwood, of Angola, and G. D. Timmons, of Valparaiso University. The meeting adopted a resolution urging the Legislature to place the sale of intoxicating liquors by druggists on the same basis as the sale of habit-forming drugs. The meeting also went on record as favoring a pharmacy requisite law which would not permit any one to take an examination before the State board unless he is a graduate of a recognized school of pharmacy. A resolution was adopted that the State board define a recognized school of pharmacy as one that meets the requirements of the Pharmaceutical Syllabus. This means that no applicant for license from the State board shall receive credit for time spent in a college of pharmacy unless he is a graduate of a recognized college of pharmacy.

### Iowa.

DES MOINES, May 20.—Forty-eight out of 148 who took the recent examinations for registration in pharmacy before the State pharmacy commission were successful, as follows:

Pharmacists—Harry Leiser, Waukon; Frank D. Weaver, Ackley; Sam J. Stiles, Des Moines; Maurice R. Miller, Council Bluffs; Verna M. Lovely, Stuart; Howard Nicholas, Redfield; Ralph A. Emons, Paul A. Heller, Andy Hildegaard, Edward E. Eide, Des Moines; E. D. Brown, Columbus Junction; Joseph E. Haskins, Jessup; Jose R. Prieto, Cruces, Cuba; Edna B. Anderson, Dow City; Nellie Manbeck, Iowa City; Lawrence F. Moore, Burlington; James Macdonald, Bellevue; Martin Strand, Halbeck, Sask., Canada; C. G. Martin, Charles City; Ralph E. McKim, Nevada; John F. Kiedaisch, Keokuk; John C. Gedstead, Des Moines; Jay B. Ronsch, Fingley; Russell E. Foster, T. E. Enloe, Muzeylle Powell, Loren R. Carrico, George B. Paulson, Des Moines; Ray Green, Aurelia; E. W. Harriman, Kellerton; Plumer Egert, Frank Sassman, Des Moines; Bryce Greene, Traer; Clarence Ebert, Waverly; Peter L. Bauer, Sutton, Neh.; J. Emmet Kehl, Gilmore City; Maude Wieland, Red Oak; Rozella Schmidt, Omaha; F. F. Aess, Iowa City; Bryan L. Day, Seymour; John Reardon, Auburn; J. A. James, Huron, S. D.; Ornie Knott, George W. Forsythe, Raymond Green, Mose Oransky, William S. Macauley, Des Moines.

### Kentucky.

LOUISVILLE, May 20.—At the meeting of the Kentucky Board of Pharmacy, held in Louisville, April 14, 15, 16, the following applicants, out of a class of 51, were registered:

Registered Pharmacists—Lewis E. Cogle, Louisville; William D. Dawson, Princeton; Edwin M. Frantz, Louisville; Roy B. Gillians, Louisville; Robert E. Hancock, Uniontown; James R. Harris, Louisville; Augustus M. King, Mt. Sterling; Robert H. Konshheim, Cincinnati, Ohio; Albert E. Lacy, Crofton; Owen M. Lynch, Shelbyville; Sterling F. Monroe, Auburn; Squire E. Nichols, Clarkson; Chas. G. Passmore, Jr., Louisville; John J. Seiberz, Louisville; Martin E. Sutherland, Paducah; Jacob L. Wagner, Greenville, Ohio; Albert R. Will, Columbus, Ohio; Roy P. Hinton, Adolphus.

Assistants—Frank L. Brown, Princeton; Frank Howard, Princeton; William O. Patterson, Hawesville; H. L. Perry, Richmond; Frank W. Richey, Louisville; Vernon Valentine, New Castle; John W. Wear, Murray; Chas. E. West, Louisville; John H. Bus-tetter, Covington; J. D. Clopton, Jr., Smithland; Chas. Kretschmer, Cincinnati, Ohio; Frank W. Krull, Louisville; Geo. Meyer, Cincinnati, Ohio; Silas P. Meyer, Louisville; Ralph B. Puckett, Cincinnati, Ohio; Max H. Snyder, Louisville; Speed G. Wood, Midway. The next meeting will be held at Dawson Springs, July 14, 15.

### Louisiana.

NEW ORLEANS, May 20.—As a result of the examinations held by the State Board of Pharmacy at Tulane University, May 1-2, out of 31 candidates for registration eight were successful as registered pharmacists and five as qualified assistants. The questions were prepared by the examining committee, Gus Seemann, on pharmacy; J. T. Baltar, on chemistry; A. DiTrapani, on practical work, and Edward H. Walsdorf, on materia medica and toxicology. Those receiving certificates of registration were:

Pharmacists—E. H. Beaucoudray, Mrs. L. J. Maloney, B. O. Roberts, A. C. Flemmings, all of New Orleans; R. J. Higginson, Donaldsonville; W. J. Headrick, Jr., Logansport; H. C. Richards, Sulphur; E. F. Buckley, Slidell.

Assistants—Rene Bienvenu, St. Martinsville; V. Portinberry,

Kentwood; J. P. McNulty, John S. Morvant and George P. Welsh, of New Orleans.

### Minnesota.

ST. PAUL, May 20.—Twenty-three candidates who took the recent examinations before the State Board of Pharmacy were successful, according to a report just issued by the secretary of the board.

Pharmacists—R. Berglund, Minneapolis; J. Y. Breckenridge, Jr., Stillwater; Otto J. Bruning, St. Cloud; Theodore W. Fratzke, Madison; J. H. Gebhard, Winsted; H. H. Hart, Winnebago; Albert Lehmann, Wadena; J. H. Neumann, Lewiston; J. F. Pelant, Minneapolis; V. A. Pendleton, Minneapolis; A. W. Peterson, Ortonville; H. C. Peterson, Minneapolis; C. H. Rogers, Minneapolis; H. W. Sampson, Minneapolis; L. L. Schaffer, Delano; H. A. Scott, St. Paul; R. T. Scott, Minneapolis; J. Strimling, Minneapolis; H. W. Thompson, Stillwater; H. M. Watson, Minneapolis; J. B. Wikke, St. Paul; G. K. Wold, Austin; C. W. Zemlin, Minneapolis.

Assistants—P. J. Binck, Owatonna; H. W. Christianson, Belgrade; R. W. Cannon, Minneapolis; C. C. Cowing, St. Paul; J. P. Faas, New Ulm; F. A. Gifford, Minneapolis; J. T. Gericke, St. Paul; A. O. Johnson, Hudson, Wis.; E. H. Heidmann, Arlington; Fred N. Knapp, Redwood Falls; J. J. Kirchner, Richmond; Jesse J. Keefe, Minneapolis; H. E. Meyer, Twin Valley; C. A. Perkins, Minneapolis; H. C. Pereson, Minneapolis; N. V. Sanders, Minneapolis; W. A. Scheer, Chisholm; F. Sasmann, Winona; B. A. Schultz, St. Paul; G. F. Stratton, Minneapolis; B. A. Wolter, St. Paul.

### Mississippi.

JACKSON, May 20.—At the April meeting of the State Board of Pharmacy the following named were successful applicants for registration in pharmacy, 29 out of 55 who took the tests:

Pharmacists—Thomas E. Tapp, Itta Bena; W. P. Pierce, Belzoni; T. F. Ferguson, Meridian; W. R. Little, Memphis; W. E. Everett, Friars' Point; S. F. Richburg, Jackson; H. S. Rayne, Hickory; P. McMorco, Natchez; D. G. Anderson, Lucedale; R. H. Walker, Mendenhall; G. R. Lott, Richton; L. P. Hall, Rueville; W. S. Thornton, Brandon; E. Wherry, Durant; R. B. Jordan, Poplarville; W. M. Love, Terry; Clay Callicot, Caldwell; E. A. Coody, Phoenix; C. L. Schillings, Osyka; J. K. Minyard, Kosciusko; J. H. Owen, Holly Bluff; B. M. Funderberg, Raymond; H. H. Norton, Hattiesburg; J. N. Shirley, DeSoto; Norton Taylor, Greenwood.

### Missouri.

KANSAS CITY, May 20.—The following applicants for registration in pharmacy were successful in the State board examinations held in this city in April:

Pharmacists—Edward Jost, St. Louis; Noland A. Cate, Rich Hill; C. F. Kardell, Versailles; Thornton A. Washington, Garden City; W. H. Heaton, Shawnee, Kan.; Fred J. Kerlagon, Kansas City; Stella B. Walker, Kansas City; Lawrence J. Haymes, Springfield; Chas. M. Pettey, Kansas City; Dell S. Kittredge, Kansas City; Leslie V. Medicus, Kansas City; Roy R. Salloway, Lamonte; Harold V. Todd, Palmyra; W. Glenn Smith, Gallatin; Louis A. French, Rushville; Emil E. Wellmeyer, St. Louis; John France, Jr., Forest City; P. M. Fallis, Union Star; A. J. Clark, St. Joseph; H. H. Defenbach, Kansas City; Dr. C. F. Anderson, Moscow Mills; Dr. J. C. Wise, Kansas City.

Assistants—Walter Nunn, Chillicothe; Wm. G. Hogan, Neck City; Jas. R. Trolinger, Cassville; Cora E. Patton, Cabool; B. F. Menefee, Jonesburg; O. E. Berndt, St. Joseph; C. M. Murray, Cameron; W. E. Anderson, Kansas City; Murray C. Fellers, Sedalia; J. Frank Raney, West Plains; Jas. Thad. Kenney, West Plains; Jos. E. Hamilton, St. Louis; Robt. C. Glenn, Harrisonville; Walter S. Hunter, St. Louis; W. J. Sell, Waynesville; Thorn H. Nelson, St. Joseph; R. G. Thompson, St. Joseph; A. Morris Ginsberg, Kansas City; H. B. King, Elmo; Jas. I. Jones, New Cambria; Roger Bagby, Higbee; Edw. F. Duggins, Corder; Eugene L. Terry, Chito Hill.

The next meeting will be held at Pertle Springs on June 15.

### Montana.

BUTTE, May 20.—Out of a class of 40 applicants who took the recent examinations at Butte, 17 from Montana and one from North Dakota were successful, as follows:

Pharmacists—E. H. Campbell, Jr., Belt; A. F. Watson, Great Falls; J. F. Swab, Big Timber; W. G. Holm, Stanley, N. D.; Charles E. Martell, Anaconda; L. A. Baker, Livingston; Lorenzo Nickey, Harlem; H. D. Miles, Butte; H. H. Hosfield, Butte; Henry W. Flomer, Butte; F. G. Ruggles, Whitehall; D. E. Farmer, Glasgow; C. L. Brenner, Glendive; Elmathan Town, Hedgesville; R. J. Reynolds, Red Lodge; A. M. Hicks, Harden; T. A. Harkness, Missoula; Earl Converse, Anaconda.

### New Jersey.

BRIDGETON, May 20.—The following candidates were successful at the April examinations of the State Board of Pharmacy. The next examinations will be held in Trenton, July 16-17:

Pharmacists—Albert E. Askew, Camden; Frederick F. Alt, New York; Clinton F. Avis, Woodstown; Samuel Bean, Newark; Lawrence G. Beisler, Hilton; Giovanni Berardinelli, Newark; Clarence H. Berryman, Camden; Walter G. Bergman, Irvington; John J. Burke, Spring Lake; Gastano Cavallo, Garfield; Samuel M. Chenkin, Philadelphia; Joseph S. Churgin, Brooklyn; Zernan Cook, Dover; Salmon Cutler, Perth Amboy; Robert E. Davis, Elizabeth; Timothy J. Doran, Rahway; Meyer C. Epstein, Philadelphia; Morris Epstein, Philadelphia; Louis Finkelstein, West Orange; John A. Fisel, Atlantic City; William H. Fitzsimmons, Philadelphia; Raymond L. Flett, Atlantic Highlands; Louis Asir Fox, Provi-

Jence, Ruge, Philadelphia; Benjamin Goodman, Philadelphia; Katherine Gross, Philadelphia; Leo Greenstein, Philadelphia; Edward M. Hagerm, Newark; Mrs. Lottie Herman, Bayonne; Maurice E. Horowitz, Newark; Paul E. K. Janson, Glen Gardner; Meyer Kamenetzky, Newark; Mitchell Kaplan, Brooklyn; Walter M. Kaufman, Harrisburg, Pa.; George Kotelus, Newark; Jacob Krell, Long Island City; Edward J. Legg, Paterson; Lester E. Lenrow, Newark; A. E. Levitt, Newark; William Lockman, Jersey City; James J. McAvoy, Jersey City; Joseph G. Mott, Jersey City; Isaac W. Morse, Atlantic City; Joseph P. Moresh, Bayonne; Harry D. Neman, New York; Herman H. North, Jersey City; Albert C. Noyes, Jr., Bayonne; Joseph H. Oeste, Philadelphia; Asteris Pappas, Philadelphia; Roland L. Pettit, Morris-town; Ernst W. Pfeiffer, West Hoboken; Henry Pichenick, Philadelphia; Frances P. Pitam, New York; Wilbert M. Ralston, New York; Ralph B. Reiers, Morristown; Max Rosencoff, Philadelphia; William R. R. Scott, New York; Wesley M. Saylor, Philadelphia; Morris H. Schmidt, New York; Connor B. Shur, Philadelphia; Charles Silberman, Newark; Harry Spector, Newark; Leonard G. Taylor, Jr., Philadelphia; Aaron Vermeck, Philadelphia; Julius P. Watzich, Weehawken; Samuel Watt, Paterson; Irving Wechsler, Brooklyn; Louis L. Weinberg, Atlantic City; Edward C. White, Hoboken; Edward E. Winslow, Bryn Mawr, Pa.; John J. Youngblood, Newark.

Assistants—Charles W. Becker, Newark; Benjamin Baumgarten, Jersey City; Albert F. Bryniarski, Plainfield; Thomas A. Cramer, Point Pleasant; Gustave J. Eszbach, Newark; Henry A. Finestone, Philadelphia; George T. Flack, Collingswood; John F. Geiger, Jr., Atlantic City; Michael Gruliano, Newark; Everett J. Gorman, Jersey City; Charles J. Hoehn, Newark; N. Aloysius Kaiser, Newark; Bernard L. Katsin, New York; Edward Kent, Trenton; Nathan Kerber, Newark; John J. Kershuis, Newark; Henry F. Meister, Tenally; William A. Messner, Newark; Ferdinand Moccia, Newark; Maurice D. Newman, Elizabeth; Adolph Pastor, Newark; Herman I. Percely, Newark; William Perl, East Orange; George H. Rowland, Annandale; Jacob Sealetsky, Jersey City; Winfield S. Taylor, Jr., Trenton; Charles K. Wendell, Plainfield; Charles A. White, Philadelphia.

New York.

The number of penalties paid the New York State Board of Pharmacy, during April, according to Secretary Warren L. Bradt, and the character of violations were as follows:

Adulterated and deficient prescriptions.....	13

Pharmacists—W. H. Brewer, Caldwell, Kan.; F. E. Bradley, Norman; Sale Burns, Canton; C. C. Boles, Monett, Mo.; Edmond W. Cotton, Muskogee; R. E. Davis, Shattuck; H. M. Dreher, Oklahoma City; Jno. M. Elder, Fargo; F. A. Francis, Helena; H. M. G. Moore, Norman; R. M. Hatcher, Hastings; L. V. Hull, Norman; B. B. Hewlett, Elk City; W. A. Henning, Oxford, Kan.; J. E. Irvin, Panhandle, Tex.; Victor Keeling, Ravia; R. E. Lauderdale, Duncan; L. I. Morrison, Okmulgee; B. L. McMillan, Dodge City, Kan.; F. L. Miller, Norman; E. J. McNally, Oklahoma City; R. M. Myer, Bristow; Wm. E. Montgomery, Norman; N. S. Neylor, Kansas City, Mo.; Glen Reck, Guymon; S. H. Smith, Jr., Kearney, Mo.; Edward Sewell, Amarillo, Tex.; A. J. Starr, Florence, Kan.; Lucien Schooling, El Reno; M. M. Turner, Wagoner; H. R. Turner, Wichita, Kan.; S. B. Trippet, Denton, Tex.; N. R. Williams, San Bois; E. C. Wires, Norton, Kan.

The next meeting of the board will be held in the chamber of commerce rooms, Oklahoma City, July 14 and 15.

Vermont.

ST. ALBANS, May 20.—Mason G. Rebe, secretary of the Vermont State Board of Pharmacy, reports the following candidates for registration in pharmacy to have been successful at the April examinations:

Joseph C. Lambert, of Burlington, registered pharmacist; E. L. Halden, of Proctor, registered pharmacist; N. B. Cook, of Quincy, Mass., assistant pharmacist; Hortense Merrill, of Swampscott, Mass., assistant pharmacist.

Virginia.

RICHMOND, May 20.—At the examination held April 21 were 51 applicants for registration as pharmacists. Of this number the following were given certificates:

Registered Pharmacists—J. S. Falconer, Newport News; D. H. Lewis, Victoria; S. P. Buchanan, Coeburn; J. W. Payne, Richmond; B. F. Foley, Jr., So. Richmond; E. H. Ward, Danville; W. H. Long, Richmond; D. T. Briles, Chapel Hill, N. C.; J. L. Stephens (colored), Raleigh, N. C.; W. L. Irwin, Richmond; H. S. Ramsey, Bedford; G. B. Cooke, Richmond; E. B. Phelps, Pocahontas; G. B. Uddike, Chatham; L. W. Turner, Richmond; M. Feldman, New York City; J. W. Chambers (colored), Lynchburg.

Registered Assistants—Frank Larner, Richmond; C. L. Pedigo, Blacksburg; C. W. Landreth, Richmond; R. M. Hawthorne, Richmond; W. N. Perkinson, Danville.

There were 11 applicants for examination as registered assistant pharmacists. Of this number the following were successful: T. T. Hatcher, Lynchburg; H. W. Zirkle, Richmond; G. R. Ellington, Richmond; R. T. McElroy, Richmond; C. B. Hudgins, Richmond; H. C. Hisey, Richmond; E. P. Berlin, Richmond.

The next examination will be held in Richmond July 21.

Wisconsin.

MADISON, May 20.—At the meeting of the Wisconsin Board of Pharmacy held in this city, April 14-17, the following were granted certificates:

Registered Pharmacists—Frank L. Griffin, Owen; Paul A. Dahl, Viroqua; Robert H. Leonhardt, Sheboygan; Reuben P. Plantico, Manitowoc; Charles E. Stapleton, Madison; Arthur J. Brehm, Sheboygan; Robert E. Otten, Sheboygan; George E. Elwers, Neenah; Horace L. Burnham, Richland Center; Martin C. Kopf, Milwaukee; Roy G. Germanson, Grand Rapids; Tony J. Muehlbauer, Sheboygan; Edmund H. J. Kochanski, Milwaukee; John E. O'Brien, Madison; Joseph B. A. Dorszynski, Milwaukee; Roy A. Fortun, Antigo; LeRoy G. Hoffman, Antigo; Herbert Villmow, Milwaukee; Walter A. Hackbarth, Wausau; Wm. F. Ziegenhagen, Racine; Wm. F. Luebner, Milwaukee; Louis E. Seif, Neillsville; Lous A. Fischer, Watertown; Oscar A. Reischel, Milwaukee; Walter H. Fischer, Milwaukee; Charles H. Karnatz, Milwaukee; Albert F. Netzel, Crandon; Frank K. Keating, Milwaukee; Arthur J. Erickson, Kenosha.

Registered Assistants—Charles S. Hocking, Waupaca; Harold W. Hansen, Lake Mills; Holger Kasmussen, Withee; Palmer E. Nelson, Cashton; Earl V. Rudolph, La Crosse; Alfred J. Kolpin, Kenosha; Charles G. Pable, Oshkosh; Raymond A. Miess, Milwaukee; Wm. J. Gunnan, Milwaukee; Edwin H. Cora, Milwaukee; Otto Baarth, Milwaukee; Jerome M. Peters, Jr., Milwaukee; Louis H. Kreuzer, Milwaukee; James P. Hagen, Westly; Mary E. Machacek, Milwaukee; Ivyl W. Farnheld, Milwaukee; Alvin A. Steinke, Milwaukee; Walter H. Meider, Waukesha; William H. Kropp, Milwaukee; Herbert F. L. Meier, West Allis; Charley M. Foote, Oxford; Frank W. Lightner, Randolph; Clarence Andrea, Milwaukee; Leland B. Smith, Bangor; William E. McParland, Milwaukee; Robert J. Quinn, Bangor; Theodore H. Erck, Milwaukee; Carroll J. Blanchard, Milwaukee; Edward A. Babcock, Madison; Walter C. Meyer, Milwaukee; Paul Lyon, Rice Lake; Alphonse W. Streicher, La Crosse.

This being the annual meeting of the board, the following officers were elected for the ensuing year: President, B. J. Kremer, Fond du Lac; secretary, Edward Williams, Madison.

The next meeting will be held in Madison July 14-17.

NEWS OF THE BOARDS.

The next meeting of the Colorado State Board of Pharmacy will be held at the Normal building, Glenarm street, Denver, June 12-13.

It is now possible for a registered pharmacist going to Montana from any one of 22 other States to register without taking an examination in Montana, the State Board of Pharmacy having adopted the rules and regulations of the National Association of Boards of Pharmacy. H. C. Christensen, chairman of the advisory board of the National association, went to Anaconda and conferred with the members of the State board.

Members of the boards of pharmacy of Missouri and Kansas were guests of the Kansas City R.D.A. at a luncheon at the Coates House, Kansas City, Mo., recently with S. N. Doerschuk, president of the association, as toastmaster. In addition to the members of the boards, Professors L. E. Sayre and L. D. Havenhill, of the University of Kansas were guests.

The Iowa State Board has been stirred to drastic action against law-violating druggists, the arrest of 26 Des Moines druggists on the charge of selling intoxicating liquors after the police had raided several stores, bringing the matter to a head. Eight druggists were cited by the commission to appear before that body and show why their certificates of registration should not be revoked.

Governor Dunne, of Illinois, in a letter addressed to the State Pharmacy Board, calls the attention of that body to complaints, which have come from several cities of the State, of druggists who have declined, according to the reports, to permit the removal of injured persons to their stores for first aid. The Governor asked the co-operation of the board in removing all just cause for complaint, his letter reading as follows: "Complaints have reached me that in many cases of accidents, where persons are injured on the public highways, druggists to whom the injured parties have been brought for first aid, have refused their admission into drug stores and first aid assistance. The ordinary dictates of humanity require in case of sudden injury that all persons of all professions and trades give such relief as lies within their power. I would esteem it a favor if you would call the attention of the registered pharmacists of the State, whom I believe to be a body of humane, upright men, to the fact that such complaints have been made to the Governor, and ask them to show in the future that those complaints cannot be justly directed toward the pharmacists of the State as a body."

The Ohio State Board of Pharmacy has started after the druggists who have been convicted of the illegal sale of cocaine, the druggists in question being cited before the board to show cause why his or her certificate should not be revoked.

Members of the Indiana State Board of Pharmacy were entertained at a banquet given at the Bohemia Cafe, Lafayette, Ind., May 14, by the Lafayette R.D.A. and the Purdue Ph.S. John J. Seultz was toastmaster.

John A. Weeks, a member of the Texas State Board of Pharmacy, states that in an opinion rendered to him he was advised that a drug store which employs a registered pharmacist, having supervision of the compounding of prescriptions and the sale of drugs, would not require the registered man's presence at all times, but that an unregistered druggist could, under the supervision of the registered man, sell drugs and compound prescriptions; that "supervision" did not mean direct supervision but a general supervision. The State attorney-general, however, has held that the law must be substantially complied with, and that the registered pharmacist must actually supervise all the affairs of the drug store.

## The Abolition of the Guaranty and Serial Number — What Leading Drug Firms Say.

**B**Y SIGNATURE of the Secretaries of Agriculture, Treasury and Commerce the guaranty and serial number regulation under the Pure Food and Drugs Act has been rescinded, the abolition of such legends taking effect on May 1, 1915. From the first the object of criticism on the ground that such legends are "misleading and deceptive," the action of the three secretaries in removing all grounds for criticism meets with the general approval of manufacturers, and of such national associations as have been in session since the edict of May 5, with the proviso that some extension of time should be allowed manufacturers who have in stock sufficient labels bearing the guaranty legend to last them far beyond the date set for the banishment of this label guaranty. The substitution of an individual guarantee is in accord with existing trade customs when articles are in interstate commerce.

In response to inquiries from the ERA, manufacturers of drug products and proprietaries have stated their position in regard to the new ruling, although a number of the firms approached did not care to comment either in one way or another, accepting the ruling as a matter of governmental supervision which calls for no particular action on the part of the manufacturer. A number of these replies will be found herewith; the text of the government ruling, reasons for the action, and a history of the guaranty legend following:

### The Norwich Pharmacal Company—

"We view with some concern the prospect before us of again changing our entire line of labels, running into the thousands. A few years ago we passed through the stress and strain of such a change to comply with the amended form of the guaranty legend. That meant some thousands of dollars of needless expense, which we charged up to the artful practices of those few manufacturers who perverted the beneficent provisions of the Pure Food Regulations into a means for deceptive advertising of their wares. The many reputable manufacturers are again called upon to pay the penalty for the sharp practice of a few. To those who market a limited line the expense of changing the labels may not be serious, but to houses like ours, whose line of manufacture embraces thousands of items, it is an expensive luxury. In common with other manufacturers doing business in New York State, we have just revised our labels to comply with the Weight and Measure Law, so that with another change made necessary by the removal of the guaranty legend, you can see that the manufacturer's lot is not a happy one. However, there seems good and sufficient cause for the action of the three secretaries from an administrative standpoint, and it is incumbent upon manufacturers to comply cheerfully with the hope that the labels printed henceforth may serve their intended end and not be thrown away.

It seems to us that for several reasons the abolishing of the guaranty legend and serial number will work a disadvantage to the manufacturer. For one thing, the dealers and consumers have become accustomed to look for the legend, and its absence from the package or label will, at first, undoubtedly raise a question as to the quality of the goods. We have no doubt all concerned will soon become accustomed to the new order of things and that in the end this will not be a serious matter. The feature which will cause the most trouble, it seems to us, is that which requires the guaranty to be incorporated in the invoice and each guaranty to be signed by the manufacturer or dealer. It might not be a serious matter to the maker of one or two items to individually sign guaranties

with each invoice, but to concerns having thousands of open accounts upon their books it might prove a serious question if each separate invoice must be individually signed, as seems to be provided for in the amended regulations. It is to be hoped that some means can be provided whereby recognition will be given to a guaranty issued directly to the customer and covering all goods which may be purchased from that manufacturer; in other words, have a single guaranty cover all transactions between that particular manufacturer and dealer. It may be found that some such plan can be devised which will be in accord with section 9 of the Food and Drugs Act, and which, at the same time, will relieve the manufacturer from the necessity of making out and signing hundreds of guaranties on each day."

### The Wm. S. Merrell Chemical Co.—

"The new ruling must be considered from two standpoints—the value and the practicability of the guaranty itself, and the effect of the frequent changes in rulings which have been in force for eight years. We heartily approve of the decision now reached by the Secretaries of the Treasury, Agriculture and Commerce for the following reasons:

"1st. While the guaranty is issued by the manufacturer and not by the Government, the assumption on the part of the public that the Government in some way has examined and approved the products bearing the serial number is to some extent warranted by the later part of the legend in the Pure Food and Drugs Act—June 30th, 1906.

"2nd. The guaranty clause has been made the basis of deception on the part of unscrupulous manufacturers and even the possibility of this deception should be eliminated.

"3rd. The guaranty is of no value to the manufacturer of pure drugs or pure foods, but on the other hand has placed him at a disadvantage in competing with manufacturers of inferior products, which are also assumed to be guaranteed by the government under the Pure Food and Drugs Act.

"4th. With the establishment of the simple guaranty from the manufacturer to the jobber—from the jobber to the retail dealer and from the dealer to the consumer, the responsibility of the distributor will be increased with the result that he will look more to the quality of the products purchased than to the mere fact that the labels bear the serial number and the guaranty legend. This should have a tendency to increase the quality of all products on the market—eliminate unfair competition and make it more difficult for inferior products to find ready distribution through conscientious and reliable dealers.

"With respect to eliminating the guaranty, it should be understood that manufacturers have already been put to an enormous expense in the printing of new labels and redressing packages. This is not only on account of the introduction of the guaranty legend, but from the fact that the approved form has been changed four times by department rulings—these changes being additional to others made necessary with reference to the statement in terms per ounce of certain inhibited ingredients. This has already involved a needless waste and expense which should be duly considered by the commission and especially with reference to future rulings, so that the various phases of the subject may be ably considered before further unnecessary expense is imposed upon the manufacturers of the country.

"The year's time allotted for the change appears liberal and ample for the purpose of manufacturers of foods and of patent medicines, but with the pharmaceutical manufacturer with from

to 50 items on the list, many of which are necessarily small. The complete elimination of the guaranty legend in any of this time is an exceedingly serious problem and one which will cost more expense than he should be reasonably asked to undertake. The immense number and variety of labels required in the pharmaceutical line, for there are from three to six labels for each item, according to size, makes it an impossible task to accomplish this change within one year except at enormous expense. Every pharmaceutical manufacturer today is most anxious to get on his slow-selling preparations bearing the name of the guaranty legend which have been authorized by the Government, whereas this last change totally eliminating the legend renders this entire stock of labels without value.

"The last change in legend allowed two years' time and still left it possible to use the labels with a supplementary label containing the latest approved form of guaranty or legend. This two years' time was none too much and should be allowed as a minimum to accomplish this last change with any manufacturer who has a line requiring any considerable number and variety of labels.

"Aside from this feature, we fully approve of the new ruling, and if necessary, would readily assume the loss and additional expense involved for the benefits which we believe will be derived by the manufacturers of quality products and for the manifest advantages to the general public."

#### Frederick Stearns & Co.—

"We are heartily in favor of the recent ruling made by the three Secretaries rescinding the use of the guarantee legend and serial number on food and drug products. The utility of these has frequently been brought into question. It would seem, too, that they have caused confusion in the minds of many final customers and have been incorrectly interpreted by a great many. While the fundamental idea is very good, we submit that the time permitted in the ruling to dispose of stocks on hand is not sufficient. We believe a great many manufacturers will have on hand considerable quantities of expensive labels, cartons, lithographed tins and other containers on which the legend referred to appears. Since the use of this phrase was suggested by the Government and manufacturers have used it in good faith, we believe that the time should be extended so that the packages or containers carrying the now proscribed wording may be used up without inflicting hardship or loss upon manufacturers and other dealers. It would seem unfortunate that this ruling covers only food and drugs and that the guarantee and serial number are to be continued for the present at least, on insecticides and fungicides. As the enforcement of both laws is in the hands of the same officials, and if it is advisable to eliminate the clause referred to from food and drugs, it would seem that it would be equally advisable to have it removed from insecticides and fungicides."

#### Lehn & Fink—

"This is undoubtedly a wise move from the Government's standpoint, for it is undoubtedly true that in sporadic instances the public has been misled by such legends to believe that the merchandise to which they relate had been examined or approved by the Government. Admitting that it is a wise move, it naturally follows that we approve of it. A great many of our labels will become useless after May 15, 1915, for it is impossible for us to use up all of them by that time, but let us be sanguine and hope by that time a new order will be promulgated which may compel us to put the legend on again, so we may be a little right after all."

#### Sharp & Dohme—

"We feel, in reference to the new ruling, that there is no occasion to eliminate it now that it has been in force so many years. The fact that the name of the guarantor, representing the manufacturer, is now required as part of the legend should, and in our judgment does, eliminate all danger of the legend being misleading, although, before this was required there was, doubtless, much misrepresentation practiced by unscrupulous houses. In view, however, of the fact that the regulation abolishing the legend has been promulgated by the three secretaries, we think they should permit the use of present labels with the legend cancelled with indelible ink, until such time as manufacturers can replace existing stocks without unnecessarily destroying their property in labels, which in many cases

run into the thousands of dollars. In our judgment, the regulation should read that on and after a certain date, say May 1, 1915, no package shall be permissible upon the shelves of dealers containing the legend, but cancellation by indelible ink shall be considered as an elimination of said legend. It will not affect the honorable manufacturer, who will guarantee his goods whether they contain the legend or not, and it probably will not affect the wholesale and retail dealer, because practically all manufacturers will continue to guarantee their goods. Even the independent or unscrupulous manufacturer will hesitate to refuse to support the dealer should his goods be found wanting while in the hands of the dealer."

#### The H. K. Mulford Company—

The H. K. Mulford Co. enclosed a copy of the following letter which was sent by them on May 19 to Secretaries Redfield, McAdoo and Houston:

"We are in receipt of copy of the ruling issued by the Food and Drug Inspection Commission prohibiting the use of the guaranty number on labels and wrappers printed after May 1, 1915. Orders have this day been issued to discontinue stamping the guaranty number on labels, wrappers and circulars printed from this date. Since we manufacture a great number of pharmaceutical preparations, many of which are sold in small quantities, we are obliged to order a sufficient number of labels, wrappers, boxes, etc., at one time to last for several years, and respectfully ask if we may be permitted to use after May 1, 1915, the labels and wrappers that we may have in stock bearing the guaranty number as printed per sample submitted. As representing one of many containers ordered, we are submitting under separate cover a package of Crystal Pastilles. You will note the label specifically states that the product is guaranteed by the H. K. Mulford Company, and by no means can the purchaser be led to believe they have been examined and approved by the Government. Inasmuch as we will doubtless lose many thousands of dollars if we are unable to use these and similar containers, we hope you will give our request your most careful consideration. What will be your decision in regard to the serial number in the Insecticide Act? Very truly yours,

H. K. MULFORD COMPANY,

#### McKesson & Robbins—

"We think that a grave mistake is being made in forbidding the guarantee legend on labels. Now, every retailer and every jobber will have to keep a file of guarantees from every manufacturer from whom they buy and refer to it each time he receives any goods, to assure himself that he is safe in selling them. Would not the jobbers display good judgment if they guaranteed on their invoices only such articles as they made themselves and allowed the manufacturers to furnish their guarantees to the retailer direct? When the retailer sells in an original package, or in a prescription, a product whose label bears a guarantee, he feels reasonably sure that it is pure; this regulation will require him to write the manufacturer before he dares use it."

#### GUARANTY SERIAL NUMBER ABOLISHED.

WASHINGTON, D. C., May 20.—The legend "Guaranteed Under the Food and Drugs Act" is held to be misleading and deceptive, and the use of a serial number on food and drugs is prohibited after May 1, 1915, by a food inspection decision signed May 5 by the Secretaries of the Treasury, Agriculture and Commerce. The taking effect of the new regulation is postponed until May 1, 1915, in order to give manufacturers an opportunity to use up their present stocks of labels.

After May 1, 1915, guarantees of compliance with the law should be given by manufacturers directly to dealers, and should be incorporated in the invoice or bill of sale specifying the goods covered. This guaranty should not appear on the label or package of the product.

#### Reasons for Action.

The reasons for the action of the three secretaries, as given in the decision, are as follows:

"(a) It having been determined that the legends 'Guaranteed under the Food and Drugs Act, June 30, 1906,' and 'Guaranteed by (name of guarantor) under the Food and Drugs Act, June 30, 1906,' borne on the

labels or packages of food and drugs, accompanied by serial numbers given by the Secretary of Agriculture, are each misleading and deceptive, in that the public is induced by such legends and serial numbers to believe that the articles to which they relate have been examined and approved by the Government and that the Government guarantees that they comply with the law, the use of either legend, or any similar legend, on labels or packages should be discontinued.

"Inasmuch as the acceptance by the Secretary of Agriculture for filing of the guaranties of manufacturers and dealers and the giving by him of serial numbers thereto contribute to the deceptive character of legends on labels and packages, no guaranty in any form shall hereafter be filed with and no serial number shall hereafter be given to any guaranty by the Secretary of Agriculture. All guaranties now on file with the Secretary of Agriculture shall be stricken from the files, and the serial numbers assigned to such guaranties shall be cancelled."

Many reputable manufacturers have used the legend and serial number in good faith solely as a convenient way of notifying a dealer that they assumed full legal responsibility for their goods. Other manufacturers have employed this legend in such way as to lead the public to believe that their product had been passed upon and certified by the Department of Agriculture. The widespread deception of the public resulting, necessitated abolishing the Department's practice of accepting guaranties for filing and issuing serial numbers.

The Food and Drugs Act does not prescribe any guaranty legend or serial number, nor has any manufacturer ever been required to file a guaranty or to use a serial number or the legend. The appearance of the serial number and the guaranty legend on the products, moreover, has been of no material assistance to the Government in detecting or prosecuting violations of the Food and Drugs Act, nor has it promoted the manufacture and sale of pure foods or drugs.

The only mention of a guaranty in the Food and Drugs Act is Section 9, which provides that where a dealer can show a guaranty from the maker of goods that they comply with the law, the manufacturer, and not the dealer, shall be amenable to prosecution.

#### History of the Guaranty Legend.

The manufacturers believed it to be commercially inconvenient to give a separate guaranty as part of the bill of sale or invoice to every dealer with every interstate shipment of their goods, and soon after the passage of the act in 1906, asked the committee, appointed by the three secretaries to draft regulations, to allow them to file a blanket guaranty to dealers at Washington under which the makers of goods would assume full legal responsibility for all goods manufactured by them and shipped into interstate commerce. This guaranty was not in any sense to be a guaranty to or by the Government, but was merely to be a guaranty protecting the dealer from prosecution in accordance with Section 9 of the Food and Drugs Act. This permission was granted, and the department assigned a serial number to each of the guaranties so filed. The manufacturer was then allowed to use this serial number on this label in connection with the legend "Guaranteed under the Food and Drugs Act, June 30, 1906." There was no requirement, however, that any manufacturer should file such a guaranty.

A large proportion of the public took these words to mean that the Government in some way guaranteed the article. In an endeavor to make it clear that the guarantee was not the guarantee of the Government, the legend was amended Dec. 8, 1908, to read "Guaranteed by (name of guarantor) under the Food and Drugs Act, June 30, 1906." The public, however, persisted in taking these words, even after the amended form was employed, to mean that the Federal Government had actually analyzed and found the product so labeled to be pure and wholesome and of standard quality. This misinterpretation on the part of the public was, in some cases, encouraged by manufacturers, and there is no question that the serial number and legend were used in some instances to increase the sale of highly undesirable foods and drugs for interstate shipment of which the manufacturers were later prosecuted and fined.

The only guaranty approved by the new regulation for use after May 1, 1915, is the individual guaranty identifying the

goods sold by the manufacturer to the dealer. This guaranty can be incorporated in the invoice or bill of sale specifying the goods covered by use of a form, stamped or printed in the document, and signed by the manufacturer. When the goods are properly described in the document, they can be referred to in the guaranty, without repetition of the detailed description contained in the invoice or bill of sale. This guaranty should not appear on the label or package of the product. In the meanwhile the public is notified that the presence of a serial number and the words "Guaranteed under the Food and Drugs Act" on packages merely means a guaranty to the dealer that the manufacturer is legally responsible for his goods, and in no sense implies that the Federal authority has investigated or approved the quality of the goods so labeled.

The remainder of the regulation which deals with the method of using the guaranty is as follows:

"(b) The use on the label or package of any food or drug of any serial number required to be cancelled by paragraph (a) of this regulation is prohibited.

"(c) Any wholesaler, manufacturer, jobber or other party residing in the United States may furnish to any dealer to whom he sells any article of food or drug a guaranty that such article is not adulterated or misbranded within the meaning of the Food and Drugs Act, June 30, 1906, as amended.

"(d) Each guaranty to afford protection shall be signed by, and shall contain the name and address of, the wholesaler, manufacturer, jobber, dealer, or other party residing in the United States making the sale of the article or articles covered by it to the dealer, and shall be to the effect that such article or articles are not adulterated or misbranded within the meaning of the Federal Food and Drugs Act.

"(e) Each guaranty in respect to any article or articles should be incorporated in or attached to the bill of sale, invoice, bill of lading, or other schedule, giving the names and quantities of the article or articles sold, and should not appear on the labels or packages.

"(f) No dealer in food or drug products will be liable to prosecution if he can establish that the articles were sold under a guaranty given in compliance with this regulation."

#### First Pharmaceutical Experiment Station.

In accordance with a law passed by the Wisconsin Legislature last year providing for the establishment of a pharmaceutical experiment station in the department of pharmacy of the State University, the regents of that institution have recently adopted a plan of organization and confirmed the following appointments constituting the staff of the station: C. R. Van Hise, Ph.D., LL.D., president of the university; E. A. Birge, Ph.D., Sc.D., LL.D., dean of the College of Letters and Science; Edward Kremers, Ph.G., Ph.D., director; R. H. Denniston, Ph.G., Ph.D., pharmacognosist; H. A. Langenhan, Ph.G., B.S., pharmacist; Emerson R. Miller, Ph.C., M.S., chemist; G. A. Russel, Ph.G., B.S., Government expert; F. A. Federer, Ph.G., field and laboratory assistant, and H. W. Tuft, office and laboratory assistant.

The introduction of the measure creating the station followed the action of the Wisconsin Pharmaceutical Association which was embodied in a resolution adopted at the meeting held at Delavan in 1912, the bill as finally passed by the Legislature becoming a law last July. In this effort the pharmacists of Wisconsin have the credit of putting into active operation the first pharmaceutical experiment station ever established. Under the law the duties of the station are to co-operate with the bureau of plant industry of the department of agriculture for the cultivation of medicinal plants and to disseminate such information as may lead to the proper cultivation of medicinal plants and the production of high-grade vegetable drugs within the State; and also, to serve the public at large by co-operation with pharmacists and physicians in securing for the sick the best medicines that pharmaceutical science and art can provide. The station will also co-operate with the State Board of Pharmacy, the State Board of Health and the Dairy and Food Commission to bring about the results named.

# I. What Retail Druggists Really Need — A Symposium.

IN the preparation of any discussion of such a subject as this now under consideration there is little necessity for an explanation. Every reader is directly interested in what successful druggists have done and are doing to ensure success, and what methods they have pursued to meet changing conditions. The following contributions are from Nationally-known druggists in widely separated sections of the country, thus removing the discussion as far as possible from the influence of purely local conditions, at the same time emphasizing how local demands of a general character have been and are being met. Similar articles on the same general topic will be a feature of the ERA during the next few months.

## Must Be Both Pharmacist and Merchant.

By DAVID R. MILLARD.

*Juniata Medical Morgan & Millard, South and Baltimore streets, Baltimore.*

“THE drug business offers greater opportunities today than ever before, though, of course, those who engage therein must be prepared to adjust themselves to new conditions. The musty, untidy old shop, with its peculiar smells and its want of conveniences, is a thing of the past and is not to be regarded as evidence of conservatism and of thoroughness, but of decay. Never before has the standard set for young men who desire to enter the profession of pharmacy been so high as at present. The University of Maryland, for instance, will, when the next session opens in the Fall, require of matriculates what amounts in effect to a college education as a preliminary. As a consequence, a better class of young men will be attracted than ever before. The pay of drug clerks is about twice as high as it was 10 years ago, and this also helps to attract a more capable class, the low salaries previously paid having resulted in a pronounced scarcity of clerks, which naturally forced up the

D. R. MILLARD

pay until at the present time the rewards are decidedly attractive. On the other hand, fewer drug stores are being opened than before. In this city it will be found probably that notwithstanding the increase in population the number of stores has been increased by hardly more than three in the past year. So much more capital is required in stocking up, but especially in furnishing stores, that this of itself tends to limit the number of pharmacies.

“Along with the larger capital required to engage in the business the profits have become smaller. The greatest menaces to the drug trade at the present time are “chain stores” and “cut prices.” In every other line of business the merchant endeavors to ascertain how much the traffic will stand and how much the public will pay for goods. The ‘cut price’ druggist, on the other hand, tries to see how low he can sell goods without going to the wall. We have never experienced any trouble in getting a fair price or even a higher one. In various instances when we have had to raise the price of certain preparations, because of the advance made by manufacturers, we have found our customers to be perfectly satisfied to pay more after an explanation and have not lost a single one. I mention this merely to show that there is no real necessity for this cutting of prices which has come to be a feature of the drug trade. I am of the opinion that if Congress passes the bill permitting manufacturers of trade-marked articles to fix the price at which retailers shall sell the goods it will be a great thing for the druggist, because a large part of his business is in trade-marked goods.

“The druggist in the East is in a better position than his fellow pharmacist in the West, because the former has not ever suffered from the practice of physicians prescribing their own medicines to the extent experienced in the West. Here the relations between the druggist and the physician are generally more reciprocal and this helps the pharmacist. In spite of this, however, the money is not now made on prescriptions, but on other goods. In other words, a druggist must not only be a pharmacist but a merchant as well. He must look to side-lines to make his business pay, and finds novelties and specialties bought at advantageous prices and closed out quickly

particularly profitable. The prescription business alone will not enable the druggist to make a living; in fact, it has become the least profitable and the least desirable portion of the business, viewed solely from a trade standpoint.

“Taking the average price of a prescription at 40 cents, and assuming that a store gets 75 prescriptions in a day—which is what some stores average—and it will require at least three clerks to put up these prescriptions, for which the drug store receives \$30. Allowing \$5 a day for the clerk, which is \$15, and \$5 or \$6 for the material that goes into the prescriptions the proprietor is put to an expense of \$20 or more without any deduction for rent and other expenses. His margin of profit, it can readily be seen, is not large, and in addition he will have to wait for his money. In the time it takes to put up a prescription a clerk can sell several brushes or other articles, netting a larger profit, and the transaction is closed, the money being paid over the counter without any further bookkeeping or other details.

“A prescription, on the other hand, may be heard from later. You are responsible not only for your own shortcomings or whatever else it may be, but for those of a druggist who may have put up the original prescription. Take the case of a man coming to Baltimore from New York. He had a prescription originally compounded in New York, but finding that he must stay here for several weeks or months, he has it filled in a Baltimore drug store. If the preparation happens to be of a slightly different color it will excite comment, and the customer will immediately complain that he is not getting the right medicine or that the compound is of inferior quality, whereas the Baltimore druggist may have put it up right, while the New York man slighted it or made a mistake. This calls for explanations which the druggist does not like to make, and entails loss of time. Take a prescription extract of cherry bark. The color may run all the way from light red to dark brown, the selected bark yielding a liquid lighter than the lower grades. The customer not knowing this, will jump to the conclusion that the preparation he gets from our store is inferior, whereas the contrary is the case, and yet it will be difficult to convince him of the fact.

“It used to be that a certain investment in simples would suffice to do a considerable prescription business, but such is no longer the case. To do the same amount of business, you will have to spend perhaps nine or ten times as much for the ingredients. Every manufacturer turns out his own brand of pills and other articles, and we get prescriptions not for quinine pills or some other kind of pills, but for S. & D. quinine pills, and so on down the list. There is hardly an end to the proprietaries which are called for in prescriptions. You may buy a pound or an ounce of a certain product, use a small portion of it in a prescription and not have any further call for the product in years, the profit you get on the prescription being utterly inadequate to compensate you for the original outlay. I venture to say that the prescription department is responsible for more dead stock than all the others combined, making up perhaps 90 per cent. of the total of such dead stock.

“And yet a drug store cannot do without the prescription department. It is necessary to get prestige. A store without a prescription department is at once suspected as being given over to quackery and to other practices that are to be discouraged. But it is the novelties that pay the money these days, and the druggist must be up and doing. Of course, it stands to reason that his goods must be all right, and that his store must be up-to-date. In our experience we have found fixtures a good, though expensive, investment. In the 18 years or so in which I have engaged in the drug business, I have spent perhaps \$100,000 in drug store fixtures, but it has paid. Every now and then something new or a change is desirable, for it gives an impression of progressiveness and

serves to prevent a store from taking on an appearance of staleness.

"In conclusion, I can only add that there is more money to be made in drug stores than ever before, and that the position of the really alert druggist is more secure than ever before."

## Advertise—But Quote Prices.

By A. M. HOPKINS.

General and Advertising Manager for M. Cora Dow, of Cincinnati, Ohio.

"IN the first place, we are for advertising, first, last and all the time. We believe that there is value in all publicity, but that there is one particular kind—that is, newspaper advertising—which is best for a business like ours; and, consequently, we have a weekly advertisement in one of the papers, in the same place every week, 52 weeks in the year, with gossipy talk about special features which we think are worth mentioning, and with price quotations on a variety of other goods.

"That is one characteristic about our advertising which is worth noting, by the way—we always quote prices—because that is one of the best possible ways of making an advertisement effective. People have learned to look for these regular weekly ads., and they certainly come to our stores for the bargains they find in them. Moreover, as I say, we try to insert some interesting talk about something or other. We are now running for the second

time a series of short talks on a number of subjects that proved interesting, from the make-up and effect of an enteric pill to the way we put up citrate of magnesia.

"In those little talks we tell people a lot of things they didn't know about drugs and so forth, and it all works out for our benefit, either directly or indirectly. For example, when we emphasize the necessity of care in the preparation of all kinds of drugs, as well as with prescriptions, and tell the public that we meet the strictest possible requirements in this respect, there is plainly a strong argument in favor of doing business with us. And so it goes—all proving, as I say, the usefulness of advertising.

"Then, too, I might say that we're positive cranks on location—good location. My exact meaning in this respect may be gathered from the fact that out of the 10 stores in the string—11 soon to be—all but two are in the downtown district of the city, and most of them in the very busiest section, in the heart of the activities of Cincinnati. We have just two suburban stores, and I think I am safe in saying that we will never have any more.

"Why? Well, because there's more money in running them downtown. That's the best reason I know. You see, it takes just as much money, in every item except rent, and just as much time and stock and so forth, to keep a suburban store going as it does one in the heart of the city; and, naturally, the profit is much less, because no such volume of business is possible, even in the most favorable suburban location, as in a good downtown store. That is why our policy may now be said to be to confine our business to the business section.

"Another point as to location is that we must have corners—because, emphasizing the importance of the factor of location as we do, corners are obviously the only thing for us. Corners mean just twice as much window space as can be had in an interior location, which is an important point; and, therefore, while they cost a good deal more in rent, we are convinced that they are worth the difference. No druggist, in my opinion, should think of trying to do business in an interior location.

"Of course, I realize that there is not room in every city for every druggist to do business in the downtown section; and, too, there is a real call for the suburban neighborhood druggist, and good business for such stores, properly located and managed. I am not overlooking these things when I outline our own policy.

M. C. Dow

"The real trouble with the druggist who finds himself falling behind in the race for business nowadays is that which is indicated in that simile—his failure to keep up with the times. For example, I venture to say that even now there are many druggists who haven't the slightest idea what it costs them to do business, and have no idea that it is worth while to find out. *They don't know how to fix prices scientifically. They think that if an article costs them 75 cents and they sell it for a dollar they are making 25 cents, when, as a matter of fact, they may be losing money at that figure.*

"Then, too, the old-fashioned druggist does not realize the vital necessity nowadays of keeping constantly on the lookout for side-lines that will sell. Notice that qualification—side-lines that will sell. There are a thousand and one lines to carry, but the problem, as I have seen it, is to select those which will sell readily and at a fair profit. There is the danger, on the one hand, of getting stuff that must carry too high a price to move readily, and, on the other, of finding that the five-and-ten-cent stores can undersell you on the merchandise if it is too cheap. The druggist must, if he wants to succeed, find the happy medium, and stick to it.

"There are other things which might be said along this line, but I think I have indicated the principal points. People say that the drug business is more difficult than it used to be, and, in a way, it is; but the successful druggist is more of a money-maker nowadays than he ever was, because he is more of a merchant. And, as you will observe, practically everything I have said goes to show exactly that."

## A Creed for a Paying Trade.

By E. H. CONE.

Prescription Specialist, Pryor and Decatur streets, Atlanta, Ga.

"HOW trade—paying trade—can be built. This covers quite a bit of ground. I agree that pessimism has no place in the drug business, or any other business. The germ of fear will eventually kill any business, and the usefulness of the man who cultivates it.

"I believe that the retail drug business is an easier profession than that of lawyer, doctor or dentist. I know it is easier than that of drug manufacturer or jobber, as I have had eight years of those before I became a retailer on my 'own hook.'

"I believe the future holds more good than the past. I have always obtained pleasure from my work. It is hard, vexing, and not without its responsibilities; but what line of serious endeavor is not?

"I consider a creed like the above essential as a starting point in building a "paying trade." We have all passed through a trade depression. When we saw it coming we shifted from featuring \$3.00 hair brushes and 50-cent tooth brushes to the lower-price kind; from a dollar a pound candy to 50 cents, 60 cents and 80 cents. This kept up our volume so necessary when overhead expenses are fixed.

"We spent month after month the same fixed percentage of our sales for advertising. Service, clean, bright merchandise, attractively displayed, windows changed every two days (because we had more time) produced the necessary sales.

"Periods of depression have been marked by slow recovery of normal trade conditions because of fear of their recurrence.

"The new Currency Bill with the Regional Bank feature will correct this to such a degree that short crops and manipulations by money interests will not seriously affect commerce."

## Secretary E. W. Runyon Convalescent.

Edward W. Runyon, of Boericke & Runyon Co., homeopathic pharmacists, 14 W. 38th street, New York, assistant secretary of the New York College of Pharmacy, has so far recovered from a serious attack of pneumonia as to be able to sit up. Prof. Runyon, who occupied the chair of pharmacy and was dean of the California College of Pharmacy during the '80s, has an extended acquaintance in the drug trade and his many friends are wishing him an early return to health.

E. H. CONE

## DRUG LAWS AND RULINGS

**U. S. Net Weight Law Now Effective.**—The three secretaries of Treasury, Agriculture and Commerce—have signed the regulations for carrying out the so-called net weight law which compels manufacturers to make a clear statement of the weight, volume or contents on their packages of food, shipped in interstate commerce or sold in the District of Columbia or the territories. These regulations became effective at once, though the law was passed March 13, 1913. Under the law all packages, bottles or other containers holding more than two ounces avoirdupois or more than one fluid ounce must be marked, and the volume of liquids must be computed at 68 F. The quantity stated must represent the actual quantity of food, exclusive of wrappings and container. In general, solids must be stated in terms of weight and liquids in terms of volume. Semi-solid foods or mixtures of liquids and solids may be stated either by weight or measure, but the statement must be clear as to which method is employed. The regulation also permits the statement of minimum volume or weight as "minimum weight 12 ounces," "minimum volume 1 gallon," "not less than four ounces," etc., but no variation below the stated quantity will be permitted. The regulations permit tolerances or variations in packages where the discrepancies are due exclusively to unavoidable errors in weighing, measuring or counting which occur in packing in order to permit the use of weighing and measuring machines which, like human operators, cannot weigh or measure with absolute accuracy every package. The regulations, however, provide that a run of such packages must show as many cases of overweight and as much excess as it does cases of underweight or undervolume. Similarly in the case of bottles which cannot be blown with absolute accuracy, tolerances are allowed, but with the same proviso that the run of bottles must show as much excess in volume as deficiency in volume. A manufacturer who uses some special bottle of odd shape cannot claim a greater variation because of the difficulty of blowing or manufacturing such a bottle or container.

**Bars Down for Drug Users Through a Kansas Amendment.**—Cocaine and morphine may be sold in the State of Kansas to any and all persons, according to a decision April 23, by Judge Brady. In giving the decision the judge blamed the Legislature of 1913 for an amendment to the "drug act" which permits a return to the sale of "two of the most dangerous habit-producing drugs." The decision was given in the case of F. E. Orr, a druggist at 11th street and Osage avenue, Wichita, who was charged with selling morphine. "There is absolutely no law under which Mr. Orr can be convicted on this charge of selling morphine," Judge Brady said. "The carelessness, wilful neglect or ignorance of the last Legislature absolutely protects sellers of cocaine and morphine. The law of 1909 provided it could be sold only on prescription from a physician. The 1913 Legislature so amended the law that it is capable of only one construction and that is that any druggist may sell morphine or cocaine upon obtaining the signature of the purchaser." W. H. Henrion, a member of the State Board of Pharmacy, on May 4 issued a warning from the board which advised druggists not to consider the ruling by Judge Brady, on the ground that Judge Brady's decision is not in accord with the law, that neither morphine nor cocaine can be sold except on the prescription of a physician, and that the board will prosecute any druggist who fails to observe this legal regulation.

**Drastic Drug Regulation Bill in Massachusetts.**—After several weeks of conferences the Massachusetts legislative committee on Public Health reported a drastic bill to regulate the sale of opium, morphine and other narcotic drugs. The bill provides, briefly, that a prescription for opium, morphine or any of the other commonly used and dangerous narcotics shall be filled but once. The bill is intended to prevent the refilling of prescriptions by persons addicted to the use of habit-forming drugs, or to the clandestine and illegal sale of such drugs. The provisions of the bill have been accepted by representatives of the druggists and physicians. Senator Ezra W. Clark, of Brockton, the chairman of the committee, is a physician. The bill as reported provides: That after Jan. 1, 1915, it shall be unlawful for any person, firm or corporation

to sell or give away any of the habit-forming drugs, except upon the written prescription or order of a physician, dentist or veterinary surgeon and that it shall be unlawful to again fill the prescription except by order of the prescriber. This does not apply to patent preparations or other proprietaries sold exclusively for medicinal purposes. Violations of the act would be punishable by a fine of from \$50 to \$1000 and by imprisonment not exceeding one year. The bill was later passed.

**The Net Container Act** passed by the California Legislature has gone into effect. According to this act, all food products sold in original packages, where the retail price is 11 cents, or more, must be branded with a statement of the weight, measure or numerical count. Generally speaking, soda-water manufacturers are not affected by the measure, as the price of a bottle of soda water, including the deposit on the bottle, is but 10 cents. Most mineral waters, however, sell for more than 11 cents per bottle and will have to be labeled with a statement of the contents. Many soda fountains have stocks of bottled goods on hand that are not properly labeled and care should be taken that none of these are sold in original packages. Manufacturers shipping extracts, ice-cream powders, mineral waters, or other products intended for human consumption in California should see that they are properly labeled. Wholesalers having stocks of goods on hand not properly labeled are affixing separate labels to have goods conform with the provisions of the new measure.

**An inspection of 100 Milwaukee drug stores** by R. W. Cunliff, a special investigator connected with the city sealer's office, showed that 22 per cent. of the druggists' scales were in error, 43 5/10 of the weights were in error and 37 3/10 of the graduates were wrong. Druggists to a man agreed to correct their scales, weights and measures. Among the principal defective measures discovered were the graduates. Sealer of Weights and Measures Jansen said: "Eastern manufacturers who sell to the Milwaukee drug trade have disputed some of the tests made by the city sealer's department on some of these graduates. A number of the condemned graduates, which are in dispute, were sent to the Wisconsin State dairy and food commissioner and were given a very rigid test in the State laboratory, which has complete scientific equipment for making most discriminating tests of this character. In every case the results found by the city sealer's department were verified by the State department."

**Ohio Insecticide Law Declared Illegal.**—By a recent decision of Judge E. B. Kinkead, of the Franklin county, Ohio, court of common pleas, the act of the State Agricultural Commission, requiring payment of a fee for the privilege of selling insecticides, was declared unconstitutional. The judge held that this law levied a tax, which was not in the power of the commission to levy. The action which resulted in this decision has already been referred to in the ERA, and was begun by several large wholesale firms who were upheld by the State Ph.A. It was alleged that the operation of the act would call for the payment of some \$9,000,000 a year in excess of the costs of enforcement. The judge followed a previous decision of the court of appeals in regard to licensing automobiles.

**For Yearly Inspection of Druggists' Weights and Measures.**—A bill providing that all scales, balances, weights and glass graduates used by druggists be tested each year instead of once in three years, as at present, has been offered in the Massachusetts Legislature by Representative White of Newton as a result of an investigation made under the direction of Thure Hanson, commissioner of weights and measures. In the 10 days that five inspectors were on the road at the time the bill was introduced they found more than 2000 weights and scales inaccurate in the 200 drug stores visited. It was announced that according to this ratio nearly 50 per cent. of the scales inspected will be found incorrect when all the stores shall have been inspected.

**Rhode Island Passes Cocaine Bill.**—The Baldwin bill to put an end to the illegal traffic in cocaine, morphine and other habit-forming drugs has passed the Rhode Island House of the General Assembly unanimously. The bill provides that any person who shall be found with cocaine, morphine or any other similar drug on his person and who shall be convicted of having the same without having obtained it on a physician's prescription, shall be subject to a fine of not less than \$50 nor more than \$100 for the first offence, and not less than \$100

nor more than \$200 for each succeeding offence, and shall be imprisoned in the county jail for not more than six months.

**Assault Followed Order for "Barefoot Soda."**—W. D. Saphar, of Oklahoma City, entered the store of the Roach & Veazey Drug Co. Oct. 15, 1913, and asked for a "barefoot soda." The dispenser at the fountain told Saphar that he served no such drinks and was called an unprintable name. A fight followed and Saphar was punched so hard that he brought suit. At the trial a jury brought a verdict for the defendant after 28 minutes' deliberation. Now Saphar has made a motion for a new trial.

**Chicago Drug Clerks Fighting Narcotics.**—The Cook County Association of Drug Clerks has passed resolutions endorsing the movement to put a stop to the sale of habit-forming drugs, commending the press for its efforts in this direction, and appealing to the Governor and the general public to "compel the pharmacy board of Illinois to enforce the pharmacy laws and to prosecute violators to the full extent of the law."

**Went to the Police to Get Alcohol.**—Owing to the new liquor regulations in Lynn, Mass., which have resulted in the non-granting of licenses to drug stores a woman with a physician's prescription for alcohol for bathing purposes visited four local drug stores, only to be refused at each. She notified her physician who in turn notified the police, and he was informed that if she would call at the police station she would be loaned alcohol enough to bathe her patient. This she did.

**Frawley Anti-Narcotic Bill Vetoed.**—Instead of permitting the Frawley anti-narcotic bill to die a "natural death" by not signing it within the prescribed 30 days, Governor Glynn, of New York, included the measure in his omnibus veto list, thus killing it by direct action. Senator Frawley, who introduced the bill, personally requested the veto in order that the provisions of the Boylan bill, which the Governor did sign, might not be interfered with.

**Druggists' License Refused in Massachusetts.**—In three different communities in Massachusetts recently the town officials have refused to grant sixth-class liquor licenses to druggists—Brookline, Attleboro and Leominster. The sale of liquor by druggists is also barred in the city of Lynn. In each instance, however, "pony express" licenses were granted to express companies, giving them the right to bring liquor into the towns.

**Druggists Quit Selling Liquor.**—Following the recent victory of the "dry" forces in the election at Kewanee, Ill., the city council has adopted a stringent liquor ordinance, aimed to prevent illegal sales of liquor in clubs, etc. All the local drug stores have signed an agreement, voluntarily, to refuse to handle liquor in any form, even for medicinal purposes. The saloons closed May 1.

**Wood Alcohol Ban Remains in Texas.**—Food and Drug Commissioner C. O. Yates, of Texas, has sent notice to dealers in hair tonics and toilet preparations that he will strictly enforce the ruling of former Commissioner J. S. Abbott that wood alcohol cannot be used legally under the Texas food and drug laws in hair tonics, bay rum and similar preparations.

**Stoughton, Wis., Druggists** have been discussing the question of refusing to fill the prescriptions of physicians for alcoholic liquors, thereby saving the expense of securing Government licenses. Stoughton went "dry" at the recent Spring election.

#### WALTERS BILL SIGNED BY GOVERNOR GLYNN.

**Pharmacists Placed Under Pharmacy Act, New Measure "Alone" Regulating Their Working Hours.**

GOVERNOR GLYNN approved the Walters bill April 23. This measure is an act amending the public health law, relative to the practice of pharmacy, as to working hours and sleeping apartments in pharmacies and drug stores. It took effect immediately.

The pertinent text of the Walters bill is as follows:

"No apprentice or employee in any pharmacy or drug store shall be required or permitted to work more than 70 hours a week. Nothing in section prohibits working six hours overtime any week or for the purpose of making a shorter succeeding week, provided, however, that the aggregate number of hours in any such two weeks shall not exceed 132 hours.

The hours shall be so arranged that an employee shall be entitled to and shall receive at least one afternoon and evening off in each week and in addition thereto shall receive one full day in two consecutive weeks. No proprietor of a pharmacy or drug store shall require any clerk to sleep in any room or apartment in or connected with such store that does not comply with the sanitary regulations of the local board of health. *The provisions of this section alone regulate working hours and sleeping apartments in pharmacies or drug stores.*"

When the Governor signed the bill he filed the following memorandum:

STATE OF NEW YORK, EXECUTIVE CHAMBER,  
ALBANY,

April 23, 1914.

Memorandum filed with Senate Bill, Introductory, No. 407, Print No. 1232, introduced by Mr. Walters, entitled:

"An act to amend the public health law, in relation to the practice of pharmacy, as to working hours and sleeping apartments in pharmacies and drug stores."

*Approved.*

The purpose of this bill is to amend the Public Health Law so as to relieve pharmacists, apothecaries and druggists from some of the restrictions of the Labor Law, so as to enable them and their employees to furnish the public with the supplies required by physicians and surgeons without the restrictions now imposed by the Labor Law on certain other pursuits.

The bill is approved by the Department of Health, which has filed the following memorandum:

"It seems to this Department entirely reasonable that such long hours should be allowed as pharmacists should be available at all hours for the protection of the public, and should be ready to be on call at any time in case of an emergency. Pharmacists, apothecaries and druggists are in the same class as physicians in this respect, and they should be permitted to work for periods of time for longer hours than other classes of individuals just as physicians are at times called upon to work continuously for 24 hours. This measure in this respect is in our judgment entirely right and proper.

"The other amendment of this section, stating that the provisions of this section regulating working hours, takes out of the Department of Labor the power to control hours of labor in pharmacies, for the reasons above stated, is entirely proper. It does not seem possible without undue expense to limit the hours of labor to an ordinary degree in a business of such vital importance to public health. If an eight- or nine-hour-a-day law were executed, so that employees could not work over that time, undue hardship would be worked upon the pharmacist or druggist with a small store and would necessitate his employing at least one extra clerk where the work could be satisfactorily done by one."

I believe that labor laws in general should be upheld and enforced, but it seems to me that the exception proposed by this bill is entirely reasonable, and will serve the best interest of the public.

I therefore approve the bill.

(Signed) MARTIN H. GLYNN.

#### N. Y. RETAILERS UNITE ON STEVENS BILL.

**Mass Meeting Held at Aeolian Hall—Hearing Given by Merchants' Association—Conference Planned.**

THREE meetings, pertinent to the subject of price-maintenance, have been held in this city during the past month. A mass meeting of all retail trades was called to order by Dr. Wm. C. Anderson at Aeolian Hall, 34 West 43d street, on the evening of April 24, the speakers being the chairman, Congressman H. A. Metz, who compared his own and the Stevens bills; Ellis L. Howland, editorial staff, *Journal of Commerce*; J. Leyden White, special writer, Washington, D.C., and Nicholas Ehrlich, president Independent Retail Tobacconists' Association of America. The following resolutions were unanimously adopted:

WHEREAS, the habit of price-cutting on standardized and trademarked articles of merchandise has assumed such vicious proportions that it now threatens the business existence of all retailers of small or moderate capital, and

WHEREAS, the consuming public is being plundered and outraged by a scheme of business which depends upon deception rather than an exchange of real and recognized values, and

WHEREAS, present conditions tend toward an imminent monopoly of the channels of distribution—a monopoly that would be vaster and more perverted for evil than any trust hitherto conceived. Be it therefore

RESOLVED, That we, the Independent Retail Merchants of Greater New York and the Metropolitan District, sound an earnest note of warning to Congress and to the people at large and counsel immediate action against present and impending attacks on the integrity of American commerce; and be it further

RESOLVED, That we solemnly endorse and promise heartily to support the Stevens bill (H. R. 13305), now pending in Congress, which promises honesty in merchandising and equal opportunity to all business men and consumers alike; and be it further

RESOLVED, That the secretary be instructed to send a copy to the President, to every member of the United States Senate and House of Representatives, to the Governors and every member of the State Legislatures of New York and New Jersey.

At a hearing on the Stevens bill given by the Merchants' Association committee on commercial law, and called to order by Chairman Edward B. Page in the association's assembly room, the attendance of business men was both large and influential. No action was taken, the speakers being given opportunity to file briefs. Chairman Page explained the provisions of the bill and then allowed a half hour each to its proponents and the opponents. Briefly, the speakers were lined up as follows: For the bill, C. H. Ingersoll, president American Fair Trade League; Gilbert Montague, counsel for the league; L. H. Porter, of the Yale & Towne Mfg. Co.; Carl E. Ackerman, Photographic Dealers' Association of New York and the Photographic Dealers' Association of America; E. H. Outerbridge, of the Pantasote Leather Co.; William H. Childs, president American Coal Products Company; Charles E. Butler, American Booksellers' Association; Representative Herman A. Metz. Opposed, Percy S. Straus, of R. H. Macy & Co.; E. W. Bloomingdale; Simon F. Rothschild, of Abraham & Straus; G. D. Beattys, Aeolian Co.; Harry Balie, Austin, Nichols & Co.

Dr. William C. Anderson officiated as chairman, and Francis L. Plummer as secretary, at a meeting of a committee to promote the interests of retail merchants, held on May 11, in the conference room of the Fifth avenue building. Others present were Henry Frank, Stationers' Association of New York; Alfred O. Woodruff, New York Association for Improving the Condition of the Poor; Ellis L. Howland, R. J. Atkinson, Brooklyn Hardware Dealers' Association; J. M. Kohlmeier, Hardware and Supply Dealers' Association of Manhattan and Bronx boroughs, Inc.; L. Berger, M. A. R. D.; L. W. Winckelman, president, United Retail Grocers' Association, Borough of Brooklyn; C. J. Cornell, secretary, Metropolitan Hardware Dealers' Association; Nicholas Ehrlich, M. Zimmerman, Printers' Ink, and an ERA representative.

Plans for a permanent delegate organization were discussed, the chairman pointing out that its immediate purpose would be the passage of the Stevens bill. The chair was instructed to appoint a sub-committee to take charge of the formation of a temporary conference to outline objects, frame constitution and by-laws and decided upon plan and scope generally of the proposed organization. The sub-committee appointed by Dr. Anderson consists of John Steeneck, New York Retail Grocers' Association; John G. Bromner, Eastern Talking Machine Dealers' Association; J. H. Boezer, Photographic Dealers' Association, and Messrs. Kohlmeier and Ehrlich. It was decided that the officials of the temporary conference be the same as those of the committee which called this meeting. It was further the sense of the meeting that constitution and by-laws be made elastic enough to permit the membership of individuals who are not duly accredited representatives of retail organizations.

#### N.Y.C.P. TO ABOLISH INITIATION FEE?

May Cut Annual Dues—Resolution Comes Up at Next Meeting—Practical Talks on Window Displays.

THAT the annual dues of members of the New York College of Pharmacy be reduced to \$1 and the initiation fee be abolished, was the meat of a resolution introduced at the May meeting by Hieronimus Herold, former attorney for the State board. Mr. Herold thought that the college should have several thousand members instead of 280; the larger number would have a certain advertising value and influence. Further, for the \$5 per year which the members now pay as dues they receive nothing. Since the college gave nothing it

should not charge much for it. Caswell A. Mayo foresaw considerable benefit to the college in enlarging its membership. Alderman Jacob Weil suggested a passive membership at \$1 per year. He expressed the opinion that an element detrimental and hostile to the future of the college might be admitted. Chairman McMann pointed out that the college was a stock company—a corporation—the members of which could at any time dissolve the institution and call for the proceeds. In fact, this action had been very narrowly averted about 25 years ago.

Alderman Weil spoke on the wood alcohol ordinance he is endeavoring to get through the aldermanic body. He asked that the college be represented at the hearing at the City Hall, especially requesting that Dr. H. V. Army be present. The secretary was instructed by resolution to send postal notices to each member of the hearing.

Charles W. Holzhauser, class of 1906, and now president of the New Jersey Ph. A., delivered a very practical lecture on "Drug Store Window Displays," which will be published in a later issue of the ERA. M. Zimmerman, of the editorial staff of *Printers' Ink*, talked very interestingly upon a study he had made of retail trade window displays while pushing a well-known proprietary dental cream in New England, and in New York and vicinity. He found the average dealer was not very efficient on window displays in the territory covered. One druggist, he found, had featured the same old display off and on for six years. The average druggist does the work himself, and has no time for window display work and is usually very glad when the manufacturer will send around a man to put in a display. Mr. Zimmerman asserted that the dealer should very early set and fix a price upon his windows. He should then stick to his price and accept a display upon its merits. The speaker advocated the use of mechanical devices to push sales, and gave two reasons for turning down a display: (1) The material sent cheapens the store; (2) the trim is out of all proportion to the size of the window.

An interesting discussion ensued in which Thomas Lamb and John W. Ferrier participated. The former expressed the opinion that the druggist was a little beyond window dressing. People came into his store, he said, regardless of window displays. He displayed ordinary drug-store articles and would not push patents.

The keynote of window display work, Mr. Ferrier asserted, was local conditions—sauce for the goose was not sauce for the gander. He was thoroughly unethical—if he put medicines in his window he couldn't sell them. He featured one thing at a time. His was a ten-cent window; he had found it out. He had co-operated with a manufacturer who featured a Broadway electric soap sign at \$2600 per month. The soap sold at 25 cents per cake. He sold three cakes in a week and figured he was out just \$24.25 that week. Ten-cent soap would have sold.

Mr. Ferrier couldn't sell candy at 10 cents per white box. But candy in blue boxes sold "great." He sold over 2000 blue boxes of candy at 10 cents each in a week. "Show what you want to sell," said Mr. Ferrier. "If you're selling candy, show the candy, not just the boxes. Break the candy open. Make their mouths water! And don't show just signs. Don't tell a long story. People won't stop long enough to read it through. Mechanical devices and pictures will help you. But don't show war pictures and pretty actresses. It might take a traffic cop to clear the sidewalk, but the people won't buy your goods. That kind of pictures distracts attention and doesn't sell anything. Find out what the trade will stand, and give it to 'em hot," concluded Mr. Ferrier. "I have a big rent but a 'cheap' window. I couldn't sell a dollar article but have sold 2100 10-cent articles in a week."

#### Recent Fires.

A second fire occurred recently in the drug and chemical factory of Allaire, Woodward & Co., which at one time threatened the entire plant and, as it was, almost asphyxiated a number of firemen. This fire, like the one a month previous, to which reference has already been made in the ERA, started in one of the machines used for making insect powder. Sneezing, stifling and almost blinded, the Peoria firemen had a strenuous battle before the blaze was subdued.

A \$25,000 fire on the third floor of the building at 178 West Randolph street, Chicago, occupied by the Hochschild-Kelner Co., a wholesale drug firm, was startling to the people of that section and brought thousands of sightseers to the scene. Green and purple flames and sharp explosions made it particularly spectacular. Three employees were overcome by fumes, and removed to the street by firemen. The blaze was confined to the third, fourth and fifth floors of the building, all occupied by the drug company.

## National Co-operative Drug Company.

*How the New Co-operative Wholesale Drug Company Owned and Operated by Retail Druggists Is Organized—Branches in Many Large Cities—More than 1000 Retail Members on May 1.*

FOR the past few months there has been an unusual interest in the question of co-operative buying. Reports from the "Mutual" and "Economy" and similar organizations of retailers in the Middle West have indicated such prosperity to the retail druggist members and such a saving in first costs that the trade papers have considered the whole question of co-operative buying as of equal importance with "chain store" and "department systematized" methods of doing business, finding a relationship between the two in the self-evident fact that co-operative buying by a small but united band of retailers enables such retailers to compete on a more equitable basis with the buying power of the chain stores. The small retailer has seen a way of getting some chain store advantages, at the same time retaining his business individuality. So much in the way of prologue.

The latest arrival in the field of National co-operative buying—in itself but an elaboration of the State and City mutual drug companies which have flourished in Ohio and other mid-Western States, and which, by the way is officered by the men who have won success in the State and city field—is the National Co-operative Drug Co.—"a co-operative wholesale drug company organized and owned by retail druggists," with a home office in St. Louis, and with branches organized or planned in other cities in different parts of the country. It has already leased 25,000 square feet of floor space at Fourth and Valentine streets, St. Louis, and there are more than 600,000 square feet available in the same building, right in the center of St. Louis wholesale druggdom.

The National Co-operative Drug Co. was incorporated under the laws of Delaware, with an authorized capital of \$1,000,000, divided into \$600,000 preferred and \$400,000 common stock, the preferred only to be sold, the common to be used, if necessary, in purchasing plants, at the determination of the board of directors; the proceeds of the sale of stock to be used first to establish and strengthen the central warehouse in St. Louis, and afterwards for the branches.

Within 90 days of incorporation enough members were enlisted in St. Louis to warrant the opening of the St. Louis house, where the headquarters will be maintained.

The officers of the company are: President, O. B. Thuma; 1st vice-president, Chas. W. J. H. Hahn; 2d vice-president, K. B. Bowerman; secretary, George E. Brown; assistant secretary, Harry R. Mulvey, and treasurer, George W. Platt. (One additional director from each city having a house, to be selected by the local board of control.) The directors are: Louis Roettig, Edward Kipp, George W. Platt, J. M. Satterfield, Chas. W. J. H. Hahn, Robert F. Miller, O. B. Thuma, K. B. Bowerman, O. J. Cloughly, A. S. Ludwig, Wm. F. Ittner and George E. Brown. The organization committee: Chas. H. Huhn, Minneapolis, Minn.; O. J. Cloughly, Chas. W. J. H. Hahn, A. S. Ludwig, Geo. W. McDuff, Wm. F. Ittner, Robert F. Miller and Geo. E. Brown, St. Louis; W. Gnerich, K. B. Bowerman, Nathan Schwartz, D. R. Rees and Harry R. Mulvey, San Francisco; O. B. Thuma, George W. Platt, Edward Kipp and Louis Roettig, Cincinnati; C. Wilfred Dare, Newark, N. J.; Charles Lyle, Memphis, Tenn.; E. J. Green, Dallas, Tex.; Louis Doerr, San Jose, Cal.; Frank S. Grey, Sacramento, Cal.; O. V. McCracken, Oakland, Cal.; J. A. Gance, Indianapolis; A. Di Trapani, August C. Flach and Henry Berlin, New Orleans.

It is announced at the St. Louis office that the Minneapolis branch will start with the merging in the branch of the Merritt Drug Co., co-operative, under the management of Chas. H. Huhn, former president of the N. A. R. D. H. J. Mitchell, assistant secretary of the new company, is in charge of the Minneapolis district work, with the organization committee composed as follows: C. H. Huhn, C. M. Pardoe, A. D. Thompson, G. A. Ball, F. A. Klenert, G. A. Rose, J. Jackson, E. A. Tupper, Newman Griffin and John Danck. The temporary quarters in Minneapolis will be those of the Merritt Drug Co. at 92-96 Western avenue.

Secretary Brown of the National said that branches were being organized in San Francisco—the first to be opened after

the opening in St. Louis—and Memphis; also in New Orleans, Louisville, Indianapolis and Fort Worth. Others will be opened in a number of other cities later, among those under consideration being Denver, Kansas City, Portland, Ore., and Salt Lake City. Secretary Brown also stated that the National had in the first part of May a total membership of nearly one thousand in the places where the main office and the branches are being established.

George E. Brown, secretary of the company, has been sales manager of the Cincinnati Economy Drug Co., which was organized in Cincinnati about six years ago, with a capital of \$30,000 and 10 members, all local retail druggists. The Cincinnati concern now has a capital of \$100,000, with nearly 300 members, and is doing a business of more than \$500,000 a year, according to the report for 1913.

At the solicitation of druggists from various parts of the country, says Secretary Brown, the plan for a National proposition along the lines which had made the Cincinnati enterprise successful was formed, with O. B. Thuma, originator and present manager of the Cincinnati company, as president of the National concern.

Brown came from Cincinnati a year ago last January and took up the proposition for the organization of the National with O. J. Cloughly, who recently closed his term as president of the St. Louis R. D. A., and the same month the plan was taken up with a committee of St. Louis retail druggists—O. J. Cloughly, C. W. H. Hahn, W. F. Ittner, Robert Miller and A. S. Ludwig.

"The National Co-operative Drug Co. is purely mutual," said Mr. Brown to a representative of the ERA. "Each druggist who buys through it must be a stockholder member. The plan is for each member to carry stock in the company to equal his average monthly purchases—if he buys \$500 a month, he must have \$500 in the company. One of the features will be to eliminate unnecessary expenses. All profit made in the business above the actual cost of handling the business is to be divided among the members. Our price will be one price to all. When we get started here we have promises that some of the biggest stores will join. Quantity buying will not cut any figure, but the membership with us of the big stores will cut down their big investment in carrying stock and give them a quick turn-over. The co-operative company will carry the stock. One of the most encouraging things to us is the attitude of the manufacturers. Manufacturers have come to us and offered not only to take stock but to stock up our branches with their lines complete. Wide-awake manufacturers see that the co-operative way of distributing goods is a successful way. In Memphis, Kansas City, Fort Worth and Cincinnati we have had overtures made to us by jobbers for us to buy them out."

The New Orleans branch organized May 7 with the following directors: Fred Earheart, chairman; Peter Rupp, E. S. Bernadas, E. Wunderlich, Edward H. Walsdorf. The New Orleans branch will be the distributing center for Louisiana, Mississippi and Eastern Texas.

### FROM THE BUSINESS FIELD.

Morgan & Millard, South and Baltimore streets, is one of the most progressive drug firms in Baltimore. When this firm went downtown several years ago, taking one of the principal corners in what was then and still is the financial district, many persons shook their heads and declared that no drug business could be successfully established there with the rent so high, and with the other heavy expenses. Morgan & Millard have signally disproved all predictions of failure and have shown that they are come to stay. They not only made the original place pay, but their patronage has so increased that the firm recently took in the adjacent store, doubling the space formerly occupied, and giving the pharmacy the form of an "L" with the floors generally unobstructed and with mahogany shelves and cases along the walls. Because of its success under essentially modern conditions, the members of this firm are entitled to speak with authority on the chances of the present day in the retail drug business.

H. H. Austin, of Minneapolis, some years ago was a traveling salesman for a large wholesale drug house, and, while going about, heard druggists in various parts of the

country. Across the country to buy somewhere or to sell the stores they were then conducting. They had no medium through which they could come in contact with the parties they wished to meet. Mr. Austin thought it might pay to act as a middleman and, for a time, he carried lists on the road with him. Lists of druggists who wished either to buy or sell stores. This list got so large that finally he decided to open an office, and to give up traveling. He then associated himself with W. G. Fowler, another druggist, and the two men built up a business that now includes, not only druggists, but grocers and other retailers.

**Chas. E. Matthews**, manager of Sharp & Dohme's Chicago branch, called upon his friends in the jobbing trade in St. Paul and Minneapolis recently. Messrs. Burke, Lund, Gilmore and Co. are Sharp and Dohme's salesmen in the Northwest, were called and to meet Mr. Matthews. J. C. Dysart, who represents Sharp & Dohme in Southwest Missouri, visited the St. Louis office recently and reported that the prospects are bright for a good year in his section of the State. E. T. Curtis, manager of Sharp & Dohme's St. Louis branch, has returned to his desk after an extended trip through Kansas and Southern Missouri. He reports business conditions as good, and indicates that Kansas expects a bumper wheat crop this year.

**Marshall Field & Co.**, of Chicago, have at last been persuaded to put a soda fountain in their State street store. Heretofore the management of this company has been opposed to a soda fountain, but, evidently, now has been forced to give way to the wishes of patrons. The fountain will be located in the tea-room in the main building, and the apparatus will be of unique design in circular form, and finished in white and gold. The contract for the same has been let to the Liquid Carbonic Co. This action on the part of what is probably the largest department store in the world is most significant as showing the growing importance of the soda fountain in department stores.

**The Geisen Drug Co., Inc.**, has been chartered at Shreveport, La., with a capital of \$25,000, and the following officers: President, C. A. Geisen; vice-president, Dr. S. C. Barrow; secretary-treasurer, David H. Deas. The president is a well-known traveling man and has been connected with the New Orleans firm of S & J Katz & Co. for 35 years. Dr. Barrow is a well-known local physician, and David H. Deas is an expert accountant and insurance man. The new company has purchased the A. H. Renfro stock, and will continue the business at the head of Texas street.

**The Dow drug store chain** in Cincinnati, now 10 in number, with an 11th soon to be added, has been celebrating its 29th anniversary, as it is entering upon its 30th year. The chain is owned by a woman—Miss C. Dow—who has been its active head for the entire period mentioned; and its continuing success shows exactly what may be done in the drug business by the use of aggressive modern methods. For some years, however, Miss Dow has had an able lieutenant, in the person of A. M. Hopkins, general and advertising manager of the business.

**The Louis K. Liggett Co.** are to erect an eight-story building costing in the vicinity of \$150,000 at Woodward and Grand River avenues, Detroit, the present site of one of the company's drug stores. According to Edson O. Geissler, vice-president and resident manager, the architecture will follow closely that of the company's building at Gratiot avenue and Farmer street, with an exterior of terracotta. Work will begin within a year. The drug company will occupy the entire lower floor, and the upper stories will be leased.

**The Henry K. Wampole & Co., Inc.**, Athletic Association, celebrated its second annual opening on the association's grounds, Philadelphia, on Saturday, May 2. Music, refreshments, a lively baseball game and several field events, in some of which the female members participated, were all highly enjoyable features on the day's entertainment. The members of the firm, and the officers of the association deserve high credit for their activities in fostering athletic pursuits and a social getting-together among the employees.

**The Columbus Pharmacal Co.**, Columbus, Ohio, has opened its new building at 339-336 Oak street, the occasion being marked by a formal housewarming with a dinner at which covers were laid for 90. Twenty-two of those present were traveling men, who cover eight States adjoining Ohio, in which

the company supplies physicians and surgeons. J. W. Haynie, general manager of the company, was presented with an office clock by the salesman, B. C. Woodrick, of Decatur, Ill., making the presentation speech.

**The E. E. Sutherland Medicine Co.**, of Paducah, Ky., one of the largest proprietary medicine firms in the South, has changed ownership. G. D. Merner, of St. Louis, with G. A. Pfeiffer, of Philadelphia, have purchased the holdings of W. P. Paxton and H. R. Lindsey, of Paducah, and of A. E. McBea, of New York. The price was not made public. The business will be moved at once to St. Louis.

**The National Co-operative Drug Co.** has decided upon New Orleans as its Southern headquarters, and, according to a recent dispatch, more than 100 retail drug stores in New Orleans had signified their intention of joining in the work of this organization, which is composed of retail druggists in all sections of the country, with general headquarters at St. Louis.

**The Riker-Jaynes** employees of Boston held their second annual ball on May 5. M. E. Adams was chairman of the general committee, W. F. Doherty secretary and A. M. Ridehout treasurer. H. D. Vatum was chairman of the entertainment committee, F. A. Gilbert of the refreshment committee, J. H. Spinney of the committee on decorations.

**The Radium Therapy Corporation**, of No. 170 William street, New York, has been incorporated with a capital of \$1,500,000. The company purposes to manufacture and deal in minerals and their products. The directors are William Jay Schieffelin, Schuyler Schieffelin and William Osgood Field.

**Frank B. Schutz**, postmaster of Milwaukee, has opened a contract postal station in the Goldsmith pharmacy. Although the pharmacy is only across the street, the Sunday and holiday closing of the post-office makes it necessary to have some nearby point where citizens may secure stamps and money orders at these times.

**The Builman-Nash Drug Co.**, of Charleston, W. Va., has been chartered to deal in drugs, wholesale and retail. The authorized capital stock is \$20,000. The incorporators are: W. G. Mathews, Walter J. Builman, McLean Nash and Geo. W. McClintic, all of Charleston.

**The Ellicott Drug Co.**, of Buffalo, N. Y., has elected Frank Marvin Clark, a well-known druggist of Jamestown, N. Y., president. The vote was unanimous. The Ellicott Drug Co. is a jobbing concern which does business in both New York and Pennsylvania.

**The Buffalo Foundry & Machine Co.**, of Buffalo, N. Y., are no longer represented in New York City by H. E. Jacoby. They request that manufacturers address them direct at Buffalo, regarding the requirements of vacuum apparatus, castings, patterns, etc.

**William O. Holz**, of Marinette, Wis., recently formally opened his drug store at 1331 Main street, formerly conducted by V. A. Lundgren. Mr. Holz, who managed the Lundgren business for the past five years, purchased the store last January.

**The Hoge-Davis Drug Co.**, Wheeling, W. Va., has purchased the Wingerter drug store at 1030 Main street. The basement of the newly purchased store will be converted into a tea room, and new fixtures will be installed.

**The Pike Rubber Co.**, Akron, Ohio, has been incorporated with \$50,000 to manufacture rubber sundries and druggists' supplies. The incorporators are Orville C. Pike, Fred Grether and Frank Selzer, the latter a local druggist.

**F. V. Nihart**, proprietor of the Opera House drug store, recently burned, of Decatur, Ill., has reopened for business—both wholesale and retail—at 147 South Water street, Decatur.

**The Carter Smart Weed Co.**, of Erie, Pa., has been sold to S. C. Wells & Co., of LeRoy, N. Y., and the plant will be removed to the latter town.

A new **Riker-Hegeman** drug store has just been opened at 165 Genesee street, Utica, N. Y. R. B. Howarth, of Utica, is the new manager.

**Silas C. Boucher**, well-known as a working druggist in Marquette, Mich., has opened a new store in that city.

**Waterville (Me.)** druggists have signed an agreement to close their stores on Sundays until further notice.

## John Gosnell &amp; Co., Ltd., of London — A House with Nearly 200 Years of History.

Two scenes in the workrooms of John Gosnell & Co., Ltd., Blackfriars Road, London, the home of many world-known toilet specialties.

IN Great Britain it is not an uncommon experience to have business dealings with the same houses with which the great-grandfathers of present-day patrons were accustomed to deal, and it is interesting to note how many commercial firms in a flourishing condition today were established a century or more ago. In the United States such conditions are seldom found, chiefly because of the comparative youth of this country, but American business men can readily understand how such long-established houses take a natural pride in tracing their beginning back to some hard-headed ancestor who laid the foundations upon which succeeding generations have erected a business edifice which has not only withstood the test of time but has grown in importance with the passing of the years. But while many British firms can trace their origin back to the days "when George the Fourth was King"—or possibly to the latter days of the reign of his predecessor—there are few which have a history as long as that of John Gosnell & Co.

John Gosnell & Co., Ltd.—to give the firm its full title—was founded nearly two centuries ago. The precise date is not known, for the reason that the ancient records were destroyed by a fire which swept the premises in Three King's Court, Lombard street, in 1865. But in a newspaper bearing the date of Aug. 9, 1819, appeared an advertisement of the firm, which then traded under the name of Price & Gosnell, in which it was stated that the house was established nearly a hundred years previous to the date of publication. That is, it was founded in the reign of George I, and has existed during eight reigns—those of George I, George II, George III, George IV, William IV, Victoria, Edward VII, and George V. In all probability the firm of John Gosnell & Co., Ltd., is the oldest of the English perfumers now in existence. During these successive reigns it has enjoyed royal patronage, and, in the advertisement referred to, it is described as: "Perfumers by Appointment to the Prince Regent," afterwards George IV.

From a collection of old British newspapers, all of which are nearly 100 years old, the writer has culled a number of advertisements in which the products of Price & Gosnell are advertised, and the following typical announcements from *Bell's Weekly Messenger*, of Jan. 28, 1821, will be found of interest:

#### PERSONAL BEAUTY.

The ladies are assured that all the cosmetics ever yet discovered do not possess, in an hundredth degree, the good qualities of Price & Gosnell's Patent Naples Cream as a beautifier & clearer of the skin. Sunburns, freckles, ring-worm, tetters, spots, tan, redness of the nose, etc., peculiar to delicate complexions; by the regular application of the Patent Naples Cream once a day, or twice or thrice a week, the skin & fluids are gradually cleansed & cooled & assume that clear transparent white & red, which denotes them in a healthful state. Its innocent & refreshing balsamic qualities, render it a salutary wash for infants, it keeps the skin cool and soft. Sold in London only by the patentees, Price & Gosnell, Perfumers to His Majesty, No. 12 Three King's Court, Lombard Street, price 5/- & 10/- per bottle. Also Price & Gosnell's Rose Bloom, prepared from roses, from which so much colour is extracted, as to impart an instantaneous, lasting & youthful colour to the cheeks & lips; bestowing a bloom, that defies the most curious observer from concluding it any other than the natural appearance of the most exalted beauty. Price 5 6d & 21/- per

bottle with directions for use. The Rose bloom from its innocence & striking effect is peculiarly adapted for the stage.

Another advertisement in the same paper sets forth that Messrs. Price & Gosnell "beg to caution the Royal Family, Nobility & Gentry, against the numberless pernicious preparations daily imposed upon the shopkeepers & public, by inexperienced and unprincipled speculators, by means of pirated bills & labels."

*Bell's Weekly Messenger* consists of six small pages, and its price was 17 cents, the stamp duty being 8 cents!

The firm received the patronage of the late Queen Victoria and a Royal Appointment exists which was granted by Queen Alexandra under date of May 4, 1863, when on her marriage with the future Edward VII she had become Princess of Wales. This was renewed when she became Queen upon the accession of the late Edward VII in 1901.

So much for the historical side of the Gosnell business; let us turn to the production of their specialties. A visit to the premises in Blackfriars Road, London, found a building with spacious floors, well-lighted and well-ventilated, and supplied with the newest devices in machinery and apparatus for the perfection of the firm's products. The firm originated the well-known "Cherry Tooth Paste," and have obtained their toothpaste pots from the English potteries since 1853. The original design is still used, although to meet the requirements of present-day taste this paste is also supplied in tubes. As an indication of the care exercised in the manufacture of all the Gosnell specialties, all the ingredients used in the "Cherry Tooth Paste" are passed through a sieve containing 32,000 holes to the square inch, the resulting powder being of surprising smoothness.

"Cherry Blossom," another Gosnell specialty, had its birth at the South Kensington Health Exhibition in 1884. Cherry soap and Cherry Blossom talcum powder are two other specialties of the firm, and one of the most astounding testimonials ever given a proprietary article was that received by the firm from one of the defenders of Mafeking during the memorable siege which was a feature of the South African War. The writer described with seeming gusto how a quantity of Gosnell's toilet powder had been discovered, and *had been converted into healthful and tasty dishes of blanc mange!* Despite such an encomium John Gosnell & Co., Ltd., are *not* advertising their product as a health food, even though it is admitted to be a harmless and absolutely pure talcum powder.

The Messrs. Gosnell claim to be the pioneers in lavish advertising expenditure to advance the sale of a single perfume, and as a result of the 30 years of persistent publicity, their perfume is now sold in every quarter of the globe. Such is the reputation of the individual members of the present firm that they were appointed members of the jury on their section at the recent Brussels and Turin expositions.

The American agents of the firm, E. Fougere & Co., Inc., of New York, are contemplating a more general introduction of the Gosnell products to the American public, and the firm is anticipating a still larger business than at present enjoyed "over the seas."

## A "Pure Food" Vanilla Since 1868.

**T**HERE is a firm in New York, N. Y., which made vanilla extract for 45 years. Its vanilla extract from selected vanilla beans is made with steam and water, without using sugar, glycerine or alcohol, and they are still making the same extract that is approved by all the pure food regulations which have been passed since they embarked in business. This business was founded by D. C. McMonagle and William H. Rogers, but in 1898 Mr. McMonagle sold his interest to Fred Rogers, and since that time father and son have conducted the business together. Fred Rogers, who is admitted to be one of the best judges of vanilla beans in this country, says any one can make vanilla extract—of a kind—but that the successful manufacturer of a fine vanilla extract depends almost entirely upon the knowledge pos-

FRED S. ROGERS

sessed of the beans themselves, how long they should be held before use, and when they have developed their full richness and aroma.

"There are lots of prime vanilla beans that are used before they should be," said Mr. Rogers to an ERA representative. "There are about as many varieties and conditions of vanilla beans as there are types in the human race," he continued, "and many a manufacturer, honest in his desire to use nothing but prime Mexican goods, finds foisted upon him cheaper varieties done up in Mexican style. Every bundle of vanilla beans used by us is passed upon for appearance, texture and flavor before it goes to the mills.

"When McMonagle & Rogers first started manufacture in 1868 they soon realized that vanilla extract as commonly sold varied greatly in quality and strength, according to the condition of the vanilla beans from year to year. In order to secure uniformity of product they began buying vanilla beans in large quantities whenever the right 'cure' could be found. It was next discovered that by storage of the extract in casks for some time its quality was improved, and this led to the adoption of the ageing process. Now, from the time the beans are put into process until the extract is ready for the market from a year and a half to two years elapse.

"We follow the old-fashioned method of slow, cold percolation in all our product. We have tried machinery, and while mechanical methods give a good product we found that slow percolation gives a better extract, and that the mass of vanilla bean still contained flavor which could be extracted by the old method after the mechanical process was supposed to have completely exhausted the flavor content.

"Our success has rested principally upon our ability to select and control large quantities of prime selected vanilla beans, to hold them until ripening has brought them to proper perfection for manufacturing purposes, and then to extract the full flavor by percolation. We are not alarmed by the disturbed conditions in Mexico, for should the supply of beans be cut off for two years our holdings are large enough to make us independent of supplies for that time."

While the McMonagle & Rogers vanilla has been sold through the high-class grocery and catering trade, Mr. Rogers has found from his druggist friends that the passage of pure food laws in the several States has added to the perplexities of druggist manufacturers of vanilla, and without advertising many druggists have turned to this firm for vanilla supplies, so many in fact that the firm has now decided to advertise to the retail druggists throughout the country. That McMonagle

& Rogers started in business as druggists, that their methods of manufacture are druggists' methods, combined with years of experience in the selection of vanilla beans, at once places them "right" with every druggist who is seeking a quality product, which antedated the pure food laws, made by a house which never changed a single step in their manufacturing processes because of any legal enactment.

Fred S. Rogers was president of the New York State Ph.A. in 1906; his father, William H. Rogers, was president of the same organization in 1884, this being the only instance in the history of the New York State association where father and son have both been honored by election to the presidency.

### Vending Stamps by Machines.

There is a growing demand by druggists for some dependable machine for the vending of postage stamps, to do away with the loss of time—and loss of money—where such "accommodation trade" is handled by a clerk from a stamp drawer or the till of the cash register. The following extracts from a letter received recently have an interesting bearing on the subject, and are printed for the benefit of druggists who may have "thought of" using vending machines, but who have not taken the necessary steps toward purchase:

"There are so many reasons why druggists ought to use stamp-vending machines that it seems to us a publication like your own could well afford to devote space to this subject. The druggist is the one business man who is asked to do more without recompense than any other class of business men in the world. He is asked, for instance, to sell stamps for mere accommodation, not only without any profit to himself but actually at a great loss to himself. The better druggists today realize that the opinion of some druggists who feel that by selling stamps at par they are attracting business to their store has absolutely no foundation in fact. This is substantiated in any number of cases where druggists who have had sub-postal stations have been only too glad to give them up.

"If selling stamps at par were to these druggists the advertising that many druggists are inclined to believe, a sub-postal station ought even to be of greater advertising value, and yet the experience of so many druggists on this very question shows that the advertising to be gained from the handling of stamps on this basis and the conducting of a sub-postal station actually loses money for the druggists. The druggist doesn't expect to put up a prescription without being paid for his time and without realizing on his investment. Why should he sell stamps without the same consideration for his own best interests?

"In the first place, what does it cost the druggist to sell stamps at par? Figure the loss in spoiled stamps, errors in handing out too many and in making change, time of the clerk in waiting on this trade which could be put to more profitable use, sales of profitable goods lost by being called away from a prospective customer by an insistent demand for a stamp, loss of time in putting up a prescription by being called away for a stamp and the work interrupted necessitating checking back, perhaps, a proportional part of the over-head expense, etc. The result would probably astound the druggist, as an exhaustive investigation of this matter has shown that it costs any druggist not less than 25 per cent., and many more than this, so there is a 25 per cent. loss to start with."

### Seneca Camera Departments an Asset.

F. K. Townsend, secretary of the Seneca Camera Mfg. Co., writes: "It seems to me that the reason we are doing such a large business this season is because our dealers are more than satisfied with their treatment and because our cameras are making good with their customers." The Seneca outfits for dealers which start at \$50 are complete, including quality goods of every variety. Readers of this issue of the ERA will find a photographic reproduction of one of these assortments in the company's advertisement elsewhere, which tells its own story. The assortment covers folding roll film and fixed focus box form cameras, film pack machines and dry plate instruments. The folding roll film Seneca is a new departure. It is made of aluminum and covered with genuine seal leather; it has a one-piece, fool-proof lock back that is positively light-tight. Most amateurs have difficulty in telling when a camera is level, so the Seneca has a spirit level placed close to the finder where both can be seen at the same time. The Scout camera loads with ease, and the shutter is "sure shot" every time. In all the Seneca hand-plate cameras film pack adapters

can be used, thus making two styles of camera in one. In addition to the cameras the Seneca company is prepared to furnish everything necessary for the photographer, both professional and amateur, and when the druggist has installed a department it is a very simple matter to add supplies in any line carried, or "sort up" the department. More complete details as to assortments and prices are instanced in the company's advertisement elsewhere in this issue.

#### 42% Profit on a Druggist's Investment.

To the druggist who believes in carrying goods that sell, in the line of toilet articles, soaps, bath salts and violet water, Müllhens & Kropff, the U.S. Branch of Ferd. Müllhens, of Cologne, Germany, are making a special combination offer, which includes free goods. The "4711 line" is known the country over, because of its quality and because it is nationally advertised in 20 high-class publications with a combined circulation of more than 13,000,000. Such a campaign has already created a demand which the druggist can take advantage of without additional publicity on his part. The "4711" White Rose Glycerin Soap, which is the product given the greater part of the publicity, although the famous "4711" cologne and toilet waters are by no means overlooked, is a fine, smooth and satisfactory soap with a growing reputation. In the two pages advertising the "4711" products in this issue of the ERA Müllhens & Kropff are making an offer which includes all their best sellers, quoting prices, and are also quoting the 1914 price on White Rose Glycerine Soap which can be obtained through any jobber. See the advertisement for details, and a list of the articles included in the offer.

#### No Lost Eyesight With S.K. & F. Tubes.

Ether tubes explode occasionally, and when they do the druggist or physician handling them is apt to be injured—he may even lose his eyesight. To prevent just such disasters the Smith, Kline & French Co. are packing their nitrous ether tubes in a patented bag covering, which, should the tube explode, prevents the glass from flying. These tubes of nitrous ether are packed in boxes containing one or six tubes, and can be obtained through all wholesale druggists. A sample will be sent on application to the Smith, Kline & French Co. See advertisement in this issue for further details.

#### "WOOD NAPHTHA" PROPONENTS AGAIN ACTIVE

##### Hearing Held on Proposed Ordinance by Board of Aldermen Public Health Committee—Weil Presides.

The committee on public health of the New York City Board of Aldermen gave a hearing recently on two ordinances to regulate the sale and use of wood alcohol. Alderman Jacob Weil presided. The ordinance favored by Mr. Weil provided for the name "wood naphtha" and the label statement "This fluid taken internally, inhaled or used externally, is likely to produce blindness and lead to death." Dr. Charles Baskerville presented a model for a uniform State and municipal law which is in part as follows:

Section 1. No person shall sell, offer for sale, deal in, supply or give away, or have in his possession with intent to sell, offer for sale, deal in, supply or give away any article of food or drink or any medicinal or toilet preparation intended for human use internally or externally which contains any wood alcohol, otherwise known as methyl alcohol, either crude or refined, under or by whatever name or trade-mark the same may be called or known.

Section 2. No person shall sell, offer for sale \* \* \* supply or give away any wood alcohol, otherwise known as methyl alcohol, \* \* \*, unless the container in which the same is sold \* \* \* shall have affixed thereto a label containing the following words, printed in type not less in size than eight point as known to the trade, in red letters on a white field, viz.:

"Poison.—Wood Alcohol.—It is unlawful to use this fluid in any article of food or drink, or mechanical or toilet preparation, for human use internal or external."

The opposition to the first ordinance included Professor Baskerville, Mr. Stevens, Wm. S. Gray, Albert Paut, Mr. Covey, Berry Bros., Detroit; Wm. C. McConnell, Board of Trade and Transportation, and Mr. Pierson, of Alexander & Green, attorneys for the Wood Products Co. The proponents included a representative of the Department of Health, who

supported the first ordinance in principle; a representative of the Society for the Prevention of Blindness; Henry Woodruff and others. Mr. McConnell and all the manufacturers present favored Dr. Baskerville's model.

#### Gathered in Philadelphia.

Stedman & Archer, Inc., of 16 South Front street, have taken up a line of automobile accessories in addition to their drug and paint trade.

A charter has been granted at Dover, Del., to Cleas Tilly, Inc., to conduct a wholesale drug business; capital, \$150,000. The incorporators are F. B. Hansell, Philadelphia; George H. B. Martin and S. C. Seymour, of Camden, N. J.

A new drug store was opened recently at Plainfield, N. J., in the Speer building.

The contract for the erection of a drug store and ice-cream parlor at Lewis and Baltimore avenues, Darby, Pa., has been awarded.

Owing to the constant increase in the volume of the business since they made a cut in the price of patent medicines about a year ago, the Smith, Kline & French Co. have found it necessary to open an additional office for the accommodation of their rapidly growing clerical force and have rented the building adjoining their entrance on Fifth street above Market. Mr. French says, in regard to the condition of business: "If the Government will cease consideration of laws further restricting and disrupting business and will confine itself to the enforcement of laws now on the statute books, it is believed that in consideration of the splendid prospects of growing crops business will again become very active, in spite of the further possible trouble with Mexico."

A bad case of rheumatism has kept Harry E. Robertson, of Frederick Brown & Co., away from business for several months, and as he is not improving very rapidly it is not known when he will return to work.

All indications point to an unusual exhibition by manufacturers at the exhibition of the N.A.R.D. in August. There are but nine display spaces left.

The drug store located at 1210 Market street, which the Riker-Hegeman Co. opened for business last November, was formally opened in April. The usual "opening sale" was held, and to the numerous articles handled by retail druggists this company has added fresh eggs. In order to stimulate the sale of eggs they gave a package of egg dye with each dozen purchased, and in the course of the day thousands of dozens were sold. While the women and girls consumed 2000 glasses of soda water and as many sundaes, the men took 5000 cigars and 5000 packs of cigarettes out of the establishment.

The will of the late J. Elwood Lee, vice-president of Johnson & Johnson, has been probated at Norristown, Pa. The estate is estimated at more than \$1,000,000.

J. F. Maurice, of the Philadelphia branch of Johnson & Johnson, is now covering the territory made vacant by the recent death of A. Swisher. Mr. Wertheim, who occupied an inside position, is looking after the territory formerly taken care of by Mr. Maurice.

#### Riker-Hegeman Co. Elects Officers.

Alfred H. Cosden was elected president of the Riker-Hegeman Drug Co. at the recent annual meeting of that company. Ex-president John H. Flegler was made chairman of the board of directors. H. S. Collins, formerly vice-president of the United Cigar Stores Company, was elected vice-president of the drug company. John S. Alley is another vice-president and R. B. Wattlely the secretary and treasurer. The stockholders elected as directors: H. S. Collins, R. B. Wattlely, Carl Schmidlap, D. Herman, E. Rubenoff, S. L. Marcus and W. S. Refus. The retiring directors are: R. B. Rathbone, W. D. Davis, Frederick H. Pouch, Wm. C. Bolton and H. D. Hutchins.

#### New York Bowlers Win Tournament.

The annual tournament of the American Drug Trade Bowling Association, Atlantic City, May 8-9, resulted in a victory for the New York Wholesale Drug Trade Bowling Association with 18 points won, Baltimore second with 10 points and Philadelphia third with eight points. These officers were elected: President, Charles C. Buchanan, Philadelphia; vice-president, George Armour, Baltimore; secretary-treasurer, Dr. Wm. B. Christine.

# PATENTS AND TRADE MARKS

## HOLDER FOR CARBOYS.

**HORACE M. McCORD**, Minn., ap'ls. Minn., assignor of five-tenths of the right in and to a patent, to Joseph F. McDonough, La Crosse, Wis., of the following letters patent on a carboy holder (No. 1,095,318), which comprises a frame, a pivoted support for a carboy consisting of a bottom platform, side and end walls, and a hinged wall adapted to swing clear of the support,

and means for holding the carboy on the pivoted support. The hinged wall is made to hold the support in horizontal position while the carboy is being placed thereon, and is also being adapted to swing up and firmly position the carboy within the walls. A box pivotally attached to the standards mounted on the frame of the holder supports the carboy, which is held therein by means of an adjustable rod, which is positioned by means of a hand-nut. The hinged side of the box when swung down, as before stated, is made to support the box in horizontal position to permit the insertion of the carboy.

### Medicine Cabinet.

This invention consists of a door for medicine cabinets comprising four bars at right angles to each other having beveled ends brazed together, the two uprights and the bottom bars of the frame constituting channel bars, while the top bar has a smooth inner face, whereby a mirror and a backing may be inserted into the frame from the top, an angle bar removably secured to the inner face of the top bar confining the upper edge of the mirror and the backing in the frame. The specifications also cover the combination with a medicine cabinet having a rectangular door receiving opening therein, of a door for said cabinet comprising four bars at right angles to each other having the beveled ends brazed together, three of the bars having heads at their outer edges extending in both directions beyond the intermediate member of the channel bars and overlapping the edges of the cabinet, hinges connecting the third of said bars to the cabinet, and the horizontal members of the door constituting channel bars in which are supported the mirror and backing which form a prominent part of the door. The inventor is Louis F. Eisele, Philadelphia, Pa. (Patent No. 1,095,315.)

### Medicine Dose Measurer and Bottle Stopper.

This device is the invention of Alexander T. Stevenson, Portland, Ore. (Patent No. 1,093,740.) It is designed as a

combined measurer and stopper for bottles, comprising a graduated bulb having a neck projecting diagonally upward and outward in substantially the same plane with the long axis of the bulb; and a downwardly extending tubular branch connected to the bottom of the graduated bulb adapted to be inserted in and form a closure for the bottle.

### Combination Valve Funnel.

Among the numerous improvements made in funnels recently is the invention of Bertie Earl Walter, Tulsa, Okla. (Patent No. 1,094,350), which is shown in the accompanying engraving. It consists of the combination with a glass funnel having a

contracted neck forming a valve seat, of a rod working within the funnel, and a glass tube fixed to the rod throughout the length thereof for covering the same and formed with a glass ball terminal about the lower end of the rod to provide a valve engageable with the said seat.

### Funnel With Discharge Spout.

Another type of funnel is the invention of Bela Rakottay, Jersey City, N. J. (Patent No. 1,094,098), which consists of the combination with a funnel having a conical discharge spout, of a valve normally closing said spout, a hollow conical member shiftably arranged upon the outer face of the spout, and a wire attached to the outer surface of the conical body and connected with the valve whereby the latter is unseated when the conical member is moved toward the body portion of the funnel, the conical body also preventing that portion of the wire disposed on the outer surface from contacting with the inner surface of the bottle when the funnel is inserted into the bottle neck.

## PATENTS.

### Granted April 21, 1914.

- 1,093,740—Alexander T. Stevenson, Portland, Ore. Medicine dose measurer and bottle stopper.
- 1,094,098—Bela Rakottay, Jersey City, N. J. Funnel.
- 1,094,119—Jurgen Callsen, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Pharmaceutical compounds.
- 1,094,123—Ludwig Claisen, assignor to Synthetic Patents Co., Inc., New York, N. Y. C-Allyl salicylic acid.
- 1,094,159—Georg Merling, Otto Chrzescinski and Hugo Kohler, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing keto compounds from ketones and alkylaminomethanes.
- 1,094,182—Hans Wolf, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Process of producing oxides of nitrogen.
- 1,094,296—Peter Bergell, assignor to J. D. Riedel Aktiengesellschaft, Berlin-Britz, Germany. Pharmaceutical or medicinal compound and process for producing the same.
- 1,094,350—Bertie Earl Walter, Tulsa, Okla. Funnel.

### Granted April 28, 1914.

- 1,094,539—Konrad Delbruck and Kurt Meisenburg, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing 1,3-butylene glycol.
- 1,094,669—Horace M. McCord, Minneapolis, Minn., assignor of five-tenths to Joseph F. McDonough, La Crosse, Wis. Holder for carboys.
- 1,094,776—Louis H. Brinkman, Glen Ridge, N. J., assignor to General Industries Company, New York. Bottle capping machine.
- 1,094,784—Carl Henry Epple, Oakland, Cal. Sanitary bottle closer.

NOTE—A, advanced; D, declined; C, correction; N, new.

NEW YORK, May 22.—Purchasing operations in drugs and chemicals in this market have been of a restricted character and confined principally to replenishment of stocks and routine business. The advances in prices, however, outnumber the reductions, the most important changes being the decline in the quotations on oils of bergamot, birch, lavender and sweet orange. Natural opium is higher, due principally to the scanty supply of stocks. Quinine is firm and still obtainable at last month's quotations. Citric acid is higher, and advances are also noted in the quotations on tannic and tartaric acids. Balsam tolu is lower, although a fair buying movement is reported. Oil of peppermint is higher and firmly held on the lack of new offerings from growers in Michigan and other Western sections. Cod liver oil is unchanged in price, notwithstanding continued reports of a falling off in the number of fish caught and amount of oil produced during the season as compared with the statistics of former years. Ergot is easier and lower in price. Atropine alkaloid and sulphate have been advanced, and guaiacol and combinations show a revision in prices. Sarsaparilla root, Mexican, has again advanced, local stocks being considerably curtailed, owing to the hold-up of shipments in the country of production. Cantharides are higher.

OPPIUM—The market is firm and jobbers have advanced quotations on natural to \$6.60@87.25 per pound, prices for granulated and U.S.P. powdered remaining unchanged at last month's quotations, viz., \$8.25@88.35 for the former, and \$8.15@88.35 for the latter. The statistics showing the imports of this drug for the nine months ending March 31 are as follows: 330,413 pounds, valued at \$1,279,258; the figures for

the corresponding period of the preceding year were 372,317 pounds, valued at \$1,909,224; for 1912, 346,675 pounds, valued at \$2,129,069. Reports from abroad indicate that operators in the primary markets continue to hold their stocks very strongly, and that there is a growing scarcity in these centers which cannot be replenished until the arrival of the new crop next month.

QUININE—Continues firm and in good demand at 26 cents per ounce for bulk in 100-ounce tins. Some interest has been evinced in this article during the past few weeks owing to the fact that several large contracts were placed for the febrifuge by the U.S. Government, presumably in anticipation of a possible future need of the drug by the armies and naval forces now in or to be sent to Mexico. Government statistics for March show the importation of 467,606 ounces of quinine, valued at \$106,804, as compared with 551,534 ounces, valued at \$98,817 for the corresponding period last year.

COD LIVER OIL—Norwegian is firm and unchanged in price. Cables from primary sources report an upward tendency, influenced by the falling short of the anticipated yield of the season's production. The total catch to the week ending May 16 amounted to 66,800,000 fish, with a yield of 42,540 barrels of oil, against 59,200,000 fish caught in the corresponding period a year ago, which yielded 31,900 barrels of oil.

CITRIC ACID—Scarcity of supplies has caused a marked advance in quotations, as follows: Crystal, in kegs, 54 cents per pound; less, 70c.@75c.; granulated, 72c.@75c.; powdered, 73c.@77c. Advices from Hamburg state that all of last year's production and what remained of old stock has been sold and the Camera Agrumaria has stopped sales.

CANTHARIDES—All grades are in limited supply and higher, jobbers quoting \$2.10@2.25 per pound for sifted, and \$2.25@2.40 for powdered. Chinese flies are also higher abroad, but still obtainable at nominal quotations in this market.

OIL BERGAMOT—In common with other Sicilian essences this oil shows a downward tendency, quotations ranging from \$5.85 @ \$6 per pound. Further reductions are likely, advices from producing centers indicating that the season's yield will be satisfactory both in quality and quantity.

OIL ORANGE—This article is also lower in price, sweet being quoted at \$2.50@2.60 per pound. In common with other citrus oils this product is assuming its former normal price, due to the reports of the large production of new crop.

OIL PEPPERMINT—Is firmly held on the lack of new offerings from growers in Michigan and other Western sections. Jobbers have advanced quotations to \$4.50@4.75 for New York, and \$4.25@4.50 for Hotchkiss. The market for menthol is also firm, but quotations are unchanged.

OIL CITRONELLA—Ceylon oil has been strong and active in the local market, and quotations have been advanced to 48c. @54c. per pound. As a mosquito repeller citronella oil has some reputation, and the increased demand of the oil for this purpose at this time of the year is not without its effect on the market. It is also noted that spot offerings from primary markets have been virtually withdrawn.

OIL LAVENDER—Garden (French) is easier and quotations have been reduced to 90c.@ \$1 per pound.

MANNA—Small Flake shows a lower range and prices have declined to 45c.@50c. per pound, notwithstanding the reports that stocks in some quarters are largely depleted.

ATROPINE—Following an advance in quotations by manufacturers of this alkaloid and its salt, jobbers have marked up their prices and now quote \$9@ \$9.25 per ounce for alkaloid in 1/8-ounce vials, and \$8@ \$8.25 per ounce for sulphate, also in 1/8-ounce vials.

HOPS—Prices for 1913 crop are higher, the ruling quotations being 30c.@36c. per pound.

SENNA LEAVES—Lack quotable change, but the market retains a strong tone and the tendency of prices seem to be moving upward. The customs authorities are exercising a very strict supervision of the quality of leaves now permitted entry.

CANNABIS INDICA—Is firmer, owing to the strength of the primary situation and diminished stocks here, dealers quoting

**SUGAR.**—SUGAR, WHITE, ROBERT, advices from London 100 lbs. \$1.85, 50 lbs. \$1.00.

**TANNIN.**—TANNIN, CASHEW, 100 lbs., inquiry and the market is steady. SUGAR, WHITE, 100 lbs., \$3.25 to \$3.50; 50 lbs., \$1.85 to \$2.00. Light and the indications are for a further rise in the present season.

**SUGAR, WHITE, MEXICAN.**—It has been advanced to 52c to 55c per pound, the former to 55c to 60c per pound. The latter grades have been unable to replenish their stock owing to the suspension of shipments from Tuxpan and Tampico, the only points coming in to those points from the producing districts are within the zone of active hostilities and the rest of the country. Honduras root is also selling at 40c to 45c per pound.

**GUANO.**—GUANO, PERU, has undergone a revision since our last issue. It is now obtainable at \$2.50 to \$2.70 per pound, or \$2.25 to \$2.40 per pound, or 20c to 28c per ounce, and \$1.00 to \$1.25 per cask.

**SUGAR, ISLAND.**—It is \$13 to \$13.25 for true Valencia. Cable reports indicate a downward tendency abroad owing to a shortage of the yield due to dry weather in the Spanish producing districts.

**OR BIRD.**—BLACK (betula) shows a marked decline, jobbers quoting \$1.50 to \$1.60 per pound.

**OR SASSAFRAS.**—It is also lower and in good supply, quotations ranging from 65c to 75c per pound.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The E. Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
NO. 3 PARK PLACE, NEW YORK.

Matriculation Number.	Graduates to May 20, 1914.	Graduation Average.
7592—	Walter H. Hayles, Fort Madison, Iowa.....	96
7801—	Fred Ed. Wiltshire, Cleveland, Ohio.....	91
7878—	Howard E. Robinson, Altamont, Mo.....	86
7990—	Leon C. Rothgeb, Luray, Va.....	96
8058—	Edward A. Bank, Brooklyn, N. Y.....	94
8189—	J. I. Gelly, Nokomis, Ill.....	94

### What Our Graduates Think of It.

"I think your Course is fine, and cannot praise it enough. The only objection I can see is that you sell it too cheap."  
—H. E. ROBINSON, Altamont, Mo.

"I have certainly enjoyed the study, and I have learned many new and fine points that I couldn't have learned myself. I think the Course worth many times more than the price charged."  
—L. W. TOZIER, Montpelier, Idaho.

"This is to inform you of the fact that I am now a hospital steward, having passed the examination before I completed the ERA Course. My success I base on the thorough study of your Lectures. I must say that a man certainly gets his ten dollars' worth and more."  
—HENRY TOPP, Navy Yard, Norfolk, Va.

"I can say that I was benefited to a great extent by this Course, and have recommended it to several who are seeking advancement."  
—JOS. C. FAGAN, Naval Medical School, Washington, D. C.

### St. Louis C. of P.

Charles F. Nagel, former Secretary of Commerce and Labor in the National cabinet, delivered the valedictory address at the 48th commencement exercises of the St. Louis College of Pharmacy. Fifty-eight students, including three women, were graduated. Degrees were conferred by Dr. J. C. Falk, college president. A gold medal for the best examination in all branches was won by Franz Friedrich Berg, of Colorado Springs, Col.; the college silver medal by Frank John Helms, Addicks, Ill.; the recommendation for membership in the American Pharmaceutical Association, with dues for 1914, given by the college, to Junius Blanton Linn, of Canton, Mo.

Honorable mention in the graduate of pharmacy class: Miss Cressie Delahae Pamhorst, Staunton, Ill.; Miss Lydia Frankie Radolf, Freeburg, Ill.; Fred George Messerschmidt, St. Louis; Alexander Pearlstone, St. Louis; Walter Freudenberg, Belleville, Ill.; William Paul Messock, Decatur, Ill. Honorable mention in the bachelor of pharmacy class, William Henry Duckworth, St. Clair, Mo.

The junior class scholarships and prizes follow: Edward Mallinckrodt scholarship for 1914-15, to Joseph Frey, St. Louis; Meyer Brothers scholarship for 1914-15, to Glenn Adrian Burkhardt, St. Louis; J. S. Merrell scholarship for 1914-15, to Roland Henry Kraeger, Yorkton, Tex.; the alumni prize, some standard work on the subject of pharmacy or allied branches, awarded for excellence in examination, to Herbert W. Dixon, Middlebrook, Mo.; honorable mention: Joseph Frank Evans, Mountain Grove, Mo.; Sam Honiberg and Philip Ludger Chiles, St. Louis.

### New Jersey College of Pharmacy.

The annual commencement of the New Jersey College of Pharmacy at Newark was held May 12 at Wallace Hall, when 29 graduates received their diplomas. There were two ladies, both Sisters of Charity, and one of them, Sister Inez Marie took the highest honors in the class, and won the prize of \$25 in gold awarded by the trustees, and one other award, the presentation being made by President William O. Kuebler. An address was made by Dean P. E. Hummel, and the address to the graduates was made by N. Kussy, Esq., on "Professional Ethics." The valedictory was delivered by Isadore Leventhal, and the diplomas were bestowed by President Kuebler. This was the largest graduating class in the history of the college.

At the annual meeting May 20 all the old officers were re-elected. The college is in a very substantial condition, with neither debts nor mortgages, and there is a substantial balance in the treasury.

### New Orleans College of Pharmacy.

Twenty graduates received diplomas at the commencement of the New Orleans College of Pharmacy. The alumni gold medal to the student making the highest mark was presented by President Joseph P. Walker to Ernest F. Buckley, of Slidell; the State Ph.A. medal to Pascal J. Liuzza, of New Orleans; membership in the A.Ph.A., awarded by the dean, to Emile J. Burvant, of New Orleans. The faculty medal to the junior making the highest marks went to P. H. Corbett, of Colfax. Emile J. Burvant, of New Orleans, was salutatorian, and Marion W. Stewart, of Amite, valedictorian.

The Indianapolis College of Pharmacy has been incorporated with \$50,000 capital, by F. A. Mueller, L. H. Niles and J. V. Rawlings.

Campbell A. Neptune, of Parkersburg, West Va., has just completed a canvass of the high school students of the State to see how many are interested in the establishment of a course in pharmacy at West Virginia University. Neptune, who is secretary of the State Ph.A., received affirmative replies from 71 would-be students, and President Hodges, of the university, has received a sufficient number of applications to justify the opening of a pharmacy department if an appropriation can be secured from the State. The State association will take the matter up at its annual meeting this month.

### Dinner at Chemists' Club Honor of Prof. Remington.

Prof. Joseph P. Remington was the guest of honor at a dinner held at the Chemists' Club, 52 East 41st street, before the recent meeting of the N. Y. Ph. A. branch. Among those present were: Dr. H. V. Army, Dr. W. A. Bastedo, John Roemer, Otto Raubenheimer, J. Leon Lascoff, Dr. Wm. C. Anderson, Dr. Joseph Mayer, J. H. Rehffuss, Prof. E. Fullerton Cook, Caswell A. Mayo, Prof. Charles LaWall, Dr. Virgil Coblenz, Prof. G. N. Horstmann, Frank L. McCartney, Clarence O. Bigelow, Thomas Latham, Louis Berger, Felix Hirseman, Hugo Kantrowitz, V. C. Daggett, E. K. James, Thomas F. Main, R. S. Lehman, E. H. Gane, Mrs. St. Clair-Ramsford Gay and others.

The Wassell Pharmacy, 4239 Broadway, are about to open a branch drug store at Broadway and 142th street, New York City.

### AND THIS IS WHAT WE PAY FOR!

Two new enactments in New York State, made laws without perfecting clauses or without necessary appropriations, have created a remarkable situation in the drug trade. The Boylan bill, hailed as a progressive and supposedly fair law for the control of the sale of narcotic drugs, carried with it a proviso that on and after July 1, 1914, all orders for cocaine, etc., shall be made upon official order-blanks, prepared and furnished by the State Commissioner of Health, and furnished by the local health officers to all physicians, dentists, pharmacists and veterinarians, duly licensed. Any sale of the stipulated narcotics in any other method than by the use of these official blanks is declared unlawful. The druggists, wholesale and retail, stand ready to abide by the law, but *thousands of requests for blanks have been made to the State Health Department without result*—the uniform reply from the State officials has been this: *No blanks have been printed and no appropriation has been made for them.*

What the effect of such unbusinesslike methods and lack of foresight will be no one at this writing pretends even to surmise!

The second measure concerning which there is a similar difficulty, although in this instance due to lack of definite stipulation, is the 'Workmen's Compensation Act' which requires general insurance of workmen to provide for the generous damages awarded under the law to workmen injured while engaged in their customary occupations, and still larger damages in the case of death through accident. Efforts have been made by the New York State Ph.A. and by other organizations to obtain from the State Department of Labor and the Compensation Commission at Albany a ruling as to whether or not this act applies to the average retail pharmacy where neither power nor machinery is used. Up till the time of going to press no decision had been announced by the State boards, while the experts of the liability companies frankly admitted they were in doubt as to whether or not pharmacists came under the application of the act.

The great National associations have, as a rule, protected themselves and their membership from such disquieting conditions by the employment of legal council, attorneys versed in the intricacies of legislative enactment. It is unfortunate that the

retail druggists have been without such legal aid, for no layman, nor body of laymen in a legislative committee, work as hard as they will and as conscientiously as they have—and the legislative committee of the New York State Association last year was second to none in efficiency and wholehearted effort to surmount such purely technical difficulties in the application of new laws.

The situation is a deplorable one, although by no means without precedent in these days of semi-digested legislative enactment.

#### EVADING A PLAIN RESPONSIBILITY.

The manner in which Secretary-Treasurer Mandabach disposes of the Druggists' National Home in his report to the annual meeting of the National Drug Clerks' Association, an abstract of whose proceedings are printed in this issue of the ERA, is not very reassuring as to the future success of that laudable undertaking. Further, the report gives no information as to the work that either he or his organization have done in connection with the Home. The disposition of the subject in such short shrift lends color to the belief expressed in some quarters that the association undertook to found an institution without first fully counting the cost or considering the work that the "fathering" of such a project involved.

The motives which prompted this endeavor were no doubt altruistic enough and worthy of any humanitarian effort, and we would not criticize anyone actuated by such ideals. But organized effort to obtain results of this character must be backed by something more than ideals; it must be intelligently directed and must have experience and influence to carry the endeavor to successful fruition. The noticeable lack of information upon these points tends to show that those directing the affairs of the association would seek to minimize their responsibility in the project and place it upon a board of trustees. Reading between the lines of the Secretary's report, one cannot help but arrive at this conclusion. The Druggists' National Home may have been "presented to the druggists of the United States" at the last convention of the Drug Clerks' Association, as Secretary Mandabach affirms, but it yet remains for some one to discharge the outstanding obligations against the Home before the "present" really becomes a "gift." The ERA wants to see the institution put upon a substantial basis and has conscientiously tried to do its share in pushing this worthy project to completion, because it is a worthy object. But the proposition is greater than any individual or set of individuals can well carry forward. It needs men who can and will devote their time to the work, not for self-glorification, but for the real good they may do the drug trade of the country.

#### EFFECTIVE WORK AT ALBANY.

THE work of the legislative committee of the New York State Pharmaceutical Association was admirably summarized in the report presented by President Rehfuess at the recent annual meeting of

that organization held at Saratoga. Of more than 1500 bills introduced in the Legislature, there were at least 30 affecting retail pharmacists, quite enough to engage the attention of any committee for many days. It is creditable to the committee that the bills as finally placed on the statute books are not considered to be inimical to pharmacy. The work done on the Boylan bill showed masterful activity on the part of the association's representatives at the last moment—practically snatching victory out of anticipated defeat. It is to be regretted that the omission to provide an appropriation for preparing the necessary official blanks to be used in connection with the sale of narcotics named in the laws was not anticipated, the one drawback to what has been declared to be an admirable piece of legislation.

Persons who have not followed legislative matters closely upon the ground can have little idea of the trials and troubles of the legislative committee-man, the loss of time and the expense of making numerous trips to Albany and the oft-times difficult task of trying to convince the law-makers against their will that a measure ought either to be enacted or killed. The members of the New York State Association have reason to feel proud of the committee representing them at the Capitol last Winter, for it did effective work and is entitled to great praise.

#### EXTENSION OF THE GUARANTY LEGEND.

MANUFACTURERS, jobbers, and members of the drug trade generally are pleased to learn of the action of the Secretaries of the Treasury, Agriculture and Commerce in extending the time of the discontinuation of the guaranty legend and serial number from May 1, 1915, to May 1, 1916, the supplementary decision (F. I. D. No. 155) containing the text of the order appearing on another page of this issue of the ERA.

A study of the decision discloses the provision that on products packed and labeled before May 1, 1916, in compliance with regulations in force before May 5, 1914, manufacturers will have until Nov. 1, 1916, to dispose of goods so labeled. This, we believe, is a just recognition by the authorities of the sacrifices that manufacturers would have to make in order to conform to the decision which would have terminated the use of the legend and serial number on labels on May 1, 1915. That large losses would accrue to citizens who have expended their money for labels in good faith and in an effort to comply with existing regulations, was self-evident, and the authorities were wise in considering this loss and providing for reducing it to a minimum by a further extension of time before enforcing the radical provisions embodied in the new regulation.

The ERA views this decision with some satisfaction, as it was one of the first, if not the first journal to set forth the difficulties involved and the sacrifices that would have to be made by manufacturers in attempting to comply with the law, and that in justice to them they should be allowed a sufficient time in which to use up their present stock of labels. To stringently enforce a decision

which differed so radically from that formerly obtaining and thereby order the destruction of a stock of labels involving thousands of dollars would have been confiscatory to a paramount degree, and more characteristic of bureaucratic methods than of a liberal and enlightened policy.

Too much emphasis cannot be placed upon the fact that the change in procedure contemplated by the new ruling will necessitate a much closer scrutiny of goods on the part of jobbers and dealers, who under the new order of things will be compelled to assure themselves of the quality of the goods they may sell, instead of simply assuring themselves that the labels of the goods carry a guaranty legend and serial number.

Another question that has been raised is the right of the manufacturer to continue some form of a personal guaranty on the label after the time the new regulation becomes effective, but the logic of the situation would seem to imply that this trade custom, which is more or less followed by some manufacturers, will not be affected, if the manufacturer makes it plain that the guaranty as printed is his own individual statement and carries with it no suggestion of Government authorization or ratification. Most consumers are now aware that putting the legend on labels by manufacturers is entirely voluntary and that, to use the words of the authorities, "the Government never guarantees the wholesomeness or purity of food or drug products."

#### TRUE CONVENTION EFFICIENCY.

THERE is a movement on the part of pharmacists and druggists, members of State and National associations, to so concentrate their programmes that much useless vocalization will be eliminated. From the simple gathering of druggists of a few decades ago when important matters were considered, acted upon, and then the delegates were left free to enjoy a period of wholesome recreation, the elaborate, complicated and overlapping programme of the average association today is a marked change—for the worse. There are too many annexes, too many appendages, too many talk-fests. In the maze of diverse interests the main object of these conventions—to do something—is often overshadowed or made impossible simply by the lack of unification which cannot but result when members of so many sections or branches, each with its own work to do, attempt to really accomplish something through the main organization.

This criticism is true to a greater or less degree of every great National organization. The political parties have simplified the machinery to an executive committee and a largely cut and dried programme, which policy is not to be recommended to any body of intelligent professional or business men who wish to accomplish anything themselves.

The druggists are beginning to see the economy of talk regulation. This year it has been announced by several programme committees of State associations that the dull, the uninteresting, and the unimportant would be eliminated entirely from the programme of the general sessions and that

executive committees—in the line of their duty—would transact all the routine business possible.

There has been a strong appeal on behalf of both the N. A. R. D. and A. Ph. A. to centralize the interest and the work of the National conventions so that more will be accomplished, without the necessity of a continuous session of some section or branch or committee from 8 a. m. until 12 midnight every convention day. And this movement has found a growing support. The whole tendency of the present convention system is toward elaboration—not concentration—not recreation. Many druggists and pharmacists take their vacations at the time of the National conventions—they are interested in the deliberations of the delegates because directly affected by the issues—but when to participate in the deliberations calls for the expenditure of practically the entire time of the druggist attendant upon the conventions there seems to be at least a reasonable basis for the argument that more will be accomplished, a more general attendance will be gained, and a more enjoyable annual session will be assured if as much skill shall be temporarily exercised in programme pruning as there has been in programme elaboration during the past few years.

#### PAPERS FOR STATE ASSOCIATIONS.

As a means of imparting information and creating interest in the meetings of the average pharmaceutical association, the carefully prepared paper read by the author holds first place, but how to get a sufficient number of these papers to make a good "showing" is the hardest problem with which the members of the committees on papers and queries have to deal. Various means have been tried to arouse interest in this direction, but not all the plans proposed have been as productive as could be wished.

We have had occasion to look at the programmes arranged for various association meetings to be held this year, and while, to paraphrase the agricultural expert's formula, the Season's crop looks favorable, there is yet much to be done to awaken interest in this most helpful part of the association's activities. Papers prepared and read before any gathering of pharmacists, aside from their own intrinsic worth, are of value in inducing members with ideas to break the ice of discussion and to contribute their experiences for the benefit of their fellow pharmacists. An active and interested committee whose membership knows what it wants and then proceeds in a business-like manner to get the members of the association interested and to contribute, is sure to land something of value. The custom of preparing sets of subjects for papers by such committees, perhaps, has been the most successful of any of the schemes that have been tried, as may be seen from the results obtained in Pennsylvania, Missouri, and some of the other State associations. This custom when considered in its entirety, is something more than invitation to prepare papers; besides being suggestive, it instructs the new members in the range of subjects that may be properly handled by them for the edification of

those who attend the meetings. The nature of the subjects that are likely to provoke discussions of a helpful character are so numerous that it is strange that programme committees do not make more use of this time-honored plan of arousing interest in their association meetings. A half-dozen 10-minute papers on live subjects is more provocative of discussion of a genuinely helpful character to the average member of a State association than a dozen long-winded disquisitions on the relations of the pharmacist and physician or any description like that of the attempt to decarboxylate histidine by heat alone.

#### MEDICINAL WINES FROM TINCTURES.

PARMENTIER'S account of a new method for preparing medicinal wines, published in this issue, differs somewhat from the preceding articles of the "Classical Discoveries" series in that it is not a discovery, in the true sense of the word. The author himself is explicit in his statements that the proposed administration of medicinal principles of vegetable drugs by mixing a tincture with wine is no innovation. Nevertheless, the account has been included by reason of the great importance attaching to the subject at the time when the change was suggested, and also because Parmentier's method became the basis of the procedure now to be found in the U.S.P. From the fact that he had made such an extended study of the subject, and that his discussion was so detailed and complete, and accompanied by working formulas for the new class of preparations, it came about that Parmentier had the satisfaction of seeing the new process adopted by Governmental officials, and given a thorough trial, which ultimately resulted in the displacement of the old maceration method for medicinal wines.

## BOOKS REVIEWED

THE SIMPLER NATURAL BASES. By George Barger, M.A., D.Sc., professor of chemistry in the Royal Holloway College, University of London. 8vo., 215 pages. \$1.80. London, New York, Bombay and Calcutta. Longmans, Green & Co.

This is a recent addition to the series of monographs on biochemistry issued by these enterprising publishers under the editorial supervision of Drs. R. H. A. Plimmer and F. G. Hopkins, and as such, it represents a successful attempt to present the reader with a very complete account of what is known at the present time of the position of the simpler natural bases in the field of scientific investigation. In contradistinction to the typical vegetable alkaloids, these bases, as defined by the author, have a simple chemical constitution, and are of general biological interest, either because of their wide distribution, or on account of their close relationship to the proteins and phosphatides.

Present-day studies tend to show that some of the earlier conceptions of some of these products are not tenable, and even some terms used to designate certain bodies are now no longer employed. The term "ptomaine," originally applied by Selmi to bases from corpses, and which afterwards became identical with putrefaction base, has fallen into disuse, while "eucomaine," the term used by Gautier for animal bases such as creatinine, which are not formed by putrefaction, is now obsolete. Pharmacists and physicians who have a desire to have the latest summary on this most interesting subject will find this book most helpful. The arrangement of the various products into groups is logical and will greatly aid

one in obtaining a comprehensive view of the relationship of these natural bases, as shown by the following outline of the several chapter headings: Amines Derived from Protein; Amino Acids and other Bases containing a Carboxyl Group; Betaines; Choline and Allied Substances; Creatine, Creatinine, Glycoxyamine, and Guanidines; Adrenaline; Bases of Unknown Constitution; Practical Chemical Methods and Details. The bibliography appended is most complete and indicative of the original sources of information that have been consulted in the preparation of the volume.

DIGEST OF COMMENTS on the Pharmacopoeia of the United States (8th Decennial Revision) and on the National Formulary (4th Revision) for the calendar year 1912. 8vo., 495 pages. Bulletin No. 93, Hygienic Laboratory, Washington, Government Printing Office.

This is the eighth bulletin of the present series, which, according to Messrs. Motter and Wilbert, the compilers, rounds out three decades of the systematic compilation of comments on the Pharmacopoeia as instigated by the late Charles Rice, who, as chairman of the Committee of Revision of the U.S.P., began compiling notes and abstracts in 1883. The user who is familiar with the earlier volumes of the series, will quickly note that the material presented in this bulletin has been "hoiled down" to the lowest form in order to save space, with the result that the bulletin in many instances is an elaborated index of pharmacopoeial articles.

Briefness and economy of space are two important factors that must be considered in the production of any publication, and a bibliography is of great help to the scientific investigator who would quickly ascertain what has been done in a given field. But with the large majority of pharmacists who have not the facilities for consulting original sources, the mere enumeration of a title and the naming of an author leave much to be desired in the way of helpful information, and this abbreviated treatment of some of the references cited in this bulletin will prove a disappointment to those who are looking for a "digest" or synopsis of what a given authority asserts or has found in his work. As a whole, however, the bulletin gives a very good resumé of the year's comment, and with the exception we have noted, the work of the compilers is to be commended.

PHARMACEUTICAL EDUCATION IN THE DIFFERENT COUNTRIES. By Henry L. Taylor, Ph.D., Albany, N. Y. 8vo., 59 pages. Paper.

This reprint, under the above title, embodies the result of the author's study in an attempt to bring to the attention of the pharmaceutical world through the 11th International Pharmaceutical Congress at The Hague, 1913, the essentials of pharmaceutical education in the different countries of the civilized world. In this study the author has closely followed his endeavor to keep in mind when comparing educational requirements two factors, viz., the general education prerequisite to entering on professional study, and the professional education required for entering on professional practice, and he has summarized his findings in the several countries enumerated in alphabetic order. These are supplemented by five graphics showing the French system of education as exemplified in Paris, the German system as exemplified in Prussia, a conspectus of educational organization in Scotland, the Swiss school system in Zurich, and the American system as exemplified in the State of New York. The frontispiece is a reproduction in halftone of New York's Palace of Education at Albany. Viewed in any light, this study is interesting and informative, and the facts one can be sure are authoritatively stated.

PROCEEDINGS OF THE NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION, 39th Annual Meeting, Jacksonville, November 18 to 20, 1913. 8vo., 28 pages. Cloth. New York. Burr Printing House.

This volume contains a stenographic report of the meeting of the association which was held in the Florida city last year, as well as the full text of the various committee reports on anti-narcotic legislation, commercial travelers and selling methods, credits and collections, fire insurance, legislation, prevention of adulteration, increase in freight rates, and other subjects germane to the jobbing business, all of which as here massed, give the reader a far broader view of the magnitude and ramifications of the wholesale drug trade than he could get in any other way. There are also illustrations of all of the present officers, and halftone cuts of the members of the asso-

ciation who have died since the previous meeting. According to the report of Secretary J. E. Toms, under whose direction the volume has been prepared, the association had on March 1 of the present year 262 active and 347 associate members, an increase of one active and 18 associate members since the corresponding date last year. The next annual meeting will be held in Indianapolis during the week beginning September 14 of the present year

SEMI-ANNUAL REPORT ON ESSENTIAL OILS, Synthetic Perfumes, Etc. April, 1914.

This valuable report, covering 148 pages, published by Schimmel & Co. (Fritzsche Brothers), of Miltitz, near Leipzig, Germany, contains a review of the commercial results of the year 1913 in their relations to the principal articles of trade in which these manufacturers are most interested; commercial notes and scientific information on essential oils, chemical preparations and drugs, and notes—bibliographic, analytical, pharmaco-physiological, phyto-physiological and chemical—on recent research work, etc. There is also a very interesting resumé of the researches of Dunbar and his collaborators into the pathology of hay fever and the evolution of the antitoxic serum now known as "pollantin," one of the Schimmel specialties. This study is accompanied by a full-page illustration in color showing the gathering of the pollen of goldenrod for immunizing hay fever horses. The pollen is collected on blue paper beneath zinc vessels filled with water which contain the goldenrod, the flowering tops of the plants extending over the sides of the vessels and shedding their pollen on the paper beneath.

Volume 6 (January-December, 1913) of "Reports of the Chemical Laboratory, A.M.A.," published under the direction of Prof. W. A. Puckner, secretary of the Council on Pharmacy and Chemistry of the A.M.A. and chief of the association's laboratory, contains considerable data of particular interest to pharmacists in regard to the various nostrums which have been discussed in the *Journal* of that organization during the past year. This material is assembled under three heads: Reprints of Contributions; Reports Abstracted from the *Journal*, and Reports not Previously Published. As it is the practice of this laboratory to publish along with the results also the methods of analysis used, the volume should be of great value to those who are engaged in the chemical examination of drugs and chemicals. Copies may be obtained from the American Medical Association, publishers, 535 North Dearborn street, Chicago, Ill., at 25 cents each.

Compound Acetic Tincture of Gentian.\*

By ALBERT N. DOERSCHUK.

President of the Kansas City Drug Club.

THE specimen presented herewith is a compound acetic tincture of gentian, of U.S.P. drug strength, that has stood for over a year with no precipitation, and has the following proportion in each 100 parts: Gentian root, 10 parts; recent bitter orange peel, to the equivalent of four (4) parts of dried peel; cardamom, one part, as extractive carried in 6 per cent. acetic acid, with water sufficient to make 10 parts (no alcohol being present), as against the official U.S.P. tincture of the same drug strength in three parts of alcohol to two parts of water. Here is also a small quantity of the official hydro-alcoholic tincture, containing about 19 fl. ounces of alcohol to each quart; a tablespoonful of this three times a day is equivalent in alcoholic strength to giving a patient an average bar drink of whiskey three times a day. The acetic acid present in the acetic tincture is equivalent in strength to that of U.S.P. dilute acetic acid.

Acetic acid was slow to be recognized as a solvent for the active principles of organic drugs, but now the official fluid-extracts of sanguinaria, squill and lobelia are entirely made with acetic acid dilutions, while nux vomica, ergot and conium are extracted with a hydro-acetic-alcoholic menstruum.

Compound acetic tincture of gentian appeals for favor by its full, mellow and completely true aroma and its distinctive

\*A paper read before the Kansas City Drug Club, which is the successor to the Kansas City R.D.A.

bitter tonic taste, bringing out the marked characteristic of each drug and representing the root fully, much, no doubt, as is found in an extract of a fresh specimen and quite in contradistinction to the alcoholic smell and burned taste of the official tincture. The glucoside, pectin, and the gentianose of the fresh root undergo oxidation in the presence of alcohol, and an aged alcoholic tincture is practically inert and worthless. Acetic acid, in itself, has a marked food value, is a refrigerant tonic, and promotes excretions. As combined in this tincture, it has only a mild acid reaction, and develops no acetic ether. For all practical purposes the acid used in manufacture is neutralized by combination with the organic bases found in these drugs, as it also combines in the form of acetates with the valuable organic salts of calcium, potassium, sodium, iron, etc., of the drugs which are mostly left behind in the process for the alcoholic tincture.

Compound acetic tincture of gentian is recommended for continued use in large doses, and combines nicely in mixtures with other drugs. Gentian is a valuable drug, but it has fallen into disuse mainly because there has been no really available official preparation containing it since the abandonment of the infusion in general practice. As acetic acid is now produced in a high state of purity at a nominal cost it is to be hoped that its medicinal and solvent virtues will become better known, and that acetic tinctures and extracts will be brought into general use.

Below is a formula for the compound acetic tincture of gentian:

- Gentian root, in fine powder..... 5 tr. ounces
- Bitter orange peel, from the fresh fruit,  
in thin shavings and narrow shreds,  
cut with a bright knife..... 5 tr. ounces  
(This is equivalent to 2 tr. ounces of dried peel.)
- Cardamom seed, recently powdered.... 1 1/2 tr. ounce
- Acetic acid, in distilled water (10%).. 50 fl. ounces

Place all the above in a bottle, macerate for seven days in a warm place with frequent shaking, express (avoiding contact with metal), wash the residue with sufficient 6 per cent. acetic acid to make the finished quantity measure 50 fl. ounces. Filter through coarsely powdered charcoal previously well-washed with dilute acetic acid. The 10 per cent. acetic acid originally added is neutralized to the extent of about 4 per cent., so that the finished product contains about 6 per cent. of acetic acid.

Milk of Magnesia without Gelatin.

By H. L. TILLY, R.P., Memphis, Tenn.

- Magnesium sulphate..... 350 gm.
- Sodium hydroxide..... 119 gm.
- Distilled water, enough to make..... 1000 cc

Dissolve the magnesium sulphate in 400 cc. of distilled water and filter the solution through paper. Dissolve the sodium hydroxide in 400 cc. of distilled water; take of this solution 400 cc. and heat to boiling; to the hot solution add 100 cc. of the solution of magnesium sulphate and heat the mixture for 10 minutes more; then add the remainder of the solution of magnesium sulphate. Dilute the resulting mixture to 3000 cc., and allow the magma to settle to the 1000 mark. Wash the magma with water until it gives but a slight turbidity with barium chloride test solution.

H. L. TILLY

(This formula, contributed by Mr. Tilly, is a modification of that proposed by S. L. Hilton, of Washington, D. C., some years ago, and so far as we can discover, the only difference is in the omission of gelatin from the formula and a variation in the method of procedure.—Ed.)

University Rub for Athletes.

- Methyl salicylate..... 1 cc.
- Spirit of camphor..... 20 cc.
- Extract of witch hazel..... 25 cc.
- Alcohol ..... 50 cc.

## Changes in the New Pharmacopoeia—Fourth Instalment—Standards for Drugs.\*

Changes in the New Pharmacopoeia and Standards  
 Resins, Gums, and Glycerates. Origin submitted  
 to the Pharmacopoeial Convention for inclusion into the next  
 edition of the Pharmacopoeia.

262 June 1914

**OPHIOPHYLLON**—Defined as the dried stem and roots of *Papaver somniferum* Linné and its varieties (Fam. Papaveraceæ), with not more than 5 per cent. of foreign matter. Usually in the form of capsules and leaves of the poppy (*Rosa*), or stems and roots of foreign matter. In more or less flattened masses of variable size, usually not at 8 to 15 cm. in diameter, externally grayish-brown, with fragments of poppy leaves and with some traces of stems and roots, adhering from packing; more or less striated, rough, becoming hard and brittle on keeping; internally grayish, interspersed with lighter areas, somewhat lustrous, odor characteristic, narcotic; taste bitter, characteristic.

**PEPSIUM**—Defined as the "dried" seeds of cultivated varieties of the genus *Pisum* (Fam. Cucurbitaceæ), with not more than 5 per cent. of other harmless seeds. Broadly elliptical, about 15 to 25 mm. in length and 2 to 3 mm. in thickness; externally yellowish-white, very smooth, occasionally with thin, transparent fragments of adhering pulp, and with a shallow groove parallel to and within 1 mm. of the margin; fracture short; seed coat consisting of a white coriaceous outer layer and a membranous inner layer occasionally of a dark green color; embryo whitish, straight, with a small conical hypocotyl and two plano-convex cotyledons; slightly odorous when wetted; taste bland and oily. Characteristics under the microscope are given.

**PETROSelinum Fructus**—The dried ripe fruits of *Petroselinum sativum* Hoffmann (Fam. Umbelliferae), with not more than 5 per cent. of foreign seeds and other vegetable matter. Mericarps usually separated, ovoid crescent shaped, 2 to 3 mm. in length, 1 mm. in diameter; externally grayish-brown becoming grayish or brownish on aging, having 5 yellowish, filiform, prominent ribs, alternating with the coarsely roughened furrows; in transverse section nearly hemispherical, the commissural surface with 2 vittæ, or oil-tubes, the dorsal surface usually with a single vittæ, occasionally 2 vittæ, in the grooves between the primary ribs; endosperm large, oily, enclosing a small embryo; odor and taste characteristic and distinctly aromatic, especially when bruised. Appearance of sections under the microscope described. Powder. Grayish-brown, mostly of large, irregular fragments; cells of endosperm with aleurone grains, each usually containing a rosette aggregate of calcium oxalate, 0.25 to 0.7 mm. in diameter; fragments with light yellow vittæ and the yellowish-brown cells of the pericarp; fragments with narrow trachea and more or less lignified sclerenchymatous fibres.

**PHYCITIGUS**—Defined as the "dried" seeds. Oblong or ellipsoidal, somewhat compressed reniform, 15 to 30 cm. in length, 10 to 15 mm. in thickness; externally reddish or chocolate brown, smooth, somewhat wrinkled near the brownish-black groove, the latter being 2 mm. in width and extending almost the entire length of the convex edge and in which is found frequently the remains of the white membranous funiculus, the margins of the seed coat on both sides of the groove somewhat elevated, of a yellowish-red or brownish-red color and somewhat thickened; embryo large, white, with short hypocotyl and two concave-convex cotyledons; taste at first starchy, afterwards acid. Powder described. Ash not exceeding 5 per cent.

**Pilocarpus**—The dried leaflets of *Pilocarpus Jaborandi* Holmes, in commerce known as Pernambuco Jaborandi, or of *Pilocarpus microphyllus*, Stapf, known in commerce as Maranhão Jaborandi. (Fam. Rutaceæ), with not more than 5 per cent. of the rachis (stalks), bearing the leaflets and stems of the same plant. Pernambuco Jaborandi: Leaflets when entire, oval, oblong, or elliptical, 4 to 10.5 cm. in length and 2 to 4 cm. in breadth and with short, stout petiolules; summits more or less rounded or acute and emarginate; bases rounded or acute and mostly unequal; margins, entire and narrowly revolute; very smooth, shiny, coriaceous and glandular-punctate; upper surface grayish to brownish-green, mid-ribs mostly depressed, under surfaces yellowish- or greenish-brown and slightly pubescent on the prominent midvein; peculiarly aromatic when crushed; taste bitterish, becoming somewhat pungent and having a sialagogue effect. Maranhão Jaborandi: Leaflets rhomboidally oval to obovate or elliptical, 1.5 to 5 cm. in length and 1 to 3 cm. in breadth, the lateral ones nearly sessile, the terminal ones on margined petiolules, 0.5 to 1.5 cm. in length; of a nearly uniform grayish or yellowish-green color, rather thin but otherwise resembling Pernambuco Jaborandi. Microscopical characteristics are given. Ash not exceeding 7 per cent.

**Piper**—It may include not more than 2 per cent. of stems and foreign matter. Nery globose, 3.5 to 6 mm. in diameter, epicarp very thin, easily separable from the sarcocarp; externally blackish-brown or grayish-black, coarsely reticulate; 1-locular, 1-seeded, seed whitish, hollow, adhering to the pericarp, odor aromatic, slightly empyreumatic; taste aromatic and very pungent. Powder microscopically described. Non-volatile ether extract, not less than 6 per cent.; starch, not less than 25 per cent. Ash not exceeding 7 per cent. Ash insoluble in diluted hydrochloric acid, not exceeding 2 per cent.

**Podophyllum**—Defined as the "dried rhizome and roots." Podophyllum should yield, by the method given under Resina Podophylli, not less than 3 per cent. of resin which should conform to the requirements and tests for Resin of podophyllum. Horizontal, nearly cylindrical, jointed, compressed on the upper and lower surfaces, sometimes branched; in pieces from 3 to 20 cm. in length, the internodes 2 to 9 mm. in diameter; externally dark brown, longitudinally wrinkled or nearly smooth with irregular, somewhat V-shaped scars of scale leaves, nodes annulate, upper portion marked with large, circular, depressed stem-scars and sometimes with buds or stem-bases; at or near the nodes on the lower portion, occur numerous root-scars or roots from 2 to 7 cm. in length and about 2 mm. in thickness; fracture short; internally, bark light brown, wood with small, yellowish, vascular bundles, pith large and white; odor slight; taste sweetish, disagreeably bitter and acid. Microscopical characteristics of whole drug and in powder are given.

**Prunus Virginiana**—To consist of the "stem-bark." Usually in transversely curved pieces from 2.5 to 8 cm. in length and 0.5 to 4 mm. in thickness; outer surfaces light brown or greenish-brown, smooth, except for numerous lenticels from 3 to 4 mm. in length; inner surfaces light brown, longitudinally striate and occasionally fissured; fracture short, granular; odor distinct, bitter-almond-like, when macerated in water; taste astringent, aromatic, and agreeably bitter. Microscopical characteristics of both whole and powdered bark are given.

**Pyrethrum**—Defined as the "dried" root. Nearly cylindrical, slightly tapering, usually in pieces, 2.5 to 10 cm. in length, 5 to 20 mm. in diameter; externally dark brown, deeply longitudinally furrowed and somewhat wrinkled, occasionally bearing short, tough, hair-like rootlets, crown more or less annulate and occasionally tufted with coarse fibres or with long, soft-woolly nearly straight, 1-celled hairs; fracture short; bark dark brown with 1 or 2 circular rows of resin ducts, closely adhering to the light yellow, radiate, porous wood, in the medullary rays of which occur 1 to 3 rows of resin ducts; odor distinct; taste sweetish, pungent, very acrid, tingling and producing a strong sialagogue effect. Microscopical characteristics of the powder are given. Ash not exceeding 5 per cent.

**Quassia**—Jamaica Quassia: Usually in chips, raspings or shavings, occasionally in billets; yellowish-white or bright yellow, with a few light gray pieces somewhat coarsely grained; fracture tough, fibrous; odor slight; taste bitter. Surinam Quassia: The crude drug and microscopic sections closely resemble the Jamaica variety; tracheæ usually single or in pairs, sometimes in groups of 3 or 4; medullary rays in narrower and larger groups than in the Jamaica variety, from 1 to 4 cells wide and from 10 to 30 rows deep; calcium oxalate crystals few or entirely wanting and distinguishing this variety from Jamaica quassia.

**Rhamnus Purshiana**—The dried bark of the trunk and branches of *Rhamnus Purshiana* De Candolle (Fam. Rhamnaceæ). Usually in flattened or transversely curved pieces, occasionally in quills, bark 1 to 5 mm. in thickness; outer

\*Permission to use granted by the Chairman of the Board of Trustees, United States Pharmacopoeial Convention.

surface dark brown or brownish-red, longitudinally ridged, often nearly covered with grayish or whitish lichens, bearing small blackish apothecia, sometimes with numerous lenticels; and occasionally with mosses; inner surface light yellow, light brown, or reddish-brown, longitudinally striate, turning red when moistened with solutions of the alkalis; fracture short, with projections of bast-fibres in the inner bark; in cross section inner bark shows diagonal or curved medullary rays, forming converging groups, the outer bark showing yellowish groups of stone cells which are especially apparent on moistening the freshly cut surface with phloroglucinol T.S. and hydrochloric acid; odor distinct; taste disagreeable, bitter, slightly acid. Microscopical characteristics are given. Powder microscopically described. Ash not exceeding 8 per cent.

*Rheum*—In subcylindrical, barrel-shaped, conical pieces known in commerce as "rounds," or in plano-convex pieces known in commerce as "flats" or irregular pieces, frequently with a perforation; hard and moderately heavy; attaining a length of 17 cm. and a diameter of 10 cm., or cut in pieces of variable form and size; outer surface yellowish-brown, mottled, with alternating, longitudinal striae of grayish-white parenchyma and reddish or brownish medullary rays, small stellate groups of fibro-vascular tissue and occasionally reddish-brown cork patches, smooth and sometimes covered with a bright, brownish-yellow powder; fracture uneven and granular, presenting a characteristic, mottled appearance; odor aromatic, characteristic; taste slightly bitter, astringent; gritty when chewed, tingeing the saliva yellow. Microscopical characteristics are given. Diluted alcohol extractive, not less than 30 per cent. Ash not exceeding 13 per cent.

*Saba*—The partially dried, ripe fruits of *Serenia serrulata* (Roemer and Shultes) *Hooker filius* (Fam. Palmæ). Ellipsoid or ovoid, occasionally compressed, 1.5 to 3 cm. in length, 1 to 1.5 cm. in diameter; externally brownish-black to bluish-black, smooth and somewhat oily, with a few large, somewhat angular depressions due to the contraction of the inner layer on drying, summit marked by scar of style, and base either with a short stalk or stem-scar; epicarp and sarcocarp together forming a thin coriaceous shell enclosing a hard but thin endocarp which is externally reddish-brown and somewhat fibrous as is also the inner layer of the sarcocarp; inner layer of endocarp smooth, enclosing a hard ellipsoidal or ovoid, somewhat flattened, reddish-brown seed; odor pronounced, aromatic; taste sweetish, aromatic, slightly acid.

*Sanguinaria*—The dried rhizome "and roots" of *Sanguinaria canadensis* "collected after the death of the foliage" is omitted. Of horizontal growth, occasionally branching, more or less cylindrical, somewhat flattened, from 2 to 7 cm. in length, and from 5 to 15 mm. in diameter; externally dark brown, slightly annulate, with a few stem scars on the upper surface and numerous more or less broken filiform roots and root-scars on the lower surface; fracture short and somewhat waxy, brownish-red, occasionally yellowish-white, with numerous, small, circular, yellowish fibro-vascular bundles within about 1 mm. of the epidermis, pith very large; odor slight; taste persistently acrid and bitter. Microscopical characteristics are given.

*Santalum Rubrum*—Usually in the form of a coarse powder, of a brownish-red or dark saffron color and nearly inodorous and tasteless. Add 0.500 gm. of red saunders to 10 cc. of alcohol; the solution should become distinctly red. Add 0.500 gm. of red saunders to 10 cc. of ether; the solution should assume an orange-yellow color and when held in a bright light should show a distinct, greenish fluorescence. Add 0.005 gm. of red saunders to 10 cc. of water; the solution should remain clear and colorless. Ash not exceeding 3 per cent.

*Sarsaparilla*—The dried root of *Smilax medica* Chamisso and Schlechtendal, known in commerce as Mexican sarsaparilla; or *Smilax officinalis* Kunth, or an undetermined species of *Smilax*, known in commerce as Honduras sarsaparilla; or *Smilax papyracea* DuRoi, known in commerce as para sarsaparilla; or *Smilax ornata* Hooker filius known in commerce as Jamaica sarsaparilla (Fam. Liliaceæ). Mexican sarsaparilla: In loose bundles, or pressed into bales, single bundles attaining a length of 60 cm. and composed of 20 to 35 folded roots attached to a crown with one or more stout stems; roots 3.5 to 6 mm. in diameter; externally grayish-brown to dark brown, minutely hairy, longitudinally furrowed, the furrows containing more or less of a blackish earth; fracture tough, fibrous; internally light brown with a more or less shrunken, mealy or sometimes horny cortex surrounding the porous cen-

tral cylinder, pith distinct; nearly inodorous; taste mucilaginous, somewhat sweetish and acid. The woody, knotty crown with portions of the overground stems should be removed. Honduras sarsaparilla: In more or less compact, cylindrical bundles, attaining a length of 55 cm. and a diameter from 8 to 15 cm., consisting of the long, folded roots bound together by roots of the same plant; roots 2 to 6 mm. in diameter; externally dark or reddish-brown, longitudinally furrowed, the furrows usually free from soil; fracture fibrous; internally consisting of a grayish-white or dark brown cortex, a light yellow and porous central cylinder and a whitish pith; taste mucilaginous and slightly acid. Para sarsaparilla: In very compact, cylindrical bundles, attaining a length of 1 m. and a diameter of 20 cm., closely bound with the stem of a vine and with the ends evenly trimmed; the roots otherwise resembling those of Honduras sarsaparilla. Jamaica sarsaparilla: In more or less compact and somewhat flattened bundles, 30 to 45 cm. in length, 10 to 15 cm. in width, consisting of the folded roots loosely bound with roots of the same plant; roots 2 to 5 mm. in diameter; externally grayish-brown to reddish-brown, longitudinally wrinkled, more or less furrowed and bearing numerous coarse fibrous rootlets, taste slightly sweetish and bitterish.

*Sassafras*—The drug may include not more than 2 per cent. of adhering wood. In irregularly transversely curved or quilled pieces, 1 to 15 cm. in length, 1 to 4 mm. in thickness; outer surface orange-brown, nearly smooth and marked with more or less irregular ridges; inner surface light to dark, reddish-brown, obscurely short-striate; fracture short with a thin, reddish-brown, corky layer and a yellowish-white inner bark; odor aromatic; taste slightly mucilaginous, astringent, aromatic and somewhat pungent. Microscopical characteristics are given. Ash not exceeding 30 per cent.

*Scammony Radix*—The dried root of *Convolvulus Scammonia*, Linné (Fam. Convolvulaceæ), yielding when assayed by the official process, not less than 8 per cent. of total resins of scammony root. Cylindrical or somewhat tapering, from 10 to 25 cm. in length, 1 to 4.5 cm. in thickness; externally grayish to reddish-brown; usually distinctly twisted, deeply longitudinally furrowed, marked by distinct root scars, otherwise nearly smooth except for the lenticels and abraded cork, the upper portion terminated usually by a number of short stem branches; hard and heavy; fracture tough, irregular with projecting wood-fibres; internally somewhat mottled showing yellowish, porous wood-wedges separated by whitish parenchyma containing starch and resin; bark thin; odor slight, resembling that of ja'ap; taste very slightly sweet becoming slightly acid.

*Scilla*—The fleshy, inner scales of the bulb of the white variety of *Urginea maritima* Linné Baker (Fam. Liliaceæ) cut into pieces and carefully dried. In irregular, more or less curved, somewhat flattened and translucent pieces, 0.5 to 5 cm. in length, yellowish-white, nearly smooth and shiny with slight projections of fibro-vascular bundles, brittle when dry and somewhat flexible when damp; odor slight; taste bitter and acid. Ash not exceeding 8 per cent.

*Senna*—The roots may include not more than 5 per cent. of stems and other foreign matter. Usually in broken pieces, when entire, slenderly conical, more or less tortuous, somewhat branched, 3 to 15 cm. in length and 2 to 10 mm. in thickness and bearing a few rootlets; crown knotty with numerous buds and short stem-bases; externally brownish-yellow, the crown rose-tinted, longitudinally wrinkled, frequently marked by a keel; fracture short, wood pale yellow, usually eccentrically developed, odor peculiar, penetrating, taste sweetish, afterwards acid. Ash not exceeding 5 per cent.

*Senna*—The drug may include not more than 10 per cent. of stem tissues, pods, seeds, and other impurities. Alexandria Senna: Usually entire, sometimes more or less broken, leaflets inequilaterally lanceolate or lance-ovate, from 2 to 3.5 cm. in length, from 6 to 10 mm. in breadth, having extremely short, stout petiolules; acutely cuspidate, entire, subcoriaceous brittle, pale green or grayish-green, sparsely and obscurely hairy, especially beneath, the hairs appressed; odor characteristic; taste somewhat mucilaginous and bitterish. Pods few, broadly elliptical, somewhat reniform, dark green, thin and membranous. India senna: Leaflets usually entire, from 2 to 5 cm. in length, and from 6 to 14 mm. in breadth, usually more abruptly pointed than those of Alexandria senna, yellowish-green and smooth above, paler beneath; in odor and taste closely resembling Alexandria senna. Pods few, elliptical, more or less reniform and from 4 to 5 cm. in length. Mix

0.5 gm. of pow.—18 gm. with 10 cc. of a solution of potassium hydroxide in alcohol (1 in 10), boil the mixture for about 2 minutes, dilute it with 10 cc. of water and filter. Then acidify the filtrate with hydrochloric acid, shake it with ether, remove the ethereal layer and shake it with 5 cc. of ammonia water. The latter should be colored yellowish-red. Ash not exceeding 12 per cent. Ash insoluble in hydrochloric acid not exceeding 3 per cent.

*Sinapis Alba*.—The drug may include not more than 10 per cent. of stems. Rhizome oblique, subcylindrical, more or less curved, from 10 to 30 mm. in length and from 1 to 2 mm. in diameter, externally dark brown, upper portion with short hairs, internally yellowish-white, wood with broad, eccentric

stem-bases, from lower and lateral portions, and numerous, long, thin, nearly straight, yellowish-brown roots; fracture wedges; odor terebinthinate; taste bitter, aromatic.

*Sinapis Alba*.—The drug may include not more than 5 per cent. of other harmless seeds and other foreign matter. Subglobose, from 1.5 to 2.5 mm. in diameter; testa yellowish, nearly smooth; embryo yellowish, oily, with 2 large cotyledons; inodorous, taste mildly pungent, acrid. Powder microscopically described. White mustard does not yield allyl isothiocyanate upon distillation with steam (distinction from black mustard). Starch not exceeding 2.5 per cent. Starch test of U.S.P. VIII omitted. Ash not exceeding 9 per cent.

(Concluded in August ERA.)

## “Preparation and Analysis of Vlemineckx's Solution”, (\*) by DR. JOSEPH L. MAYER.

“A SHORT time ago two samples of Vlemineckx's solution were submitted to me with a request that in view of the fact that the color of one sample was markedly different from the other, analyses be made to ascertain if they were properly prepared.

“Since the National Formulary only contains a formula for the preparation, and various pharmaceutical authorities consulted made no reference to a standard, it was necessary to make samples in an effort to determine how the solution should be prepared and what should be the strength of the finished product. The following work was therefore undertaken.

“Referring to page 81, 3d edition of the National Formulary, we found that ‘Liquor Calcis Sulphurate’—‘Vlemineckx's Solution’ was directed to be prepared as follows:

“Lime, freshly slaked.....165 grammes  
 “Sublimed sulphur .....250 grammes  
 “Water, a sufficient quantity to make..1000 grammes

“Mix the slaked lime with the sulphur, and add the mixture gradually to 1750 c.c. of boiling water. Then boil the whole, under constant stirring, until it is reduced to 1000 grammes, strain, and having allowed the solution to become clear by standing in a well-stoppered bottle, decant the clear brown liquid, and keep it in completely filled and well-stoppered bottles.

“We accordingly made up one-tenth of this formula by taring a 600 cc. porcelain evaporating dish, adding 175 cc. of water, heating to boiling and then slowly adding the mixture of freshly slaked lime and sulphur, constantly stirring while heating until the weight was reduced to 100 grammes. The material was then decanted into a 4-oz. cork-stoppered bottle, allowed to stand until the next day, filtered and assayed for total sulphur by the following method:

“Measure 10 c.c. of the clear sample in a 100-c.c. measuring flask and fill to the mark. Analyze 10 c.c. aliquots of this solution. Treat with 3 c.c. of saturated solution potassium hydroxide or sodium hydroxide solution, following by 50 c.c. hydrogen peroxide free from sulphates. Heat on the steam bath for one-half hour exactly and then acidify with hydrochloric acid, precipitate with barium chloride in the usual way in boiling solution, and finally weigh as barium sulphate.

“Of course, multiplying the weight of barium sulphate by the proper factor gives the quantity of sulphur and this multiplied by 100 gives the percentage.

“We ran blanks on the reagents and determined the quantity of sulphate present which was then deducted from the sulphate found in the actual analysis.

“This is Avery's method, which is recommended by the Association of Official Agricultural Chemists for the analysis of lime-sulphur dips and lime-sulphur-salt mixture (U.S. Dept. Agr. Bureau of Chemistry, Bul. 107 rev. page 34). It is an extremely accurate and simple method and one which in our hands yielded remarkably close duplicates.

“We also analyzed the sample for total sulphur in solution, monosulphur equivalent, thiosulphate sulphur, sulphate and sulphite sulphur, total sulphite sulphur and total lime (CaO) in solution, following the method in U.S. Dept. Agr. Bureau of Chemistry, Bul. 162, page 29, but seeing no advantage in its use over the Avery method, we employed the latter

in all our analyses and simply determined the total sulphur of which the above sample showed the presence of 10.838 grammes in 100 c.c. of solution.

“Another 100-gramme lot made up in the same manner contained 14.581 grammes of total sulphur in 100 c.c. of solution.

“This great variation in results indicated difficulty in properly preparing the solution. We therefore referred to the directions in the N.F. and found that it was there directed to add the lime and sulphur mixture gradually to 1750 c.c. of boiling water. Then boil the whole under constant stirring until it is reduced to 1000 grammes; this procedure differs from mine in that it directs the water to be heated to boiling, the mixture of lime and sulphur added and the whole boiled under constant stirring until the weight is reduced to 1000 grammes.

“Another 100-gramme lot was then made by strictly adhering to these directions and when assayed showed the presence of 4.448 grammes of total sulphur in 100 c.c. solution.

“My original reading of the process was as above noted, to heat the water to boiling and then while the water was still on the fire to gradually add the lime and sulphur under constant stirring and boiling until the proper weight was produced, whereas the last product was made by strictly following the N.F. by heating the water to boiling, taking it off the fire, stirring all the lime and sulphur in, putting the mixture back on the fire, stirring and heating until the proper weight was attained.

“The above figures clearly indicated that the wording of the directions for manipulation employed by the N.F. was faulty, therefore another batch of 100 grammes, employing the official quantities, was made by taring a 250 c.c. Erlenmeyer flask, adding 175 c.c. of water, heating on the hot plate until boiling, and then adding the lime and sulphur previously mixed and boiling on the hot plate without stirring or further attention until the weight was reduced to 100 grammes; this mixture was then transferred to a 4-oz. cork-stoppered bottle, allowed to stand until the next day, when it was filtered and assayed. The solution contained 29.162 grammes of total sulphur in 100 c.c.

“Another lot made by the same method contained 29.593 grammes of total sulphur in 100 c.c. solution. These figures indicate that if the solution is prepared in a flask the product will practically be of uniform strength.

“It is true the N.F. does not state whether a flask or evaporating dish should be employed. The failure to specifically state that a flask or similar vessel be used is shown by the analyses to result in preparations of indefinite strength. If a large enough flask is not at hand, vessels which are deep should be employed, the object being to avoid too rapid evaporation of water as the proper preparation of the product requires several hours.

“In view of the above results, and to insure a uniform product, the Committee on National Formulary should revise the wording of the directions for the preparation of Vlemineckx's solution. Of course, if thought necessary, a standard could be fixed for the solution and a method of assay appended.

“I would take this opportunity to acknowledge my indebtedness to my assistant, J. H. Wiener, Ph.C., for assistance rendered in the preparation and analyses of some of the samples.”

## Pure Drugs and the Public Health—What Government Investigation Has Shown.

*Abstracted from a Report by Martin I. Wilbert, Assistant in Pharmacology, Hygienic Laboratory, U.S. Public Health Service, in Public Health Reports, Vol. 29, No. 19, May 8, 1914.*

A COMPILATION of analytical reports shows that out of a total of more than 9000 samples of six pharmacopoeial preparations reported upon from 1907 to 1911 more than 4000, or approximately 45 per cent., were found not to be in compliance with the requirements of the U.S. Pharmacopoeia. Later reports show this ratio to hold good. For instance, the chemist of the Indiana State Board of Health for 1912 shows that of 365 samples of drugs analyzed 156, or 42.7 per cent., did not comply with requirements. The food and drug commissioner of South Dakota reports that of 326 samples examined 36.3 per cent. were not passed; in New Hampshire, of 421 samples examined by the chemist of the board of health 42.8 per cent. were not conformable.

The limitations imposed by the present method of enforcing the drug feature of food and drugs laws is illustrated by a table prepared by L. P. Brown, food and drug commissioner of Tennessee, which shows that no less than 44 political divisions of the United States make some attempt to enforce laws of this type. The total number of employees recorded is 465, an average of 10 to each State. The total number of samples examined in one year is given as 83,498, and not more than from 20 to 25 per cent. of these samples represent drug products or products used as drugs.

When one remembers that in the United States alone there are no less than 40,000 retail drug stores and that each one of these stores has in stock from 1000 to 20,000 separate articles used or offered for use as medicine *the futility of endeavoring to control or even to seriously influence the nature and purity of products sold as medicines by an occasional examination of one or more preparations is at once apparent.*

An article that has been materially improved through systematic examination and accompanying publicity is "solution of hydrogen peroxide." This preparation is also used quite extensively in the arts as a bleaching material, and formerly it was quite common to find the comparatively impure and usually weak technical product on sale in drug stores for medicinal purposes. Improved methods of manufacture, the use of preservatives, and the exercise of a little additional care in keeping the preparation have evidently combined to change this preparation from one that was considered to be uniformly impure to one that complies fairly well with the spirit, though not the exact letter, of the present pharmacopoeial requirements. Disregarding the frequent presence of a preservative only 8.7 per cent. of the preparations examined during 1912 were found to be deficient in strength or contaminated.

The opposite of these rather promising conditions is found in connection with asafetida, a drug product of somewhat uncertain value that is, nevertheless, used quite extensively, largely perhaps because of its penetrating odor and disagreeable taste. The pharmacopoeial requirements for this drug are unnecessarily high, and the chemical tests for identity and purity quite inadequate. It is, therefore, not at all surprising to learn that more than 78 per cent. of the samples of asafetida examined did not comply with the requirements of the Pharmacopoeia. This drug, however, is but one of a number of articles that are of uncertain medicinal value, are difficult to control from a chemical point of view, and are more frequently found to be below standard than above. This one fact, that there are hundreds of more or less widely-used drugs for which we have little or no data on which to base a chemical control of the finished preparation, serves to further illustrate the difficulty of exercising any adequate control of medicinal preparations through a city, State or Federal laboratory.

The reports of the several officials entrusted with the enforcement of laws relating to the production and sale of drugs have emphasized time and again that much of the material that is now being sold as medicine in this country is either directly harmful or absolutely useless, and that from a public-health point of view considerable progress is necessary before the consumer is as adequately safeguarded as he should be.

It is generally recognized that once a seal is broken, a package opened or a cork drawn the manufacturer can no longer be held responsible for the content of the package, and, quite

irrespective of the nature of the medicine, the pharmacist in dispensing a portion of an original package assumes all responsibility for the nature and the purity of the article.

That this responsibility of the druggist is as yet not appreciated and that much progress must be made in the enforcement of existing laws before the public is as adequately protected as it should be or has a right to expect is evidenced by the shortcomings of pharmaceutical preparations as shown by tests, particularly those preparations made on a small scale in the retail drug store. From the point of view of State or National officials these preparations offer the most serious difficulties in the way of control through the intervention of Federal or State laboratories, and yet they are of considerable importance from a medical point of view in that they include some of the most widely-used medicines we have. It has been well said that medicine, particularly the use of medicines, as a science, can make little or no progress until physicians know more of the nature and the composition of the articles they use as medicines and of the action or influence of these articles on the healthy as well as on the diseased organisms.

How little actual reliance can be put in the average drug preparation at the present time will be appreciated when we learn that fully 50 per cent. of such widely-used articles as aromatic spirit of ammonia, spirit of camphor, tincture of iodine, tincture of opium, spirit of peppermint and spirit of nitrous ether have been found to be adulterated or below standard.

The general subject of changes produced in a drug because of deterioration due to improper keeping has received altogether too little attention, and it is not generally recognized that many of the formerly well-known drugs have probably been discredited because of their failure to accomplish the object for which they were administered, a failure perhaps largely due to some form of contamination or to decomposition not recognized by the dispenser.

In addition to this possible deterioration of medicaments which can be averted, to a considerable degree at least, by constant care and watchfulness, there are a number of other factors that should be taken into consideration in connection with the dispensing of medicines to the consumer. Not the least important of these several factors is the accuracy and also the sensitiveness of scales, weights and measures. One observer found that not one of 36 graduates examined was correct. Some were better than others but all were bad. In the State of Kansas nearly one-half of the prescription weights examined were condemned, and of the 718 prescription scales examined 195 were found unfit for use.

The inability or unwillingness of retail druggists to assume proper responsibility is further evidenced by the recommendation of one man to use ready-made tablets in place of weighing out small quantities of potent drugs. The fallacy of this advice has more latterly been emphasized by the fact that compressed as well as other tablets, even under the most favorable conditions, may vary from 10 to 30 per cent. from the quantities claimed. Under conditions not so favorable even greater variations have been observed, and in cases where tablets have been made to sell at inordinately low prices it has been found that expensive chemicals were present only in traces sufficient to give qualitative tests.

In conclusion, it may be reiterated that the more evident shortcoming in the present-day enforcement of pure drugs laws is the general failure to properly place the responsibility for the nature, kind and purity of the medicines supplied to the consumer where it belongs. This shortcoming is being corrected by recently-enacted laws to regulate the practice of pharmacy by placing the responsibility squarely on the person dispensing the drug.

The proper enforcement of laws designed to regulate the practice of pharmacy in conjunction with pure drugs laws should relieve physicians and the public of any doubt as to the composition, purity, quality and strength of all drugs and medicinal preparations used in the treatment of disease. As these laws are enforced at the present time it is plainly evident that the methods of control are inadequate and do not serve to safeguard public health as well as they could or should.

Boards of health and other Federal and State officials entrusted with the enforcement of these laws should endeavor

to call attention to the desirability of having druggists exercise a close scrutiny of the drugs and preparations included in their stock, to keep drugs and chemicals and preparations in suitable containers, to throw away old and useless material, and to see that scales, weights and measures are reliable and accurate under the conditions imposed upon them.

Some effort should also be made to see that drug stores are equipped with the necessary analytical apparatus with which to analyze or examine all supplies and thus assist in maintaining a more efficient control of the articles sold as medicine.

Consistent and efficient control of the identity, purity and strength of all drugs and preparations as furnished the consumer would make for progress in the science of medicine and should prove to be an important factor in promoting public health.

## Liquid Petrolatum: Russian Mineral Oil.\*

PETROLEUM has been in use as a medicine from time immemorial. It was known to Herodotus 400 years before Christ and is mentioned by Plutarch, Dioscorides, Pliny and other early writers. It was extensively used by the Arabians and evidently played an important part in the practice of medicine in India, being known to the Bengalese as Muthe Katel. The raw product was the substance used in earlier times and differed much in character and composition, as obtained from different sources.

As an internal remedy it was early employed in chronic pulmonary affections, in obstinate skin diseases, in rheumatism, and for the expelling of tapeworms. It was extensively used for these several purposes in France under the name "Oleum Gabianum" and in North America as "Seneka oil." The internal use of the refined product may be traced to a patent granted to Robert A. Chesebrough, of New York, in June, 1872, for the manufacture of a "new and useful product from petroleum, named vaseline." This name was originally applied only to a semisolid preparation, but later a liquid product known as liquid vaseline was marketed and for a time exploited as a cure for coughs, colds, consumption and a number of other diseases and conditions.

The liquid petrolatum has since become known under a variety of names, proprietary and otherwise, in addition to being used as a substitute or an adulterant for other, more costly, fats and oils. Some of the names applied to the product are:

Adepsine Oil	Neutralol
Amilee	Olo
Atoleine	Paraffin Oil
Atolin	Paroline
Blandine	Petalol
Crysmalin	Petro
Deeline	Petrolax
Glyco	Petrolia
Glycoline	Petronol
Glymol	Petrosio
Heavy Petroleum Oil	Rock Oil
Liquid Albolene	Russian Liquid Petrolatum
Liquid Cosmoline	Russian Mineral Oil
Liquid Fossiline	Russian Paraffin Oil
Liquid Geoline	Russol
Liquid Paraffin	Saxol
Liquid Petrolatum	Terraline
Liquid Saxoline	Terralbolia
Liquid Vaseline	Ussoline
Mineral Glycerin	Water-white Mineral Oil
Mineral Oil	White Paraffin Oil.

A preparation similar to that official in the Pharmacopoeia of the United States as liquid petrolatum has been included in many, if not all, of the foreign pharmacopoeias, the official title under which this preparation is recognized being as follows:

Petrolatum liquidum, U.S. Pharmacopoeia; Paraffinum liquidum, pharmacopoeias of Great Britain, Germany, the Netherlands, Japan, Belgium, Austria, Denmark, Switzerland, Sweden, Servia, Italy, Hungary and Russia; Oleum Paraffinae, Spanish Pharmacopoeia; Vaselinum liquidum, French Pharmacopoeia, and Oleum vaselini (as a synonym) pharmacopoeias of Denmark and Russia.

The requirements of the several pharmacopoeias differ somewhat and the specific gravity as given is as follows:

U. S. P. VIII, 1905.....	0.870 to 0.940 at 25°
Ph. Brit. IV, 1895.....	0.885 to 0.890 at 15.5°

R. P. C. II, 1911, usually.....	0.875 or lower at 15°
Ph. Germ. V, 1910, at least.....	0.885 at 15°
Ph. Ross. VI, 1910.....	0.880 to 0.885 at 15°
Ph. Hung. III, 1909.....	0.888 to 0.89 at 15°
Ph. Ital. III, 1909.....	0.875 to 0.890 at 15°
Ph. Fr. V, 1908, about.....	0.875 at 15°
Ph. Serb. II, 1908, about.....	0.880 at 15°
Ph. Svec. IX, 1908.....	0.88 to 0.90 at 15°
Ph. Helv. IV, 1907.....	0.880 to 0.885 at 15°
Ph. Dan. VII, 1907, at least.....	0.880 at 15°
Ph. Austr. VIII, 1906, at least.....	0.880 at 15°
Ph. Belg. III, 1906, not below.....	0.880 at 15°
Ph. Japon. III, 1906.....	0.875 to 0.945 at 15°
Ph. Ndl. IV, 1905, not below.....	0.860 at 15°
Ph. Hisp. VII, 1905.....	0.840 at 15°

For pharmaceutical purposes, liquid petrolatum may be divided into two grades, the lighter or more limpid oil, used extensively as a vehicle for oil sprays, and the heavier, more viscid oil generally recognized in European pharmacopoeias and used as an ingredient of ointments and more recently as a remedy in the treatment of intestinal stasis.

Under petrolatum liquidum the U. S. P. recognizes a mixture of hydrocarbons, chiefly of the methane series, which occurs as a colorless or very slightly yellowish, oily, transparent liquid without odor or taste and having a specific gravity of about 0.870 to 0.940 at 25 C. For the U. S. P. IX, it is proposed to change this requirement somewhat so as to have it apply to a transparent liquid free from fluorescence, without odor or taste and having a specific gravity of from 0.845 to 0.940 at 25 C.

Such a requirement would include all of the available paraffin oils irrespective of origin. The now commonly available commercial liquid petrolatum, used for pharmaceutical purposes, is practically colorless and all of the better grades are free from odor or taste. The specific gravity varies from 0.855 to 0.895. The lighter oils, having a specific gravity of from 0.860 to 0.870, are usually preferred in the making of oil sprays or solutions of substances to be used as local applications. The product having a specific gravity above 0.875 evidently contains a considerable amount of dissolved solid paraffin which separates out at temperatures at or below 0 C., but readily dissolves again at temperatures above 10 C.

There is considerable difference in the chemical composition of the paraffin oils obtained from various sources. The American oil consists largely of hydrocarbons of the methane series, while the Russian oil contains naphthenes or hydrocarbons of the benzene series, having the empirical composition of ethylene (C<sub>n</sub>H<sub>2n</sub>) which may be considered as hydrogenated aromatic hydrocarbons, though they behave with reagents very much in the same way as do the hydrocarbons of the methane series.

Mineral oils with a naphthene base are best suited for making white petrolatum, and at the present time the production of the colorless water-white liquid petrolatum appears to be confined largely or almost exclusively to the crude product of the Baku district of Russia, though it is asserted that it is now also made from the Hanover (Germany) crude oil and that some is being produced by "cracking" the white solid paraffin.

It is also said that the American oil can be made water white but that it is not being so produced at present for economic reasons; the yellowish oil, free from fluorescence, having a very wide sale, both as a lubricant and as a substitute for lard oil and other of the more costly lubricating oils.

From a pharmaceutical point of view, it would appear important to note the physical characteristics of the oil and to insist on absence of color, absence of odor and taste, absence of acid and of alkali and a specific gravity in harmony with the purposes for which the oil is to be used.

During the past year or two liquid petrolatum has attracted considerable attention as a remedy in the treatment of intestinal stasis or chronic constipation, the practice of using it having been developed largely through its recommendation by Sir W. Arbuthnot Lane and his associates. This use of liquid petrolatum and of petrolatum products generally is by no means novel. N. A. Randolph,<sup>1</sup> of Philadelphia, was among the first to suggest its use for this purpose in an article published in 1885. Randolph also appears to have been the first to experiment with petrolatum and to determine its non-absorbability from the intestinal tract. In an article<sup>2</sup> in 1884 he concludes that "pure petrolatum while entirely unirritating to the digestive tract is valueless as a foodstuff."

The experiments recorded by Randolph were evidently prompted by the fact that vaseline and a number of imitation products then on the market were being sold as substitutes for lard and butter, and opinions regarding the food value of

\*Advance proof of Report of the Council of Pharmacy and Chemistry for publication in the "Journal" of the A.M.A.

petroleum products appear to have differed very materially. Following the experiments of Randolph, Robert Hutchison in 1899 made a series of experiments to demonstrate that petroleum, petrolatum, paraffin and related products were absolutely unassailable by any of the digestive fluids, despite the "large vogue that had of late years been given to various petroleum emulsions, chiefly by ingenious and unterrified advertising." He came to practically the same conclusions arrived at by Randolph 15 years earlier and pointed out that "liquid paraffin in one sense may be regarded as an artificial intestinal mucus and might in that way have some value on certain forms of constipation."

William Duffield Robinson<sup>3</sup> reports on the use of a perfectly refined colorless and odorless petrolatum, supposedly of American origin. He was able to show that all of the product passed unchanged through the intestinal tract and could be regained from the feces. In his conclusions he expressed the belief that the effect of the administration of these petroleum products is far more than as a simple intestinal lubricant. In over 50 selected cases in which nutrition, digestion and body-weight were impaired, and the purest oil administered in 1- or 2-dram doses each day for a period of from four to six months, there was in every instance an improvement of weight, health and feeling of well-being. The administration of refined paraffin oil gave no discomfort in any instance, even in cases in which nearly a pint was given in a few hours.

William Ewart<sup>4</sup> suggests liquid paraffin as a safe agent for the local treatment of the lesions in typhoid fever. He says in part: "Mineral oil, such as petrolatum or paraffin, is neither absorbed nor dissolved; therefore, after all absorbable ingestions are taken up by the lacteals, it will remain in the bowel. In this way pure liquid paraffin is valuable, precisely because it is inert; moreover, it might some day, perhaps, be made the vehicle for effective topical remedies."

A. D. Schmidt<sup>5</sup> quotes Stubenrath as having given liquid paraffin in the treatment of chronic constipation, and he himself gave as much as 20 gm. of liquid paraffin to adults without observing any injurious effect whatever. He says, "As a result of the administration of liquid paraffin, the feces are softened considerably and are found under the microscope to contain numerous minute globules of paraffin." He was, however, unable to recover from the feces the entire quantity of paraffin administered and believes that a certain portion of it, probably the fractions with a low boiling-point, are absorbed or possibly oxidized in the organism.

Maurice Vejux Tyrode<sup>6</sup> also refers to the use of liquid petrolatum in the treatment of constipation.

Sir W. Arbuthnot Lane in his recommendations of liquid petrolatum calls it an ideal remedy for stasis, but cautions against the use of the lighter oil as extensively prescribed in this country as a vehicle for sprays in nose and throat work.

Paraffin oil is not absorbed from the alimentary tract and so far as known exerts no deleterious influence. It is usually given in quantities of from 10 to 20 cc. half an hour or an hour before meals or in larger doses, from 30 to 50 cc., at one time on retiring. From available evidence it appears that comparatively huge doses may be administered without the production of any untoward results. According to many observers, liquid paraffin should not be given with or after meals because of the inhibiting influence that it may have on the digestion of food. It is not soluble in water or the ordinary solvents and therefore cannot be diluted. The denser oils are preferably slightly warmed or drunk with warm water so as to obviate the disagreeable slimy sensation that persists when taken cold.

Volatile oils may be used in moderate amounts to give a distinctive taste to the otherwise rather insipidly tasteless paraffin oil. Among the more desirable oils to be used for this purpose would be oil of peppermint, oil of cinnamon, oil of betula or methyl salicylate and oil of cloves. From 2 to 10 drops of any of these oils can be added to a pint of the oil. When larger doses of the oil are to be given at one time, it would, of course, be advisable to use a comparatively smaller quantity of the volatile oil as a flavor.<sup>7</sup>

From the foregoing it would appear that apart from the Pharmacopœia of the United States, practically all other known pharmacopœias describe a water-white mineral oil under the title "Paraffinum Liquidum" or "Liquid Paraffin" as a colorless, odorless, tasteless, non-fluorescent, oily liquid, free from acids, alkalies and organic impurities. As explained before, the specific gravity of the preparation as recognized

in other countries and as offered on the American market at the present time varies considerably, and there appears to be some difference of opinion as to the exact nature of the product that is preferable for use for different purposes. This matter requires further investigation.

Since the definition of liquid petrolatum in the U.S. Pharmacopœia permits the use of fluorescent products of widely varying specific gravities, it is recommended that physicians who desire the water-white non-fluorescent (Russian) mineral oil should use the term "Petrolatum Liquidum, Grave," or "Paraffinum Liquidum, B.P.," if the heavy product recommended by Lane is desired, and "Petrolatum Liquidum, Leve," if the light varieties are required. It is further recommended that under the foregoing names, manufacturers and pharmacists be requested to dispense the products, in accordance with the following descriptions:

**Petrolatum Liquidum, Grave.**—Heavy (Russian) Liquid Petrolatum.—Paraffinum Liquidum, B.P., liquid paraffin.—A transparent, colorless, tasteless, non-fluorescent, oily liquid, odorless when cold but giving off a faint petroleum odor on heating. This preparation should correspond to the requirements of the British Pharmacopœia for liquid paraffin and have a specific gravity of about 0.885 to 0.890 at 15 C. It is insoluble in water or alcohol, but soluble in boiling absolute alcohol and readily soluble in ether, chloroform, carbon disulphide, petroleum benzine, benzene and fixed and volatile oils. It serves as a solvent for volatile oils and related substances like camphor, menthol and thymol.

This is the type of preparation used by Sir W. Arbuthnot Lane, and his associates for internal administration. It is also used as a basis for ointments and salves and as a local application to wounds, ulcers and in certain forms of skin diseases in which a simple protective is desired.

**Petrolatum Liquidum, Leve.**—Light (Russian) — Liquid Petrolatum.—A transparent, colorless, tasteless, non-fluorescent, oily liquid, odorless when cold, but giving off a faint petroleum odor on heating. In other respects this preparation should correspond to the pharmacopœial tests for liquid petrolatum and have a specific gravity of about 0.860 to 0.875 at 15 C. Like the heavy variety of liquid petrolatum, it is insoluble in water and alcohol, but soluble in boiling absolute alcohol and readily soluble in ether, chloroform, carbon disulphide, petroleum benzine, benzene and fixed and volatile oils. It serves as a solvent for volatile oils and related substances like camphor, menthol and thymol.

This is a type of preparation extensively used as a vehicle for the oily sprays in nose and throat work. It is also being used as one of the constituents in the now popular paraffin oil cold cream and has been used to some extent for internal administration in the treatment of chronic stasis. Being more limpid than the preparation preferred by Lane, it is more readily taken, though greater care must be exercised in securing a sample devoid of the lighter fractions of petroleum distillates.

**Cheap Mucilage.**

Dextrine .....	½ pound
Alcohol .....	4 fl. ounces
Acetic acid .....	4 fl. ounces
Water .....	20 fl. ounces

Mix.

## VII. Classical Discoveries in Pharmacy—The Medicinal Wines.

**C**HIEFLY of historical interest are the four articles by Antoine-Augustin Parmentier on the subject of medicinal wines. These preparations have now fallen largely into disuse, but at the beginning of the nineteenth century wine was one of the four principal menstrua of the pharmacist, and in countries like France, where wine was a staple article of drink among all classes, medicated wines were a favorite form of tonic for convalescents. It is interesting to note, however, that Parmentier's suggestions have so far prevailed that they are still embodied in the U.S.P. directions for medicinal wines, which, except wine of opium, are made by mixing wine with a fluidextract, the latter taking the place of Parmentier's so-called tinctures.

Parmentier was a prominent figure in his day. Born at Montdidier, in 1737, he practiced pharmacy for some time in his native town. During the Seven Years' War he was field apothecary of the French Army in Germany, where he learned to know the value of the potato as food. Later he was assistant apothecary at the Invalides, in Paris, and then became professor of economy and agronomy at the *École Centrale*. Finally he was made inspector-general of medical affairs. He was an authority on agriculture and its chemistry, and wrote many treatises on fertilizers, grains, sugar and its extraction, wines, brandies and syrups, the preservation of foods, chocolate, and similar subjects. His most striking achievement was his overcoming of the French prejudice against potatoes as food, which had been used by surrounding nations for many years.

The papers from which the following extracts are taken appear in the *Annales de Chimie*, Vol. 35, pp. 58-73; Vol. 39, pp. 225-241; Vol. 50, pp. 33-57, during the years 1800, 1801, and 1804, under the titles "Experiences and Observations on Medicinal Wines," and "New Observations on Medicinal Wines." A fourth discussion, on "Alcoholic Medicinal Tinctures," is closely connected in subject matter with the others, and contains a large amount of repetition of statements found elsewhere. It appears in Vol. 40, pp. 257-272, and in it Parmentier states the reasons which lead him to believe a tincture made with alcohol of 20 degrees would be preferable to one with 24° alcohol, as previously prescribed. The stronger alcohol, it was feared, might not extract all the active principles of the drugs, and a tincture made with it was likely to precipitate when mixed with the less spirituous wine. In all the discussion and formulas cover 74 pages, and the paragraphs below, taken in the order in which they appear in the originals, but not in immediate sequence, are merely to present the main line of thought in a series of rather long-winded papers.

### Experiences and Observations on Medicinal Wines.

"For a long time water, wine, alcohol, and acetic acid have been regarded in pharmacies as the most suitable vehicles for extracting from vegetables, by some form of digestion, their most essential parts, thus offering the art of healing more or less active remedies; but one of these vehicles—wine—which by its composition unites all the solvent properties belonging to the other three fluids, since it takes up equally the aroma, resinous extracts, resino-extractives, resins, and oils—wine cannot combine with these different substances without changing its nature, without necessarily losing a large part of the properties which it had in the natural state.

"Medicinal wines have long enjoyed, and still enjoy today in some cantons, a certain celebrity. To prepare them, our oldest pharmacologists indicated two methods, one by fermentation, the other by infusion or maceration; the first takes place by mixing with the saccharine and recently expressed juices the substances whose properties it is intended to transmit to the vinous liquors; the second consists in immediately applying the substances to wine already prepared.

"If in the first case, the vegetable drugs, of whatever nature they may be, when put to macerate in grape juice undergo, like this mucous and saccharine liquid, through the internal motion, some notable changes; in the second case, on the contrary, it is the vinous liquor itself which, in associating to itself the medicinal principles loses, if not all, at least in part, its tonic and restorative properties, so that the health officer who prescribes can no longer count on the effect that he aims to produce.

"It does not suffice to have shown that wine, while exerting

its action on one of the principles of the drugs with which it is macerating, and leaving in their expressed marc a large part of the alcohol which constitutes its strength, is no longer wine; we must show still that the simple operation of preparing medicinal wines is also another means to their deterioration.

"The vessel in which the maceration takes place cannot be filled completely or perfectly stoppered; the wine remains exposed to a temperature prejudicial to its conservation. To decant it from above the substance on which it has rested for a greater or less time, it must be strained, submitted to the press, filtered, and distributed in bottles; there you have it, always exposed to the influence of the atmosphere; the wine, according to its nature, undergoes other changes; only a glassful, or two at most, are administered in a day; it remains in ullage for a longer or shorter period, according to the capacity of the container.

"Thus with all these alternations of heat and cold, infusions, expressions, filtration, and distribution, the patient receives, in place of a cordial, strengthening and tonic wine, nothing but the dregs; the wine is no longer what it should be to the eye, smell or taste; in short, it has all the characteristics of a turned or stale wine. Should one be astonished that we are often justified in complaining of the use of medicinal wines, and forced to discontinue their use before being freed of the indisposition for which this remedy was indicated?

"Since the art of healing can gain little or no aid from medicinal wines obtained by fermentation or infusion, it appears advantageous to us to abandon this mode of preparation, and to prefer a good wine to which one would add, at the instant when it is to be administered, a few drops of a tincture prepared in advance; that is to say, with alcohol of 24°, charged as much as possible with the principles that the wine would have been used to extract, in following the old process.

"Medicinal wines thus compounded according to need, and by the simple mixing of a few drops of a tincture appropriate to the effect one wishes to produce, would no longer be exposed during their preparation, their conservation, or their distribution, to the influence of the host of causes which always bring about variations in the action of the solvent, the quantity of material dissolved, and the nature and the effects of the compound which results.

"The Board of Health, impressed by the inconveniences attached to the ordinary manner of preparing medicinal wines, and the advantages which exist for the welfare of the sick, the facility of service, and for economy, in introducing some useful changes into that part of medicine, has just ordered the central pharmacy of military hospitals to compound as many tinctures as there are medicinal wines in the pharmaceutical formulry of the army, so as to be able to judge finally, by trials repeated under their own eyes, of the effects on our organs, and in the animal economy.

"My last response to the objections which can be alleged in favor of medicinal wines prepared by the method against which I have taken my stand, is that physicians, in prescribing this class of medicines, intend to administer first, wine; then, an extract in solution which adds to its tonic, cordial, and restorative properties. Now, chemistry, experience, and observation all prove that often the patient gets neither the one nor the other; that the wine, whether pure, or decomposed and near to vinegar, must exercise, under these different modifications as a solvent, an action likewise different, and produce results on which one can no longer depend; thus, far from repairing the forces of the weakened stomach, it contributes still further to derange the functions of that organ.

### Preparation of Alcoholic Tinctures.

"The alcohol most suitable for the preparation of tinctures destined to form, by their mixture with wine, those medicaments called in all the pharmacopoeias, medicinal wines, should show 20° on the Baumé areometer. The solvent having always the same fixed degree of strength, constantly exercising the same action on vegetable substances which are submitted to it; it removes at the same time both the resinous extractive and the resino-extractive. Whence results a compound fluid which, mixed in certain proportions with wine, changes neither its transparency nor its specific properties.

"Another rule useful to establish in the general preparation

of alcoholic medicinal tinctures, is to proceed in two stages, and to begin the digestion of the ingredients with only one-half the prescribed amount of alcohol, so that it may charge itself at first with extract, and dispose the marc to yield more easily that which it still contains. By means of this precaution the alcohol becomes saturated as fully as can be, with the two extractives which are most essential to the medicinal effect intended.

**Tincture of Gentian.**

Take Gentian root ..... 64 gr. (2 ounces)  
 Orange peel ..... 32 gr. (1 ounce)  
 Alcohol at 20° ..... 1½ kilo. (3 pounds)

"The gentian and the orange peel being coarsely powdered, are placed in a matrass, with one-half of the alcohol indicated. The vessel remains for 6 days, exposed to the sun or the heat of the sand bath, according to the season, shaking frequently; decant and recommence digestion for the same space of time, pouring on the marc the other part of alcohol. Express strongly, unite the two liquors for filtering, and distribute them in bottles of a capacity of two deciliters, which are stoppered and laid away in a cool place for use.

**Preparation of Medicinal Wines.**

"The custom of administering alcoholic tinctures by mixing them with wine at the instant of taking is in no wise an innovation in medicine. Quercetan, Bauderon, and Charas, although partisans of medicinal wines prepared by the old method, praise this custom: to be sure, it must be noted that it is only in a very concentrated state that these famous pharmacologists prescribe the use of alcohol, and that, also for fear of diminishing their strength, they take great care to demand that the drugs shall be previously dried.

"We shall observe, before indicating the proportion of the tincture, that it has been determined by repeated trials in civil and military hospitals that every kind of tincture may be employed in the proportion of from 16 to 8 parts, to one of wine:\* that by this means the restorative and tonic properties of the latter are increased, not only because of the extractive principle it contains, but also by the small portion of free alcohol which, in a weak wine, makes of it on the spot a generous wine, more homogeneous than if one had added alcohol as a condiment too late."

**Bitter Wine.**

Tincture of Gentian..... 24 gr. (6 drams)  
 Red wine ..... 1 kilo. (2 pounds)

**Stomachic Wine.**

Red or white wine..... 1 kilo. (2 pounds)  
 Tincture of elecampane, from.... 32 gr. (1 ounce)  
 to.... 64 gr. (2 ounces)

\*This is apparently inverted in error, the correct proportions being, as shown by the formulas, one part of tincture to from 8 to 16 parts of wine.

**NEW REMEDIES**

*Ampyrofen* is dimethylamino-antipyrin-caffeine citrate, used as an antipyretic and tonic.

*Arnicoform* is a combination of arnica with 15 per cent. of formaldehyde solution and eucalyptus oil. It is used as a wash and disinfectant.

*Arsalyt* is bismethylamino-tetramino-arsenobenzene.

*Azymon* capsules contain olive oil, magnesium and sodium choleate, and magnesium and sodium carbonate. Used in hyperacidity of the stomach.

*Cavalin* contains camphor, olive oil, Japan wax, lead carbonate, and minium.

*Chromoform* is the dichromate of methyl-hexamethylenetetramine, an orange-red crystalline powder, soluble in water. On the addition of acids or alkalis, and also on warming the solution, formaldehyde is set free.

*Diabetoson* contains magnesium peroxide, effervescent lithium citrate, potassium sulphoguaiacolate, calcium glycerophosphate, ovolecithin, and sodium caseinate.

*Droserin Syrup* contains droserin, 1 per cent. of bromine, and 5 per cent. of valerian.

*Fondant iodotannique* contains in each dose 0.01 g. of iodine and 0.15 g. of tormentilla tannin.

*Glykamben*, a cough rem.dy, contains codeine, benzoic acid, extract of ipecac, camphor, and anisated ammonia.

*Gold cantharidin* is cantharidyl-ethylene-diamino-aurocyanide, used in intravenous injections of a 2.5 per cent. solution.

*Gonophen* tablets contain kava resin and extract of pichi.

*Goudron-Guyot* is a mixture of vegetable tar, sodium bicarbonate, and water, used in tuberculosis, catarrh, etc.

*Heuran* consists of 0.005 g. menthol, 1 g. anesthesin, 1 g. boric acid, 4 drops adrenalin solution, and vaselin to make 20 g. A hay fever remedy.

*Hydrastopon* contains in 100 g., 0.08 g. of hydrastinine hydrochloride and 0.2 g. of papaverine hydrochloride, and is used in dysmenorrhoea.

*Inhibin*, a new hemostatic, contains adrenalin, stypticin, ferripyrin, quinine sulphate, solution iron chloride, antipyrin, and effervescing constituents.

*Kinetin* tablets contain quinine and hectine, and are used in colds, hay fever, and influenza.

*Lacalut* is aluminum lactate in solid form, used in aqueous solutions of ½-2 per cent. for rinsing the bladder and urethra.

*Lecigahaemin* is a tuberculosis remedy containing lecithin, hemoglobin and guaiacol.

*Lecimark* is a cod liver oil emulsion with egg yolk.

*Lecithæmin* is a liquid lecithin-hemoglobin preparation, with glycerophosphoric acid. *Arsalecithæmin* contains in addition 0.0015 g. of arsenic in a teaspoonful.

*Maltobonaco* consists of malt extract, banana meal, calcium glycerophosphate, cacao and sugar.

*Nicosabin* is said to be a nicotine salicylate preparation, containing boric acid and menthol. Used in treatment of itch.

*Phosphocose* contains somatose and sodium glycerophosphate.

*Pyocyzneoprotein Houl* is prepared from bouillon cultures of *B. pyocyaneus*, and has given good results in cases of inflammation of the mouth, pharynx and larynx.

*Pyralgin Injections* are sterile solutions containing in each cc. 0.5 g. melubrin, 0.00275 g. of sodium chloride, 0.00025 g. of calcium chloride, and 0.0005 g. of glucose. Used in rheumatic affections.

*Rhodoform* is said to be hexamethylenetetramine-methylsulphocyanate, forming a white powder, melting at 193°. It is used in affections of the mouth and gums.

*Sagrotan* is a molecular mixture of chlor-xylenol and chlor-cresol, possessing double the bactericidal activity of the sum of the constituents. It is a light-brown, oily liquid, miscible with water. Non-toxicity is a special feature.

*Sal Hycolin*, a disinfectant, contains 60 per cent. of creosote oil, 4.6 per cent. of glue, and 35.4 per cent. of water.

*Sanamark Emulsion* contains cod liver oil, lime salts, and sodium glycerophosphate.

*Sanitafer* contains casein and sodium glycerophosphate.

*Saposalin* is a soap containing salicylic acid, eucalyptol, and terpeneol.

*Septan* is a disinfectant containing formaldehyde, and used in 1-5 per cent. solution. It is said to be superior to any other agent for similar purposes, has a pleasant odor, does not attack metals or fabrics, and is miscible with water, alcohol, and glycerol.

*Tenuidin* tablets contain potassium iodide, aloes, borax, and dried extract of cascara.

*Testormon Richter* has been used in sexual neurasthenia, impotence, and affections of the prostate gland. One ampule contains 1.1 cc., and represents about 2.5 g. of fresh glands.

*Toxodesmin* consists of 5 parts of chemically and biologically tested animal charcoal, 2.5 parts of sodium sulphate, and 2.5 parts of magnesium sulphate. It is intended to be a general antidote for all poisons, except strong acids and alkalis, and is further useful in inflammation of the intestinal tracts, and as a dietetic.

*Valymbin* is yohimbine valerate.

*Venericide* tablets contain mercurous chromate.

*Veroglandol* is an extract of the corpus lutea, used in uterine hemorrhages.

*Vesalkine S* is hexamethylenetetramine salicylate.

*Vishimbin* consists of lecithin and yohimbin.

*Vosselin Ointment* contains olive oil, yellow wax, and balsam of Peru.

# SELECTED FORMULAS

**Milk of Olives.**

Soft soap	2 drams
Glycerin	10 ounces
Powdered soap	2 drams
Olive oil	10 ounces
Oil of peppermint	5 drams
Solution of caustic	3 drams
Water	10 ounces
Perfume	3 drams

Mix. (Pr. &amp; Co.) Dr.

**Violet Cold Cream.**

Oily soap	1000 grams
White wax	100 grams
Spermaceti	100 grams
Distilled water	1000 cc.
Ionone	10 grams

Melt the white wax and spermaceti, and incorporate the oil. Then when slightly cooled, mix in the distilled water previously warmed, lastly adding the ionone.

**Flaxseed Cosmetic Cream.**

Flaxseed	2 ounces
Water	12 fl. ounces
Salicylic acid	2 grains
Glycerin	12½ ounces
Alcohol	2½ fl. ounces
Carbolic acid	1 fl. dram
Cologne water	1½ fl. drams

Make a mucilage by macerating the flaxseed in the water for three days with frequent shaking; then strain through muslin; dissolve the salicylic acid in the alcohol and add with the remaining ingredients to the glycerin; shake well and let stand for 24 hours, strain again through muslin, and bottle.

**Non-Sticky Cosmetic Cream.**

Cornstarch, in fine powder	5 drams
Boric acid	2 drams
Carbolic acid	20 minims
Glycerin	6 fl. ounces
Distilled water	14 fl. ounces
Perfume (any desired extract)	½ fl. ounce

Boil the cornstarch with the water until a perfect paste is formed. Dissolve the boric and carbolic acids in the glycerin and add to the first mixture. Lastly add the perfume.

**Compound Menthol Snuff, B.P.C.**

Menthol, in powder	50 grains
Ammonium chloride	100 grains
Boric acid, in powder	200 grains
Lycopodium	650 grains

Mix the powders

**Salol Mouth Wash, B.P.C.**

Salol	½ ounce
Thymol	22 grains
Spirit of anise	96 minims
Oil of peppermint	48 minims
Elixir of gluside	½ fl. ounce
Alcohol, enough to make	20 fl. ounces

Dissolve the salol and thymol in 10 fl. ounces of alcohol, heating gently if necessary; then add the oil of peppermint, spirit of anise, and elixir of gluside, make up to the required volume by the addition of alcohol, and filter. This solution forms a refreshing antiseptic mouth wash if a few drops be added to a wineglassful of water.

**Sulphur Lotion, B.P.C.**

Precipitated sulphur	1 oz. 162½ grains
Glycerin	300 minims
Alcohol	2½ fl. ounces
Rose water, diluted	8 fl. ounces
Solution of lime, enough to make	20 fl. ounces

Triturate the precipitated sulphur with the glycerin, and some of the diluted rose water to form a smooth paste, and add the other liquids. This lotion is used in acne and other skin diseases.

**Dentifrice Essence.**

Thymol	0.2 gram
Oil of peppermint	0.6 gram
Benzoic acid	2.4 grams
Tincture of eucalyptus	12.0 grams
Alcohol	84.8 grams

Mix.

**Hair Water With Quinine.**

(Eau de Quinine)

Quinine sulphate	1.0 gram
Cologne water	10.0 grams
Alcohol	100.0 grams
Rum	150.0 grams
Rose water	600.0 grams
Alkannin	q. s.

Mix.

**Vaseline Cream.**

Vaseline	24 ounces
White wax	12 ounces
Spermaceti	12 ounces
Glycerin	3 ounces
Oil of rose geranium	1 dram

Melt the white wax and spermaceti over a water bath, add the vaseline, stir until nearly cold, then add the glycerin and oil of rose geranium.

**Mackenzie's Eye Lotion.**

Mercuric chloride	1 grain
Ammonium chloride	6 grains
Cochineal	1½ grains
Alcohol	1 fl. dram
Water, enough to make	8 fl. ounces

Mix. After 12 hours filter the solution.

**Fumigating Compound for Greenhouses.**

Nicotine, 30 parts; camphor, 5 parts; oil of camphor, 25 parts; oil of citronella, 20 parts; methylated spirit, enough to make 100 parts. Half an ounce of this compound is generally sufficient for each 1000 cubic feet of space. It should be placed in a porcelain dish over an alcohol lamp, the operator then leaving the house, which should not be entered for at least two hours.

**Saponified Solution of Formaldehyde.**

Solution of caustic potash	20 grams
Alcohol	15 grams
Redistilled olein	20 grams
Solution of formaldehyde	45 grams
Oil of lavender	5 drops

Mix. For disinfecting purposes.

**German Wart Paint.**

Chloral hydrate	6 parts
Acetic acid	6 parts
Salicylic acid	4 parts
Ether	4 parts
Collodion	15 parts

Mix, and apply with a camel-hair pencil.

**A General Insecticide.**

Green soap	40 parts
Extract of tobacco	60 parts
Empyreumatic oil	50 parts
Alcohol	200 parts
Water	650 parts

Mix according to art. For use, dilute one part with five parts of water.

**Sausage Flavoring.**

Celery seed	2 drams
Mace	1 dram
Nutmeg	1 dram
Black pepper	2 ounces
Common salt	2 ounces
Ground rice	6 ounces

Mix well, tinting the powder a dark salmon with powdered red sandalwood.

## FOREIGN ABSTRACTS

### FROM WORKERS IN OTHER LANDS.

#### Rattlesnake Venom Valuable in Epilepsy—Barladean on Distilled Water—Physiological Assay of Digitalis Not Yet Practicable for Pharmacists.

FROM France comes confirmation of reports, heard here and there, that the dread disease epilepsy is materially affected for the better by the venom of the rattlesnake tribe. Apparently, the effects are due to the violent hemolytic action of the poison. Good results are reported in nearly every case treated. Barladean again points out the dire results that may follow the introduction into distilled water, by sterilization, of saline matter from the glass containers. Pharmacists may be glad to learn that Gottlieb is of the opinion that the various physiological assay methods for digitalis have not yet been sufficiently well worked out to justify the adoption of any one for ordinary drug store use. Other items of interest to analysis are Lehmann's account of the chief adulterants of vanillin, the cause of the alteration of potassium iodide on standing, a simple determination of *B. Coli* in milk, and identity reactions of fluidextract of hydrastis.

#### Rattlesnake Venom for Epilepsy—

Self, of Texas, has related the case of an epileptic who was cured by being bitten by a rattlesnake. Others have reported similar cases. The authors have conducted a series of experiments on a number of female lunatics, with hypodermic injections of physiological solution of the venom of *Crotalus adamanteus*. All patients were suffering from "essential" epilepsy. The doses of sterilized venom were exactly graduated, and the patients kept under observation for a long period. The results have been striking. The treatment has been favorable in almost every case, and the number of fits per annum has been greatly reduced. The younger subjects, more generally healthy, gave better results than the old. The crises are arrested in their progression and accelerated in their diminution. The number sometimes remains stationary, or continues to diminish after the treatment has been stopped. No other drug of any kind was given. One case showed a decrease in the number of attacks from 648 in 1911 to 148 in 1913, after treatment. Others varied from a diminution of 64.9 per cent. to only 3.3 per cent. Venom which had been heated for five minutes to 100° was found to be inert when tried in similar doses. The authors express no opinion on the manner in which these favorable results are brought about, but they note provisionally the following points. Those drugs which give the best results in the treatment of epilepsy either act as sedatives on the nervous system, or modify the viscosity of the blood. Those maladies which appear to have a beneficial tendency on the disease, such as jaundice, are accompanied by hemoglobinaemia. (Calmette and Mezié, Comptes rend., 1914, p. 845; through Pharm. J.)

#### Sterilized Distilled Water—

It is generally believed that water intended for intravenous injections, as with salvarsan, should be sterilized just before use, in order to destroy all bacteria, which have been shown to play an important rôle in the secondary effects of the injections. The objection has been raised to this procedure, that it allows the endotoxins from the bacteria to remain in the water. Barladean has shown that sterilization not only leaves the endotoxins in the water, but introduces many saline constituents from the glass containers. The effect of alkali from glass bottles on morphine and epinephrin solutions is well known. There is also evidence from various quarters that the ingestion of water or other liquids containing silica, which would also be introduced into water by sterilization, has a constipating effect. Barladean collected the middle portion of some distilled water from a tin-lined copper still, in a large Erlenmeyer flask, which had been carefully cleansed and steamed. Half of the water was then placed in a smaller flask, and the other half in a similar flask, the latter, with its contents, being sterilized for 45 minutes. In each flask grains of wheat were made to grow. After four days the differences in the plants were striking. In the unsterilized water, the rootlets were short, while the sprouts were dark gray, soft and not trans-

lucent. In the sterilized water the roots were twice as long, and the sprouts were pure white, translucent, firm, and covered with short hairs. The differences are attributed to the presence in the sterilized water of traces of sodium, potassium, calcium and silica, derived from the glass of the flask; these substances in some degree counteracting the harmful effect of the metallic impurities from the still. Similar results were obtained from Jena glass, quartz, and platinum stills, and with water sterilized in Jena glass. Barladean thus thinks he has proved that by sterilization the action of the bacteria is avoided, but another effect of unknown magnitude is introduced, in the form of soluble constituents of the glass. This explains the so-called "thermolability" of the endotoxins, which has nothing to do with the phenomena. In conclusion, Barladean states that for biological and medicinal purposes only freshly distilled water, collected under aseptic conditions, should be used, and that water subsequently sterilized is not allowable. (Barladean, Schweiz. Apoth. Ztg., 1914, p. 205.)

#### Physiological Assays of Digitalis—

Gottlieb is of the opinion that the physiological assay method for digitalis, consisting in finding the minimum dose producing stoppage of the frog heart, is not a light task, even in the simplest forms, and that accurate and trustworthy results can only be obtained if all possible sources of error are known, and the results are judged in the light of long experience. The method is still far from being so well worked out that simple directions can be given to allow novices to carry it out. It thus resembles many chemical and analytical processes, which, in spite of the simplicity of the principle, give good results only in the hands of experts. For this reason the author deems it inadvisable to recommend the adoption of physiological assays for the pharmacist. Even when performed by those with biological training, the methods may give erroneous results, if sufficient experience is not also possessed to avoid the numerous sources of error. (Gottlieb, Münch. Med. Wochschr., 1914, No. 15.)

#### Vanillin and Its Adulterations—

The chief adulterants are guaiacal carbonate, cumarin, heliotropin, benzoic, salicylic, and acetylsalicylic acids, acetanilid and phthalic anhydride. A table of sintering and melting points is given for vanillin adulterated in various proportions with the several adulterants. If the sintering point of a sample of vanillin is found to be abnormal, adulteration has almost certainly been practiced. If chemical analysis, taste, or odor shows the presence of sugar, heliotropin, or cumarin, the amount can be gauged approximately from the table. But often a mixture of substances has been added, which introduces complications. In one case 3 per cent. of cumarin had been used as a perfume for vanillin adulterated with 30 per cent. of acetanilid or acetylsalicylic acid. (Lehmann, Sonderabdruck Chem. Ztg., 1914, Nos. 36 and 37.)

#### Alkaloids of Ipecac—

Hesse finds five alkaloids in genuine ipecac, whether wild or cultivated. Emetine and cephaeline are most important in quantity, and also possess the greatest physiological activity. The others are hydroipecamine, isomeric with cephaeline, and psychotrine and ipecamine, isomeric, and having two hydrogen atoms less than the former two. Emetine is a white powder, easily soluble in ether, alcohol, and chloroform. It is dibasic, and forms well crystallized salts. Four methoxyl groups are present. Cephaeline contains three methoxyl groups, and forms salts similarly to emetine. Psychotrine forms glittering prisms, containing four molecules of water, has a strong bitter taste, and easily causes nausea. The isomeric ipecamine is a white crystalline powder, easily soluble in the usual solvents. Hydroipecamine forms another white powder, easily becoming electrified by friction. It soon turns yellow in the light, and later dark brown. Its solutions are also highly sensitive. (Hesse, Annalen, 1914, Heft 405, p. 1.)

#### Alteration of Potassium Iodide—

It is a well-known fact that potassium iodide which has been kept for some time acquires numerous reddish spots on the surface of the crystals, even though chemical examination proves no impurity is present. These spots are often taken

for traces of a gas liberated by light and air. Van de Vorst has recently shown that they are not a chemical phenomenon at all, but a botanical growth. Three kilos of pure potassium iodide were kept in a store room in a blue bottle, exposed to strong light. After a time all the crystals had taken on a reddish color, and some were entirely red. On heating some of the salt in a crucible, instead of the red color disappearing, which would have been the case had it been due to free iodine, the color changed to black, and an empyreumatic odor was noticed. On dissolving the crystals in water, a colorless solution resulted, with a red precipitate. Examined under the microscope, the latter showed well defined cell-complexes, constituents of some kind of mold. (Van de Vorst, J. Pharm. d'Anvers, 1914, March 31.)

#### Simple Determination of B. Coli in Milk—

The organisms are grown in tubes containing the following medium, in which gas is produced only by organisms of the *Bacillus coli* type: Lemco, 5 g.; peptone, 10 g.; lactose, 10 g.; sodium chloride, 5 g.; sodium taurocholate, 5 g.; gelatin, 120 g.; water, 1000 cc. Boil, neutralize with sodium carbonate, clarify and filter; then pour into test tubes, plugged with cotton wool, and sterilize at 100°. Each tube should contain about 15 cc. Ten cc. of milk are added to 990 cc. of sterile water, and thoroughly mixed. Quantities of 1 cc., 0.5 cc., and 0.1 cc. of the diluted milk are added to a series of tubes at a temperature of 40°, which are well shaken and incubated for 48 hours at 20°. When the gas bubbles produced in the medium are counted. When the process is carefully carried out, the divergence in the number of gas bubbles in tubes from the same sample, and of the same dilution, does not exceed 5 per cent. of the total average. (MacGinnis, Brit. Med. J., 1914, p. 709; through Pharm. J.)

#### Determination of Alcohol in Tinctures—

Anselmino has proposed a method for determining alcohol in tinctures, by which the usual distillation is done away with. The specific gravity of the tincture being determined, as well as the amount of residue, the alcohol is proportional to the specific gravity minus the residue, multiplied by a certain empirical factor, which is practically the same for all tinctures, and in the neighborhood of 0.0036. Richter criticised the method on the ground that the dry residues cannot again be brought into solution, and that they take no account of the volatile constituents, which also affect the specific gravity. Richter proposed another empirical relation, which is not considered entirely satisfactory by the authors. The latter base their method on the critical solution temperatures of the tinctures in benzene, which is completely soluble in the cold only in strong alcohol, and gives turbid solutions with weaker spirits. Ten cc. of tincture and 2 cc. of benzene, measured at 15°, are placed in a thick-walled test tube, and closed securely with a cork carrying a thermometer. The tube must be strong enough to withstand the vapor pressure of the liquid after heating, and also to allow the firm insertion of the cork. The temperature is slowly raised by immersion in hot water, with constant shaking, and the temperature noted at which the solution becomes clear. The temperature is then allowed to fall, and the point on the thermometer at which turbidity just makes its appearance is taken as the critical temperature. From a table the alcohol strength can be read off directly. The table is calculated for tinctures prepared with dilute alcohol alone (sp. gr. 0.892 to 0.896) and would therefore appear to be of limited usefulness. The alcoholic percentages vary from 51.83 to 63.62 by weight, and 59.68 to 71.10 by volume. An advantage of this method of alcohol determination is that it permits the detection of as little as 4 per cent. of methyl alcohol, the critical solution temperatures of which are much higher than for grain alcohol. If the alcoholic strength found from the table does not agree with that calculated from the dry residue, the specific gravity, and the correction factor (0.0033), the presence of methyl alcohol may be suspected. (Mossler and Markus, Pharm. Post, 1914, Nos. 37 and 39.)

#### Preparation of Thiosulphate Solutions—

According to Bohrisch, these solutions can be kept for a long time without change, if they are properly prepared and stored. The water used should be freshly distilled, or recently boiled. Bottles should be filled completely, but it is immaterial whether they are kept in a cool place or at room temperature. If full, the bottles need not be protected from light. Under these conditions the solutions will keep for at least a

year. In brown bottles, often exposed to the air for removing some of the solution, the titer does not change in six months. White bottles, partly filled, and often opened, cause rapid decomposition with precipitation of sulphur. (Bohrisch, Pharm. Ztg., 1914, No. 36.)

#### Reactions of Fluidextract of Hydrastis—

For berberine: Dissolve one drop of the extract in 10 cc. of fuming hydrochloric acid, add a drop of hydrogen peroxide solution, and shake. After 5 or 10 minutes the mixture takes on a violet color, which persists for a long time and is still perceptible if diluted with hydrochloric acid in the proportion of 1 : 25. For hydrastine: Treat 5 drops of extract, mixed with 5 cc. of a 5 per cent. solution of sodium bicarbonate, with 5 cc. of ether; wash the ether with water, filter, and evaporate. Dissolve the residue in 10 cc. of sulphuric acid, and treat with 12 to 15 drops of a 1 : 1000 solution of permanganate. On shaking for some time, the solution is decolorized. Dilute with 5 volumes of water, and the solution should be colorless by transmitted light and should show a marked violet fluorescence by reflected light. (Glücksman, Rep. Pharm., 1913.)

#### Ignition of Magnesium Ammonium Phosphate—

The residue of magnesium pyrophosphate often has a gray color after ignition, which is not removed by an elevation of temperature. This has usually been ascribed to carbon from the filter, or from impurities in the ammonia, for instance pyridine. Some experiments by Pereira throw an interesting light on the question. Precipitations were made with an acid magnesia mixture, so as to avoid a large amount of ammonia salts. Ignition was made in a platinum crucible; first, the precipitate being wet, and heated rapidly; second, under the same conditions, with gradual heating at the outset; and third, after first drying the precipitate. All three methods gave a uniformly white mass. Ammonia free of pyridine was used in these experiments, and the Gooch filters were provided with asbestos mats. In another series, a drop of pyridine, a trace of paper, a drop of a solution of ammonium citrate, and a trace of ordinary ammonia water were added. In each case the residue was gray. The white residues did not attack platinum, and gave no reaction for phosphides. The gray residues, on the other hand, showed partial decomposition of the phosphate. (Pereira, J. Pharm. Chim., 1914, p. 469.)

#### Origin of Chaulmoogra Oil—

Until the year 1900 it was assumed that chaulmoogra oil was derived from the seeds of *Gynocardia odorata*. Holmes later showed that the true oil came from the seeds of *Taraktogenos Kurzii*. At the present time an oil called "Oleum Gynocardiace" is on the market, which can be regarded, however, only as a substitute for chaulmoogra oil. Since 1913 the oil of *Hydnocarpus Wightiana*, from Malabar, has come into trade as Gynocardia oil, but differs from chaulmoogra oil in odor and fatty acid content. *Taraktogenos Kurzii* grows in the evergreen forests of Burma, and in Assam, but in no other parts of India. The genuine oil costs three times as much in India as Hydnocarpus oil, which is sold at high prices in Europe as true chaulmoogra oil. (Francis, J. Pharm. Chim., 1914, p. 388.)

#### Fate of Salvarsan in the Body—

In the first 24 hours about 9 per cent. of the arsenic introduced circulates in the blood. It can be detected in small amount in the spleen, kidneys, and lungs; in traces also in the heart and brain. Deposition in the skin increases gradually, until at the end of three weeks 12 per cent. of the arsenic can be found. At this period it is contained in the other organs only in traces, and after three months these have vanished. The elimination takes place preferably by means of the digestive tract and the kidneys, and in slight amounts also through the skin, mammary glands, and the lungs. (Burnschoff, Nouveaux Remedes, 1914, p. 159.)

#### Ammonia in Potassium Salt—

The presence of ammonia in potassium iron tartrate is very frequent in commercial products. This comes from the iron hydroxide used in manufacture, which is thrown down by ammonium hydroxide, the latter being incompletely removed in the subsequent washings. Lemaire found ammonia in eight samples claimed to be pure. According to the supply houses, the manufacture of ferric potassium tartrate entirely free of ammonia is very difficult. (Lemaire, Rep. Pharm., 1913, p. 529.)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Metchnikoff's Calomel Salve.**

(O.D.Co.)—The preparation under the above title does not seem to be extensively known to dispensers in this country, although a formula is given in the British Pharmaceutical Codex Formulary under the synonym "Metchnikoff's Calomel Ointment," which we assume to be the preparation wanted, the Latin title of the same being "Unguentum Hydrargyri Subchloridi Forte," and the English name, "Strong Mercurous Chloride Ointment." The formula is as follows:

- Mercurous chloride..... 1 ounce
- Hydrous woolfat..... 3 ounces

This ointment is recommended by Metchnikoff as a prophylactic against syphilis.

**Bath Powder.**

(R.C.S.)—The purpose of most preparations of this character is to soften and perfume the water in which the bath is to be taken. The following typical formulas are taken from the new ERA Formulary:

(1)

- Powdered borax ..... 4 ounces
- Salicylic acid ..... 1 dram
- Extract of cassia..... 1 dram
- Extract of jasmine..... 1 dram
- Oil of lavender..... 20 minims

Rub the oil and extracts with the borax until the alcohol has evaporated, and put into a wooden box. Use a heaping teaspoonful to the body bath, or about one-eighth teaspoonful for a face bath.

(2)

- Powdered borax ..... 8 ounces
- Powdered white castile soap..... 8 ounces
- Essence of bergamot..... 6 fl. drams
- Essence of lemon..... 3 fl. drams
- Oil of neroli..... 3 fl. drams
- Oil of petit grain..... 8 minims
- Oil of origanum..... 30 minims
- Oil of rosemary..... 30 minims
- Oil of rose..... 5 minims

Mix the powders, add the essential oils, and rub together in a mortar. A tablespoonful of this added to the bath water gives the odor of cologne.

(3)

- Tartaric acid ..... 10 ounces
- Sodium bicarbonate ..... 9 ounces
- Rice flour ..... 6 ounces
- Mix and perfume with a mixture of the following oils:
- Oil of neroli..... 2 drams
- Oil of rosemary..... 1 dram
- Oil of bergamot..... 1 dram
- Oil of cedrat..... 2 1/4 drams
- Oil of orange..... 2 1/4 drams

Mix. A fluid dram of this mixture is sufficient to perfume one pound of the above bath powder.

**Horn Fly Repellent.**

(H.D.Co.)—Almost any greasy substance applied to the skin and the horns of the animal will keep the flies off for several days. Among the remedies named by the Bureau of Animal Industry, Washington, D. C., for the purpose are common axle grease, whale oil, train oil, carbolized oil, etc. Mixtures of fish oil and tar have also been recommended.

In the Southwest these flies usually become very abundant in the Spring and again in the Fall, the hot weather checking

breeding. Rainy seasons of the Spring and Fall are most favorable and cause the insects to appear in greatest numbers. The flies spend the greater part of their existence on the animal, leaving only for a few seconds at a time to deposit eggs in freshly dropped cow manure, in which the larvae develop rapidly. They usually work downward to the surface of the earth and there transform to reddish-brown pupae, from which the adult flies emerge in from 10 to 20 days from the date the eggs were deposited. Under ordinary conditions, and where few animals are kept on the farm, breeding can be largely prevented by scattering the manure every three or four days. This allows it to dry out and thus prevents development of the immature stages. The use of manure spreaders has been recommended for this purpose. Where animals are under control, repellent substances, such as train oil, placed on the parts most attacked have given fair satisfaction. All such substances have to be applied at frequent intervals, thus entailing some labor and expense. According to information furnished by the Department of Agriculture, it has been found that where dipping of cattle is practiced against the Texas fever tick, mange, or lice the vats may be provided with splash boards along the sides so as to turn the spray over the animals as they plunge into the dip and thus destroy a large percentage of the flies which are on them. For further information concerning this pest we suggest that you address the director of your State Experiment Station, as also the Bureau of Animal Industry, Washington, D. C.

**Lettering on Cloth or Canvas.**

(E.E.D.)—The preparation of cloth or canvas for sign painting depends somewhat on the ideas of the painter and also on the character of the cloth. However, a practical sign painter gives us the following outline: Before lettering on canvas or duck, wet it thoroughly with a sponge soaked in water, wipe off the superfluous water and then letter in oil while damp. On muslin the same plan is followed, excepting that the color is mixed with varnish and japan. When the letterer is very expert, he can use boiled linseed oil, but usually the varnish and japan is the safer method. The pigment (color) to be used is left to the judgment of the artist. "Laying off" may be done with a charcoal crayon used very lightly, but an outline faintly sketched with a lead pencil will answer very well.

**Curd Soap.**

(P.H.H.)—According to the standard definition, "curd soap" is a soap made with soda lye and a purified animal fat consisting principally of stearin. By usage, the process has been extended to include the addition of fatty vegetable oils, as in the formula given on page 287 of the ERA Formulary to which you refer. In this formula the specific quantity of soda lye is not given, except to indicate that enough should be used to produce a clear jelly when the lye is saponified with the tallow. The amount necessary is always a variable quantity and the manufacturer must use his experience and judgment in preparing the soap, adding the solution cautiously until the proper stage is reached. In the formula, the strength of the lye is given as 15° (although lye of other strength may be used), the figures referring to the specific gravity of the lye as indicated by the Beaume hydrometer. A solution of soda lye of 15° would have a specific gravity of about 1.1154. In practice, a solution of this strength is the best to use, as it saponifies readily with the fat, although a stronger or lighter solution can be employed, if desired, by taking less or more of such solutions as may be needed to produce the desired reaction. Twaddell's hydrometer is also used in many soap works for measuring the strength of lye. A lye of 15° B., weighing 100 pounds, will contain about 10.05 pounds of caustic soda, which, if the soda be chemically pure, should saponify a little more than 50 pounds of tallow. Practical soapmakers state that tallow combines most readily with lye of not much over 10° B. in strength, if made of low degree of caustic; but when saponification has been induced, the strength of the lye can be rapidly increased up to 20° B. or over. Coconut oil

combines most readily with strong lye. The stronger the lye used, the less water is unnecessarily introduced into the kettle, and the resulting soap more easily managed. On the other hand, a weak lye of caustic soda dissolved in too large a volume of water is apt to induce "frothing," a condition that the practical soapmaker has to take into consideration. By following the hints suggested and trying the process experimentally you should have no serious trouble with the formula, which is one frequently used by soapmakers.

#### Luminous Paint.

(J. F. C.)—Here are some formulas for luminous or phosphorescent paint from the ERA Formulary:

##### Orange.

Mix 40 parts of varnish with 17.5 parts of prepared barium sulphate, 1 part of Indian yellow, 1.5 parts prepared madder lake, and 38 parts of luminous calcium sulphide.

##### Yellow.

Mix 48 parts of varnish with 10 parts prepared barium sulphate, 8 parts barium chromate, and 34 parts of luminous calcium sulphide.

##### Green.

Mix 48 parts of varnish with 10 parts of prepared barium sulphate, 8 parts of green chromium oxide, and 34 parts of luminous calcium sulphide.

Luminous colors for artists' use are prepared by using pure East India poppy oil in the same quantity instead of varnish, as directed in the preceding formulas, taking pains to grind the materials as fine as possible. For luminous oil color paints, similar quantities of pure linseed oil are used in place of varnish. The linseed oil must be cold-pressed and thickened by heat. The luminous paints can also be used as wax colors for painting on glass and similar objects by adding, instead of varnish, 10 per cent. more of Japan wax and 5 per cent. of olive oil. The wax colors thus prepared may be used for porcelain, which, after painting, is then carefully burned without access to air. Paintings of this kind can also be treated with waterglass.

It is also possible for you to make use of the old-fashioned "luminous vial" by dissolving 5 grains of phosphorus in 1 ounce of olive oil by the aid of heat. Half an ounce of this product is poured into a 4-ounce stoppered bottle and shaken so as to cover the whole interior of the bottle, whose surface then becomes luminous in the dark. The stopper is loosened occasionally to favor oxidation of the phosphorus which is the cause of the luminosity.

#### Fuller's Earth for Filtering Oils.

(T. H. R.)—For bleaching, clarifying or filtering of fats, greases and oils, fuller's earth is the medium generally employed. The common practice with mineral oils is to dry the earth carefully after it has been ground to 30 to 60 mesh and run it into long cylinders, through which the crude, black mineral oils are allowed to percolate slowly. As a result the oil that first comes out is perfectly water-white and much thinner than that which follows. The oil is allowed to continue percolating through the earth until the color reaches a certain maximum shade. With the vegetable oils the process is radically different. The oil is heated beyond the boiling point of water in large tanks, from 5 to 10 per cent. of its weight of fuller's earth being added, the mixture vigorously stirred, and then filtered off through bag filters. The coloring matter remains with the earth, the filtered oil being of a pale straw color, provided the operation has been conducted with sufficient care. Considerable information on fuller's earth as a filtering medium has been published in various bulletins issued by the U. S. Geological Survey, Washington, D. C.

#### Dry Fire Extinguisher.

(E. F. W.) The formula for "dry fire extinguisher," page 369, ERA Formulary, composed of alum, ammonium sulphate and ferrous sulphate, is given by a number of authorities as one producing a satisfactory product for extinguishing fires. The theory underlying its use is based upon the fact that when the mixture is subjected to a high degree of heat, the ammonia of the ammonium sulphate is liberated, thereby displacing the atmospheric oxygen necessary to combustion. The other salts of the mixture, more particularly the alum, are more or less decomposed or melted by the heat, and in this condition are spread over and cover the burning substance with a fireproof film or deposit.

The "caking" of the mixture is undoubtedly due to the water of crystallization found in ordinary alum and ferrous sulphate (copperas), and, on theoretical grounds, these salts should be well dried before being combined in the mixture, which should then be quickly enclosed in 1-pound water-proof pasteboard boxes and stored in a dry place. To use, the boxes are thrown into the fire in the same manner as that followed in using the old-fashioned hand grenade. If you will follow these suggestions we think you will get the best results in using the mixture. One drawback to the use of all dry compounds for extinguishing fires, however, is the difficulty experienced in spreading the powder over the seat of the fire, but in this respect the above mixture is probably as "workable" as any of the "dry" class.

#### Linimentum Album: White Liniment.

(A. S.)—"Linimentum album" is one of the synonyms given in the National Formulary for "linimentum terebinthinae aceticum" or "acetic turpentine liniment." According to the British Pharmaceutical Codex, the title is also employed, but the formula directed therefor differs materially from that of the National Formulary, as will be seen from the following (B. P. C., page 1236):

Acetic acid .....	816 minims
Oil of lemon .....	144 minims
Oil of turpentine.....	8 fl. ounces
Yolk and white of egg, by volume....	2 fl. ounces
Distilled water, enough to make.....	20 fl. ounces

Emulsify the turpentine and oil of lemon with the egg, gradually add a portion of the distilled water, and finally the acetic acid previously diluted with distilled water.

According to Dunglison ("Dictionary of Medical Science"), the title has also been employed as a synonym for "unguentum catelai," and for "linimentum ad ambustiones" or liniment of lime-water (Carron oil). In addition to these preparations, the name has been indiscriminately applied to many variant formulas, as reference to pharmaceutical journals published during the past five or 10 years will show. Here are two formulas of this character:

(1)

Oleic acid.....	1 ounce
Oil of turpentine.....	9 ounces
Ammonia water.....	3 ounces
Solution of potassa.....	1½ ounces
Water, enough to make.....	20 ounces

Mix thoroughly by agitation in a 40-ounce bottle.

(2)

White castile soap, in shavings.....	13 drams
Ammonium carbonate .....	2 ounces
Ammonia water .....	4 ounces
Water .....	60 ounces
Camphor .....	2 ounces
Alcohol .....	3 ounces
Oil of turpentine.....	13 ounces

Dissolve the soap in 3 pints of water, and the ammonium carbonate in the remaining 12 ounces of water and the ammonia water. Mix these two solutions. Then reduce the camphor to a thin paste with the alcohol and add in small portions to the soap mixture, agitating briskly after each addition. Then add the oil of turpentine gradually, thoroughly incorporating after each addition and continuing until an emulsion-like mixture results.

#### Toothache Gum.

(M. W.)—The ERA Formulary is authority for the following formulas under the above title:

(1)

Venice turpentine, ½ ounce; paraffin oil, 4 fl. ounces; salol, ¾ ounce; yellow wax, 3¼ ounces; alkanet root, q. s. to color. Triturate together the salol, turpentine and oil, then add the wax, previously melted and colored with the alkanet root; allow to cool and roll into sticks or pencils.

(2)

Paraffin, 3 ounces; Burgundy pitch, 3 ounces; oil of cloves, 1 ounce; carbolic acid, 1 ounce. Melt the paraffin and pitch together and stir in the other ingredients; when nearly cold, mix with the cotton and cut into small rods; wrap in thin waxed paper, and keep in small bottles.

# WOMEN IN PHARMACY

Conducted by **EMMA GARY WALLACE**

## How Shall the Woman Pharmacist Dress?—A Helpful Talk with the Editor.

*Taste and Appropriateness and Their Effect Upon Engagement of Professional Workers—Two Pertinent Examples.*

FROM time to time articles have appeared in various pharmaceutical publications emphasizing the need of careful grooming and dressing on the part of the pharmacist. These articles almost invariably refer to the male members of the profession. Reminders are offered that nothing succeeds like success, and that modest, even quiet elegance of attire is in itself a necessity to proper maintenance of business dignity.

That the woman pharmacist has not been considered in these articles is probably accounted for by the fact that a regular department for women in the profession has not heretofore been maintained, and that men felt a natural reticence and delicacy about offering advice in such matters.

With the graduation at this season of the year of large numbers of charming young women, the question of a suitable business attire is timely, for a single mistake may unconsciously change the entire trend of a lifetime. To illustrate this two examples will suffice.

A very bright and capable young woman applied for a position where she knew help was sorely needed. She was desirous of the type of experience to be gained in this very place. Unfortunately, however, in making personal application she dressed her hair in an extreme style and wore long, showy earrings which flopped at every movement of her head. Her would-be employer at once relegated her to the list of impossibilities, because he could not conceive it possible that she could successfully serve his fastidious customers without offending their sense of the proprieties. She was obliged to seek employment elsewhere and to accept a position much less desirable. Had this young lady made application, so neatly

and quietly dressed that neither garments nor ornamentations would have attracted attention, she would have secured the position.

Again, the owner of several stores heard of a young woman who was so dissatisfied with her position that she desired to change. He went to the store expecting to approach her on the subject but his first impression was unfavorable, so he made a couple of small purchases, the while he sized the situation up mentally, as to how she would do behind his own drug counters. He paid for his purchases and went out without mentioning his errand because her lack of neatness had not come up to his standard.

A proprietor of a large city drug store was heard to give unhesitating tribute to a woman pharmacist who had been in his employ for years. He offered ready testimony to her efficiency, good judgment, and reliability. When questioned about her dress he looked surprised and smilingly said: "Well, really, I can hardly remember. I know she always looked the dignified business woman and the lady. Her costumes I know were suitable to her work, durable, and without unnecessary frills and furbelows to get taggy. Of course she wore little jewelry and only that of the simplest type. There were never any loose ends or gaping belts. She was invariably neat, immaculate, and attractively attired. That is all I remember about it." This certainly offers a desirable picture for reproduction.

Two essentials for the woman pharmacist are thoroughly comfortable shoes and a liberal laundry allowance. Serviceable laboratory aprons for use during manufacturing processes are desirable. These may be slipped on and off in a moment. A plainly marked umbrella at home and at business will avoid the embarrassment of always being at the other end of the line from this useful necessity.

### Mrs. Ednah Blanche Anderson.

THE Anderson Drug Co., of Dow City, Iowa, is an example of the best kind of a partnership, both Mr. and Mrs. Anderson are registered pharmacists, and both are working together at all times in the interest of the firm. Ednah Blanche Anderson began

systematic study of pharmacy in 1911, continuing until 1913 with the ERA Course. So successful was she in her pursuit of pharmaceutical knowledge that the following February she took the pharmacy examination of the Nebraska State Board and passed with flying colors. She was the only one of 50 applicants not college graduates to pass.

Encouraged by this signal success Mrs. Anderson, in April, took the Iowa examination, and, when the results were announced, was rated second in a class of 116, with an average of more than 88 per cent.

In speaking of her home study as an aid to her education in things pharmaceuti-

as that in pharmacy. But even though it may become monotonous, and the outlook may seem discouraging at times, when you have passed the State Board examinations and look back over the effort required as compared with the results, then you feel that it has really been worth while after all."

### A Queen City College Graduate.

MRS. CAROLINE WETTERSTROEM, of Cincinnati, Ohio, is one of the recent successful students of the Queen City College of Pharmacy. This latter school is in reality 15 years old, although it is new in name. The president, Dr. Frank Cain, formulated an original course of individual instruction with or without the use of text-books, a special graded course of lesson notes being used. The students of this school are proving to be singularly successful in passing the State Boards. Students are entered and graduated when they are ready. Regular graduating classes are not listed unless a number are ready at once.

Among the women on the teaching faculty are Prof. Maude B. Johns, who conducts her own store at the corner of Bramble and Central avenues, Madisonville, Ohio, and Assistant Instructor Miss Josephine Spinning who

MRS. ANDERSON

Mrs. Anderson says:

"I heartily agree with Mrs. Wright, of Algona, Wash., who says: 'It is an easy matter for one to obtain the material for study at home, but it takes will-power and determination to keep it up day after day and complete such a technical course

... and assist in  
 ... pharmacy and pharmaceuti-  
 ... prosperous retail drug  
 ... Miss Spinning and Miss Johns  
 ...  
 ... successfully passed the Kentucky  
 ... to try the Ohio Board after com-  
 ... work.

**A Brooklyn College Gold Medalist.**

**M**ISS MINNIE LOEB,  
 34 Third place,  
 Brooklyn, N. Y., acts  
 as the efficient manager of the  
 W. H. ... pharmacy, 224-225  
 Hamilton Avenue, corner of  
 Ludlow and Henry streets,  
 Brooklyn, this being the same  
 store where Miss Loeb started  
 her apprenticeship as a phar-  
 macist seven years ago.

After acquiring the necessary preliminary knowledge and becoming deeply interested in her work, Miss Loeb entered the Brooklyn College of Pharmacy, from which she graduated in due time with honors, winning besides the Anderson gold medal.

Miss Loeb is particularly well adapted to her work, being a fine student and skillful and conscientious in whatever she undertakes.

**Mrs. Annie Wiseman, Pioneer.**

**T**HE following interesting details concerning the work and enterprise of Mrs. Anne Wiseman have been compiled through the kindness of Hy. P. Hynson, of Hynson & Westcott, of Baltimore, Md. Prof. Charles Caspari assisted Mr. Hynson in locating some of the data given.

Mrs. Anne Wiseman conducted a drug store at the corner of Fremont and West Baltimore streets, Baltimore, previous to 1870, and was probably one of the first women pharmacists in this country. She was an English woman and had assisted her husband, an old pharmacist and a member of the Maryland College of Pharmacy Association, during his lifetime. After his death Mrs. Wiseman continued the business quite successfully for a number of years. The residences of many prominent and wealthy citizens of Baltimore were located near her store, and she had a very fine class of patronage and enjoyed the confidence and respect of her customers to a marked degree.

She prepared "Wiseman's Pulmonic Drops." As far as we can ascertain, these were composed of compound tincture of gentian, tincture of guaiac, paregoric, compound tincture of benzoin, and oil of anise. The alcoholic strength of the mixed tinctures was not great enough to hold the oil of anise in solution and the combination resulted in an unsightly mixture; it had to be "well shaken before taken." The mode of administration was "a few drops on a lump of sugar." Mrs. Wiseman showed her good commercial instincts by charging 25 cents for a half ounce of this mixture.

The store was sold in November, 1876, to Charles Caspari, Jr., who later became professor of pharmacy at the Maryland College of Pharmacy, and the well-known secretary of the American Pharmaceutical Association.

Professor Caspari afterwards moved the store from the rented building on the southeast corner, where it had been located a long time, to his own building on the northeast corner and conducted it successfully for a number of years, when he disposed of the store and retired from the retail business.

Soon after the selling of the store Mrs. Wiseman, although more than 70 years old, married a widower about her own age, who had a number of grown-up children and moved with her husband to a small town near Norfolk, Va. How long she lived after this second matrimonial venture is not known.

This store of Mrs. Wiseman's was indelibly fixed upon the

writer's mind because of the fact that, when a boy of sixteen years he visited Baltimore and, stopping in the neighborhood, ventured to go to this store and timidly ask for a stamp. A handsome clerk, rather large in stature, replied that he had none. When the boy politely asked him if he knew where one might be obtained, the clerk very positively stated "At the post office," which was at least 15 squares away. This clerk afterwards studied medicine and practiced a number of years in Baltimore and very lately died. Your correspondent could never quite forgive him for this unwarranted treatment.

**FROM ACROSS THE BORDER.**

Among the interesting women pharmacists of our sister province, Ontario, is Miss Mabel V. Bentley, whose picture recently appeared in the ERA. Miss Bentley went into the business because it presented an opening which attracted her. From her experience she is emphatic in the opinion that the long hours, especially in smaller towns, could be shortened considerably if the druggist proprietors only thought so and had the courage to live up to their convictions. She also believes that the Sunday business in these places does not call for open doors all day and that the public could and should be educated to supply much of their needs at times consistent with giving the drug store fraternity a needed Sunday rest.

Miss Bentley tells interestingly of a typical experience in which a woman customer asked her very earnestly if she didn't think the women were robbing the men of their positions by taking up drugs. Our sister from across the border promptly assured her questioner she did not and referred her to the number of millinery establishments, dress-making parlors, etc., in our cities which are now being run entirely by men.

On another occasion while in an American city a doctor who was running a drug store of his own declared to her that the store was no place for a woman, that they could not run a successful business, and insisted that men coming into a store did not want a woman to wait on them. Miss Bentley was promptly able to show that the greater majority of buyers are women and that in drug-store goods women prefer to be waited upon by women, her own experience being that in nine cases out of ten a lady can please a man also in serving him as well as a man can.

These are oft-repeated arguments against women in the profession and the counter arguments brought up in the above cases are worthy of remembering for possible use.

**ECHOES FROM THE FIELD.**

Miss Clara Hulskamp has recently been elected president of the Louisville Chapter W.O.N.A.R.D., with Mrs. Ernest May as 1st vice-president; Mrs. C. R. Manneman, as 2d vice-president; Mrs. P. H. Wallner, treasurer; Miss Jeanette Schweitzer, secretary; Mrs. K. O. Spelger, chairman of press committee. We are glad to report that Miss Hulskamp's brother who has been so ill is recovering.

Boston Chapter No. 1, W.O.N.A.R.D., has re-elected Mrs. Mary S. Cooper as its president, with Mrs. Truman Hayes as 1st vice-president and Mrs. I. P. Gammon as 2d vice-president. Mrs. Mary Green will serve as recording secretary; Mrs. Gertrude Bartel corresponding secretary; Mrs. Gertrude Ernst as treasurer, and Mrs. Lillian Connolly as auditor. The excellent work that Mrs. Cooper has done during the past year is a matter of congratulation to the members.

A great many are already saving their vacation time and money to attend the N.A.R.D. Convention during the week of August 17. Everyone who goes is sure to feel splendidly repaid for the effort.

The charming daughter of Mr. Charles Rehfuess, Miss Leonette Rehfuess, has just graduated from Temple University, Philadelphia.

Members of St. Louis branch of the American Pharmaceutical Association and their wives and friends were escorted through Shaw's Garden by instructors of the botanical garden. The delegation was headed by President J. A. Wilkerson and Secretary Julius C. Hoester.

## MOSTLY PERSONAL

### The Lessons of Seventy Years.

**O**LIVER F. FULLER, of Fuller & Fuller, wholesale druggists of Chicago, discusses his 70 years in the drug business in a recent issue of *System*. Among his interesting points are the following: "Most important of all these milestones along the path business is taking is probably the invisible one, back 20 years or more, which points the beginning of specialization. In our line, for instance, we formerly made the tinctures, the plasters and the powders. Now specialized machines, in the hands of specially trained men, working in specially built factories, do this work before we ever see the goods. So it is in all business. We are now specialists. This coupling of specialization with shorter hours is exceedingly important, for as a result we do not learn the relative importance of our work with the old-time thoroughness. In 1845, I, as a salesman, made plasters I sold over the counter. Today the salesman only sells. Hence, salesmen in '45 knew more about plasters

O. F. FULLER.

than most salesmen do today. This change also affects executives and owners. Luckily, business methods are now being collected and written down. The experience of hundreds is ready in print for the man who will read intelligently for an hour a day—one hour out of the six or seven given him by the shorter work days. He can thereby know all business and besides be a specialist at one task. By this short application he multiplies my opportunities a thousandfold. Hence, there is no excuse for not taking the time to study out the angles to our work which have been lopped off by specialization, no need to avoid thinking out how activities formerly in our field are progressing. It is my advice, as I look back over my 70 years in business, to give some of the time freed by our shorter hours to this type of study. At least let us do so until we are sure we are on the right track. The present high distributive costs should warn us that we may be on the wrong track. This advice applies to all at work in this country, from minor clerks to presidents in charge of millions. Such is my advice. I am willing to take my own medicine. It may be that we old men are too conservative for today's business. But the decades often carry a wise lesson."

—**G. Henry Sohrbeck**, whose drug store at Third avenue and 16th street, Moline, Ill., was a landmark of the city for years, celebrated his 50th anniversary as a druggist on May 19. During this time he has filled more than 226,000 prescriptions—originals—not counting those which have been refilled. In the window of the new store in Fifth avenue—for a new establishment, after complete remodeling and renovation, was thrown open last November—Mr. Sohrbeck displayed on his anniversary day his huge prescription books, together with the first prescription ever filled by the founder of the business, J. S. Richards, with whom Mr. Sohrbeck began as a partner on May 19, 1864. The store 10 years later was changed from Second to Third avenue and 16th street, where it remained for

nearly 40 years. In November last the partnership between Messrs. Henry and George Sohrbeck was dissolved, and Henry Sohrbeck opened a new store in Fifth avenue, after having spent 39 years and 6 months in the old Third avenue pharmacy. In the window with the prescriptions was displayed the first scale used by the founder of the business when he went to Moline from New York in 1854. It is a large scale nearly three feet in height, and offered a striking contrast to the modern weighing equipment of the new store.

—**George R. Tompkins** has been made assistant manager of the New York branch of Parke, Davis & Co. Mr. Tompkins comes to this position from that of traffic manager, in which capacity he was in charge of the order and shipping entries at this branch. He has spent practically all his business life with Parke, Davis & Co. and has been at different times in charge of various of the New York branch Departments. He started with this company in December, 1885, as a mail boy. Born and brought up in New York City, as a boy his habit was Greenwich village and he attended and graduated from School No. 3 at Grove and Hudson streets. His home is now in the Washington Heights section. Mr. Tompkins has, in a way, grown up with the New York branch. This first branch of Parke, Davis & Co. was opened in January, 1881, at 60 Maiden Lane. Four years later Mr. Tompkins undertook his arduous duties in the capacity above mentioned. He went with the company to 90 Maiden Lane and is now located at its Hudson street address. His training in its employ has been broad and varied and has included every department except finance. Needless to say, Mr. Tompkins has a wide acquaintance throughout the drug trade. He is a member of several downtown clubs—the Traffic and Wool. He is also a member of the Sons of the American Revolution.

GEORGE R. TOMPKINS

—**Edwin Yates Webb**, the new chairman of the House judiciary committee, is the youngest chairman this Congressional committee has ever had. He is a native of North Carolina, where he was born May 23, 1872, and was admitted to the bar at the age of 22. He was elected to the 58th Congress, when barely 30 years of age, and has since served continuously. He is the author of the interstate liquor act, which became a law over the veto of President Taft, the act giving each State the right to absolutely control the liquor traffic as it wishes. He is also the author of the law which requires patent medicine manufacturers to display on the labels or cartons of medicine the proportion of morphine, opium, cocaine, alcohol, or habit-forming drug contained in the medicine. Mr. Webb is married, and has three children, and Mrs. Webb is one of the most popular of the younger hostesses in Washington.

(EDMONSTON PHOTO Washington, D.C.)

—**Beverly T. Galloway**, newly elected as dean and director of the New York State College of Agriculture at Cornell University, was for many years at the head of the Bureau of Plant Industry of the United States Department of Agriculture, and since 1913 has been the Assistant Secretary of Agriculture. He began his work for the Government in 1887 as assistant pathologist in the Section of Mycology, a department with four or five men working on an appropriation of not to exceed \$7,000 a year; now as he steps out of the Government employ he leaves behind him in the Bureau of Plant Industry nearly 3,000 men employed in a work which costs nearly \$3,000,000 a year, and all this has been accomplished in 27 years. It was largely through Dr. Galloway's instrumentality that the four big bureaus of Plant Industry, Forestry, Chemistry and Soils were formed and brought to their present usefulness. He is a native of Millersburg, Mo., and in early life did considerable toward qualifying as a pharmacist. He early attracted the attention of Prof. Samuel M. Tracy, and through Prof. Tracy's assistance Galloway was enabled to finish his education at the University of Missouri, where he graduated from the Agricultural College after four years of study.

—**A. E. Wills**, who has been managing representative of H. K. Mulford Co. in Boston and vicinity for the past few years, sailed June 12 for London, Eng., to assume direction of the Mulford interests in Great Britain. Mr. Wills was born in Belleville, Ontario, and graduated from the high school of that city. Later he was apprenticed to the retail drug business with R. Templon & Co., of the same city. Afterwards he entered the service of W. Lloyd Wood, Toronto, and joined the Mulford force in 1902 as traveling representative in Ontario and Quebec. He afterwards represented the Mulford Company in Toledo, Ohio, and vicinity, in which field he was eminently successful, but was transferred to Boston to give him wider scope for his abilities. He has made many friends in Boston and is deservedly popular in drug circles, who, although pleased that he has earned promotion, regret his absence from their city. Mrs. Wills and daughter accompanied him and it is a foregone conclusion that he will repeat his former success as an organizer and business-getter in the British metropolis. Mr. Wills is succeeded in Boston by W. S. Tyson, formerly branch manager for the Mulford Company in Kansas City, Mo.

—**President Louis K. Liggett**, of the United Drug Co., in speaking of business conditions, said that while the sales of the company had shown an increase every month of this year, the per cent. of increase during April was the smallest of any month since the company was started. The percentage was 12.6. Since the first of the year the per cent. of increase has been slightly over 18. President Liggett states that for the first four months of the current calendar year the company received the largest number of orders in its history, the gross sales of manufactured goods showing an increase of 18.1 per cent. over corresponding period last year. A change for the better in general business conditions is anticipated by Mr. Liggett before the close of the present year, but until that time arrives the United Drug Co. will take no steps to further expand its business on a large scale such as opening new stores and making additions to plant account.

—**Jasper Fenner**, of Coldwater, Mich., who has circled the globe twice during the past eight years, and has managed drug stores in both China and Japan, visited friends in Coldwater in May. He was married on May 28 to Miss Anna Brill in Sharpsburg, Pa., and then the young couple started for San Francisco by automobile where they will sail for Tokio, Japan. Mr. Fenner began life as a farm boy, then studied pharmacy and graduated from the College of Pharmacy, University of Michigan. He is one of the best-known American business men in the Orient and is at the head of a wholesale drug house in Tokio.

—**Ira W. Comstock**, well known in the drug business in Connecticut, has purchased a third interest in the old-established New London drug firm of the Nichols & Harris Co. Mr. Comstock has been elected president and general manager, and H. Ernest Harris remains as treasurer. Mr. Comstock was for four years treasurer of the Tracey Co. and for the past 10 years has been president of the Comstock Co., which is putting out a well-known saline laxative. He will still manage this company in addition to his work with the Nichols & Harris Co.

—**Oscar A. Sebastian**, a Cincinnati druggist, and his wife, who was formerly Miss Dorothy Durand, daughter of Dr. J. A. Durand, of Cincinnati, have just announced that they had been married five years ago at Springfield, Ohio, while Miss Durand was visiting relatives there. Following the announcement, which naturally took friends of the couple off their feet, Mr. and Mrs. Sebastian departed for the East on a belated honeymoon trip. Mr. Sebastian has a prosperous drug business at Fourth and Main streets in Cincinnati.

—**J. T. Selman**, who for the past three years has been connected with the prescription department of the Elkin Drug Co., Atlanta, Ga., has purchased the W. P. Smith pharmacy at 116 Capitol avenue. The store has been remodelled and will be operated as Selman's pharmacy. Mr. Selman was "raised" in a drug store, as his father, J. L. Selman, of Douglasville, has operated one of the best drug stores in the State there for a number of years. Young Mr. Selman is a college graduate.

—**C. C. Wilkins**, a Chicago druggist, of 127 West North avenue, was held up and robbed recently by two gunmen, cash and jewelry to the total value of \$2,000 being taken from him. As the men left the store Wilkins seized a shot-gun from behind a counter and gave chase, firing as he ran. The robbers returned the fire with their revolvers, but Wilkins continued the pursuit and, as the men reached Wells street, fired his final shot. One of the robbers fell to the sidewalk with a buckshot wound in the back, while the other jumped on a car and escaped.

—**James P. Derby**, proprietor of the drug store at 782 Main street in the Fitchburg (Mass.) Hotel block, is the dean of Fitchburg pharmacists. June 1 was the 47th anniversary of his opening a drug store in the American House block in that city, later removing to a store at the corner of Main and Prichard streets. After conducting a drug store in Boston for some years Mr. Derby returned to Fitchburg, where he has since been engaged in business.

—**Edmund S. Thatcher**, well-known Milwaukee druggist, located at 334 Ogden avenue, has been married to Miss Eugenie Trumpff, a prominent young society lady of Milwaukee. The wedding service was attended only by the members of the immediate family and relatives and was followed by a dinner. The bride was attended by her sister, Mrs. Enno Schmidt, as matron of honor, and J. Stanley Thatcher, a brother of the groom, was best man.

—**Walter Henrion**, proprietor of a drug store at Central avenue and Main street, Wichita, Kan., distinguished himself at the recent meeting of the Kansas Ph.A., and made a record as a spellbinder of the first class. Mr. Henrion entered the convention after it had voted to meet next year at Independence, but after his speech, inviting the druggists to meet at Wichita next May, another vote was taken, and not a single ballot was cast against his proposal to change the meeting-place to Wichita.

—**Charles Harding**, of Cincinnati, president of the Ohio Valley Druggists' Association, attended the recent meeting of the organization held at St. Marys, Ohio, presiding over its deliberations. There were a number of interesting addresses, including talks by Governor James M. Cox and Congressman G. H. Goeke, the latter speaking on the price-maintenance bill now before Congress. While in St. Marys Mr. Harding was the guest of Theodore Seiwert, at the Idlewild Club.

—**W. T. Black**, of Kansas City, presided at the sessions of the Mississippi Valley Drug Jobbers' Association in St. Louis in the latter part of May, when about 60 wholesale druggists were present. New laws, the Harrison bill, the Boylan and Walters bills in New York State, and the Stevens and Metz (price maintenance) bills were discussed. M. Cary Peter, of Louisville, was toastmaster at the banquet. This was the fifth conference of the kind to be held in St. Louis.

—**H. H. Whyte**, sales manager for the H. K. Mulford Co., 426 South 13th street, Philadelphia, accompanied by Mrs. Whyte and Master Lawrence Whyte, sailed on the steamer *St. Paul* June 12 for London, Eng., where Mr. Whyte will direct some changes in the London branch of this concern. Mr. Whyte returns the latter part of July, but Mrs. Whyte and Master Lawrence will spend the Summer in Scotland.

—**Dr. Charles T. George**, a prominent retail druggist of Harrisburg, Pa., and proprietor of the pharmacy at 1301 North Third street, that city, recently underwent a very serious

abdominal operation, but his condition is reported as being steadily improving. Dr. George is 69 years old, and aside from being the oldest pharmacist in Harrisburg, was for many years secretary of the State Pharmaceutical Board.

—**Louis Webber**, a druggist at 3463 Lorimer street, Denver, Col., was held up in his store recently by three highwaymen who took his watch and the contents of the cash register, and fled. The men entered the store as Mr. Webber was about to close it for the night, and while one held him the others tied him up with towels and handkerchiefs, after thrusting a gag in his mouth.

—**Dr. Charles H. Kimberly**, for a number of years professor of analytical chemistry in the Department of Pharmacy with the Medico-Chirurgical College, Philadelphia, has resigned as a member of the college faculty. He was banquetted by his fellow members of the faculty at the Union League, Philadelphia, and was presented with a massive silver loving cup, inscribed with the names of the diners.

—**W. G. Peterson**, a druggist employed at Partin's up-town drug store, High and Canal streets, Petersburg, Va., was shot and seriously injured by negro hold-up men who entered the store and snatched the cash from the day's sales from the register. Mr. Peterson hurried after the thieves and just at the door one turned and fired three shots at the druggist, all three taking effect.

—**I. N. Morton**, founder of the Wright Drug Co., Milwaukee, has been visiting the Wisconsin city recently, with Mrs. Morton. In 1858 Mr. Morton opened a drug store in the present location of the Wright Drug Co. pharmacy, and a few years later S. A. Eckstein began working for him as an errand boy. Today Mr. Eckstein is president of the company, and Mr. Morton resides at Tampa, Fla.

—**W. S. Tyson**, who has had supervision of salesmen in Kansas City and vicinity for H. K. Mulford Co. for the past four years, has been transferred to Boston to succeed A. E. Wills. The latter will shortly sail for London, England, to assume charge of the Mulford interests in Great Britain. W. L. C. Nichols, of Detroit, Mich., has succeeded Mr. Tyson in Kansas City.

—**S. B. Penick**, until recently with the drug importing house of J. L. Hopkins & Co., as treasurer, is the head of a new company at Marion, S. C., which will deal in roots, barks, herbs and seeds under the firm name of S. B. Penick & Co. The firm will have a New York office at 38 Park place. Mr. Penick is president, A. Blanton vice-president and W. W. Guy secretary.

—**Dr. J. W. Burns**, of Soudan, Minn., formerly of Oakfield, Wis., has disposed of his interests in the Burns Brothers' drug store in Oakfield to his nephew, Walter C. Burns, a recent graduate of the pharmacy department of the University of Wisconsin. Thomas Burns, a brother of Dr. Burns, is the other partner in the business. The store has been in operation since 1878.

—**Oscar C. Ebinger**, a druggist at 2659 West Chicago avenue, Chicago, was alone in his store at night recently when two men entered, pointed revolvers at him, and ordered him to "Throw up your hands!" He did so, and the men took \$90 from the till of the cash register and ran out of the place. The police were notified, but the men made good their escape.

—**Herbert B. Harding**, secretary and treasurer of the Humphrey's Homeopathic Medicine Co., and the president of the Drug Club, sailed on the *Vaterland* of the Hamburg-American line for a six weeks' holiday in Paris and in Switzerland. Mrs. Harding accompanied him. This is the first long vacation Mr. Harding has taken in a number of years.

—**Alvin H. Korn**, an Easton, Pa., retail druggist, was married on June 2 to Miss Beulah E. Brown, of 221 N. Ninth street, Allentown, Pa., by Rev. B. L. Romberger. After the ceremony the couple left for an automobile trip to Easton, where they took up their residence in their newly-furnished home at 1131 Northampton street.

—**Charles A. West**, vice-president of the Eastern Drug Co., and chairman of the legislative committee of the N.W. D.A., sailed for Europe, with Mrs. West, on the return trip of the *Aquitania*. Mr. and Mrs. West expect to be absent about three months, and will spend most of their time in Norway, Sweden and Russia.

—**Frank J. Butler**, of Pontiac, Ill., entertained the members of the State Board of Pharmacy recently at a dinner at the Phoenix Hotel, Pontiac. Those present were: President, F. T. Provost; vice-president, L. L. Mrasek; J. B. Michels, El Paso, and T. D. Gregg, Harrisburg. Mr. Butler is a member of the State Board.

—**Fay M. Sieg**, a retail druggist, 501 North Noble street, Indianapolis, was held up recently by four men, but fought them off. He bought two revolvers to protect himself and some one broke into the store and took one of the revolvers. On the night of June 7 some one entered the store again and took \$111 and valuable papers.

—**W. B. Allen**, a Palmyra, Mo., druggist, was painfully burned recently by the explosion of alcohol, and but for a fortunate accident might have been burned to death. He attempted to pour two ounces of alcohol into a compound over an alcohol flame, when the liquid exploded, spattering him from head to foot with the burning fluid.

—**Harry A. Moore**, president of the Pitman-Moore Co., Indianapolis, has been named by Gov. Samuel L. Ralston to represent the State of Indiana at the International Veterinary Congress in London, Aug. 3-8. Mr. and Mrs. Moore sailed from New York for Europe June 12 and will spend the Summer abroad.

—**Roy Williams**, pharmacist at Friedenburt's pharmacy, Winfield, Kan., won the first prize at the recent meeting of the Kansas Ph.A. for the best display of products made at the prescription counter. Mr. Williams had six entries in the display. The judges were J. M. Brunt, Charles Joslin and A. M. Petro.

—**William C. Alpers**, dean of the Cleveland School of Pharmacy, read a paper on "The New Pharmacopoeia" at a recent meeting of the Cleveland Academy of Medicine. The paper was received with great favor and was discussed at some length by leading physicians and pharmacists.

—**E. B. Patton**, druggist at Waupun, Wis., recently celebrated the 30th anniversary of his connection with the drug business in Waupun by holding a reception in his newly re-furnished and redecorated store. Exactly 1800 people visited the store, and each visitor was given a souvenir.

—**E. M. Neal**, of the Spurlock-Neal Co., wholesale druggists of Nashville, Tenn., was a recent visitor in New York City, doing extensive buying of holiday goods. The Spurlock-Neal Co. makes a specialty of toys and similar holiday goods, and this is the wholesalers' buying season.

—**Charles J. Sittel**, who has been connected with the McPike Drug Co., for many years, was a recent New York City visitor. Together with Thomas G. Hatcher, of Kansas City, he has entered the drug and chemical brokerage business with headquarters in Kansas City.

—**Henry E. Horn**, proprietor of the E. A. Horn pharmacy, at 65 Main street, Oshkosh, Wis., was married in Milwaukee recently to Miss Sarah J. Frazer, daughter of Mr. and Mrs. Robert E. Frazer, of Milwaukee. Mr. and Mrs. Horn visited the Rexall convention at Atlanta.

—**George L. Baldauf**, the Milwaukee druggist, has awarded contracts for the erection of a new store at North avenue and 35th street. The store and entire building will be modern in every respect and will be one of the finest on the Milwaukee Northwest side.

—**L. A. McKnight**, a druggist at Rosendale, Wis., for the past 18 years, has moved to Fond du Lac, Wis., where he and his wife will make their future home. H. O. Lengelsen, a partner in the McKnight pharmacy at Rosendale, is now conducting the business.

—**Dr. Charles H. Kimberly**, professor of analytical chemistry at the Medico-Chirurgical College, Philadelphia, since 1907, resigned on June 1 to become a member of the staff of the Bureau of Chemistry, Department of Agriculture, Washington, D. C.

—**G. L. Vander Veer**, advertising manager for the Norwich Pharmacal Co., of Norwich, N. Y., recently paid a hurried visit to the trade in New York while en route to the American Medical Association meeting at Atlantic City.

—**Clyde V. Hudson**, honor man of the California College of Pharmacy, class of 1913, who has just completed his post-graduate course, has accepted a position as chemist with the Langley & Michaels Co., of San Francisco.

— **William A. Carpenter**, of Philadelphia, entertained 25 members of the Philadelphia Drug Club at the Summer clubhouse of the Delaware Saengerbund recently. A chicken and waffle dinner was a feature of the day's programme.

— **Harry S. Noel**, a member of the executive staff of Eli Lilly & Co., Indianapolis, was married June 10 to Miss Nellie Kathleen Covert. Mr. and Mrs. Noel will be at home in Indianapolis after Sept. 1 at 242 West 32d street.

— **Prof. S. F. Acre**, of the department of chemistry of Johns Hopkins University, Baltimore, has been appointed chief of the chemical division of forest products laboratory of the Forest Service, U.S. Department of Agriculture.

— **Goddard Gehring**, who is one of the owners of the Southwestern Drug Co., and formerly a druggist of Douglas avenue, Wichita, Kan., but who went to Los Angeles, Cal., about two years ago, has returned to Wichita.

— **Miss Irma C. McGrath**, daughter of Mr. and Mrs. Robert McGrath, of Lafayette, Ind., was married to William Hanley, Indianapolis June 9. Mr. Hanley is employed by the Eli Lilly Company, Indianapolis.

— **Theodore R. L. Loud**, who for a number of years was connected with the drug and chemical trade and with the pharmaceutical press, is now associated with the Butterick Trio in the New York offices.

— **Burton J. Cassady** has been appointed by President Wilson as postmaster at West Terre Haute, Ind. Mr. Cassady is a member of the Indiana State Board of Registration and Examination in Pharmacy.

— **R. T. Gibbs** is the president of the newly incorporated Louisiana-Texas Drug Co., of Shreveport, La., which will be open for business as a wholesale house on Sept. 1, if the present plans are carried out.

— **Edward Trippe**, Philadelphia representative of Ungerer & Co., of New York, was married recently to Miss Alice Pattison, of Easton, Md. Mr. and Mrs. Trippe will make their home in Germantown.

— **Edouard S. Houle**, pharmacist at the Lowell pharmacy, Lowell, Mass., was married in Compton, Quebec, recently to Miss Gilberte St. Marie, the daughter of Mayor St. Marie, of Moss River, Quebec.

— **F. Dieckerhoff** is the head of a new wholesale drug company in Havana, Cuba, under the firm name of F. Dieckerhoff & Co. Dr. C. J. Goltz and F. Walther are associated with him.

— **Herman Rosenbaum**, the junior partner of the Mt. Vernon, Ind., drug firm of D. & H. Rosenbaum, has been re-elected unanimously as a member of the school board of his city.

— **Otto J. Biebinger**, secretary of the Mallinckrodt Chemical Works, with Mrs. Biebinger, and L. O. Ellis, Mexican representative of the M.C.W., were New York visitors recently.

— **Charles F. Cutler**, president of the Eastern Drug Co., who has been abroad for three months with Mrs. Cutler, returned to New York on the maiden trip of the *Aquitania*.

— **W. J. Sturgeon**, the Kittanning, Pa., druggist, and member of the executive committee of the Pittsburgh Ph.A., has purchased a drug store in Ford City as an investment.

— **Howard B. French**, of Philadelphia, was a delegate from the Philadelphia Chamber of Commerce to the Lake Mohonk Conference on International Arbitration.

— **George D. Feidt**, president of George D. Feidt & Co., manufacturing chemists of Philadelphia, is reported as convalescent from a recent illness.

— **H. H. Whyte**, sales manager for the H. K. Mulford Co., of Philadelphia, sailed for Scotland early in June on business for his company.

— **Walter Bade**, formerly of Plymouth, Wis., now of Billings, Mont., is to return to Plymouth with his wife, and open a pharmacy in that city.

— **Robert J. Gates**, of New York City, has become the American representative of the Hamburg firm of Schutz & Co., dealers in crude drugs.

— **Hugh H. O'Rourke**, a Worcester, Mass., druggist, has announced his candidacy for the Democratic nomination for Congress in his district.

— **Charles E. Mathews**, manager of Sharp & Dohme's

Chicago branch, was a recent visitor to French Lick Springs, Ind., on an outing.

— **Frank W. Fuller**, proprietor of Fuller's pharmacy, Pittsfield, Mass., has been married to Miss Lura H. Hager, at Brattleboro, Vt.

— **Cassius M. Church**, for years a druggist in Belvidere, Iowa, is a candidate for the Boone county treasurership as a Republican.

— **J. M. Miller** is named as one of the incorporators of the Addline Medicine Co., a new \$25,000 Columbus, Ohio, corporation.

— **Secretary B. E. Pritchard**, of the Pennsylvania Ph.A., was a visitor in New York City last month.

— **F. W. Meissner**, a retail druggist of Laporte, Ind., has been several weeks in Philadelphia.

— **John W. Davis, Jr.**, a Dorchester, Mass., druggist, lost his father by death recently.

— **Charles Gietner** has been made president of the Missouri Board of Pharmacy.

## OBITUARIES

### Henry H. Lyman.

Henry H. Lyman, president of the wholesale drug house of Lyman's, Ltd., Montreal, one of the best-known drug houses in Canada, was a victim in the "Empress of Ireland" disaster in the St. Lawrence River, May 29. Mrs. Lyman also died in the wreck. Mr. Lyman was a native of Montreal, where he was born Dec. 21, 1854. He was a B.A. of McGill University from which he was graduated in 1876 with the Logan medal. His business career began with Lyman's, Clare & Co., wholesale druggists, of Montreal. When he became a partner in 1895 the name was changed to Lyman, Sons & Co., and later when the firm of Lyman Bros. & Co. was converted into a stock company he became vice-president. On the death of his father he took the presidency of the Toronto house as well as the senior partnership in the Montreal concern. He was one of the organizers of the Imperial Federation League in Canada, vice-president of the Graduates' Society of McGill, a fellow of the Royal Geographical Society and of the Royal Colonial Institute, and was life governor of the Montreal General Hospital. The firm has been a member of the N.W. D.A. for many years. Mr. Lyman was actively interested in many other organizations, and in the development of trade interests in Canada; was a military veteran with a long service record and at the time of his retirement in 1891, was senior major of the Royal Scots, now the Royal Highlanders.

### David L. Bradt.

David L. Bradt, for years well and favorably known by the druggists of New England, died recently at Passaic, N. J., from acute Bright's disease. He was born in November, 1858, in Litchfield, N. H., and after leaving the Massachusetts College of Pharmacy, was employed for several years at the old Theodore Metcalf store in Boston, later engaging in business in Worcester. He was known to the trade as the organizer of the Apothecary Publishing Co., and for three years was its treasurer. Since 1909 he had been interested in the manufacture of fancy paper, and at the time of his death he was operating a factory of this kind at Passaic.

### Burtus Overton.

Burtus Overton, a prominent druggist of Antioch, Ill., dropped dead recently just after arising from bed. He was village clerk of the corporation and had lived in Antioch for many years. On the day of his funeral all the stores and other places of business were closed as a mark of respect, and the services were unusual in that a Methodist clergyman preached the funeral sermon at the house, a Catholic priest officiated at the grave, and the supervision of the services as a whole was in the hands of the Masonic order.

— **James J. Ottinger**, of Philadelphia, who for 34 years conducted a drug store and manufacturing chemical plant at 20th and Spruce streets, that city, died last month from pneumonia. He was a native of Mt. Holly, N. J., a graduate of the

Philadelphia College of Pharmacy, and later the manager for John Wyeth & Son. He later came to New York City as the manager for the Caswell, Hazard Co. Thirty-four years ago he went back to Philadelphia and opened a store at 20th and Spruce streets, where in later years he numbered among his patrons Gen. U. S. Grant, President McKinley, Theodore Roosevelt and George W. Childs. He was a member of a number of fraternal and trade organizations.

—**Charles Woodberry**, a former president of the Beverly (Mass.) Hospital, and one of the early druggists of Beverly, died recently, aged 67 years. He was a native of Beverly, and at the age of 20 opened a drug store in the town, which he carried on for a number of years, although in recent years he had not been identified with the business. He was active in the civic life of the city, eminent in Masonry, and while master of Liberty Lodge brought about the relationship between Constitution Lodge of England, Alexandria Lodge of Alexandria, Va., and Liberty Lodge of Beverly, whereby each lodge annually sends greetings to the other two. Mr. Woodberry was a warden of St. Peter's Episcopal Church.

—**Frank E. Bahlman**, president and treasurer of the Bahlman-Frederich Chemical Co., of Cincinnati, died at his home in that city recently after a two days' illness, brought on by the excessive heat which marked the week of June 7. He was stricken by the heat while at work in his office on June 9, but was able to make his way home, where he became unconscious, failing to rally. Besides his widow, he leaves a son, William Bahlman, who was graduated last June with honors from the Sheffield Scientific School.

—**John J. Noble**, dean of the Newton druggists, in which city he had carried on business for 46 years, died recently as the result of a shock. He was 63 years old. He was a native of Augusta, Me., and as a young man secured employment in a drug store in Brookline, and later worked in Charlestown. He opened a drug store in Newton in 1868, almost opposite the site of the store, at 1217 Center street, where he had been located the last 16 years. He was a member of the Massachusetts State Pharmaceutical Association. He leaves a wife and a son.

—**James A. Rogers**, retired, and for many years one of the best-known druggists in West Virginia, died recently after a two weeks' illness. He was in his 59th year. He was born in what is now Charleston where for many years he conducted the store founded by the late James Henry Rogers, which had the unique honor of being the first pharmacy in the State of West Virginia. The Elks were in charge of the funeral arrangements.

—**J. B. Raboteau**, 84, a retired St. Louis druggist, died the early part of June at Cape Henry, Va., after an illness of several years. He had been in Norfolk two years. He retired from the drug business in St. Louis about six years ago. The store, formerly facing the Union Market, is now at Broadway and Washington avenue and is one of the three Judge & Dolph shops.

—**Joseph T. Hawkins**, for more than 40 years a retail druggist of Mobile, Ala., is dead after an illness of two years' duration. He was in business first at Monroe and Dearborn streets and later at Dauphin and Cedar streets. He was a prominent member of the Alabama Ph.A., was a Mason and affiliated with other fraternal organizations.

—**Joseph Willis**, 20, a pharmacist of Canton, Ohio, was drowned near that city in Myers' Lake while trying to save the life of a companion with whom he had been canoeing. He and Joseph Fitzgerald were out on the lake in a canoe when the vessel capsized. Willis clung to the canoe and also held his companion up until Fitzgerald was pulled from the water, when he sank from exhaustion, and was drowned.

—**Col. John Ewing**, a Gettysburg veteran, whose he was colonel of the famous 155th Regiment of Pennsylvania Volunteers, is dead at the age of 82. After the war he engaged in business as a member of the wholesale drug firm of Harris & Ewing, of Pittsburgh, but afterwards left the drug business to become president of the Canonsburg Iron & Steel Co.

—**William T. Totten**, a widely-known druggist and the organizer of the Yankee Christmas Club, is dead at the home of his son, Harry G. Totten, 5941 Webster street, Philadelphia, after an illness of only two days. Mr. Totten was 69 years old, a graduate from Central High School, a 32° Mason and a member of the Knights Templars, besides being a member of the Odd Fellows.

—**John Cline**, 27, who was engaged in the drug business

with his father in Marion, Ill., is dead, together with his little son, Francis, following an automobile accident. The car was struck by a freight train at a blind railroad crossing between Herrin and Marion. The boy was killed instantly, the father dying in the hospital about an hour after the accident.

—**George A. Shepard**, who was connected with the management of the Maltine Company with the late Timothy W. Woodruff, died May 21 at his home in Brooklyn. He was 55 years old, was a native of Huntington, L. I., was formerly in the drug business and later with Parke, Davis & Co. Mr. Shepard's wife died several months ago.

—**James W. Pritchard**, 60, a former member of the Pennsylvania Legislature, is dead. For 25 years he was a representative of the Robert Schumaker Drug Co., and for 15 years of the Albany Drug Co., of Albany, N. Y. Death resulted from injuries received by being run over by a wagon.

—**Horace E. Andrews**, 50, for 20 years a druggist in Hamilton, Mass., is dead of heart trouble. He was affiliated with a number of fraternal organizations, and was one of the best-known men in Hamilton. He was a graduate of the Massachusetts College of Pharmacy.

—**Charles H. Price**, a prominent druggist of Salem, Mass., president of the Holyoke Mutual Life Insurance Co., and a director of several Salem banks, is dead. He conducted one of the leading drug stores in Salem for 60 years, retiring in 1905. He was 82 years of age.

—**Walter J. Burke**, 35, of 138 Norwell street, Dorchester, proprietor of a drug store at 122 Harvard street, is dead following an operation. He was a native of Pittsfield, Mass., and a graduate of the Massachusetts College of Pharmacy.

—**James B. McFatrigh**, M.D., president of the Murine Eye Remedy Co., of Chicago, and at the time of his death the president of the Board of Education of that city, is dead.

—**Ovilla J. A. Dufault**, proprietor of a drug store at 703 Main street, Pawtucket, R. I., committed suicide recently by taking poison in the rear room of his store. He had been in ill-health and was suffering from melancholia.

—**William Wardell**, 53, a pioneer druggist of Grand Rapids, Mich., and for a number of years connected with the drug firm of Mills & Lacey at 8 Monroe street in the '70s, is dead. He was a native of Battle Creek.

—**Mrs. Augusta Schorse**, 70, widow of Otto Schorse, late druggist of Milwaukee, and mother of Gustave Schorse, a druggist of Milwaukee, died on June 13. She leaves nine children, all residents of Milwaukee.

—**Harry J. Hughes**, 38, for the past six years manager of the drug department of the Big Store at Reedsburg, Wis., died recently. He was a well-known singer and was exceedingly popular in Reedsburg.

—**Edwin J. Woeffle**, 36, a graduate of the Brooklyn College of Pharmacy, and a member of the Kings County Ph.S., died recently following an operation for appendicitis. He was a native of Trenton, N. J.

—**S. L. Tate**, of Tate & Childress, Sweetwater, Tenn., is dead from pneumonia. He was thought to be on the road to recovery when his disease took a turn to the worse. He leaves a young widow.

—**Charles T. Hamilton**, 50, a manufacturing druggist of Atchison, Kan., is dead. He was a close friend of Speaker Champ Clark and for a long time prominent in Missouri politics.

—**R. Greenberg**, a Confederate veteran, and the father of Albert Greenberg, manager of the Benjamin Pharmacy Co., Atlanta, Ga., is dead after an illness of several weeks.

—**William C. Reycroft**, 47, for 15 years proprietor of a drug store in Massachusetts avenue, Cambridge, Mass., is dead after a month's illness. He was a prominent Mason.

—**Harry T. Crutcher**, a Fresno, Cal., drug clerk, 33, committed suicide with chloroform recently. Despondency over the death of his wife is held to be the cause.

—**Victor Vonderheide**, 30, a representative from Montgomery county, Ohio, in the Legislature, and also a pharmacist, is dead after an illness of six weeks.

—**Mrs. Lilly B. Sparks** died suddenly at the family home in Anderson, Ind., June 4. She was the wife of Walter Sparks, a druggist of that city.

—**Dana Rhodes**, 75, a resident of Groton, N. Y., for many years as a druggist and as postmaster, is dead following injuries received in a runaway.

—**Otto F. Traubel**, druggist, Jefferson and Clark avenues, St. Louis, is dead, aged 43.

## NEWS FROM ASSOCIATIONS

### ANNUAL CONVENTIONS.

- A. Ph. C.*—Detroit, Mich., Aug. 24-29.  
G. M. Befinger, president; J. H. Beal, secretary.
- N. A. R. D.*—Philadelphia, Pa., week of Aug. 17.  
James F. Finneran, president; T. H. Potts, secretary, Chicago.
- N. W. D. A.*—Indianapolis, Ind., week of Sept. 21.  
Geo. W. Lattimer, president; J. E. Toms, secretary, New York City.

### A. A. Ph. C. Annual at Boston.

**B**OSTON, June 20.—The American Association of Pharmaceutical Chemists held its seventh meeting here during the last week of May, and carried out a long programme of business and pleasure. Beginning on Monday morning, with a meeting of the board of directors, business sessions were held on four successive days, and 22 different reports on trade matters were submitted for discussion and action. The last two days of the week were given over wholly to sightseeing, while not a little bit of pleasure was programmed for the other days.

The real business of the convention began on Tuesday morning, when the association received its formal welcome to the city. Dr. Pitts E. Howes, a former member of the State Board of Registration in Medicine, represented the National Eclectic Medical Association, and took occasion to speak a word of defence for those physicians who dispense their own medicines, saying they use the very best drugs, and thoroughly know their use.

Charles A. West, of the Eastern Drug Company, represented the National Wholesale Druggists' Association, in which he is chairman of the legislative committee. He spoke of some of the important measures now pending, and endorsed the Harrison bill, now before Congress. He said that pending amendments to the pure food law made the outlook somewhat uncertain, and manufacturers were uncertain now whether it would be legal for them to have goods out after May 1, 1915, bearing the present form of label.

James F. Finneran, of Boston, president of the National Association of Retail Druggists, called attention to the multiplicity of proprietary articles which a druggist must carry, and yet for which there is little call. He deprecated the practice of some manufacturers sending out "physicians' samples" which are different from the goods sold to druggists, and suggested that there be uniformity in them. Then he took issue, in a gentlemanly, but firm manner, with the stand of Dr. Howes, the first speaker, in the matter of physicians dispensing drugs, and insisted that druggists only should sell and dispense drugs.

George D. Williams spoke for the National Association of Manufacturers of Medicinal Products, and then President George C. Hall, of New York, presented his annual address, dealing with the vital business problems of the country, and dwelling on the banking and currency system. Regarding the general business outlook, he was not inclined to be optimistic. He urged loyalty to the association in its distinctive work of securing purity, quality, strength and accuracy in drugs.

The feature of the Tuesday afternoon session was the address by Charles Wesley Dunn, of New York, on the proposed Interstate Trade Commission.

The banquet on Tuesday night was a pleasant affair, although neither Gov. Walsh nor Mayor Curley, who had been expected, put in an appearance. There was excellent music, by the Knickerbocker Quartette, and by Madame Wilhelmina Calvert, soprano. President Hall presided, and Dr. Mark W. Richardson, secretary of the Massachusetts Board of Health,

told of the work of his department during the past five years in fighting typhoid fever.

Other speakers were Dr. DeWitt C. Wilcox, of Brookline, president of the American Institute of Homopathy; Caswell A. Mayo, of New York, president-elect of the American Pharmaceutical Association; Dr. E. P. Howes, George G. Williams, James F. Finneran, Charles A. West and Dr. Alfred S. Burdick.

At the final business session the following officers were elected: George C. Hall, of New York, president; Dr. S. E. Wasengill, of Bristol, Tenn., 1st vice-president; Dr. C. H. Searle, of Chicago, 2d vice-president; E. L. Maltbie, of Newark, N. J., secretary and treasurer. The session was made rather memorable by the presentation of a set of resolutions and a handsome loving cup to the retiring secretary and treasurer, Willard P. Stearns, of Chicago. Frank L. H. Nason, of Boston, chairman of the committee of arrangements, made the presentation speech, and Mr. Stearns responded.

Rochester, N. Y., was chosen for the next meeting-place.

The programme of entertainments was rather elaborate for a convention of this size and included an automobile trip to Concord and Lexington over the route traversed by Paul Revere 139 years ago, an automobile ride along the North Shore, with a fish dinner at Marblehead, and a harbor trip to Nantasket.

The following members were represented at the convention:

Abbott Alkaloidal Co., Chicago, Ill.; J. E. Allworth, Chicago, Ill.; Central Pharmaceutical Co., Seymour, Ind.; Chapman Mfg. Co., Chicago, Ill.; Columbus Pharmaceutical Co., Columbus, Ohio; Daggett & Miller Co., Providence, R. I.; Davies, Rose & Co., Boston, Mass.; Diamond Pharmaceutical Co., Philadelphia, Pa.; Digestive Ferments Co., Detroit, Mich.; Flint, Eaton & Co., Decatur, Ill.; Fraser Tablet Co., New York, N. Y.; Henry R. Gering Co., Omaha, Neb.; J. F. Hartz Co., Detroit, Mich.; Howard-Holt Co., Cedar Rapids, Iowa; Independent Pharmaceutical Co., Worcester, Mass.; Irwin, Neisler & Co., Decatur, Ill.; Kremers-Urban Co., Milwaukee, Wis.; LaFayette Pharamcal Co., LaFayette, Ind.; McCoy, Howe Co., Indianapolis, Ind.; Robert McNeil, Philadelphia, Pa.; Maltbie Chemical Co., Newark, N. J.; Masengill Bros. Co., Bristol, Tenn.; National Drug Co., Philadelphia, Pa.; Norwich Pharmaceutical Co., Norwich, N. Y.; E. L. Patch Co., Boston, Mass.; Pitman-Moore Co., Indianapolis, Ind.; Pittsburg Physicians Supply Co., Pittsburgh, Pa.; Frank G. Scott, Detroit, Mich.; G. D. Searle & Co., Chicago, Ill.; Standard Chemical Co., Des Moines, Iowa; Stearns & White Co., Chicago, Ill.; R. J. Strassenburgh Co., Rochester, N. Y.; Sutliff & Case Co., Peoria, Ill.; Swan, Myers Co., Indianapolis, Ind.; Taibuy-Nason Co., Boston, Mass.; Henry Thayer & Co., Boston, Mass.; E. A. Thompson & Co., Detroit, Mich.; Toledo Pharamcal Co., Toledo, Ohio; Tracy Co., New London, Conn.; Truax, Greene & Co., Chicago, Ill.; Henry K. Wampole & Co., Philadelphia, Pa.; Webster-Warnock Chemical Co., Memphis, Tenn.; William A. Webster Co., Memphis, Tenn.; Westerfield Pharmaceutical Co., Dayton, Ohio; Ziemer Co., Pittsburgh, Pa.

### WHAT N. A. R. D. WILL DO AT PHILADELPHIA.

*Entertainment Programme for August Convention as Arranged by the Convention Committee.*

**D**ETAILED of the entertainment planned by the local committee for the delegates to the annual N. A. R. D. convention in Philadelphia the week of Aug. 17 promise a scope and variety to excel anything in the history of the National body.

The first formal event will be the officers' reception and ball in the ballroom of the Bellevue-Stratford Hotel on Monday evening, Aug. 17. Of equal importance, although perhaps more from a commercial standpoint, will be the drug show in the historic Clover and Red Rooms on the same floor and in close proximity to the ballroom. This annual exhibition has become each year more and more important as a feature of the National conventions. Never before have the manufacturers displayed such interest, and in educational features alone the exhibition this year promises to be unique. Many of the exhibitors plan to launch new goods and new policies on this occasion.

An automobile tour for the ladies at the convention is planned for Tuesday afternoon, with visits to points of interest throughout the city and vicinity and a spin through Fairmount Park.

On Wednesday the ladies will be the guests at a reception in the Egyptian Hall in the John Wanamaker store. A tour of the building and a special organ recital in the Court of Honor will be additional features.

Thursday will be "Scottissue Day," when every person registered at the convention will be the guest of the Scott Paper Company on a trip down the Delaware River to the company's plant at Chester, Pa. One of the most commodious river steamers has been chartered; luncheon will be served on board,

after which there will be an entertainment. The big industrial establishments and points of historic interest along the river front in Pennsylvania and New Jersey will be described by guides enroute. On the return trip a stop will be made at League Island Navy Yard.

Friday will be "Wampole Day," when the delegates will be the guests of Henry K. Wampole & Co., at Willow Grove Park. Special cars will convey the visitors over a special route, calculated to show the city and its environs in most attractive form. The Wampole Company, with the co-operation of the local committee, has arranged for the distribution of coupons which will entitle the visitors to admission to all of the amusement features of the park as well as dinner at the Casino.

Still another possibility of "Wampole Day" is that the convention will formally close at Willow Grove Park, if the business is not concluded on Thursday at the regular session at the Bellevue-Stratford Hotel.

The committee wishes it clearly understood that the participants in all of these entertainment features will only be those who register at the convention. The registration privileges will be accorded every druggist and those affiliated with the drug trade. The sessions of the convention will be open to all who care to attend.

## National Association of Drug Clerks.

### *Minimum Wage, Eight-hour Day, and National Standard of Requirements Urged.*

THE fourth annual convention of the National Association of Drug Clerks was marked by a number of interesting reports, and by the adoption of regulations urging a minimum salary scale, starting at \$1200 a year for a registered pharmacist, and at \$900 a year for a registered assistant pharmacist. The adoption of a National standard of requirements for reciprocal registration and the advocacy of an eight-hour working day with fewer hours of Sunday work were other matters indorsed by resolution. The following officers and committees were elected and appointed:

*President*, L. W. Sinclair, Columbus, Ohio; *1st vice-president*, T. O. Duckworth, Dubuque, Ia.; *3d vice-president*, Marvin E. Pate, Madisonville, Ky.; *secretary-treasurer*, P. A. Mandabach, Chicago; *director of publicity*, Wm. C. Clingen, Chicago; *associate editor*, Charles H. Bowersox, Columbus, Ohio; *contributing editor*, L. W. Coleman, Wichita, Kan.; *National organizer*, Lee Tuholskie, Akron, Ohio.

*National Publicity Committee*—J. A. Orr, Brooklyn, N. Y.; G. E. Williams, Savannah, Ga.; M. Aubrey, Dallas, Tex.; L. E. Stoebig, Chicago; A. D. Burnham, Detroit.

*Auditing*—George M. Swigart, Dayton, Ohio; Frank Barca, Perth Amboy, N. J.; L. A. Montgomery, Oklahoma City.

*Fraternal Relations*—William H. Caswell, Valdez, Alaska; Jas. H. Newsom, Rockland, Mass.

*Finance*—F. M. Blank, Akron, Ohio; Frank Schachleiter, Hot Springs, Ark.; A. B. Wallace, Savannah, Ga.

*U.S.P. & N.F. Propaganda*—W. J. Moreland, Pittsburgh, Pa.; J. H. Brinkley, New Bern, N. C.; D. R. Caples, Princeville, Ore.; Chas. P. Baum, East Orange, N. J.; E. H. Darling, Santa Ana, Cal.; A. L. Forguee, Centralia, Wash.; G. H. Blatchley, Middleton, Conn.

*Membership*—L. D. George, Clayton, N. M.; C. L. Thompson, Augusta, Me.; V. Hayden, St. Paul, Minn.; Chas. Williamson, Frankfort, N. Y.; L. Jense, Riverton, Wyo.; N. J. Nelson, Chicago; W. E. Smith, Lewiston, Ida.

*Foreign Relations*—J. J. Hoffman, The Hague; Jonathan Nicolson, London; S. T. Ramsey, Honolulu; J. C. Carbello, Havana; Carlos Bierberach, Panama; H. E. J. Pletcher, Winnipeg; H. W. Well, Welwyn, Saskatchewan, Canada.

*Status of the Pharmacist in U.S. Employ*—Dr. Geo. F. Payne, Atlanta, Ga.

According to the reports of the retiring president, F. M. Blank, of Columbus, Ohio, and of the secretary and treasurer, Mr. Mandabach, the association is now represented in 47 States, in Porto Rico, several provinces in Canada, the Philippines, Panama, Honduras and Cuba. The following paragraph in regard to the Druggists' National Home at Palmyra, which was launched under the auspices of the N.A.D.C., will be read with interest, particularly in view of the fact that unless immediate assistance in a financial way is given the Home it will be taken back by the original owner:

Mr. Mandabach says: "At the last convention the Druggists' National Home was presented to the druggists of the United States, and placed under the management of a board of trustees who incorporated the Home under the laws of Wisconsin, and under whose entire supervision this charitable proposition is managed. Therefore, your association has no report to make upon the Home, as the matter is entirely in the hands of the aforesaid board of trustees."

The present practice of re-registration of pharmacists was condemned in the secretary's report, Mr. Mandabach urging a life certification after the pharmacist had successfully passed his examination.

## What the A. Ph. A. Will Do at Detroit.

### *Programme of the Business Sessions of the Parent Organization and Allied Bodies, during the week beginning Aug. 24.*

#### MONDAY—

9:00 a.m. Meeting of the Council.  
House of Delegates.  
3:00 p.m. First General Session.  
7:30 p.m. Meeting of the Committee on Nomination.  
9:30 p.m. Joint Reception of the Presidents of the A.Ph.A. and M.S.P.A.

#### TUESDAY—

9:30 a.m. Second General Session.  
9:30 a.m. First General Session M.S.P.A.  
10:00 a.m. National Association of Boards of Pharmacy.  
10:00 a.m. Ladies' Shopping and Visiting, etc.  
2:00 p.m. National Association of Boards of Pharmacy.  
2:30 p.m. Women's Section.  
Scientific Section.  
Joint Session of Commercial Section and M.S.P.A.  
7:30 p.m. House of Delegates.  
7:30 p.m. Meeting of the Council.  
8:30 p.m. Conference of Pharmaceutical Faculties.

#### WEDNESDAY—

9:30 a.m. Section on Education and Legislation.  
9:30 a.m. Pharmacopoeias and Formularies.  
10:00 a.m. National Association of Boards of Pharmacy.  
12:30 p.m. Luncheon of College Alumni.  
2:00 p.m. National Association of Boards of Pharmacy.  
2:30 p.m. Section of Practical Pharmacy and Dispensing.  
2:30 p.m. Scientific Section.  
7:30 p.m. Meeting of the Council.  
7:30 p.m. Ladies' Reception.

#### THURSDAY—

9:30 a.m. Section on Education and Legislation.  
Scientific Section.  
Joint Session of Practical Pharmacy and M.S.P.A.  
10:00 a.m. National Association of Boards of Pharmacy.  
1:30 p.m. Excursion.

#### FRIDAY—

9:30 a.m. Historical Pharmacy.  
Section on Pharmacopoeias and Formularies.  
Women's Section.  
Commercial Section.  
2:30 p.m. Automobile Ride.  
7:30 p.m. Re-organization Meeting of the Council.  
8:00 p.m. House of Delegates.  
8:00 p.m. Ladies' Reception.  
8:30 p.m. Joint Session of the Section on Education and Legislation, the A.C.P.F., and the N.A.B.P.

#### SATURDAY—

9:00 a.m. Meeting of the Council.  
10:30 a.m. Final General Session.

The entertainment features will include the following:

On Monday night the grand ball will take place in the ball room of the Hotel Ponchartrain. Tuesday afternoon Nelson Baker & Co. will entertain the ladies with a boat ride down the river to Bob-Lo Park, where dinner will be served. Wednesday evening, F. F. Ingram & Co. and F. A. Thompson Co. will take the ladies to a theater party while druggists are at the smoker given by Frederick Stearns & Co. at the Wayne Hotel Auditorium. Thursday, Parke, Davis & Co. have chartered for the exclusive use of the convention the steamer *Pleasure*, which will go up the river and through Lake St. Clair. Friday afternoon an automobile trip has been arranged about the city, along the magnificent Lake Side Drive, and through the most beautiful natural park, Belle Isle.

Thomas F. Main, chairman of the transportation committee of the A.Ph.A., has sent out a schedule of the official tour of delegates to the Detroit meeting, starting from New York or Boston on Aug. 22, and returning by the way of Toronto, Thousand Islands, Montreal and Quebec, and returning to New York or Boston on Sept. 8. The committee has also made special arrangements from the South and from the Pacific Coast, full details of which have been sent to members, or will be sent on application to Mr. Main, 166 Chambers street, New York City.

## S. H. BAER HEADS FLAVORING EXTRACT MEN.

National Association Establishes Fellowship at University of Michigan—Dr. Alsberg Commended.

**D**R. S. H. BAER of St. Louis, was elected president of the Flavoring Extract Manufacturers' Association at the fifth annual convention of that organization, held June 2, 3 and 4 at the Hotel Astor. The other officers are: 1st vice-president, F. I. Beggs, Newark, Ohio; 2d vice-president, C. F. Starr, Richmond, Va.; 3d vice-president, Dr. J. O. Schlotterbeck, Rochester, N. Y.; treasurer, Robert E. Heckin, Cincinnati; secretary, F. P. Beers, Earleville, N. Y.; executive committee, S. J. Slicer, Chicago; W. M. McCormick, Baltimore; S. F. Irwin, Philadelphia, and C. W. Jennings, Grand Rapids, Mich.

By resolution the association effected the establishment for one year of a fellowship of \$500 at the University of Michigan for the scientific study of vanilla extract, the holder to devote half his time to this subject, and the association's committee to supply him with the raw material with which to work. Other resolutions adopted provided for the appointment of a research committee of five members to which should be referred the scientific investigation work of the association, and the appointment of another committee of five members to work with the board of co-operation established by Dr. Alsberg for the purpose of attaining greater uniformity of State and Federal food laws. Dr. Alsberg's fair attitude in establishing this board was commended, as was the liberal attitude of the pure food officials in extending the time for the using up of labels on hand which contain the guaranty legend recently ruled against. The president was instructed to appoint a committee of three to give consideration to the question of fire insurance and prevention. The committee on costs was continued. The accumulation of scientific literature on extracts and essential oils was referred to the scientific and executive committees. The requirement that the percentage of alcohol be stated upon the label was condemned as advertising the contents as a beverage. The Stevens bill was indorsed, and the object of the measure adjudged laudable. The committee for the increase of sales of extracts was made permanent during the ensuing year. W. M. McCormick's work in the National Chamber of Commerce was indorsed.

Two of the strongest points made by the association's attorney, T. E. Lannen, in the course of his very interesting report, were the importance of the members immediately setting about the accumulation of scientific data on their own industry—they should not be at the mercy of the food officials for authoritative information on the articles they manufactured—and the necessity of the trade fixing its own trade standards. Trade standards should not be fixed by officials after consultation with only a few of a trade—the trade as a whole should be conferred with.

The association has a total of 149 members, 33 having been taken in during the past year. Of the total 106 are active members and 43 associate. The industry contains about 800 extract manufacturers. The membership committee has about 35 prospects whom they expect to enrol in the near future.

The balance on hand is \$634. Disbursements during the past year were \$2696.

## KINGS COUNTY P.H.S. RE-ELECTS PRESIDENT.

H. B. Smith Again Heads Society—Year Most Prosperous in History—Interesting Reports Presented.

**H**ENRY B. SMITH was re-elected president of the Kings County Pharmaceutical Society at the recent annual meeting held at the College of Pharmacy. Other officers elected were:

First vice-president, Charles Heimerzheim; 2d vice-president, Charles L. Gesell; secretary, A. E. Hegeman; treasurer, Adrian Paradis; trustees to serve six years, Charles A. Kunkel and John Wischerth; censors, Otto Raubenheimer, chairman; O. F. Bancroft and Edward Hoffman; librarian, Dr. H. J. J. Kassebaum; counsel, Wm. L. Perkins.

The following delegates were elected: To the N.Y.S.P.A. meeting, Hy. B. Smith, chairman; Otto Raubenheimer, Dr. H. J. J. Kassebaum, Charles V. Lewis, Wm. H. Bussenschutt, Joseph Kahn, Joseph S. Goldwag; N.J.P.A., Charles Heimerzheim, Otto Raubenheimer and A. P. Lohness; A.P.A., Dr.

Wm. C. Anderson, J. H. Reh fuss and Prof. Hy. W. Schimpf.

In his annual report, President Smith thanked the members for the loyalty and support they had accorded him during the past year, and pointed out that the Brooklyn C.P. was the only college of pharmacy in the county owned and controlled by retail pharmacists. The institution had no outstanding debts and had recently invested \$15,000 in New York City bonds. The registration of students had been the highest during the past school year of any similar period since the foundation of the college, and it would not be long before the alumni would number more than 2000. The society, asserted President Smith, had been honored by the election of J. H. Reh fuss to the presidency of the State association. Four members had been appointed by the Commissioner of Health to his recently established Advisory Council.

Treasurer Adrian Paradis reported a balance on hand for the society of some three or four hundred dollars. During the past school year the college disbursements had been \$45,689; the cash balance on hand is \$6324; money recently invested in N.Y.C. bonds, \$15,000; total balance, June, 1914, \$21,324; balance on hand, June, 1913, \$19,169. The sum of \$4000 above the usual running expenses of the college was spent 1913-14 on renovations and improvements. According to Mr. Paradis the school year had been very prosperous. In a summary, presented later by T. J. France, it was shown that the college balance in 1911 was \$12,793 and that more than \$9000 had been spent in the period of 1911-14 on "betterments," which item does not include repairs to buildings, increased compensation to faculty, etc.

Upon Secretary A. E. Hegeman's recommendation the names of seven members were dropped from the rolls for non-payment of dues. Mr. Hegeman had collected \$550 in dues during the past year. The society had held 10 meetings.

T. J. France, chairman of the committee on supervision, reported that the students had totalled 312; 147 juniors had passed their examinations and had been admitted to the senior class.

Dr. Wm. C. Anderson, chairman of the legislation committee, presented a report which was extensive despite his brief reference to State legislation now familiar to New York pharmacists. He dwelt at some length on the Walters and Boylan bills, reading the Governor's memorandum which accompanied the executive's signature upon the former measure. He advised that members write the local Board of Health for official narcotic ordering blanks. The National legislative situation had not been materially changed of late. He notified the members of the abolition of the guaranty legend and serial number after May 1, 1916. Druggists should see that the guaranty is signed by the one giving the guaranty—otherwise it is not a guaranty. The Advisory Council had taken under consideration the proposition to label ordinary remedies with "Poison," which the druggist members opposed as ridiculous. The Council decided at its last meeting that it would be proper for the Board of Health to inspect soda-water factories where such places were open to the air. Where everything is enclosed in pipes and not open to air, as in drug stores, inspections are unnecessary. The Council further had under consideration the requiring of a physician's prescription for certain ordinary remedies. The pharmacist-members' stand was that to deprive the pharmacist of the right to handle drugs and to give the physicians that right is a commercial proposition. Under such conditions no restriction is placed upon the public.

Dr. Anderson stated that it was the opinion of many people that pharmacists are affected by the workingmen's compensation law which goes into effect July 1. If this is true, they must prove to the commission at Albany—before July 1—that they are financially able to meet damages under the provisions of the law. A penalty is provided for failure to comply. Dr. Anderson said that an employee injured through his own carelessness could collect damages. The employer is liable in all cases except when the employee is intoxicated. The damages, Dr. Anderson described as "something awful." Upon recommendation of Mr. Reh fuss it was decided to inquire of the Compensation Commission at Albany as to the status of the retail pharmacist under the new law.

Wm. Morgan, chairman trade matters committee, reported that the detail man, Dr. H. J. J. Kassebaum, had called on 315 physicians and 168 dentists. The sum of \$565 had been spent on propaganda work.

**N.Y.S.P.A. ANNUAL MEETING AT SARATOGA.****President Rehfuß Presents Interesting Report Containing Several Pertinent Recommendations.**

The 36th annual meeting of the New York State Pharmaceutical Association was called to order by President Jacob H. Rehfuß at the United States Hotel, Saratoga Springs, N. Y. In his annual report, President Rehfuß referred to the association's fight against the "One Day of Rest in Seven" law, which if it had not been superseded would have placed the pharmacist "on the level of the bricklayer and hodcarrier," recommended to members the careful consideration of the Sunday closing question, it having been demonstrated by postal vote and otherwise during the past Winter that New York State pharmacists were almost unanimously desirous of closing at least a part of Sunday, and advised them to take cognizance of the need of revising their system of pricing prescriptions, such revision being absolutely necessary in view of the increased cost of operating a pharmacy, the diminishing net profits in the business and the high cost of service due to excessive regulation. He enlarged upon the splendid propaganda work performed by the association's committee and concluded his remarks upon this phase of his report by inquiring as to whether it was not high time for the makers of the Pharmacopœia to take their bearings and find out whether they are not making this volume an exclusive pharmaceutical text-book rather than one for both the physician and the pharmacist.

"At no time in recent years," said Mr. Rehfuß, "have pharmacists felt such general satisfaction over the work of our State Board of Pharmacy." He suggested that the board should meet the responsibility resting upon it by the enactment of the Walters bill—else the Labor Department will demand legislation placing pharmacists in its jurisdiction. He recommended that the board employ additional inspectors to carry out the enforcement of working hours in a pharmacy. He recommended that board members be made eligible for service upon the legislative committee. Other recommendations were to the effect that the association's detail man collect back dues from delinquent members and agree to visit every member at least once during the year, and that all members in arrears for three years or more be dropped from the rolls.

Mr. Rehfuß' legislative report was in the nature of an elaborate resumé of the association's work on legislation.

A full report of the meeting will be published in our next issue.

**G.A.S. CONSIDERS OWNERSHIP OF OWN HOME.****Committee Appointed to Consider Plan for Bringing It About—European Trip Success Assured.**

THAT the German Apothecaries' Society own its own home was recommended at the June meeting by President Dr. Charles F. Klippert, the idea having originated some time ago with August Diehl. Dr. Klippert enlarged upon the financial and social advantages to accrue from such ownership and pointed out the success of the New York Consolidated Drug Company, which he said, had made great strides since buying its own building. The scheme would not be so very difficult of accomplishment and success was absolutely certain. Ex-Presidents Felix Hirsman and Charles F. Schlessner spoke in favor, and Otto P. Gilbert proposed Mr. Diehl as chairman of a committee to develop plans. Dr. Klippert appointed on the committee August Diehl, chairman; Henry F. Albert, Paul Arndt, H. Blomeier, George Bruns, Albert Koehler, Fred Linnig, Wm. Oetinger, George T. Reiffin, Paul Roenne, Fred Schaefer, Carl Schur, S. V. B. Swann, Fred Trau, Karl Wuppermann and all the officers of the society. This committee organized after the meeting.

Robert S. Lehman, treasurer for the approaching European tour, reported that the enterprise would be a success. Besides the many invitations extended to the tourists one had been recently received from The Bayer Co., Inc., Leverkusen, near Cologne, to tour through its plant and attend a banquet. He read other invitations extended by all the pharmaceutical societies of Berlin and Vienna. Invitations had been extended by many individuals, including Professors Thoms, of Berlin; Boehm, Leipsic; von Tappenier, Munich; Hofrat Moeller, Vienna; Tschirch, Berne; Henri Gautier, Paris. The editors of the pharmaceutical press of the several countries to be visited

also expressed deep interest in the tour and many institutions connected with pharmacy and medicine have assured the society of a hearty welcome.

S. V. B. Swann, chairman of the legislative committee, presented an extensive report, dwelling particularly upon the work of the Advisory Council of the Board of Health. He pointed out that the druggist-members were participants in all of the Council conferences, but were always in the minority when matters of pharmaceutical importance were voted upon. He said that the New York Pharmaceutical Conference would soon meet to suggest regulations which would place physicians under the same restrictions in dispensing remedies containing narcotics as are now placed upon pharmacists. Mr. Swann reminded the members that the workmen's compensation law went into effect July 1 and that a definite interpretation of the law would be made by insurance experts who at the time of this meeting were about to confer on the subject. For their own protection pharmacists should obtain a general liability policy at once.

Mr. Swann further reported that only two employees of pharmacists had been arrested for the illegal sale of narcotic remedies, which, according to the Sanitary Superintendent of the Advisory Council, was only one-tenth of 1 per cent. of the pharmacists of Greater New York, and showed that those who disobeyed the narcotic law were outside of the profession. The pharmaceutical conference will have cards printed showing the provisions of the Boylan bill and these will be distributed to all the pharmacists in the city.

Dr. Klippert enlightened the members upon the financing of the pharmaceutical conference. The conference consisted of delegates from 12 local organizations, only six of which have contributed to its expenses. Of these the G.A.S. had been in the lead and the Kings County Ph.S. second. The six non-contributors will not be permitted to vote unless they pay up and their right to send delegates will be withdrawn.

Otto P. Gilbert, chairman of the entertainment committee, again called attention to the society's annual outing. He reported the donation of a number of prizes for contests held on that occasion, among these being one copy of his "Principles of Pharmacy" donated by Professor H. V. Army, and one copy of the U.S. Dispensatory donated by the society.

Treasurer Robert S. Lehman reported that no objection had been raised by the members to the increase in the monthly dues made recently.

The next meeting will be held Oct. 1.

**Chicago Branch, A.Ph.A.**

The Chicago Branch of the American Pharmaceutical Association met for the last regular monthly meeting of the season at the University of Illinois School of Pharmacy building, with President J. H. Wells in the chair. Mr. Wells introduced L. A. Becker, who led the discussion of the evening on the topic "The Preparations of the New U.S.P." Mr. Becker made suggestions as to the improvement or correction of several formulas and tests. He criticised the tests for iron in "Aqua," stating that he found the "Heavy Metals Test" of the present pharmacopœia more efficient than the proposed test for metals and that the proposed test for iron should not read "immediately" but should have a time limit. Iron 1/100000 required one minute to develop a positive reaction, 1/500000 required 3½ to 5 minutes, solutions of 1/1000000 showed the color only in 7 to 10 minutes. He pointed out in connection with "Aqua Destillata Sterilisata" and "Liquor Sodii Chloridi Physiologicus" the necessity for extreme care in sterilization and recommended for the latter solution fractional sterilization, using the autoclave at 115° to 120° for 15 to 20 minutes on three successive days or boiling for one hour on three successive days. He stated that should the pharmacist become the purveyor of this preparation to the physician the directions as proposed for sterilization will lead to many a dispute, for where there is trouble from infection, where sterilized materials are employed, either instruments, dressings, suture materials, etc., or preparations, the physician almost invariably seeks to put the blame on any other cause, however far-fetched his reasoning, rather than to ascribe bad results to his possible faulty technique or poor judgment. For the pharmacist's protection against accusations of this nature, the process of sterilization should produce unquestionable results and the most thorough is none too safe.

Mr. Wm. Gray followed Mr. Becker with the following suggestions:

Liquor Cresol's Comp. Use *sapo mollis* and cresol equal parts. Dissolve, with heat. Tinct. Iod.: Use 40 cc. of water to the liter of tincture for insuring solution of the K.I. Tinct. Auranti Dulcis and Tinct. Limonis Cortex: Retain the present formula. More oil will be lost by grating. Tinctures in general: There should be some form of standardized concentrated preparation of the assayed drugs which could be diluted to form U.S.P. tinctures for the benefit of pharmacists who cannot stop to make such tinctures and assay the same as the Pharmacopoeia now demands. The present tincture of *myrica* is an example of what I mean. Otherwise the entire preparation of assayed tinctures is going into the hands of the pharmaceutical manufacturer. The plan proposed would allow considerable saving both in cost of container, menstruum and freight.

A communication was received from R. E. Rhode, who commented as follows:

Aromatic waters should be made with magnesia instead of talcum. Recently boiled water may lead to better preparations. Solution of magnesium citrate should be made by the cold process and with spirit of lemon instead of the oil. The proposed process is altogether too complicated for what is practically an extemporaneous preparation and furthermore a volatile oil should not be added to a hot liquid. He recommends the return to the use of the name *Tr. Saponis Mollis* or *Spir. Saponis Mollis* instead of *Linimentum Saponis Mollis*.

In the discussion of Mr. Gray's suggestion of "concentrate" for tincture making, Professor Clark opposed the idea, believing that a druggist using guaranteed assayed drugs should be educated to prepare U.S.P. tinctures from them.

Professor Day suggested that neighborhood druggists should club together and engage an expert to make the U.S.P. preparations in larger quantities and of standard quality for them.

Mr. Storer, in commenting on the preparation of green soap and comp. solution of cresol, stated that he prepared in 50-pound quantities with careful manipulation and not too close an adherence to the formula and then allowed it to age for three months. From this soap he prepared the cresol solution and allowed it to age some months before use. Both preparations were declared to be very satisfactory.

Secretary Gathercoal read a letter from Fred Meissner, of LaPorte, trustee of the Pharmacopoeia, who stated that the prospects for the new U.S.P. to be in print early this Fall were very good indeed.

#### Arkansas Association of Pharmacists.

At the 32d annual meeting of the Arkansas Association of Pharmacists at Little Rock, Pine Bluff was chosen for the 1915 meeting, and the following officers were chosen by the association and by the travelers:

*A.A. of P.*—President, Roy Chamberlain, Malvern; 1st vice-president, Brookes Latimer, De Queen; 2d vice-president, Sidney Beasley, Hot Springs; secretary-treasurer, Miss Mary A. Fein; Herman A. Durst, chairman of executive committee; for vacancy on State Board, J. A. Gibson, J. F. Dowdy and Roy Chamberlain.

*Pharmaceutical Travelers*—President, J. L. Bomar, Little Rock; 1st vice-president, L. F. Cappleman, Little Rock; 2d vice-president, G. L. Gideon, Little Rock; 3d vice-president, W. J. Conery, Little Rock; secretary-treasurer, F. V. Perry, Little Rock.

#### American Woman's Ph.A.

A regular meeting of the A.W.P.A. was held at the New York College of Pharmacy on May 11, when Dr. Diekman gave a very interesting talk on the progress of pharmacy. At the June meeting three new members were introduced. A committee of two was appointed to arrange for a social gathering at Woodmere in September, through the invitation of Mrs. Wisendanger. A committee of five was named to bid farewell to President Wisendanger and Miss Kramer when they sail for Europe on July 2, with the G.A.S. excursion. Miss Lillian Listerman and Mrs. Evelyn Baker Schwager were elected delegates to the N.Y.Ph.A. convention at Saratoga. Miss Listerman spoke on bichloride poisoning, and the meeting adjourned for refreshments at 10 p.m., it being the final session until Fall.

#### Cincinnati Branch, Ph.A.

The first annual meeting of the Cincinnati branch, A.Ph.A.,

was held at Lloyd's Library, and the reports indicated a highly successful year. The following officers were elected: President, E. H. Thiesing; 1st vice-president, F. W. Weissmann; 2d vice-president, J. F. Kutchbauch; treasurer, Julius Greyer; secretary, Chas. A. Apmeyer; executive committee, A. O. Zwick, C. T. P. Fennell, C. G. Merrell.

#### Delaware Pharmaceutical Society.

The annual meeting of the Delaware Pharmaceutical Society was held June 4 at the Hotel DuPont, Wilmington, with a large attendance. A luncheon and minstrel show followed the business session. The delegates endorsed the Stevens price-maintenance bill unanimously. Dr. A. W. Miller made a brief address in regard to the Procter memorial fund, and told interestingly of his studies at the Philadelphia College of Pharmacy under the late Professor Procter, who is known as the "father of American pharmacy." Members were urged to use their influence with Congress to secure a site and base for the statue in front of the Smithsonian Institute. The Delaware society has 280 active members, and its finances were reported to be in a good condition. Among the addresses was one by Dr. H. J. Watson, on "Drug Adulteration." The following officers were elected:

President, George W. Rhoades; vice-president, New Castle county, Miss Nora V. Brendle; vice-president, Kent county, Walter P. Keys; vice-president, Sussex county, W. H. Chambers; secretary, Walter A. Morgan; treasurer, W. A. Grant; board of directors, George W. Rhoades, Harry Ivins, Richard N. Saunders, T. H. Cappeau, W. R. Keys.

The association selected the following list of names from which Governor Miller will make an appointment to the State Board: W. H. Chambers, George W. Rhoades, R. M. Kauffman, Ernest A. Truitt and Joseph P. Williams.

#### Florida Ph.A.

A large number of Florida druggists with their wives and guests attended the annual meeting of the Florida Ph.A. which convened at Atlantic Beach June 10 with Dr. W. J. Maloy, of White Springs, the vice-president, in the chair, in the absence of President Leroy Cotter. Mayor Thornton, of Ormond, welcomed the druggists, to which M. M. Tyler, of Tampa, replied. The entertainment in connection with the convention was under the direction of the Travelers' Auxiliary and consisted of an excursion from Mayport to Jacksonville, where automobiles conveyed the visitors to the ostrich farm, and later to an entertainment at the Board of Trade.

The following officers were elected: President, M. M. Taylor, Tampa; 1st vice-president, W. J. Maloy, White Springs; 2d vice-president, E. M. Norton, Jacksonville; 3d vice-president, F. D. Bryan, Lakeland; secretary, J. H. Horton, Palatka; treasurer, W. M. Johnson, Gainesville; executive committee, Wm. D. Jones, Jacksonville; Macon Thornton, Ormond; D. W. Ramsaur, Palatka. Mr. Ramsaur was also recommended for appointment to the State Board.

#### Georgia Ph.A.

The Georgia Pharmaceutical Association held its annual two days' convention at Indian Springs, with an attendance of 70 delegates. W. A. Pigman, of Savannah, was elected president, and S. E. Payne, of Macon, vice-president. A traveling men's auxiliary was organized and will meet with the association next year at Tybee island.

#### Illinois Pharmaceutical Association.

With the slogan of "A week-end at Fox Lake," the Illinois Pharmaceutical Association assembled June 11, 12 and 13 and had a very successful convention. For the first time in many years the association had selected a Summer resort for the place of meeting, and that the experiment was a success was the expression of practically all the 300 or more druggists and travelers who attended.

The entertainment was cared for entirely by members of the Illinois Pharmaceutical Travelers' Association. The usual opening addresses were dispensed with. The association got down to business at the very first session and listened to an excellent address by President Ralph E. Dorland. President Dorland is but 34 years old, but has had wide experience in association work and his presidential address as well as the skilful manner in which he handled the convention were widely commented upon. He especially urged the druggists to get into politics to make themselves felt as a political factor to the end

that the interests of pharmacy might be conserved in both State and National legislation. He urged the formation of local organizations and the cordial support of the two great National associations—the A.Ph.A. and the N.A.R.D. He made a strong plea for a wider co-operation among all pharmacists, especially in view of the need for anti-narcotic legislation and the powerful opposition that had developed. He urged that the Illinois Pharmaceutical Association be made an all-year-round organization and that its activities be not limited to the few days of the annual convention and the semi-annual session of the executive committee. He recommended the maintenance of permanent headquarters and the employment of an organizer to recruit the membership and interest the druggists in the work of the association. President Dorland's address was referred to a committee consisting of W. S. Denton, O. C. Nussle and Jas. H. Wells.

The report of the secretary, W. B. Day, included the presentation of 133 new members who were elected. This is the largest accession of members in many years.

Treasurer Garver's report showed an income for the year of \$1765.68 and expenditures of \$1914.39. There was \$600.00 in the permanent fund and \$1260.63 in the general fund at the close of the fiscal year, May 31, 1914.

Chairman Byron Armstrong, of the committee on trade interests, strongly endorsed legislation aimed at the establishment of a system of one-price-to-all on trade-marked and branded goods. The committee also discussed the ruling of the Internal Revenue Department on the addition of medicinal substances in small amounts to alcoholic liquids and advised all druggists to steer clear of the "booze patents," also exceeding care in the sale of alcoholic medicines in local option territories. The resolutions were adopted.

Chairman Charles Brunstrom presented the report of the legislative committee which dealt with the clerk question, advocating the extension of the authority granted the registered assistant in taking charge of a drug store during the temporary absence of the registered man which authority is now given for short periods only. It was suggested that the registered assistant pharmacist should be authorized to take charge of the store in emergencies even for a week or so. The committee further recommended that at the coming session of the Legislature the energies of the association be centered on the passage of a strong anti-narcotic measure.

President F. T. Provost presented an unusually complete report of the operations of the Board of Pharmacy for the past year. He advocated the inclusion in the pharmacy law of a section forbidding the sale of opium, morphine and heroin or chloral hydrate or their derivatives excepting upon prescription and with the usual exemptions of wholesalers, physicians, dentists and veterinarians, also the labeling of proprietary or patent medicines containing these substances. He also recommended the strengthening of the cocaine section of the present pharmacy law so as to make it unlawful for any layman to have in his possession at any time cocaine or its derivatives unless obtained by means of a prescription. A fourth recommendation was to require the labeling of poisonous insecticides such as Paris green and lead arsenate, these to bear the word poison in prominent type and the names of two readily obtainable antidotes with directions for their administration. A fifth recommendation would provide a penalty for any person who falsely represents himself to be an apprentice, assistant pharmacist or registered pharmacist.

Secretary Potts, of the N.A.R.D., made a stirring address and offered resolutions regarding the unfair practice of cutting prices on standard goods, commending the Stevens bill and pledging the earnest support of this association. These resolutions were unanimously adopted.

Other reports were made as follows: For the committee on propaganda, Lee M. Pedigo, chairman; for the committee on Druggists' Home, George W. Sobrbeck, chairman.

Resolutions were adopted endorsing the National Association of Retail Druggists and continuing affiliation with that association.

Awards of prizes for essays were made as follows: First prize, J. A. Mahaffy, "The Advertising Value of Your Window"; 2d prize to H. N. Bruun, "Advertising Schemes."

The secretary read the result of the vote taken by the registered pharmacists of the State for nomination for the Board of Pharmacy and Advisory Board. The following nominees were selected for presentation to the Governor for his consideration in appointing a member to fill the next vacancy on the Board

of Pharmacy: J. B. Michels, El Paso; Robert Clarkson, Springfield; Lee M. Pedigo, Chicago. To the president of the University of Illinois for appointment of a member of the Advisory Board to fill the next vacancy, the following were selected: Jos. F. Shreve, Jacksonville; J. C. Wheatcroft, Grayville; Joseph Hottinger, Chicago.

Officers for the ensuing year were elected as follows:

President, W. F. Baum, Danville; vice-president, Julius Riemenschneider, Chicago; W. S. Denton, Beardstown; Byron Armstrong, Jacksonville; secretary, W. B. Day, Chicago; treasurer, Christian Garver, Bloomington.

It was decided to hold the next meeting during the third week in June at a place to be determined by the executive committee.

#### Iowa Ph.A.

The Iowa Pharmaceutical Association held a record-breaking convention at Burlington, beginning June 9, with more than 500 delegates registered the first day of the session, the 35th annual "getting-together" of Iowa druggists. This 500, however, was only about a third of those in attendance as between 1400 and 1500 delegates, friends and guests were in Burlington for the festivities. In his address President George Miller, of Marion, urged the appointment of a State Pharmacy Board of drug inspector and strongly advocated the passage of the Stevens' price-protection bill. Resolutions to this effect were passed. President Miller announced the following advisory board, one member from each Congressional district:

First, J. H. Axt, Fort Madison; 2d, Milo J. John, Clinton; 3d, C. A. Evans, Independence; 4th, A. C. Wilson, Oelwein; 5th, A. S. Gibbons, Anamosa; 6th, E. F. Hafner, Sigourney; 7th, E. Kenney, Indianola; 8th, George Jay, Shenandoah; 9th, C. A. Harlan, Harlan; 10th, W. W. Haire, Fort Dodge; 11th, J. A. Todd, Sioux City.

This advisory board is a new departure in organized drug-dom, its object being the consideration of leading questions of interest to druggists and reports to the members of the association as occasion requires. The first duty of the board this year was the nomination of officers of the association for the following term.

The big event of the first day was an entertainment in the coliseum at Crapo Park—"some show" was the general verdict. A "Dutch lunch," music, wrestling matches, etc., were features.

Ball games, an athletic meet with scores of prizes, band concerts by two bands, dances, banquet and amusement features galore kept the drug men and their guests interested and busy when the business sessions had adjourned.

The following officers were elected for the ensuing year, during the steamboat excursion to Keokuk on a big steamer:

President, A. J. Kilmer, Mason City; 1st vice-president, Joseph R. Sutter, Burlington; 2d vice-president, Arthur Kiedaisch, Keokuk; 3d vice-president, Milo J. John, Clinton; secretary, Al Falkenhainer, Algona; treasurer, J. M. Lindley, Winfield; executive committee, J. D. Royer, Cedar Rapids; H. S. Keabets, Pella; J. A. Todd, Sioux City.

Following are the new officers of the Iowa Pharmaceutical Travelers' Association: M. H. Wick, president, Des Moines; W. J. Schneider, 1st vice-president, St. Paul; W. C. Wright, 2d vice-president, Cedar Falls; J. B. Vincent, 3d vice-president, Oskaloosa; J. R. Cochran, secretary-treasurer, Des Moines. The following were elected to serve on the Council:

W. G. Haupt, chairman, Des Moines; R. E. Kilbourne, Edgar Hurford, Minneapolis; W. T. Curwen, Chicago; H. N. McCann, Elkhart, Ind.

Three insurance directors were elected: W. W. Haire, of Ft. Dodge; George M. Pedersen, of Storm Lake, and E. E. Conner, of Algona.

#### Kansas Ph.A.

The annual meeting of the Kansas Pharmaceutical Association was held at Hutchinson, and there was a large attendance for a town situated so far from the larger cities and more densely populated Eastern part of the State.

The association went into executive session during the reading of President Reed's address, which was full of timely matter for the needs of the druggists of the day.

Secretary Von Riesen's report showed that he had had a hard year of work and that much was accomplished, not only for the upbuilding of the association but also in lightening the burden of the druggists in the United States by having been successful in getting a number of manufacturers to reduce

their prices to the 2, 4 and 8 standard of the N. A. R. D. Seventy-nine members were added to the roll, and this brings the total to about 650.

The association at Lawrence a year ago ordered that the secretary be instructed to take a vote by mail on the following questions:

Shall the K. Ph. A. reaffiliate with the N. A. R. D.?

Shall the K. Ph. A. amend its by-laws so that members of the State Board of Pharmacy shall not be eligible to serve more than two successive terms?

The vote stood overwhelmingly in favor of both questions, and the association amended its by-laws to conform with the result of the vote.

Speakers before the association were National Secretary Thos. H. Potts, J. B. Wood, of Parke, Davis & Co.; R. E. Bell, of Frederick Stearns & Co., and Jas. M. Love, M. D.

It was the misfortune of Mr. Potts, while in Hutchinson, to contract a very severe case of biliousness combined with vertigo, which not only prevented him from attending several sessions of the convention but also debarred him from the banquet at the Bissante Hotel where he was to have made an address.

J. B. Wood read a paper on "Biological Products" and R. E. Bell read a paper on "Co-operation and Kindred Ideas."

A memorial meeting was held in commemoration of Charles L. Becker, deceased. Mr. Becker served for many years as an officer of the Kansas State Board of Pharmacy, and was well and favorably known by the various members of State associations as well as National. Many druggists eulogized Mr. Becker.

The newly elected officers are: President, Walter J. Bangs, Madison; 1st vice-president, J. W. Giesburg, Kansas City; 2d vice-president, E. E. Bloom, Hutchinson; secretary, D. v. Riesen, Marysville; treasurer, John Schmitter, Gypsum City.

The Kansas Pharmaceutical Travelers' Association resolved at their last meeting in Lawrence to be the entertainers or hosts of the guests at the meeting in the future and they certainly did some entertaining! In fact, the banquet at the Bissante, one of the favorably known hostelries of the Harvey system, was one to be remembered. Plates to the number of 300 were laid. Claud Coon, who had been chosen as toastmaster, had to be unavoidably absent, so H. S. Lynn was substituted, and as he is an ex-drug representative, he felt perfectly at home.

The ladies were charmingly entertained with a musicale and informal reception at the residence of Mrs. E. E. Bloom, with a general reception and dance at the Elks Club. Mrs. O. E. Wherrett, of Atchison, was elected president, and Mrs. N. C. Edelblute, of Topeka, as secretary.

The next meeting will be held at Wichita, May 11, 12 and 13, 1915.

#### Louisiana Ph.A.

Whether or not it was because for the first time in the history of the association the annual convention of the Louisiana Ph.A. was held outside of New Orleans, the recently concluded meeting of that organization at Shreveport was one of the most interesting and most successful of any yet held. About 90 new members were added, and the following officers were elected:

President, John Gill Wafer, Homer; 1st vice-president, Fred Earhardt, New Orleans; 2d vice-president, Eugene Daste, New Orleans; recording secretary, George W. McDuff, New Orleans; corresponding secretary, M. Castreix, New Orleans; treasurer, Dr. George S. Brown, New Orleans; executive committee, Peter Rupp, E. H. Walsdorf, Joseph T. Walker, Gus Seemann, M. Stolzenhaller, New Orleans; delegates to the A. Ph. A., J. W. Peyton, W. G. Hudson, Hamilton Monroe and Paul Eckles.

The convention favored: 76 hours per week on a two weeks' basis for pharmacists and clerks; a registration fee of \$15 instead of \$8; the rigid enforcement of the anti-narcotic laws, with the appointment of an advisory council of five to confer with the board of health; the appointment of an inspector of drugs to be appointed by the State Board of Health from five names to be presented by the association—inspector to be at least 30 years of age and to have had at least five years' experience as a registered pharmacist; the enforcement of the law requiring that every applicant for registration shall have been duly registered as an apprentice at the time of his entrance into business; an increase of the secretary's salary by \$50.

#### Maine Ph.A.

As we go to press the annual convention of the Maine Pharmaceutical Association is being held in Bangor, on June 30, July 1, 2, the entertainment being under the direction of a committee made up of Charles H. Davis, Bangor; C. M. Brown, Bangor; W. C. Mutt, Old Town; C. E. Walmsley, Bangor. The first business session includes an address by Mayor Utterback, automobile trips, open air entertainments, a day at Penobscot Park, Stockton, with shore dinner and ball game; a grand ball and distribution of prizes are among the features scheduled.

#### Michigan Ph.A.

The 34th annual convention of the Wisconsin Ph.A. was held at Delavan Lake, June 16, 17, 18 and 19, and was one of the most successful gatherings in the history of the organization. The annual entertainment by the Wisconsin Pharmaceutical Travelers' Association included many new and novel features. The first session was devoted to reports of officers and committees, appointment of committees and new business. President Louis H. Kressin, of Milwaukee, delivered his annual address. The welcome of the travelers' organization was offered by President Julius Kauders. The Ladies' Auxiliary announcement was made by Mrs. William Thomson, president. George Weigle presented the legislative committee report; George H. Kesten reported on the school of pharmacy, while E. E. Williams presented the report of the U. S. P. committee. In the evening the traveling men's annual entertainment was given, followed by dancing.

Interesting reports were presented Wednesday morning as follows: E. B. Heimstreet, committee on trade interests; committee on adulteration, Prof. R. Fisher; committee on national legislation, S. A. Eckstein; historical committee, Prof. E. Kremers; committee on propaganda, E. G. Racuber; druggists' national home at Palmyra, Wis., George H. Kesten and E. B. Heimstreet. Another band concert and a reception and card party for the ladies in the hotel parlors were held Wednesday forenoon. The annual baseball game between the druggists and the travelers took place in the afternoon. A musical entertainment, followed by dancing was the attraction on Wednesday evening.

E. B. Heimstreet and William Kaiser reported on the fire insurance proposition Thursday morning, after which the annual election of officers, directors and State Board members took place. The annual business meetings of the Travelers' organization and the Ladies' Auxiliary were held Thursday. Another band concert and the annual athletic contest took up all of Thursday afternoon, while in the evening the Ladies' Auxiliary gave an annual entertainment, followed by dancing.

The installation of the new officers took place on Friday morning of the last day. More band music and another round of athletic contests consumed the afternoon and brought to a close the four-day session.

#### Mississippi Ph.A.

The two days' annual session of the Mississippi Ph.A. was held at Jackson, and that city was again chosen as the meeting-place for 1915, on the second Tuesday in June. The officers elected were: President, J. Clyde McGee, Jackson; 1st vice-president, J. B. Atkinson, Water Valley; 2d vice-president, W. H. Hardy, Kosciusko; secretary-treasurer, Miss Flora Scarborough, Laurel; executive committee, George L. Moore, Hunter M. Todd and E. H. Bradshaw, all of Jackson. A meeting of the alumni of pharmaceutical department of the University of Mississippi was held at which an alumni association was formed with the following officers: President, Leslie P. Johnson, Levington; vice-president, R. Hills, Leakesville; secretary, F. G. Mann, Yazoo City.

#### Missouri Ph.A.

The Missouri Pharmaceutical Association met in 36th annual convention June 16, for a session running through to the 19th, inclusive, at Pertle Springs, a resort at Warrensburg. The Missouri Pharmaceutical Travelers' Association held its 23d annual convention at the same place on June 18.

Francis Hemm, St. Louis, was chairman of the committee on papers and queries, and others on the committee were F. W. Sultan, St. Louis; Louis Lieberstein, St. Louis; J. M. Love, Kansas City; F. W. Robinson, Warrensburg. Following were chairmen of committees: Deceased members, F. R. Dimmitt; drug adulterations, M. M. Whitney, Kansas City; exhibits,

J. E. Koppenbrink, Higginsville; legislation, F. H. Fricke, St. Louis; National Formulary, O. J. Cloughly, St. Louis; membership and attendance, W. C. Bender, St. Joseph; trade interests, J. A. Kinder, Cape Girardeau; transportation; J. George Wirtham, Kansas City; U.S. Pharmacopoeia, William Mittelbach, Boonville; auxiliary committee on legislation, C. J. Walker, Hannibal; welcome, Dr. Otto F. Claus, St. Louis; candidates for board of pharmacy, D. V. Whitney, Kansas City; pharmaceutical assay processes, F. H. Fricke, St. Louis; conference committee on entertainment, Francis Hemm, St. Louis.

Response to the welcome by Mayor Mayes, of Warrensburg, was by A. W. Pauley for the Missouri Pharmaceutical Association. There was a reception of delegates from the American Pharmaceutical Association, National Association of Retail Druggists and other organizations. President E. G. Schroers' address was followed by Dr. H. M. Whelpley's report as permanent secretary. L. A. Seitz was chairman of the entertainment committee of the Missouri Pharmaceutical Association, and Mrs. H. M. Whelpley was chairlady of the ladies' entertainment committee. W. F. Kahre was chairman of the Pharmaceutical Travelers' entertainment committee. The leader of the band as usual was "Prof." Charles J. Wagner.

A feature of the Travelers' entertainment was the grand opening of Locatell's barber shop. The druggists and travelers paraded. There was a baseball "scramble," a potato race, a football kick, an egg and spoon race. A musical entertainment was given in the auditorium.

#### Montana Ph.A.

The Montana Pharmaceutical Association will hold its annual meeting in Kalispell, Mont., on July 17 and 18. The railroads have granted a fare of one and one-third for the return trip from all points in Montana. This promises to be the most successful meeting ever held by the association. For a number of years the association has been small in numbers, and at the last annual meeting there was a membership of but 50. There are 217 drug stores in Montana and more than 90 per cent. belong to the association at the present time, a large increase in membership which has resulted from the activity of State Secretary Ridell and from the efforts of druggists in Kalispell. The local committee has prepared a very interesting programme including an excursion across Flathead Lake. Kalispell is only 30 miles from Glacier National Park, and the visitors will be permitted stop-overs at either Belton or Glacier Park Station for the purpose of visiting the park. Kalispell is well provided with hotels, and all prospective visitors who desire to reserve rooms in advance may do so by sending a request to the effect to the secretary of Kalispell Chamber of Commerce.

#### North Carolina Ph.A.

The 35th annual convention of the North Carolina Ph.A. was held at Hendersonville, June 17-19. The guest of honor was Dr. James H. Beal, secretary of the A.Ph.A., who spoke on the 17th.

#### Ohio Ph.A.

The 36th annual convention of the Ohio Ph.A. will be held at Cedar Point, on Lake Erie, July 7-10 "without a dull moment in the programme." The entertainment features are in the hands of the Travelers' Auxiliary, and all the business sessions will be brief and to the point. The Council promises to remove all the dull spots, and only allow the interesting things to come before the delegates. The special addresses will be made by Dr. W. A. T. Andrews, of New York; the Hon. S. E. Strode, of the Agricultural Commission; Prof. J. G. Haleplaeus, Fred B. Atchison and Charles Barker. The entertainment programme contains almost every conceivable form of recreation, both social and athletic. Special rates have been made at the Hotel Breakers.

#### Pennsylvania Ph.A.

As we go to press, the 37th annual meeting of the Pennsylvania Pharmaceutical Association is being held at Buena Vista Spring, Franklin county. A feature of the session is the large number of new members to be received as the result of a systematic campaign in every county of the State. Pittsburgh and Philadelphia assigned local committees for the work, the members of which in automobiles called on every druggist not a member with excellent results. More than 100 applications for membership had been acted upon by June 1.

Among the business before the convention was the preparation of legislation pertaining to the practice of pharmacy in the State, the proposed bills to be presented at the Fall session of the Legislature. President Richard H. Lackey presided, and in addition to the reports of Secretary Edgar F. Heffner, Treasurer Francis H. E. Gleim, and the executive committee through Chairman Howard J. Siegfried, the following committees were heard from:

Delegates to the N.W.D.A., C. M. Kline, chairman; delegates to the A.Ph.A., Louis Emanuel, chairman, Procter Memorial Fund, Louis Saalbach, chairman; membership, Wm. H. Kuoepfel, chairman; botany, A. W. Miller, chairman; papers and queries, F. J. Blumenschein, chairman; patents and trade-marks, F. E. Stewart, chairman; trade interests, B. E. Pritchard, chairman; drug market, Chas. E. Vanderkleed; U.S.P. and N.F. propaganda, W. L. Cliffe, chairman; legislation, J. C. Wallace, chairman; next meeting, H. C. Byers, chairman.

A lecture on "Bacterial Vaccines and Serums," by Dr. A. Parker Hitchens, and addresses by the Hon. John W. Hoke, Chambersburg, Pa., and President Edward T. Hahn, of the Traveling Men's Auxiliary, were features.

On the entertainment programme were the president's reception with a dance and refreshments, a ladies' card party, athletic sports and family dinner, a circus parade and a society circus.

#### Oklahoma Ph.A.

The Oklahoma Ph.A. at the annual convention at Enid adopted a resolution in favor of eliminating the wagon patent-medicine vendor, house-to-house peddlers and street fakirs dealing in drugs. Tulsa was chosen for the next year's meeting-place, and the following officers were elected: President, W. S. Younkman, Tulsa; vice-president, W. L. Kasl, Perry; secretary-treasurer, A. W. Woodmancey, Oklahoma City.

#### San Francisco Branch, A.Ph.A.

Early in May the San Francisco Branch of the A.Ph.A. was organized with the following officers: President, Albert Schneider; 1st vice-president, Mrs. R. E. White; 2d vice-president, Arthur Reum; secretary-treasurer, Miss Clarissa M. Roebr. Dr. Albert Schneider was elected a member of the Council of the A.Ph.A. to serve three years, and Dr. Josephine Barbat-Winslow, Dr. John Zieg and Joseph Lengfeld were named delegates to the annual convention of the California Ph.A. A constitution and by-laws were adopted. The June meeting was held on the second Tuesday.

#### Vermont Ph.A.

Secretary W. E. Terrill, of the Vermont State Ph.A., has sent out notices of the annual meeting of that body at Burlington, July 7, 8, 9, with headquarters at the Hotel Vermont. Prof. Joseph P. Remington, of Philadelphia, is to address the delegates on the second day of the meeting. The steamer Chateaugay has been chartered and the annual "boat ride" will be the principal feature of the entertainment programme.

#### Atlanta Woman Pharmacist Club Organized.

After a series of informal meetings, the Atlanta Woman Pharmacist Club met formally in the library of the Southern College of Pharmacy to elect permanent officers and establish certain necessary rules. Dr. R. C. Hood, dean of the college, acted as temporary chairman. The officers elected were: Miss Margaret Kimmel, president; Mrs. G. E. Matthews, secretary, and Miss Bertha Davis, treasurer. It was suggested by Miss Bowie and approved by those present, that the club retain the title "Atlanta Woman Pharmacist Club." The purpose of the club is to aid its members in keeping in touch with the advances of the pharmaceutical profession, to uplift woman's position in the pharmaceutical world, and to meet socially for the entertainment of its members and guests. Miss Bowie read an interesting article on "Woman in Pharmacy," and it was decided that at each meeting the members would read papers, tell of the interesting things met with in their work, and make suggestions for the good of the club and its members. Each member will be assessed with an initiation fee of 25 cents and regular dues of 20 cents per month, and the regular meetings be held the third Friday of each month. After the business meeting Miss Kimmel served delicious sandwiches.

## JOHN C. GALLAGHER HEADS N.J. P.H.A.

## Discussions on Live Subjects and Reading of Good Papers Mark Meeting—Stevens Bill Approved.

John C. Gallagher, of Jersey City, was elected president of the New Jersey State P.H.A. at its 44th annual meeting at Lakewood, Jan. 16 to 19. G. M. Hays Deemer, Atlantic City, was elected 1st vice-president; Franck C. Stutzlen, Elizabeth, secretary, and James C. Field, Plainfield, treasurer. The newly elected executive committee consists of Charles J. McCloskey, Jersey City; Alexander Dubell, Mount Holly; Leon A. Taylor, Lakewood; G. M. Hays Deemer, chairman; legislative committee, Stephen D. Woolley, Ocean Grove; George M. Beringer, Camden; Isaac J. Keuper, Trenton; David Strauss, Newark; Thomas S. Armstrong, Plainfield.

In his annual report, President Charles W. Holzhauser, of Newark, asserted that the past year had been either average or slightly under average for business. "The drug business in the big cities is becoming more and more commercial." The druggist can't live on ethics; he must turn his attention to side-lines. He must meet conditions by giving heed to commercial features—he must study merchandising. Mr. Holzhauser pointed out the importance of window displays to the modern drug store. Speaking on legislation, he observed that only one State, Maryland, had passed a bichloride tablet law as a result of the recent agitation. The abolition of the old guaranty fund would cause trouble where the retailer ships out of his State. He recommended: That the legislative committee continue its efforts to get a new pharmacy law enacted; an increase in the annual dues; that a committee investigate the subject of establishing life membership in the association.

The report of the legislative committee was presented by Stephen D. Woolley, who stated that the committee had followed instructions but had failed to get results. The bichloride tablet bill had been opposed by the majority of the committee because they thought more reasonable legislation than that provided for could be obtained. The anti-narcotic measures were favored but went to "the legislative graveyard." The pharmacy act bill passed the Assembly, then went into the hands of an unfavorable Senate committee and "never got out." Small storekeepers were in part to blame for its being killed. The committee believed the association should be reincorporated under the State corporation law of 1908. This action was advised despite the Secretary of State's assurance that the association's corporation rights have not been impaired.

Secretary Stutzlen reported that 1000 copies of the proceedings had been published. No copies had been sent to delinquent members. The total membership is 905, 65 new members having been taken in at this meeting. Disbursements had amounted to \$1,037.12. Treasurer Field reported a balance on hand of \$499.86. Many members are far in arrears and a large sum is out in back dues. The subject of delinquent members was referred to the executive committee.

Secretary Jorden, of the State Board of Pharmacy presented an extensive report touching in detail upon each case prosecuted since the last meeting. A large number of pharmacists had neglected to renew their registration. Mr. Strauss had been appointed by the Governor for a full term on the board. There are now 2976 registered pharmacists in the State in good standing. Treasurer L. W. Brown, of the board, reported total receipts amounting to \$4498 and a balance on hand of \$219.

The association endorsed the Stevens bill almost unanimously.

George M. Beringer, Jr., had arranged his usual splendid programme of papers, some of which will be published in later issues of the ERA.

By resolution, the association decided that the matter of reincorporation be referred to the incoming legislative committee to draw up new articles in proper legal form and submit same at next meeting, all members present on that occasion to append their signatures thereto. By approving the application for membership submitted by a registered assistant the members went on record as interpreting the constitution to the effect that registered assistants are eligible for membership. The membership of non-practicing pharmacists upon the State board was referred to the board to obtain an opinion of the Attorney-General of the State.

## Commencement at Philadelphia College of Pharmacy.

The 93d commencement week exercises of the Philadelphia

College of Pharmacy began with the Baccalaureate services at the Church of St. Luke and the Epiphany, June 14. The sermon was delivered by the Rev. David H. Steele. On Monday evening the professors' annual banquet to the graduating class was held in the college auditorium. At the annual election of the Alumni Association Tuesday afternoon the following officers were elected: President, Dr. Alfred Heineberg, '99; 1st vice-president, Warren H. Poley, '75; 2d vice-president, William A. Carpenter, '91; recording secretary, Joseph W. England, '83; treasurer, C. Carroll Meyer, '73; corresponding secretary, Jacob M. Baer, '87; board of directors (to serve for three years), J. F. Strawinski, '98; Mitchell Bernstein, '09; P. Samuel Stout, '99; Elmer H. Hessler, '12. In the evening the 80th annual reception to the graduating class was held in the college auditorium.

The 50th annual Alumni reunion and dinner was held at the Hotel Walton on Wednesday evening. Forty-four different classes were represented by a total of nearly 300 alumni. Joseph L. Lemberger, of the class of 1854, was the oldest graduate present. Toastmaster Prof. Joseph P. Remington spoke briefly on the work and loyalty of the Alumni Association, after which the following toasts were responded to: "The Class of 1914," by Elwyn J. Wheeler, class president; "Philadelphia as an Educational Center," by Edward J. Cattell, Statistician of the City of Philadelphia; "The 50th Anniversary of the Alumni Association," by Howard B. French, president of the College; "The Pennsylvania Alumni Scholarship," by Warren H. Poley, vice-president of the Alumni Association; "The P.C.P. Centennial Fund," by Prof. Henry Kraemer; "The 4's and 9's," by representatives of the various classes. The completion of the Pennsylvania Alumni Scholarship Fund was announced and a total of \$5000 was reported to have been subscribed to the P.C.P. Centennial Fund. The class of 1889 boasted of being the first class to finish their class fund for the Centennial Fund, but the class of 1914 announced the completion of their fund before the evening had passed.

The 93d annual commencement took place in the American Academy of Music on Thursday evening.

## The Advertising Men's Convention.

The news value of advertising was illustrated in an exceptional manner at Toronto during the recent convention of the advertising men there. Securing the co-operation of the Toronto newspapers they in turn enlisted the support of all the merchants' associations and, in addition, circularized every retailer, big and little. As a result, thousands of stores, great and small, made window displays during convention week of nationally advertised goods. Every kind of merchandise from pins to pianos was included, and the result was the largest concerted display of advertised goods ever made at one time. It was a great object lesson to retailers and to advertising men in showing what can be done to get the retail stores in line with an advertising campaign. The fight against fakers was one of the features of the convention, the standpoint of association members being illustrated by the statement of Frank L. Blanchard, of New York, in a lay sermon on Sunday: "We are endeavoring to drive from the temple of advertising the liars, the swindlers, the fakers and those who seek to blast the lives of the innocent."

## A Pharmaceutical Wedding.

At the Hotel Savoy, June 20, Miss Clementine Sedana Klippert, daughter of Dr. Charles F. Klippert, president of the German Apothecaries' Society, was married to Karl Wippermann, a prominent pharmacist of Brooklyn. As bridesmaids were Miss Charlotte Hattermann, cousin of the bride; Miss Frances Seifert, daughter of the well-known pharmacist, L. F. W. Seifert, and Miss Claire Kantrowitz, daughter of the secretary of the G.A.S. The best man was August Diehl, also a well-known pharmacist of Brooklyn, and president of the New York Consolidated Drug Co. The matron of honor was Mrs. Alfred Koester. The G.A.S., Thursday Bowling Club and Jolly Theater Party were well represented. George T. Riefflin officiated as toastmaster and read many felicitous messages from friends in this country and Europe. About 75 guests, relatives and intimate friends were present.

The Springfield (Ill.) R.D.A. gave a dinner dance at Lincoln Inn recently with 30 couples present. J. R. Phillips, president of the association, was the toastmaster.

## SCHOOLS AND COLLEGES

### Medico-Chirurgical Department of Pharmacy.

The Medico-Chirurgical College of Philadelphia, including the departments of pharmacy and chemistry, held its annual commencement in the Academy of Music June 5 at 12 o'clock. The address was delivered by John Grier Hibben, LL.D., president of Princeton University. Prof. James M. Anders, senior member of the faculty of medicine, conferred the degrees. In the department of pharmacy 40 received the degree of Graduate in Pharmacy, 12 the degree of Pharmaceutical Chemist, two the degree of Doctor of Pharmacy in course. The honorary degree of Doctor of Pharmacy was conferred upon Joseph L. Lemberger, ex-president of the American Pharmaceutical Association. Prizes were awarded as follows:

The gold medal for the highest general average at the final examinations in the senior pharmacy class was awarded to William D. Hall, of Philadelphia, with honorable mention of Donald J. Brown, of Hazleton, and Samuel L. Furman.

The gold medal for the highest general average at the final examinations of the graduating class in chemistry was awarded to Harold L. Parmelee, of Middletown, Conn.

The Alumni Association gold medal for the highest average obtained at the alumni examination in practical pharmacy to William N. Baker, of Lewisburg. The second prize, a life membership in the Alumni Association, was awarded to Reginald Scheets, of Pottstown, with honorable mention of William D. Hall, of Philadelphia; Samuel L. Furman, of Philadelphia; Dell W. Youngken, of Philadelphia; Robert L. Bellenghi, of Philadelphia, and Donald J. Brown, of Hazleton.

The New York Alumni prize, consisting of first year's membership in the American Pharmaceutical Association, and contributed by Messrs. Maines and Gardner, was awarded to Gilbert C. Bacon, of Cuba.

The gold medal for the highest average in the examinations for advanced standing at the end of the junior course was awarded to Basil Mott, of Bellefonte, with honorable mention of Harry Angstadt, of Reading; J. Milton Groff, of Elizabethtown, and Isaac Bloomfield, of Philadelphia.

The prize consisting of one year's membership in the American Pharmaceutical Association offered to the member of the senior pharmacy class making the most satisfactory average in pharmacy laboratory work was awarded to Dell W. Youngken, of Philadelphia, with honorable mention of Joseph S. Hagenbuch, of Mahanoy City; William D. Hall, of Philadelphia, and Edward Schafer, of New Haven.

The prize consisting of one year's membership in the American Chemical Society offered to the member of the graduating class in chemistry for the highest general average in pharmaceutical chemistry was awarded to Harold L. Parmelee, of Middletown, Conn.

On the evening of June 4 the annual banquet of the General Alumni was held at the Hotel Adelphia. There were about 300 in attendance. The chief address was made by the Hon. Rudolph Blankenburg, Mayor of Philadelphia. The toast "Pharmacists" was responded to by Dr. O. W. Osterlund, the newly appointed member of the Pennsylvania Pharmaceutical Examining Board.

### Cincinnati College of Pharmacy.

The 42d annual commencement exercises of the Cincinnati College of Pharmacy were held on June 4 at the Grand Hotel when a class of 30 were given the degree of Ph.B., and a class of two the degree Ph.C. The programme included an address on behalf of the college by Fred W. Weissman, Ph.G., Ph.D., president of the Cincinnati Section of the American Chemical Society; an address on behalf of the faculty by Chas. A. Apmeyer, Ph.G.; and address and the conferring of the degrees by President John C. Otis, Ph.G., M.D., and prayer and benediction by the Rev. David H. Jemison. The annual meeting of the Alumni Association was held at the college building on June 2, with an illustrated lecture on "Erllich's 606" by Dr. A. O. Zwick, and the annual address of the president, Chas. F. Harding, Ph.B., Ph.C. At the annual college banquet Charles T. P. Fennel, Ph.G., Ph.D., was the toastmaster, and the following toasts were answered: Medicine, A. C. Bachmeyer, M.D.; Legal Profession, Judge Wm. D. Alexander; Pharmacy, Prof. John Uri Lloyd; Opportunities,

Chas. F. Harding; the Press, the Hon. Scott Small; Our Alumni, Clyde Wright Hill, Ph.B.

Prizes were awarded for excellent work as follows: General chemistry, given by Dr. Fennel, Donald H. Weiteki; practical chemistry, given by Prof. Apmeyer, Otto Durand; practical pharmacy, given by Dr. Fennel, Clyde W. Hill; pharmacy, given by Prof. Harding, James F. Dyer; physiology pharmacy, given by Prof. Lamb, Frank L. Murphy; materia medica, given by Prof. Griess, Charles Krechmer; microscopy, given by the College of Pharmacy, Lake A. Wright; alumni prize, given by the alumni, Fred L. Weik; college medal, August L. Stern, Jr.

### Medical College of Virginia.

The School of Pharmacy, Medical College of Virginia, at Richmond, has just completed its 21st session, the year having been the most successful in the history of the school. Seventy-two students were enrolled, and the graduating class numbered 25. The faculty for next year will be: Albert Bolenbaugh, B.S. in Phar., professor of pharmacy; W. F. Rudd, Ph.G., M.A., professor of chemistry; E. C. L. Miller, M.D., professor of bacteriology; Chas. O. Lee, B.S. in Phar., instructor in pharmaceutical botany; Chas. C. Haskell, B.A., M.D., lecturer in materia medica and pharmacology.

Twenty-three senior classmen visited the laboratories of Sharp & Dohme at Baltimore in May. After being shown through the plant the class was tendered a banquet at the Hotel Emerson, and the excursion proved most enjoyable and profitable. The party was accompanied by Richard Gwathmey, of Richmond, and by Prof. Albert Bolenbaugh.

### Valparaiso University C. of P.

The Department of Pharmacy of Valparaiso University has closed the most successful year in its history. Forty-four young men and one young woman received their diplomas with the degree of Graduate in Pharmacy. Practically every member of the class had a position waiting for him. The senior class annual exhibit, in addition to showing a general line of pharmaceuticals prepared by the students during the year, the filling of prescriptions, and the usual activities of the retail pharmacist, illustrate many processes of special interest, such as the manufacture of acetanilide, extraction of volatile oils by steam distillation, microscopical examination and purification of crude drugs, alkaloidal assaying and testing. The annual banquet was attended by more than 200 members of the classes with friends and relatives. Dean Timmons presided as toastmaster. One of the best things of the evening was a paper by Dr. Stoner on the "Therapeutics of Red Sandstone." The graduating exercises were held in University Auditorium. The address to the graduates was delivered by Prof. J. A. Hynes, of Chicago, on "The Pharmacy of Your Generation."

### University of Maryland, Department of Pharmacy.

Not less than 287 graduates received their degrees at the commencement of the University of Maryland, June 1, at the Lyric, 24 of the total being graduates in pharmacy. The occasion was rendered notable by the presence of Count Johann Heinrich von Bernstorff, the German Ambassador to the United States, who delivered the address to the graduates. The degrees were awarded by the provost of the university, the graduates being presented by the deans of the several departments. Dr. Charles Caspari, Jr., performed this duty for the department of pharmacy. The graduates were:

Maryland: Charles L. Armstrong, George Joseph Ayd, Joseph Myer Bransky, Samuel C. Cohen, Eugene D. Doty, L. Reyner Dukes, Sigismund V. Karwacki, William Earl McClure, Annie M. Patterson, Ferdinand Pross, Jr., Charles J. Rowe, J. Edward Schmidt and Charles Kenneth Stolemeyer. West Virginia: W. Ray Jackson, Roas Jackson Leader, and Thomas Homer Phillips. South Carolina: Claude E. Harris and Harvey Edwin Todd. North Carolina: Frontis Lentz. Russia: Carl J. Flom and Israel Liebman. Pennsylvania: Frank Neal Britcher. Connecticut: Allen M. Don. Cuba: Angel Antonio Rodon y Norma.

Frontis Lentz received the gold medal for general excellence and also the Simon medal for superior work in chemistry. Certificates of honor in the order of merit were awarded to Charles L. Armstrong, Ferdinand Pross, Jr., and Miss Annie M. Patterson, and honorable mention in the order of merit in the junior class went to Wilmer H. Schultze and W. I. Nathanson.

### University of Illinois School of Pharmacy.

The larger course of the School of Pharmacy, leading to the degree of Pharmacist in Chemistry, closed June 5, when the degree was conferred upon Paul W. Edgett, Gennaro D. Lavieri, Albert Schmitt, Jr., George Stulik, George F. Vaupell and Edgar P. Howard, Jr. The advisory board held its annual meeting at the school on June 4. There were present at the meeting George G. L. Scott, of Galesburg; A. G. C. Ackermann and Herman Gray, of Chicago, as well as the faculty of the school. The Chicago "Veteran Druggists' Association" has presented to the school the silver loving cup which was presented to Albert E. Lantz in 1895, and upon his death reverted to the C. V. D. A.

The new catalog of the University of Illinois School of Pharmacy is now ready for distribution. A copy may be had by addressing the actuary, W. B. Day, 74 E. 12th street, Chicago.

Announcement is made of an increase in the entrance requirements beginning with the session of 1916-17 to graduation from high school of accredited grade or the full educational equivalent of this. The present entrance requirements for the shorter course which leads to the degree of Graduate in Pharmacy are two years of high school of accredited grade or its full educational equivalent.

For entrance to the longer course leading to the degree of Pharmaceutical Chemist graduation from high school is already required.

Entrance examinations conducted by the registrar of the university will be held at the College of Medicine, Congress and Honore streets, Chicago, Sept. 21-25 and will include all the high school branches in which credits are accepted.

Andrew Scherer, an alumnus of the class of 1875, has offered a prize of \$25 in gold to the senior student who attains the highest average in pharmacy.

The 55th session begins Tuesday, Sept. 22.

### College of Pharmacy, State University of Iowa.

Prof. Zada M. Cooper entertained the women students of the college as well as the women pharmacists of Iowa City on May 29.

Dean Teeters, Dr. Chase, Prof. Kuever and Prof. Cooper were in attendance at the convention of the Iowa State association the second week in June at Burlington. Prof. Kuever read a paper on the "Preparation and Administration of 606 and 914," and Dr. Chase discussed the "Physiological Standardization of Glucosidal Drugs."

Dean Teeters and Mrs. Teeters entertained the members of the graduating class at their home on the West Side on June 6.

The junior class gave a picnic at Black Springs on June 2, to which the seniors and faculty members were invited.

### Brooklyn C. of P.

The 24th annual session of the Brooklyn College of Pharmacy will begin on Sept. 21. The year just closed has been one of the most successful in the history of the college. The junior class was the largest yet recorded, and the total number of students during the scholastic year, 1913-1914, exceeded by far the number in any previous year. During the past three years nothing has been spared to maintain the standing of the college among pharmaceutical institutions. At large expense improvements and new equipment have been added to the college building. It has been wired throughout for electric lighting and heating and the most modern electric stoves have been installed in the laboratories. A courtyard has been constructed and a massive retaining wall built entirely around the premises. A spacious lavatory with every modern and sanitary fixture has been built on the immediate north of the college building. A large number of high-power microscopes, the last word in scientific manufacture, have been added in the departments of physics and physiology. With a faculty composed of some of the strongest men in their respective fields, and with modern and effective equipment, the college looks forward to the greatest year in its history.

### Rhode Island College of Pharmacy.

At the commencement exercises honorary degrees were bestowed upon Edwin E. Calder, dean of the college, and John E. Groff, of the faculty. Earl H. Mason received the degree of doctor of pharmacy given for the first time under the new curriculum necessitating five years' study. The degree of graduate in pharmacy was conferred upon a class of 23.

The prizes for scholarship were distributed by the dean. The William O. Blanding prize, \$25 in gold for the highest general average during the senior year, was awarded to Frank I. Matteo, of Providence. He also won the Hall & Lyon prize of \$25 for the highest average in pharmacy. The George L. Clatlin scholarship was won by Michael J. Deady, of Westerly. The faculty prize was won by Aram Benoit, of Woonsocket. The Albert Fenner cup, presented to the class of 1912 by Albert Fenner in memory of his father, Albert Fenner, and to be given to each succeeding class getting a better average than the class of 1912, was retained by the class.

### FORDHAM UNIVERSITY C. OF P.

At the commencement exercises of Fordham University, June 9, seven pill rollers were made happy by the presentation of the coveted sheepskin. They enlisted two years ago in the newly-established Department of Pharmacy at Fordham.

Commencement this year will long remain a pleasant memory with those who were fortunate enough to be present. The large auditorium having a seating capacity of nearly 3000 was filled to its utmost and many late-comers were disappointed.

After the opening remarks by the president of the university, the Rev. Thomas J. McCluskey, S. J., two addresses were delivered by graduates from the Law School, one by Benedict D. Dineen, A. B., on "The Initiative and Referendum," the other by William J. J. Elger, on "The Recall of Judges." This was followed by the conferring of degrees and the awarding of prizes to the graduates of the three schools.

The address of the evening was given by His Excellency, Gov. Martin H. Glynn, LL.B., LL.D. He dwelt at some length upon the old memories which his visit to Fordham brought back to him and then he gave good, sound advice to the embryo lawyers, medicos and pharmacists. He drew a beautiful picture of the ideal physician and pharmacist, praising their devotion to the humanitarian calling and expressing the hope that the Fordham graduates would be an honor to their profession and to their alma mater.

The following men received the Degree of Ph.G.: Henry Burmeister, Otto Canis, William Flannagan, Leo Ganbarg, Vincent Montalbano, Angelo Pellegrino, Michael H. Teuy.

### Cleveland School of Pharmacy.

Eighteen students received diplomas as Graduates of Pharmacy at the commencement of the Western Reserve University, of which the Cleveland School of Pharmacy is the pharmaceutical department.

### Dr. Hy. J. J. Kassebaum Heads Brooklyn C.P. Alumni

At the annual meeting of the Alumni Association of the Brooklyn College of Pharmacy, Henry J. J. Kassebaum, '12, was elected president. The other officers are: 1st vice-president, Charles V. Lewis; 2d vice-president, Harry A. Read; secretary, Joseph Rollo; treasurer, William C. Anderson; registrar, Carolyn Santora; executive committee, 1914-15, Harry L. Goldwag, Rose Rubinoofsky and Edward J. Taylor; 1914-16, William Dembling, Joseph Caruso and Robert J. Henderson, and 1914-17, William Kitzer, Arthur O. Buck and Paul Mendelsohn, and chairman press committee, M. N. Babbitt.

A feature of the meeting was the proposing for membership by Dean Dr. Wm. C. Anderson of every graduate of the 1914 class. All were accepted and fully half the class became life members.

Dancing in the alumni rooms followed the conclusion of the business session.

### College of Pharmacy, University of State of N. J.

The commencement of the Department of Pharmacy, University of the State of New Jersey, was held in Jersey City June 2. President Hon. James E. Pope presiding. The principal address was made by Geo. M. Beringer, of Camden, N. J., president of the A. Ph. A. Hon. William H. Speer, Judge of the Hudson County Circuit Court, also delivered a short address. Dr. Joseph Koppel, dean, conferred the degree of Graduate in Pharmacy (Ph.G.) on 17 students and the degree of Doctor in Pharmacy (Phar.D.) on 32 students. President Pope awarded the following prizes: The gold medal to Joseph S. Churgin, the silver medal and the silver cup for the best examination in organic chemistry to Herman H. North, both of the senior class, and the bronze medal to Jacob Feinberg, of the junior class. The post-graduate prizes consisted of

three (3) memberships in the A. Ph. A. and were awarded by Prof. Otto Raubenheimer to Isaac Friedman, Eugene Gordon and Isidor A. Shapiro. Herman H. North delivered the valedictory address and Meyer A. Feinberg an excellent address in behalf of the post-graduate class.

### NEWS FROM THE COLLEGES.

The commencement exercises of the Pharmacy department, University of Mississippi, were held June 3, with 14 recipients of the degree of Ph.G.

At the commencement exercises of the Pharmacy Department of Southern Methodist University, May 29, President Hyer gave diplomas to four graduates in pharmacy.

At the commencement of Baylor University College of Pharmacy the degree of Ph.G. was conferred upon 10 graduates by Dr. S. P. Brooks.

The 20th annual commencement of the Birmingham Medical College, Schools of Medicine, Dentistry and Pharmacy, was held at the Jefferson Theater, Birmingham, Ala. Thirty candidates received the degree M.D., 11 the degree D.D.S., 18 the degree Ph.G., 5 the degree Ph.Ch., 1 the degree B.S. in Phar., and 1 the degree Phar.D. The college conferred the honorary degree of M.D. upon Dr. A. R. Bliss, professor of chemistry and pharmacy, in charge of the School of Pharmacy.

St. Louis College of Pharmacy banquet was held at the Jefferson Hotel, with Prof. H. M. Whelpley as toastmaster. The following were the toasts and speakers: Lorenz A. Seitz, chairman of the board of trustees, the College of Pharmacy; Omega Phi Society, Frank Kincaid, president, Decatur, Ill.; Alumni Association, Jerome A. Wilkerson, St. Louis; graduates in pharmacy class, Frank John Helms, Addieville, Ill.; bachelor of pharmacy class, Hull Wesley Butler, Kokomo, Ind.; pharmaceutical chemistry class, David S. Ralston, Vandalia, Mo.; scholarship, Theodore F. Meyer; class honors, Frederick George Messerschmidt; St. Louis Drug Club, H. L. Hudson; medals, Franz Fred Berg, Colorado Springs, Colo.; class history, Henry Adam Karber, Karber's Ridge, Ill.; the college faculty, Prof. J. M. Good; women in pharmacy, Miss Lydia Frankie Batdorf, Freeburg, Ill.; future, Thomas Bowden; student life, Charles Raymond Davis; class of 1889, George R. Merrell; call of classes from 1866 to 1913.

The graduation exercises of the department of pharmacy, University of Tennessee, were held June 6, President Brown Ayers, of the University, conferring the degrees. The silver loving cup for highest general average in pharmacy was won by J. H. Grant; gold medal for highest grades in laboratory work went to Ross Little, and the one year's membership and subscription to the American Pharmaceutical Association went to J. H. Grant.

## BOARD EXAMINATIONS

### Florida.

JACKSONVILLE, June 20.—President Wm. D. Jones, of the Florida State Board of Pharmacy, announced at the convention of the Florida Ph.A. at Atlantic Beach, that 19 applicants for registration as pharmacists took the recent examinations, and that the following had been successful:

Pharmacists—L. A. Pierre, Orville, Ala.; A. J. Porter, Tampa; George Moore, Lakeland; L. A. Myers, Jacksonville; M. B. Edwards, Miami; W. R. Crow, Umatilla; V. W. Ferris, Jacksonville.

### Illinois.

SPRINGFIELD, June 20.—At the May meeting of the Illinois State Board of Pharmacy held in Springfield, eight of the 52 candidates for registered pharmacists, 10 of the applicants for assistant pharmacist and two applicants for local registration passed successful examinations. Their names follow:

Registered Pharmacists—Emil Barre, Kaiser M. Beshshure, Stanislaus W. Burda, S. F. Sinclair, Harold Schmid, all of Chicago, and Frank L. Baird, Geneva; F. E. Parks, Marion and Ralph H. Thompson, Earlville.

Assistant Pharmacists—Randolph H. McGowan, Taibe Rose Polin, Clarence W. Simmons, Geo. J. Sladky, Robert J. Stubbs, all of Chicago, and Albert B. Catlin, Springfield; Melvin B. Hayes, Bloomington; Geo. M. Reid, Champaign; Ralph C. Swansen, Quincy; Lloyd E. Throckmorton, Quincy.

Local Registered Pharmacists—Edw. J. Jones, Secor and Leonard W. McBride, Sheffield.

The next meeting of the board for the examination of applicants for registered pharmacist will be held in Chicago July 14 and on July 16 an examination will be held for applicants for assistant pharmacist. The next apprentice examinations will be held on Friday, July 3.

SPRINGFIELD, June 20.—The Board of Pharmacy has been

especially active in investigating conditions throughout the State and instituting suits against violators of the pharmacy law. Following is a list of recent prosecutions:

George Schultz, Paris, fined \$40 and costs; James A. Loukota, Crete, \$100 and costs; C. Czabanski, Chicago Heights, \$50 and costs; Wm. McCrum, Decatur, \$20 and costs; Davis & Gentry, West Frankfort, \$100 and costs; Bent Bros. Drug Co., Oglesby, \$50 and costs; C. M. Harris, Casey, \$50 and costs; Clark & Waterman, Casey, \$20 and costs; E. A. Stemm, Oglesby, \$50 and costs; Fred Buck & Sons, Cherry, \$50 and costs; T. J. Wylie, Rock Falls, \$20 and costs; H. F. Daggett, Rock Falls, \$100 and costs; A. M. Schmidt, Earlville, \$20 and costs; Charles Hartman, Mt. Carroll, \$100 and costs.

All of the above defendants pleaded guilty and paid the fines. In addition to the above, judgment was obtained recently against the following violators of the pharmacy law, in Chicago, but the fines have not been paid over to the board because of a suit now pending to determine whether the clerk of the Municipal Court in Chicago can legally do so:

Dr. J. S. Gentile, \$20 and costs; I. Trace, \$20 and costs; Jacob Debovitz, \$20 and costs; Paul McMillan, \$20 and costs; D. Funt, \$20 and costs; W. Masor, \$20 and costs; Wm. B. Knowles, \$20 and costs; Oscar Osterger, \$20 and costs.

A number of other cases were instituted in Chicago which have not yet been adjudicated.

At the April examination in Chicago 30 of the 77 applicants for assistant pharmacist and 22 of the 90 candidates for examination as registered pharmacist passed.

### Kansas.

ELLSWORTH June 20.—The first quarterly meeting of the Kansas State Board of Pharmacy was held in Hutchinson, May 14 and 15, at which time there were 40 applicants in attendance for the examinations. Of this number, 29 were successful and received certificates as follows:

Pharmacists—Victor DeTour, Minneapolis; W. T. Donce, Belleville; Harry E. Flag, Sterling; Thos. C. McMillan, Council Grove; Ralph W. Henderson, Burden; Dr. A. E. Hewitt, Walnut; Wm. E. Allen, Emporia; Geo. W. Robinson, Miltonvale; Lyle H. Gray, Protection; Grant H. Simms, Belleville; Wm. G. Allen, Council Grove; J. A. Bacon, Holton; Arthur Hess, Hutchinson; L. E. Puryear, Council Grove; Dr. A. R. Adams, Easton; Tom Jackson, Chanute; R. Goelmer, Leavenworth; Arthur Staar, Florence; Byron McMillan, Dodge City; Harley R. Turner, Lewis; Walter C. Henning, Oxford; Mrs. L. D. Hampton, Kansas City; Walter S. Black, Kiowa; Michael May, Andale; W. N. Maher, Stafford; C. A. Nownes, Oak Hill; Nick S. Neylon, Paola; E. W. Zimmerman, Solomon.

Assistant—Mary E. Mumford, Hanover.

The next quarterly meeting of the board will be held in Leavenworth, Sept. 16 and 17, beginning at 9 a.m.

### Maryland.

BALTIMORE, June 20.—Following is a list of those who passed the Maryland Board of Pharmacy examination held in April:

Pharmacists—Frank N. Britcher, S. V. Kanvacki, Ferdinand Pross, Jr., Allen M. Don, J. E. Schmidt, Wm. E. McClure, C. K. Stotlemeyer, Jos. M. Bransky, S. C. Cohen, Carl J. Flom, C. L. Armstrong, Harvey E. Todd, Eugene D. Doty, Harry J. Moyer, L. R. Dukes, Annie M. Patterson, A. La. Course, N. Dean Rowland.

Assistants—John F. Witzell, V. L. Litsinger, H. Homer Freitag, Fred G. Young, H. A. Kinnaman, A. L. Sterling, L. F. Mitchell, Wm. M. Roddick, John T. Meeth, J. L. Ashbill, Beni. Mellor, Jr., Wm. H. Schulze, Allan T. Hartman, N. F. Storm, Thos. E. Kelly, Morris Citrenbaum, R. A. Lotterer, A. J. Patrick, C. H. Wiggers, Chas. S. Austin, Jr., Geo. W. Kellough, Edwin A. Schmidt, M. Perry Poterfield.

The following officers were elected for one year from May, 1914: President, H. Lionel Meredith, Hagerstown; secretary, Ephraim Bacon, Baltimore; treasurer, David R. Millard, Mt. Washington; William C. Powell, Snow Hill; J. Fuller Frames, Baltimore.

### Massachusetts.

BOSTON, June 20.—The Massachusetts Board of Registration in Pharmacy has granted registration to the following applicants:

Albert Brown, Malden; William H. Craig, Swampscott; Joseph F. Devine, Boston; Henry Hansen, Brookline; Robert G. Albertson, Worcester; John J. O'Rourke, Worcester; William C. Bruzga, Boston; Joseph A. Denis, Marlboro; Walter F. Gorham, Taunton; James I. Lawlor, Lawrence; James D. Hart, Boston; Minna Seini-gor, Boston; Thomas F. Fair, Natick; Arthur F. Johnson, Malden; Samuel M. Lapp, Boston.

Frank M. Gaffney, Leominster; Joseph A. Gallant, New Bedford; William H. Hickey, Fall River; Joseph A. Lamothe, Holyoke; Arthur J. Leary, Springfield; Eldred W. Woodworth, Haverhill; Thomas C. Garner, Boston; Frederick V. Palladino, Boston; Arthur A. Brum, Medford; Charles A. Duhamel, Boston; Joseph F. La-liberte, Boston; Allan H. Adams, Somerville; Herbert A. Clough, Medford; Thomas F. Cuddy, Lawrence; William P. Murray, Lowell; Florinn J. Amrhein, Boston; Gdalo S. Soroka, Boston.

The following were granted Assistant Certificates:

Assistants—Charles A. Gwynn, New Bedford; Joseph M. McLaughlin, Brookline; Alfred R. Trimbach, Boston; Samuel K. Saleeby, Boston; Alfred H. Chute, Somerville; Homer D. Tubbs, Boston; Sherman T. Oliver, Cambridge; Rodolph L. Roy, Lynn; Wilfred D. Arseneault, Worcester; Joseph D. Beauparlant, Fall River; William S. Brosseau, Holyoke; Eugene A. Brown, Natick; Frederic H. Ferris, Hollbrook; Harry I. Garb, Boston; Alogia Genet, Indian Orchard; John E. Martin, Lawrence; Theresa F. Rearden, Springfield; Arthur J. Brown, Lowell; Edward L. Costello, Hudson; Elyvyn A. Dearth, Lowell; Romeo O. de Villers, Fall River; Oliver L. Goodness, Springfield; William H. McCormick, Cambridge; John J. McGreevey, Westfield; Ubald G. St. Jacques, Holyoke; Ford W. White, Cambridge.

Edmond G. Bessette, New Bedford; Henry R. Blanchette, New

Bedford; Rosare Debers, New Bedford; George A. Gladu, New Bedford; Louis G. New Bedford; Thomas F. Healy, Jr., New Bedford; Arthur E. Leeger, Worcester; John A. McCarthy, Lawrence; Joseph A. Michaud, New Bedford; Reynold N. Silverman, Worcester; Paul Balen, Boston; Joseph E. Gallagher, Boston; David J. Leach, Boston; Albert I. Reynolds, Everett; Keovork Vartan, Lowell; Boston; Harry M. Bean, Somerville; Roupfen Der Stepanian, Cambridge; Walter R. Hayes, Medford; Arthur Simmons, Boston; John S. Austin, Cambridge; Harry A. McDonald, Boston; M. Smith, Reading; Fred E. Therrien, Boston; Maurice J. Rossard, Lowell; James P. Shea, Thelwell; Charles D. Dever, Lowell; Merrill R. Johnson, Brockton; Edward St. Hilaire, M. St. Joseph, W. Vogel, Quincy.

### New York.

The number of penalties paid the New York State Board during May, 1914, and the character of the violations follow:

Narcotic violations of Pharmacy.....	1
Working hours of employees.....	1
Misfitting labels present.....	1
Adulterated and deficient pharmacopoeial products.....	8
Adulterated and deficient prescriptions.....	15
Minor violations.....	9
Total.....	35

At the examinations held May 20-21 the following applicants were successful:

Proctors—New York City: Charles Weinrob, Isidore Rabinowitz, William Lockman, Peter Barbieri, Vincent W. Kasprzycki, Frank A. Creeve, Harrison O. Meredith, J. Sebring Ackerman, Oscar Fealler, William M. Malloy, Warren E. Dell, Michael DeLalla, Charles M. Storm, Edward J. Kodet, Ralph F. Finello, Roscoe S. Jones, Edward Cragg, Jr., Aaron M. Dixon, Robert E. Lee, Charles H. Kneivitt, Albany: Mathilde M. Bongartz, Clarence H. Weatherwax, William J. Brisbin, Elmer J. Schiemer, Fred L. Schramme, Jack W. Abraham, Ruth L. Marsh, Morris Singer, Earl E. Davenport, Lloyd B. Whitaker, Arthur Haques, Francis Fletcher, Harry O. Withey, George E. Conrad, Morris M. Horowitz, George P. Reichardt, Harry J. Van Vleck, George E. Robinson, Buffalo: Edith C. Peloubet, Joseph L. Harrington, John D. Cogswell, Edwin J. Booth, Guseppe Ortolani, Henry M. Fish, Gerald F. Campbell, Louis J. Urbanski, Ernest C. Silvernail, Curtis C. Finney, Herman L. Hardy, Marvin B. Davis, George W. Vadakin, Isidore Lurie, Homer D. Sreater, Henry I. Whitby, Jewett G. Holbrook, Henry W. Chapman, Fred M. Noninger, Ivan M. Pleskow, Charles A. Williamson, George Cavaguaro.

Pharmacists—New York City: Samuel M. Rivkin, Harry Kimmelman, Donato Lamonaca, Reuben Podolsky, Francis A. Frawley, Joel W. Brown, Andrew Phillips, Maurice N. Babbit, Clarence F. Dennis, Jacob Marionowsky, Abraham J. Rosenfield, Samuel Ferber, Salvatore Picozzi, Nicholas Andreole, Patrick J. Tunny, Max Belson, Samuel Olson, Reuben Cirulnick, Morris H. Smukler, Hyman Levine, Samuel M. Klein, Isidor Goldenberg, Minnie Sachs, Benjamin Lipson, Francis A. Callahan, Harry Aronshon, Solomon H. Chramoy, Abraham Lerner, Rudolf Cunradi, Lynn Berbert, Asher Z. Dubinbaum, Morris B. Twersky, Morris D. Ruderman, Benjamin Rappaport, Henry S. Lavina, Irving Weschler, William Shemstein, Nathan Wiener, Harry N. Lester, Samuel Schoen, David Berkowitz, Herman J. Godes, Walter H. Daniell, Timothy J. Landres, Max Breitbart, Louis Sheinfine, Solomon Kemp, Boris Gourin, Isaac Rounin, Lewis N. Brown, Edward J. Taylor, McNeil Blair, Bernard J. Barbieri, Florence V. G. Wodicka, Murray Markowitz, Nicholas M. Jacobson, Louis Dwork, Attilio Sabini, Harry A. Read, Mandle Katz, Charles Dwork, Solomon Katz, Kpel Samelson, Francis B. McSheehy, Jacob Doniger, Henry Barraek, Charles Bushel, David G. Matzkin, Helen A. Rutkus, Jacob A. Michels, David Chasan, Louis Reiss, Nathan Moskowitz, Jacob Rutes, Benjamin Feinstein, Julius Nelson, Howard C. Newton, Otto J. Hoffman, Solomon Zevie, Bendette Carfara, Joseph Sirohoff, Thomas E. Kinane, William Zibulsky, John Sciaccia, Benjamin Foodin, Simon Shack, Thomas A. Zimmerman, Leo Cohen, Gustave Smith, Michle Scheinfinkel, Harry D. Niemetz, Carlton S. Embree, Joseph A. Trainor, Meyer Emanuel, Abraham I. Tolmach, Michael T. Sisto, Raymond J. Martin, Gaetano Cavallo, Joseph Futterman, Albany: Carl A. Weber, Rufus A. MacGregor, J. Edward Molloy, Raymond D. Darringer, John J. Healy, Jr., Sylvester E. McDermott, Emanuel Brunt, Roy Abernethy, Herman P. Rappold, Henry H. Swink, Fred J. McBreath, John E. Kelly, Nicholas L. Rogers, Chester W. Weeks, Herbert Jones, Raymond H. Curtis, Walter M. Hartmann, Buffalo: Henry D. Bennett, Reuben J. Bennett, Lucius A. Williams, Cornelius J. Hoctor, Frank S. Deyoe, Uriah S. Messier, Ethel I. Woodward.

### Oregon.

PORTLAND, June 20.—The following-named passed the State Board examinations at the recent tests: J. G. Torrance, Portland; J. L. Spence, Salem; L. C. Beers, Salem; Clair Taylor, Portland; C. S. Bartolcker, Coquille; O. S. Perry, Portland; F. A. Logan, Portland; F. G. Phipps, Portland; C. O. De Vore, Portland; O. C. Shindler, Marshfield; Kathryn Brainard, Medford; Amy Hughes, Salem; E. H. Moody, Portland; L. H. Schultz, Portland; G. R. Baum, Portland; Lester M. Leland, Portland; Benjamin Harning, Corvallis; Olive M. Harry, Corvallis; Rose C. Mason, Jefferson; O. H. Schutz, Portland; J. H. Baker, Portland; J. C. Shirley, Corvallis; H. T. Soll, Portland; L. L. Hendricks, Portland; W. A. Groves, Condon; F. V. Engledinger, Hillsboro; Harvey Koon, Corvallis; H. L. Kurtz, Rainier.

### Rhode Island.

PROVIDENCE, June 20.—Francis M. Laudy, of Cumberland, passed examination before the Board of Pharmacy Tuesday, April 7.

James A. Miller, Providence; James J. Chandley, Jr., Pawtucket, and Arsene Lepaxe, Woonsocket, passed the examination at the meeting of the board May 5.

### South Dakota.

BROOKINGS, June 20.—At the Spring meeting of the South Dakota Board of Pharmacy a class of 30 took the examinations for registration in pharmacy, the following-named being granted certificates:

Pharmacists—Earl G. Wheeler, Parker; Anna Sivertson, Pierpont; M. W. Henney, DeSmet; E. S. Hansen, Wagner; R. H. Soule, Brookings.

Assistants—F. G. McDougall, Britton; L. J. Kadinger, Hartford; L. F. Nelson, Canton; A. J. Shaw, Miller; M. M. Reeve, Milbank; John Eng, Flandrau; George Paulson, Dell Rapids; H. Heubner, Hot Springs; D. Willer, Geddes; A. T. Danielson, Omaha; H. F. McGowan, Mt. Vernon; J. Gedstad, Lennox; J. T. Heffernan, McIntosh; C. H. Hess, Blunt; J. S. James, Huron; D. F. Danforth, Raymond.

### Texas.

HOUSTON, June 20.—The regular meeting of the Texas Board of Pharmacy was held in the Auditorium, in Houston, May 19, with a full attendance of all members present. There were 87 applicants in waiting to take the examination, the following making satisfactory grades:

W. F. Allison, Chisholm; W. F. Brooks, Ferris; Olin Bruton, Mesquite; L. M. Davis, Galveston; L. E. Ferguson, Ft. Worth; L. G. Heirston, Snyder; H. E. Hunsucker, Staples; E. H. Huddleston, Galveston; R. E. Maris, Franklin; P. L. Moore, San Antonio; J. M. Pyburn, Jr., Coolidge; P. A. Rush, Marlin; John J. Shiller, Rowena; L. T. Stinson, Dallas; Wm. L. Threadgill, San Antonio; C. B. Wiggins, Galveston; H. L. Bartlett, So. Houston; C. A. Bailey, Kansas City, Mo.; E. Y. Cassles, Greenville; G. N. Dickinson, Galveston; Geo. D. Graves, Galveston; Jno. W. Halsey, Rogers; Garrett Herring, Humble; Berry Loper, Mabank; Thos. O. Mosley, Galveston; E. C. Parker, Hawkins; W. C. Pirtle, San Marcos; F. A. Ratliff, Ganado; D. Sheftelman, San Antonio; C. L. Taylor, Ft. Worth; R. L. Wheelock, Corsicana; Anabel Wilson, El Paso.

The next regular session of the State Board will be held in Dallas, Sept. 15.

The following officers were elected for the coming year: H. C. Jackson, president, Austin; Jno. A. Weeks, treasurer, Ballinger; R. H. Walker, secretary, Gonzales.

R. H. Walker was elected delegate to the National Association Boards of Pharmacy, which convene in Detroit, Mich., on Aug. 24, 1914.

### Utah.

SALT LAKE, June 20.—At the quarterly meeting for the examination of applicants for registration, held at the University of Utah, 13 of the 17 candidates were successful, as follows: Paul A. Aen, P. V. Van Orden, G. E. Traul, Harry J. Chappelin and Leon Davis, Salt Lake City; James A. Greer, Ogden; Robert C. Lucke, Brigham City; Frank S. Ulrich, Devil's Slide; Edgar I. Williams, Myton; Robin L. King, Layton; Joseph Kastill, Logan; Horace K. Allman, Mt. Pleasant; Parley Nelson, Manti.

## NEWS OF THE BOARDS.

The Chicago "Tribune" recently raised a tempest in a teapot by declaring that the Illinois State Board of Pharmacy was illegally waiving pharmacy tests on the payment of a \$5 fee by applicants for registration coming from other States. Both Governor Dunne and President Provost of the State Board of Pharmacy were quick to reply to the charge, making the explanation—which any druggist would have known—that the extra fee of \$5 went to the National Association of Boards of Pharmacy under the reciprocal registration arrangement. Similar reciprocal arrangements have been made with other State boards of medicine and dentistry.

On charges that Truax, Greene & Co., of Chicago, a physicians' supply house at 171 North Wabash avenue, has been distributing narcotics illegally the Illinois State Board of Pharmacy seized the firm's sales records recently. On one spindle at the time of the raid by officers of the State board and two attorneys 50 prescription slips for morphine were found. Revocation of the license of the concern was asked by the State board, and the attorney for the board, State Senator John Waage, alleged that the board had evidence showing that firm sold cocaine to any person calling for it, without the slightest restriction.

Representative F. A. Earhart, of New Orleans, has introduced a bill for the further regulation of pharmacy, the main features of which are the following: That all registered pharmacists must renew their certificates annually; heretofore it has been every four years. That pharmacists shall work 70 hours per week, on a two weeks' basis. That the Secretary of the State Board of Pharmacy must furnish the State Board of Health with the result of all examinations. That the examination fee for pharmacists shall be raised from \$8 to \$15 in order to make the State board self-sustaining.

Alleging that their Pittsfield store has been refused a license because the State Board of Registration in Pharmacy is made up of competitors and its report is unfair, the Riker-Hegeman Co. has filed a petition for a writ of mandamus in the Supreme Court in Boston. The store in Pittsfield has been ready for opening for weeks, and considerable money has been spent in making alterations in the property at North and Depot streets, and in fitting up the store.

The State Board of Pharmacy of Iowa has announced that the pharmacy certificates of Edward Higgins and Richard Krusho, of Des Moines, and H. P. Gripenburg, of Manson, have been revoked because of evidence of violation of the law regarding the sale of liquors.

After an examination of eight Ohio druggists charged with the illegal sale of narcotics, the State Board of Pharmacy has found the charges sustained in four cases, which were placed on file. The other four druggists were not found guilty of illegal acts.

## Abolition of Guaranty Postponed.

Revised Food Inspection Decision Allows Manufacturers Additional Year in Which to Exhaust Stock of Labels.

WASHINGTON, D. C., June 20.—It has been decided to postpone the effective date of Food Inspection Decision 153, which, in substance, abolishes, after May 1, 1915, the present guaranty legend on food and drugs.

This legend, now in general use by manufacturers, is "Guaranteed by (name of guarantor) under the Food and Drugs Act." The Secretaries of the Treasury, Agriculture and Commerce have found it to be misleading and deceptive. Many people have been induced to believe that all articles labeled with the legend have been examined and approved by the Government. The facts are that putting the legend on labels by manufacturers is entirely voluntary and that the Government never guarantees the wholesomeness or purity of food or drug products.

It appears that, acting in accordance with the regulation now in force, which permits the legend, many manufacturers have supplied themselves with large stocks of labels which cannot be used up by May, 1915. The result is that if the regulation, as amended by Food Inspection Decision 153, should go into effect May 1, 1915, large losses would accrue to citizens who have expended their money for labels in good faith and in an effort to comply with existing regulations.

To meet this situation the effective date of the amendment to the regulation will be postponed until May 1, 1916, and as to products packed and labeled prior to May 1, 1916, in compliance with law and with the present regulations, it will be postponed until November 1, 1916. Meanwhile, manufacturers may, and doubtless will, label their goods in compliance with the new regulations.

The decision is as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE  
Office of the Secretary

### FOOD INSPECTION DECISION No. 155.

CHANGING EFFECTIVE DATE OF FOOD INSPECTION DECISION No. 153, WHICH AMENDS REGULATION 9, RELATING TO GUARANTIES BY WHOLESALESALE, JOBBERS, MANUFACTURERS, AND OTHER PARTIES RESIDING IN THE UNITED STATES TO PROTECT DEALERS FROM PROSECUTION.

The effective date of Food Inspection Decision No. 153, issued May 5, 1914, is hereby postponed until May 1, 1916; *Provided*, That as to products packed and labeled prior to May 1, 1916, in accordance with law and with the regulations in force prior to May 5, 1914, it shall become effective November 1, 1916; And, *Provided Further*, That compliance with the terms of Regulation 9 of the Rules and Regulations for the Enforcement of the Food and Drugs Act as amended by Food Inspection Decision No. 153 will be permitted at any time after the date of this decision.

C. S. HAMLIN,  
*Acting Secretary of the Treasury.*  
D. F. HOUSTON,  
*Secretary of Agriculture,*  
WM. C. REDFIELD,  
*Secretary of Commerce.*

## DRUG LAWS AND RULINGS

**New Legal Provisions in Maryland.**—Tablets containing more than one-tenth grain mercury bichloride must be of either triangular, diamond, square, oblong or other irregular shape, and their color must be either blue, purple or green, with the word "Poison" imprinted or embossed on each tablet. Further, these tablets can only be sold, dispensed or given away in bottles upon one side of which the word "Poison" is blown, and when a label with the word "Poison" is placed on the face of the bottle. The penalty for transgressing this law is not less than \$25 nor more than \$100 fine for each offence, or imprisonment in jail for not less than 30 days nor more than three months. This law forbids the sale of any round and any white tablets that contain more than one-tenth grain mercury bichloride in each tablet, and it also prohibits the sale, dispensing and giving away—even by physicians or on a prescription—of any tablets that contain more than one-tenth grain mercury bichloride in any other kind of container than in bottles that subscribe to the above restrictions. The Sanitary Inspection law, as it applies to drug stores, requires cleanliness at the soda fountain and in the manufacture of ice cream, and it further insists that the materials, utensils and containers that are used therein shall be kept in a sanitary condition. This law gives the right of inspection of the premises by the inspectors of the Board of Health, who in turn make their report to the Board of Health, who will then act as the complainants in the case. A failure to comply with their requirements will cause them to prosecute the case before a justice of the peace, although, if the defendant should prefer, he may take the case to court.

**Sweeping Weights and Measures Law in Massachusetts.**—One of the most stringent weights and measures acts ever passed by a State Legislature has gone into effect in Massachusetts, the scope of the law including all graduates, weights and measures used in hospitals, private sanatoriums and retreats and by physicians and nurses as well as by pharmacists. The salient section of the act is as follows: "Apothecaries and all other persons dealing in or dispensing drugs or medicines or merchandise sold or given away, by apothecaries' weights or by apothecaries' measures, shall, at least annually, cause such weights and measures so used to be tested and sealed by the sealer of weights and measures in the respective cities and towns in which they carry on business; provided, however, that if a graduate glass measure has once been sealed by a sealer of weights and measures, it shall not in any case be necessary to have it sealed again at any time while it remains in the same condition in which it was first sealed." The bill provides that any person who uses apothecaries' weights and measures in any form and who does not comply with the provisions of this law in having the weights tested shall be punished by a fine of not less than \$5 or more than \$50.

**Wants Stockade for Drug Victims.**—Dr. Carl Host, city physician of Butte, Mont., has made a suggestion that a stockade should be built at the city poor farm for the accommodation of drug victims. "When the city sends them to the county jail they are released in a few days, only to be thrown back upon the city," says Dr. Host. "The same thing takes place when they are sent to the State insane hospital at Warm Springs. There the authorities take the stand that there is no appropriation to care for them, and as a result drug users are

turned loose in a short time, even though they are sent there."

**Court Holds Unregistered Druggist May Keep Liquor.**—Ruling on a demurrer by the State to a special answer in the drug store cases in which three Marion, Ind., druggists were charged with the illegal sale of liquor, Judge Paulus, of the circuit court, has held that the keeping of liquor by a druggist not a registered pharmacist, was not illegal. The ruling held it was the pharmacist and not the drug store which was licensed. The cases will be carried to the Supreme Court by the State.

**Fewer Deaths from Bichloride of Mercury.**—Dr. Charles Frederick Pabst, of Brooklyn, whose efforts had a great deal to do with the passage of the regulations confining the sale of bichloride of mercury tablets to physicians' prescriptions, reports a falling off in the number of deaths from this cause since the regulations went into effect. There were 10 deaths in the five boroughs between March 1 and June 1, six were suicides and four were accidental. A still greater decrease is expected during the next quarter. Dr. Pabst said: "That the effect of the regulation in this city may not be nullified by a trip across the river, I have been in communication with F. H. Edsall, Superintendent of Health for Jersey City, and he is revising the sanitary code to include the regulation as here. The Health Commissioner of Boston plans to have the regulation introduced in that city. Dr. Young, Health Commissioner of Chicago, is taking similar steps as to Chicago, and F. Bell, secretary of the Legislative Bureau of Illinois, has sent to me for a copy of our law and purposes to have it introduced in the Illinois Legislature."

**Bottles Must Be Marked in Pennsylvania.**—John Virdin, chief of the Bureau of Weights and Measures, has warned manufacturers of bottles and other glass containers in Pennsylvania to manufacture only containers stamped with the true capacity. "You are hereby notified that every bottle, jar or measure of any description, used or to be used for the sale or offering for sale of milk, skim-milk, cream or milk preparations of any description in liquid form, within the county of Philadelphia, must be only of the following sizes: Standard 1 gallon, containing 231 cubic inches; standard ½ gallon, containing 115.5 cubic inches; standard 1 quart, containing 57.75 cubic inches; standard 1 pint, containing 28.875 cubic inches; standard ¼ pint, containing 14.437 cubic inches; standard 1 gill, containing 7.21875 cubic inches."

**To Pay Opium Rewards.**—According to a decision by the Comptroller of the Treasury Department the courts are to pay the rewards for information furnished concerning violations of the opium law. In a letter to the Secretary of the Treasury the Comptroller wrote: "The informer's claim to his share of the fine or forfeiture is a matter which must be adjudicated by the court; and the court's order is final both as to payment itself and the method in which payment shall be made. If the order adjudging the fine or forfeiture directs that half of the amount recovered shall be paid to the informer it would seem that the court officer having custody of the money collected under the order should disburse under the terms of the order, paying half to the informer and depositing the remainder in the treasury as required by law."

**To Stop the Smuggling of Narcotic Drugs.**—Dr. H. L. Schulz, formerly chief of the Federal food and drugs inspection laboratories in Detroit, which were moved to Chicago several months ago, has been in Michigan in the interest of a coalition between the customs and food and drugs departments to watch the importations of food and drugs at Detroit, particularly with a view to preventing the smuggling of narcotics. Dr. Schulz visited the principal ports of entry in Michigan to place before the local inspectors his plan, which was generally received with enthusiasm, and it is hoped that the illegal entry of cocaine, morphine and opium into this country in the Michigan district will be completely wiped out.

**Illinois Drug Stores as State Board Stations.**—Gov. Dunne, of Illinois, has approved plans by which the State Board of Health will hereafter be prepared to make, free of charge, Wasserman blood tests, and microscopic examinations in cases of diphtheria. The Wasserman tests will be made by the State laboratory but only for strictly indigent patients. The majority of the stations where local physicians can obtain the necessary equipment, as well as antitoxin, are located in drug stores.

**Insecticides Containing Inflammables Barred.**—Massachusetts druggists and hardware dealers have been in-

formed that the State police are about to enforce a regulation prohibiting the sale of insecticides containing any inflammable liquid. This will bar the bug and insect destroyers which contain oil of cedar or benzine, and the regulation has been put in force because of the danger attending the use of such preparations, one fatality and several serious accidents being on record in the State.

**Kansas Starts War on Complexion "Foods."**—War on injurious skin foods, complexion rejuvenators and similar preparations on the market in Kansas has been begun by the State Board of Health. "Most of them are fakes," according to Chief Food and Drug Inspector L. A. Congdon, "and some of them are really dangerous to skin and to health." The crusade is the result of recent laboratory examinations of such preparations carried on by the State Board of Health.

**Massachusetts Ruling on Sunday Sales.**—Judge Hubbard, of the Pittsfield, Mass., court, gave a decision recently to the effect that the only places which can be kept open legally on Sundays for the sale of ice cream, soda and confectionery are drug stores and the places of licensed innholders. The fact that newspapers or tobacco are sold every day in the week does not give the storekeepers the right to sell ice cream and soda on Sunday.

**Sanitary Provisions Raise Soda Water Price.**—Harrisburg, Pa., druggists have raised the retail price of soda water because of the provisions of the new health regulations requiring them to pay a \$5 milk inspection fee. A. M. Rickert, 18th and Walnut streets, was the first to boost his soda-water price.

**New York Narcotic Law as a Basis of Virginia Ordinance.**—Dr. Powhatan S. Schenck, health commissioner of Norfolk, Va., has secured a copy of the new Boylan anti-narcotic law (New York) and is drafting a city ordinance for Norfolk which is based upon the Empire State measure.

**Want Cocaine Sale Declared a Felony.**—At a convention of 200 police chiefs and city marshals at San Antonio, Texas, resolutions were adopted appealing to the Legislature to amend the law so as to make the sale of cocaine and morphine a felony instead of a misdemeanor.

#### AMENDMENT TO SANITARY CODE OPPOSED BY DRUGGISTS.

At a meeting held at the New York College of Pharmacy, May 27, delegates from the Drug Trade Conference to the Advisory Board of the Municipal Board of Health were instructed to oppose the proposed amendment to Section 182 of the Sanitary Code, relative to the selling of preparations containing certain drugs. If this measure is adopted, it is affirmed, druggists will not be able to sell patent medicines except upon a prescription. Dr. Wm. C. Anderson suggested an amendment to the section relating to the dispensing of habit-forming drugs, which would allow the selling of preparations for external use without a prescription, as well as four or five well-known family remedies which contain small amounts of narcotics, like brown mixture. The Board was to be requested to lose no time in printing and distributing the blanks for the Boylan Law prescriptions, which will be needed July 1. Other measures favored by the Conference were the Weil methyl-alcohol ordinance, the labeling as poisons of preparations such as A. B. S. pills, and a statement of the presence of saccharine on the label of substances containing it.

#### Drug Trade Section Seeks Information on Guaranties.

At the June meeting of the Drug Trade Section, New York Board of Trade and Transportation, Secretary Wm. F. McConnell was instructed to write the Department of Agriculture for explicit information on the subject of individual guaranties permitted to accompany shipments of food and drugs. He was also to inquire as to whether the name of the manufacturer must be signed on each guaranty or may be printed on the invoice guaranty statement together with the new individual guaranty. The members did not protest the abolition of the old form of guaranty legend and the serial number. The extension of time to May 1, 1916, was considered a great relief as compared to the time first allowed by the F. I. D.

C. S. Littell reported that he had encountered considerable difficulty in filling out the inquiry blanks required by the Department of Labor in connection with the workmen's compensation law. The law does not define "workmen." No action was taken.

## FROM THE BUSINESS FIELD.

**H. K. Mulford Co.** happenings of interest include the following items: S. M. Quirk has been transferred from Boston, Mass., to Pittsburgh, Pa. A. C. Newbridge, special representative, is making an extended visit to the home office in Philadelphia. L. P. Faucett, treasurer of this company, is spending an extended vacation at his bungalow on Indian River, Delaware. H. K. Mulford attended the commencement exercises at Wellesley, from which his daughter, Miss Marion Mulford, graduated this year. J. D. Girvin, a member of the sales department, will sail from Philadelphia for Europe on the *Merion* during the early part of August. A. T. Richards, assistant treasurer, has returned from an extended sojourn to Ocean View, Delaware. E. V. Pechin, secretary, has taken up his Summer residence at Twin Lake, Conn. Miss Mazie Dougherty, cashier, was a visitor at this year's meeting of the Pennsylvania Pharmaceutical Association.

**The J. R. Watkins Chemical Co.**, of Winona, Minn., of which Paul Watkins is president, and E. L. King, vice-president, have a new building at 155, 157 and 159 Perry street, New York City. The structure is of fireproof construction, eight stories in height, and contains nearly 100,000 square feet of floor space. The Watkins company manufacture more than 100 different articles, including flavoring extracts, toilet preparations, household remedies, and they are one of the largest importers and grinders of spices in this country. The business amounts to millions of dollars annually and the firm employs 3000 salesmen and thousands of workers. The company has considered locating a manufacturing plant at Boston or Baltimore, where it has branch houses, but decided, after making a careful investigation, to locate in New York.

**El Cerrito Products for the Dealer Who Cares.**—The maker of cold creams and toilet preparations realizes that a poor perfume or essential oil will spoil the quality of an otherwise highly satisfactory product. It is to the druggist or specialty man who is looking for essential oils, synthetic perfume oils, etc., which will give continuous satisfaction that the El Cerrito Synthetic Laboratories, Inc., of San Francisco, appeals. El Cerrito Oil Jack Rose has made a reputation, and its sales are constantly increasing. The offices of this company have been removed to San Francisco, but the plant still remains in San Mateo. See their advertisement for the line carried; in writing please mention the ERA.

**The National Co-operative Drug Co.**, the new million-dollar buying concern owned and controlled by retail druggists in the larger cities of the country, has now added Minneapolis to its cities with branches—the roster now including St. Louis, Cincinnati, Dallas, New Orleans, San Francisco and other central localities. The merged company in Minneapolis is the Mer-rit Drug Co., a local co-operative concern made up of about 40 retail druggists. A warehouse will be built at 115 Western avenue. The members of the Mer-rit Drug Co., it is asserted, will take about \$75,000 worth of stock in the National company.

**Parke, Davis & Co.** gave their 24th annual picnic and outing to their employees at Bob-Lo on June 11. More than 4000 were guests of the firm and enjoyed the sail down Detroit river on the twin steamboats *Columbus* and *Ste. Claire*. The mammoth laboratories in Detroit and Walkerville, Ont., were closed for the day, and the employees were given their salaries just the same, so the gathering was carefree. It was a great big family picnic, and was enjoyed by everyone from the heads of departments to the ever-present small boy.

**The Randall-Faichney Co.**, makers of surgical instruments, etc., are in business difficulties. Federal Judge Dodge, of Boston, has named C. P. Blinn, Jr., and R. Whidden as receivers. The company has liabilities of \$292,000, while the assets are said to be in the vicinity of \$400,000. The company has factories at Jamaica Plain (Boston), and at Watertown, N. Y. The petition for the appointment of receivers was brought by the Cutter & Wood Supply Co., of New Jersey.

**The Nashville (Tenn.) Surgical Supply Co.**, Church street and Fourth avenue, was organized several months ago, and purchased the surgical supply department of the DeMerville Drug Co. George T. Wilson, formerly vice-president of the DeMerville company, is the head of the new concern,

and Henry W. Cooper, formerly the head of the surgical supply department of the DeMerville company, is associated with him.

**The H. W. Johns-Manville Co.** has moved its Duluth office to larger quarters at No. 327 West 1st street, in order to take care of its increased business. The new office is on the ground floor, with windows for the display of J-M asbestos roofing, pipe coverings, packings, sanitary specialties, auto accessories and other products of this company's well-known and varied lines.

**The Eastern Drug Co.** Employees' Mutual Benefit Association held their 11th annual party and dance in Roxbury, Mass., with more than 600 in attendance. John F. Maloney was chairman of the reception committee, and President John Tomlinson was floor marshal, assisted by James J. Shields. Vice-President William C. Quinn was chairman of the entertainment committee.

**The Yahr & Lange Drug Co.**, well-known wholesale drug house of Milwaukee, which purchased the large building of the Bradley & Metcalf Co., 207 East Water street some time ago, began the work of remodeling the structure about June 1. The building will be light, modern and will give the Yahr & Lange concern more than double the space it had in its other quarters.

**Prof. Severance Burrage**, director of the biological laboratories, and John S. Wright, manager of the advertising department of Eli Lilly & Co., attended the Spring meeting of the Indiana Academy of Science held at South Bend. Prof. Burrage is president of the academy. Mr. Wright was secretary of the society for 10 years and one of its former presidents.

**The Fricke Drug and Rubber Co.**, Council Bluffs, Ia., has expanded its business through the purchase of the O. H. Brown drug store at 537 South Main street. Albert Fricke, who for the past 18 months has been in Chicago and New York, will be the manager of the new store which will be known as the "Economic Drug Store." Mr. Brown was in the location for 31 years.

**The Hannon-Bach pharmacy** has been opened at 431 Main street, Stevens Point, Wis., by Maurice J. Hannon and Edward G. Bach. Along one side of the store eight handsome booths have been installed for the convenience of the patrons of the soda fountain. Above the booths, in panel effect, is an oil painting 50 feet long and three feet wide.

**The Hu-Wa-Co Drug Co.**, whose name is made up of syllables from the names of several of its members, was recently incorporated with a capital stock of \$15,000 for the purpose of engaging in the retail drug business at East Liverpool, Ohio. Those interested are H. F. McNutt, T. A. Huebner, T. E. Lewis, H. Waggoner and W. J. Todd.

**The National Druggists Manufacturing Co.**, Oak Harbor, Ohio, has increased its capital stock to \$50,000. The following officers and directors have been elected: President and general manager, L. Z. Lantz, Oak Harbor; vice-president, Dr. Baker, Genoa; secretary, George Gehring, Elmore; treasurer, F. Lewis Miller, Oak Harbor.

**W. A. Caperton**, sales manager of Eli Lilly & Co., recently accompanied Mrs. Caperton and the children to Mrs. Caperton's former home at Athens, Texas. Mr. Caperton was absent from his desk for two weeks and visited the jobbing trade in surrounding Texas territory. His family will be away the entire month of July.

**George W. Shoemaker**, a retail druggist, who for a number of years has been conducting his business at 722 North Hamilton street, Allentown, Pa., recently moved his place of business to new and more commodious quarters at 804 North Hamilton street, that city.

**The Ost Apothecary** has been incorporated under the laws of New Jersey, with a capital of \$100,000. It will do a general drug business. The incorporators are: Morris R. Ost, Edward Ost and Louis Ost, of Philadelphia. Business will be transacted at Atlantic City.

**The Strong & Cobb Co.**, of Cleveland, Ohio, has been organized to handle a wholesale drug business in that city. The capital stock is \$500,000, and the incorporators are A. V. Cannon, O. O. Vrosman, H. A. Beckett, P. A. White and J. E. Splittdorf.

**The J. S. Rinehart Co.**, of Toledo, has filed articles of

incorporator at Columbus with a \$10,000 capital. J. S. Knecht, H. L. Post, William Post, George F. Lay and Charles H. M. S. are incorporators.

**Berwick & Co., Inc.**, of Poughkeepsie, is a newly chartered concern under the laws of New York, with a capital of \$10,000. The directors are T. S. G. Berwick, Clarence J. Drake and Sarah O. Durrow.

**Win Suits** has purchased the interest of his brother, Lin, in the Suits Bros.' pharmacy at Medford, Wis., and is now in sole charge. Lin Suits has purchased the Lindsay pharmacy at New Holston, Wis.

**James R. Polkinghorne**, of Pensacola, Fla., has opened a new drug store, finished in mission throughout, with a handsome new fountain. It will be known as the Palace pharmacy.

**The Woodward Drug Co.** (Boston) employees gave a dance recently attended by nearly 100 couples. Honor guests were Mr. and Mrs. G. F. Murphy and Mr. and Mrs. J. H. Finerman.

**B. Goldenthal**, who has opened a new drug store at 3131 Boston road, near the entrance to Bronx Park, gave away souvenirs on the initial business day of the new enterprise, May 2.

**Brevard Culp**, who has opened a drug store at 3320 Third avenue, is a native of North Carolina, a graduate of the New York public schools and of the New York College of Pharmacy.

**The Jaynes Drug Co.**, a Massachusetts corporation, in their last report filed with the Secretary of State, showed total assets of \$1,843,758 for 1914 as compared with \$1,327,963 for 1913.

**Oscar and Elmer Shultz**, who have conducted the Shultz pharmacy at Green Bay, Wis., have dissolved partnership and Oscar Shultz will now have charge of the business.

**The Shuler pharmacy**, one of Pottstown's, Pa., oldest places of business, was sold recently to and is now being conducted by Edgar A. Nyman, also of that place.

**The Riker-Hegeman Co.** are to open a new store in Wilmington, Del., in the building now occupied by C. F. Rudolph, Inc., Fourth and Market streets.

**A. J. Riess**, of 1607 Second avenue, Rock Island, Ill., has opened one of the best-equipped establishments west of Chicago.

**R. S. Gill** has been elected secretary and treasurer of the Chesebrough Manufacturing Co. to succeed S. A. Drew, resigned.

**The Cuero (Tex.) Corner Drug Store**, owned by S. F. Coleman, will be one of the most modern stores in Southern Texas.

**The Fargo (Ga.) Drug Co.** has opened a new store under the direction of E. F. Henderson.

#### NEW INCORPORATIONS.

**Wood's Drug Store, Inc.**, Orange, Conn.; capital, \$6000; president, James P. Wood, New Haven; secretary and treasurer, John K. Stevenson, West Haven.

**Ost Apothecary**, Atlantic City, N. J.; capital, \$100,000; M. R. Ost, E. Ost, L. Ost, J. Ginsburg.

**Imperial Electron Medical Co.**, Brooklyn; capital, \$10,000; directors, Charles H. Hall, Wm. F. Kissing and Frank F. Jones, all of Brooklyn.

**Mecca Drug Co.**, Birmingham, Ala.; capital, \$3000; officers, B. R. E. Lee, president; A. E. Day, vice-president; P. B. Wilbanks, secretary and treasurer.

**Remington-Bailey Drug Co.**, Shawnee, Kan.; capital, \$5000; Lena Remington, H. O. Bailey and W. L. Chapman, all of Shawnee. **The Levine-Blanding Drug Co.**, of St. Croix Falls, Wis., has changed its name to the J. N. Blanding Drug Co.

**The Cross Hill Drug Co.**, Columbia, S. C., has been incorporated with \$2000 capital, by G. F. Klugh, C. Dial, B. O. Whitten and A. M. Klugh.

**Dothan Drug Co.**; H. A. Denton, manager; John Ellis, assistant manager, has succeeded A. E. Smith at Dothan, Ala.

**Hollowell & Ryan Drug Co.**, Kokomo, Ind.; capital, \$5000; incorporators, Larry Ryan, Otis J. Hollowell and Byron Haines. **Reading Drug Co.**, Wilmington, Del.; capital, \$100,000.

**Advance Products Co.**, Cleveland, Ohio; pharmaceutical products; capital, \$10,000; F. A. Kreuzberg, C. H. Matchett, Edw. L. Smith, Roland A. Baskum, F. A. Bauman.

**Lincoln Drug Co.**, Lincoln, Me.; capital, \$10,000; president, Robert A. Lovely, Lincoln; treasurer, Byron F. Porter, Lincoln.

**Palace Drug Store, Inc.**, Fayetteville, Ark.; capital, \$25,000; incorporators, James J. Reed, J. Floyd Hight, H. A. Bridensthal and Dr. John P. Hight.

**Grand-St. Louis Drug Store, Inc.**; \$6000 capital; W. R. Coryell, G. M. Schen and W. F. Long, all of St. Louis.

**Charles A. Woodworth Co., Inc.**, Lodi, N. Y.; capital, \$25,000; drugs, medicines, chemicals, etc.; C. A. Woodworth, F. Woodworth, C. S. Farr.

**Vergo Manufacturing Co., Inc.**, Buffalo; drugs, medicines; capital, \$10,000; Leroy M. Kellas, John P. Kellas, Edmund J. Bristow, L. G. Denton Co., Inc., Schenectady, manufacturers and dealers in drugs and patent medicines; capital, \$35,000; Louis G. Denton, Frederick K. Clouch and Louis S. Sebring.

**Scott Drug Co.**, Kingstree, S. C.; capital, \$5000; D. C. Scott, president and treasurer; J. H. Scott, secretary.

**The Norwalk Drug Co.**, Connecticut.

**The Prescripto Drug Co.**, Omaha, Neb.; capital, \$25,000; Edward F. Geelen, Daniel J. Killen and Arthur S. Gillette.

**The Orinika Pharmacal Co., Inc.**, Manhattan; druggists, chemists; capital, \$50,000; incorporators, J. A. Arroyo, S. Proskauer and A. J. Ristorcelli.

**Alabama Medicine Co.**, Montgomery; drugs and medicines; capital, \$3000; president, R. H. Bozeman; vice-president, William H. Duncan; M. H. Duncan, general manager, secretary and treasurer.

**M. Schwartz**, New York; capital, \$5000; incorporators, S. Earl Lavene, H. W. Miller and A. Bacharach.

**Keller Pharmacy Corporation**, New York; capital, \$10,000; incorporators, George Schmidt, M. L. Joyce, J. J. O'Brien.

**Walker Drug Co.**, Schenectady; capital, \$10,000; incorporators, H. E. Walker, Maude E. Hooker and Harry G. Hooker.

**Scott-Lanyon Cash Drug Co.**, Pittsburg, Kan.; capital, \$20,000.

**George H. Mayr**, Chicago; capital, \$5000; incorporators, George H. Mayr, George K. Herman and E. W. Shaw.

**The Black Diamond Remedy Co., Inc.**, Buffalo, N. Y.; capital, \$100,000; incorporators, E. Austin, M. L. Case and W. M. Spaulding.

**The Retail Druggist Selling System of Fort Worth, Texas**; capital, \$25,000; incorporators, M. B. Forsyth, H. E. Embenhour and C. T. Lemond.

**The Dix Mig. Co.**, Manhattan; to deal in articles contained in drug stores; capital, \$5000; incorporators, E. Englander, O. Englander and L. N. Larson.

**The Rheumo Chemical Co.**, Brockton, Mass.; capital, \$15,000; incorporators, Abbot W. Packard, William Neeves, Mary McCrillis and Daniel W. Case.

**The North Pharmacy, Inc.**, North Attleboro, Mass.; capital, \$10,000; incorporators, Herman N. Collins, Raymond V. Willey and Marion E. Gelinax.

**The Wolcott Square Pharmacy**, Boston; capital, \$5000; incorporators, Harry L. Wardle, William C. Zickendraith and Linwood C. Conant.

**National Chemical and Pharmacal Co.**, Toledo, Ohio; capital, \$50,000; incorporators, E. A. Harshman, H. E. Rechner, E. B. Collins, M. R. Auth and Ralph Harshman.

**Cleas Tilly, Inc.**, wholesale drug stores; capital, \$150,000; Delaware corporation, chartered by F. R. Hansell, Philadelphia; George H. B. Martin and S. C. Seymour, Camden, N. J.

**Woods Drug Co.**, Orange, Conn.; capital, \$6500; incorporators, James P. Wood and Nellie K. Wood, New Haven; John K. Stefenson, West Haven.

**Antilosis Drug Co.**, Columbus, Ohio; capital, \$3000; Harry M. Manger, Willber P. Day, George W. Mason, W. H. Hill and J. O. Brown.

**Our Drug Co.**, Georgetown, S. C.; capital, \$5000; president, H. C. Smith; vice-president, F. M. Brickman; J. W. Wingate, secretary and treasurer.

**Park Ridge Pharmacy Co.**, Park Ridge, N. J.; capital, \$5000; incorporators, Frederick H. Ebegardt, Frank O. Millag, Jr., George E. Duncan.

**San Antonio Drug Co.**, San Antonio, Tex.; capital \$1,150,000; increased capital to provide increased warehouse facilities at Galveston, and larger branch offices at Dallas and Monterey.

**International Drug Co.**, Chicago; capital, \$40,000; incorporators, Joseph Nasi, Jacob Brande and Leon Brande.

**June Smith Drug Store, Inc.**, Lexington, Ky.; capital, \$3500; incorporators, June Smith, W. T. Luxon and Elizabeth S. Collins.

**M. De Marsico**, D. Villamena, A. Carabilla.

#### RECENT FIRES.

Fire believed to have started from spontaneous combustion in the ether building of the Mallinckrodt Chemical Works, St. Louis, early in the morning of June 11 destroyed or damaged two ether factories, a mixed chemical factory and three storage houses. A number of steam mains leading from the boiler plant were damaged. The works occupy a block bounded by Second, Hall, Salisbury and Mallinckrodt streets, and the firemen worked hard amid chemical fumes and dense smoke to extinguish the blaze. President Edward Mallinckrodt at first estimated the damage at \$100,000, but a more thorough investigation by the adjustment company, which represented a majority of the 200 insurance companies holding risks on the concern, placed the damage at \$225,000. The total insurance on the plant was \$1,660,000. It was fortunate that no one was injured. While a number of employees were forced from work temporarily it was stated that they would be continued on the payroll. Auditor Frohock said that the company could resume full operation in a short time.

At Savannah, Ga., Solomons Co., wholesale druggists; loss between \$50,000 and \$60,000; fully insured; cause unknown.

At Elizabeth, N. C., Cape Fear Drug Co.; building destroyed.

At Dermott, Ark., Bordeaux drug store; loss \$2000.

At Marseilles, Ill., Trowbridge drug store; loss to stock.

At Appleby, Tenn., Week's drug store; burned out.

At Decatur, Ga., Meeks Drug Co.; loss \$3000.

At Winnipeg, Man., Public drug store; loss total.

At McAlester, Okla., C. E. Stillix drug store; loss \$3000.

At Elkhart, Texas, Douthit drug store; loss total.

At Burlington, Ill., Emerson & Medley drug store; loss total.

At Hinton, Ia., B. F. Pofnew drug store; loss total.

At Florala, Ala., Quillin Bros. drug store; loss \$3000 stock.

At Coeur d'Alene, Idaho, Young pharmacy; loss \$11,000.

At Brighton, Mass., E. E. Heinlein; water damage.

## The New Smile on the Face of the South.

*The American-French Perfume Co., Paris, Tenn., Is Offering a New Line of Perfumes and Toilet Articles Truly Parisian in Elegance.*

WITHIN the past decade there has been a growing sentiment among druggists, perfume-makers and toilet goods men in this country that there was no reason why the product of the American perfumer should not stand upon an equally high plane with that of the Parisian laboratory. The

*The Handsome Container for Dental Paste.*

opinion was often expressed in sessions of National perfumery men that the American product compares so favorably with the imported article—without the handicap of the additional price to the retailer made necessary by tariff, etc.—there was and is no necessity for distinction in handling, or marketing.

It is true, perhaps, that the original perfume products of American laboratories lacked in distinction and in elegance, in their lasting quality and in delicacy and originality of odor. It is also true that the early containers were crude as compared with the handicraft of the Parisian workman, always an artist.

Today, however, no one of these criticisms holds true. It is possible to obtain in this country perfumes and toilet articles of the most exquisite character, beautifully packaged, bottled and labeled, without a jarring note to offend the most fastidious taste when used—as they are—as a conspicuous adjunct to milady's dressing table. And, while in quality, in odor, in lasting fragrance these products are all that can be desired, since men trained in foreign laboratories are in supervision of their manufacture—they can still be sold at a rate which enables them to compete most favorably in price with the foreign article.

The American-French Perfume Co., of Paris, Tenn., puts out a line of perfumes and toilet articles which, when compared item by item, for beauty of container, elegance of preparation and quality of goods, does not suffer in comparison with the products of the most noted European laboratories. An idea of the beauty of their packaging can be gained from the half-tone reproduction of their dental cream herewith. Their products include: Xora Eau de Toilette, Xora Bouquet, Manta Rosa Eau de Toilette, Manta Rosa Essence, talcum powder, Manta Rosa Face Powder, tooth paste, toilet water (six odors) and cologne, and these are produced under the personal supervision of the company's chemist, an experienced perfumer from Bulgaria and from Paris, France.

The American-French Perfume Co., Inc., was organized in March, 1913, with \$200,000 capital. Its officers and directors are men of standing in the busy little city of Paris, the president of the company being T. B. Walker, vice-president of the First National Bank there. P. D. T. Roberts, of the Roberts Bros. Drug Co., is the secretary, while C. C. Jackson, a successful theatrical man and manager of the Dixie Theater, is the vice-president.

In their sales plan the American-French Perfume Co., Inc., is to strongly emphasize co-operation with the retail dealer. To quote a recent letter from their secretary and advertising manager:

"We propose to get behind the druggist with as much and as unique advertising as possible, and in addition will make him special prices in special deals. We further propose to use moving-picture slides, mailing lists, folders, etc., and intend to give the druggist all possible co-operation. We want it to

be a money-making proposition for him, because it will then be a money-making proposition for us."

For further details as to the company's line and business policy, and for an idea of the grace and beauty of the perfume containers used, we would call attention to the advertisement on another page in this issue.

### Lily Drinking Cups Clean and Attractive.

The Public Service Cup Co., of Brooklyn, makers of aseptic paper "individuals" for use at the soda fountain, and for any purpose where a "personal" drinking cup is utilized, are putting out these cups so the druggist can retail them and make a profit at five cents a package. The Lily drinking cups are

round, rigid, one-piece, aseptic paper cups, stiffened with pleats which act like structural braces. Their form and method of manufacture is shown in the cut herewith. The smooth, well-rounded lips, so different from the cutting lip of the average paper drinking cup, makes the Lily cup unique for comfortable use. The company will send samples to any druggist on application.

## WITH OUR ADVERTISERS.

**Building a Business in Cameras and Supplies.**—Suppose you have become interested in the possibilities of a camera department through holding the agency for some printing and developing concern—many druggists have. Suppose you have realized that there is no good camera agency in your immediate neighborhood, or, possibly, in your community. You doubtless have realized that there is money in a good camera and photographic goods sideline, but have hesitated, not knowing the cost or the risks. It is to you as a druggist that the Seneca Camera Mfg. Co. turns with an offer of assistance, and a line of cameras and camera supplies sold under a money-back guarantee. The policy of the Seneca company is not to ask a new dealer to buy in a large assortment of instruments, but to buy a quick-selling line, and then order any special camera a customer might need from the factory. In this manner the druggist-retailer can make large profits with practically no investment. Camera and supply assortments can be had at from \$50 up; in fact, in their advertisement in this issue there appears a half-tone cut of their \$50 assortment. If interested you will find a coupon on the Seneca advertisement

which, promptly filled, will bring you full information as to assortments and prices.

**Gummed Labels in Rolled Form.**—The McCourt Label Cutting Co. makes of 100 labels and of gummed labels in rolled form, have perfected a system which obviates dirty, torn, sticky or mis-cut labels, by which the labels are kept in separate compartments of a cabinet, each with its own cutter, and from which any label can be taken and affixed when desired with the smallest amount of trouble, and without using space valuable for other purposes. The McCourt labels are printed on imported paper in various colors, gummed with an adhesive particularly fitted for drug-store work, and as the process of printing and rolling is automatic labels can be produced at a very small price. In fact, the cost is lower than flat labels, and none are wasted in use, making a double saving for the user. More than 9000 druggists are using this system, and thousands of physicians, oil companies and wholesalers in different lines, as well.

**Safety First in Antiseptics.**—Criticism of the practice of labeling bichloride of mercury in tablet form as "antiseptic tablets"—a practice general in the trade up till within a very short time—has led the Norwich Pharmacal Co. to take the lead by announcing a change in their nomenclature, by which the coffin-shape bichloride tablets made by them and formerly called "Antiseptic No. 1 Wilson" are now known and labeled by their U.S.P. title, "Corrosive Mercuric Chloride." The original title was misleading and ill-advised owing to the very general use into which the word "antiseptic" has come within the past few years, and the Norwich Pharmacal Co. has again shown its public spirit and appreciation of the "right thing" to do by its action in thus changing its nomenclature to avert all possible misconception by the lay mind.

**Filled Capsules Pay the Druggist.**—As a method of dispensing in tasteless and easily-taken form a large variety of useful medicaments that in other forms are administered with difficulty, the capsule has won a growing popularity. Filled capsules are an exceedingly profitable line for the average druggist to carry. The Grape Capsule Co., whose advertisement appears elsewhere in this issue, has been manufacturing a line of capsules for 17 years, and two of their specialties, Ricinol-Grape and Olive Oil Grape, are advertised in the leading magazines and newspapers. Druggists are invited to send for a complete price list of these goods.

**Peroxide in the Drug Store.**—Department stores and similar commercial houses have been getting too large a proportion of the business in peroxide of hydrogen—and much of it is of very poor quality. To assist the druggist in holding this branch of business the Mallinckrodt Chemical Works have made a new price schedule on M.C.W. Peroxide of Hydrogen in any quantity, large or small, through the jobber. These prices are very low, quality considered, and the druggist can now compete with the "unbranded" peroxide of the department store with the labeled product of well-known and reliable manufacturers. A Mallinckrodt price list will be sent on application.

**Sheffield Pure Tin Tubes.**—The New England Collapsible Tube Co. has recently installed a chemical department to take care of the demand for filling into their tin tubes any desired toilet article or cream. Thus the tubes will be manufactured and filled in one establishment with consequent saving of expense and the insurance of a special package. The Sheffield tubes are all tin, guaranteed to be 100 per cent. pure, imported especially from Penang, Straits of Malacca. The company will be glad to quote prices on tubes alone, and also on the tubes filled, labeled, packed, etc.

**Henry's Porous Plasters.**—The Wilford Hall Laboratories, Port Chester, N. Y., have put on the market a new line of porous plasters known as Henry's. Each package comes in an airtight box, each dozen boxes in a display case. With the Henry line the druggist is sure always of having fresh stock—Henry plasters when delivered to a customer have not lost any medicinal property by long exposure to the air. They are carried by all jobbers.

**Lemon and Orange Phosphates, J.H.S.**—Since the announcement in the April issue of the J. Hungerford Smith "Mallow Float" many dispensers have adopted this "True Fruit" specialty at their fountains. This month the "True Fruit" specialties announced are lemon and orange phosphates, quick-selling hot weather drinks with all the quality for which the J.H.S. products are famous.

## RIKER-JAYNES SUE DRUG BOARD.

A novel suit at law has been instituted in Massachusetts by the Jaynes Drug Co. against the State Board of Registration in Pharmacy. Recently the Jaynes Drug Co. applied for a writ of mandamus to compel the State Board to permit it to open a drug store in the city of Pittsfield. In its petition the plaintiff alleges that the State Board of Registration in Pharmacy is composed of men engaged in the drug business, and that some of them are competitors, and that they are not acting in good faith in refusing the permit to open a drug store in Pittsfield. The Board of Pharmacy, in its reply, says that its refusal to issue the desired permit is based on statute grounds, and quotes the law which requires that now every drug store must be conducted by a registered pharmacist, while the petitioning company is controlled by a New York corporation, whose stockholders are not registered pharmacists, although the board admitted that registered pharmacists are employed to run its stores.

The case came up for a hearing in the Supreme Court, before Judge DeCourcy June 2. Albert J. Brunelle, of Fall River, secretary of the board, was put on the stand by Sherman L. Whipple, counsel for the company, and he was questioned as to the methods employed by the board in the application for a permit to open a drug store. Mr. Whipple, in his cross-examination, drew out the statement from the secretary that the State Board had promised Gov. Walsh that no action would be taken without a hearing on the application, and the counsel for the petitioners had been given a chance to inspect the objections filed by the Massachusetts State Pharmaceutical Association and the Boston Association of Retail Druggists. The further admission was exacted that in executive session the board had denied the petition, and that the counsel for the company had not been given a chance to inspect the objections. The substance of the protest of the pharmaceutical associations was that a permit should not be given to a store controlled by persons who are not registered pharmacists. Mr. Brunelle said that the question of a name for the store had been discussed by the board, which inclined toward "The Riker-Jaynes store," while the petitioners desired to use the name of "Riker-Hegeman Drug Store." The right of the State Board to refuse an application for a permit based on its construction of the law is a question that counsel for the company said will be argued later.

When the case came up by continuance, Judge DeCourcy intimated that he thought the State Board had placed a construction on the statute, which the Legislature had not intended. While the law provides that a permit must be issued by the State Board before a drug store can do business, and that no permit shall be issued to a corporation until it shall appear to the satisfaction of the board that the management of the store shall be in the hands of registered pharmacists, the court did not think that the law intended that the stockholders should be registered pharmacists. Judge DeCourcy ruled that the State Board should give a hearing.

## DRUG LAWS AND RULINGS.

**Changing Effective Date of Food Inspection Decision No. 153.**—The effective date of Food Inspection Decision No. 153, relating to guaranties by wholesalers, jobbers, manufacturers, and other parties residing in the United States, to protect dealers from prosecution, issued May 5, 1914, is hereby postponed until May 1, 1916: *Provided*, That as to products packed and labeled prior to May 1, 1916, in accordance with law and with the regulations in force prior to May 5, 1914, it shall become effective November 1, 1916; *And provided further*, That compliance with the terms of Regulation 9 of the Rules and Regulations for the enforcement of the Food and Drugs Act as amended by Food Inspection Decision No. 153 will be permitted at any time after the date of this decision.

**Fruit Juices With Alcohol Must Be Labeled.**—The U.S. Department of Agriculture has ruled that after Sept. 1 all fruit juices to which alcohol has been added must be plainly labeled to that effect when shipped in interstate commerce. Such names as "cherry juice," "peach juice," etc., will apply only to such juices when unfermented, and which contain no added sugar, alcohol or other substances. Goods not so labeled will be denied admittance to this country, and, if found in interstate commerce, will be subject to action by authorities.

# PATENTS AND TRADE MARKS

## FLEXIBLE NECK FUNNEL.

**F**RANK LINDEEN, Clinton, Ill., has devised the funnel shown in the above engraving (Patent No. 1,099,706) which comprises a body portion, a flexible neck extending from the lower end of the body and adapted to engage the neck of a bottle to permit lateral movement of the body

relative to the bottle, a supporting bar extending across the top and a flexible air-conducting tube extending through the body and neck and slidable through the supporting bar. The upper end of the tube carries a finger grip, while a stopper carried by the lower end of the tube is provided for sealing the neck.

### Hermetic Seal for Receptacles.

This sealing device for bottles, the invention of Frank S. Hereth, New York, assignor to E. R. Squibb & Sons (Patent No. 1,100,432), consists of an electro-deposited layer of metal around the lip of the bottle in combination with a metallic disk closing the mouth of the bottle and soldered to the electro-deposited layer.

### Collapsible Tube.

James W. Johnson, assignor to Johnson & Johnson, New Brunswick, N. J. (Patent No. 1,100,433), has designed a collapsible tube which presents some unique features. The tube has its dispensing end or orifice sealed by a thin film of metal, while the neck is provided with screw threads. To go over the neck of the tube is a double-ended cap, both of whose ends are threaded so as to take the threads of the tube, and which has a medial part or division wall provided with a fixed endwise directed piercing member adapted, when the cap is screwed on the tube, to pierce and destroy the seal and plug the orifice.

### Stable Crystalline Sodium Bisulphite.

Henry Howard, Boston, Mass., has been granted letters patent (No. 1,099,177) for a stable crystalline salt of sodium bisulphite

and method of producing the same, the process comprising concentrating a heated solution containing sodium bisulphite while passing sulphur dioxide through said solution, cooling, crystallizing, and rapidly separating, drying and cooling the crystals. The gas is passed into the heated solution until crystallization occurs, the excess of gas being absorbed in an alkaline solution. After separating, drying and cooling the crystals, the alkaline solution containing the absorbed sulphur dioxide is added to the filtrate from the crystals, and sulphur dioxide is passed through the mixed solutions.

### Druggist's Label Case.

This label case, the invention of Byron B. Fees and Emanuel W. Schneider, Pond Creek, Okla. (Patent No. 1,097,409), includes a casing open at the front and having a top and end walls and a back wall, upwardly inclined grooves on the inner faces of the end walls, each having the lower edge cut away and forming a seat with a shoulder at its front end, the grooves opening through the front edges of the end walls, and a shelf which passed into the grooves, is dropped into the seats and there held by the shoulders against accidental es-

1,097,409.

cape. A plurality of partitions adjustably mounted on the shelf are adapted to hold packs of various sizes of labels. These partitions are provided with depending threaded pins projecting through slots in the shelf to which they are anchored by means of nuts on the pins. By loosening the nuts any particular partition may be moved longitudinally of said shelf toward or away from its neighbor to provide for storing various sizes of labels. Each partition is cut away obliquely at the front edge to permit the withdrawal of the lowermost label when wanted for use.

## PATENTS.

### Granted May 5, 1914.

- 1,095,205—Reinhold Gruter and Heinrich Pohl, assignors to Chemische Werke vorm. Dr. Heinrich Byk., Lehnitz-Nordbahn, Germany. Manufacture of lactid.
- 1,095,277—Otto E. Hermann and Elden C. De Witt, Chicago, Ill. Tablet packaging machine.
- 1,095,290—Daniel Schmid, assignor to Progressive Manufacturing Co., Milwaukee, Wis. Bottle washing machine.
- 1,095,313—Charles H. Davids, Brooklyn, N. Y. Combination of a container and a photographic recording label.
- 1,095,318—Louis F. Eisele, Philadelphia, Pa. Medicine cabinet.
- 1,095,406, 1,095,407—Clarence J. Lawson, Plainfield, N. J., assignor, by direct mesne assignments, to Columbia Machine & Stopper Corporation. Machine for applying bottle closures.
- 1,095,607—Joseph Trimbach, Rye, N. Y. Non-refillable bottle.
- 1,095,618—Rudolph Berendes, assignor to Synthetic Patents Co., Inc., New York. Bismuth salt of gallocarboxylic acid.
- 1,095,731—Filip Kacer, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing anthraquinone-thiazoles.
- 1,095,969—John C. Poore, Chicago, Ill. Nipple for nursing bottle.
- 1,095,998—Walter A. Meyer, Brooklyn, N. Y., assignor of one-half to Richard Jaeger. Powder puff and pad.

### Granted May 12, 1914.

- 1,096,135—Virginia W. Smith, Williamsport, Pa. Non-refillable bottle.
- 1,096,318—Alfredo Santarelli, New York, N. Y. Non-refillable bottle.
- 1,096,361—Paul Flemming, Hamburg, Germany. Process for the production of disinfectants.

- 1,086,864—Charles Hammer, assignor to The American Metal Cap Co., Brooklyn, N. Y. Bottle cap or closure.  
 1,086,868—Arthur L. S. Zerk, assignor, by mesne assignments, to The Enamel Company of America, Elyria, Ohio. Method of manufacturing antimony oxide.  
 1,086,873—Conrad M. Forst and Frank A. Schramm, Philadelphia, Pa. Bottle closure and opener.  
 1,086,875—Stephan Geiger, assignor to Adam Heilmann, Nuremberg, Germany. Apparatus for extracting herbs and medicating steam.  
 1,086,882—Raymond B. Gilchrist, assignor to The Gilchrist Company, Newark, N. J. Bottle holder.  
 1,086,884—Frich Baum and Martin Mugdan, assignors to Consortium für Elektrochemische Industrie G. M. B. H., Nuremberg, Germany. Process of preparing acetaldehyde.  
 1,086,884—Lawrence M. Stevens, St. Louis, Mo. Non-refillable bottle.

Granted May 19, 1914.

- 1,086,884—George L. Harvey, Chicago, Ill. Cigarette dispenser.  
 1,086,885—Frank Thayer, El Paso, Tex., assignor of one-half to T. M. Stiles, Havana, N. Mex. Process of making alcohol.  
 1,086,886—Clas F. Foley, St. Foster, R. I. Stopper.  
 1,086,887—Homer R. Dell, Iowa City, Iowa. Device for holding bottles, glasses, and pictures.  
 1,086,888—J. Kukow, Offenbach-on-the-Main, Germany. Apparatus for acid salts of acetic acid.  
 1,086,889—O. Freston, Sacramento, Cal. Toothbrush.  
 1,086,890—Alvin Procella, Buffalo, N. Y. Bottle stopper.  
 1,086,891—Wm. DeWitt, assignor of one-half to William Downs, Chicago, Ill. Non-refillable bottle.  
 1,086,892—Bert B. Jones and Emanuel W. Schneider, Pond Creek, Okla. Druggist's label case.  
 1,086,893—Carlton H. Mayton, Dallas, Tex. Process for reduction of saturated fatty acids and their esters.  
 1,086,894—Jean F. Rolland and Pierre A. P. Mauciere, Paris, France. Apparatus for storing and distributing inflammable liquids.

Granted May 26, 1914.

- 1,086,897—Shirley L. Ames, Everett, Mass. Flavoring emulsion.  
 1,086,897—Henry P. Kraft, New York, N. Y., and Maximilian S. Swenert, West Hoboken, N. J. Water bottle stopper.  
 1,086,898—Charles H. Beers, Asbury Park, N. J. Non-refillable bottle.  
 1,086,898—John A. Steele, Cedarville, Ohio. Bunsen burner.  
 1,086,898—Alexander S. Ramage, Detroit, Mich., assignor to Eugene A. Byrnes and Clinton P. Townsend, Washington, D. C. Process of oxidizing compounds and producing terpene peroxide.  
 1,086,898—Alexander S. Ramage, Detroit, Mich., assignor to Eugene A. Byrnes and Clinton P. Townsend, Washington, D. C. Organic peroxide and process of producing same.  
 1,086,899—Ernest A. Ash, New York, N. Y. Tooth paste dispensing device.  
 1,086,899—Alex B. Davis, assignor to Eli Lilly & Company, Indianapolis, Ind. Quinolin compounds and process of producing same.  
 1,086,899—Thomas P. Pick, Chicago, Ill. Bottle stopper.  
 1,086,899—Alexander Bogdanoff, New York, N. Y., assignor to The International Cork Co., Brooklyn, N. Y. Process of manufacturing bottle closures.  
 1,086,899—Julius Weisse and Friedrich Rieche, assignors to The Firm of Rudolph Koepf & Co., Chemische Fabrik, Oestrich-on-the-Rhine, Germany. Production of mixtures of nitrogen and hydrogen suitable for the manufacture of ammonia.  
 1,086,899—Giuseppe F. Pinski, New York, N. Y. Bottle stopper.  
 1,086,899—Orto Widemann, Douglas, Alaska. Bottle guard.  
 1,086,899—Robert C. Glasco, Anderson, Ind., assignor of one-third to Archibald C. Rice, Madison County, Ind., and one-twelfth to Austin H. Brumbaugh, one-twelfth to James W. Harris, one-twelfth to John E. Davis, one-twelfth to Calvin S. Miller, one-twelfth to Ward B. Willis, and one-twelfth to Michael J. Fogarty, Glass bottle mould.  
 1,086,899—Alexander S. Ramage, Cleveland, Ohio, assignor to Eugene A. Byrnes and Clinton P. Townsend, Washington, D. C. Process of producing terpene peroxid.

Granted June 2, 1914.

- 1,086,843—Frank J. Wood, New York, N. Y., assignor to Marx & Rawolle, New York, N. Y. Apparatus for distilling glycerin.  
 1,086,853—Marvin B. Whisenant, Hollis, Okla. Bottle.  
 1,086,840—Otto Liebknecht, Frankfurt-on-the-Main, Germany, assignor to Roessler & Hasslacher Chemical Co., New York, N. Y. Process of dehydrating perborates.  
 1,086,854—Aron Rauch, New York, N. Y. Bottle closure device.  
 1,086,858—Franz Webel, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing chlorine derivatives of the amyl series.  
 1,086,860—Gustav Hilgenstock, Dahlhausen-on-the-Ruhr, Germany. Process of obtaining ammonia from gas.  
 1,086,861—George B. Keplinger, assignor to Kyle Bottle Washing Machine Co., Chicago, Ill. Bottle washing machine.  
 1,086,861—William W. Smith, assignor of one-half to Stanley S. Spencer, Darlington, Md. Non-refillable bottle.  
 1,086,861—Harry A. Kucera, Philadelphia, Pa. Bottle stopper.  
 1,086,861—Almer M. McAfee, Bayonne, N. J. Manufacture of aluminum chloride.

Granted June 9, 1914.

- 1,086,877—Henry H. Ward, Boston, Mass. Stable crystalline sodium bisulfite and process of producing same.  
 1,086,891—Charles Nelson, Brooklyn, N. Y., assignor to S. Sternau & Co., New York, N. Y. Alcohol lamp.  
 1,086,864—Willy Hof, Frankfurt-on-the-Main, Germany. Means for distilling acids.  
 1,086,881—Theodor Meyer, Offenbach, and August Klages, Magdeburg, Germany. Process for the continuous production of dry hydrochloric acid and potassium bisulfate from potassium chloride and sulphuric acid.

- 1,086,852—August Klages, Magdeburg, Germany. Process for the continuous production of nitric acid.  
 1,086,874—Charles A. Tatum, Middletown, N. J., assignor to Whitall, Tatum Company, New York, N. Y. Atomizer.  
 1,086,802—Sidney D. Jacobson, New York, N. Y. Non-refillable bottle.  
 1,086,806—Frank Lindeen, Clinton, Ill. Funnel.  
 1,086,806—Leopold Ostermann, Hamburg, Germany. Process for the formation of diaryl ethers.  
 1,086,806—Walter A. Stattmann, Wilmette, Ill., assignor to Universal Non-refillable Bottle Co., Chicago, Ill. Bottle.

Granted June 16, 1914.

- 1,086,810—Cora N. Cummings, Bridgeport, Conn. Hypodermic solution holder.  
 1,086,817—Franz Elger, Basel, Switzerland, assignor to Hoffmann-La Roche Chemical Works, New York, N. Y. Non-hygroscopic malt extract preparations and process for making the same.  
 1,086,818—Frank R. Hart, Santa Cruz, Cal. Hypodermic needle.  
 1,086,800—Willy Ruprich, Dortmund, Germany. Machine for cleaning bottles.  
 1,086,832—Frank S. Hereth, assignor to E. R. Squibb & Sons, New York. Hermetic seal for receptacles.  
 1,086,833—James W. Johnson, assignor to Johnson & Johnson, New Brunswick, N. J. Collapsible tube.  
 1,086,840—Christian W. V. Messerschmidt, Copenhagen, Denmark. Metal capsule for bottles.  
 1,086,848—Andrew J. Selz, New Rochelle, N. Y. Paper bottle.  
 1,086,856—William C. Clarke, Rockland Park, Va. Bottle closure.  
 1,086,839—Frank S. Washburn, Nashville, Tenn. Process and apparatus for making phosphoric acid and compounds of the same.  
 1,086,885—Edwin O. Barstow, assignor to Dow Chemical Co., Midland, Mich. Method of manufacturing arsenate of lead.

### They All Sawed Wood with Foerster.

Julius Foerster, New England representative of Sharp & Dohme, of Baltimore, was the guest of 40 druggists at dinner at Young's Hotel, Boston, recently. Charles H. Perry, of Medford, of the Eastern Drug Company, was toastmaster, and he made a lively evening for everybody. William B. Foster, an advertising expert, Major Hall and Fred S. Lovis, of Fitchburg, were called upon and given a chance to tell what they knew of the guest of the evening, and he heard some high and sincere compliments. Mr. Foerster was about to leave Boston for a Continental trip, combining business and pleasure. The menu card bore a photo of the guest of the evening in the picturesque attitude of sawing wood, and beneath it the couplet: "Ever watchful doing good; Ever working, sawing wood."

### RECENT DEATHS.

- John M. Garrity, 40, for many years identified with the retail drug trade, died at his home in Indianapolis, June 8, after a short illness.  
 —Abraham Brubaker, 86, a retired druggist and school teacher of Lancaster county, died recently in his home at Center Church, Pa.  
 —John Cline, an Illinois druggist, and his three-year-old son were killed by a train near Marion, Ill., recently while automobiling.  
 —Bert Overton, 32, who has conducted a drug store at Antioch, Ill., for several years, died recently of heart disease.  
 —John A. Stanwood, 56, formerly a druggist in East Boston, Mass., died recently at Santa Monica, California.  
 —James H. Foster, 63, for many years a traveling salesman for a Michigan drug firm, is dead at Saginaw.  
 —George A. Foster, a druggist well-known in Dover, Hudson, Portsmouth and Rochester, N. H., is dead.  
 —Frank W. Green, a well-known drug clerk of Wheeling, Va., is dead as the result of an automobile accident.  
 —Mrs. Belle S. Perry, widow of Frederick Burr Perry, wholesale druggist, of Chicago, is dead.  
 —Clarence P. Parker, of 1510 West Garfield boulevard, Chicago, a retired druggist, is dead.

NOTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, June 23.—The last few days have been characterized by a much broader demand from consumers for drugs and chemicals in the wholesale market, and some increase has been noted in the number of mail and telegraph orders from various sections. By far the most important advances in a large way during the past month relate to botanical drugs, one of these being the uplift in the price of Hungarian chamomile flowers, due to the practical exhaustion of old crop supplies and the reported shortage of new supplies. American refined camphor has been advanced, and natural opium is slightly higher. Quinine is firm and still obtainable at last month's quotations. Citric acid still retains a strong position, owing to the comparatively high cost of lime citrate and lemon culls from which it is manufactured. Guarana is lower, following a falling off in demand and an accumulation of stocks. Glycerin has been reduced. Buchu leaves, long, are easier, while the short variety has been marked up as a consequence of shortages in stocks reported from the Cape of Good Hope. Chloral hydrate is strongly held and prices are higher.

**OPPIUM**—The demand continues routine, the situation pre-

sented no new features, excepting that quotations on natural have been advanced to \$6.85@ \$7.30 per pound. Prices for granulated and powdered U.S.P. remain unchanged at last month's quotations, viz., \$8.25@ \$8.35 for the former, and \$8.15 @ \$8.35 for the latter.

**QUININE**—Is meeting with a somewhat larger inquiry, and prices continue firm at 26 cents per ounce for bulk in 100-ounce tins. Government statistics for April show the importation of 179,666 ounces of quinine, valued at \$45,819, as compared with 298,585 ounces, valued at \$57,218 for the corresponding period last year.

**COD LIVER OIL**—Norwegian is firm and unchanged in price. Cables report the result of fishings up to the week ended June 20 as follows: Total catch, 80,800,000 fish, with a yield of 49,110 barrels of oil. In the corresponding period a year ago the catch was 74,800,000 fish yielding 40,830 barrels of oil.

**GLYCERIN**—Quotations are lower, jobbers asking 25c.@28c. per pound as to quantity and brand. Imports of crude glycerin so far this year have been materially larger than in previous corresponding periods.

**CANTHARIDES**—A growing scarcity of supplies has caused holders to mark up their prices, and jobbers now quote \$2.30@ \$2.35 for Russian, whole, and \$2.45@ \$2.50 for powdered. New crop flies are being offered for September-October shipment.

**CAMPHOR**—American refined has been advanced to 46 cents per pound by the barrel, and 52c.@55c. per pound for less quantities. One-quarter-pound "squares" are quoted at 47 cents per pound by the case, and 55c.@57c. for less. Japanese in ounces fetches 50c.@55c. per pound. The advance is due to the materially higher values now prevailing for both crude and refined Japanese camphor.

**GUARANA**—There is little demand and stocks have accumulated to such an extent that jobbers have reduced quotations to \$2.50@ \$2.75 per pound for whole, and \$2.75@ \$3.00 for powdered.

**ACID, CITRIC**—This article still holds a strong position, owing to the comparatively high cost of lime citrate and lemon culls from which the acid is manufactured. A sharp upward movement is also reported in European markets. Jobbers quote 61 cents per pound for crystals in kegs, and 68c.@70c. for smaller quantities. For granulated, 70c.@75c., and powdered, 71c.@75c. per pound is asked.

**BUCHU LEAVES**—The short variety has been advanced to \$1.75@ \$1.80 per pound for whole, and \$1.85@ \$1.90 per pound for powdered. Shortages in stocks are reported from the Cape of Good Hope, and no new shipments are expected to come forward for some time. Revision of quotations on the long variety shows slightly lower prices, \$1.50@ \$1.60 per pound for whole, and \$1.60@ \$1.70 for powdered being asked.

**ARNICA FLOWERS**—There is a fair demand for jobbing quantities and the market is steady at somewhat advanced prices, 20c.@25c. per pound for whole, and 28c.@33c. per pound for powdered being asked.

**SAFFRON**—Spanish (true Valencia) is more freely offered by importers whose stocks have been recently replenished, and jobbers are quoting \$12.75@ \$13 per pound. American (safflower) is also easier and prices have declined to 75c.@85c.

**OIL BERGAMOT**—Keen competition among local importers and other handlers of this oil has caused a downward trend in prices, and good oil is quoted at \$5.70@ \$5.80 per pound.

**OIL LEMON**—Primary markets are reported very inactive, conditions which are reflected in an easier feeling here. Jobbers quote \$2.25@ \$2.35 per pound.

**OIL ORANGE**—Sweet is slightly higher and quoted at \$2.55@ \$2.65 per pound. Cable advices reflect a firmer undertone in primary markets for this oil.

**MERCURIALS**—An advance in price has been the feature of some of these salts, due, it is said, to reduced competition from the foreign producers. The changes noted in quotations are for ammoniated (white precipitate), \$1.05@ \$1.12 per pound; mild chloride (calomel), 92c.@ \$1; and red oxide (red precipitate), \$1@ \$1.10 being asked.

**CHRYSOPHANIC ACID**—A revision of prices shows a decline, 25c.@27c. per ounce being asked. Quotations of German makers are higher than those made by English manufacturers.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
No. 3 PARK PLACE, NEW YORK.

**F**ROM clerk in a retail store to druggist at a State hospital, where he is gaining an extended experience in prescription work that will make him a most valuable man, is the climb made by Harry L. Riddle, druggist of the State Hospital, Morganton, N. C. Mr. Riddle is one of the many young men who have found the ERA Course an invaluable aid in mastering the technical side of their pharmaceutical work, and he is frank in his praise of it. Forced to stop his school work at the age of 17, Mr. Riddle was thrown on his own resources, and found a college education impossible for him. After taking a position in a drug store, he soon realized that he needed an authoritative guide in his work, and began to look around for it. He decided on the ERA Course as best meeting his requirements, and enrolled in August, 1912. By that time he had had four years of practical drug-store work, and was able to push his studies and recitation work forward so rapidly that he completed the Course in a little less than a year, receiving his diploma in August, 1913. During the past two years, including the time he was an ERA Course student, Mr. Riddle has been druggist at the Morganton State Hospital, and he is of the opinion that the training of the Course has contributed largely to the success he has made of the work.

H. L. RIDDLE

pleted the Course in a little less than a year, receiving his diploma in August, 1913. During the past two years, including the time he was an ERA Course student, Mr. Riddle has been druggist at the Morganton State Hospital, and he is of the opinion that the training of the Course has contributed largely to the success he has made of the work.

### A Friend in Mexico.

The war in Mexico has upset many arrangements, but it has not interfered with the work of Mr. L. A. Garcia, of Torreon, Province of Coahuila, who finds time to pursue his ERA Course studies despite the fact that the most important battle ever fought on Mexican soil took place within earshot of him, and the city's government changed hands. Mr. Garcia is a photographer, but he evidently does not believe in having but one string to his bow, for he has branched out into the pharmaceutical line, and is now taking the ERA Course lectures, and studying the U.S.P. We were fortunate enough to get Mr. Garcia's lectures to him just two days before communications around Torreon were cut off by the Constitutionalist army last April. Since that time mail has been forwarded through El Paso, Texas, without any marked delays. Mr. Garcia recently sent us his photograph, with the following remark:

L. A. GARCIA

"The picture I take the liberty of dedicating to you, and you can keep it as token of appreciation of your endeavors to help others attain their goal."

### Era Course Student Only One in 19 to Pass.

"Last April I went up for my examination and was the only man out of 19 who passed the examination. Therefore I must thank you, and say that your Course is to be recommended to any drug clerk, or to any beginner who wishes to make a success in his study. It is the only course that explains things so very plainly that you can understand a subject when

you are through with it."—MORRIS GLASSMAN, East Hartford, Conn.

### Passed Two State Examinations.

"I am very much pleased with the results I have obtained through the ERA Course. I have recently passed the Iowa and Nebraska State examinations, and I believe that I owe a great deal to the instruction which I received through the study of the Course. I heartily recommend it to anyone desiring to take up the study of pharmacy at home, or wishing a thorough review."—MRS. EDNAH B. ANDERSON, Dow City, Iowa.

### Era Course Students in Many States.

The following students or graduates of the ERA Course were successful in passing State Board examinations recently:

Delaware—W. B. Swain, Trappe, Md.; Morris Citrenbaum, Baltimore, Md.  
Mississippi—H. H. Norton, Hattiesburg.  
Illinois—Harry L. Spongberg, Rockford.  
Louisiana—Réné Bienvenu, St. Martinville.  
Maine—Lester B. Tozier, Waterville.  
California—John A. Sasso, San Francisco.  
Iowa—Plumer Egert, Des Moines; Ednah B. Anderson, Dow City.

### Wins Silver Medal in St. Louis.

Mr. Frank T. Helms, of Addieville, Ill., a former ERA Course student who is now pursuing his pharmaceutical training further at the St. Louis College of Pharmacy, was the recipient of the silver College Medal at the recent commencement. Even if one is fortunate enough to look forward to a course in a college of pharmacy, the solid groundwork supplied by the ERA Course lectures will never be regretted, while the broad survey of the whole field of pharmacy one thus obtains is of inestimable value.

### Matriculation Graduates to June 18, 1914. Graduating Average.

7573—Roscoe O. Brady, Carlisle, Pa.....	89
7619—Ambrose G. Sauer, Baltimore, Md.....	93
7675—Donald Fulton, St. Marys, Kan.....	92
7831—Mrs. Emma M. De Wolfe, Bennet, Neb....	96

7927—Donald B. Gill, Chicago, Ill.....	99

### Chicago Drug Club Salesmen's Night.

On May 25 the "Big Doings" were turned over to the salesmen members of the Chicago Drug Club, and the boys did themselves proud. It was very gratifying to see such a large attendance, for more than 250 members of the club turned out.

The initiation team, under the direction of J. M. Schwalbe, worked for the first time on a real live candidate. Brother Hattersley, who bore up bravely under the excruciating tests and obligation all new candidates for membership in the Drug Club are now obliged to submit to. The personnel of the initiation team is as follows: Royal Mortar, Ad. Umenhofer; Pounding Pestle, F. Strodola; Smooth Spatula, C. A. Abrahamson; Pill Roller, Doc Pritchard; Deep Graduate, R. D. Keim; Guide, C. A. Redig; Executioner, P. J. Roth.

"Billy Baxter the Big Smoke" acted as toastmaster and kept things moving. The most interesting feature was a highly instructive talk on the science of salesmanship given by A. Fogleman, of the Sheldon School of Salesmanship. Mr. Fogleman's talk bristled with interesting points to every merchant whether he is a retailer or a wholesaler and especially to every man present who is selling goods. Signor George Bromo Mattesoni, the world-renowned ventriloquist, assisted by Signor Rogaschki and Signor Weedenstein, his dummy Tommy and the Star Light Quartette, gave several very enjoyable numbers.

Signor Mattesoni is a member of the organization; it is a wonder that his marvelous gift of ventriloquism has remained hidden for so many years. He told those in attendance that he only discovered the day before his appearance that he could ventriloquize. Messrs. Rehfeld and Golden rendered tenor solos in their usual enjoyable manner. Among the other speakers of the evening were Messrs. Potts, McCracken and Keim.

The New Hampshire Ph.A. is holding its annual convention at the Hotel Wentworth, New Castle, June 30, July 1-2.

### COMING MEETINGS OF A.P.H.A. AND N.A.R.D.

THE greatest inducement that can be offered to the average druggist to attend the annual meetings of the A.P.H.A. and N.A.R.D. is the promise that his presence at these meetings will give him an opportunity to rub elbows with the big men of pharmacy—professional and commercial. There is needed the whole-hearted co-operation of all those engaged in the business to provide the solution of many drug trade problems, and to attain the highest result and the greatest value in this direction, the application of intelligence and scientific knowledge, as well as co-operative effort is urgently demanded. The visiting druggist is promised much in the way of returns and an unusual opportunity for an outing at moderate expense in attending the coming meetings of these big associations. The programmes have been arranged with particular reference to the work in hand, and also to give each visitor, without missing any of the meetings, a chance to participate in all the entertainment features that have been provided by the local committees. So take the ERA's advice and attend these great gatherings of American pharmacists. You will live just as long as you would were you to remain at home, while your range of vision is sure to be considerably broadened if you but go. Act on this advice and we are sure that you will return to your home and store much benefited by your conference with the leaders of your calling.

### WHAT IS SOLD IN DRUG STORES?

JUDGING from the window displays of some of the large stores in New York City, it would be much easier to make out a list of the commodities which are not sold in drug stores. Drugs, of course, are a comparatively small item in most stores, and the rest of the business consists of a variety which, at first sight, has no unity at all, and cannot possibly be grouped under a general head. No drug store, or pharmacy, if the more "professional" term is preferred, yet sells automobiles or motor boats, and one must still go to a haberdasher for collars and cravats. Again, the corner grocer has the call in selling food; the corner druggist confines himself mostly to infant and invalid foods. On the other hand, some of the large chain stores were selling, on the third of July, large American flags with

sockets for attachment to motor boats. These same stores sell eggs by the dozen at Easter time, while nearly all pharmacists offer such articles of clothing as paper or felt vests, handkerchiefs, and bathing caps. How can all these various articles be classified?

To tell the truth, we do not think that they can be accurately. The modern druggist is approaching the status of the "apothecary" of the 14th century, whose title meant simply "shopkeeper," as evidenced today by the derived word "boutiquier" of the French. But for an approximation, we suggest the following definition, or delimitation: Articles sold in drug stores are such as come in actual physical contact with some part of the body when in use, excepting food and clothing. This will include drugs and medicines, cigars, soda water, toilet articles, stationery, most sundries, perfumes, candy, rubber goods, trusses, crutches, and some jewelry. It will not include paints, cameras and supplies, phonographs, window glass, or American flags. However, after much heavy thinking, in the hottest weather the Summer has yet inflicted on us, we have been unable to draw up a more accurate statement of what a customer may hope to find when he crosses your threshold. Now let "Oldest Subscriber" speak up, and any of our younger subscribers, and tell us of a definition which will be both finer-meshed and more inclusive.

#### BUSINESS BECOMING A PROFESSION.

THERE is only a certain amount of drug business in the country. It is not something that is capable of stimulation, since the application of creative selling principles would necessitate the creation of sickness. The drug problem is therefore a problem of attracting to the individual store all the possible drug business violation of Nature's laws has caused. And it is a significant fact that those stores which feature sundries, confectionery, soda, etc., usually do the largest prescription business. Instead of the profession being lowered, business has been raised to the standard of a profession equal to the profession of pharmacy.

The druggist is coming into his own. He is cashing in on the advantages he has as a result of his training. Where the average retail merchant has sneeringly laughed down the idea of business being a science, the druggist, because of his scientific training, has been quicker to see the light of reason and truth. The old wail: "The profession is being commercialized," is now seldom heard. The druggist is coming to see that the "commercial instinct" is a term synonymous with "common sense." He is beginning to recognize the fact that the science of business presents a field for deeper study and thought than the mere compounding of drugs. For business is based largely on the science of psychology and involves the practical use of that science.

The druggist is learning that business is human service and that there can be no more noble or dignified calling than the supplying of the public with those things which it needs for health, happi-

ness and progress, whether it be a medicine or a toothbrush. We expect to see all schools of pharmacy embody as a most important part of their courses a study in the science of business. And soon.

#### GUARANTEED CHEMICALS.

UNDER this caption, a letter from Prof. Victor Lenher, of the University of Wisconsin, to the editor of the *Journal of Industrial and Engineering Chemistry*, calls attention to a state of affairs which points to something radically wrong in the methods of certain firms who are trying, or who should be trying, to build up a reputation and wide market for chemicals of American manufacture. So-called "guaranteed," "analyzed" and "tested" chemicals are nothing new, but surely those who at first welcomed their advent with the thought that at last the "blank test" could be done away with before use, never thought that a few years would lead to the suspicion that the whole scheme was exploited principally for its advertising and commercial value, and only secondarily in the interest of pure reagents. Absolute ether containing both water and alcohol; sodium bromate stated to contain no bromide, but actually consisting of nearly 50 per cent. of bromide; sodium hydroxide with more than 10 per cent. of carbon dioxide, when only traces were present according to the label—such are the contradictions which Professor Lenher reports. The case of the pure sheet copper, which, according to the label, contained no tin, no antimony and—*mirabile dictu*—no copper, may be regarded as a careless piece of proof-reading, rather amusing than misleading. Another case, more reprehensible, related to a lot of bromine of which the chlorine content was given. When asked to indicate the method by which these figures were obtained, the distributor stated calmly that the analysis was given by the manufacturers from whom *he* had bought the bromine, and no analysis had been made by his house. The Bureau of Standards also reports that it never takes at their face value the statements on the labels, and often finds them absolutely false, and that this holds for reagents of foreign as well as domestic make.

The matter of purity in reagents is of the greatest importance to every chemist worthy the name. It is as fundamental as accuracy in atomic determinations. It is greatly to be regretted that business men who are backing the manufacture of reagents are not sufficiently far-sighted to realize that a policy such as they appear to have adopted cannot succeed—at least not until the whole body of chemists the world over becomes utterly slovenly and corrupt—an unthinkable condition. So long as chemists are faithful to their "jobs," just so long will they require and demand pure chemicals. A wise manufacturer will endeavor to supply this demand, and in a legitimate manner; certainly not by endeavoring to hoodwink purchasers by labels which, it must be admitted, make a strong appeal to the busy worker, and to which the contents of the bottles could be made to correspond. There is no longer any justification in charging advanced

prices for goods that may, at any time, prove no better than the "C.P." grade, which, by the way, nowadays seems to mean simply "comparatively pure."

#### OFFICIAL BICHLORIDE TABLETS.

THAT the enormous use of bichloride of mercury tablets constitutes a menace to the future growth and prosperity of the Nation has been the belief of many in the trade for years, and the reports of the daily press of numerous cases of poisoning and death from the accidental or premeditated use of these tablets during the past year have greatly emphasized this conviction until now there is scarcely anyone who does not favor some sort of regulation. The latest deliverance on this subject appears in the address of Prof. Joseph P. Remington, chairman of the Committee of Revision of the U.S.P., before the recent Atlantic City meeting of the American Medical Association, a report of which appears elsewhere in this issue of the ERA. According to the distinguished speaker, the Pharmacopoeia cannot check the use of these tablets, but it can at least direct the form for their use which will as far as possible prevent accident through swallowing the tablets or their solution.

This conclusion is in direct line with that which this journal has advanced on numerous occasions, and if such a requirement were included in the Pharmacopoeia, it would tend to relegate the much-discussed problem of how to control the sale of these tablets to the background, and thereby deprive newspapers of much of the sensationalism that has heretofore accompanied the "write-ups" of accidental use and misuse of this substance. That the authorities of other countries have studied this problem will be seen in the contribution by George M. Beringer, president of the A.Ph.A., which also appears in this issue.

From all points of consideration, it is desirable that a tablet of distinctive shape should be prescribed. A number of State Legislatures in session during the past year have had under consideration measures providing for the handling and sale of this substance, and Congress has at least three bills upon the same subject. The drug trade should take an active interest in helping to solve this question of public safety, and the Committee of Revision of the Pharmacopoeia will no doubt provide such requirements, especially since the Section of Materia Medica and Pharmacology of the A.M.A. has gone on record asking that "corrosive mercuric chloride pastilles" be made official in the next Pharmacopoeia, and that the form adopted be that described in the German Pharmacopoeia, namely, "of cylindrical shape, twice as long as thick, wrapped individually in paper bearing the name of the medication, 'corrosive mercuric chloride pastilles,' and the word 'poison' in suitable and striking letters."

Every reasonable precaution and means should be taken to prevent the user of bichloride tablets from accidental poisoning and death by impressing upon him the fact that such tablets are powerfully toxic; at the same time, in any proposed legislation

or regulation, sufficient latitude should be permitted to allow any reputable dealer to supply legitimate demands for mercuric chloride.

#### THE USE OF SACCHARIN IN FOODS.

IN his book on "Foods and their Adulteration," Dr. Wiley wrote that he believed that under the scrutiny of municipal, State and National inspection, the use of saccharin in food products would disappear. He also stated that in its use to sweeten foods, the consumer is deceived, and at the same time he is consuming a drug which has valuable uses in medicine but which should only be administered with the consent and by the advice of a physician. In contrast with this opinion is the recent decision of the Supreme Court of Missouri, which declares that the enactment prohibiting the use of saccharin in soft drinks manufactured and sold in that State is unconstitutional.

Of course, the decision, primarily, is of interest to the druggist as a dispenser of soda water and possibly some other food products, but the point brought out in the light of the evidence submitted is that saccharin is not so malevolent as some have tried to make out. An abstract of this decision appears in our news columns, and from the judicial viewpoint, at least, the arguments for the use of saccharin are convincing.

In other countries the use of saccharin has been the subject of recent investigation. The Netherlands correspondent of the London *Chemist and Druggist*, in a recent number of that journal, states that the delegate of the Dutch Government to the Saccharin Convention, which met in Paris in 1912, advises his country to participate in the convention, otherwise the reputation of the country would suffer, as participating States would make reprisals against the export trade in chocolate, condensed milk and biscuits. This advice is interesting from the fact that the Dutch Government is contemplating measures dealing with the manufacture and use of saccharin. The *Chemische Fabriek*, in a petition to the Minister of Agriculture, Trade and Industry, says the correspondent, "combats the view that saccharin is in any way harmful to public health. Sweetmeats, fruit syrups, and non-alcoholic wines are not taken on account of the nourishment they contain. If the price of these preparations were raised, many people would be unable to purchase these luxuries." These arguments smack strongly of commercialism and are "not in it" with the decision of the Missouri Supreme Court, which looks upon the prohibition of saccharin "as an arbitrary discrimination in favor of those who sweeten soda water with sugar."

A NEW edition of the British Pharmacopoeia is expected to make its appearance shortly, the present book having been in use since 1898. According to the ERA's London correspondent, the present edition has long since ceased to be all-sufficient to prescribers—if it ever was—and many of the drugs and preparations it contains have been discarded and their places taken by products, which, although they are prescribed in every-day practice are not recognized in the official book. Such rapid progress is being made in pharmaceutical science and so quickly is one new drug after another being discovered that the need for

revision of the Pharmacopœia at more frequent intervals has become almost imperative. The features of the new book will be the inclusion of a large number of synthetic drugs, and extension of the principles of standardization, and more definite tests for lead and arsenic impurities in chemical products, and the addition of some of the recommendations of the International Congress on the standardization of drugs.

## BOOKS REVIEWED

**CHEMICAL REAGENTS, Their Purity and Tests.** Authorized translation of "Prüfung der Chemischen Reagenzien auf Reinheit" (zweite Auflage), von E. Merck. By Henry Schenck, A. B. (Harvard). 2nd edition. 8vo., 199 pages. Cloth \$1. New York: D. Van Nostrand Co.

This edition of Merck's "Chemical Reagents" follows closely the method of treatment employed in the first edition of this standard work with which many of our readers are well acquainted. But in comparing this book with the preceding, one notes that the author has kept step with chemical progress in the attention he has bestowed upon new chemical reagents and upon the new uses that have been made for chemicals that have long formed a part of the laboratory equipment. Besides the large number of subjects introduced into the work, there appears for the first time a table giving approximate strengths and brief directions for the preparation of solutions for reagent purposes, and a parenthetical statement appended to each test, giving in terms of percentage the minimum amount of the impurity which would be recognized by the test. These are designed "to prove of use to the analyst when he selects reagents for particular purposes, estimates the relative values of tests, or makes allowances and corrections in his own findings or the findings of his assistants or students." This addition is particularly designed for American chemists and they will appreciate the vast amount of authoritative information gathered here and reproduced in such a practical manner.

**THE PHARMACEUTICAL SYLLABUS.** Second Edition. Outlining a minimum course of instruction of 1200 hours. Revised and published by the National Committee representing the American Pharmaceutical Association, the American Conference of Pharmaceutical Faculties, the National Association of Boards of Pharmacy. 12mo., 220 pages. Cloth \$1.25; postage 10 cents extra. H. L. Taylor, treasurer National Syllabus Committee, Albany, N. Y.

We have examined this edition of the Syllabus with considerable interest and are convinced that it marks a considerable advance over the previous edition. That it meets the general requirements for which it is designed is confirmed by the fact that it has been approved and adopted by the Indiana State board and Indiana schools, by the New York State Board and Pharmaceutical Council, and by the Missouri board. Among the points claimed for the book is that this is the first "Syllabus" ever published of a National character, and as such, it represents the co-operative effort of 53 State boards and more than 75 schools of pharmacy—a noteworthy achievement. This fact is accentuated by the difficulties under which the committee has labored, the work being undertaken by the members for the betterment of pharmacy without hope of individual advancement or pecuniary return.

As noted in the above abstract of the title page, the aim of this work is to outline a minimum course of study broad enough and sufficiently well balanced to be acceptable to pharmacy schools as a basis for the instruction of students. The advantages of a book of this character are that it gives all the boards a uniform outline of the ground to be covered by their examinations; it gives examinees definite knowledge of the preparation expected by the boards; and it gives the colleges a minimum outline of the ground to be covered in the preparation of students for board examination. Uniformity of board examinations once established makes possible the indorsement of licenses by boards, and this favors the observance of reciprocal registration throughout the entire country. Taken as a whole, the book represents nothing but what the most liberal laws should demand of applicants in the way of qualifications for the practice of pharmacy.

**PROCEEDINGS** of the Fourteenth Annual Meeting of the American Conference of Pharmaceutical Faculties.

This volume of 76 octavo pages contains the proceedings of the Conference of Pharmaceutical Faculties held in Nashville

last year. There are now 38 institutions holding membership in the Conference, the departments of pharmacy of Tulane University, the University of Mississippi and the University of Nebraska having been elected as members at the Nashville meeting. The next meeting will be held in Detroit.

## CORRESPONDENCE

### Wants to Greet You at Detroit This Month.

George M. Beringer, president of the A.P.A., sends the ERA a copy of the following letter which he has addressed to every member of that organization and which is self-explanatory:

*Dear Fellow Member:*

The time is rapidly approaching for the 62d annual meeting of the American Pharmaceutical Association. Detroit is famous as a convention city; renowned alike for its beauty and the hospitality of its citizens. The advance news is that the local committee have prepared to make our stay full of enjoyment and that the various sections have arranged programmes replete with matters of interest and profit.

We believe that this meeting, August 24 to 29, will be a notable event in our history and will be the largest gathering of representative pharmacists ever held in this country.

The officers extend an invitation to you to come and enjoy to the fullest extent the pleasures in store. May we have your presence and co-operation? If you have never attended a meeting of the association, attend this year and get imbued with the prevailing spirit and enthusiasm. If you have been attending, you will understand what an influence and benefit to each member is a meeting of the association that stands for the welfare of all concerned in pharmacy. Goethe has well said: "There is no teaching to compare with what we derive from intercourse with others."

To the former presidents, I extend a special invitation. It is the hope to have present at the opening session all of the living former presidents.

Come and, if possible, bring along a new member to help the good work of the membership committee. There is going to be much of interest and ties of friendship and good fellowship will be renewed and strengthened.

This invitation, of course, includes the wives and daughters and lady members of the association, as without the presence of the fair sex there could be no full enjoyment of the occasion.

The American Pharmaceutical Association is the exponent of all that tends to the welfare of pharmacy. Its aim is true, ethical and progressive pharmacy. Its activities are extending along ever-increasing avenues of usefulness. The president will welcome suggestions from any member for improvement in methods or for additional lines of activity beneficial to pharmacists.

Looking forward to the pleasure of greeting you at Detroit on Aug. 24, I am,

Yours fraternally,

GEORGE M. BERINGER,

Camden, N. J., July 10, 1914.

President.

### South American Markets for Drug Products.

Dental instruments and supplies of American manufacture are one line of goods that seem to be able to hold the South American markets without much opposition from European manufacturers. According to a report by Commercial Agent E. A. Thayer, recently published by the Bureau of Foreign and Domestic Commerce, the United States supplies about 70 per cent. of all such goods imported into South America. In surgical instruments, however, American goods comprise only 20 per cent. of the total imported, in drug products only 11 per cent. and in patent and proprietary medicines only 35 per cent. It is the opinion of Commercial Agent Thayer that American exporters of these lines can obtain a much larger share of the South American trade. His reasons, with many practical suggestions for entering the Latin-American markets, are contained in a report entitled "South American Markets for Drug Products, Patent and Proprietary Medicines, Surgical Instruments, and Dental Supplies," Special Agents Series, No. 85. This may be obtained from Superintendent of Documents, Government Printing Office, Washington, at five cents a copy.

## Bichloride of Mercury Tablets.\*

By GEORGE M. BERINGER, Camden, N. J.

IN presenting a paper on such a hackneyed subject as "Bichloride of Mercury Tablets and Bichloride Tablet Legislation," I am well aware that I may be trying your patience on a subject that you may, perhaps, consider as threadbare. My association with and study of this subject, however, convinces me that this is not a dead subject, but contains several problems directly associated with the duties of the druggist and which pharmacists themselves must, to a very large measure, decide.

The extensive use of corrosive sublimate in this form has justified the decision of the Committee of Revision of the U.S.P. to introduce an official formula and by this means to endeavor to formulate additional safeguards to life in its use. The articles that have appeared in the medical, pharmaceutical and lay press as well as the discussion in the committee, demonstrate that this is a live subject and associated with it are several questions still to be settled.

In the official recognition of the tablet of mercuric chloride, the U.S.P. is only following the example of most of the pharmacopoeias that have been revised in recent years. A study of the foreign formulas and a comparison of these and likewise of the commonly used American formulas is interesting.

In American practice, either the Wilson formula containing a mixture of mercuric chloride and ammonium chloride or the Bernay's formula containing mercuric chloride and citric acid have been almost exclusively used. In Europe the formula proposed by Angerer for "pastilla hydrargyri bichlorati" has been the type followed. His formula:

Mercury bichloride,  
Sodium chloride.....aa 0.5 gm.  
Eosin ..... 1.0 gm.

Mix the salts and color the mixture with the eosin dissolved in water. Allow the mixture to dry in the air and compress into portions weighing 1 or 2 grams each.

The German Pharmacopoeia IV (1900), and again in the fifth edition (1910), adopts the title "pastilli hydrargyri bichlorati" and directs that from a mixture of equal parts of mercuric chloride and sodium chloride colored with a red coal-tar dye are to be made cylinders twice as long as thick and weighing 1 or 2 grams each. Sublimate pastilles must be dispensed in sealed bottles labeled "poison" and each pastille must be wrapped in black paper on which is printed in white the word "poison" and the content of mercuric chloride stated in grams.

The Swedish Pharmacopoeia (1901), under the title of "pastilli chlorethi hydrargyrici," directed that "sublimate pastilles" should be hard cylinders or prisms weighing either 1 or 2 gm. each and composed of equal parts of mercuric chloride and sodium chloride and colored red by an aniline dye. It likewise introduced the requirement that each tablet must be wrapped in black paper on which was printed in white the word "poison."

The Austrian Pharmacopoeia (1906), under the title "pastilli hydrargyri bichlorati corrosivi," directed that equal parts of mercuric chloride and sodium chloride should be triturated to a thorough mixture and colored with a solution of eosin and compressed into pastilles weighing 2 gm. or 1 gm. The pastilles are directed to be dispensed in glass bottles under a poison label and the pastilles are to be singly wrapped in black paper with the word "poison" imprinted in white.

The Swiss Pharmacopoeia (1907) adopts as a title "hydrargyrum bichloratum compressum" and as synonym, "pastilli sublimati." The formula is mercuric chloride 666 gm., sodium chloride 333 gm., eriocyanin A 1 gm., mixed and compressed into tablets weighing 37.5 cg., 75 cg., and 1.5 gm. and containing respectively each 25 cg., 50 cg. and 1 gm. of corrosive sublimate. It directs that each tablet must be wrapped in black paper on which is printed in white the weight of the sublimate contained, the word "poison" and a death-head design.

The British Pharmaceutical Codex in the first edition of

1907, and likewise in the 1911 edition, gave formulas for a series of these tablets. Under the name of "solvellæ hydrargyri perchloridi"—"soluble mercuric chloride tablets," and as a synonym "antiseptic perchloride or corrosive sublimate tablets," it directed a mixture of equal parts of mercuric chloride and sodium chloride colored with methyl violet to be compressed into tablets containing 8.75 grains of the mercuric chloride so that one dissolved in the Imperial pint (20 fl. ounces) of water will make a 1/10 per cent. (1 in 1000) solution of mercuric chloride. Under the title "solvellæ hydrargyri perchloridi fortes or strong soluble mercuric chloride tablet," a tablet of the same percentage of essential ingredients but double the weight was directed, so that one dissolved in 20 fl. ounces of water makes a solution containing 1/5 per cent. (1 in 500) of mercuric chloride. Other formulas are given for a "mild" and for a "small" soluble mercuric chloride tablet yielding when dissolved as directed solutions 1 in 4000 and 1 in 4500, the latter especially recommended as suitable for ophthalmic purposes.

The French Pharmacopoeia (1908) presents a new style of formula for use of mercuric chloride in antiseptic solution. Its formula for "papier au chlorure mercurique or charta hydrargyri bichlorati" directs that 5 gm. each of mercuric chloride and sodium chloride be dissolved in a sufficient quantity of distilled water to obtain a volume of 20 cc. Filter paper purified by treating with water containing one part of hydrochloric acid to the thousand, washing with pure water and drying, is then saturated with the mercuric chloride solution so that each rectangular surface 5 cm. by 10 cm. shall imbibe 1 cc. of the solution and represent 25 cg. of mercuric chloride. The superscription "corrosive sublimate" 25 centigrammes is directed to be printed with indigo carmine, thus producing, when immersed in the proper volume of water, a blue solution. The paper is to be protected from light and moisture and the container to be labeled in indelible red letters "poison."

These specifications of the Pharmacopée Française official in that country since July 17, 1908, will yield a product essentially the same as the corrosive sublimate leaflets now being made by an American manufacturer who claims originality and a right to a patent thereon as a new and novel invention.

The Italian Pharmacopoeia (1909) gives the title "pastiglie di cloruro mercurico" with the Latin "pastilli bichlorurethi hydrargyri." Its formula is mercuric chloride and sodium chloride, equal parts, colored with an aqueous solution of eosine and compressed into circular pastilles of 1 or 2 gm. in weight.

It is to be noted that most of the foreign pharmacopoeias have simply followed in their titles that proposed by Angerer and designate these tablets as "pastilles." In the same pharmacopoeias the title "pastilli" is frequently applied to mild remedial agents dispensed in the form of confections or lozenges. It is certainly an unfortunate designation and a dangerous classification that would include such a toxic form along with worm lozenges, cough troches, peppermint drops, etc. It is still more to be regretted that it has been proposed to adopt this same title in the U.S.P. IX. The use of the word "pastille" in this connection is not in accordance with the English usage of this word. As defined in the dictionaries, the word "pastille" refers to several forms of substances of an entirely different character and dissimilar use.

The Century Dictionary defines pastille or pastil:

1. A small roll of aromatic paste, composed of gum benzoin, sandalwood, spices, charcoal powder, etc., designed to be burned as a fumigator.
2. A kind of sugared confection, usually of a strong flavor, of a round, flat shape, like peppermint drops.
3. In art: (a) a thin, round cake of watercolor; (b) the method of painting with watercolors prepared as pastils or a drawing produced by them.
4. In pyrotechny, a paper case filled with a burning composition intended to cause rotation of a wheel.

Neither of these definitions would cover a mercuric chloride tablet of the shape described and the intended use. In medicine and pharmacy, this title had already been pre-empted and used to a considerable extent for medicated confections, and its adoption for such a toxic official preparation is an exceedingly dangerous experiment. It was probably for this reason that the Pharmacopoeia Helvetica adopted as its title "hydrargyrum bichloratum compressum" and the British Pharmaceutical Codex "solvellæ." The "solvellæ" of the Codex are compressed tablets or discs intended to be dissolved in water

\*Read before the N. J. Pharmaceutical Association, Lake Hopatcong, 1914.

for external use. The attempt at classification here makes a step in the right direction. The title coined, however, is not sufficient to indicate the toxic character and, moreover, is subject to the same criticism that it has the appearance of an attempt to give a trade-marked name of a certain brand of tablets, which is not lawfully used in England.

The necessity for a distinct title that will clearly differentiate these medicinal tablets used so extensively for the treatment of skin and such poisonous tablets intended for internal use, and the safeguarding of life is the first and principal consideration and this warrants the coining of a new title that shall distinguish the latter as a separate and distinct class. For this purpose I propose "toxitabellae" as a distinctive, essential and as the official title for these tablets, "toxitabellae corrosivae chlorati corrosivi" and as the English, "poison tablets corrosive mercuric chloride."

The foreign formulas follow the formula of Angerer in using three parts of mercuric chloride and sodium chloride. The American manufacturers generally claim on their labels to adhere to the Wilson formula. Tablets containing the proportion of ammonium chloride directed in this latter formula are prone to change on keeping. They deliquesce in humid atmosphere and the solubility also diminishes with age. For these reasons some of the manufacturers have already substituted sodium chloride for part of the ammonium chloride. One manufacturer advises that he has found preferable a mixture of corrosive sublimate 7.5 parts, ammonium chloride 2.7 parts, sodium chloride 5 parts. The entire replacement of the ammonium chloride by the sodium chloride will doubtless yield a more stable and soluble tablet and this change should be adopted in the pharmacopoeial formula.

The coloring of bichloride of mercury antiseptic tablets was originally proposed, not only to make them distinct in color from other tablets of the same shape and size, but the primal idea was to obtain a solution that would have a distinct color and not be mistaken and administered for harmless medications or water. Such accidents had occurred, and to prevent recurrence, Angerer proposed as an additional safeguard that the solutions should be colored. It has been difficult to select a red dye that would possess sufficient tinctorial strength so that only a minute quantity would be required and at the same time be permanent and not altered by the action of the chemicals nor fade on keeping. This problem has confronted the manufacturers and has been the subject of considerable experimentation on the part of the writer.

Eosin, in the quantity proposed, yields a tablet that is distinctly pink, but when in solution  $1 \text{ Hg Cl}_2$  in 1000) does not show a distinct color. This practical difficulty with the red dyes, their variable shades, and, moreover, the fact that confections are frequently of this color and liquid medicines are likewise commonly some shade of red, has led to the use of other colors. The British Pharmacopoeial Codex directs methyl violet, which in this combination gives a blue-purple solution. The Swiss Pharmacopoeia orders eriocyanin A, the sodium salt of sulfonated dye of the triphenyl-methane-carbinol type that colors silk and wool a bright blue and is only slightly affected by 10 per cent. hydrochloric acid. The French Codex directs indigo carmine for this purpose.

A number of the manufacturers are already giving preference to the blue tablets. One of these writes: "Green and red colored tablets are not at all satisfactory. I believe that you will agree with me that a sombre blue would prove the most desirable. Confections are made in red, green, yellow, white and every conceivable color, but the blue is not attractive and therefore would in all probability prove the safest." On the question of coloring for mercuric chloride, Dr. A. G. Rosenquarten, whose firm prepares large quantities of mixed salts already colored for the manufacturers, writes me:

"The only satisfactory color that we have found is the blue dye, called indigo carmine. We have not yet found a satisfactory red or green dye, but I can highly recommend indigo carmine for consistent results, and a definite weight of that dye added to a definite weight of corrosive sublimate mixture, will produce definite results. I cannot say the same about the other dyes, and I think it will be most desirable to confine the dyes for corrosive sublimate mixture to the one color, blue, and the one dye, indigo carmine."

My own experiments confirm these statements as to the availability of indigo carmine for this purpose. 2.5 mg. per tablet is sufficient to color 500 cc. of water a distinct blue.

If a more intense color be desired, this can be increased up to 5 mg. and the quantity to be specified in the formula for 100 tablets should not exceed 0.5 gm. In my experiments with red dyes, eosin and alizarin carmine (sodium alizarin sulfonate) appear to have given the best results with the Wilson type, but the color of the solutions is not as bright a red as might be desired. With the Bernay formula containing citric acid, methyl orange has shown the best results.

The official tablet should be adjusted to the basis of one tablet to 500 cc. of water yielding a 1 in 1000 solution instead of one tablet to the pint, as has been the custom. This will necessitate only a slight increase in the weight.

The shape to be adopted for the official bichloride tablets is one of the questions that is being considered. When these tablets were introduced, the manufacturers quite naturally used the moulds that they had for their compressing machines and so the unfortunate mistake was made of manufacturing these of the round or disc shape, the same shape and sizes as were used for innocuous medicinal tablets and confections. Fatal accidents have demonstrated that it is imperative that this dangerous practice should be discontinued. Toxic tablets of the bichloride of mercury antiseptic type should be made in a distinct shape that has not been used for any other purpose and the use of such a shape or form should be restricted by legal enactments to such toxic tablets intended for external use.

In recent years the ingenuity of the American manufacturer has been exercised to obtain a distinctive shape that should characterize and distinguish his brand of "antiseptic tablets." As a result, we now have such shapes as triangular, diamond, square, cube, keystone, clover leaf, exploited as proprietary forms of antiseptic tablets. Every one of these shapes has been commonly used in confections and their official recognition and continuance for bichloride antiseptic medication would be a repetition of the original fatal error as to the shape of such tablets. The manufacturers of these shapes are each clamoring for the recognition of his particular shape of tablet.

The influence of these commercial interests has been exerted to prevent legislative action that would designate an appropriate shape or judicial consideration that would permit judgment to crystallize in favor of an official shape that would insure the greatest amount of protection to life. After all, the question of safety first is the paramount question.

Of all the proposals for a shape for bichloride of mercury tablets, the coffin-shape suggested by F. M. Apple in his paper before the Pennsylvania Pharmaceutical Association seems to be best. This has already been adopted by at least four manufacturers and its general adoption has only been prevented by the commercial interests back of other designs. Commercial instinct and financial advantages and not the broad humanitarian principle of what is best to protect life, have been the causes actuating the opposition to legislation and to official recognition of the best suggestion yet offered.

The German Pharmacopoeia has been quoted as an authority to be followed in fixing the U.S.P. standard. I believe that we should appropriate from the foreign pharmacopoeias all that our experience and judgment prove to be correct and in accordance with American practice. In this instance, I cannot approve of following the dictum of the German Pharmacopoeia. I have here a sample of the official German "corrosive sublimate tablets" that have been in my possession since last March. You will observe that these are not uniform in color and that fading has commenced to take place. Secondly, the shape in conformity with that of the Ph.Gr. is twice as long as broad, and the manufacturer to show this and possibly to permit of economy in using only half a tablet at a time has made the tablets with a ridge across the center. This resembles forms of the pink-linked phenolphthalein and other proprietary laxative wafers that are so extensively used in this country. It would be difficult to conceive of a more dangerous experiment than to officially recognize such a shape for bichloride tablets. It would be on a par with the adoption of the Italian pharmacopoeial standard of the round tablet which we are now ready to condemn. There is no uniformity in the European pharmacopoeias on this formula and so the argument for adopting an international standard falls flat. Thirdly, the solution when made of a strength of 1 to 1000 as commonly used is so delicate a pink as to be barely perceptible.

So far as I know, no American manufacturer has yet placed on the market a bichloride of mercury tablet copied after that of the German Pharmacopoeia. As this formula has been

published for more than 14 years, this is noteworthy and may be construed as an evidence of the good judgment of our manufacturers. To now insist that the U.S. Pharmacopœia must adopt and make legal a shape that has not met favor in American practice, is a unique proposition that lacks the popular approval that is essential to its effectiveness.

The importance of throwing every safeguard possible around the sale and handling of such poisonous substances is now thoroughly recognized. The newspapers have given wide publicity to the deaths either suicidal or accidental occurring from bichloride tablets. The evil resulting from the overzealous newspaper which gives its readers all the details of the method by which some poor unfortunate has gone on the long voyage, has been discussed and decried, yet, nevertheless, it continues its course with little or no abatement.

A number of State legislatures in session during the past year have had under consideration acts that would restrict the handling of such poison tablets and define their shape, color and label, and further prohibit the use of the prescribed shape for any other purpose. There are at least three bills on the same subject now pending in Congress. It is certain that we may expect legislation before long on this entire matter and it is eminently proper that the drug trade should take an active interest in solving a question of public safety that is so closely associated with our business. Unfortunately, the attitude assumed by some of the druggists is that of thoughtless indifference. The argument advanced by others is that such legislation is only a passing sentimental fad and that it can have no influence on the protection of life. This is so fallacious that it cannot long continue to prevent legislation.

It was never expected that any legislation would prevent a person of morbid mind from committing suicide. This is not the purpose of the proposed legislative enactments, but it is contended that in prescribing a distinctive shape for these poison tablets they could under no circumstances be mistaken either in the day or night for harmless medications. If a distinctive shape had been supplied to the Macon, Ga., banker and the Brooklyn business man, whose deaths beyond question were accidental poisonings, at least these lives could have been spared. The necessity for a distinctive shape for bichloride of mercury tablets is well shown by the compilation appearing in Public Health Report No. 46 by Martin I. Wilbert, of the United States Public Health Service. In this compilation Mr. Wilbert shows that in the current price-lists of five leading pharmaceutical manufacturers, there are 16 different formulas and varying sizes of poison bichloride tablets, five different colors and only three out of the 16 were then made of any other shape than the ordinary round tablet used for medicine, such as headache and cold tablets. Could any stronger evidence of the necessity for restrictive legislation and a distinctive shape for these poison tablets be presented than this compilation in a Government bulletin, which shows the present dangerous and unsatisfactory method of marketing these tablets?

The influence of certain manufacturers on proposed legislation is shown in the act passed by the last session of the Maryland Legislature. Instead of specifying in the act a distinctive shape or color, the value of the legislation is largely nullified by the amended form in which the bill was passed. This law provides that "tablets containing more than 1.10 grain of mercury bichloride must be of either triangular, diamond, square, oblong or other irregular shape, and their color must be either blue, purple, or green, with the word 'Poison' imprinted or embossed on each tablet. Further, these tablets can only be sold, dispensed or given away, in bottles, upon one side of which the word 'Poison' has been blown, and when a label with the word 'Poison' is placed on the face of the bottle."

The restrictions regarding the package and labeling are such as are commonly employed by all of the manufacturers, but the very needed protection to the consumer has been lost sight of by the overpowering commercial spirit that prevented the selection of a distinctive shape for the tablets. Any one of a number of shapes is equivalent to no shape and the very indefiniteness of the act as passed through the influence of the manufacturers destroys its value as a measure for the safety of the public.

*Mercoïd* is a sterile suspension of calomel and sodium mercurisalicylsulphonate, each cc. containing 0.08 g. of mercury. It is used by injection, where mercury is indicated, and is said to possess decided advantages over the usual forms of medication

## The Timid Druggist.\*

By C. J. McCLOSKEY.

WEBSTER defines the word "timid" as meaning faint-hearted, fearful, want of courage. If he had given as an example, the average retail druggist, no further description would have been necessary. All kinds of business suffer more or less from the timidity of a part of the men associated with it, but the retail drug business seems to be particularly over-burdened with that kind of man. Let it be understood that I am not referring to the merchants of great ideas, who conduct our large and successful stores in the shopping districts, and prominent thoroughfares. If they suffered from timidity, they would not be there.

The men I have in mind particularly are the ninety and nine who conduct small stores in the residential and tenement districts of our cities and suburban towns. Conducting several stores in such localities myself, I am familiar with the conditions.

The average druggist is afraid to have the patient pay his own telephone toll when calling his physician. There is no good reason why the druggist should be put to this expense—no more than if he was calling the plumber or the butcher. If the patient expects someone to pay for his call, why not have him give the doctor 25 cents for his visit, thus withholding the price of the phone. There is just as much logic in this method as in expecting the druggist to stand the expense. The innovation of the slot telephone has given every druggist the opportunity to get rid of this tax if he only has nerve enough to seize it. When the patient knows that it takes a real five-cent piece to call his doctor, you will find he is willing to pay it himself. He probably thinks you will add it to the price of his prescription, if he brings it to you, and that he might as well pay it first as last. Within a short time you will find that everyone will expect to pay for his calls.

When the patient brings his prescription, the timid druggist, instead of asking a fair price, begins to wonder how much his nearest competitor might charge for it, and names a figure much less than he should, then stands in fear and trembling that the patient might go on a shopping expedition with the prescription. I would say to these men: "Don't be afraid to ask a just compensation for your drugs and labor. Don't forget that in the eyes of the great majority of consumers price makes quality." The patient is proud of paying \$10 or more for the services of a "professor," and is not looking for the cheapest medicine, but the best.

Furnish the best drugs and chemicals that your money can buy, and constantly hold before the public the fact that your prescriptions are worth all you ask for them. The manufacturer who sells his candy at \$1 per pound, gets it because he impresses the purchaser with the fact that it is the best and none so good could be sold for less money. The price makes the quality in this instance. The people who are putting four ounces of effervescent salts in a bottle to retail at 75 cents are banking on the same principle—price makes quality. An ounce of so-called wax is sold at 75 cents, an ounce of sulphur ointment at the same price, and so on.

Drop your timidity, and while I am not advising a suit of bullet-proof nerve, such as in some of the instances I have mentioned, clothe yourself in a mantle of justice and fairness to yourself, to the consumer, and to your neighboring competitor. Give quality and get the price. The timid druggist is doubly afraid to ask a living profit on proprietary articles, and is so imbued with the fear of making too much money, that he is afraid to ask more than a small percentage of profit on his sundries. When he has an opportunity of buying a standard article at a discount, he immediately gives most of that discount to the public, for fear of crowding his cash register.

When a new proprietary is put on the market he sells his first one-twelfth of a dozen at a cut price in fear that his neighbor might do the same thing. The first I hear of price-cutting on a new proprietary is not that a department store or corporation is selling at a cut price but that some timid owner of a small store on a by-street is either afraid of his neighbor or thinks that a 50 per cent. profit on a patent

\*Read at N. J. Ph. A., Lake Hopatcong, June, 1914

make him a plutocrat, and he would not know what to do with the money. I say to these timid men: Learn to sell your own new articles. You are entitled to, and can sell, on all new proprietaries for a long time after their introduction. Instead of being the first to cut the price, be the last. You will be surprised at the time you can hold the price, and at the amount of money you will sell.

If an article is put out by a reliable firm, and being very good, and you believe it will prove a success, display it in your windows, keep it in view in the store, and while it is fresh in the mind of the public, sell at a price for every package you sell. Then when you are faced with competition you must cut the price of the article to the back room, and only sell it at a low price. On the other hand, the article of rare sale, the favorite, the one that still lingers in the minds of a few, should be sold invariably at or near full price.

The success of these stores such as I am addressing is mostly dependent on the living nearby. Those who patronize you do so because of your personality, and reputation for fair and honest dealing, and expect to pay you a living price. Do not become a bargain-hunter who only patronizes you as a matter of convenience in an emergency should be made to pay for that convenience. Hundreds of dollars are lost every year by selling proprietaries at cut prices to customers who expect to pay the dealer a legitimate profit. Who of us hasn't had the experience of a person buying a 25-cent piece on the counter for a 25-cent article, and starting to leave the store, and didn't you hate to call him back? The man of courage is admired and looked up to, as the timid, fearful man is discredited and imposed upon.

To be courageous and fearless means to be honest. The honest man in business cannot be a coward. Cowardice and dishonesty go hand in hand. Let us be honest with ourselves, with the public, and even with the frequently condemned proprietor of articles which are generally sold at cut rates. Then the aggressive cutter who bobs up now and then will not make the inroads on our business that he imagines he will. The proprietor who advertises his article and sends his customer into your store for that article, is entitled to that sale, and we, as his agents, are entitled to a profit on the transaction. The man or firm who advertises a proprietary at or below cost does not expect to sell that article except under compulsion. He expects to sell a profitable substitute in its stead, sometimes going so far as to say he has sold out of the article so advertised, and at times deliberately wrapping and handing out the substitute, without explanation or apology, trusting that when the buyer discovers the substitution at home, he will not return it.

The good business man knows that in the end this will not pay, but I consider the aggressive cutters as not good business men, but as being short-sighted, and as resorting to price-cutting as the only method which they know to get business.

Let it be known that at your store people will get what they ask for, willingly, without argument or discussion, and they will prefer coming to you and paying you a reasonable profit, instead of having to put up a fight to get what they want, in the store that is selling below the cost of doing business. Make it a point to inform any customer who might question your price that you are trying to act honorably both to him and the proprietor of the article, that he can come to you and get what he wants without being embarrassed and bamboozled into taking something else. That to do this is justice to all concerned—you must have a living profit on the goods he wants.

Our best weapon with which to fight the demoralizer of business is honesty along this line. The cutter's first principle is substitution of profitable goods for the ones he advertises below cost, and we have greatly aided him in the part, by following to a degree his method. Let us get away from this false view of business-getting. Let us build our reputation along the line of honesty and fair dealing. Let us give the people what they want at all times, and ask a fair profit on the transaction. This method need not necessarily interfere with the sale of our own preparations. We can make our own market in a legitimate manner. Advertising by circulars over our counters by inserts in all packages leaving the store, in our windows, keeping them in prominent position on our shelves and show-cases, and, of course, recommending them to

all persons asking our advice, as to what remedy they should use. This is legitimate advertising, and will build up business on our own preparations, without injustice to other advertised articles.

Another error of the timid druggist in residential districts is in the selling of pills and tablets in bottles of 100. He reads the announcements of department stores or drug stores in the shopping districts, advertising Blaud's pills in 100's, 10 cents; Lucy Webster pills, 15 cents; aspirin tablets, 55 cents, etc., etc. He immediately thinks he is losing business, and buys from his pharmaceutical house a few bottles of each, possibly put up under his own name. Then when one of his customers asks for 10 cents' worth of dinner pills, or a dozen aspirin tablets, he calls their attention to the 100 package, suggesting that they can save money in buying the larger quantity. Of course, the customer will save money, and the druggist will lose just the amount the customer saves. Is it better business for the family drug store to sell 100 C. C. pills at 25 cents or less, or to sell eight dozen at 10 cents per dozen?—one pound of Rochelle salts at 25 cents, or 16 ounces at 5 cents per ounce? Be prepared to meet the occasional demand of the quantity buyer, but don't fill your windows with pill and tablets in 100's, or with 1-pound packages of drugs at cut prices.

Frequent small sales, at a good profit, appeal more to me than fewer large sales, at cut rates. The customer benefits by fresh drugs, and the elimination of waste and loss that quantity buying always entails. These ideas may not be considered up-to-date, but in my opinion they will increase your profit, and the primary motive for being in business is to make money.

The exercise of force of character, nerve and grit, together with hard work, will overcome many of the seeming obstacles to financial success.

#### Iodine Number of Linseed and Petroleum Oils.

The determination of the iodine number of linseed and petroleum oils according to the Hanus method has just been completed by the Bureau of Standards of the Department of Commerce and the results published in Technologic Paper Number 37. Each of the three factors, weight of sample, time of absorption, and amount of Hanus solution was studied for a series of burnt linseed oils and petroleum oils. The results produced by variation of one of the factors, the others remaining constant, are reproduced graphically. Variations of weight of the raw linseed oil show that a constant volume is obtained for weights of the oil up to 0.25 gram. Beyond this value, the iodine number decreases with increasing weight. For burnt linseed oils, the range of weight over which the iodine value is constant, decreases with increased burning of the oil. Petroleum oils, on the contrary, approach a constant value when 0.6 gram or more of the sample is taken. Varying the time of absorption from five to sixty minutes shows that the reaction approaches a maximum in about 10 minutes. Thereafter, absorption is slow, and a few minutes one way or another has little effect on the value obtained. When the amount of Hanus solution is varied from 20 to 75 cc. the results indicate that the oil with the highest iodine number does not require the greatest excess of iodine to reach maximum absorption value. The effect of temperature on the value obtained is more marked for burnt linseed oils than for boiled or raw oils. The results as a whole indicate that concordance is obtained only when a prescribed procedure is followed with exactness. To obtain comparable results, a standard procedure should be followed in which the limits are strictly defined. This is particularly true of burnt linseed oils.

#### Phosphorescent Paint.

(1)

Calcium oxide, 20; sulphur, 6; starch, 2; bismuth nitrate solution (0.5 per cent. in acidified alcohol), 1; potassium chloride, 0.15; sodium chloride, 0.15. The materials are mixed, dried and heated to redness (1300°). To make the paint effective, the painted surface should be exposed for a time to direct sunlight, or a mercury vapor lamp may be used. Powerful incandescent gaslight also does well, but requires more time.

(2)

Another formula, giving a golden yellow light, is: Strontium carbonate, 1000; sulphur, 1000; potassium chloride, 5; sodium chloride, 5; manganese chloride, 4. Mix and heat to white heat for half an hour.

## Changes in the New Pharmacopoeia — Fifth Instalment — Standards for Drugs.\*

*Condensed abstract of Proposed Definitions and Standards Relating to Drugs of Vegetable and Animal Origin submitted by the Committee of Revision for incorporation into the next edition of the Pharmacopoeia.*

(Concluded from page 314, July ERA.)

*Sinapis Nigra*—The drug may include not more than 5 per cent. of other harmless seeds and other foreign matter. Ellipsoidal or irregularly spheroidal, from 1 to 1.6 mm. in diameter; testa deep reddish-brown, sometimes yellowish-brown and with a grayish tinge, minutely pitted or reticulate; embryo greenish-yellow or dark yellow, oily, with 2 large cotyledons; odor when dry, slight, on moistening very irritating; taste strongly pungent, acrid. Powder microscopically described. The powder should contain few or no starch grains. Black mustard upon distillation with steam yields allyl isothiocyanate (distinction from white mustard). Starch not more than 2.5 per cent. Starch test of U.S.P. VIII omitted. Ash not exceeding 9 per cent.

*Spigelia*—The rhizome and roots may include not more than 10 per cent. of stems and other foreign matter. Rhizome horizontal or slightly oblique, more or less flexuous, somewhat branched, from 1.5 to 5 cm. in length, from 2 to 5 mm. in diameter; externally dark brown, slightly annulate with scars of bud scales, the upper surface knotty from approximate stem-bases, bearing cup-shaped scars; from the lower and lateral portions arise numerous long, rather coarse, sparingly branched, brittle roots; fracture short, internally differentiated into three nearly equal zones of pith, wood and bark; odor slightly aromatic; taste bitter, pungent. Few, if any, of the roots should exhibit thin, terminal portions with the bark stripped from the slender strands of wood; stems usually attached to the upper portions of the rhizome nearly cylindrical, attaining a length of 6 cm. and a diameter of 3 mm., light grayish-brown to purplish-brown, nodes annulate, marked by opposite leaf-scars. Ash not exceeding 10 per cent.

*Staphisagria*—The drug may include not more than 2 per cent. of foreign vegetable matter. Irregularly triangular, flattened, or somewhat tetrahedral, one side being convex, from 4 to 7 mm. in length, from 3 to 6 mm. in breadth; externally dark brown, becoming lighter with age, and coarsely reticulate; easily cut, showing a somewhat light brown oily endosperm, enclosing a small embryo at the pointed end; odor slight, disagreeable; taste intensely bitter and acrid.

*Stillingia*—When entire, terete, unequally tapering, rarely branched, attaining a length of 40 cm., from 0.5 to 3 cm. in diameter, usually in pieces; externally reddish-brown, longitudinally wrinkled; fracture very fibrous, externally, the bark light reddish-brown, thick, spongy, finely fibrous, with numerous resin cells and easily separable from the porous, radiate wood; odor distinct; taste bitter, acrid and pungent. Ash not exceeding 5 per cent.

*Stramonium*—The dried leaves of *Datura Stramonium* Linné, or of *Datura Tatula* Linné, (Fam. Solanaceæ), with not more than 10 per cent. of stems and other foreign matter. Usually much wrinkled and either loose or more or less matted together; laminae when entire from 2 to 30 cm. in length, having petioles from 0.5 to 8 cm. in length; inequilaterally ovate, summits acute or acuminate, bases unequal, one side extending from 3 to 12 mm. below the other, margins sinuate, toothed or angled, the teeth being few, acute or acuminate and with rounded sinuses, frequently with numerous circular perforations which may have become filled with cork; upper surfaces dark green, sparsely hairy, especially upon the veins, lower surfaces light green; odor distinct, heavy and narcotic, taste unpleasant, nauseous; stems cylindrical, usually flattened, attaining a length of 30 cm. and a diameter of 7 mm.; longitudinally wrinkled, occasionally with 1 or more deep furrows, light greenish-brown to purplish-brown. Ash not exceeding 20 per cent.

*Strophanthus*—The dried, ripe seeds of *Strophanthus Kombé* Oliver, or of *Strophanthus hispidus* De Candolle (Fam. Apocynaceæ), deprived of the long awn. Lance-ovoid, flattened and obtusely edged; from 7 to 20 mm. in length, about 4 mm. in breadth and about 2 mm. in thickness; externally of a light

fawn color with a distinct greenish tinge, silky lustrous from a dense coating of closely appressed hairs, (*S. Kombé*), or light to dark brown, nearly smooth and sparingly hairy (*S. hispidus*), bearing on one side a ridge running from about the center to the summit; fracture short and somewhat soft, the fractured surface whitish and oily; odor heavy when the seeds are crushed and moistened; taste very bitter. Microscopical characteristics are given. The tests with iodine T.S., ferric chloride T.S. and mercuric potassium iodide T.S., omitted. Ash not exceeding 5 per cent.

*Sumbul*—The roots of *Ferula Sumbul* (Kauffmann) Hooker filius (Fam. Umbelliferae). In transverse segments, attaining a length of 10 cm. and a diameter of 7 cm.; externally light brown to dark brown, longitudinally wrinkled and showing in the upper portions a smooth, grayish, epidermal layer, occasionally with the short stem-bases attached; fracture short, fibrous, spongy; internally light yellow or brownish-yellow, arrangement of wood irregular and with yellowish-brown or blackish resinous patches frequently extending over the entire ends of the segments; odor peculiar, musk-like; taste bitter and somewhat aromatic.

*Taraxacum*—The dried rhizome and roots of *Taraxacum officinale* Weber (Fam. Compositæ). Directions for collecting omitted. Cylindrical or somewhat flattened, gradually tapering, usually broken in pieces, from 6 to 15 cm. in length, from 5 to 15 mm. in thickness; externally brown or blackish-brown, longitudinally wrinkled, having numerous root and rootlet-scars; crown simple or branched with numerous leaf-bases showing annulate markings; odor slight or inodorous; taste bitter. Ash not exceeding 10 per cent.

*Tragacantha*—The spontaneously dried gummy exudation from the stems of *Astragalus gumifera* Labillardière, or from other Asiatic species of *Astragalus* (Fam. Leguminosæ). In flattened, lamellated fragments varying from ribbon-shaped bands to long and linear pieces, which may be either straight or spirally twisted, and from 0.5 to 2.5 mm. in thickness; whitish to light brown in color, translucent and horny; fracture short, rendered more easily pulverizable by heating to 50°C.; inodorous; taste insipid, mucilaginous. Add 1 gm. of tragacantha to 50 cc. of distilled water; it should swell and form a smooth, nearly uniform, stiff, opalescent mucilage and should be free from cellular fragments. Indian gum upon similar treatment forms an uneven mucilage containing a few reddish-brown fragments which are more apparent and on stirring separate in the form of coarse, uneven strings. Shake 2 gm. of tragacantha with 100 cc. of water until fully swollen and free from lumps, then add 2 gm. of powdered sodium borate, and shake the mixture thoroughly until the salt is dissolved; the mucilage should not lose its transparency, nor exhibit any change in consistence, and on pouring should not be slimy or stringy, even after standing 24 hours (absence of foreign gums). Boil 1 gm. of tragacantha with 20 cc. of water until a mucilage is formed, then add 5 cc. of hydrochloric acid and again boil the mixture for five minutes; no pink nor red color should develop (absence of Indian gum). Ash not exceeding 3.5 per cent.

*Triticum*—Usually cut in pieces from 4 to 12 mm. in length and from 1 to 2.5 mm. in diameter; externally light yellow or yellowish-brown, longitudinally furrowed, smooth, shiny, nodes with circular leaf-scars, a few root-scars and occasional slender roots; fracture tough, fibrous; internally lemon-yellow and with a large, hollow pith; odor slight, aromatic; taste sweetish. Roots filiform, irregularly branching, attaining a length of 5 cm. and not more than 0.5 mm. in thickness, light brown or yellowish brown, frequently covered with long root-hairs. Microscopical characteristics are given. Ash not exceeding 3 per cent.

*Ulinus*—Usually in bundles consisting of flat, oblong pieces 30 cm. in length, from 10 to 15 cm. in width; outer surface of a light brown or buff color with occasional dark brown patches of adhering cork, longitudinally striate and with detached bundles of bast-fibres, and colored blackish upon the addition of a very diluted iodine T.S.; inner surface light yellowish-brown nearly smooth and finely striate, only slightly darkened upon the addition of a very diluted iodine T.S.; fracture fibrous with projecting bast-fibres, the broken surface porous, due to the large mucilage cells; odor distinct; taste mucilagi-

\*Permission to use granted by the Chairman of the Board of Trustees, United States Pharmacopoeial Convention.

rous. Mix with a part of powdered Ulmus with 40 cc of distilled water, in an hour and filter, the filtrate should be of a uniform, mucilaginous consistency.

**Ulmus.**—The drug may include not more than 5 per cent. of stems and other foreign matter. Usually more or less entire branches, or, for drying, spatulate, from 12 to 30 mm. in length; 5 to 8 mm. in breadth; summits obtuse or rounded; margins of the slightly revolute, veins cuneate, tapering into sharp points; upper surface dark green, glabrous and slightly hairy; lower surface yellowish-green and slightly hairy; especially on the midribs, coriaceous, fracture short and woody. Taste astringent and somewhat bitter. **Ulmus officinalis**—Mix with 10 cc of distilled water, shake in a mixture occasionally until cold and filter, the filtrate should yield a grayish-purple precipitate with addition of a few drops of ferrous sul-

fate. **Ulmus campestris**—Upright, from 2 to 4 cm. in length, and from 1 to 2 cm. in diameter, usually cut longitudinally into 2 to 4 pieces; externally yellowish-brown or dark brown, upper surface striate, and frequently with a short horizontal striation; fracture from the outer surface arise numerous small, woody, fracture of rhizome short and horny, internally striate with a thick bark and narrow central cylinder. **Ulmus campestris**—Taste of valeric acid, becoming stronger on heating; sweetish, emphyreumatic and somewhat bitter. Ash, not exceeding 20 per cent.

**Vanilla.**—Yielding not less than — per cent. of vanillin. Pods, in flat bud, from 15 to 35 cm. in length and from 5 to 10 mm. in breadth; summits terminating in flat, circular scars, gradually tapering, more or less bent and curved or hooked at the base, or in the Tahiti variety, broad in the middle and tapering towards either end, the base closely resembling the summit; externally blackish-brown, longitudinally wrinkled, moist-sticky, and occasionally with an efflorescence of vanillin in the form of acicular crystals or monodimensional prisms; frequently with narrow, elliptical or irregular, more or less wrinkled, dark-brown patches of cork; occasionally striate to the parts near the tip, flexible and tough. 1-locular, containing a blackish-brown pulp and numerous blackish-brown seeds, the latter being flattened, irregularly triangulate or nearly circular in outline, reticulate and varying from 0.15 to 0.30 mm. in diameter; odor and taste characteristic and very agreeable. Microscopical characteristics are given. Place a few of the crystals, occurring as an efflorescence on the fruit on a microscopic slide or watch crystal and add a drop of ether-glacial T. S. and hydrochloric acid; the solution should immediately acquire a carmine-red odor (distinction from terebic acid). Diluted alcohol extractive, not less than 12 per cent. Ash, not exceeding 6 per cent.

**Veratrum Viride.**—The dried rhizome and roots of *Veratrum viride* Aiton (Fam. Liliacea), known in commerce as American belladonna, with not more than 5 per cent. of stems and other foreign matter. Rhizome upright, obconical, usually cut longitudinally into 2 to 4 pieces; from 2 to 7 cm. in length, from 1.5 to 3 cm. in diameter, externally light brown to dark brown or brownish-black, frequently bearing at the summit narrow, closely arranged, thin leaf-bases; otherwise rough and wrinkled, somewhat annulate from scars of bud-scars and bearing on the outer portion numerous roots, the lower part more or less decayed; fracture hard and horny, internally yellowish or grayish-white, marked with numerous, irregular fibrovascular bundles; inodorous but sternutatory; taste bitter and acrid. Roots, nearly cylindrical, from 3 to 8 cm. in length and 1 to 2 mm. in diameter, externally light brown to yellowish-brown, deeply transversely wrinkled, fracture short, bark of roots very thick, enclosing a porous central cylinder.

**Viburnum Opulus.**—The dried bark of *Viburnum Opulus* Linné (Fam. Caprifoliaceae), with not more than 5 per cent. of stems and other foreign matter. In strips, or occasionally in chips or chip-like fragments, the bark attaining a thickness of 2 mm.; outer surface of the thinner pieces of a light gray color, finely cracked, longitudinal, purplish-brown stripes and very small brown lenticles, the thicker pieces purplish-red or occasionally blackish, except when very young, and more or less finely fissured or thinly scaly; inner surface varying in color from yellowish to rusty-brown, with very short oblique striae, except where the outer wood layer adheres; fracture short and weak; the fractured surface mostly whitish, varying to pale brown in the inner layer, rusty-brown in the outer

layer covering green, tangential, phelloderm plates; odor strong and characteristic; taste mildly astringent and decidedly bitter.

**Viburnum Prunifolium.**—The bark may include not more than 5 per cent. of wood and other foreign matter. In irregular, transversely curved or quilled pieces, from 1.5 to 6 cm. in length, from 0.5 to 1.5 mm. in thickness; outer surface grayish-brown, or where the outer cork has scaled off, brownish-red, longitudinally wrinkled; inner surface reddish-brown, longitudinally striated, fracture short but uneven, showing in bark which is young or of medium thickness a dark brown cork, a brownish-red outer cortex, and a whitish inner cortex in which are numerous light yellow groups of sclerenchymatous tissues; odor slight; taste distinctly bitter and somewhat astringent.

**Zanthoxylum.** The dried bark of *Zanthoxylum americanum* Millér, known in commerce as Northern Prickly Ash Bark, of *Zanthoxylum Ory-Hirculis* Lindl., known in commerce as Southern Prickly Ash Bark (Fam. Rutaceae), Northern Prickly Ash Bark. In transversely curved fragments or quills, from 2 to 15 cm. in length; bark from 0.5 to 2 mm. in thickness; outer surface short gray to brownish-gray with grayish patches of foliaceous lichens bearing numerous small black apothecia; longitudinally wrinkled and with numerous whitish lenticles, the cork occasionally abraded showing the yellowish or orange colored inner bark; inner surface yellowish-white, finely longitudinally striate and usually with numerous, bright, shining crystals, fracture short, uneven; odor slight, taste bitter, acrid, becoming pungent. Prickly Ash Bark: In transversely curved or irregular (along flattened pieces) or in quills, from 2 to 40 cm. in length, bark from 1 to 4 mm. in thickness; outer surface light gray to brownish-gray marked by numerous large barnacle-shaped projections of cork from 0.5 to 3.5 cm. in thickness, otherwise with numerous grayish patches of foliaceous lichens, bearing numerous blackish apothecia, and numerous, elliptical lenticles; inner surface light yellowish-brown to olive brown, obscurely longitudinally striate and free from crystals, odor and taste as in Northern prickly ash bark.

**Zingiber.**—The outer cortical layer may be either partially or completely removed. Jamaica Ginger: Rhizomes free from the outer corky layers, in horizontal, laterally compressed, irregularly branched pieces, 4 to 16 cm. in length, and from 4 to 20 mm. in thickness, externally light brown, longitudinally striate, ends of the branches with depressed stem scars; fracture short-fibrous, mealy and resinous; internally yellowish to light brown, cortex thin, endodermis, a thin, yellow layer enclosing a large central cylinder with numerous groups of fibrovascular bundles and yellowish oil cells; odor agreeably aromatic; taste aromatic and pungent. African Ginger: Rhizomes with cork partly removed on the flattened sides, the patches without cork smooth and of a light brown color, the portions with cork longitudinally or reticulately wrinkled and grayish-brown; fracture short or short-fibrous; internally lemon-yellow or dark bluish with yellowish oil secretion cells and light yellow to reddish-brown resin cells; odor strongly aromatic, taste intensely pungent. Calcutta Ginger: Rhizomes resembling the African ginger, the branches or "fingers" being somewhat larger, and with a considerable proportion of shriveled pieces; externally grayish-brown or grayish-blue; fracture short and mealy, or horny; internally light yellow or light brownish-yellow with numerous yellowish oil cells and yellowish-brown resin cells; odor aromatic; taste starchy and strongly pungent. Calicut Ginger: Rhizomes resembling African Ginger, more of the periderm being usually removed; externally more or less uniformly light brown; fracture short or short-fibrous and mealy; internally light or brownish-yellow with numerous yellowish oil and resin cells; odor aromatic; taste very pungent. Cochin Ginger: Rhizomes with most of the corky layer removed on the flattened sides; externally light brown to grayish-yellow; fracture short and mealy; internally yellowish-white with numerous yellowish oil cells and brownish-red or blackish resin cells; odor aromatic; taste pungent but not so persistent as in the African variety. Japanese Ginger: Rhizome somewhat resembling Cochin ginger but usually with a thin coating of lime; externally nearly smooth or slightly wrinkled and of a whitish color; fracture short and very mealy; internally varying from a yellowish-white to light brown and with numerous brownish-red resin cells; odor aromatic; taste pungent. Non-volatile ether extract not less than 2 per cent. Alcoholic extract not less than 4 per cent. Ash not exceeding 8 per cent.

(THE END)

## VIII. Classical Discoveries in Pharmacy—Beginnings of System in the Terpenes.

WALLACH'S work on the terpenes is, perhaps, more directly connected with pure chemistry—if there is such a thing—than with pharmacy, but the growing importance of the perfume industry and its relations to pharmacy warrant the inclusion of the present memoir in this series, for the reason that it is taken from the first two of a notable succession of papers which have contributed, more than any others, to the development of our knowledge of terpene chemistry, and not a little to the industrial utilization of such knowledge. The simple reactions described below enabled their discoverer to bring order out of chaos through a large part of the field of his work. Previous investigators had been content to isolate a chemical compound from an essential oil, and to give it a name indicative of its source, without making any great effort to ascertain its relationships with the substances already known. The result was inevitably a reduplication of names for the same chemical individual, until Wallach saw the improbability of the assumption that all these bodies were different, and proceeded to weed out the useless data from the literature.

Although Wallach is still living, and active in the same field, his work is already a classic, worthy to rank with the researches of Richards on atomic weights, of Fischer on the sugars, and Abderhalden on the proteins and amino-acids. In recognition of his achievements, he was awarded the Nobel Prize in Chemistry for 1910. His communications on the terpenes and their derivatives, nearly all of which have appeared in Liebig's *Annalen*, now number 115.

The first paper is found in the *Annalen*, Vol. 225, p. 314 (1884), and the second appears in Vol. 227, p. 277 (1885). The account is as follows, under the title:

“On the Constituents of Some Ethereal Oils.”

“The numerous so-called ‘ethereal oils’ are known to be characterized by their containing, for the most part, a mixture of hydrocarbons of the terpene group, with oxygenated compounds, which in many cases are related to camphor, in some instances the oxygen-free, in others the oxygenated constituents prevailing. If one passes in review these constituents isolated from the ethereal oils, often forming their principal content, one must be struck by the fact that, in the course of time, a long series of similarly constituted compounds has been described, without any experiments having been made as to whether these bodies are really different from one another. Thus, one finds especially hydrocarbons of the formula  $C_{10}H_{16}$ , as ‘terpene,’ ‘camphene,’ ‘citrene,’ ‘carvene,’ ‘cynene,’ ‘cajuputene,’ ‘eucalyptene,’ ‘hesperidene,’ etc., etc., cited in such great numbers that it must be considered *a priori* very improbable that all these compounds are different from one another. The case is similar with the corresponding oxygenated products, as  $C_{10}H_{16}O$ ,  $C_{10}H_{14}O$ , etc. It is now high time that these relationships were in some degree cleared up, and the textbooks of chemistry freed of an entirely useless ballast; and the purpose of the following pages is to furnish the first instalment of such a work.

“In the previous treatise it was shown that the ethereal oil obtained from *Artemisia Cynae* contained as its chief constituent the compound  $C_{10}H_{16}O$ , and a series of new reactions has been indicated, by means of which one can easily identify that compound. A liquid compound,  $C_{10}H_{16}O$ , is also said, according to the available data, to be present in several other ethereal oils, and among others to form the principal component of the ethereal oil of some *Melaleuca* species, which comes on the market as cajuput oil.

“The data regarding this constituent of cajuput oil, or cajuputol, which are due chiefly to Schmidl, seemed to justify the inquiry whether cajuputol might not be identical with cyneol, and the following experiments carried out with cajuputol have answered this question with certainty.

“For the purposes of the investigation use was made of a preparation obtained some time ago from the well-known factory of Sachsse, in Leipzig, and the results were moreover controlled by an oil recently procured from C. Krieger, in Coblenz.

“The cajuput oil was first rectified, whereby the old results were confirmed, that the main portion of the oil d’stills over

between  $170^{\circ}$  and  $180^{\circ}$ . This fraction possesses an odor very similar to cyneol, and behaves as follows:

“On conducting hydrochloric acid gas into the well-cooled oil diluted with petroleum ether, after some time a dazzling white crystalline compound is precipitated, which is instantly decomposed by water. If bromine is added to the cooled mixture of cajuput oil with petroleum ether, a brick-red compound is immediately thrown down, which cannot be distinguished from cyneol bromide. It deliquesces spontaneously when it is well pressed out and placed in a closely stoppered vessel, and from the resulting colorless liquid there are deposited, when alcohol and bromine are added, colorless crystals, which have the same melting point as the tetrabromide obtained from cyneol bromide under the same conditions.

“The specially characteristic behavior of cyneol toward hydriodic acid is also manifested by cajuputol. On conducting gaseous hydriodic acid into the cooled oil, it finally solidifies to a thick crystalline mass, which, after draining, washing with alcohol, and recrystallizing from petroleum ether, gave white crystalline needles melting at  $77-78^{\circ}$ .

0.1135 g. gave 0.1360 g. AgI.		
Calculated for		Found
$C_{10}H_{16}I_2$		
I, 64.79.		64.74

“Not only appearance, composition, and melting point of this iodide,  $C_{10}H_{16}I_2$ , agree entirely with the corresponding figures for the body obtained from oil of wormseed, but also the other behavior. At  $84-85^{\circ}$  it decomposes while becoming brown in color.

“On warming with aniline, a hydrocarbon,  $C_{10}H_{16}$ , results, with a boiling point of  $181^{\circ}$ . It has a pleasant odor, like lemon oil, and gives, when diluted with alcohol, cooled, and treated with bromine, after evaporation of the liquid, a tetrabromide melting at  $124-125^{\circ}$ .

“These facts are quite sufficient to make the assertion well founded that the principal constituent of cajuput oil,  $C_{10}H_{16}O$ , is identical with the principal constituent of oil of wormseed.

“It must here be noted that the older data of Schmidl regarding cajuputol vary from the above in certain non-essential points, and stand in need of partial revision. This will be taken up at another opportunity. Observations of Wright and Lambert on the behavior of cajuputol toward bromine and phosphorus pentasulphide may also be easily brought in line with what has been presented here.

“Several times it has been pointed out, in the previous communication and above, that the terpene,  $C_{10}H_{16}$ , obtained from *Oleum Cynae* and *Oleum Cajuputi*, is characterized by its pleasant, lemon-like odor. This suggested that we investigate whether the hydrocarbon, formerly called cynene (cajuputene) would not prove to be identical with some of the terpenes which, as is well known, are contained in the pleasant smelling ethereal oils of the *Aurantaceae*, or whether at least it was not closely related to these. The latter assumption was confirmed by the following experiments:

“Characteristic of cynene is the ease with which it can be converted into a beautiful crystallized tetrabromide. The terpenes used which were obtained from *Pinus* species do not show this property at all. Nor have I succeeded in preparing a similar compound from *Oleum Eucalypti*, or *Oleum Bergamottae*. *Oleum Citri*, after similar treatment, deposits only a very small amount of crystals, while *Oleum cort. Aurantiorum*, from various sources, afforded an enormous yield of a splendidly crystallizing tetrabromide. The compound has a great external similarity to the bromide obtained from cynene.

“In composition the bromides . . . agree. But deviations are shown in melting points. While the tetrabromide from cynene melts at  $125-126^{\circ}$ , the tetrabromide from *Oleum cort. Aur.* becomes liquid at  $104-105^{\circ}$ .

“It . . . appears that a close chemical relationship exists between the last-named terpenes, cynene and hesperidene, but not complete identity.”

The account is continued in the next article, *Annalen*, Vol. 227, p. 277:

“From the fact announced in my recent communication, but previously overlooked, that certain terpenes unite with bromine

... crystalline tetrabromides, it was to be expected that the search for a more exact characterization of single members of this still important group of substances. This has been fully accomplished, and I would now like to communicate some of the results of my research, with the reservation that they are subject to supplementary further experiments.

As a first step, I shall go into closer examination of the physical and chemical properties of these compounds. For the purpose of this study, only those that from the analyses, as well as from the results of formation and the behavior of these substances, are most probable that they possess the formula  $C_{15}H_{24}Br_4$  and that they result from the direct addition of bromine to a cyclic terpenoid hydrocarbon  $C_{15}H_{20}$ . Both products are very easily obtained, not only by melting points, but also by their physical properties in other, which takes up the bromide melting point of 124-125° more easily than the higher melting form.

The crystals of the bromide of the difference between the two products are clearly produced. It is to be noted that when, in what follows, I speak of the identity of terpenes, only identity in respect to their chemical formula is meant. The physical differences of some chemically identical bodies, which find partial expression in the differences of optical rotation, are for the present not taken into account by me.

**American Oil of Turpentine.**

Turpentine, when boiling at 150-161° gives on brominating a liquid product, but the affair is entirely different if the turpentine is exposed for several hours to a temperature of 25-27°. If this modified turpentine oil is treated with bromine, there is obtained a great amount of a solid bromide, which, after repeated crystallizations, forms beautiful prisms, which cannot be distinguished in appearance from the cinene tetrabromide previously described. The melting point was at 124-125°, and an accurate crystallographic comparison established the complete identity of the two bromides.

**Oil of Spruce.**

From this oil I distilled over two fractions, one at 159-165°, and the other at 175-180°. The lower boiling fraction gave on direct bromination a liquid compound; after heating the hydrocarbon to 250-270°, higher boiling products resulted, of which the portion boiling around 180° gave, on bromination, a crystalline bromide, forming beautiful prisms, melting at 124-125°. This bromide is undoubtedly identical with that obtained in the corresponding manner from heated oil of turpentine, and from cinene.

The fraction of spruce oil boiling between 175-180°, which had a pleasant odor, gave directly a large amount of a solid bromine product, the identity of which with hesperidene tetrabromide was made certain by the appearance and melting point of 104-105°.

**Oil of Juniper Berries.**

This oil contains much of a terpene boiling between 155-162°, which gives no solid product with bromine. After heating this hydrocarbon to 250-270°, the boiling point was considerably raised, and the part boiling at 180° gave a good yield of a beautiful bromide melting at 123°, unquestionably identical with cinene tetrabromide.

**Oil of Lemon.**

I have previously shown that by brominating lemon oil directly, only a small quantity of a crystalline product is obtained. A closer examination revealed the following:

It is possible—as Tilden has already shown—to separate two terpenes from the portion of the oil boiling up to 200°. The lower boiling terpene goes over below 170°, the other chiefly from 175-180°. The lower boiling terpene behaves like turpentine changes on heating to a compound which easily yields the oil, that is, it gives directly no trace of a solid bromide, but bromide melting between 124-125°.

On the other hand, the portion of *Oleum Citri* boiling between 175° and 180°, the true citrene, proved to be identical with hesperidene from *Oleum cort. Aur.* From it was obtained in good yield, the tetrabromide melting at 104-105°.

Similar results were obtained with oil of bergamot, which contained hesperidene. Oil of caraway, long known to con-

tain a terpene "carvene," was shown to consist largely of hesperidene; in other words, carvene was identical with hesperidene. The same demonstrations were made with oil of dill and oil of erigeron.

**Estimation of Glucose in Urine.\***

By JOSEPH L. MAYER.

ANYONE who has occasion to make many quantitative determinations of sugar in urine is aware of the necessity of having a rapid, accurate and easily applied method of analysis.

Shortly after the publication of Benedict's paper, "The Detection and Estimation of Glucose in Urine" (*Drug. Circ.*, Jan., 1912, page 11, from *Journal A.M.A.*). I began experimenting with the object of ascertaining the accuracy of the method.

The sugar in a sample of urine was determined volumetrically by employing the following modification of Benedict's method, which I suggested in a paper read at the last annual meeting of the American Pharmaceutical Association (*Jour. A. Ph. A.*, May, 1914, page 687.).

Into 100 cc. Erlenmeyer flask, with cord wrapped around the neck to prevent burning the fingers, pour 25 cc. of accurately measured Benedict's quantitative solution, add a few grams of crystallized sodium carbonate and place on the hot plate. When the solution is boiling gradually add the sugar solution from a burette with sufficient slowness to allow the reaction to proceed, putting the flask back on the hot plate until disappearance of color.

The sugar in this same sample was then determined gravimetrically by the following method of Defren-O'Sullivan (Leach, "Food Inspection and Analysis," 2d Edition, page 564).

Mix 15 cc. of Fehling's copper solution with 15 cc. of the tartrate solution in a quarter liter Erlenmeyer flask and add 50 cc. distilled water, place the flask and its contents in a boiling water-bath and allow them to remain five minutes, then run rapidly from a burette into the hot liquor in the flask, 25 cc. of the sugar solution to be tested (which should contain not more than one-half per cent. of reducing sugars). Allow the flask to remain in the boiling water-bath just 15 minutes after the addition of the sugar solution, remove, and with the aid of a vacuum, filter the contents rapidly into a platinum or porcelain Gooch crucible containing a layer of prepared asbestos; fiber, about 1 cm. thick, the crucible with the asbestos having been previously ignited, cooled, and weighed. The cuprous oxide precipitate is thoroughly washed with boiling distilled water till the water ceases to be alkaline. The asbestos should be of the long-fibred variety and should be especially prepared as follows: Boil first with nitric acid (sp. g. 1.05 to 1.70), washing out the acid with hot water, then boil with a 25 per cent. solution of sodium hydroxide, and finally wash out the alkali with hot water. Keep the asbestos in a wide-mouthed flask or bottle and transfer to the Gooch crucible by shaking it up in the water and pouring it quickly into the crucible while under suction.

Dry the crucible with its contents in the oven, and finally heat to dull redness for 15 minutes, during which the red cuprous oxide is converted into the black cupric oxide. After oxidation, as above, the crucible is transferred to a desiccator, cooled, and quickly weighed. From the milligrams of cupric oxide, calculate the milligrams of dextrose, using the table accompanying the method.

The results by both methods were as follows:

Gravimetric method .....	2.806% sugar
Volumetric method .....	2.777% sugar

0.029% difference

Another sample of urine tested by the same methods contained:

Gravimetric method .....	6.34% sugar
Volumetric method .....	6.29% sugar

0.05% difference

These results clearly indicate that the volumetric method of Benedict modified as above, while rapid and easily applied,

\*Read before the New York State Pharmaceutical Association, June 23, 1914.

So spelled in the original and subsequently. Hesperidene, or citrene, is now called limonene.

is capable of yielding just as accurate results as the longer gravimetric method.

I am now conducting a series of experiments to determine the relative accuracy of all the methods commonly used to quantitatively determine glucose in urine and hope in the near future to publish the results.

### Intelligent Publicity.

By HORACE TAYLOR,

Secretary-Treasurer of T. P. Taylor & Co., Operators of Six Louisville, Ky., Stores.

IT pays to advertise. That is not an original thought, exactly, but it probably expressed in the fewest possible words the reason why this company handles the business it does. We are here to serve the people by supplying their wants in drugs, photographic goods, cigars and cigarettes, and a score or more of other lines; and as far as we can see, the only way to do it is to let them know that we have the goods, at certain quoted prices.

HORACE TAYLOR

"That means publicity; and we have therefore persistently and consistently advertised, without ceasing. We believe in the liberal and continued use of newspaper space, to announce regularly the sale of goods whose prices, as we quote them, should prove attractive to the public; and the results certainly confirm us in our belief in its efficacy.

"A plan which has proved very successful has been the use in the wrapping of parcels of reproductions of successful newspaper advertisements, in 'dodger' or circular form. The fact that a person

has come into one of our stores to buy goods indicates that he is already on the road to becoming a permanent customer; and when we give him, inside the wrapper of the package, a list of other merchandise in which he may be interested, with attractive prices quoted, we have a pretty good chance of selling him something else. Experience has shown that these chances work out in our favor to a remarkable extent.

"But there is one point which should be borne in mind by the druggist who wants to pull business by advertising of any kind: His windows are the best possible medium for giving his goods publicity. If I had to take my choice between giving up the use of windows and giving up the use of newspaper space, the newspaper space would have to go. But the combination of newspaper advertising of certain goods, and a simultaneous display of the same goods in the windows, is a powerful one, and we use it, inasmuch as it is not a question of choice, but of intelligent use of the two methods combined.

"Furthermore, we utilize in every possible way the general publicity paid for by the manufacturer of lines which we carry. Many druggists make no use whatever of their prior knowledge of a big advertisement in a national medium by a manufacturer whose goods they handle. We consider it sufficiently important to arrange our newspaper advertising and window displays to coincide with the appearance of any particularly striking national advertisement, displaying it in our own windows at the same time, thus making a combination even stronger than that which we usually accomplish.

"By these means, as well as by the use of choice locations for our stores, we accomplish the object which must be kept constantly in mind by the successful druggist, as by every other retail merchant—of making a quick turnover of our stocks. It isn't necessary to give exact figures, but I think it will be conceded that we move our goods about as quickly as the thing can be done. It is truthfully said of us that on a good many lines—notably, perhaps, tobacco—we don't make much; but the old maxim about quick sales and small profits has a good deal of value in it, in some ways. The quick-sale part of it, at least, is important.

"I was in one of the most famous drug stores of the country not long ago, in New York, and a thing struck me there which strikes a visitor in one of our stores—the small amount

of drugs visible out in the store. That's the way to run a modern drug business, to my mind. Here's the point:

..... :  
: People don't buy drugs, or at least they :  
: oughtn't, merely because they see them; they :  
: buy goods of that sort only upon a physician's :  
: prescription, and that's the only way we want :  
: to sell them. :  
:..... :

"This being the case, the obvious thing to do, from the merchandising standpoint, is to give them their proper place—not in the front of the store, where they take up valuable display space, but in the back, where they are handy to the prescription clerks, and where they are displayed exactly as much as they should be, which is not at all. *The display space which is worth while is thus given over to merchandise which answers to publicity by selling better because of it, and the total volume of business handled is made just that much larger.*

"On the other hand, so far from this method resulting in less drug business than that of the old-fashioned druggist, whose shelves are taken up with labeled bottles, it results in a much heavier business, for very obvious reasons. Everybody who comes into the store for any of the many other lines which we carry is so well served—if our ideas are carried out—that it is pretty certain that we will get whatever straight drug business he has. It works just that way.

"Here's another idea which has resulted in largely increasing business. Our rubber-goods department in every store is handled in a retired section of the room, practically a private compartment, by women employees. Women are assured that when they come to a Taylor store they don't have to communicate their needs in this line to a man, with men standing around, and look at the goods under the same naturally objectionable circumstances. This has enabled us not only to sell more goods in this line, but better goods as well, besides increasing sales of various preparations which are used in connection with them.

"That's the answer:

..... :  
: "Intelligent publicity, which, mind, means the :  
: kind that suits the man who is using it—with :  
: the kind of service that backs it up and makes :  
: the customer want to come again. We have :  
: proved it out in every possible way, and it :  
: works out." :  
:..... :

#### Solution for Frosting Glass.

Magnesium sulphate .....	3 parts
Zinc sulphate .....	3 parts
Dextrin .....	2 parts
Water .....	20 parts

Make a solution and apply the liquid with a suitable brush, being careful to first remove all traces of grease from the glass.

#### Anti-Perspiration Liquid.

Borax .....	15 parts
Salicylic acid .....	15 parts
Boric acid .....	5 parts
Glycerin .....	60 parts
Dilute alcohol .....	60 parts
Perfume .....	q.s.

Mix. Recommended for the prevention of sweating hands and feet. Rub on the palms of the hands and soles of the feet two or three times a day.

#### Automobile Wind Shield Clarifier.

The following solution is recommended by a writer in the *British Medical Journal* for application to the wind shield of an automobile: Sodium chloride, 1 dram; water, 1 ounce; glycerin, 2 ounces. Mix. A little of the solution is placed on gauze and wiped over the glass in a very thin layer, but always in a downward direction. The application is said to permit the automobilist a clear view through the wind shield, even in the wettest weather. "a boon on a wet night on a dark road."

## SELECTED FORMULAS

### Disinfectant and Germicide for Stables.

Cresol solution	1 pound
Formalin	1 pound
Sodium carbonate	7 ounces
Water	1 gallon

Boil together until dissolved, when cold, add—  
 Oxalic acid solution.....1½ pints

According to the *National Builders' Gazette*, this produces an impalpable disinfectant for general use around shops and stables. The product should be well shaken together and labeled "p. 103818."

### Sulphur Spray.

Mix 20 pounds of flowers of sulphur into a thick paste with cold water and add 10 pounds of pulverized 98 per cent. caustic soda, by which the sulphur will be liquefied with much heat. Stir and add water to prevent burning, finally diluting with water to make 20 gallons. This is a stock solution, 2 gallons being used for each 50 gallons of spray, or even stronger without injury to the foliage.

### Nail Polishing Paste.

Talcum	5 drams
Stannous oxide	3 drams
Powdered tragacanth	5 grains
Glycerin	1 dram
Rose water	q.s.
Carmine solution, q.s.	to tint.

Mix and make into a paste.

### Metal Polishing Paste.

Infusorial earth	10 parts
Levigated chalk	10 parts
Levigated emery	5 parts
Petroleum	1 part
Soft paraffin (petrolatum)	40 parts

Mix thoroughly and make into a paste.

### Paste for Labels on Tin.

Water	90.0 parts
Wheat starch	6.5 parts
Gelatin	2.0 parts
Sodium fluoride	1.5 parts

Soak the gelatin in the water for 24 hours, then heat on the water bath. Make a paste of the starch, then mix both masses with the sodium fluoride. This product will keep indefinitely, and is recommended for attaching any fabric to any metal.

### Paste for Varnished Surfaces.

Rice starch	1 ounce
White glue	½ ounce
Acetic acid	¼ ounce
Oil of cloves	10 minims

Dissolve the glue in cold water, and then boil. Mix the starch with a little cold water, and pour into the boiling glue; then add the acetic acid and clove oil.

### Liquid Stove Polish.

Shellac	5 ounces
Rosin	2 ounces
Alcohol	28 ounces
Nigrosin	½ ounce

Dissolve the nigrosin in an ounce of alcohol, and add this solution to the shellac and rosin dissolved in the remaining alcohol. Rosin may be left out should its odor prove objectionable.

### Tan Shoe Dressing.

Boil together 25 parts of yellow wax, 3 parts of potassium carbonate and 2 parts of rosin (common yellow) soap in 50 parts of water. After incorporation remove from the fire, and when the mass has cooled down to about 180° F., add 25 parts of oil of turpentine and mix thoroughly. By the addition of any of the oil-soluble anilin colors, previously dissolved in the oil of turpentine any shade or hue desirable may be given to the dressing. By the addition of a small portion of shellac to the wax and other ingredients, a mass capable of a higher polish is said to be obtained.

### Dressing for White Shoes.

Pipe clay	1 pound
Spanish white	½ pound
Precipitated chalk	10 ounces
Powdered tragacanth	2 drams
Phenol	2 drams
Oil of verbena	30 drops
Water	enough

Mix intimately with water to which the phenol has been added to form a paste.

### White Dressing for Canvas Shoes.

Shellac, white	2 ounces
Borax	6 ounces
Water	32 fl. ounces
Pipe clay or chalk	sufficient

Dissolve the shellac in the borax water by the aid of heat, adding the water from time to time to make up that lost by evaporation; then add the pipe clay or chalk in sufficient quantity. By using less water and a little soap, a paste preparation may be obtained.

### Polish for Shoes.

Ozokerite 5½ ounces; ceresin, 2 pounds; carnauba wax, 5½ ounces; bees-wax, 11 drams; oil of turpentine, 4 pints; lamp-black, 2 pounds; oil-soluble black aniline, ½ dram. Melt the first four ingredients, add the turpentine and stir well; then thoroughly combine the mixture with the coloring materials.

### Ink-Eradicating Pencil.

Carefully fuse oxalic acid in a porcelain dish provided with a lip, and then pour the melted mass into glass tubes which have been previously greased with liquid paraffin or other oil. When the substance has solidified, the pencils can readily be pushed out of the tubes and cut into suitable lengths. The pencil is used by moistening the end with water and gently rubbing the ink spot with it. In some cases it is advisable to follow the application by moistening the spot with a little dilute chlorinated lime solution, and then thoroughly washing with water. (Merck's Report.)

### Ink for Reagent Bottles.

An ink designed for use on labels of bottles exposed to corrosive fumes of the laboratory or to the dampness of cellars is the following from a foreign technical journal. Shellac, 20 grams; dissolve in a hot solution of borax, 30 grams, and water, 400 cc.; filter while hot, and then add the following solution made by dissolving aniline black, 8 grams; tannin, 0.3 gram; picric acid, 0.1 gram, and ammonia, 15 grams, in water, 10 grams.

### Crayon for Writing on Glass.

Yellow wax	2 ounces
Tallow	3 ounces
Spermaceti	4 ounces
Potassium carbonate	1 ounce
Red lead	6 ounces

Melt the first three ingredients together, and then stir in the two powders. Triturate well together until nearly cold, then pour into glass tubes of the thickness of a pencil. The resulting crayons may be sharpened in the same way as an ordinary pencil.

### Pencils for Removing Grease Spots.

Ox gall	16 parts
Powdered borax	8 parts
Magnesia	20 parts
Powdered soap	56 parts

Rub well together and then add sufficient green soap to make into paste. Roll out into pencils of a convenient size and set aside to dry. In use, the end of the pencil is dipped slightly into water and applied to the spot. After rubbing substance of the pencil into the spotted fabric, wipe off with a moist sponge.

### Harness Blacking.

Soft soap, 3 ounces; isinglass, ¼ ounce; Prussian blue, ¼ ounce; transparent glue, 2 ounces; logwood, 2 ounces; lamp-black, q.s.; vinegar, 24 ounces. Simmer the ingredients together over a slow fire and strain.

## FOREIGN ABSTRACTS

### RESEARCH IN OTHER LANDS.

#### Contributions to Our Knowledge of Cinchona—Practical Hints in Prescription Work—More Biochemical Syntheses—Specific Test for Ethyl Alcohol.

THREE articles dealing with various phases of the cinchona industry are abstracted this month, one relating the circumstances attending the award of the prize for the best cinchona method, presented by the Preanger Cinchona League, another dealing with recent studies of cinchona from Madagascar, and the third giving a simple volumetric method for determining the cinchona alkaloids, with the quinine separated. A number of very practical and time-saving hints are given, which will be welcomed by all laboratory workers. Bourquelot and his able co-workers report their results with a number of new biochemical syntheses of glucosides, containing derivatives of benzyl alcohol. Rosenthaler tells of some preliminary experiments which seem to confirm Kiliani's belief that Kraft's gitalin is not a chemical individual. An important color reaction for ethyl alcohol, which is specific for that substance and not interfered with by methyl alcohol or acetone, is also presented.

#### Alcogratin, Alleged New Antipyretic—

Under this name a substance has recently come on the market, which purports to be a reliable and entirely safe antipyretic, to take the place of antipyrin, pyramidon, and phenacetin. The literature accompanying the packages presents what is intended to be a scathing indictment of the dangerous and treacherous nature of antipyrin, emphasizes the supposed harmful effects of phenacetin on the red blood corpuscles, and mentions the decaying reputation of pyramidon. As to the composition of alcogratin, nothing very definite is stated, although it is said to be a member of the "group of phenylaminoxanthines," and an improbable formula is assigned to it. An investigation made by the *Pharmaceutische Zeitung* revealed the astonishing fact that the new remedy is nothing but a mixture of caffeine, phenacetin, and pyramidon. This was confirmed by an independent study by Mannich, of Göttingen. (*Pharm. Ztg.*, 1914, p. 473.)

#### On Gitalin—

Gitalin, isolated some time ago by Kraft, and said to be one of the true individual constituents of digitalis, is now claimed by Kiliani to be a mixture of substances. Rosenthaler reports some simple experiments tending to confirm Kiliani's view. If gitalin is treated with water, in the attempt to transform it into the hydrate, which, according to Kraft, is formed under these conditions, a portion escapes transformation. One part of the substance was dissolved in 1½ parts of alcohol and treated with ¾ part of water. The separated crystals were filtered off and washed with a mixture of 1 part of alcohol and ½ part of water. Mother liquor and wash water were shaken out with chloroform, the latter dried with sodium sulphate, and concentrated in a vacuum. Precipitation was caused by petroleum ether, and the precipitate again treated so as to form the hydrate. This was repeated until no more hydrate formation took place. The gitalin was apparently changed into two constituents, one of which did not form a hydrate. The latter proved to be just as active physiologically as gitalin. Another substance, entirely distinct from any hitherto isolated constituent of digitalis, crystalline, and more active than gitalin, was also separated. The work is being continued. (*Rosenthaler, Schweiz. Apoth. Ztg.*, 1914, p. 349.)

#### Practical Prescription Hints—

Mucilage of gum arabic is best prepared by wrapping the unminuted pieces in a large square of absorbent gauze, which is tied up and suspended in the mixture of water and lime water. Solution begins at once, is promoted by gravity diffusion, and is complete after 12 hours. The finished solution requires no straining, and keeps well. The same method is useful in preparing tinctures of aloes, asafetida, catechu, iodine, myrrh, opium, and other non-cellular drugs, and for resinous solutions, such as varnishes. Aqueous solutions of powders which are difficult to wet may be prepared in large

shallow dishes, partly filled with water, on the surface of which the powder is sprinkled. This method, already used for protargol and other metal-allumen compounds, is well adapted for sodium nucleinate, bromocoll, etc. Solution of salicylic acid and other bulky substances in volatile solvents is effected by placing the solid in a funnel, which is inserted in the neck of a flask, and pouring the solvent slowly on it. This applies to solutions of salicylic acid, tannic acid, benzoic acid, and menthol, in alcohol, ether, or collodion. Ointments containing extract of opium are readily prepared by first powdering the extract finely, and rubbing it with a small amount of glycerin, after which the mass may be smoothly incorporated with any ointment base. Zinc oxide and starch paste with various additions is best made in enamelled dishes, heated on a steam or water bath, stirring with a pestle. Syrup made from some grades of sugar deposits the ultramarine coloring after standing. To destroy the latter, bring the syrup to a boil, and at the instant when ebullition becomes violent, add 0.1 g. of pure citric acid to each kg. of sugar. Strain through flannel. The small amount of invert sugar produced is negligible. (*Kordon, Pharm. Post*, 1914, No. 39.)

#### Prizes for Cinchona Assay Method—

Announcement was made in the ERA some time ago that the Preanger Kina Bond (Cinchona League) of Java had offered prizes for the best assay method for the bark, the estimation of the quinine being aimed at. Cinchona is bought on the "unit" basis, the unit being five cents paid for each per cent. of quinine in a half-kilo of bark. It is therefore of the highest importance, in order to avoid disputes between growers and dealers, that the amount of quinine be accurately known. The conditions of the contest were that the assay method should give as nearly as possible the actual amount of quinine in the bark, and that duplicates should agree within 0.2 per cent. Four replies were received, but two were very unsatisfactory, and in the others the amount of quinine differed too much from the real amount present. The purpose of the competition was therefore not realized, but the prize was awarded, nevertheless, since the new methods had contributed much to the end sought. The prize was divided between the Government Testing Station, at Tjinjirecan, and Drs. Maurenfrecher and Uteé. (*Chem. Drug.*, 1914, p. 857.)

#### Madagascar Cinchona—

Attempts to introduce cinchona cultivation into Madagascar date from 1896, but it was not until plants were brought in from Java, in 1900, that the trees began to take firm hold. A number of samples recently sent to France from the colony have been analyzed by Prof. Perrot. The content of alkaloids has decreased to a remarkable extent since the trees were planted, being now about 1.77 to 3.64 per cent. for total alkaloids in the trunk or branch bark; while the root bark is rather high in total alkaloids, showing from 9.75 to 10.25 per cent. The method used was that of the Dutch Pharmacopoeia III, modified by Van der Wielen. The quino-tannates were also determined, by the following method: 10 g. of bark in No. 30 powder (French), are macerated in a flask with 75 cc. of water and 5 cc. of 4-normal hydrochloric acid. After 24 hours, with occasional shaking, 40 cc. of the liquid are filtered off into a tared dish. Two g. of potassium acetate are then added, and the liquid is evaporated on a water bath to a weight of 10 g. After cooling, the liquid is separated by passing through a plain filter, which has been dried and weighed. The residue of quino-tannates is washed with a little water, dried, and weighed, the amount found representing 5 g. of bark. Perrot calls attention to the fact that commercial analyses are made with air-dried bark, which contains about 10 per cent. of water, while scientific analyses should use only bark which has been desiccated to constant weight. The most striking result is the poverty of the barks in alkaloids. The best sample of bark from branches contained only 4 per cent. of total alkaloids, corresponding to 23 g. of basic quinine sulphate per kilo. Barks from roots yielded only about 36 g. of quinine per kilo, although the other alkaloids were abundant. The varieties of cinchona examined were probably the *Ledgeriana*,

*Subnitrate*, and a *nitride* (Perrot and Huber, Bull. Sci. Pharmaceutol., 1914, p. 287.)

#### Volumetric Analysis of Cinchona—

1. Contain in a glass vessel, on a water bath, the cinchona alkaloids and sulphuric acid, displace them by sodium hydroxide, and dissolve in a mixture of ether and chloroform. 2. Wash the ether-chloroform solution with a saturated solution of sodium sulphate until free from soda. 3. Drive off the ether and chloroform on a water bath and by dry air, adding decinormal sulphuric acid. 4. Titrate with decinormal alkali, using tincture of girasole (heliotrope) as indicator. 5. Again set the alkaloids free by an excess of sodium hydroxide, and recover them with the ether-chloroform mixture previously distilled. 6. Separate the non-aqueous mixture and evaporate in the presence of an excess of sulphuric acid. 7. Crystallize the sticky residue by the addition of ether. 8. In the crystalline residue dissolve the sulphates of the alkaloids other than quinine by a sufficient quantity of a saturated solution of pure quinine sulphate, and titrate volumetrically with decinormal alkali, in the presence of phenolphthalein, the sulphates of the other alkaloids; the quinine sulphate will then be known by difference. (Duñillo, Bull. Sci. Pharm. Bordeaux, 1914, p. 53; through C. A.)

#### More Biochemical Syntheses—

A number of glucosides have recently been prepared for the first time by the biochemical method, by Bourquelot and his collaborators, using the same technique as heretofore. Preliminary experiments having shown that a glucoside of glycol could be formed, the method was applied on a larger scale, in a solution containing 261 g. of glycol, 39 g. of water, 60 g. of glucose, and 3 g. of emulsin. The rotation was originally  $21.56^\circ$  to the right, and changed in five months to  $-6.40^\circ$ , when 77 per cent. of the glucose had entered into combination. The uncombined glucose was then removed by yeast fermentation, and the glucoside extracted by acetic ether. The yield was about 18 g. of crystals, some slightly impure. The melting point was slightly different from a similar compound prepared by Fischer, but the other properties were identical. The compound is the beta-monoglucoside. The realization of the synthesis of salicyl-glucoside (orthoxybenzyl-glucoside) in acetone having shown that this liquid offered some advantages for biochemical work, the attempt was made to prepare other derivatives of benzyl alcohol. Ortho-methoxybenzyl-glucoside was synthesized by the action of emulsin on an acetone solution of sugar containing methyl-saligenin (orthoanisic alcohol). After 33 days there was a change in rotation of 58 minutes to the left, and a small amount of a crystalline product was isolated, melting at  $127^\circ$ . Meta-nitrobenzyl-glucoside was formed by a similar method, using meta-nitrobenzyl alcohol. It forms straw-yellow crystals. The para-methoxybenzyl-glucoside was also prepared. It was found that the proportion of glucose which combines with an alcohol increases with the strength of the alcohol, and that if several alcohols are present, it increases with the number of molecules of each alcohol. The ortho compound has a very bitter taste, while that of the para glucoside is only slightly bitter. All three compounds are hydrolyzed by emulsin, and by dilute sulphuric acid, but do not reduce Fehling's solution. The monoglucoside of glycol mentioned above is the beta variety. In order to obtain the alpha compound, alpha-glucosidase was used, resulting in a fair yield of substance. To obtain the alpha or beta diglucoside, it would be necessary to operate in the presence of a large excess of glucose; to use, for example, at least six times as much glucose as glycol, an operation difficult to carry out, since on account of the concentration of the sugar, other ferments might enter into the action. It is probable that a diglucoside which is alpha in one function and beta in the other could be formed with greater facility. (Bourquelot, Bridel, Ludwig, J. Pharm. Chim., 1914, pp. 383, 441, 514, 542.)

#### Bismuthated Oil of Vaseline—

Because of the cases of poisoning sometimes caused by the administration of large doses of bismuth subnitrate, due apparently to the formation of nitrites in the digestive tract, Lion proposed to wash the salt, before use, with large quantities of water, to obtain a less acid compound. He also suggested the use of carbonate or oxide of bismuth, but these substances are unpleasant to take, and may be partially dissolved by the acid of the stomach. The addition of vaseline oil to bismuth salts appears to obviate these difficulties. If carbonate of bismuth is carefully triturated with oil of vase-

line, to obtain a uniform mixture, the bismuth salt is not attacked by hydrochloric acid, whether of 5 per cent. strength or concentrated, either at ordinary temperature or at  $37^\circ$ . The following formula is therefore suggested: Bismuth subnitrate, washed and powdered, 20 g.; vaseline oil, for internal use, 70 g.; pure vaseline, 10 g. The subnitrate can be replaced by the carbonate, and sugar and aromatics may be added. (Vicario, J. Pharm. Chim., 1914, p. 458.)

#### Determination of Organic Iodine—

One g. of substance, such as the iodine-albumen preparations, is weighed into a very shallow platinum dish, and moistened with 3 cc. of 30 per cent. sodium hydroxide solution. The mixture is allowed to stand for several hours, occasionally being stirred with a small glass rod. Then it is carefully heated, until the mass no longer swells up, after which the heat is increased until charring is complete. It is not necessary to burn off all the carbon. The crucible with contents is then placed in a beaker containing water sufficient to cover it, and treated after a few hours with dilute tartaric acid solution. The object of the weak organic acid is to avoid the setting free of iodine, which is apt to occur when inorganic acids are added to the iodide. The crucible is then removed and washed well, and 2 or 3 cc. of dilute sulphuric acid are added. Transfer the whole to a half-liter flask, in which are 50 cc. of pure carbon disulphide, and set the iodine free with a few drops of sodium nitrite solution. Shake the two layers together, allow to settle, and pour off the aqueous layer into another flask, where it is again shaken with a little carbon disulphide and nitrite solution. Unite the two violet solutions, and wash with two portions of water, which will also remove any particles of carbon which still remain. Fit a filter of moderate size in a funnel, and wet thoroughly with water. On it pour the carbon disulphide solution, which will not pass through, but will be freed of water. Wash a few times with distilled water, drain, and then perforate the filter, allowing the solution of iodine to run into a flask, where it is titrated with decinormal thiosulphate solution. (Eckardt, Pharm. Ztg., 1914, p. 441.)

#### Specific Test for Ethyl Alcohol—

From 25 to 100 cc. of the sample are distilled and the fractions between  $60^\circ$  and  $80^\circ$  collected in 2 cc. portions. Higher alcohols, if present, must be removed before distillation by treating the sample with a 5 per cent. solution of alum and shaking with a small quantity of benzene. To each 2 cc. of distillate are added 2 cc. of iodine solution (12 g. in 100 cc. of ether), and after standing 2 minutes, 4 cc. of potassium hydroxide solution (40 g. in 100 cc. of water). When the solution is decolorized, 2 cc. of a solution of 1.2.4-dinitrotoluene (1.5 g. in 200 cc. of a mixture of 1 part carbon disulphide and 2 parts ether) are added with brisk agitation. In the presence of ethyl alcohol a play of colors is observed in the upper layer, which eventually becomes an intense garnet red. The reaction will detect ethyl alcohol in the distillate at a dilution of 3 per cent., and is not affected by the presence of methyl alcohol, acetone, or aldehyde. (Toninelli, Ann. Chim. Analyt., 1914, p. 169; through J. Soc. Chem. Ind.)

#### Standardization of Papaya Juice—

The following modification of Sørensen's test is proposed: Four g. of casein (Hammarsten's) are dissolved in 100 cc. of an alkaline solution containing 4 cc. of normal soda. To 25 cc. of this solution are added 25 cc. of water containing 0.1 g. of dried papaya juice, and the mixture is digested in an incubator for 4 hours at  $37^\circ$ . To 20 cc. of the liquid are added 10 cc. of 40 per cent. formaldehyde solution, neutralized with dilute soda. The mixture, equivalent to 0.04 g. of dried papaya juice, is titrated with  $N/5$  soda, with phenolphthalein as indicator, and at least 1 cc. should be required to neutralize the amino acids formed, after abstracting the amount of alkali carried by a blank containing no papaya juice. Pure dried *Carica papaya* should give no reaction with starch, nor reduce Fehling's solution before or after hydrolysis. Four-hundredths of a g. of papain forms amino acid equivalent to 0.45 cc. of  $N/5$  alkali, while 0.02 g. of pancreatin, tested in the same way, but digested only one hour, should require at least 2 cc. of  $N/5$  soda. (Shelley, Analyst, 1914, p. 170; through Pharm. J.)

#### Transparent Paper.

White wax .....	2 parts
Absolute alcohol .....	15 parts
Ether .....	1 part

Dissolve and pour off the clear solution.

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Dewees' Emmenagogue Elixir.**

(G.E.J.)—"One of our leading physicians has frequently prescribed Dewees' Emmenagogue Elixir and insists that the formula is in one of the text-books. We have searched thoroughly for the same and are unable to locate it. We are quite sure it is not official. We will appreciate it very much if you will furnish us with the formula."

So far as we are able to determine, the preparation wanted is "Dewees' tincture of guaiac," a formula for which appears in the National Formulary under the title "Tinctura Guaiaci Composita." If this preparation has ever been classed as an "elixir," we fail to find it so recorded in any literature at our command. Dr. Dewees was a distinguished obstetrician of Philadelphia where, for many years, he was connected with the medical staff of the University of Pennsylvania. He died in 1841. He was the author of a large number of medical works, his "System of Midwifery" and his "Treatise on the Diseases of Females" being listed among the standard works for specialists in gynecology during the second quarter of the last century. Guaiac was believed, by Dr. Dewees, to exert a peculiar influence over the uterus, which rendered it very useful both in amenorrhœa and dysmenorrhœa, and he employed it in the form of a special tincture, prepared by a special formula, which will be found in his "Treatise on the Diseases of Females," 1826 ed., page 81. This work appeared in at least 10 different editions, the last we have record of being issued in 1854.

The present N.F. formula follows very closely that originally given by Dewees, which is as follows:

Powdered resin of guaiacum.....	4 ounces
Carbonate of sodium or potassium.....	1½ drams
Powdered pimento .....	1 ounce
Diluted alcohol .....	1 pint

Digest for a few days. Add volatile spirit of ammonia, if required, in proportion of 1 or 2 drams to each 4 ounces of tincture. "Highly praised in idiopathic amenorrhœa, in doses of a teaspoonful, three times a day, in milk or wine."

We are quite convinced after this investigation that "Dewees' tincture of guaiac" is the preparation the prescriber has in mind.

**Compounding Difficulties.**

(F.T., Manila, P.I.)—submits the following prescriptions in Spanish and which, for comment, we translate into English, thus:

(1)

Sodium bicarbonate .....	12.00
Urotropin .....	4.00
Helmitol .....	6.00
Salol .....	4.00
Hot water .....	1000.00 cc.

Mix, etc.

However combined, the helmitol (hexamethylenamine methylecitrate) will be decomposed by the sodium bicarbonate with the liberation of formaldehyde, a reaction that is likely to be accelerated in the presence of hot water, and which, in this instance, also tends to decompose the sodium bicarbonate into sodium carbonate. It is also possible that in the presence of this sodium carbonate and the hot water the salol may be saponified, forming a salicylate and carbolic acid (phenol). This reaction is quite likely to occur, especially if any great degree of heat be employed. In the cold 1 part of salol requires 2333 parts of water to effect solution, so that in any event a clear solution cannot be made from the prescription as written. Of course, it is possible to emulsify the salol or hold

it in suspension by the aid of compound powder of tragacanth or other emulsifying agent, but even this method will not prohibit the reactions above mentioned.

(2)

Creosotal .....	6.00
Elixir eupeptic .....	150.00

(Note by F.T.: "This elixir contains 400 cc. of white wine in each 1200 cc. of finished product, which also contains simple syrup, ferments, etc., in solution.")

First rub the creosotal with an equal weight of powdered gum acacia, and after thoroughly triturating, add drop by drop enough water to make the mixture turn white. To this mixture add more water, incorporating it well until the mixture measures about 50 cc.; then slowly introduce the elixir until the proposed volume is reached. Of course, this means that the volume of water employed must be used for part of the elixir prescribed; in other words, in order to produce a satisfactory emulsion, some water must be used, and the quantity so employed should be deducted from the prescribed elixir. In place of powdered acacia, compound powder of tragacanth, B.P., may be employed with even better results.

**Trade-mark Protection.**

(W.C.G.)—The plan followed by most manufacturers of proprietary articles who wish to keep their trade secrets to themselves, is to obtain trade-mark protection by making application to the United States Patent Office for the registration of their particular trade-marks under the laws provided therefor. As generally defined, a trade-mark is any sign, mark, symbol, word or words which indicate the origin or ownership of an article as distinguished from its quality, and which others have not the equal right to employ for the same purpose. In its strictest sense, it is applicable only to a vendible article of merchandise to which it is affixed. The fee charged by the Patent Office, under the law, for registering a trade-mark is \$10. This does not include the attorney's fee, which must be paid by the applicant. If registered, the certificate of registration remains in force for 20 years, and it may be renewed, upon expiration, for like periods of 20 years, upon payment of a renewal fee of \$10.

As the initial move in attempting to gain this protection, it would be well for you to write to the Commissioner of Patents, Washington, D.C., requesting the necessary blanks for such application and a copy of the regulations and necessary instructions to be followed. These, we believe, are sent to every applicant, and from them you can get a working idea of just what should be done in the matter. As a rule, most applicants find it necessary to call to their aid the services of a competent and reliable attorney who makes a specialty of such practice, and this is what we should advise for you to do should you decide to take out such protection. Unless your preparation is a new and definite chemical compound or is made by a new process—not a mixture of substances or drugs—it is not likely that you could get it patented. In fact, there are but few real patented medicines on the market, and these are definite chemical compounds whose composition is well known. The attorney you employ should be able to advise you on this point.

**Foot Cream.**

(W.S.)—We know of no satisfactory formula under this title, most of the applications for tender and sore feet being preferably in the form of powders. However, here is a formula for a preparation in liquid form:

Powdered alum .....	1 ounce
Spirit of camphor.....	1 ounce
Carbolic acid .....	60 grains
Oil of cloves.....	15 minims
Alcohol .....	6 ounces
Water .....	8 ounces

Dissolve the alum in the water, add the spirit of camphor, carbolic acid and oil of cloves dissolved in the alcohol. Mix the two solutions and use as a bath, letting it dry on the feet.

### Bismuth Subnitrate and Sodium Bicarbonate.

(J. H. N.)—"Will you please explain through the Question Box the exact nature of the incompatibility, both therapeutic and chemical, between bismuth subnitrate and sodium bicarbonate? What change occurs when they together come in contact with the gastric juices?"

While the change which takes place when bismuth subnitrate is combined with sodium bicarbonate is termed a "chemical incompatibility," there is no "therapeutic incompatibility" in the sense of an antagonism of physiological action, or of one of the substances being an antidote to the other, or a combination usually forbidden by all the laws of effective prescribing. The reaction which takes place when the two substances are brought together is thus represented:  $2\text{BiONO}_3 + 2\text{NaHCO}_3 = (\text{BiO})_2\text{CO}_3 + 2\text{NaNO}_3 + \text{CO}_2 + \text{H}_2\text{O}$ , the carbonic acid gas being evolved.

You do not inform us whether these substances are to be compounded in the form of powders or that they are to constitute part of a liquid mixture. But even if the sodium bicarbonate be in solution, the reaction is sometimes very slow; if it does not occur in compounding the prescription, it is apt to take place after the mixture is sent out. Some dispensers recommend the use of bismuth subcarbonate instead of the subnitrate, but this is hardly allowable. A good plan is to place the subnitrate and the bicarbonate in a mortar and pour a little boiling water upon them, when effervescence will take place immediately. If the mixed powders be taken into the mouth in dry form and swallowed, the reaction will begin to take place as soon as they come in contact with the saliva or with the liquids of the stomach. Just how much the reaction would be modified by the gastric juices would be a debatable question. According to Cushny, bismuth subnitrate passes through the stomach and intestine for the most part unabsorbed. It gives the stools a black color, which is generally believed to be due to the formation of the sulphide of bismuth, but which Quincke ascribes to the reduction of the subnitrate in the intestine. Notwithstanding the fact that the books give the combination of these two substances as a pronounced example of "chemical incompatibility," yet the mixture is one not infrequently prescribed by physicians for internal administration.

### Powder for the Feet: Pyorrhea Remedy.

(Denverado)—"Will you please publish formulas for a good foot powder containing alum, boric acid, talc, zinc in some form, and eucalyptol? Also give me a formula for a wrinkle-removing cream, and a formula for a good pyorrhea remedy, something that will come as near to curing as possible?"

Typical formulas for various kinds of dusting powder for the feet may be found in the ERA Formulary. The following formula conforms very closely to your specifications:

Zinc oleate, powdered.....	1 ounce
Boric acid, powdered.....	2 ounces
French chalk, powdered.....	3 ounces
Eucalyptol .....	1 dram

Mix and use as a dusting powder. A little alum powdered may be incorporated, if desired.

### Wrinkle Removing Cream.

White petrolatum .....	7 ounces
Paraffin wax .....	½ ounce
Lanolin .....	2 ounces
Water .....	3 fl. ounces
Vanillin .....	2 grains
Oil of rose.....	3 drops
Alcohol .....	1 fl. dram

Melt the paraffin wax, add the lanolin and petrolatum, and when these have melted, pour the mixture into a warm mortar and, with constant stirring, incorporate the water. When nearly cold, add the oil of rose and vanillin previously dissolved in a little alcohol. Preparations of this kind should be rubbed into the skin vigorously, as friction assists the absorbed fat in developing the muscles and also imparts softness and fulness to the skin.

Without other qualification, the term pyorrhea is employed to designate a chronic destructive disease of the supporting structures of the human tooth (*Pyorrhoea alveolaris*), the predisposing causes being due to the lack of maintenance of proper hygiene and excessive irregularities and malocclusion of the teeth. The local exciting causes are the presence of inorganic and organic deposits containing pyogenic bacteria, and lodg-

ment of food in the interproximal spaces. The symptoms of the disease are not always uniform in all individuals, and the condition needs the services of a competent dentist. Some authorities regard the complete removal of tartar as a principal element of success, an hour or more in some cases being needed to cleanse one tooth. Equally important is the destruction of the pockets which run up alongside the teeth and which have been formed by the destruction of the bony alveolus. Antiseptic mouth washes are also recommended, along with a tightening up of all loose teeth. We should advise consultation with a competent dentist.

### Emulsion of Petrolatum.

(Dispenser) There are other formulas for preparing emulsion of petrolatum than that in the National Formulary, and while we append three of these in response to your request, we believe that for the sake of uniformity, you should use the one recommended by the N.F., page 53. Here are the formulas.

(1)

Liquid petrolatum .....	6 ounces
Condensed milk .....	3 ounces
Syrup .....	3 ounces
Cinnamon water .....	4 ounces
Lime water .....	4 ounces

Rub the liquid petrolatum with the condensed milk in a mortar and add, first the lime water, then the cinnamon water, and lastly, the syrup; rubbing them well together to form an emulsion. What is known as mineral glycerin, glymol, albolene, glycoleum, etc., forms of petrolatum, may be used for making this emulsion. (Fenner's Formulary.)

(2)

Liquid petrolatum .....	4 ounces
Oil of sweet almond.....	2 ounces
Powdered acacia .....	1½ ounces
Glycerin .....	1½ ounces
Sodium hypophosphite .....	128 grains
Calcium hypophosphite .....	128 grains
Lime water .....	4 ounces
Water, enough to make.....	16 fl. ounces

Mix the oil and petrolatum and incorporate well with the acacia, then add 2½ fl. ounces of water all at once, and stir briskly until an emulsion is formed. Dissolve the hypophosphites in 3 fl. ounces of lime water, mix with the preceding liquid, then add the glycerin, the remainder of the lime water, and enough water to make 16 fl. ounces. This contains 25 per cent. of liquid petrolatum and 1 grain each of the hypophosphites in each fl. dram of the emulsion. (ERA Formulary.)

(3)

Liquid paraffin (B.P.).....	6 fl. ounces
Calcium hypophosphite .....	160 grains
Sodium hypophosphite .....	160 grains
Gum acacia, in powder.....	3 ounces
Tragacanth, in powder.....	120 grains
Oil of cinnamon.....	20 minims
Elixir of gluside.....	32 minims
Distilled water, enough to make.....	20 fl. ounces

Triturate the liquid paraffin and the oil of cinnamon with the powdered gums, and add all at once, 5 fl. ounces of distilled water. Dissolve the hypophosphites in 6 fl. ounces of distilled water, and add the solution to the paraffin emulsion with constant trituration; finally add the elixir of gluside and dilute with sufficient distilled water to produce the required volume. (British Pharmaceutical Codex Formulary.)

### Carbon Paper.

There are many formulas extant for the manufacture of carbon paper, says the London *Chemist and Druggist*, but the following illustrates the modern practice:

Deep black, ground in turpentine.....	½ pound
Graphite .....	½ pound
Aniline-oil black .....	¼ ounce
Soft paraffin .....	2¼ pounds
Hard paraffin .....	¾ pound
Soft soap .....	2 ounces

The last three ingredients are melted together, the colors stirred, and the mass ground in a paint mill until perfectly smooth. This and the subsequent spreading on paper should take place while the composition is warm.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## A Fragrant Talk — Promoting the Sales of Perfumery — A Talk by the Editor.

*An Ancient and Honorable Art Whose Products and Odors Gratify the Esthetic Sense—The Trade Worth-While.*

IT is a difficult matter to become enthusiastic over the handling or sale of any article concerning the origin, manufacture, and use of which we are ignorant. Knowledge begets appreciation, and enthusiasm is the child of appreciation.

The woman pharmacist, of course, will enjoy handling and making an occasional sale of perfume. That these richly labeled bottles carry within their crystal forms the product of an exceedingly ancient and honorable art may not always be remembered; or that other people can be educated in the history and use of perfumes, thus increasing the aggregate sales most materially to a constantly growing and appreciative public. Perhaps we do not know very much about perfumes, but "The next thing to knowing a thing is knowing where you can find it." So if the pharmacist desires to become conversant with this art she can scarcely do better than to procure a standard book, such as "Perfumes and Their Preparation," by Askinson, "The Art of Perfumery," by Piesse, or any one of a dozen interesting and illuminating books on the subject.

It is indeed an unusual person who does not enjoy the fresh fragrance of beautiful flowers or a faint whiff of a rare perfume. Nature has given us the sense of smell for both our own protection and enjoyment and furnished many delightful natural odors to gratify the esthetic sense.

The art of perfumery is a very ancient one. Among the nations of earliest antiquity offerings of delicate odors were made as a token of respect and loyalty. The burning of incense which gave forth rich perfumes was a practice of both Pagan and Hebrew rituals. Again and again this practice is referred to in the Bible, also the giving of precious ointments highly perfumed. The Greeks and the Romans learned the use of the still from the Egyptians and applied it to the manufacture of their perfumes.

Perfumes are a luxury, but one in which people indulge, nevertheless. As may be seen from the fact that the great center of the perfume industry located in Grasse, France, is said to use in these factories the product of 5,500,000 pounds of orange blossoms, 4,400,000 pounds of roses, 400,000 pounds of jasmine, and 330,000 pounds each of violets, cassia, tuberose, are consumed in their annual output.

Turkey, Bulgaria, Arabia, India and Syria all engage largely in the culture of flowers for this purpose. Even in our own United States there are upwards of 300 establishments engaged in the manufacture of perfumery and perfumed cosmetics.

The buyer of perfumes should understand clearly whether the odors purchased are natural or artificial. Natural perfumes are either of animal or of vegetable origin. Artificial or synthetic perfumes are chemical compounds prepared to imitate natural odors or substances derived from the by-products of other manufacturers.

The prices, lasting quality, and the delicacy of many perfumes can be explained satisfactorily to a customer if the one who sells knows whereof she speaks. It is important to sell intelligently as well as to buy intelligently—to understand the nature of the volatile oils used and tests for purity; to understand the effect of proper and improper storage, of light and heat; to be able to explain the use of and if necessary to compound dry or sachet perfumes.

The sale of fumigating essences, pastilles, powders, etc., will become intensely interesting if the art of making these goods is understood. Dentifrices, mouth waters, etc., become popular or unpopular as their fragrance and flavor is agreeable or disagreeable and the same holds true in large measure of hair pomades, hair oils and hair tonics.

The sales of perfumes are more readily increased through demonstration than perhaps by any other means. For this reason the atomizer on the show case, the perfumed blotter, the sample sachet, the tiny gift vial, the perfumed handker-

chief, etc., are all excellent means. The expense is the only drawback. Consequently samples of all kinds must be given out with great discrimination and not allowed to fall into the hands of those who are not likely to become customers.

Brief newspaper talks on perfumes, artificial and natural, will explain why some competitors are able to sell an inferior product at a lower price and will serve as a means of public education. The annual sales of perfume in every retail drug store should aggregate a considerable amount. If, however, this amount is divided up per capita among the store's fractional part of the population, it will be found to be surprisingly small in most cases.

Where systematic work is done from year to year the perfumery trade may be largely increased. The profits are satisfactory; the goods are pleasant to handle; the trade is worthwhile.

## An Iowa Prize Winner.

IOWA is not as yet over-supplied with women pharmacists, but those who have elected this calling are doing notable work.

Miss Edna Becker, of Davenport, Iowa, is a recent graduate from the University of Illinois School of Pharmacy, having distinguished herself from the rank and file of the average student by winning the prize microscope for excellence in materia medica.

Miss Becker was born at Maquoketa, Iowa, April 5, 1892. She made that city her home until her graduation from High School in 1909. Her early ambition was to be a nurse, but graduating at the age of 17, she was too young to enter for training in that line. While awaiting her 18th birthday, a position in the Red Cross pharmacy of Davenport was offered her, and, thinking this work would acquaint her with medicines and medical terms, she accepted.

This ended the prospect of her career as a nurse for she became so interested in pharmacy that she decided to specialize in the work. Her determination was still further strengthened by the advice of interested friends among nurses and physicians.

Miss Becker entered the University of Illinois School of Pharmacy and thoroughly enjoyed her college course. Upon her graduation she returned to Davenport and resumed the duties of her former position. In fact, her entire practical experience has been gained in the Red Cross pharmacy, where she has assumed many responsible duties.

The store in question, Kistenmacher's, is strictly a drug store, not carrying departmental side-lines. This gives Miss Becker excellent experience in prescription and pharmaceutical work. As this is her preference, she is most happily located. Her business training is not being neglected, as she does much of the buying. The work which falls to her lot is congenial.

Miss Becker says enthusiastically:

"I am beginning to think a drug store is about the finest kind of a place to work. I only wish there were more girls in this field. I seem to be about the only one in this part of the State and it's a bit lonely to think of.

"However, since physicians are becoming broader-minded in their attitude toward lady pharmacists, perhaps in the course

MISS BECKER

of a profession will be a greater percentage of girls. I hope so, for a girl is just as capable and just as reliable as a man.

"On this point my employer says, 'A girl cannot be depended on so much, for she may choose to marry and become a part of the drug business. While matrimony for a young man does not stick close.' Of course I cannot agree with him in this."

Miss Blahnik possesses the elements of success—youth, love of her profession and enthusiasm. Married or single, the world is open for such women.

### Mrs. Marie Blahnik.

**M**RS. MARIE BLAHNIK died Wednesday, April 22, 1914, at her home, 1225 S. Harding avenue, Chicago. She was born in Christov, Bohemia. Some 40 years ago she came to America, and while she always remained true to her birthland, she was a most loyal American citizen and dearly loved her adopted country and all the activity and progress for which it stands.

She was one of the oldest druggists, in years of service, in the city of Chicago. In the years when women pharmacists were almost unheard of, Mrs. Blahnik was successfully conducting a store of her own on West 18th street, which place continued in her possession until the time of her death, although for some years past she has not taken an active part behind the counter.

She was a modest, womanly woman, "true as steel," kind to every one, ever ready and anxious to lend a helping hand where assistance was

needed. She had many, many friends, among both Bohemians and Americans. "Those who knew her best, loved her best," could be said most truly of Mrs. Blahnik.

She was for many years a member of the I.Ph.A., the A.Ph.A., the C.R.D.A., and N.A.R.D., and the Chicago Chapter of the W.O.N.A.R.D. For years she was honorary president of the W.Ph.A. and many times, in her own true hospitable manner, entertained the members in her home.

Her death was sudden—being serene and peaceful as she had made her life. Her loss will be keenly felt, not only in her own home and among her own people, but by a very large circle of friends.

#### *Resolutions of the Woman's Pharmaceutical Association:*

**WHEREAS**, It has pleased our Heavenly Father to call our much beloved Mrs. Blahnik to her long, last Home, and,

**WHEREAS**, In answer to this call, her family has sustained an inestimable loss; the pharmaceutical profession has been deprived of a most able disciple and ardent devotee, and the women pharmacists a staunch support, an enthusiastic inspirer, and a most sincere friend; and

**WHEREAS**, In her removal the Woman's Pharmaceutical Association has lost a much cherished and dearly beloved honorary president, and each member a true, personal friend;

*Therefore, Be It Resolved*, That we submissively bow to the will of the Divine Power; and also,

*Be It Resolved*, That the Woman's Pharmaceutical Association expresses sincere sorrow at this great community loss and extends heartfelt sympathies to the bereaved family; and, also,

*Be It Resolved*, That a copy of these resolutions be presented to the family; that they be spread upon the records of the association; and that copies be sent to the pharmaceutical journals.

It is interesting to note that the Youngstown Chapter of the W.O.N.A.R.D. has given special attention to the Florence Crittenton Home. This is a case where bread cast upon the waters has returned after many years. Mr. Crittenton, the gentleman who founded this series of homes in memory of his daughter, was a wholesale druggist.

### A Promising Student.

**M**ISS HELEN F. ROUDIN, of Brooklyn, New York, is one of the most promising women students of the New York College of Pharmacy. Miss Roudin is still young in years, having graduated with honors from the Brooklyn high school in 1913. Having a strong leaning toward pharmacy, she entered her chosen college the following Fall and at the close of the school year of 1914, was awarded first prize for general excellence in scholarship, her average being 91.08 per cent. She is the first woman student to receive first prize in this scholarship test.

Miss Roudin

Congratulations have poured in upon this young lady, and her future career will be watched with great interest. History will be made in pharmacy in the next few years, and Miss Roudin is sure to do her part with credit to herself, her sisters in the profession, and her alma mater.

In Miss Roudin's experience study is required to pass all of the branches necessary for the pharmacist, but she found the work so interesting as to be thoroughly enjoyable. In her experience she met no opposition from any quarter. On the contrary, she found that girls are treated with the utmost respect, courtesy, and consideration by both the faculty and the students. In the past year, out of the three class officers elected by the juniors two were girls. Miss Roudin is very fond of physiology, although all her studies were a joy to her.

Her reason for taking up pharmacy is that her father is a pharmacist, also to have a profession which will be of use to her if she should ever need to earn a living, for this young lady is thoroughly convinced that women should be as fully prepared for life as men and that any girl who has the opportunity to fit herself for some trade or profession should do so. Miss Roudin's attitude toward her work and toward life is thoroughly sane and sensible.

### ECHOES FROM THE FIELD.

Mrs. Caroline Wetterstroem, of Cincinnati, has just passed the Ohio State Board of Pharmacy, making a general average of 86 per cent. This is said to be the highest taken at this examination from the city of Cincinnati, a young man from Dayton, Ohio, making the high average mark of 96½ per cent. Mrs. Wetterstroem was one of the students of the Queen City College of Pharmacy.

*The Kentucky Druggist* of June carries a very interesting article on "Sunday Closing." The stumbling block in the minds of many seems to be the idea of losing 52 days in the year in total or in part, but the article argues rightly that many of these sales would be made anyway on Saturday or Monday and that better work would be done all through the week because of the opportunity for rest.

There are women pharmacists serving with skill and faithfulness in religious institutions which do not favor publicity for any of their workers. Sister Inez Marie, of Convent Station, New Jersey, writes that she is well acquainted with *THE PHARMACEUTICAL ERA* and each month reads with great interest the pages devoted to "Women in Pharmacy," and that much as she would like to co-operate in this monthly round table conference, because of her obligations she prefers to remain a hidden member of our company. We send kindest thoughts to these women who are our sisters in very truth.

The programmes arranged for the Philadelphia meeting of the N.A.R.D. and the W.O.N.A.R.D. are most attractive. Those who save their vacations for the week of the 17th of August will be splendidly rewarded.

## MOSTLY PERSONAL

### New Dean for North Pacific.

**P**ROFESSOR CLARENCE M. McKELLIPS, after many years of service as dean of the Course in Pharmacy, Oregon State Agricultural College at Corvallis, has resigned to become the head of the department of pharmacy of North Pacific College located at Portland. He is a native of Indiana, where he was born in 1868 and where he was early inducted into the mysteries of the drug business. He later entered the School of Pharmacy, Purdue University, and after graduation as a Ph.C. in the class of 1896, he took a post-graduate course and became an instructor in that institution. In 1898 he went to Oregon State Agricultural College as professor of pharmacy. As noted in the June ERA, he has arranged to go abroad where he will put in the Summer months visiting pharmaceutical educational institutions in France, Germany and Great Britain and studying European methods preparatory to beginning his new duties on Oct. 1. North Pacific College has just strengthened its curriculum by the establishment of a new three-year course with the Fall term and leading to a new degree. He is a member of the American Pharmaceutical Association and has been an active worker for the educational uplift of pharmacists in the Beaver State.

C. M. McKELLIPS

### New N. Y. B. P. Member.

**D**R. JACOB DINER, professor in pharmacy and pharmaceutical chemistry at Fordham University College of Pharmacy, and at one time proprietor of two pharmacies in this city, was appointed a member of the State Board of Pharmacy at the recent June meeting of the Board of Regents.

DR. J. DINER

Dr. Diner is known in National as well as local drug-trade circles, having been active for many years as a member of the N.A.R.D., on the executive committee of which he did efficient work; the A.Ph.A., especially as a member of the New York branch; the New York College of Pharmacy, the Metropolitan Association of Retail Druggists, the German Apothecaries' Society and the New York State Pharmaceutical Association.

Dr. Diner was born near Koenigsburg, Germany, 44 years ago. He was educated at the Altstaedische Gymnasium and began his pharmaceutical career in 1884, at the age of 14, as an apprentice to Dr. Doerrenberg, in Strasbourg. After completing his apprenticeship he went to the University of Strasbourg, where he sat under Dr. Flueckiger, the famous lecturer. He received the degree of "apotheker" in 1892 and one month after his graduation came to the United

States. Dr. Diner's first venture in the retail drug business was made at 112 Manhattan street, his second at St. Nicholas avenue and 126th street. Only a little over a year ago Dr. Diner received his degree of M.D. from Fordham University Medical School, and in this institution he is now an assistant professor in pathology and bacteriology.

### Baronetcy to James Horlick.

**A**T the official celebration of the birthday of King George V, a baronetcy was conferred upon James Horlick, co-founder with his brother of the house of Horlick, of international malted milk fame, and at present head of the firm. Sir James was born in Gloucestershire 70 years ago, and has been a resident of that county for the past 20 years. Several years of his busy life were spent in Canada and the United States, and from the factories on this side of the water, as well as from those in England, the product reaches practically every country in the world. In official life he has also attained honors, being High Sheriff of Gloucestershire and a Deputy Lieutenant of the county. Although president of the company, Sir James Horlick's activities have for some years been confined to occasional meetings of the board of directors. His oldest son, Ernest Horlick, is virtually in charge of the English business.

### Pharmaceutical Personalities.

—**E. E. Fabiano**, a Filipino, has worked his way successfully to two college diplomas since coming to this country six years ago. Immediately after the Spanish-American War Elmer Fabiano left a seminary at Nueva Caceres, P.I., to teach school with a view to earning sufficient money to study in America. It took three years, but he came to this country and established himself in Kansas City, Mo. In 1910 he graduated from the Kansas City College of Pharmacy, and immediately took up the study of law, in the meantime supporting himself by working in a drug store as a prescription pharmacist. He graduated this year from the Kansas City School of Law. "I am going back to the Philippines," he declared recently, "in another year, and will begin the practice of law there. I intend to spend the rest of my life in the islands, and I hope to be of some help to my native land when the islands are turned back to the control of my countrymen." In calling our attention to his graduation, Mr. Fabiano says: "My record may be of some interest to my brother pharmacists, particularly as to how a pharmacist or drug clerk can spend his leisure hours profitably, and what he can accomplish for his future benefit as well as for the community."

—**Asa G. Candler**, of the Coca-Cola Co., has announced that he will give \$1,000,000 toward the endowment of the proposed Southern Methodist University in Atlanta, now under consideration by the educational committee of the Southern Methodist Church. The City of Atlanta guaranteed \$2,550,000 in cash and property on condition that it should be chosen for the seat of the university. The establishment of the university is explained to be the Church's answer to the decision of the Tennessee courts that the denomination has not supreme control over the Vanderbilt University trustees, who accepted \$1,000,000 from Andrew Carnegie against the protests of the Church. After the courts sustained the trustees the Church withdrew its support from Vanderbilt University. Mr. Candler is a strong believer in religious education, and has stated that he wished so far as he was able to repair the damage done

of the Church of Christ above all else. He is a brother of Foster W. Williams, pastor of the same denomination, who has been selected as the pastor of the new institution.

—**W. F. Baum**, of Dayton, the newly-elected president of the National Board of Health, has been interviewed by the *Journal of the American Medical Association*. In a recent interview he said: "I am going to limit my appointment a special committee to investigate the possibility of one member from each congressional district on the board. We need such a political board to present and carry out the measures in Springfield. There should be more special committees on poisoning of poisons than we now have. There should be an all-time committee on legislation. I have been unable to obtain legislation that both Congress and the public should have. My idea is that we should have the legislature should be talked with by their constituents interested in contemplated laws. Talk with them as you would with any of your neighbors from whom you want a responsible and sensible favor, and, in my opinion, the result will be satisfactory."

—**Edwin T. Boden**, of Bay City, Mich., for the past year secretary of the Michigan State Board of Pharmacy, has been elected president of that body, his new appointment taking effect July 1. Mr. Boden has been a member of the board since 1911. In commenting upon his election he said: "I had considerable work before when I was secretary, but I shall certainly have uses for my time in taking care of the duties of the presidency. There is a great amount of work to be done, and although I will not try to be severe with the pharmacists I will endeavor to see that every drug store in the State has a registered pharmacist behind the counter to wait on trade. The laws of Michigan require this, and it is only right to the trade that the proprietors see that they have a registered pharmacist in the stores during the hours they are open."

—**Adolph Biersach**, the Milwaukee druggist, was the recipient recently of one of the "Spanish prisoner" swindle letters, which have been periodically making their appearance all over the country for many years. The letter, purported to have been written from Madrid and by a prisoner who signs his name "Belivsky," claimed that the writer was a Russian banker who absconded with 5,000,000 rubles and was arrested in London. As he killed a man in Spain he must stand trial in that country and if he manages to get by the Spanish authorities, he will be placed on trial in Russia. The letter stated that if Mr. Biersach would help the writer to get \$480,000, which he has in America, the druggist would get one-third.

—**Dr. Jokichi Takamine**, the well-known research chemist, has been elected president of the recently organized Japanese Association of New York, Incorporated, the object of which is to foster friendship and cordial co-operation among the Japanese residing in this city and its vicinity. The association further aims to promote the social and intellectual welfare of its membership, to protect them in their rights, to cultivate the spirit of mutual assistance and to strengthen the friendly ties that bind the people of the Empire of Japan and the United States. The association, it is reported, will be glad to furnish information concerning Japanese affairs to any one applying for it.

—**Mrs. J. A. Anderson**, wife of Druggist Anderson, at 2222 North Western avenue, Chicago, routed a pair of robbers recently by screaming. A car containing six men rode up to the side door of the drug store and two men got out and entered the store to telephone. They went to the booth and the druggist turned away, only to be confronted by two revolvers when he again turned about. The robbers ordered him to throw up his hands, and were backing him toward the cash register when Mrs. Anderson screamed. The men fled, but not before one of them struck Anderson on the head with the butt of a revolver, inflicting a deep wound.

—**Leon Evans**, who has just been elected president of the Kentucky Pharmaceutical Association, is, to quote the *Lexington Daily Leader*, a "humdinger." He is the senior member of the drug firm of Evans & Covington, of Mayfield, and is one of the "live wires" of his town. His hobby is Sunday School work. A few years ago he was made the superintendent of the First Baptist Sunday School of Mayfield, and inaugurated the idea of rotation in that office with a change every two years. The first Sunday in May this year that Sunday School had an attendance of 1380. The Bible Class has had as many as 380 in it at one time.

—**Raymond Siffdoll**, a 16-year-old drug-store employee,

of Paterson, N. J., has, according to newspaper reports, suddenly found himself well-to-do because he rummaged among his father's papers in an old trunk in the family garret. Letters indicating that his father, Brehem Siffdoll, who died 15 years ago, had been receiving drafts from abroad, led to the location of an estate in the suburbs of Paris that belonged to the boy's grandfather. Further investigation showed that the boy is an heir to \$100,000. He will remain in the drug store for a time and then will go to college and study medicine.

—**Sir Joseph Beecham**, proprietor of the well-known pills bearing his name, was raised by King George to the rank of Baronet at the recent birthday celebration of England's monarch. The new title, it is said, was bestowed principally for his services to music, in the production of grand opera, especially the Russian opera and ballet. In addition to his proprietary business, Sir Joseph is a director of the Pears Corporation, the owner of two theaters, and has assembled a notable collection of English paintings and other works of art.

—**Miss Velma Onstad**, formerly of Dawson, but lately of Tampico, Mexico, is now engaged as a pharmacist at Gulbrandsen's pharmacy, Montevideo, Minn. She was forced to leave Mexico because of troubles incident to the war, and had many interesting experiences, some of them not without considerable danger, before she got out of the country. With a partner she had been planning to build a drug store building, when the war made any such proposition impossible.

—**Dr. A. R. L. Dohme**, president of Sharp & Dohme, manufacturing chemists, Baltimore, who has long taken a deep interest in municipal problems and has been connected with various movements designed to advance the interests of the welfare of the city, has been re-elected president of the City-Wide Congress, which aims to secure equitable methods of taxation and to give Baltimore the standing before the country to which the municipality is entitled.

—**Harry S. Noel**, of the advertising staff of Eli Lilly & Co., was married recently to Miss Nellie K. Covert, of Indianapolis. They made an extended wedding trip East and visited Mr. Noel's parents at Williamstown, Mass., New York City, Albany, Ithaca, and perhaps several other cities were included in their itinerary. Mr. Noel is a graduate of the Albany College of Pharmacy and for several years was connected with drug journalism.

—**William H. Wood**, of Sanford, Me., recently elected president of the Maine State Pharmaceutical Association, has been in the drug business in his city for many years. Mr. Wood was recently elected president of the Sanford Board of Trade and is an alert promoter of the "bigger, busier and better" Sanford movement. He is an active Progressive and was a delegate to the last county and State conventions.

—**Miss Liguori Mary Ertel**, of Maple Lake, Minn., was a recent graduate from the Minnesota College of Pharmacy, and secretary-treasurer of her class. She comes from a family of pharmacists, for her father, Charles J. Ertel, conducted a drug store at Maple Lake until his death, when her mother, Mrs. Mary L. Ertel, herself a college of pharmacy graduate (Cincinnati), undertook the management of the store.

—**John McCluskey, Jr.**, the five-year-old son of John H. McCluskey, pharmacist at Glenwood, Ia., was recently severely shocked when, while playing with another little boy, he grasped an electric wire from which the insulation had been partially torn away. He received injuries which were at first thought to be fatal. His right side was discolored and his toes and fingers were deeply burned. A young lady who pulled him away from the wire was also severely shocked.

—**Dr. Edward Curtis True**, of Auburn, Me., and Miss Adele Dohme were recently married at Roland Park, Md. The bride was given away by her brother, Dr. A. R. L. Dohme. The groom's best man was his brother, J. R. True. A wedding reception was given by Mrs. Charles E. Dohme, mother of the bride, on the day following the ceremony. The honeymoon will include several months in Europe.

—**E. E. Grebel**, druggist of Beaver Dam, Wis., has sold his pharmacy to J. E. O'Brien, formerly of Randolph, Wis. For the past three years Mr. O'Brien, who is a graduate of the School of Pharmacy of the University of Wisconsin, has been connected with the Menges pharmacy in Madison. Mr. Grebel has not announced his plans for the future.

—**Robert F. Grace**, of New Orleans, has been presented

with a handsome gold medal by the members of the Louisiana Ph. A. as a reward for his services in securing 140 new members in two years. At the same time it was declared that through his efforts the recently closed convention was the most interesting and successful in years.

—**Charles S. Randolph**, of Charles S. Randolph & Co., Ipava, Ill., who has been 30 years in the drug business in that town, has decided to retire. Orlie E. Carter, who has been associated with Mr. Randolph for 18 years, has become the proprietor. Mr. Carter has passed his business life in Ipava, and is a registered pharmacist.

—**Lucian Bauman**, druggist, Cambridge, Mass., and Dr. Julia Lewandowska, a Holyoke physician, were recently married at the Mater Dolorosa church, Holyoke. Dr. Lewandowska rendered valuable service during the smallpox epidemic in Holyoke three years ago. Mr. Bauman has been the manager of a Boston store and will probably open his own establishment in Holyoke.

—**Harvey B. Eyer**, of Pennsylvania, for the past five years a special representative of the American Druggist Syndicate, doing special detail work among physicians, has joined the sales force of the Curts Chemical Company, of New York City, and has charge of the company's affairs in New England and Pennsylvania.

—**W. C. McGonagle**, vice-president of the Benson, Smith Drug Co., Honolulu, recently sailed from San Francisco, having completed a business tour of the Eastern States and Canada in the course of which he made a study of current merchandising methods. His itinerary en route for home included Columbus, Ohio.

—**Dr. William Jay Schieffelin** recently addressed to the president of the American Medical Association a telegram of protest against the adoption of the Pomerene amendment to the Harrison bill, which would exempt from the provisions of that measure physicians, surgeons, nurses and medical attendants.

—**F. P. Bannon** is reported to have at his Winsted, Conn., drug store cherries preserved in rum and which were grown on a tree that stood near a well now in the cellar of a nearby store. The cherries were bottled in 1870 and Mr. Bannon will open the bottle when the G. O. P. elects another president.

—**Vernon Waldron**, of the firm of Waldron & Dietrich, San Francisco, has returned home from abroad where he spent three months, visiting in the course of his trip the principal cities of Europe. His wife and daughter did not return with him, the latter having undertaken a course of study.

—**Michael J. Sullivan**, of Willimantic, Conn., is the manager of the new drug store in Stamford, that State. He was formerly manager of the City drug store, Willimantic, and has worked in a similar capacity in Bridgeport, New Britain and other Connecticut cities.

—**W. A. Caperton**, salesmanager for Eli Lilly & Co., exhibited the Lilly moving pictures of machinery and manufacturing methods at the company's laboratories, at Lincoln, Neb., early in July. Mr. Caperton enjoyed a day's fishing at Balsam Lake, Ia., on the return trip.

—**Mr. and Mrs. J. K. Lilly** held a reception for the ladies of the druggists who attended the annual meeting of the Indiana State Pharmaceutical Association at Lake Wawasee. Open house was maintained for the visiting druggists and their wives throughout the meeting.

—**James R. Phillippe**, proprietor of a drug store at Illinois and 30th street, Indianapolis, is recovering from a compound fracture of the left leg suffered recently by falling from a step ladder. The bones protruded through the flesh and ran into the ground.

—**Albert Kronkosky**, vice-president and manager of the San Antonio Drug Co., San Antonio, Texas, and one of the principal stockholders in the recently organized Sterling Laboratories of New York, has returned home after a short visit to the "Great White Way."

—**Albert M. Duescher**, druggist at Birnamwood, Wis., was recently married to Miss Irene Martin, of Green Lake. Mr. Duescher was employed in the City drug store at Antigo until four years ago when he went into business for himself at his present location.

—**Guy M. Smith**, one of the most popular of Sharp & Dohme's representatives in Ohio, was married recently to Miss Lela Moling, of Columbus. On their bridal tour they

spent several days at the home of Mr. and Mrs. P. E. Herman at Cincinnati.

—**Louis P. Zimmerman**, prescription clerk for the Grund Drug Co., Fremont, Ohio, claims to be the oldest drug clerk in point of service with one firm in that State. It is 40 years since he entered the employ of the firm by whom he is still employed.

—**Fred W. Cook**, president of the San Antonio Drug Co., San Antonio, Texas, recently sailed from Galveston for Germany on a three-months' vacation. He will bring back Mrs. Cook and daughter, who have been in Germany for nearly a year.

—**Paul Herbert Gross**, manager for the Valley Drug Company, Johnstown, Pa., recently married Miss Mary Louise Thiele, of Johnstown. Immediately following the ceremony the couple left on a honeymoon trip through the East and South.

—**Thomas Stephenson**, of Edinburgh, Scotland, sailed for England recently. Mr. Stephenson, who is a member of the Board of Pharmaceutical Examiners of Great Britain, made an extensive tour of the Western States while in this country.

—**Fred Woodhall**, of Rockville, Conn., has retired from the drug business on account of continued ill health. He was scheduled to sail last month for a vacation trip in England. John B. Thomas is in charge of the store.

—**Walter C. Seibert**, proprietor of the Seibert drug store, Carbondale, Ill., was recently married to Miss Julia Norton, of Tamaroa. Following the ceremony they took a short trip to Chicago and other Northern points.

—**C. J. Lynn**, secretary and general manager of Eli Lilly & Co., was a recent visitor at the company's New York branch. Upon his return Mr. Lynn spent a week-end at the Lynn Summer home at Torch Lake, Mich.

—**William J. Mooney**, president of the Mooney-Mueller Drug Co., Indianapolis, has been appointed chairman of the committee on appeals and a member of the relief committee of the Indianapolis Board of Trade.

—**Clarence G. Stone**, of the Lambert Pharmacal Co., won the cup in the golf tournament held by the Siwanoy Club, Mount Vernon, on July 4. Mr. Stone has a collection of these trophies of his favorite sport.

—**M. J. Breitenbach**, president of the M. J. Breitenbach Co., manufacturers of Gude's Pepto-Mangan, is, as usual, spending the Summer months at his estate on the St. Lawrence River, in the Thousand Islands.

—**Marion F. Evans**, who has just finished eight years as postmaster at Marion, Ind., has opened a drug store at Kokomo, Ind. He was in the drug business at Marion before being appointed postmaster.

—**C. E. Crecelius**, of New Albany, Ind., was elected an honorary member of the Indiana State Pharmaceutical Association at that organization's recent annual meeting held at Lake Wawasee.

—**George C. Wellner**, of Carrington, No. Dak., has been elected president of a druggists' organization made up of druggists from Foster, Eddy, Wells and Sheridan counties, North Dakota.

—**F. J. Frey**, a retail druggist, is building a \$10,000 business block at East Washington street and Oriental street, Indianapolis. He expects to occupy the building when it is completed.

—**F. W. Dessel**, pharmacist at Ninth avenue and Irving street, San Francisco, recently returned to business from a 200-mile hike in the Yosemite Valley and to the big trees at Wawona.

—**Mr. and Mrs. J. A. Turner**, of Pittsburgh, Pa., made a brief visit at Salt Lake City, Utah, while en route to Tokio, Japan, where Mr. Turner is engaged in the practice of pharmacy.

—**Mrs. Robert J. Groves**, wife of the Pennsylvania representative of Eli Lilly & Co., is spending the Summer with her parents at Belfast, Ireland. She is accompanied by her son.

—**Chester B. Ryan**, assistant manager of the sundries department of Lehn & Fink, New York, will spend his vacation at his old home, Detroit, Mich.

—**William Scott**, president of the Daniel Stewart Drug

Co., Indianapolis, and Mrs. Scott are spending the Summer at their cottage at Brockton, Ontario.

—Edward J. Murphy, manager of the Balch & Brown drug store at Manchester, Conn., has been married to Miss A. Louise Durr, of Middletown.

—Dale G. Kilburn, pharmacist of Quincy, Ill., has announced his candidacy for the Republican nomination for Congress from his district.

—D. S. McNaughton, with Schrouder's, Inc., Grand Rapids, Mich., was recently united in marriage to Miss Roslyn Behr, of Benton Harbor.

—L. D. Sale, president of the Western Wholesale Drug Co., has returned from a business trip through South America and to Europe.

—J. Byrne Severs, who represents Sharp & Dohme in Western Kentucky, is occupying a new home at Cloverport, that State.

—J. A. Glennon, formerly sales manager of the A. D. S., is secretary and general manager of the Curts Chemical Co.

—W. M. Johnson, of Gainesville, Fla., has been re-elected treasurer of the Florida Ph. A. for the 10th consecutive time.

—J. K. Lilly, president of Eli Lilly & Co., and wife are spending the Summer at Burt Lake, Mich.

## OBITUARIES

### William E. Lee.

William Estell Lee died at his home in Philadelphia July 20. Mr. Lee conducted a pharmacy at 2327 Brown street for 41 years or more and was also an active member of the Philadelphia Wholesale Drug Company. As an organization man, he was prominent locally and nationally. He was one of the oldest members of the Philadelphia A. R. D. and had held various offices in that body. He was chairman of the committee on membership of the Pennsylvania State Ph. A., a member of the A. Ph. A., of which he was a former vice-president, and a member of the N. A. R. D. Mr. Lee was born in Woodbury, N. J., in 1850. He graduated from the Philadelphia College of Pharmacy in 1872 and was ever active as an alumnus in the affairs of that institution. So long had he been engaged in the retail drug business at the one location that in that period he had catered to the pharmaceutical needs of three generations of some of the families in his neighborhood. Needless to say, he was well-known out of his particular professional circle—

and at the last primary election in Philadelphia he was a successful candidate for the Pennsylvania Legislature on the Washington party ticket. His widow—"Mother Lee," as she is known to the ladies of the Women's Organization, N. A. R. D., of which she is the secretary—and a son, Dr. Walter Estell Lee, survive.

### Charles F. Hoch.

Charles F. Hoch, 40, died at the Methodist Hospital, Indianapolis, July 11, from gas asphyxiation. Mr. Hoch was overcome by gas in the basement of his store at Central avenue and 32d street, that city. For many years he was in business at College avenue and 19th street but sold out and was employed by the Mooney-Mueller Drug Co., wholesale druggists. He bought the Central avenue store two months ago. A widow and daughter survive.

### Herman Krieger.

Herman Krieger, well-known Nevada druggist, died in the Goldfield hospital several hours after being terribly injured in an automobile accident. With him at the time were four brother Knights of Pythias, only one of whom escaped with his life. Two were killed outright and Mr. Krieger and the fifth member of the party died in the hospital. The machine they occupied

turned out for a mired car, came too near the edge of the road and plunged down an embankment.

## RECENT DEATHS.

James A. Watkins, 65, proprietor Union avenue pharmacy, St. Louis, Mo., was killed at Centralia, Mo., by a Wabash train. The supposition is that Mr. Watkins, who had had business to transact at Carthage, Mo., and intended visiting his brother at Henrietta, left the train at Centralia, expecting to board it again when it left the station. He suffered from rheumatism and walked with a cane and may have on this account fallen beneath the trucks. A widow, two daughters, graduates of Washington University, and two sons, students at this institution, survive. The deceased was reputed to be wealthy.

—Edwin Lamson, 69, for many years an importer of drugs and other South American products, died recently at his home in Summit, N. J. He was born in Tewksbury, Mass., July 25, 1845, and came to New York when a young man, becoming associated with his brother, the late John S. Lamson, in the firm of John S. Lamson & Brother, 77 Maiden Lane. He retired from active business five years ago, a nephew, Horace H. Lamson, succeeding to the leadership in the firm, which has been in existence for more than 50 years. Mr. Lamson was a member of the Drug Club.

—George W. Lawton, of Atchison, Kan., formerly connected with the McPike Drug Co., Kansas City, Mo., was found dead in his bed in the latter city to which he had just recently returned after a trip east to benefit his health. He died just after retiring for the night and expressing the opinion that he had been much improved by his trip. He was born 55 years ago at Rome, N. Y. Previous to his connection with the McPike company he had held a responsible position in a local bank and was at one time connected with a bank in Carlton, Kan. He never married.

—Demont Lowthian, 32, Unionville, Mich., druggist, died shortly after being terribly burned while attempting to carry a barrel of alcohol out of his father's store. The gasoline illumination system used in the store went wrong and a fire was started in the rear. After telling his customers to get out and to send in a fire alarm, Lowthian started to carry out the alcohol barrel, containing several gallons of alcohol. It exploded and the blazing fluid was thrown all over him. A wife and seven-year-old son survive.

—James Dannelly, 47, died at St. Paul's Sanitarium, Dallas, Tex. He was born in Charleston, S. C., but spent his youth at Waxahachie, where, after completing his education at Baltimore, he was engaged in the drug business until 18 years ago. At this time he moved to Dallas and entered the manufacturing business. He was well known to druggists throughout the State, having been connected with the wholesale and retail trade for the past quarter century. His widow and three children survive.

—John W. Bell, 65, owner of one of the first drug stores in Omaha, Neb., died at his residence in that city of either a blood clot on the brain or uraemic poisoning. He was president of the Bell Drug Company, 1316 Farnam street. He came to Omaha from Weston, Mo., in 1870, and secured employment in the first drug store in the city. His wife, a daughter, Mrs. Arthur Smith, and one son, A. L. Bell, of New York City, survive.

—Charles F. Gladding died suddenly at his home in Barrington, R. I. He had conducted the drug store at the corner of Mathewson and Washington streets, Providence, and the store now conducted by William Smith, of Warren. Death was due to a paralytic shock.

—William McCullough, 75, a druggist in New Athens, Ohio, is dead after a long illness with stomach trouble. He was known to every student at Franklin College for nearly half a century, and was an elder in the Presbyterian church. He leaves a daughter.

—Gaston Constantin, 60, manufacturer of druggists' sundries, 507 Bainbridge street, Brooklyn, died in the Lutheran Hospital. He was a member of Tyrian Lodge, F. & A. M.

—Frank Thompson, for 17 years a druggist in New Haven, Conn., but who retired recently on account of ill-health, is dead after an illness of several months.

NEWS FROM ASSOCIATIONS

ANNUAL CONVENTIONS.

- A. Ph. A.—Detroit, Mich., Aug. 24-29.  
G. M. Beringer, president; J. H. Beal, secretary.
- N. A. R. D.—Philadelphia, Pa., week of Aug. 17.  
James F. Finneran, president; J. E. Toms, secretary, Chicago.
- N. W. D. A.—Indianapolis, Ind., week of Sept. 21.  
Geo. W. Lattimer, president; J. E. Toms, secretary, New York City.

The American Medical Association.

THE annual meeting of the American Medical Association held at Atlantic City June 22-26 was attended by 3958 members who took the time and trouble to register. The attendance was considerably larger than at any previous session in Atlantic City, though not as large as the attendance at either the Boston or the Chicago meeting of the association.

The Section on Pharmacology and Therapeutics had, as usual, a programme containing many papers of pharmaceutical interest. Delegates from the A. Ph. A. were recognized and Prof. Joseph P. Remington, the chairman of this delegation, in extending the felicitations of the organization he represented, said:

"The American Pharmaceutical Association brings greetings to the American Medical Association. It is meet and proper that two National bodies should exchange greetings, for however they may differ in function and scope, they are united in principle in the one great object of promoting the health of the Nation in combating disease.

"It is gratifying to know that the Pharmacopoeia is practically completed so far as the bulk of the work is concerned. The printing of the Appendix with the Tables, Reagents and Volumetric Solutions will be sent this week to the printer, for this part of the book must be printed first, in order that members may have it for reference in checking up the text of the book.

"During the past year a number of older remedies have been deleted and new remedies admitted. A committee on scope, which reports upon proposed admissions and deletions, has finished its work, but there are still a few questions which can be settled after the printing is started. One of these questions is the form of so-called bichloride tablets. As is well known, the enormous use of these tablets is a menace to the future growth and prosperity of the Nation. The Pharmacopoeia cannot check the use of these tablets, but it can at least direct the form for their use which will prevent accident as far as possible, through swallowing the tablets or their solution.

"The American Pharmaceutical Association during the past year has used its influence in every possible way in controlling or limiting the use of habit-forming drugs by National and State legislation. Committees have been formed from the membership who are working to stamp out this evil.

"The body which I have the honor to represent asks the assistance of your body to aid in framing wise laws which will make it difficult for dopesters to continue their habits, and by limiting the use of these drugs to prescriptions by properly educated physicians, who are earnestly trying to curtail the evil.

"In educational matters pharmacy has progressed in the direction of raising the standard of education of those entering pharmacy, and enlarging the curriculum in the colleges. May we not hope that medicine and pharmacy will be more closely linked in the future, and that crimination and recrimination will cease, or take the form of constructive criticism, with the intention of remedying the evils and correcting abuses, and will be actuated by harmony between the two professions."

Referring more particularly to the probable scope of the

U.S.P. IX, the following table represents the status of the present time:

Number of articles in text of U.S.P. VIII.....	958
U.S.P. VIII articles dismissed from U.S.P. IX list.....	237
Number of articles retained from U.S.P. VIII.....	721
Number of new articles admitted to U.S.P. IX.....	67

Total number of articles in tentative list of U.S.P. IX..... 788

On motion of Dr. Murray Galt Motter, of Washington, D. C., the Section on Pharmacology and Therapeutics of the American Medical Association adopted the following resolution which was referred to the House of Delegates, endorsed by that body and thus officially recognized as the opinion of the American Medical Association:

WHEREAS, The Pharmacopoeia of the United States of America should be, above all, a book designed to protect the public health and prevent the exploitation of the sick and afflicted for profit; now therefore be it

RESOLVED, That the members of the Section on Pharmacology and Therapeutics of the American Medical Association request the House of Delegates to urge upon the Revision Committee to make official in the Pharmacopoeia of the United States "corrosive mercuric chloride pastilles" so that physicians may not be compelled to prescribe this remedy under a proprietary name; Be it further

RESOLVED, That this Section endorse the form and description of corrosive mercuric chloride pastilles as described in the German Pharmacopoeia, namely, of cylindrical shape, twice as long as thick, wrapped individually in paper bearing the name of the medicament "corrosive mercuric chloride pastilles" and the word "poison" in suitable and striking letters; Be it further

RESOLVED, That a copy of this resolution be forwarded by the Secretary of the American Medical Association to the President and to each of the officers of the United States Pharmacopoeial Convention and also to the Chairman and to each member of the Committee of Revision of the Pharmacopoeia of the United States.

Another recommendation of pharmaceutical interest was suggested by the Council on Medical Education, endorsed by the reference committee and approved by the House of Delegates as follows:

Your committee also recommends that the Council be instructed to urge all medical colleges to adopt the nomenclature of the Pharmacopoeia of 1910 and to use the metric system in their teaching.

LAST CALL FOR N.A.R.D. CONVENTION.

*Philadelphia Convention Committee Eagerly Awaits Arrival of Fellow Pharmacists and Their Wives.*

WITH the most elaborate entertainment programme in the history of the National organization, the Philadelphia A.R.D. is eagerly awaiting the arrival of fellow pharmacists and their wives and families from all over the United States. Chairman Charles Rehffuss, of the convention committee, is prepared for a registration of 1800, and the bigger the crowd, the warmer the welcome—numbers will make no difference in the matter of accommodation and entertainment.

The entertainment features, as partly outlined in the July ERA, will be the president's reception and ball on Monday evening, Aug. 17, at the Bellevue-Stratford Hotel, convention headquarters and the formal opening of the Drug Show on the same floor of the big hotel. On Tuesday the ladies registered will be taken on an automobile tour of the city and its environs. The same evening, a demonstration by professional dancers under the spotlight of the maxixe, the hesitation, the Argentine, the one-step and other popular dances, so widely discussed, will be a startling feature of a ball in the beautiful ballroom of the Bellevue-Stratford.

On Wednesday afternoon the ladies will be the guests of John Wanamaker in a tour through the big department store with a musicale in the Court of Honor. In the evening Chapter No. 6, W.O.N.A.R.D., will give an entertainment. Thursday will be "Scottissue Day" when the Scott Paper Company will be the hosts on a river excursion down the Delaware to the company's big plant at Chester. Luncheon, music, hydroplane racing and dancing with a stop at busy League Island Navy Yard will be features of the day's outing.

The following day, "Wampole Day," those registered will be the guests of Henry K. Wampole & Company on an excursion to Willow Grove Park. Special cars will pass through the most beautiful sections of the city and suburbs to the famous park where after luncheon in the Casino a registration badge will constitute a pass to every attraction along the big Midway.

The business of the convention will be dispatched promptly so as not to encroach upon the time assigned to these entertainment features. Every loyal N.A.R.D. member is urged to make a special effort to attend the Philadelphia convention, which promises to be the largest and most enjoyable yet held.

## New York Ph. A. Elects Arthur S. Wardle, of Hudson, President, at Saratoga.

ARTHUR S. WARDLE, of Hudson, was unanimously elected president of the New York State Pharmaceutical Association, at its 36th annual meeting at the United States Hotel, Saratoga Springs. Jacob H. Rehfuss was nominated for re-election, but positively declined the honor. The other officers elected were:

1st vice-president, Elmer C. Chilson, Rochester; 2d vice-president, Richard A. Austin, Cairo; 3d vice-president, Wm. C. Barton, Saratoga; secretary, E. S. Dawson, Syracuse; treasurer, Frank Richardson, Cambridge; executive committee, Dr. Joseph Weinstein, chairman; Charles N. Lehman and George S. Slade; A Ph. A. Delegates, Dr. Joseph Weinstein, Dr. A. B. Huested and C. A. Mayo.

The meeting was well attended and the business was consummated most expeditiously. An entire day was spent on Lake George, a feature of the convention much enjoyed by the members, the two preceding days having been exceedingly hot.

The principal recommendations made by President Rehfuss in his annual address were reported in the July ERA. He further expressed the opinion that the association should work energetically for the passage of the Stevens price-maintenance bill. "This act if made into law would afford a great measure of relief." In this connection, he urged the members to individually enlist in the N. A. R. D. ranks, and trusted that the association would continue to affiliate with that National organization with renewed enthusiasm. Elaborating upon the service the N. Y. S. P. A. rendered to its members and the profession in protecting their interests in legislative matters, Mr. Rehfuss observed that the head of one large drug concern operating a chain of stores in New York City recently told him that the "Day of Rest" law entailed an expenditure on them of nearly \$50,000 last year for extra clerk hire. The passage of the Walters act annulling the "Day of Rest" law places them in a position where they can save that sum if they will.

The number of new members gained by the association this year was "most gratifying." "For the greater part of this fine showing we are indebted to the indefatigable efforts of the Traveling Men's Auxiliary, and more particularly to Mr. George Riefflin, who, as chairman of the membership committee, has achieved wonderful results." In his conclusion, Mr. Rehfuss acknowledged the great assistance given him throughout the year by Vice-President Arthur S. Wardle and by the several committees of the association.

The report of the legislative committee, presented by Mr. Rehfuss as chairman, was an elaborate resumé of that body's efforts to follow the association's instructions as laid down at the Catskill meeting and the recommendations of a conference of representatives of various local organizations called by the committee in New York City. The report also recounted the fight the committee went through to kill off those bills the members considered inimical to the interests of the profession.

The committee believed that any measure making it prohibitory "for any person to issue or give souvenirs, bonuses, coupons, trading-stamps or devices of any kind as an inducement to the purchase of drugs, chemicals, medicines, prescriptions, or poisons" (the words of the association's bill, which failed to pass), would, if enacted, be unconstitutional. The members recommended that any future legislation endorsed by the association be based upon the principle of taxing every coupon or trading-stamp to create revenue for the State, as the committee was advised that such provisions were more likely to be held constitutional by the courts.

Relative to the Workmen's Compensation Act, Mr. Rehfuss reported as follows:

"Your legislative committee made efforts to ascertain whether the 'Workmen's Compensation Act' recently enacted in the State of New York, applies to the average retail pharmacy where no power or machinery is employed in compounding medicine.

"Inquiries were made in the name of the State association, of the State Department of Labor and the Compensation Commission at Albany. A reply from the Compensation Commission promises an early decision in the matter, but up to the present time none has been received by your committee.

"Inquiry among the liability companies failed to secure any definite opinions. They frankly admit they are in doubt as to whether this law applies to the retail pharmacist.

"However, assuming that the pharmacist will be included by the commission, the liability companies have made the very low rate of \$10 for a minimum bond covering a yearly wage scale of all employees up to \$5000. Since such a bond would include general liability, it would appear that the pharmacist will not fare so badly even though he be included in the compensation act. The Compensation Commission is the tribunal which will make the decision that will determine whether we need take out such a bond."

The legislative committee opposed all the bichloride measures which came up at Albany, taking the stand persistently that "we would stand for any regulation as to color, shape, style of container, and registration of sale, but never for the doctor's prescription unless he be prohibited from dispensing such poison." The committee recommended that the State association endorse this attitude as a guide for any future legislation that may be proposed.

The committee expressed the opinion that when the pharmacists became thoroughly familiar with the provisions of the Foylan bill "they will appreciate the great concessions gained for them, and realize that it is about as mild a piece of anti-narcotic legislation as could reasonably have been expected." Considering the opposition to this bill, the committee regarded the passage of the compromise measure as a great victory. It was pointed out, however, that the victory is only temporary:

"The same forces intend to go to Albany again next year, to make further efforts along the same lines. Preparations must be made to insure that our resistance is more effective. To that end we recommend that a legislative sub-committee be appointed by the President, to be composed of a member from each Senatorial district, whose duty it shall be to marshal all the druggists in his Senatorial district to the support of the programme of the State legislative committee; this sub-committee to be kept informed by the legislative committee of all pending legislation through the issuance of pamphlets at frequent intervals. . . . It must not be understood from this that we are to oppose all anti-narcotic legislation but merely to see that the rights of the pharmacists are properly conserved. The druggists of the State must realize that this narcotic evil is not a myth—it is an awful reality. Something must be done to curb it, laws must be enacted to enable the authorities to penalize those who are responsible for it, but we will not permit the pharmacist to be made the 'scapegoat.' It has been shown that the physician is equally responsible for this evil, and peddlars not connected with either medicine or pharmacy are giving the authorities the greatest trouble.

"We recommend that our State association go on record as favoring the regulation of the distribution of narcotics, but take the stand that any future legislation must be based upon the principle that the physician shall be restricted in his distribution of narcotics along with the pharmacist, likewise the wholesaler and manufacturer; that all distributors shall be licensed by the State of New York, and that extraordinarily severe penalties be meted out to those persons not licensed who are found trafficking in narcotics; that the State association by resolution appeal to the Congressmen and Senators from New York State, urging them to support the Harrison anti-narcotic bill at Washington. Were this Federal legislation enacted it would remove the greatest part of the cause of our present narcotic evil in New York State with the result that we would not be harassed by all this threatened legislation at Albany."

The committee further recommended the amendment of the by-laws making the vice-president an ex-officio member of the legislative committee.

The committee on president's address also considered the report of the legislative committee. In brief, it reported as follows:

1. The question of Sunday closing being governed largely by local conditions and public opinion, action by the association toward obtaining legislation is deemed inadvisable.
- 2 and 3. Committee recommends that Board of Pharmacy secure more inspectors to carry out provisions of the Walters bill in order to keep pharmacy out of the jurisdiction of the Department of Labor.
4. Committee approves efforts to broaden scope of board as quickly as conditions justify such progress.
5. Rescinding of resolution prohibiting board members from serving on legislative committee considered highly desirable.
6. Com-

mittee approves recommendation that association affiliate with N. A. R. D. and urges utmost efforts be made by N. A. R. D. to secure early passage of Harrison bill. 7. Recommends that association employ detail men on commission to solicit members and collect back dues; approved providing suitable arrangements can be made with such collectors. Committee expressed hope that utmost efforts would be made to collect dues from members three years in arrears in order that such members might be retained.

The committee approved the introduction of a wood alcohol bill in the next legislature, recommended that the next legislative committee push the Whitney amendment to the excise act, providing for a "dealer in alcohol" license, disapproved the recommendation that the bill taxing coupons and trading stamps be introduced, as such legislation would not hit the main part of the evil, the giving away of souvenirs; agreed with the recommendation of the president relative to bichloride legislation; approved the president's recommendation relative to a sub-committee with members in each Senatorial district; endorsed the president's recommendations that the association go on record as favoring the regulation of the distribution of narcotics, taking the stand, however, that dispensing physicians shall be restricted, etc.; recommended publication of Boylan and Walters laws in proceedings, the amendment of by-laws to make the vice-president an ex-officio member of the legislative committee, and the publication of the address of the president and his report as chairman of the legislative committee in pamphlet form, the same to be distributed to members and be used as the best possible argument in winning new members. The committee, which consisted of Fred Rogers, Fred Menges, H. V. Army, George H. Whitney and S. E. Dorn, approved the Potts resolution favoring the Stevens bill.

Upon Vice-President's Wardle's motion, the committee's report, with the exception of that part relating to trade coupons, was approved. Dr. Joseph Weinstein asserted that if a stop was not put to the coupon evil in New York City the small man would be driven out of business. The recommendation anent coupons made by President Rehffuss was adopted and that of the committee disapproved. The matter was referred to the legislative committee with power to act.

The report of the Board of Pharmacy, presented by Secretary of the Board Warren L. Bradt, showed that during 1913 there were 4608 registered pharmacies and 42 registered drug stores. The board had made 7645 inspections, and 290 alleged violators had been reported by the inspectors. Cases settled numbered 216; 97 had been held in abeyance; 129 were pending June, 1914, and 69 cases were prosecuted in court. Of these 66 were decided in favor of the board. The sum of \$11,040 was collected in penalties. Hearings granted 237, and number of samples analyzed 1148. Pamphlets on laws were sent to every pharmacy and drug store in the State.

Secretary E. S. Dawson reported that the total cost of publishing the 1913 proceedings, including postage, was \$455.90, as against \$521.27 in 1912. At the last annual meeting 40 new members were elected and 100 members were dropped from the rolls. Since the publication of the last proceedings 10 members have died, 17 resigned and 194 were dropped from the rolls, leaving a total membership of 1092. The total attendance at the last annual meeting was 139. The expenses of the office were \$977.95.

Dr. A. B. Huested, as chairman, presented the report of the committee on Procter memorial fund. No record could be found of the association having paid the \$50 it voted to the fund in 1912. The fund now amounts to over \$6000 and a statue will be erected on the Smithsonian grounds at Washington, D. C. It will be unveiled upon the centenary of Prof. Procter's birth, May 3, 1917. "It is the duty of the druggists of the Empire State to see that the project is carried through."

Thomas Lamb, chairman of the advisory committee on the Druggists' National Home, recited the history of the State-wide campaign made this Winter to raise funds for the Home. The committee netted \$1010.97. It became the duty of his committee to suggest the following recommendations for consideration:

"1. That the Home trustees be asked relative to the advisability of disposing of the present costly location, and should they consider same, we recommend that a smaller house be leased or bought nearer some large city, and placed directly under the control of the State association where the same is located.

"2. Every State association wishing to send eligible person to the Home, until same is paid for and endowed, shall pay a pro rata share of expenses for maintenance of Home."

A special committee consisting of Dr. Wm. C. Anderson, Louis Berger and Thomas Lamb was appointed to consider the recommendations of the above committee. The members named recommended that the funds collected by the committee be turned over to the association treasurer and be subject to the action of the association executive committee, and that the association refrain from making any suggestions concerning the future conduct of the Home at this time. This action was approved by the members.

The report of the committee of revision of the U. S. P. was presented by Dr. Diekman. Many of the points made by Dr. Diekman were presented by Professor Joseph P. Remington in a recent address in this city. Dr. Diekman confined himself to the present status of the work of revision. He gave no definite statement as to date of publication. Galley revision was to begin July 1. The book was to contain 798 distinct items as opposed to 958 in the present edition. Sixty-four new articles had been added and 248 articles dropped. Publicity had been a feature of this revision. The admission of patent and proprietary articles had been disapproved at a committee meeting held at Washington. If manufacturers will permit their articles to go into the Pharmacopoeia they must sign an agreement. He cited the Holland case and pointed out the danger of opening opportunities for claiming damages. The coming U. S. P. will contain much valuable material furnished by manufacturers who have lent their laboratories and services. Comments and criticisms must be in by July 1—after that date should be sent in by telegram. Additions or deletions will be published from time to time: the U. S. P. will be up-to-date.

Dr. Joseph Weinstein, as chairman of the committee on adulterations, presented an interesting report, much of which was of a historical nature. He divided adulteration into three classes, accidental, unavoidable and intentional. The third division was the reason for the present laws. Conditions in this State, he said, have considerably improved. As a member of this committee he had collected samples in 1910, 50 per cent. of which had been below standard. Samples of the same drugs, collected in the same places this year, had almost all been up to standard.

Dr. H. H. Rusby opened the discussion of Dr. Weinstein's report. After pointing out the immense amount of work necessary in preparing such a report, he observed that this and similar reports should be accompanied by a caution unless too much be assumed. Referring to the point made relative to selling prices and decreasing net profits made by the president, Dr. Rusby asserted that prices in retail pharmacy had not kept up in proportion to the wholesalers' prices. The higher standards required of imported drugs was one reason for higher prices. When an importer receives 10 bales of buchu leaves at the port of New York and after removing the chopped stems with which it is adulterated, has only four and a half bales left, he must charge 100 per cent. more and drain the supply of buchu leaves to get another shipment. The most difficult task before the importer is to get out the last 3 to 4 per cent. of adulterations and the cost to the retailer is naturally increased. It is foolish to think that the public should get pure drugs without paying the bills.

Dr. Rusby said that in New York the people were fortunate in having a Board of Pharmacy that has supported the Federal government. Adulterated drugs may be sold in the same State as adulterated and the Federal government can't do a thing. "In New Jersey conditions are simply awful!" The Board of Pharmacy of New York has done something for the public but they won't get credit for their work. Dr. Rusby thought that the board should include some simple questions on the identification of powdered drugs in its examinations. The board should support the educational system.

One of the most appreciated reports presented at the meeting was that of George T. Riefflin, chairman of the committee on membership. He reported a total of 255 new members, 150 of these having come through the auxiliary. The committee as such had not done very well, but individual members had done very well in the work of getting members. Mr. Riefflin recommended that members be accepted every three months. He also recommended that the legislative committee report to the monthly journals every issue. This would triple the

membership. In discussing this report, Dr. Rusby expressed the opinion that the association had taken a deep interest in the schools of pharmacy in the State and that these institutions had not been sufficiently grateful. He intended, at regular intervals, taking five minutes at the beginning of lectures to report to his students what the association is doing. He will try next year to see if he cannot get some new members. Dr. Jacob Diner invited the membership committee to visit his school and tell the students what the association is doing for pharmacy. The executive committee was instructed to originate a plan for taking in members.

John Roemer, chairman of the committee on propaganda, told how he and his fellow members had endeavored to stimulate State-wide interest in pharmaceutical propaganda. The poor retail pharmacist himself overpowers all other forces in this work. Mr. Roemer read a letter from an up-State pharmacist, which, after pointing out the urgent need of propaganda in his city, concluded "therefore we think it best that we each look out for ourselves and grab what we can." The benefits of propaganda, Mr. Roemer asserted, included an immediate financial gain to the pharmacist and an ultimate gain in prestige to pharmacy. The report dealt largely with an account of the work of the committee during the past Winter. It was pessimistic when it referred to the support afforded the committee by pharmacists throughout the State.

Otto Raubenheimer read a brief introduction to his extensive report on "New Remedies, 1913-1914."

Papers were presented at the meeting as follows:

Charles V. Lewis, "What Course Ought the Pharmacist to Pursue in Relation to Dispensing Doctors? Does It Pay to Try and Get Their Business?"; Dr. Joseph Weinstein, "Urine Analysis as a Profitable Side Line for the Pharmacist"; Peter Diamond, "Separation of the Practice of Pharmacy from the Drug Business"; Dr. Joseph Kahn, "Modern Anti-Rheumatics"; Dr. William Mansfield, "Insect Flowers of Commerce"; Professor Barrus, department of agriculture, Cornell University, "Sale of Insecticides and Fungicides by the Retail Druggist"; Mrs. St. Claire Ransford-Gay, "Putting the Bulgarian Bacillus on the Market"; "Camphor and Its Preparations," J. Leon Lascoff; Otto Raubenheimer, "Aromatic Liquid Paraffin"; F. E. Niece, "Colorimetric Methods with a Demonstration of a Simple Colorimeter"; John Roemer, "Professional Responsibilities"; Dr. Joseph Mayer, "Quantitative Estimation of Glucose in Urine"; L. Marmor, "Evils of Counter Prescribing and How to Check It"; Hugh Craig, "What Is Your Salary and How Do You Earn It?"

Mr. Diamond's paper upon "The Separation of the Practice of Pharmacy from the Drug Business" occasioned considerable discussion, in which Dr. Jacob Diner, F. S. Rogers, Dr. Wm. C. Anderson, Dr. Joseph Weinstein and others participated. A committee of 11 was appointed to consider this question and another matter brought up by Mr. Roemer. The committee consists of Messrs. Diamond, chairman; Johnson, Anderson, Lehman, Boetzel, McCullough, F. S. Rogers, Brooks, Sears, Brothers and C. F. Brown. Mr. Roemer argued for a State pharmacy commission. He would separate the administrative functions from the police regulations. In his opinion it was a mistake to ever have placed the pharmacy law under the Regents. One of the members expressed himself as in sympathy with Mr. Roemer's contention, but asserted that the remedy advocated was worse than the present condition.

Upon Dr. Wm. C. Anderson's recommendation as a delegate to the N. A. R. D., the association voted to reaffiliate with the National body. Caswell A. Mayo enlarged upon the necessity of uniform systems of accounting for the retail druggist. He asked that a committee be appointed to co-operate with committees from other State associations upon this subject. According to the treasurer's report, Dr. Hy. J. J. Kassebaum, as special collector for the association, had added \$260 in back dues to the treasury. George T. Riefflin, at the time the treasurer's report was made, had added \$446 to the funds. Wm. Henry Rogers proposed that the travelers' auxiliary be consulted at the next place of meeting, the members concurring.

Dr. Wm. Mansfield conducted a contest as usual at this meeting, this year the contestants endeavoring to identify 165 crude powdered drugs. The prize winners are: First prize, Mrs. St. Claire Ransford-Gay; 2d, Miss Charlotte G. Ransford; 3d, Lillian Leiterman; 4th, Louis Berger; 5th, Wm. Ihmils; 6th, Caswell A. Mayo; 7th, Alfred B. Husted; 8th, H. S. Johnston; 9th, H. Sarason, and 10th, F. E. Niece.

The usual splendid programme of entertainment was presented by the auxiliary. The travelers elected as officers:

President, C. W. Coleman; vice-president, Charles F. Kelley; secretary-treasurer, R. W. DePuy; executive committee, W. C. Bucher, chairman; C. F. Fischer and R. B. Featherly. About 50 members of the auxiliary were in attendance.

By resolution at the last session the members rescinded the resolution barring board members from the legislative committee, and amended the by-laws so as to make the vice-president an ex-officio member of the legislative committee. It was also provided that prizes should be offered for work in bringing in new members. Mr. Mayo argued at some length to effect the cutting from the programme the reports of delegates—too much time is devoted to matters of common knowledge. A lively discussion followed, the presenting of papers being especially referred to, and although no action was taken it was plainly to be seen that, in the latter direction, few of the members favored lengthy papers or a lengthy programme of papers.

### Maryland Ph.A.

The annual meeting of the Maryland Pharmaceutical Association extended over four days. The deliberations were held at the State House, Annapolis, permission to use the historical Senate Chamber having been obtained from the Governor. Headquarters were made at Carvel Hill, now a hostelry, but in the old days one of the famous houses of the ancient city.

The members were welcomed by Governor Goldsborough and Mayor Strange, both of whom were highly complimentary in greeting the visitors.

J. Fuller Frames, the retiring president, praised the efforts of the various committees to carry on the work of the association, and spoke in an especially commendatory manner of the labors of the committee on membership, which had worked zealously to augment the ranks during the year. He advocated the formation of a traveling men's auxiliary as a means of getting better acquainted with the druggists throughout the State, regarding this as one of the most effective means of bringing them into close affiliations with the organization. Mr. Frames further discussed the Stevens bill, now pending in Congress, which permits of a measure of price control and which otherwise aims to regulate the distribution of goods. Mr. Frames expressed the opinion that the Stevens bill would be promotive of great benefit to the retail druggists by preventing limitless competition.

John B. Thomas, of the Thomas & Thompson Drug Co., Baltimore, also favored the Stevens bill.

The report of Treasurer J. W. Westcott, of Hynson, Westcott & Co., showed that the association is in good financial condition, with a balance in the treasury and all obligations met. Among the reports submitted was one by Dr. John F. Hancock, chairman of the Procter memorial committee of the A. Ph. A., which is intrusted with the task of raising funds and providing a monument to the "Father of American Pharmacy," which is to be erected at Washington in 1917, the centennial of Professor Procter's birth, when the American Association will hold its meeting at the National capital. Dr. Hancock urged the Maryland Association to line up with other State organizations. The matter, he said, had a special significance for Baltimore because Dr. Procter was a native of the Monumental City, having been born there May 3, 1817, though he was graduated from the Philadelphia College of Pharmacy, Baltimore at that time having no pharmaceutical training school.

The feature of the second day's proceedings was an address by Dr. Charles Caspari, Jr., Pure Food and Drug Commissioner of Maryland, who spoke in defence of the sanitary inspection law enacted at the last meeting of the Maryland General Assembly, and which encountered considerable opposition from a number of the druggists. These latter took the ground that the bill gave excessive powers to the State Board of Health, charged with the enforcement of the law, and to the sanitary inspectors appointed under it. Dr. Caspari proceeded to argue that the opposition was based mainly upon a misapprehension of the facts, and that it really was designed to promote the best interests of the pharmacists. He regretted that especially druggists should have antagonized the measure, and had thereby greatly hampered the work of the State Board of Health, when they should have in every way facilitated the efforts to abate conditions throughout the State inimical to the wellbeing of the public. He accused certain druggists of

having gone so far in their antagonism as to charge excessive prices for the samples of drugs and other articles bought by the inspectors to carry on their work.

James E. Hancock, chairman of the legislative committee, defended the opposition to the law, he having taken a prominent part in the campaign against the measure, and stated the objections urged by the druggists with him. There was considerable good-natured fencing over the matter, both sides making some strong points, but in an entirely amicable way.

David R. Millard, the treasurer of the Maryland Board of Pharmacy, presented the annual report of that body, showing how many candidates for registration had applied during the year and how many had passed. The following officers were elected: President, J. F. Leary, Rock Hall; vice-presidents, 1st, Eugene W. Hodson, Baltimore; 2d, George F. Bunting, Baltimore; 3d, Henry Howard, Brookeville; secretary, E. F. Kelly, Baltimore; treasurer, S. Y. Harris, Baltimore; executive committee, J. F. Frames, the retiring president, and George H. Wendell, Baltimore, and D. P. Schindel, Hagerstown.

Among the diversions were a trip up the Severn River to the head of navigation; an excursion across the bay to Claiborne, on the Eastern Shore; an inspection of the Naval Academy and grounds; dancing, card parties, bathing and a dinner.

### Pennsylvania Ph.A.

One of the most important resolutions passed by the Pennsylvania Ph.A. at its annual convention at Buena Vista Springs was that indorsing the Stevens price-protection bill, which, it was stated, "is a measure that will aid in establishing fair, free and honest competition, relieved from cut-throat methods, and give the independent merchant an opportunity to do business under legitimate conditions." The remedy for existing evil conditions was held to be under the Stevens bill which would force all manufacturers of advertised controlled products to stamp the retail price on the label and punish retailers who cut this established price.

President Richard H. Lackey, of Philadelphia, in his annual address, recommended the preparation of a State anti-narcotic measure, the provisions of which should coincide with those of the Harrison bill now before Congress. He pointed out the evils of indiscriminate house-to-house peddling and advocated the passage of a law to control and restrict this practice. Still another recommendation was to the effect that a provision of the proposed pharmacy bill should make it compulsory to print an adequate antidote upon the label of every package of poison sold. All these recommendations were referred to committee.

Dr. F. E. Stewart, of Philadelphia, in reporting for the committee on patents and trade-marks, warned his fellow pharmacists that in taking the stand in favor of the Stevens bill the harassed retailer in his desperate attempts to correct evils which may ruin his business may unwittingly "jump from the frying pan into the fire."

C. Mahlon Kline, of Philadelphia, in his report for the N.W.D.A., advocated the establishment of a National Board of Health. He also favored the giving by the next State Legislature to the Pennsylvania Pharmaceutical Examining Board of funds sufficient to enable it to protect the public health by the enforcement of laws which come under its jurisdiction.

The Hon. John W. Hoke, of Chambersburg, made the formal address of welcome to the delegates, which was responded to by Col. H. C. Demming, of Harrisburg. Mrs. Chas. H. LaWall, of Philadelphia, spoke for the ladies.

Among the items of business transacted were the following: The adoption of a draft of a proposed anti-narcotic law, and the recommendation to the incoming legislative committee that it prepare drafts of a heroin and an itinerant vendors' bill; the indorsement of the Stevens bill; the election of Caswell A. Mayo, president-elect of the A.Ph.A., to honorary membership; approval of an amendment to the Act of May 24, 1887, providing for the printing of an antidote on the label of commonly-used poisons. Chairman William H. Knoepfel, of the committee on membership, announced that 130 names had been added to the list at the low cost of \$18. In 1911 it cost \$780 to secure 428 members; in 1912 the cost was \$450 to get 149 members, and in the following year 38 members were added at no cost other than postage. The loss by death last year was 16 and by resignation and non-payment of dues 28. The need of a heroin law was emphasized when members of the Pennsylvania Pharmaceutical Examining Board declared that

the sale of this drug in the stores of Pennsylvania was growing to an alarming degree with the corresponding decrease in the sales of cocaine, due to stringent State and Federal legislation.

The principal entertainment feature was a circus presented by the members of the Traveling Men's Auxiliary. It took place in a huge tent, pitched in the ballroom of the hotel and the performers, all of whom were members of the auxiliary or the parent organization, went through their "stunts" in the big ring in the center. The Traveling Men's Auxiliary elected 40 new members during the past year, bringing the membership up to 204.

During the convention the Pennsylvania Board of Examiners and the Traveling Men's Auxiliary also met at Buena Vista Springs. The following officers were elected by the association and auxiliary:

*Pa.Ph.A.*—President, Edgar F. Heffner, Lock Haven; 1st vice-president, Josiah C. Peacock, Philadelphia; 2d vice-president, F. M. Siggins, Meadville; secretary, David J. Reese, Philadelphia; treasurer, Francis H. E. Gleim, Lebanon; member of the executive committee, Frank P. Streeper, Philadelphia.

*Travelers' Auxiliary*—President, Edward T. Hahn, Philadelphia; vice-president, J. R. Thompson, Pittsburgh; secretary, J. C. Reinhart, Philadelphia; treasurer, J. D. McFerren, Philadelphia.

The next annual meeting of the association will be held at Forest Park, Pa., beginning June 22, 1915.

### Kentucky Ph.A.

The 37th annual meeting of the Kentucky Pharmaceutical Association was held in Lexington, June 16, 17 and 18, and both in attendance and in interest was perhaps the best meeting in the history of the association, there being 150 members present. Thirty-five new members were added. The reports of the various officials indicated a very gratifying condition of affairs. The membership continues to show a steady increase, notwithstanding the recent raise in the annual dues from one to two dollars. The treasury has become sufficiently strong to bear, not only the regular expenses, but the publication, without the assistance of advertising, of the proceedings of the annual meetings.

A strong resolution was enthusiastically adopted endorsing the passage by Congress of the Stevens price-protection bill.

The following papers were read: "How to Build Up a Prescription Business," by G. O. Patterson; "What Classes of U.S.P. Preparations Should the Retail Druggist Prepare?" by Gordon L. Curry; "Bacteriological Products, Preparation and Storage," by George Eisele; "Counter-Prescribing," by Simon N. Jones; "The Dispensing Physician," discussed by Dr. F. H. Clark, of the Fayette County Medical Society; "Should Kentucky Have a Prerequisite Law Requiring That Applicant Be a High School Graduate Before Admittance to Examination for Registration?" by Otto Mueller; "Practical Pharmacy and System in Dispensing in the Prescription Department," by Addison Dimmitt; "The Best Methods of Advertising," by Leon Evans; "Some Needed Amendments to Our Pharmacy Law," by Edward Bloomfield.

The last session of the meeting was, upon invitation, held at the Experiment Station, when addresses were made by R. M. Allen, chief of the Food and Drug Division; C. S. Porter, chief inspector of drugs, and Dr. L. A. Brown, chief chemist of the drug department. In addition to these Dr. Lyman F. Kebler, of the Bureau of Chemistry, Washington, delivered a most interesting talk, which was highly appreciated by the association.

Hy. P. Hynson, of Baltimore, was a visitor at the sessions, and added much interest to the various papers and addresses throughout the meeting. The personal charm of his presence was both a delight and an inspiration to those in attendance.

The social features furnished by the local committee could not have been excelled, consisting of receptions, card parties, automobile rides, to which were added a cabaret dinner at the Phoenix Hotel, and a visit to the Elmendorf dairy, perhaps the most sanitary institution of its kind in America.

The following officers were elected for the ensuing year: President, Leon Evans, Mayfield; 1st vice-president, W. H. Tibbals, Somerset; 2d vice-president, Miss Alice Caden, Lexington; 3d vice-president, Geo. H. Worland, Brandenburg; secretary, J. W. Gayle, Frankfort; treasurer, Vernon Driskell, Carrollton.

Next meeting to be held either at Dawson Springs or at Cerulean Springs, June 16, 17 and 18, 1915.

## W. M. BOWMAN OHIO STATE PH.A. PRESIDENT.

### Members Deery Pomerene Amendment to Harrison Anti-Narcotic Bill—Raise Dues to \$5 Per Annum.

THE Ohio State Pharmaceutical Association, the largest State pharmaceutical organization in this country in point of membership, 1,450 pharmacists being now enrolled, held its 36th annual meeting at Cedar Point on Lake Erie, July 7-10, 1914. Edward Sehl, of New Philadelphia, occupying the chair. Waldo M. Bowman, of Toledo, was elected to head the association during the ensuing year. Others elected are:

First vice-president, R. C. Start, Toledo; 2d vice-president, C. L. Farns, Kenton; secretary, Theodore D. Wetterstroem, Cincinnati; treasurer, Edward W. Harrington, Columbus; members of O.S.P.A. council for two years, Carl Winter, Cleveland; member council, five years, H. T. Thompson, Lima; candidates for appointment to State Board, E. C. Davis, Akron; J. C. Scott, Bethel; E. S. Ely, Barnesville; D. D. Neal, G. Lipolis, and Carl A. Schmidt, Dayton; delegates to N.A.R.D., L. W. Funk, Columbus; C. L. McIntire, St. Mary's; Ed. H. Thiising, Cincinnati; C. S. Ashbrook, Mansfield, and Joseph Albrecht, Cleveland.

In his annual address, President Sehl characterized legislation as the paramount issue with which the association had to deal. He advocated vigilance on the part of the members to see that no pernicious laws are enacted and that laws already enacted to safeguard the interests of pharmacy should not be repealed. Three laws, recently effective, were of interest to members—House Bill's No. 230, 393 and 320, known respectively as the insecticide and fungicide law, the feedstuffs law and the Duffly bill or the new Ohio anti-narcotic law. Lack of interpretation had made their observation extremely difficult. Suits are now pending relative to the constitutionality of bills No. 230 and 393. Mr. Sehl was in accord with the provisions of the Duffly bill except that no arrangement had been included for the care of the poor unfortunates deprived of their "dope."

President Sehl regarded the promoting of the National Drug Trade Conference by the A.Ph.A. as a splendid achievement. Price-protection, after many years of agitation by the N.A.R.D., seemed nearer a reality. He advised that the State association continue its friendly relations with the National organizations which are doing so much in behalf of pharmacy. The efforts of his predecessors in office, nearly every one of whom had touched on the subject of Sunday closing, had not been in vain. Constant agitation had resulted in the druggists observing better Sunday and weekday closing hours, this being especially true in the smaller towns and cities.

That the association maintain an organizer in the field all the time, was advised by President Sehl. If the dues of \$2 were insufficient to finance the work of obtaining new members and retaining the interest of the old, the dues should be increased to \$3 per annum. It was not to be expected that Theodore D. Wetterstroem and E. W. Harrington could go on indefinitely giving up their valuable time attending meetings of county branches as they have in the past. The association should get an organizer to do this work. The members should take a more active interest in politics and endeavor to elect to office men who will protect their interests. A means must be found for cutting off the source of supply of habit-forming drugs to irresponsible persons who engage in the illegal traffic for the purpose of making money. Until such is found the control of their sale and distribution will be a difficult matter. In his tribute to deceased members, Mr. Sehl referred especially to Charles Huston, one of the organizers of the association and its first treasurer; O. N. Garrett, president '02-'03, and Z. T. Baltzly, president '05-'06. The Traveling Men's Auxiliary aided the association materially in getting members out to meetings, in securing new members and giving the organization publicity in the trade.

The association adopted a resolution, a copy of which is to be sent to each U.S. Senator, condemning the Pomerene amendment to the Harrison bill as "an iniquity sure to foster the habitual use of harmful drugs" and which will "tend to increase the number of unfortunate users." The amendment would exempt physicians and nurses from the requirement of registration. Following the charge by a member that the officers were practically elected by the nominating committee and that the annual election was a farce, that committee was instructed to report not less than three candidates for each office. The election this year was thus governed.

The by-laws were amended making the annual dues \$5 and changing the title of the committee on pharmacy laws to committee on State and National legislation. It was the opinion of many present that after the increase in dues the association would soon be unable to boast of being the largest State pharmaceutical association in the U.S. The Council was empowered to engage an organizer and collector for the ensuing year. By resolution, the members endorsed the Stevens bill and the recommendations in the president's address. Fifty-three new members were enrolled.

Among the speakers were E. P. Sandles, president Ohio Agricultural Commission; Professor Halapleus, Dr. W. A. Andrews, Fred R. Atchinson, Thomas H. Potts, secretary N.A.R.D.; L. H. Witte, State Drug Inspector W. R. Hower and Miss Bertha Ott.

Committee reports were submitted as follows:

Trade interests, George F. Reiser; U.S.P. and N.F. propaganda, Otto Muhlan; papers and queries, W. M. Bowman and C. R. Burnett; unofficial formulary, F. W. Kisker; adulteration and sophistication, Azor Thurston; drug market, Edward Spease; history, Joseph Feil; pharmacy laws, L. W. Funk; county organization, Charles L. McIntire.

The entertainment by the traveling men was lavish, a reception and card party, a Dutch lunch, at which 700 guests were served at one time, and an excursion to Put-in-Bay with a chicken dinner at that place, being features. Other features of the convention, beyond the travelers to supply, were the delightful weather and the beautiful moonlight nights.

The traveling men elected the following officers:

President, Van V. Dorr, Cincinnati; vice-president, H. A. Bauman, Akron; secretary, F. D. Brodrick, Elkhart, Ind.; treasurer, A. H. Burdsal, Columbus; council of administration, Van V. Dorr, C. N. Russell and George M. Schamps, Cleveland, and Charles Diehl, Cincinnati.

### Nebraska Ph.A.

The 33d annual convention of the Nebraska Ph.A. was held at Grand Island with an attendance of about 500. A fine programme was arranged by Secretary McBride, of University Place, including addresses by President J. H. Schmidt, F. W. Nitardy, of Denver, and Dr. J. B. Wood, of Kansas City. Social entertainments, an outing at Schimmers' Lake, an annual banquet and ball at the Liederkrantz, and drives about the city for the ladies were features of the entertainment.

The report of the legislative committee was of unusual importance. After a review of the laws already enacted but not strictly enforced it was set forth that the prime purpose of such legislation should be to prevent the sale of narcotic or habit-forming drugs promiscuously, to prevent the sale of any sort of poison bought with suicidal intent and to remove as far as possible the chance for accidental poisoning. The failure of the passage of the Johnson bill at the last session of the legislature was deplored and it was suggested that it would not "be hard to guess what the interest was that prevented its passage."

"The law known as the cocaine law," said the report, "is being generally observed, but it is well known that there are some very rank offenders of this law in the larger cities, and possibly in the smaller ones. The chief trouble in this law seems to be in the smallness of the penalty as provided for in section 2, and what is still more fatal, the lack of any officer who feels it incumbent upon himself to prosecute violations."

The following officers were elected: William Brookley, of Edgar, president; W. E. Clayton, Grand Island, vice-president; D. D. Adams, Nehawka, treasurer; J. G. McBride, University Place, secretary. As candidates for State Board of Pharmacy, J. W. Felter, of Maxwell; Neils Mekkelson, of Kenesaw; J. K. McDowell, of Lincoln. Delegates to National convention, N. P. Hansen, D. J. Fink, A. V. Pease, R. A. Lyman and J. E. O'Brien. Omaha was selected for the next convention.

### Colorado Ph.A.

The 24th annual meeting of the Colorado Pharmacal Association will be held at Pueblo, Sept. 8, 9, 10, where the headquarters will be at the Congress Hotel. A cabaret dinner, a trip through the great steel works, auto rides, and a fine programme of papers are among the attractions already announced.

**California Ph.A.**

The eighth annual convention of the California Pharmaceutical Association was held at Santa Cruz, with a very interesting programme of social events, and the transaction of considerable important business. San Francisco was chosen for the 1915 meeting-place, and the following officers were elected:

President, Prof. F. T. Green, of San Francisco; vice-presidents, David R. Rees, San Francisco; E. G. Bins, Los Angeles; secretary-treasurer, K. B. Bowerman, San Francisco.

The association went on record as opposed to the proposed eight-hour law amendment to be voted on by the State in November, President J. A. Sanford declaring that its enforcement would be a hardship on the retail drug trade and would certainly result in the reduction of wages.

The entertainment programme included a mussel bake on the beach, a "smoker" filled with thrills and punch (in fact, there were three boxing bouts), card parties, dancing, banquet and an excursion by special train to the big trees. Among the papers and discussions were the following: W. B. Dickinson, "What Shall We Do When the Legislature Convenes in 1915?" C. B. Whilden, "The Harrison Bill"; C. M. Twining, "Price Protection and Uniformity in Prices"; K. B. Bowerman, "The H. R. Bill, 13305—Stevens Bill"; W. H. Farley, "Paying Commissions to Doctors." W. Gnerich, "How to Buy Co-operatively and Make It Pay"; Mrs. E. E. Patterson, "How to Buy Co-operatively and Make It Pay"; N. Schwartz, "How to Buy Co-operatively and Make It Pay"; Prof. F. T. Green, "Leaks in a Drug Store That Eat Up Profits"; W. A. Wishart, "How to Make Window Decorating Pay"; Dr. J. Zieg, "How to Sell Disinfectants Over the Counter," "How Can I Make My Clerks Sell More Profitable Goods for Me?" K. B. Bowerman; "How Can a Drug Store Compete With Dispensing Physicians?" C. C. Walker; "How Can a Drug Store Compete With Dispensing Physicians?" W. B. Philip; "Soda Fountain Side Lines." J. S. Aguirre; "What Should a Pharmacy Apprentice Do and Expect?" J. A. Sanford.

**California Drug Clerks' Association.**

The third annual convention of the California Drug Clerks' Association was held at the Chamber of Commerce Building, Oakland, an address of welcome being given by Mayor Mott, with a reply by President J. S. O'Callaghan, of San Francisco. The eight-hour law, the employment of registered pharmacists only in hospitals and similar institutions, and the necessity for the college pre-requisite in all candidates for registration were among the matters discussed. The association voted in favor of requiring a college degree essential to registration. San Francisco was chosen as the next convention city, it was voted to hold a drug show in that city this Fall, and the following officers were elected:

President, J. S. O'Callaghan; vice-presidents, C. F. Basse, of Oakland; R. L. Terrell, of San Diego; A. E. O'Neill, of Stockton; H. E. Allen, of San Jose; R. G. Lindley, of Fresno; J. P. Taggart, of San Francisco; recording secretary, C. F. Holman, of San Francisco; treasurer, J. R. Busby, San Francisco; executive board, Fred Driscoll, W. H. Adair and C. B. Whilden, all of San Francisco.

**Connecticut Ph.A.**

The annual convention of the Connecticut Pharmaceutical Association was held at the Shoreham, Morris Cove, the sessions lasting two days. Among the papers submitted were a report on the New York State Ph.A. meeting by Thomas F. Main, of New York, and K. O. Curtis, of Bridgeport, read a report for the committee on pharmacy and queries. "Drugs in General" was the title of a paper by P. J. Garvin, of Bethel. The banquet at the Shoreham was unique in that there were no speeches, and a cabaret show was conducted while the banquet was going on. A dance followed.

The election of officers resulted as follows: President, Harrison D. Purdy, Derby; 1st vice-president, I. H. Levy, New Haven; 2d vice-president, J. H. Lockwood, Saybrook; secretary-treasurer, P. J. Garvin, Bethel. The following names were selected for presentation to the Governor from which to select a member of the State Pharmacy Commission: J. A. Levery, Bridgeport; John B. Ebbs, Waterbury; Samuel Thesbro, Willimantic; Harold Glendening, Norwalk; J. W. Marfand, New Britain, and Edward McQuaid, Ansonia.

The Traveling Men's Auxiliary elected the following: President, J. E. Carey, New Rochelle; vice-president, J. Cooper, Bridgeport; secretary-treasurer, R. F. Isbell, New Haven.

The associations will probably meet next year at the same place.

**Texas Ph.A.**

The dual sessions of the Texas Pharmaceutical Association and the Texas Drug Travelers' Association were held this year at El Paso with an unusually large attendance and a great deal of enthusiasm. Houston was chosen as the convention city for next year, and the following officers were elected:

President, Walter D. Adams, Forney; 1st vice-president, A. M. Fischer, San Antonio; 2d vice-president, C. E. Craycroft, Sherman; 3d vice-president, William Willman, Brownsville; 4th vice-president, Mrs. E. B. Dwyer, Houston; secretary-treasurer, E. G. Eberle, Dallas; home secretary, J. W. Gilman, Austin; historian, Miss Lum Ship, San Antonio.

W. F. Martin, of San Antonio, Tex., was elected president of the Texas Drug Travelers' Association at a meeting of the traveling men. L. G. Calvin, of Dallas, was elected 1st vice-president; T. D. Barton, of Amarillo, was elected 2d vice-president, and Dr. E. G. Eberle, of Dallas, was re-elected secretary-treasurer. The traveling men endorsed the selection of Houston as the next place of meeting. The retiring president, J. E. Gallagher, presided.

President John A. Weeks, of Ballinger, recommended five amendments to the laws of the State:

All candidates for certificates shall be required to pass an examination in chemistry, pharmacy, materia medica, bacteriology, physiology, pesology and toxicology, prescription reading and compounding and pharmacognosy; that not later than January 1, 1916, all candidates for examination for pharmacists' certificates be required to give evidence of successfully passing one year in a reputable college; that all candidates shall also give proof of having had at least three years' experience; that the definition of R. H. Walker, of Gonzales, as to what a reputable college is be incorporated in the law; that the examination fee for pharmacists be \$5.

R. H. Walker, secretary of the Texas State Board of Pharmacy, advocated the passage of better drug laws by the Legislature.

The report of E. G. Eberle, of Dallas showed a total balance on hand of \$1406.38.

The San Antonio delegation carried off most of the prizes, several of its members being chosen as the officials. The delegation was awarded the prize of \$100 for having the most members attending the meeting and a similar amount was won by Albert Kronkosky for his skill as a tango dancer. On the trip home it was decided to utilize the \$160 won by the delegation to establish a scholarship in pharmacy at the State University for some Texas boy. An amount sufficient for this scholarship will be made by the San Antonio druggists.

**Alabama Ph.A.**

The annual convention of the Alabama Ph.A. was held at Anniston in the circuit court room of the Calhoun county courthouse. Condemnation of violators of the anti-narcotic laws, and a demand for their more rigid enforcement and for the enforcement of the pure food and drug laws were features of the action taken. A big barbecue at Oxford Lake and a banquet at the Alabama Hotel were among the entertainment features. Next year's session will be held at Selma. The following officers were elected:

President, D. P. McDairmid, Talledega; 1st vice-president, L. L. Scarbrough, Anniston; 2d vice-president, W. S. Vance, Gadsden; secretary, W. E. Bingham, Tuscaloosa; treasurer, F. F. Ravenscroft, Union Springs; five names from which the Governor will fill vacancy on State Board of Pharmacy: L. G. Lewis, Tuskegee (present incumbent); S. L. Toomer, Auburn; L. L. Scarbrough, Anniston; Lee Wharton, Gadsden; John T. Poe, Mobile.

PRESIDENT ADAMS

**F. J. CAMPBELL HEADS MASSACHUSETTS PH.A.****Members Divided on Enrolling Riker-Jaynes Employees. But Can Find no Ground for Discrimination.**

At the 88th annual meeting of the Massachusetts State Pharmaceutical Association, held at the New Ocean House, Swampscott, the following officers were elected:

President, Frank J. Campbell, Lowell (re-elected); vice-presidents, John F. Harper, Great Barrington; William Hardie, Fall River; P. J. Fitzpatrick, Wellesley; secretary, James F. Guerin, Worcester; treasurer, James F. Finneran, Boston; trustees of permanent fund, William F. Sawyer, Boston; Edward A. Mole, Adams; James W. Cooper, Plymouth; delegate to State Board of Trade, E. LaPierre, Cambridge; candidates for State Board of Pharmacy, John H. Hayes, Fitchburg; John J. Tobin, Boston; George J. Carroll, Gardner; State Board of Health, Charles F. Nixon, Leominster; William S. Flint, Worcester; Edwin F. Leonard, Springfield.

After a heated discussion 87 registered pharmacists and registered assistants employed by the Riker-Jaynes stores were admitted to membership. The opposition led by Frank F. Ernst, of Jamaica Plain, was based on the claim that this company is hostile to the small druggist and that the applications for membership were a part of an attempt to obtain control of the association. Professor C. F. Nixon, W. E. Chamberlain and G. Charles O'Connor espoused the cause of the Riker-Jaynes people, asserting that it was not possible for the association to discriminate in the admission of new members. Any registered pharmacist or registered assistant coming under the requirements of the constitution was eligible for membership. The applicants were admitted by a margin of two votes. Total of members elected was 214.

The abolition of the sixth class liquor license was a subject of discussion. Druggists can sell alcohol only upon prescription, whereas, under the dollar license, hardware, paint and chemical dealers can sell any quantity. Grocery stores are also permitted to sell Jamaica ginger, while druggists are prohibited from selling it. Addresses were delivered by James F. Cavanagh, Everett; Prof. Elie H. LaPierre, Prof. T. J. Bradley, dean of the Massachusetts C.P.; Frank F. Ernst and William R. Acheson.

The entertainment was a feature of the convention. It included a banquet at Jackson Park, a baseball game between the druggists and travelers, a fine programme of field sports, band concerts and fire works and the annual ball.

The Traveling Men's Auxiliary elected the following officers:

President, J. A. Baeder; 1st vice-president, R. R. Patch; 2d vice-president, J. H. Johnson; secretary, C. H. Townsend, Somerville; treasurer, William H. Henderson, Malden; executive committee, D. E. Lochman, C. E. M. Harrington, F. W. Wormwood, C. C. Frolich, D. F. Chase, F. L. Carter, Jr. The travelers elected 35 new members.

**West Virginia Ph.A.**

The annual meeting of the West Virginia Ph.A. was held at the Loch Lynn Hotel, Mountain Lake Park, Md., June 23-25, with a long programme of papers, addresses and varied athletic sports. The exercises were concluded with a banquet. The officers elected for 1914-1915 were:

President, John Elson, Wellsburg; 1st vice-president, Charles D. Sturm, Clarksburg; 2d vice-president, P. A. George, Ronceverte; treasurer, Cathan Sinclair, Wheeling, and secretary, E. S. Downes, Welch.

**Wisconsin Ph.A.**

George H. Kesten, of Milwaukee, 2d vice-president of the Wisconsin Ph.A., was elected president for the ensuing year at the Delavan convention. Other officers elected included: 1st vice-president, Edward Hebbard, La Crosse; 2d vice-president, A. W. Krehl, Madison; 3d vice-president, William Thomson, Milwaukee; secretary (re-elected), E. B. Heimstreet, Palmyra; treasurer (re-elected), W. P. Clarke, Milton.

S. A. Eckstein, Milwaukee, vice-president of N.A.R.D., and for several years president of the Wisconsin Ph.A., was elected delegate to the National association, which will be held in Philadelphia in August.

Officers of the Ladies' Auxiliary were elected as follows: Mrs. Henry Rustad, Delavan; vice-president, Mrs. J. E. Rogers, Beaver Dam; secretary, Mrs. Will R. Thorp, Milton Junction; treasurer, Mrs. George King, Janesville.

A. C. Reichenbach, of Milwaukee, was elected president of the Wisconsin Pharmaceutical Travelers' Association. Other officers included: 1st vice-president, H. I. Carnahan, Chicago; 2d vice-president, Anton Scheurer, Milwaukee; 3d vice-president, Ira Davis; secretary, R. P. Illian, Milwaukee; treasurer, E. G. Rauber, Milwaukee.

**Missouri Ph. A.**

At the annual convention of the Missouri Pharmaceutical Association at Pertle Springs, a Summer resort near Warrensburg, the following officers were elected:

President, O. J. Cloughly, St. Louis; honorary president, Louis Grothe, Cole Camp; 1st vice-president, J. A. Trimble, Butler; 2d vice-president, John M. Hawkins, East Prairie; 3d vice-president, H. D. Lewellyn, Mexico; treasurer, William Mittelbach, Boonsville; permanent secretary, Dr. H. M. Whelpley, St. Louis; assistant secretary, Jacob Lieberstein, St. Louis; Council, Edward J. Schroes, St. Joseph; D. V. Whitney, Kansas City; Alfred W. Pauley, St. Louis; R. A. Davidson, Essex; Joseph Klinkenboard, Lamar.

The Missouri Pharmaceutical Travelers' Association elected these officers:

President, Jerry J. Murphy, St. Louis; 1st vice-president, Percy R. Hood, St. Louis; 2d vice-president, Scollin J. Chapline, Kansas City; 3d vice-president, Frank Klein, St. Louis; secretary, Bob Adelsperger, Kansas City; assistant secretary, Charles Waggoner, St. Louis; treasurer, Dan Liddy, St. Louis.

Dr. H. M. Whelpley read a paper on "Prehistoric Pestle and Mortars in Missouri."

A resolution censuring manufacturers for refusing to sell direct to retailers, claiming such manufacturers were acting in restraint of trade in so doing, was adopted.

**Illinois P.T.A. Annual Election.**

The Illinois P.T.A. meeting at Fox Lake was called to order by President Burhans, and H. E. Cornish, secretary and treasurer, presented his annual report. The committee to revise the constitution and by-laws, consisting of Messrs. Keim, Stevenson and Dudley, presented a completely revised constitution and by-laws which with a few minor changes was adopted.

The following is the new roster of officers of the Travelers for 1914-1915:

President, A. E. Lahl, representing the Welch Grape Juice Co.; 1st vice-president, A. C. Kennedy, of Robt. Stevenson Co.; 2d vice-president, R. D. Keim, of E. R. Squibb & Sons; 3d vice-president, G. L. Leonard, of Morrisson-Plummer & Co.; secretary-treasurer, R. C. Whidden, of Eli Lilly & Co.; members of the council, M. L. Burhans, chairman; A. W. Hobart, John Hott, Frank Hoey, F. W. Dudley.

Auditing committee: Ralph Smith, of Seabury & Johnson; Frank Burhans, of Miles Medical Co.; F. H. Elsner, of Best & Russel Co.

A rising vote of thanks was extended to President Burhans and Secretary Cornish, who each responded with a few appropriate words.

**Louisiana Traveling Men's Auxiliary.**

An association of drug travelers to work in connection with the Louisiana State Pharmaceutical Association has been formed at the instigation of H. W. Lyle, and while independent of the State organization, will draw its membership exclusively from that body. The objects as set forth in the constitution are: "To assist the retail druggists in every way in the promotion of their interests; to obtain funds to be used for the entertainment of the members of the Louisiana Ph.A. at their annual conventions, and to lend them assistance in every way as occasion may require." The following officers have been elected:

President, Harry W. Lyle; 1st vice-president, Paul C. Weilbaecher; 2d vice-president, George S. Humphreys; recording secretary, Francis X. Fitzpatrick; corresponding secretary, Julius Renaudin; treasurer, Frank J. Fischer. Meetings will be held on the first Tuesday of every month at 8 p.m.

**Georgia Traveling Men's Auxiliary.**

At the annual meeting of the Georgia Ph.A. at Indian Spring a traveling men's auxiliary was formed, with the following officers: President, T. B. Lewis; vice-president, R. C. Head; secretary-treasurer, W. R. Bell; executive committee, J. H. Vinson, chairman; A. H. Waldon, W. J. Deas, W. M.

Meadows; entertainment committee, E. G. Jacobs, chairman; W. Abercrombie, J. J. Franz, F. W. Green and A. I. Jessup. The object of the auxiliary is to co-operate with the pharmaceutical association in providing amusements and in helping to entertain the delegates at annual meetings, thereby creating more interest in the meetings and at the same time developing a closer and more friendly relation between the salesmen and the retailers.

#### Weights and Measures Conference.

At the recent ninth annual Conference of Weights and Measures of the United States, held at the Bureau of Standards, Washington, D. C., the following officers were elected for the ensuing year: President, S. W. Stratton, director of the Bureau of Standards, Washington; vice-president, William L. Waldron, Trenton, N. J.; secretary, Louis A. Fisher, chief of the Division of Weights and Measures, Bureau of Standards, Washington; treasurer, Charles C. Neale, St. Paul, Minn. According to the reports presented, the standardization of weights and measures has shown great progress during the past year. Delegates representing nearly every State in the Union were present at the conference.

#### Medico-Pharm. League's New Officers.

Following the recent annual meeting of the Medico-Pharmaceutical League held in the Hotel Astor, the executive committee of that organization met in Brooklyn, N. Y., and installed these officers for the coming year: President, Prof. Otto H. Rohde, M.D.; vice-president, Enoch Mather, M.D., Detroit, Mich.; treasurer, Eugenie R. Ellis, M.D.; recording secretary, Agnes Sparks, M.D.; corresponding secretary, Samuel F. Brouters. The last-named, together with Bernard Sacks, and Messrs. Lascoff, Jones, Machat, Carter, Emelin and DeWaltoff constitute the executive committee.

#### N.A.M.M.P. Protests Amendment to Harrison Bill.

The executive committee of the National Association of Manufacturers of Medicinal Products held a special meeting at the New York Drug and Chemical Club to consider pending National legislation and to protest vigorously against the so-called Pomerene amendment to the Harrison anti-narcotic bill. There were present at the meeting Dr. Henry C. Lovis, Charles M. Woodruff, Dr. A. R. L. Dohme and Dr. George D. Rosengarten. Dr. Lovis is president of the association and Mr. Woodruff secretary.

#### Dr. Crumbine Heads Food, Drug and Dairy Officials.

The American Food and Drug Officials at their 18th annual convention at Portland, Me., elected the following officers:

President, Dr. S. J. Crumbine, Kansas; vice-presidents, Dr. E. F. Ladd, North Dakota; H. C. Smith, Utah; A. M. G. Soule, Maine; secretary, W. M. Allen, North Carolina; treasurer, Frank A. Jackson, Rhode Island; executive committee, James H. Wallis, Idaho. The next meeting will be held at Berkeley, Cal., the date to be designated by the executive committee.

#### Chicago Drug Club.

At their headquarters, the Hotel Sherman, on Monday evening, June 22, the drug club held its annual "Good Fellowship Night." In spite of the hot spell the members attended in large numbers. The chief speaker was Coroner Peter Hoffman, of Cook County, whose topic was "Safety First." A special programme of cabaret performers made the evening most enjoyable and the usual refreshments and "smokes" were served. The Club will meet August 24.

#### NEWS OF THE ASSOCIATIONS.

The annual picnic of the Chicago Drug Club will be held Aug. 13 at Palos Park.

The Houston (Tex.) R.D.A. has been organized with the following charter members: A. E. Kiesling, F. B. Dwyer, Gus Hoencke, Ray Ragland, B. W. Steele, E. A. Anderson, A. C. Fulton, T. J. Nolan, George K. Treadwell, I. Lewyn, J. S. Collins, Max Hoencke, Bob Walmsly, J. L. Gilpin, W. A. Ridley, R. Webb Mading, J. C. Huston, E. E. Letchworth, Gus Dickebut, Joe Kuntzman, B. A. Randolph and H. B. Moore.

The drug clerks of Elmira, N. Y., have organized with the

following officers: President, Myron Tillman; vice-president, C. E. Horton; secretary, B. T. Ryell; treasurer, F. G. Cole; committee on constitution and by-laws, C. S. Roy, William P. Ryan, C. E. Horton; on propaganda, R. S. Swayne, Earl Allen, B. F. Ryell, F. J. Cole. Many of the clerks declare they are working 74 hours a week, and they want a nine-hour day.

The roster of officers and committees of the New Jersey Ph.A., some of which were printed in the July ERA, is as follows: President, J. C. Gallagher, Jersey City; 1st vice-president, G. M. Hays Deemer, Atlantic City; 2d vice-president, William F. Weiss, Dover; secretary, Frank C. Stutzlen, Asbury Park; treasurer, James C. Field, Plainfield; executive committee, G. M. Hays Deemer, Atlantic City; Charles J. McCloskey, Jersey City; Leon Taylor, Lakewood; Louis T. Langheinz, Elizabeth; Harry W. Crook, Newark; legislative, Stephen D. Wooley, Ocean Grove; David Strauss, Newark; George M. Beringer, Camden; Isaac D. Keuper, Trenton; Thomas Armstrong, Plainfield.

Druggists of Cavalier, Pembina and Walsh counties (North Dakota) have organized the Tri-County Druggists' Association with the following officers: President, E. G. Erickson, Cavalier; secretary, Louis J. Wiker, Hensel; executive committee, H. B. Cook, Cavalier; Clyde A. Spillman, Langdon; D. S. Thomas, Fairdale; R. E. Cuffie, Concrete; Robert Swanlow, Milton.

S. A. Eckstein, Milwaukee, head of the Wright Drug Co., and 1st vice-president of the N.A.R.D., and George H. Kesten, alternate, Milwaukee, will represent the Wisconsin Ph.A. at the annual convention of the N.A.R.D. to be held in Philadelphia during the week of Aug. 17. At a meeting of the Milwaukee Ph.A., held July 16, George H. Kesten, Milwaukee, and Theodore Mueller, West Allis, were elected delegates from the Milwaukee organization.

At the annual June meeting of the Missouri Ph.A. at Pertle Springs, Warrensburg, Secretary Whelpley's suggestion of a special committee on the Beal Endowment Fund was accepted. It was decided to change the by-laws so delinquents may be dropped after one year, following due notice. Charles E. Zinn, secretary of the Board of Pharmacy, and F. H. Fricke, State Food and Drug Commissioner, were given a vote of thanks for efficient services in the cause of pharmacy in the State. It was the general sentiment that it would be best to ask for no changes in the pharmacy law. It was decided to join the Retail Merchants of Missouri, on a basis of 60 members, \$15. Thirty-seven new members were elected. The next convention will be held at Pertle Springs, third Tuesday in June, 1915.

Several hundred friends accompanied the Chicago R.D.A. on its ninth annual boat ride to South Haven, Mich., on July 23, where the day was spent in bathing and boating.

The Erie County (N.Y.) Pharmaceutical Association at its recent annual meeting elected the following officers: President, Robert K. Smither; 1st vice-president, E. H. Brecken; 2d vice-president, H. M. Anthony; secretary, A. H. Reimann; treasurer, Max L. Kaestner. The members expressed themselves as pleased with the provisions of the Boylan law and offered their support to any measure that will restrain the formation of the drug habit.

The National Dental Association met in Rochester on July 9 and elected the following officers: President, Dr. Don M. Gallie, Chicago; 1st vice-president, Dr. Edward C. Link, Rochester; 2d vice-president, Dr. L. P. Dotterer, Charleston; 3d vice-president, Dr. D. E. Turner, St. Louis; general secretary, Dr. Otto King, Huntington, Ind.; treasurer, Dr. H. B. McFadden, Philadelphia.

The American Society for Testing Materials met in Atlantic City on July 1 and elected the following officers for the ensuing year: President, A. W. Gibbs; secretary-treasurer, Edgar Marburg.

At the national convention of the Alpha Chi Sigma professional chemists' fraternity, recently held at Madison, Wis., the following officers were elected: Grand master alchemist, Dr. Harry Curtis, University of Colorado; vice-grand master alchemist, L. F. Nickell, Washington University, St. Louis; grand recorder, Dr. L. I. Shaw, Northwestern University, Evanston, Ill.; grand alumnus, Dr. A. N. Buswell, Columbia University, New York. Dr. J. Howard Matthews, of the University of Wisconsin, who was the grand master alchemist of the fraternity since it was founded in 1902, was made emeritus grand master alchemist. Thirty-five delegates were in attendance at the convention from 26 schools.

## THIRD OPIUM CONFERENCE AT THE HAGUE.

## New Rendering of Chinese-British Proposal to Put Convention Into Early Action Is Accepted.

At the third Opium Conference held in June at the Hall of the Knights of The Hague the following report was adopted:

"The Conference believes—(1) That it will be possible to put into effect the International Opium Convention of January 23, 1912, by the signing of that same Powers which have been invited to sign the Convention with Art. 23, Clause 1, have not yet done so; (2) That the Convention will be put into force by all the Powers which have signed it as soon as these Powers and those who have made known their intention to participate will have ratified it. The date on which it will be put into force will be the date mentioned in Art. 24, Clause 1—*i. e.*, three months after the day on which the Dutch Government will have communicated the last of such ratifications to the Powers."

The Dutch Minister for Foreign Affairs was invited by the conference to make urgent representations to the Powers which have signed, but not ratified the convention, in order to induce them to declare themselves ready to proceed as soon as possible with ratification.

A new rendering of the Chinese-British proposal to put the convention into action at an earlier date than December 31, 1914, if possible, was read and explained. The proposal in its new terms was accepted by the conference and the following conclusions were arrived at:

A. The Conference believes:

(1) That it is possible to put the Convention into force, notwithstanding the fact that some Powers which were invited to sign the Convention in compliance with Art. 23 have not done so.

(2) That the Convention will be put into force by all the Powers which have signed it as soon as these powers and those which have made known their intention to participate will have ratified it. The date on which the Convention will be put into force will be that which is mentioned in Art. 24—that is, three months after the date on which the Dutch Government will have communicated to the participating Powers the receipt of the last ratification.

(3) That if on an earlier date to be fixed by the Conference all the Powers which have signed the Convention or intend to do so have not yet ratified it, the participating Powers which have ratified the Convention on that date will be authorized to put it into force. The same competence will be granted to the participating Powers which will ratify the Convention after that date.

(4) That the date mentioned will be December 31, 1914.

(5) That the Powers which have not yet signed the Convention will always be allowed to do so.

B. The Conference concludes that at the Foreign Office at The Hague a separate Protocol will be drawn up by which the Powers which have signed the Convention and want to make use of it will make known their intention to do so. The final Protocol will be drawn up by the Drafting Committee and be submitted to the judgment of the Conference at the meeting on June 24.

In his closing speech, as reported in the *Chemist and Druggist*, of July 4, and from which the above is abstracted, the Dutch delegate and president of the conference (J. T. Cremer) said that the moment had arrived for the signatory Powers to continue by internal legislation "the philanthropic combat against the products which envenom nations."

## Missouri Saccharin Law Held Void by Supreme Court.

That saccharin is not deleterious to the health and that the law prohibiting its use which was passed three years ago by the Missouri Legislature is discriminatory, is the gist of an unanimous decision recently handed down by the Supreme Court of that State. In the case against the Empire Bottling Co. of St. Louis, is dismissed. With the assistance of State Food Commissioner Fricke, the Monsanto Chemical Works, of St. Louis, manufacturers of saccharin, made a test of the prosecution against the Empire Bottling Company to prove the validity of the law. The law prohibits the use of saccharin in soft drinks, but permits its use in foodstuffs.

The court's opinion reads:

"According to the proffered evidence, one would need to drink about 13 pints of the defendant's soda water in 24 hours before he would get to the danger point in the use of saccharin. If such is the case, the amount of saccharin in defendant's soda water is not deleterious to health, for we cannot imagine one so addicted to its use as to consume that much. But, independent of the question as to whether such use of saccharin is deleterious, we think that the statute is an arbitrary discrimination against the makers of soda water. It may be taken for granted that saccharin is or may be used in foods and drinks which are non-alcoholic. Whether it is deleterious to health or not, it is certainly an arbitrary distinction to prohibit the use of saccharin in non-alcoholic drinks and not prohibit its use in other foods and drinks. If it is deleterious to health in one case, it would be so in the other. If it was the purpose of the Legislature to prevent the use of

saccharin in soda water, not because saccharin is deleterious, but because it sweetens the soda water, then it is an arbitrary discrimination in favor of those who sweeten soda water with sugar. If the Legislature regarded saccharin as deleterious to health, it should have excluded it from all foods and drinks, and not merely from non-alcoholic drinks. If the purpose was merely to prevent the sweetening of non-alcoholic drinks, it should have prohibited the use of any kind of sweetening in such drinks.

"We regard this as too plain a case for a long citation of authorities. It talks clearly within the principles enunciated in *State vs. Milkstock*, 225 Mo. 561, l. c. 572.

"The judgment is reversed and the defendant discharged."

## Saccharin Smugglers in Europe.

A recent number of the *Pharmazeutische Zeitung* (Berlin) contains an interesting account of the tricks practiced by the saccharin smugglers in their efforts to get this forbidden chemical past the frontiers of Germany, Austria, Switzerland, and other countries. In Germany, the manufacture of saccharin is prohibited by all firms save one, which holds the Government license. A price of 30 marks per kilo—about \$3.50 a pound—is fixed as the maximum. The law prohibiting the manufacture went into effect April 1, 1903, and is said to have been the result of a campaign carried on by the sugar interests. The provisions of the law are very drastic, and it is felt in many quarters that it is unjust, in that it deprives persons who might wish to make legitimate use of saccharin in their own homes, of the right to obtain it, without going to a physician each time for a prescription. The demand for saccharin is very large, and consequently an enormous smuggling trade has arisen, the center of which is Zurich, where, it is alleged, more than a thousand persons make their living by the illegal commerce.

In Switzerland the manufacture of saccharin is free, since that country has no sugar industry. The bulk is sent to Austria, where saccharin is an ordinary article of commerce, and the price reaches 80 marks. But smuggling from Switzerland direct into Austria is a precarious business, both by reason of the heavy fines, and because the Austrian customs officials keep up a much sharper lookout than the German officers. The usual route is by way of Dresden, Munich, Chemnitz, or Leipsic, thence over the Austrian frontier.

The oldest method of smuggling consisted in packing the saccharin so as to imitate chocolate boxes, or in match boxes; other containers were oil and milk cans, feed bags for horses, smuggler's coats, vests, and entire suits with secret pockets, shoe polish and oil sardine boxes, etc. Recently one sly operator used a number of specially constructed brushes, with double backs. In solution, saccharin was sent in cases as champagne, and the smuggler had piled up his thousands before the deception was discovered. A specially enterprising rascal made some boxes, holding 25 kilos, which fit exactly in the heaters and other fittings of railroad cars. At another time, blocks of artificial stone were made up, containing saccharin, and sent across the border by the wagon load. In another case, wax and saccharin were dissolved in ether, and made into candles, which were then sent to Einsiedeln to be blessed. These articles for devotional exercises then found their way to a Vienna firm, supposed to handle nothing but religious goods. There they were treated with alkali, and the pure saccharin precipitated by acid. Herring boxes, sesame oil cans, and in one instance a black coffin, were also pressed into service. A more original trick was recently discovered at Pfungstadt, near Frankfurt-on-the-Main, where a carousel, imported from Switzerland, was found to be provided with hollow wooden horses, neatly packed with saccharin cans. In 1912, a large railroad car, about 75 feet long, and designed for carrying furniture, was examined by the customs authorities and passed. But on weighing the car with its load, it was found to be 50 cwt. heavier than called for by the bill of lading. The astonishing discovery was made that the sides and roof of the car were made of double sheet metal, the space between the two skins being crammed with small packages of saccharin, each bearing a label stating weight and value.

All saccharin discovered by the customs officials is confiscated. In Austria it is destroyed by burning, while in Germany it is sold to the concessioned factory at the cost of production. The amount of saccharin thus turned over to the factory is so great, that for a long time none has been manufactured, and a large supply is still on hand.

## SCHOOLS AND COLLEGES

### College of Pharmacy, State University of Iowa.

The baccalaureate address to the graduates of the University was given by the Rev. Charles H. Henderson, D.D., of the University of Chicago. Tuesday of commencement week was "Alumni Day" and various classes held their reunions. In the afternoon a series of "stunts" were carried out as well as a game of baseball between an alumni team and the Varsity, in which the Varsity team was the winner.

At the 28th annual commencement the address was given by the Hon. Alexander MacDonald, LL.D., managing editor of the *Toronto Globe* on the subject of "Internationalism and the University." Two students received the second degree in pharmacy, that of Pharmaceutical Chemist. They were Homer D. Long, Ph.G., 1911, and Thurston J. Long, Ph.G., 1913. The degree of Graduate in Pharmacy was conferred upon a class of 14.

The Dean Teeters prize of membership in the American Pharmaceutical Association for recognition of organic drugs was awarded to H. M. Doden, of Wilton. Mr. Doden also attained the highest rank in Practical Pharmacy for the senior year, thereby winning membership in the Iowa Pharmaceutical Association offered as prize by Prof. Zada M. Cooper.

Prof. Kuever's prize of a year's subscription to the *Journal of the American Pharmaceutical Association*, offered to the junior student attaining highest rank in Practical Pharmacy was awarded to L. T. Dyk, of Orange City.

The marriage of Prof. R. A. Kuever and Miss Ruth Hindman occurred at the home of the bride's mother at Iowa City at 8 o'clock on the evening of June 20th. Only relatives and intimate friends were present. Professor and Mrs. Kuever passed a month in the West and after their return to Iowa City will be at their new bungalow home on the West Side.

### University of Southern California.

The following graduates received the degree of Ph.C. at the recent commencement exercises of the University of Southern California held in Los Angeles: Cecil Adams, Thomas Frederick Blake, Daniel Cohen, Wallace L. Cornwall, Orla Mae Fitch, Charles Jack Foerster, Wilson Orlando Gibbs, Lewis Edward Gilson, Harry G. Gostanian, William J. Hannberg, I. Milton Haun, Louis A. Hopkins, Pong Kwan Lee, Norman Levin, Robert Cannon McKnight, Ronald William MacCorkell, Armond W. Malone, S. Nace Marks, Jr., Roy Ellsworth Martin, Gertrude Elsie Mercer, Henry Louis Miller, Ray Lloyd Miller, Albert Maurision Muck, Fred Osborn, George Hubbard Saltmarsh, Curtis Taylor Schreyer, Lannes Sharman, Marion Georgia Schulman, Russell Ernest Turner, Andree Patricia Viole, Arthur Frank Wagner, Samuel Henry Watters, Lois Marie Weller.

### University of Colorado.

Four candidates received the degree of Ph.C. at the recent commencement of the School of Pharmacy, and one received the degree of B.S. in Pharmacy. The following is the list of graduates and their occupations:

Miss Ilah Irish, Ph.C., is spending the Summer at Estes Park, and in the Fall intends to take up pharmacy work in Denver.

Rex Harrington, Ph.C., who is spending a few months in Denver, expects to locate in Oregon.

Dr. Henry F. Masson, Ph.C., has returned to his home in Washington, Iowa, where he will resume the practice of medicine.

Charles F. Poe, Ph.C., B.S. (Pharm.), is now engaged as instructor in chemistry and food and drug analyst at the University of Colorado.

### North Dakota A.C. School of Pharmacy.

Five students completed the course in pharmacy and received degrees at the recent commencement exercises held in Fargo. They are Edwin C. Zimmerman, Martin H. Krantz, W. E. Henderson, Lincoln A. Hanson and Arthur Fossum. A majority of the graduates have already secured positions and will soon report for work.

### Philadelphia College of Pharmacy.

At the 93d annual commencement of the Philadelphia College of Pharmacy degrees were awarded to a class of 146 from 25 countries and States. Eleven were given the degrees of pharmaceutical chemist, six were awarded certificates of proficiency in chemistry, one a certificate of efficiency in the food and drug course, while 23 were granted certificates in bacteriology. Stanley Eugene Sutton was given Distinguished honors, while the honor Meritorious was awarded Woods D. Balliet, Louis Cohen, Edgar S. LaWall, Wm. R. Wallace, Alvin C. Webb, Abram Weinstein and Elwyn J. Wheeler. The following prize awards were bestowed:

W. B. Memorial Gold Medal and certificate, Stanley E. Sutton. Chemistry Prize, \$25, William R. Wallace; honorable mention, E. S. LaWall.

Materia Medica Prize, \$25, Anton Hogstad, Jr.; honorable mention, W. D. Balliet, E. S. LaWall, Elmer F. Merz, Nervin A. Myers, S. E. Sutton, Alvin C. Webb, Elwyn J. Wheeler.

Microscopic Research Prize, compound microscope, Anton Hogstad, Jr.; honorable mention, Edmund E. Carr, Daniel J. Fry, Jr., Wm. W. Hockenberger, Frank L. Kahler, Walter M. Kaufman, Norris D. Rowland, Edwin R. Spangler, Alvin C. Webb.

Analytical Chemistry Prize, \$25, Wm. R. Wallace; honorable mention, S. E. Sutton, Alvin C. Webb.

Operative Pharmacy Prize, \$20, Stanley E. Sutton; honorable mention, W. D. Balliet, Charles F. Kutteroff, Forrest S. Marshall, Edwin R. Spangler, Alvin C. Webb, Fred C. Wolverton.

Mensch Botany Prize, \$20, Alvin C. Webb; honorable mention, Edmund E. Carr, Daniel J. Fry, Jr., Walter M. Kaufman, Edwin R. Spangler.

Mahlon N. Kline Theoretical Pharmacy Prize, \$20, Stanley E. Sutton.

Commercial Pharmacy Prize, \$20, John C. Gehrung; honorable mention, Joseph F. Bordini, Louis Cohen, Meyer C. Epstein, Nervin A. Myers, Stanley E. Sutton, Alvin C. Webb, Elwyn J. Wheeler.

Instructors' Prize, \$20, Stanley E. Sutton; honorable mention, Chas. L. Gantert, Anthony LaCourse, Jr., Lee T. Trambley, Alvin C. Webb, Abram Weinstein, Elwyn J. Wheeler.

Pharmacy Quiz Prize (membership in A. Ph. A.), Alvin C. Webb; honorable mention, Edgar S. LaWall, Alvin C. Webb, Elwyn J. Trambley, Abram Weinstein, Elwyn J. Wheeler.

Special Lecture Report Prize, \$10, Charles F. Kutteroff; honorable mention, Louis Cohen, Charles L. Gantert, Anton Hogstad, Jr., Maurice Rosoff.

Kappa Psi Fraternity Prize, gold medal, Stanley E. Sutton; honorable mention, Edgar S. LaWall, Alvin C. Webb, Elwyn J. Wheeler.

### University of Michigan School of Pharmacy.

Over 1000 graduates received degrees at the recent commencement exercises of the University of Michigan, the School of Pharmacy furnishing its quota of those honored.

The Summer session opened June 29 with 40 students enrolled in the School of Pharmacy.

Dean J. O. Schlotterbeck has obtained a house in Ann Arbor and will return upon the opening of the university in the Fall. Dr. Schlotterbeck has been absent during the past two years, during which period he installed a scientific laboratory for J. Hungerford Smith Co., Rochester, N. Y.

Acting Dean A. B. Stevens recently addressed the students of the Summer session on the subject, "The Manufacture of Japanese Lac and Lacquer Ware."

E. D. Gibson, Ph.C., '14, will travel extensively in Europe this Summer before going to his home in Buenos Ayres.

N. B. Lawrence, B.S., '14, has accepted a position with J. Hungerford Smith.

F. T. Bradt, B.S., '14, is first assistant chemist to Dr. A. B. Lyons, of Nelson Baker & Co., Detroit.

W. L. Mitchell, B.S., '14, is with Merck & Co., Rahway, N. J.

J. K. Lilly, Jr., Ph.C., '14, will take up his duties with Eli Lilly & Co., Indianapolis.

L. S. Blake, B.S., '13, professor of pharmacy at Alabama Polytechnic Institute, is registered at the university for his master's degree.

### North Pacific C. of P.

At the recent commencement exercises 11 students completed the course in pharmacy and received the degree of Ph.G. in the presence of a large gathering of relatives and friends. The annual address was delivered by Dr. Charles J. Smith, Democratic nominee for Governor of the State, and the charge to the graduates was given by Dr. Luther R. Dyott. Reports to hand indicate a large increase in attendance next year. Prof. C. M. McKellips, formerly dean of the Department of Pharmacy, Oregon State College, whose resignation from that position was recently noted in the ERA, becomes head of the N.P.C.P. at the beginning of the October term.

## A Porto Rico Examination.

*Student Wins Highland Park College, Des Moines, Iowa—  
English Faculty But Heart Right.*

MANNABO, PORTO RICO, May 15, 1914.

Dear Professors:

I am feeling fine now, I took last examination of April 27th and I passed everything.

The programme was:

Monday—Hygiene 9 to 11 a.m. Fisics 2 to 4 p.m.

Tuesday—Physiology 9 to 11 a.m. Inorganic Chemistry 2 to 4 p.m.

Wednesday—Natural History, Botany, Zoölogy, Minnerceology 9 to 11 a.m. Organic Chemistry 2 to 4 p.m.

Thursday—Materia Medica of vegetable drugs 9 to 11 a.m. Materia Medica Inorganic 2 to 4 p.m.

Friday—Toxicology 9 to 11 a.m. Incompatibilities 2 to 4 p.m.

Saturday—U.S.P. 9 to 11 a.m. Practical work and identification of drugs from 2 to 4 p.m. Some examination, believe me. My ears were something like red precipitated.

That Natural History, Fisics and Organic Chemistry was awful hard; but that Organic—Oh! Mine!

I saw in the *Highlander* the Highland Park Registered Pharmacists. Congratulations to my classmates. They did a nice work for Highland Park. I guess I did something for Highland in Porto Rico Board of Pharmacy. I think that everyone graduated from Highland Park can pass any State board in the whole world.

The requirements in Porto Rico Board are Diploma for a good school of Pharmacy, good moral character with a certificate of the Mayor of the native town and two years of drug store experience. What you know about that, Prof.?

I want to see a boy from a plugging school taking the Board in Porto Rico. I guess if one of those boys try the board will laugh at them. The board here is composed of five members, all them are old people, that know something. They gave me the examination in Spanish because they don't give it in English. I translated all that I learn in H.P.C. and everything was all right. The practical work was awful. They send me to make 60 Gm. of Elixer of I, Q and S without book.

Well, Prof., best regards for Dr. Parker, Zuker, French and Galloway. Excuse me everything wrong in these letter because I don't know enough English. Best regards to all members of Mortar and Pestle Club. Well, Rah! Rah! Rah! Highland!

Good-by Prof. thanks for all your work done in myself.

Yours very truly,

OCTAVIO GARCIA.

### University of Washington.

For the first time in the history of the University of Washington School of Pharmacy, the degree of Master of Science in Pharmacy was conferred upon a graduate of this institution, Miss Frances E. Hindman, Ph.C., B.S., who completed the full five years' course with high honors. She will serve as instructor in pharmacy in the school during the coming year, and also as assistant State chemist and bacteriologist. The degree of B.S. was conferred on six candidates who had completed the four-year course, while 13 graduates received the degree of Ph.C.

Earl M. Platt, B.S. (Pharm.), a member of this year's graduating class, who has been an assistant in pharmacy in the laboratory of the school for the last two years, will serve as instructor in materia medica and pharmacognosy during the coming year.

### Notes of the Schools.

At the commencement exercises of the Pittsburgh College of Pharmacy, the degree of doctor of pharmacy was bestowed upon five graduates; one received the degree of Pharmaceutical Chemist, and 79 the degree of Graduate in Pharmacy. Certificates of proficiency in materia medica and chemistry were awarded two.

At the recent commencement exercises of the Iowa College of Pharmacy 17 were awarded the degree of Graduate in Pharmacy, and two the Ph.C. degree. The class officers were W. E. Palmer, president; M. R. Hohmann, vice-president, and Maude Wieland, secretary-treasurer.

## BOARD EXAMINATIONS

### Colorado.

DENVER, July 20.—Ten pharmacists passed the examinations for registration held by the State Board June 13-14. Eight others passed as assistant pharmacists.

Pharmacists—Franz F. Berg, Roland P. Cape, Harry B. Ausburn, Colorado Springs; Carl F. L. Miller, Hugo; Harold A. Parkinson, Glenwood Springs; Guy A. Schraeder, Fort Morgan; Kenneth A. Lea, Leadville; Ernest E. Williams, Rex Harrington and Thomas H. Brown, all of Denver.

### Missouri.

KANSAS CITY, July 8.—At the examinations held by the State Board at Pertle Springs, the following were found to be entitled to the certificate of registered pharmacist:

Lee Howard Witty, Salem; A. W. Mueller, St. Louis; C. H. Pope, Jefferson City; W. P. Massock, Illinois, Ill.; Charles Lasersohn, St. Louis; Claud Wright, Macon; Louis E. Brown, Maplewood; Charles R. Davis, St. Louis; Coke B. Browning, Senath; Walter Freudenberg, St. Louis; Lydia F. Batdorf, Freeburg, Ill.; Albert L. Raithel, St. Louis; Mitchell F. Simer, Portageville; John E. Rayl, Crocker; Fred Harris, St. Louis; Frank J. Helms, St. Louis; Edwin J. Rhein, St. Louis; Henry A. Karger, Karger's Ridge, Ill.; H. D. Carlos, Jr., Buncheon; C. F. Haines, Rushville. George E. Williamson, Waverly, and Edward A. Lammers, St. Louis, passed the examinations as assistant pharmacists. The next meeting of the board will be held at the St. Louis College of Pharmacy, Oct. 12.

### North Carolina.

RALEIGH, July 20.—Thirty-five out of the 81 applicants for licenses passed the recent examinations of the State Board of Pharmacy. Of those taking the tests 67 were white and 14 were colored, and of the successful applicants 34 were white and one colored, as follows:

Ernest V. Woodard, Princeton; David C. Pemberton, Troy; Joseph W. McKay, Kings Mountain; Joseph D. Joyner, Franklin; William E. Tate, Winston-Salem; William A. McDonald, Enfield; Henry O. Holland, Apex; Richard H. Andrews, Chapel Hill; Junius W. Davis, Southport; Luther White, New Bern; James L. McDuffie, Greensboro; William P. Faucett, Raleigh; E. Lytch, Rowland; George K. Moose, Gold Hill; Paul G. Caldwell, Gastonia; Leland B. Grantham, Goldsboro; Kenneth A. Kirby, Marion; John G. Roberson, Greensboro; Joseph F. Hoffman, Jr., High Point; William H. Thornton, Baltimore; Calvin B. Ferrisette, Elizabeth City; Rupert W. Jernigan, Chapel Hill; Fletcher B. Bizzel, Kinston; Malcolm E. Pierce, Cameron; Van W. B. Elkins, Siler City; David T. Brites, Fayetteville; Edward W. Ward, Tarboro; Wilson W. Allen, Hendersonville; Richard E. Davis, Waynesville; Ellis T. McAnnis, Troy; James R. Betts, Macon; Theodore E. Stainback, Kenly. William A. Isler (colored), Raleigh.

### North Dakota.

LISBON, July 20.—At the June examination held under the auspices of the State Board of Pharmacy at Fargo, the following were successful in passing for certification:

Registered Pharmacists—Clarence Ahlness, Hettinger; John E. Christianson, Litchville; Vernon Green, Dickinson; Lincoln A. Hanson, Wyndmere; Carl E. Krantz, Enderlin; John J. Nemmo, Devils Lake; William J. Sheldver, Otto A. Zuelsdorf, Valley City; M. T. Krantz, Enderlin.  
Registered Assistants—Ted Dalrymple, Rugby; Howard S. Hentretta, Leeds; D. W. Hall, Mandan.  
The next meeting of the board for examination will be held at Fargo, Oct. 20.

### Ohio.

CEDAR POINT, July 6.—The State Board at its meeting here announced that 106 applicants out of a class of 172 passed the examinations held June 15 to 19, in Columbus. The highest grade, 96%, was received by Albert R. Will, of Dayton.

The successful registered pharmacists are as follows:  
Cincinnati—C. J. Hamman, Arthur Boger, M. W. Sheehy, George L. Weissmann, G. C. Bauer, R. A. Wetterstroem, William Kulle, Caroline Wetterstroem, M. E. Wilson, W. H. Heman, Otto Durand, H. J. Momborg, Fred L. Weik, B. M. Sprenger, Otto H. Fritz, Joseph Fabe, A. C. Visconti; Cleveland—L. G. Albee, W. N. Baldwin, William S. Petrie, Harry Levin, Raymond Niebes, William N. Lennant, G. L. Ney, John Komin, Jr., Alma F. Herbershman, James Lemant, Jr., Arthur H. Bedford, Edward E. Stein, Emil A. Eisemann, Warren F. Miller, J. E. McClelland, George E. Kurtz, J. R. Herbig, J. D. McSpadden, Irwin W. Steiner, John A. Howenstein, Sophia M. Savage, O. G. Henschen; Columbus—J. F. Moser, O. H. Hoffman, J. E. Hoggett, R. R. Work, E. E. Shaffer, C. W. Atwell, Homer B. Cohagen, D. L. Brown; Canton, John W. Noble, Max Knoppow; Napoleon, Arthur A. Beck, Jesse M. Overhulus; Elyria, L. P. Wagner, C. J. Tyler; Newark, T. W. Owings, F. C. Wolverton; Dayton, Albert R. Will, Oscar E. Owens; Galion, Gurney Laughbaum, Fred E. Barr; Greenville, Jacob L. Wagner, H. V. Rutzong; Toledo, B. C. Christen, Arthur Holdgraf, S. E. Kryzaniak; Oberlin, Merle T. Christy, John A. Gordon; Sandusky, Lewis Szendery; Akron, Arthur W. Schmidt; Lorain, William L. Whelton; Zanesville, Leafy A. Sauer; Chillicothe, Jesse Epstine; Mechanicsburg, Paul C. Slater; Garrettsville, Glenn C. Fowler; Eldorado, O. M. Mastom; Orrville, Russell E. Wyre; Hamilton, G. F.

Marcum; Dresden, Wayne Anderson; Bucyrus, Omar W. Tum; Montgomery, Frank Baker; Circleville, Fred A. Powell; Van Wert, Earl A. May; Upper Sandusky, D. F. Billhardt; Chicago Junction, M. E. Williams; East Liverpool, J. F. McGovern; Lima, Lloyd X. Mell; Gallipolis, Joseph M. Neal; Waverly, John A. Jones; Piqua, John R. Walsh; Jackson, Paul E. Shaffer; Belpre, Jas. R. Glazier; Fayette, C. A. Onweller; Wauseon, B. L. Hammontree; Clarington, Ernest Wienterman; Swanton, Robert F. Smith; McConnellsville, O. C. Taylor; Martins Ferry, J. R. Lewis; Barnesville, C. H. Rutler; St. Bernard, Wm. H. Schultz; Ashtabula, C. J. Cassidy; Lowellville, William Saltzman; Sardina, E. L. Kress; Rogers, L. T. Williams; Pleasant City, W. E. Kackley; Newport, Ky., Valentine Diebold; Covington, Ky., F. M. Crawford; Normal, Ky., C. W. Davis.

Out of a class of 64 who took the examination as applicants for registration as assistant pharmacists, 44 were successful, as follows:

Cincinnati, W. H. Cordana, A. G. Gutzmiller, M. S. Adler, F. A. Valermann, W. J. Casper, W. F. White; Cleveland, F. E. Hebbard, William McClain, L. E. Robinson, B. G. Timen, A. R. Martin, Joseph Adelstein, M. F. Wallace, G. L. Kappus, John Blauchfeld, Eugene G. Reiner, O. V. Herold, A. F. Pence, M. E. Horn; Columbus, Fannie Jamison, W. W. Tyler, Jesse Starks; Canton, Lewis Rudmer, J. C. Syler; Springfield, E. P. Jackson; Zanesville, C. T. Swope, J. H. Atkinson; Akron, H. A. Lins, E. A. Ahern; Dayton, J. C. Moffet, Medina, H. H. Bachtell; Loudonville, T. C. Covert; Youngstown, G. E. Robinson; Williamsburg, P. E. Elrod; Middletown, E. E. Prose; Utica, S. L. Powell; Jackson, W. W. Tawse; New Lexington, G. M. Elder; Belleaire, S. J. Price; Ironton, C. J. Ullrich; Sandusky, Earl Webster; Covington, Ky., J. B. Morwessel; Ludlow, Ky., W. E. Dean; Augusta, Ky., John M. N. Riesser.

Those who took the pharmacy examination only and qualified as assistants were: Cincinnati, H. H. Wintering, F. W. Wiggerman, R. B. Puckett, O. W. Schafer, W. T. White; Cleveland, J. A. Timen; E. E. Leet, H. E. Mitchell, D. C. Nutter, A. A. Albrecht, E. C. Erhardt; Sandusky, W. H. Graham; Worthington, W. C. Long; Canal Fulton, A. G. McGrew; Forrest, K. C. Kimmel; Canton, C. H. Miller; New Richmond, Adelaide Fallom; Ironton, D. H. Wietki; Vermillion, J. H. Stone; Steubenville, W. H. Probut, Jr.; Lima, G. R. Butler; Warren, A. D. Jaynes; Zanesville, C. L. Ditzel; Toledo, E. A. Schall; Bucyrus, S. C. Earl Boyd; Jackson, Charles K. Retchmer; Athens, C. W. Hill; Wyoming, J. C. Kinney.

### Rhode Island.

PROVIDENCE, July 20.—At a meeting of the Rhode Island State Board of Pharmacy held June 2, 13 candidates appeared for examination. Ten, whose names follow, were successful: Frank Matteo, Providence; Herve J. Brunelle, Albion; Arthur Marcotte, Pawtucket; John A. Bolster, Providence; Israel Marcus, Providence; William T. Hillis, Providence; John Coleman, Pawtucket; Albert T. Bernier, Danielson, Conn.; Frederick W. Stanton, Providence; Nathaniel T. Greene, Cranston.

### NEWS OF THE BOARDS.

The Illinois Board of Pharmacy has been very active in investigating conditions throughout the State. It has recently prosecuted a dozen or more firms and individuals, all of these defendants pleading guilty and paying their fines. The fines, without costs, aggregated \$800.

The State Board of Regents appointed the following to the New York State Board of Pharmacy for terms of three years each, the same to date from Aug. 1, 1914: J. Leon Lascoff, New York City, to succeed himself; John Hurley, Little Falls, succeeding himself; Jacob Diner, M.D., New York City, succeeding John Wall, also of New York City.

Governor Miller, of Delaware, recently announced his appointment of Reuben M. Kaufman, of Seaford, to the State Board of Pharmacy.

Eight candidates for registration were examined by the Vermont State Board at a recent meeting held in the Supreme Court chambers at the State House, Montpelier. Board members present were President E. G. McLallan, Rutland; Secretary Mason G. Beebe, Burlington; Treasurer W. L. Gokay, Bennington; W. F. Root, Brattleboro, and D. F. Root, Barre. The board entertained at luncheon Professor C. F. Nixon, of Leominster, Mass.; Prof. E. H. La Pierre, James F. Finneran, president of the N.A.R.D., and John J. Tobin, of Boston, and Fred A. Hubbard, of Newton. Mr. Hubbard is an ex-member of the Massachusetts Board.

The Pennsylvania State Board of Pharmacy has elected the following officers: President, Louis Emanuel, Pittsburgh; vice-president, Charles F. Kramer, Harrisburg; secretary, Lucius L. Walton, Williamsport; treasurer, George D. Stroh, Pittston. Next examinations, Harrisburg, Sept. 4-5.

### On Trail of Drug Evil in Baltimore.

Joseph A. Yoursky, 22 years old, of 2219 Fairmount avenue, Baltimore, was arrested July 3 on a charge of having falsified prescriptions for heroin, given ostensibly by Dr. Thomas B. Horton, of Curtis Bay, and having the prescription filled at a pharmacy near Druid Hill Park. Yoursky was committed for court after a hearing. He freely admitted that he had written the prescriptions. He said he had become addicted to the drug while serving in the Navy and could not do without it and that when one drug store refused to let him have the narcotic he forged the prescriptions and went to another. The police are making a determined effort to stamp out the evil.

## Boylan Law Certificates.

To the Editor of the ERA:

I am enclosing herewith copies of opinions recently received from the attorney-general relative to the Boylan law. Kindly publish these in your journal as they are of interest to all the pharmacists in the State. Very truly yours,

Albany, N. Y., July 10, 1914.

WARREN L. BRADT.

*Habit-forming Drugs—Certificates of Sale—Duties of Physicians When Administering and Dispensing Them—Public Health Law, Sections 246, 247 and 248.*

A physician need not write out a prescription when he administers or dispenses habit-forming drugs. When administering them, he need not issue a certificate of sale or disposal. But when dispensing them he acts in a like capacity as the druggist or retailer, and must make out the certificate, on the label or separately, containing his name and address, the date of sale and the name of the person to whom such sale is made.

### INQUIRY.

The State Board of Pharmacy has received several inquiries from physicians who have occasionally dispensed from their office to their patients opium, morphine, codeine, heroin and chloral hydrate in the form of tablets or liquid preparations, and who also have upon occasion administered hypodermic injections of morphine and codeine. They want to know what procedure they will have to follow after July 1 to comply with the provisions of the Boylan Narcotic Bill, Chapter 363 of the Laws of 1914, an amendment to the Public Health Law. For instance, suppose they administer a hypo-injection of morphine or codeine to a patient at their office or at the bedside, is it necessary that they first write a prescription, and are they required to keep the same on file? Also what are the requirements in the event they shall dispense to a patient a small quantity of any of these narcotics, either plain or in compound?

### OPINION.

A physician may administer habit-forming drugs. He may also issue a written prescription for them to be filled by a druggist or other retailer, or the physician may himself dispense the drugs.

The law places no duty upon the physician when administering the drugs other than the duty of keeping a record of the name and address of each person to whom it is administered and the quantity in each case administered, in compliance with the terms of section 248 of the Public Health Law:

"§ 248. Physicians, et cetera, to keep records. All physicians, druggists, pharmacists, veterinarians and dentists shall keep on record the name and address of each person to whom such physician, dentist or veterinarian administers or disposes in any way whatsoever any of the drugs enumerated in section two hundred and forty-five of this chapter, and the quantity so administered, disposed of or given away. Such record shall be preserved for five years and shall always be open for inspection by the proper authorities. Any violation of this section is hereby declared to be a misdemeanor."

When issuing a prescription for the drugs to be filled by another person and also when himself dispensing them, the physician must comply with the requirements of section 246. This section throughout most of its provisions apparently is dealing with the situation arising upon the issuance of a written prescription by a physician, its presentation to a retailer and the procedure through which the substances are there delivered and obtained. But as I am to construe its provisions as applicable also so far as consistent to the disposal or dispensation of the drugs personally by a physician, the section is quoted as follows necessarily at length:

"§ 246. Prescriptions; certificates. It shall be unlawful for any person to sell at retail or give away any of the drugs, their salts, derivatives or preparations mentioned in section two hundred and forty-five of this chapter except as herein provided without first receiving a written prescription signed by a duly licensed physician, veterinarian or dentist. The prescription must contain substantially the following: The name in full of the physician, veterinarian or dentist issuing such prescription, his office address, his office hours, and telephone, and the name, age and address of the person to whom and date on which such prescription is issued. It shall be unlawful for any duly licensed physician, veterinarian or dentist to issue any such prescription containing any of the drugs, their salts, derivatives or preparations mentioned in section two hundred and forty-five of this chapter except after a physical examination of any person for the treatment of disease, injury or deformity. It shall be unlawful for any person to sell at retail any of the drugs or preparations of any of those mentioned in section two hundred and forty-five of this article without first verifying the authority of any prescription containing more than four grains of morphine, thirty grains of opium, two grains of

heroin, six grains of codeine or four drams of chloral. Such verification can be made by telephone or otherwise. Such prescription so received shall be filled out at the time of receiving the same for the full quantity prescribed and no prescription so received shall be filled out more than ten days after the date which said prescription is dated. Such prescription, from which no copy shall be taken, shall be retained by the person who dispenses the same and shall be used but once. Such prescription shall be kept on the general prescription file and given a regular consecutive number on such file. On such prescription shall be inscribed the name and address of the purchaser making such purchase and the date upon which such sale is made. Any person who sells at retail, furnishes or dispenses any of the drugs mentioned in section two hundred and forty-five of this chapter upon a written prescription written by a duly registered physician or veterinarian or dentist shall at the time of dispensing the same place upon the package a label of design therewith a certificate stating the name and address of the person making or furnishing the same, the name and address of the physician, veterinarian or dentist upon whose prescription such sale is made, the date of sale, and the name of the person to whom such sale is made. Any person, other than a manufacturer of any of the drugs mentioned in section two hundred and forty-five or a wholesale dealer in drugs or a licensed pharmacist, licensed druggist, duly registered practicing physician, licensed veterinarian or a licensed dentist, who shall possess any of the drugs mentioned in section two hundred and forty-five or their salts, derivatives or preparations, shall be guilty of a misdemeanor, unless said possession is authorized by the certificate described in this section.

From a consideration of the last above sentence, making a misdemeanor the possession of the drugs without a certificate, by any person other than those named in the statute who may prescribe and sell them, I am forced to conclude that a physician must give a certificate, on the label or separately, in each case where he physically places any of the substances in the hands of others.

We ought not, I think, to assume that the Legislature intended that a person obtaining the drugs for a legitimate purpose from a duly registered physician should be left without a certificate, and therefore powerless to protect himself from criminal prosecution while others obtaining the drugs from pharmacists or retailers are amply safeguarded in their possession thereof.

Furthermore, the statute looks to an accounting at any hour of the amount of these drugs bought, possessed or disposed of by any person whomsoever. Hospitals, physicians, veterinarians, druggists and retailers must obtain the drugs from the manufacturer on printed order blanks furnished by the State Department of Health. (§247.) Every portion disposed of they must account for, leaving the balance which should remain in their hands at any time computable from the record. Possession of this balance and no more is lawful. Therefore, as every hospital, druggist, physician, veterinarian and retailer, and those purchasing from the druggist or retailer on a written prescription, must always be ready to justify their possession by a written record, so, too, I think, the statute intends that a person obtaining the drug from a physician should be able likewise to present written authorization for his possession of the substance.

Those portions of the statute which direct the furnishing of the drugs only on the written prescription of a physician, veterinarian or dentist are constructively applicable only to a sale by druggists and retailers. The general purpose of the statute would, I believe, eliminate them as superfluous in a case where the physician himself acts as a dispenser.

In conclusion, a physician need not make out a prescription or a certificate when he administers the drug, but when he dispenses them he acts in the same capacity as any druggist or retailer, and must issue a certificate, on the label or separately, so that the individual receiving them from him may be protected in his possession from criminal prosecution under the statute.

July 6, 1914. THOMAS CARMODY, *Attorney-General.*

Retailers of habit-forming drugs must on sale thereof place on the prescription to be kept on file the name of the physical purchaser, that is, the person to whom the drugs are delivered, not the name of the person for whose use the drug is intended. And the same name also must be written on the label or certificate of sale delivered with the drug.

#### INQUIRY.

From the State Board of Pharmacy I have received a request to construe certain clauses of Chapter 363 of the Laws of 1914, "An Act to amend the public health law, in relation to the sale of habit-forming drugs." Does the statute in requiring the person who sells such drugs at retail to inscribe upon the prescription which he retains on file the "name and address of

the purchaser making such purchase," mean that the seller shall place on the prescription the name of the person to whom the drug is actually delivered, or does it mean he shall place thereon the name of the person for whose use the article is intended? Further, does the "name of the person to whom the sale is made" required to be written on the label, intend the name of the patient or the name of the person who presents the prescription and to whom the drug is handed out?

#### OPINION.

The above statute of 1914, which is an amendment to the Public Health Law, provides at much length as follows concerning the sale of chloral, opium or any of its salts, alkaloids or derivatives or any compound or preparation of any of them: [See §246 of the Boylan law, given above.]

Attending first to that portion of the statute which requires the retailer to place upon the prescription the name and address of the purchaser making the purchase, I conclude such direction refers to the name of the actual purchaser, that is, the person who receives the drug from the hands of the retailer, and briefly for these reasons: The physician himself, by earlier provision of the statute, must write upon the prescription blank his office address, his office hours, his telephone number and "the name, age and address of the person to whom and date on which such prescription is issued." A prescription is, I think, in the contemplation of the statute, issued to the patient, not to the person receiving from the physician the paper upon which it is written, in the sense that it runs or pertains to the patient exclusively, such as a written license, though handed to a third person, issues in fact to the person for whom it is intended. This view of the meaning of the word is fortified by the presence of another requirement, that of detailed recital by the physician as to the name, age and address of the person to whom the prescription is issued, and obviously as a means to an opportunity for public officers to investigate, if desired, the necessity for the prescribed drug; and by the use of the word "issue" in the next following sentence of the statute, making it unlawful to issue a prescription except after a physical examination of the person.

Having concluded that the physician must place the name of the patient on the prescription, I am easily led to decide that the statute, where it reads "on such prescription shall be inscribed the name and address of the purchaser making such purchase and the date upon which such sale is made," did not intend that the retailer should place the patient's name again upon the paper, but rather, as an added protective or detective measure, the name of the person receiving and taking the drugs away.

On the label or in a separate certificate to be delivered at the time of sale every retailer when dispensing these drugs must place his name and address, the physician's name and address, the date of the sale, and "the name of the person to whom such sale is made."

Consistently with my determination that the person receiving the drug from the retailer is the purchaser, "the person to whom the sale is made" must likewise be the actual physical purchaser. Some may conceive and urge a benefit in construing the phrase to mean the patient, for his name would then remain upon the package or bottle as a warning that the contents were not for others. The difficulty with the construction is that the statute does not look to the accidental use but to the habitual use of the drug, and it permits the whole statement which the retailer must make out, to appear if the retailer wishes, not on the bottle or package but on an entirely separate certificate. Possession of the drugs unless "authorized by the certificate" is a misdemeanor. Therefore possession is that the statute seeks to follow, and accordingly the purchaser's name, for he is the first possessor after the retailer, must appear on the certificate.

July 6, 1914. THOMAS CARMODY, *Attorney-General.*

#### 1914 Edition of the ERA PRICE LIST.

The 1914 Edition of the ERA PRICE LIST is now in press and copies will be ready for delivery within a few days. This edition has been very thoroughly revised, many new preparations added, and the prices and manufacturers' names and addresses brought up to date. Those who have not already ordered the 1914 edition should send their orders at once. The price of the ERA PRICE LIST is \$1.00 per copy, but it is furnished to subscribers of THE PHARMACEUTICAL ERA at 50 cents a copy.

# TRADE SECTION

## Stick to the Medicine.

By FRED W. CONNOLLY.

*Ethical Pharmacist, Successful Druggist, and Instructor in Pharmacy at the Franklin Union, Boston.*

**T**HE best advice I can give to the ordinary druggist for increasing the profits of his store without increasing the investment or extending his space or converting himself into a chain-fighting druggist, is this:

"Attend to the medicine business. The profit in side-lines cannot be compared with prepared medicines *when we do the preparing*. Physicians are tired of being the selling agents for 'ethical proprietaries,' but what can they do unless we go to their relief?"

"We should call upon them frequently with samples of U.S.P. and N.F. preparations, and emphasize the fact that these goods are obtainable in every drug store in the land; also, that they are standard, while the private formulas may be changed at will. Furthermore, the Government is back of these preparations. Their agents are up and down the Commonwealth securing samples which are tested for purity and strength. Most important of all, the physicians know what the patient is taking.

F. W. CONNOLLY

"We should explain to the physicians in our neighborhood that we discourage self-medication by our customers; *i.e.*, when they order chlorate of potash or tannin for sore throat we make the sale, of course, but embrace the opportunity of telling them that they are assuming a great responsibility, as a sore throat may be very dangerous when due to certain causes, and delay renders it very much more so. Some diseases are often fatal, which, if correctly diagnosed and properly treated at the start, might be simple matters. This is true of headaches; the great variety of causes should be treated, not the head. This also holds good with stomach troubles, and even sores when they call for an ointment. We supply the ointment, but explain the danger of infection—with resulting blood poison—unless properly treated.

"Tell your physicians these things, and ask them to write for standard official preparations, and watch the results.

"The following sign in a conspicuous place in our store has won much favorable comment from physicians:

.....  
:  
: WE ARE NOT PHYSICIANS. :  
:  
: Please do not ask us to prescribe. :  
: Consult your doctor, and bring us :  
: his prescription, and :  
: Our combined wisdom will be used :  
: for your benefit . :  
:  
:.....

"Employ salesmen to sell profitable goods; if you are in a neighborhood where customers pick bargains, hire a girl at small wages to handle the trade.

"If you can develop a profitable soda-fountain business, employ an expert dispenser; if not, get a girl to take the fountain a portion of the day.

"Do not employ good, bad and indifferent drug clerks at all kinds of wages to do such work as can be done better by others at less money. Employ drug clerks to attend to the drug business; pay them better wages, and let the public know it. Let the high price of clerks be a reason for high price in medicine.

"Finally, raise the quality. Do away with those five-cent purchases of aspirin, phenalgin or AK tablets, five cents' worth of cold cream or the same amount of toothache drops. These are worth 10 cents in the smallest quantity if they are worth anything. I speak of this because a lady yesterday asked a clerk for one-half dozen 1/60 gr. strychnine tablets, and to the charge of 10 cents, replied: 'Why, I never pay but five cents anywhere for them.'

"When a waiter expects a tip of 10 or 25 cents, why should we educated druggists assume the responsibility of handling medicines for five cents? It isn't what we charge. If all charged the same a customer would pay 25 cents for six strychnine pills. *We should get together and see how much we can get for our time, goods and reputation, instead of how little.*"

## Keep a Quality Drug Department.

By EUGENE HODSON.

*Of the Thomas & Thompson Drug Co., Light and Baltimore Streets, Baltimore, Md.*

**T**HERE are more proprietaries, more patent medicines, more prescriptions, more capsules, pills and more everything else sold in drug stores today than ever before. All of the manufacturers of pharmaceuticals are extending their establishments, building additions and enlarging their facilities, so that it stands to reason that they must be putting out greater quantities of goods. The druggist has a wider field to draw upon. Rapid transit in cities brings to his doors thousands of people where before they could have been counted by hundreds or dozens. Not so many years ago it required an hour to go downtown from the sections comparatively near to the store; now it is a matter of 10 or 15 minutes, so that the pharmacist is able to centralize and draw from a very much greater territory than he was able to secure a few decades back. This of itself tends to swell the business vastly. People who come in to have a prescription filled see something else that they may want and had not thought of before, and so the prescription trade helps every other department. We sell more brushes, novelties, manicure sets, toothbrushes, and more everything else that we handle than ever before. House hygiene is carried to a point hardly thought of not so long ago, and what are considered the requisites of the household have increased many times. It remains only to meet the demand.

"Our prescription business is more satisfactory than at any previous time, yielding a fair profit and bringing to us much other custom. And while much has been said in criticism of price paring, it is a fact that price frequently cuts no figure in purchases. A man coming in for a dose of salts, for instance, does not ask how cheaply he can get it or how much he can get of that particular article. He calculates that five cents ought to buy a dose, and is perfectly satisfied. It is much the same with many other articles. The one consideration always is that the article shall be fresh, and in this respect the store doing a big business always has the advantage over the smaller pharmacy. It can buy in large quantities, thus getting the benefit of discounts, and must replenish its

stock so often that an ingredient has no chance to get stale. This is one reason why downtown stores are so often patronized in preference to the home pharmacy. But the latter can meet the situation by buying in small quantities rather than in large lots, and at infrequent intervals. Even if the smaller quantity costs more, it is an advantage for the druggist to replenish his stock often and cultivate a reputation for the freshness and potency of his goods. He can get the advance which he has to pay back over and over in the better prices he obtains.

"For another thing, the drug trade at the present time has fewer drawbacks than ever before. In the good old days, whenever any member of a family was taken ill during the night it was a case of rousing the druggist up out of bed to furnish some medicament, no matter how simple. In these days every doctor carries an emergency kit which contains enough things to afford immediate relief, and the trip to the drug store is usually postponed until the following morning, so that the druggist's rest is not disturbed, and he is thus in condition to undertake his day's work with energy and vigor.

"People also seem willing to pay more for goods than they did years ago. At a comparatively recent period it was exceedingly difficult for a druggist to get \$3 or even \$2 for a fine sponge. At present it is far easier to obtain \$5 and \$6 and even more. The price of hair brushes runs up from a nominal sum to \$25, and the outsider would be surprised to know how many of the higher-priced brushes are sold. Of course, the demand for the \$25 kind is very limited, but the \$6, \$8 and \$10 kind are in excellent demand with a fair margin of profit. It is the same with extracts. People used to halt at paying \$2 for a bottle of extract, but now they think nothing of paying \$4 or \$5 and even more. And they get their money's worth, for the high-priced extracts have a lasting quality that compensates fully for the cost, and the odor is of a more satisfying character. These are only a few instances of what holds good all along the line."

"How would you go about starting a new business in the average neighborhood?" Mr. Hodson was asked, and he met this question as follows:

"I would carefully draw up a stock list to contain all the articles I could think of that are needed in the household. These would form the basis of the assortment. Then I would keep a careful watch on what things are in demand and those that are not called for. The demand may vary with the locality, and frequently it makes a great difference which side of the street you are located on. It behooves the druggist to study his custom, and add to the list that which appears to strike the popular wants, leaving off other articles that are not desired. In this way he will shortly get a stock from which the dead merchandise is eliminated as much as possible, and which he can turn over the greatest number of times. The matter of waste is of great importance and should receive much thought and attention. By taking note of what is wanted and what goods are neglected, it will be easy enough to assemble a stock that will be always moving and will yield the greatest margin of profit for a given investment.

"Likewise, pay attention to the show window. This should be changed at least once a week and oftener, if possible. No matter how good and how artistic your window display may be, if it is allowed to become too familiar it will cease to attract attention, and the object of the display will be defeated. You can count on much the same people passing your store every day or within a given time, and the things in the drug store window will soon lose their power to arrest the attention unless they are changed or re-arranged. The public likes novelty, and you cannot give them too much novelty in a store window. The displays that are permitted to stay in a window for weeks and even months are worse than useless, for after a time they actually begin to divert custom instead of attracting it.

"Of course, it need hardly be said that your fixtures should be attractive and your store neat and clean. Make your store as bright as possible, always with due regard to the expense account. But it must be light, bright and clean if you want to build up the business.

"Also bear in mind that your reputation rests strictly upon the drug department. If your drugs are right and your prescriptions well compounded, they will attract customers. The primary object of people in going to a pharmacy is to get

medicines and sick-room appliances. The other things can be purchased elsewhere, and if you neglect the drug department you teach your patrons to go elsewhere for their brushes, combs and the thousand and one things now found in the stock of drug stores."

## LEGAL DECISIONS

### Foreign Corporations—"Doing Business"—Filing Copy of Charter—Interstate Commerce.

A CONTRACT with a medical company, a Minnesota corporation, provided that N. was appointed by the company "as a traveling salesman for its products in the county of M., State of Tennessee," and that the company "agrees to take back all goods left in the possession of the traveling salesman at the time he quits work," and referred to "the expiration of the services of said traveling salesman," etc. A provision on the back of the contract provided that N. was to begin work "as soon as practicable after the goods are received and to work continuously at the agency." During the existence of the agency a note was given by several persons for the agent, to the medical company for the uncollected price of goods shipped to the agent for \$668.01. One of the makers died and in an action for the settlement of his estate in the courts of the State of Kentucky, where the deceased owned real estate, the medical company made a claim for this sum, which was disallowed. Under the statutes of Tennessee every foreign corporation is required to file a copy of its charter with the Secretary of State, and it is unlawful for it to do or attempt to do any business in the State until it shall have complied with the statute. These statutes have been construed in a number of cases in the Tennessee courts, and it has been uniformly held that, where a corporation does business in that State without complying with the statute, all contracts growing out of such business are illegal and invalid. It was held, on appeal, that the medical company was doing business in Tennessee through its agent, N., who was not a mere purchaser of its products.

The medical company contended that its transactions with N. were interstate commerce, and that therefore the note was binding, although it had not complied with the laws of Tennessee. It was held that this defence was not available, under the facts. These products were not ordered by mail and shipped direct to the company's customers. As a matter of fact, they were shipped to Memphis, and from there distributed to its agent, N. and his brother said that he never ordered any goods except from Memphis. The company's witnesses said that the goods were billed to N. in Minnesota, and were merely sent to Memphis for distribution. Even if there were any doubt as to whether or not the interstate journey ended at Memphis, the interstate journey certainly ended when the goods were delivered to N. Upon their delivery to him their interstate character ceased; and from that time on, N., as the company's agent, proceeded to sell and deliver the goods in Tennessee. The question of the validity of the note was governed by the laws of the place where the transaction was had, as well as the place where it was executed, namely Tennessee, and not by the law of the place of payment. (Orr's Adm. vs. Orr, Kentucky Court of Appeals, 163 S.W. 757.)

### Sale of Drugs by Itinerant Vendors—Prohibition.

The United States Supreme Court holds that a State has power, without violating the equal protection or due process of law clauses of the Fourteenth Amendment to the United States Constitution, to forbid the sale by itinerant vendors of "any drug, nostrum, ointment, or application of any kind, intended for the treatment of disease or injury," although allowing the sale of such articles to other persons. The power which the State government possessed to classify and regulate under consideration (Louisiana Laws, 1894, act No. 49 § 12) is held to be cumulatively sustained and made, if possible, more obviously lawful by the fact that the regulation in question deals with the selling by itinerant vendors or peddlers of drugs or medicinal compounds—objects plainly within the power of government to regulate. (Baccus vs. Louisiana, 34 Sup. Ct. 439.)

### Action Against Board of Pharmacy—Its Nature—Parties.

In an action of mandamus against the Kentucky Board of Pharmacy and its members to compel the issuance of a pharmacist's certificate of registration, permitting him to practice his profession in the State, the question was whether the action must be brought in the county in which the president of the board resides; the board having no office or place of business in any county. It was held that such an action is a transitory action governed by Kentucky Civ. Code Prac. §78, requiring actions whose venue is not established by other sections of the article to be brought in the county where the defendant or any one of several defendants resides or is summoned, and may be brought in any county where process is executed upon the members of the board or any one or more of them. The board, not being designated a corporation by the act organizing it, is not a "corporation," and, while it is a "quasi corporation," when acting pursuant to contractual powers conferred by the act creating it, is not governed by Civ. Code Prac. §72, requiring an action of contract against a corporation having an office or place of business in a county or an agent residing therein to be brought in such county or in the county in which the contract is made or to be performed, and that an action of tort be brought in such county or the county in which it is committed. The action being to compel the performance of a ministerial duty, the members must be sued by name in order that the court may determine whether they are the proper persons to perform such duty, and in order that it may command them to perform it. (King vs. Kentucky Board of Pharmacy, Kentucky Court of Appeals, 162 S.W. 561.)

### FROM THE BUSINESS FIELD.

**S. B. Penick**, until recently with the drug importing house of J. L. Hopkins & Co., as treasurer, is, as was noted in the July ERA, the head of a new company established at Marion, N. C., under the firm name of S. B. Penick & Co. The firm has a New York office at 38 Park place. It will do a general crude botanical drug business and has been established at Marion, N. C., because that point is the center of a radius of about 100 miles of territory in which the majority of the American crude drugs now used are collected. The Appalachian range possesses a soil and climate particularly well fitted to the growth of these drugs, and the inhabitants of this section have been trained in their collection and curing.

**Four Luyties** companies, controlled by F. August Luyties, of St. Louis, were hit by fire recently, the Luyties Chemical Co., the Manola Co., the Walker Co. and the Luyties Pharmaceutical Co. They were all housed in one building at 4200 Laclede avenue. Spontaneous combustion is supposed to have been the cause of the fire which did a damage aggregating between \$175,000 and \$200,000. There was little insurance, as the policies had been allowed to elapse. The companies were in the same block as the Sanitol Chemical Co. Mr. Luyties is the president of the four companies, and C. O. Heer secretary.

**R. H. Brennecke**, who conducted a drug business in Watertown, Wis., for 44 years, has sold his business at 315 Main street to William Gehrke, who had been employed by Mr. Brennecke for the past 14 years. Mr. Brennecke, a native of Watertown, is a graduate of the Philadelphia College of Pharmacy, class of '77. Immediately upon his graduation, Mr. Brennecke resumed a position at the pharmacy of J. H. Schultz. In 1884 he and Henry Steinfort purchased a branch store, conducted by Mr. Schultz. In 1890 Mr. Brennecke purchased Mr. Steinfort's interests.

**A. W. Dows & Co.**, of Lowell, Mass., are planning one of the largest drug stores in New England outside of Boston. The Liggett interests purchased a long lease of the store in which the Dows company was located, thus forcing the latter to vacate in September, but the Dows people obtained the lease of another block in Merrimack square, and when several leases there expire will throw several other stores into the one they now have, making possible one of the finest stores of the kind in any New England city.

**The Riker-Hegeman Co.** has leased the store at the corner of Fifth avenue and Smithfield street, Pittsburgh, Pa.,

the site formerly occupied by the Federal National Bank. The lease, it is reported, covers a long term of years and stipulates an aggregate sum of \$625,000. The company has also leased for a term of 50 years, with right of renewal, the five-story building at Main and Hammond streets, Bangor, Me., and will open a drug store. The location is the business center of the city.

**The Owl Drug Company** has been organized in Milwaukee, Wis., with the following officers: President, Wm. O'Connor; vice-president, John Crowley; secretary-treasurer, Robert Kiefer. Capital stock is \$25,000. The company has leased two valuable downtown corners—401 Grand avenue, a 10-year lease, and a five-year lease on the front part of the old saloon on Grand avenue, near Third street. Alterations are being made and drug stores will be opened in the near future.

**John G. Holland** has extensively remodeled his drug store at York Beach, Me., which is now one of the most commodious and best equipped establishments of its kind in the State. The floor-space has been increased by taking a part of the adjoining store and a new system of illumination has been installed. The fountain and ice-cream parlors have been enlarged. New show cases and a new cash system are other features of the renovation.

**John J. Justis**, sole owner of the wholesale drug business of Hale, Justis & Co., of Cincinnati, Ohio, recently changed his mind as to a tentative plan for the reorganization of the business, after securing a corporate charter under the name of the Hale-Justis Co., and decided to continue the business under its old established form. It will accordingly be handled under the old firm name, Mr. Justis remaining its active and actual head, as heretofore.

**William S. Ferguson**, of Maplewood, Mo., who was a bookkeeper during the week and the commodore of a fleet of motor boats on Sundays and holidays, has been found guilty of embezzling \$5600 from the National Druggist Publishing Co. and sentenced to five years in the State penitentiary. Ferguson after fleeing from St. Louis, and being free about a year, was captured in Seattle, Wash., and brought back for trial.

**The Owl Drug Co.**, which has just completed 22 years of business on the Coast, celebrated its anniversary by special sales in its stores. The chain was established in 1892 with one store and nine employees; today there are 20 stores with a thousand employees. The stores are located in eight cities, San Francisco, Los Angeles, San Diego, Sacramento, Oakland, Portland, Seattle and Spokane.

**The Durr Drug Co.**, Montgomery, Ala., is to have a new \$50,000 building at 209-211 Commerce street, which will be completed by Jan. 1, 1915. The structure will have a frontage of 55 feet with a depth of 125 feet, and the front will be of pressed brick with stone trimmings, and with plate-glass windows. The new building will give the Durr company double their present floor space, about 41,000 square feet in all.

**Ernest Coburn**, a druggist of New Boston, Ohio, who lost heavily in a recent fire in that town which destroyed his store, will rebuild on a new site which he has acquired as soon as he secures an adjustment of his loss from the insurance companies. Mr. Coburn proposed to build a brick structure to serve as both store and residence. About all that he saved from the fire was his prescription files.

**D'Alemberte's** pharmacy, Pensacola, Fla., was awarded fourth prize by the Huyler Candy Co. for a newspaper ad. exploiting that company's product. Huyler's is endeavoring to ascertain which of its many agents is pushing its candy to the best effect through newspaper advertising. This is not only the fourth prize, but also the fourth time D'Alemberte's has won a prize for its ad. copy.

**The McCarthy Drug Co.**, of Milwaukee, which recently purchased the pharmacy at Clybourn and 29th streets, that city, has been incorporated with a capital stock of \$10,000, by C. J. McCarthy, J. E. McCarthy and Margaret McCarthy. J. E. McCarthy, formerly Sunday editor of the Milwaukee *Free Press*, is working out many original ideas in the way of publicity and window displays.

**E. C. Erthal**, the Mill street druggist, Bristol, Pa., due to his inability to secure suitable quarters upon the expiration of the lease of his store, has made an assignment. The drug

business will be conducted by Mr. Erthal until its liquidation. He has been engaged in the drug business at the above store, one of the 30 St. in Pennsylvania, for many years, being the successor of F. L. Houquet.

The Hook Drug Co., which operates a chain of nine stores in Indianapolis, has leased a building for drug-store purposes at 302 Washington avenue, St. Louis, which it is understood will house the first of a new chain of Hook stores in St. Louis. The fittings and equipment will vie with the finest in the city, and the store is planned to be in operation Aug. 1.

The Owl Drug Company, operating 20 retail drug stores on the Pacific Coast, recently distributed \$36,060 in dividends among its 500 or more stockholders. This sum represented the interest on its outstanding 8 per cent. preferred stock for the six months ending June 30, 1914. A letter to stockholders reports that the stores show a substantial increase over last year.

The Riker-Hegeman Company must await the passage of a special ordinance in order to erect a 12-story building on the site of the old Female Asylum on Washington, near Castle street, Boston. Legislation now in force would prohibit the construction of the building. The proper aldermanic committee has promised to report the measure unanimously.

The Sterling Laboratories, a \$100,000 corporation, capital all paid in, has been chartered in New York. The new corporation will deal in special pharmaceuticals. The incorporators and stockholders are Fred W. Cook and Albert Kronosky, of the San Antonio Drug Co., San Antonio, Texas, and Samuel A. Foot, of Lehn & Fink, New York.

Paramount Drug Co., Washington, D. C., capital \$50,000, has been incorporated to operate a wholesale and manufacturing drug plant; about 125 Virginia druggists are stockholders. Besides distributing to its members patents and sundries the new corporation will put a line of its own remedies on the market.

Earl P. Carney, manager of the new Riker-Hegeman Co. store at Pittsfield, Mass., has been granted a regular permit by the Massachusetts State Board of Pharmacy. A temporary permit to open the store was issued to him while a contest between the board and the company was in course of settlement.

Philip L. Fox, proprietor of the Goodall Drug Company, in High street, Holyoke, Mass., and in Chicopee Falls, has purchased the Winthrop pharmacy, High and Cabot streets, Holyoke. The store will come under the firm name of the Goodall Drug Co. Mr. Fox took immediate possession.

The United Profit Sharing Corporation, a Delaware corporation, has closed a \$10,000,000 contract with the Wrigley Chewing Gum Company. It is reported that the latter concern will use 500,000,000 of the United coupons a year. Several other large deals involving these coupons are pending.

The Mayer Pharmacy recently opened a new store on Milwaukee avenue, Kenosha, Wis. Expense has been of minor consideration in fitting out the establishment. Harry F. Mayer is in charge and associated with him in the business is Prof. F. C. Mayer, of Marquette University.

The Ummel Drug Co., newly organized and consisting of Peter Ummel, a pharmacist, and Wm. F. Lenhart, has purchased the Postoffice drug store, Peru, Ind., formerly conducted by C. Howard Jenner. To please the public, will be the policy of the new management.

The Allen Drug Company, Wiggins, Miss., was sold out by the Chancery Court recently, the sale netting but \$801. Complaint was made by the creditors who offered a bond for a resale, stating that the price was less than 20 per cent. of the actual value of the stock.

The Rice Annex Drug Store, Houston, Texas, has been purchased for \$25,000 by George L. Wilson and associates Tom M. Taylor, N. E. Meador, A. J. Elliott and Harvey T. D. Wilson are on the directorate, and the name of the new firm is the Rice Hotel Drug Store.

Charles F. Kirst, druggist at Two Rivers, Wis., has completed plans for erecting a large business block. The Kirst pharmacy will occupy a portion of the first floor quarters, while the Two Rivers telephone exchange will be located on the second floor.

## PLANT MAKES SOLUTION MAGNESIA CITRATE.

Equipped Solely for This Purpose—27 Bottles a Minute—Sanitation a Feature.

THE growth of one feature of a business until it in itself becomes a business or industry is an interesting thing to contemplate. Such a development is the manufacture of solution of citrate of magnesia, the sole line of activity of the Kleinschmidt Magnesia Company, of New York. Both President Kleinschmidt and Vice-President de Gruchy, of the company, were formerly in the wholesale drug business, and in that connection grasped the possibilities and advantages for the retail trade in a manufacturing plant which would supply to druggists "fresh every day" a product which rapidly deteriorates on aging. In modeling their building and installing its equipment, they have had an eye not only to every detail which would expedite the standard manufacture of their product, but have also made every effort to maintain absolute sanitation.

The ERA representative was recently conducted through the Kleinschmidt plant by Mr. de Gruchy. The building is a three-story affair, the top floor of which is also equipped for the manufacture of citric acid, now the most expensive constituent of solution of citrate of magnesia. On this floor the citric acid, sugar—everything but the magnesium carbonate, is sent through chutes to vats downstairs, where the actual process of manufacture is consummated.

The vats on the second floor are of 5000-bottle capacity each, and there is one vat for each of the four chutes. To relieve the building of this great weight, in case of fire, large drain pipes have been provided in accordance with the fire regulations. A high-pressure pump drives the product from the vats through a chain of filters especially designed and built for this purpose, the filtered sparkling clear solution of citrate magnesia being run into what Mr. de Gruchy calls the superfluous tank. A safety valve in this tank maintains the product at a constant height, a supply the bottling department may always draw upon, for as soon as all the product is filled into bottles its place is taken by a new supply which runs automatically into the tank. Electricity is the sole power used.

The main floor, devoted to bottling the solution, the sending out of orders and receipt of empties, is open only to workmen. A balcony overlooks this department and from it visitors may get a good view of this interesting process. Case after case of "empties" glide in over the spinning rollers of the long conveyor on the right side, and on the left, full cases constantly shoot out to the waiting wagons in front of the building. The machinery for soaking, washing and rinsing the empty bottles and for filling and "gasing" them is in the center. Everything is done by machinery, everything is automatic. Thirty-eight grains of "gas" go into each bottle—and every ingredient in the product is as exactly proportioned. Twenty-seven bottles of the solution per minute is the capacity of the plant. In the bottling department, as elsewhere, sanitation has been made a feature, and by hose, hot or cold water may be used to

wash down the walls, machinery and tile floor. Not alone the entire interior of the building, but all the machinery in it is painted white, and when one sees the workmen in their clean white coats one can well believe that the product made under such conditions must be clear and sanitary.

Mr. de Gruchy observed that solution of citrate of magnesia should be taken fresh and that the average retail druggist did not have the time to prepare the product more than possibly twice a week. "The gas passes off on aging. We have the goods ready for the druggist every day." The company has 10 wagons with which it delivers to the trade.

#### Standardized Tinctures.

In order to maintain the required standard and purity of pharmaceutical preparations, the utmost care must be exercised in the selection of material, every step of manufacture must be conducted under rigid and expert supervision, and the finished product should be determined by thorough analysis and standardization. To insure thoroughly dependable products requires the services of the expert botanist and pharmacologist, a complete and modern equipment for manufacture, and an expert analyst for the final determination and standardization of the finished product.

For obvious reasons, the busy pharmacist has not the time to standardize the small quantities of many preparations required for a few months' supply in a prescription business; nor is it possible that he should have available at all times the necessary crude drugs in the small quantities required. On the other hand, the manufacturer, with his scientific staff and modern laboratory equipment, is admirably prepared not only to comply with these requirements, but he has the opportunity to purchase crude drugs of best quality at an economy in cost, because of the large quantities used, and thus to insure both standardization of product and a minimum of cost to manufacture.

Physicians generally are in sympathy with all measures which promise better results in treatment and will invariably prefer standardized preparations. Would not, therefore, a stock of Sharp & Dohme's standardized tinctures be a paying investment? They are prepared from the best quality of drugs obtainable, are manufactured under the most exacting and experienced supervision, are standardized, and therefore absolutely dependable, and will insure the pharmacist against any criticism on account of the rigid inspection to which all medicinal preparations are subject since the enactment of the National and State pure food and drug laws.

Following is a list of standardized tinctures procurable from the Sharp & Dohme laboratories at Baltimore, or from any of their branch houses or through distributing jobbers:

Blood Root, U.S.P.	Iron Chloride Tasteless, N.F.
Aconite Root, U.S.P.	Gelsemium, U.S.P.
Belladonna Leaves, U.S.P.	Ginger, U.S.P.
Arnica Flowers, U.S.P.	Golden Seal, U.S.P.
Asafetida, U.S.P.	Hyoscyamus, U.S.P.
Benzoin Comp., U.S.P.	Iodine Colorless.
Calabar Bean, U.S.P.	Nux Vomica, U.S.P.
Cannabis Indica, U.S.P.	Opium, U.S.P.
Cantharides, U.S.P.	Opium Camphorated, U.S.P.
Capsicum, U.S.P.	Opium Deodorized, U.S.P.
Cinchona, U.S.P.	Squill, U.S.P.
Cinchona Comp., U.S.P.	Strophanthus, U.S.P.
Colchicum Seed, U.S.P.	Stramonium Leaves, U.S.P.
Digitalis, U.S.P.	Veratrum, U.S.P.
Iron Chloride, U.S.P.	

The recent increased use of standardized tinctures tends to show that it will pay you to stock these preparations, and if you will favor Sharp & Dohme with an order for a comprehensive line of their standardized tinctures, they will be glad to notify every physician in your immediate neighborhood that you have them in stock.

#### Oral Prophylaxis.

The Dentinol and Pyorrhocide Company of New York announces that it has recently completed the distribution of "Oral Hygiene in Modern Therapy" to physicians throughout the United States. This booklet handles the subject of oral prophylaxis, in its relation to systemic disease, in a distinctly original manner. Beside this, the company maintains the Pyorrhocide Clinic permanently at its headquarters in New York, for the instruction and assistance, either personally or through correspondence, of those dentists and physicians who are interested in the treatment and prevention of pyorrhea, and the question of oral prophylaxis in general. Druggists

are invited to write for copies of "Oral Hygiene in Modern Therapy," as well as "Dollars for Druggists."

#### Mothersill's Travel Book.

Under this title the Mothersill Remedy Co., Ltd., of Detroit, Mich., has issued a beautifully printed booklet which will be appreciated by travelers and those who propose to travel. Among the subjects discussed are "The Bugbear of Travel," "See America First," "Going Abroad," etc., much information being given on what to take, baggage and checking systems, routes, customs, etc., values of foreign monies, time and distance tables, tips on the Continent, in short, just the advice the would-be traveler needs in planning a sight-seeing trip to any part of his own country or to foreign lands. Of course, the booklet calls attention to the well-known remedy manufactured by this company and which is recommended to relieve seasickness, trainsickness and the nausea caused by motion in traveling.

#### An Optical Illusion.

The Newskin Company has recently gotten out a very striking

counter card for use in drug stores, the effect of which is a curious optical illusion. A pair of hands is reproduced in color, and the reproduction is so life-like that apparently the hands are those of some person behind the counter.

It would be interesting to know the effect of this display in various drug stores under different conditions of lighting and arrangement.

#### Souvenir of Parke, Davis & Co.

A beautifully illustrated booklet under the above title, descriptive of the offices, laboratories and branch establishments of Parke, Davis & Co., and gotten up for distribution to visitors, has been issued by this enterprising house. It contains a fairly complete series of illustrations of the company's home offices in Detroit, and the 19 branch establishments scattered throughout the world—12 branches in the United States, and seven abroad. In the text the effort is made to tell just what the company stands for as a house, what its scientific history has been, what it has attempted to do, and what it is today. The story sets forth many "human interest facts," and the illustrations reproduce various scenes and phases of pharmaceutical manufacturing and research work, as well as portraits of the leading officers of the company who have done and are doing things. However considered, the booklet is a work of art and a real souvenir, and while it is intended to be used solely for distribution to the hundreds of druggists and physicians who visit the P.D.&Co. laboratories, a copy will be mailed to any druggist who will drop the company a card request.

#### Quiet, Clear Weather Favored G.A.S. Tourists at Sea.

From letters received by Felix Hirsman at the office of the *Apotheker Zeitung* it was learned that the G.A.S. European tour party enjoyed quiet, clear weather on their trip across the Atlantic, not one member suffering from seasickness. A feature of the trip was the celebration held on the Fourth of July. Orations were delivered by various speakers among the passengers, Dr. William C. Alpers ably representing the G.A.S. party. He concluded his effort by calling for three cheers for President Wilson and the German Kaiser. Members of the G.A.S. bowling club challenged representatives of various bowling clubs who were en route for the international games. The apothecaries were defeated by a narrow margin. The G.A.S. ladies saved the day, so to speak, by defeating the ladies of the victors in the former contest. A concert aboard arranged by Hugo Kantowitz proved a great success and a considerable sum was collected for the Sailor's Home. A bottle containing a message written in German, English and French, promising the finder \$5 if the bottle is returned to Miss Claire Kantowitz, was cast overboard. The party disembarked at Bremen.

## A Display That Won First Prize and Helped the Druggist Sell Goods.

THE accompanying illustration is a photographic reproduction of a window display in the store of Frank E. Starbird, New London, Ohio. This display won first prize in a contest conducted by the manufacturer of the article displayed. It gives an excellent illustration of the co-operative work retailers are giving the manufacturers of standard, advertised brands of goods. Also Mr. Starbird has carried out the most up-to-date ideas regarding special sales without price cutting. The window, you will notice, concentrates entirely on the article. An ad. was run in a local newspaper during the two weeks of the special sale. Booklets were given out and mailed to families where there was sickness with a letter calling attention to the uses and merits of the article. Every package that left the store during the display bore a sticker advertising the article. The display itself is excellent but the most commendable feature about the special sale is the fact that every other available means of publicity was used to back up the exhibit. Connective advertising—creative selling—campaigns along definite and thoroughly planned lines and specializing on one article are vastly more productive than the miscellaneous advertising of everything in general but nothing in particular.

### Planten-Savage.

William Rutger John Planten, son of the late John Rutger Planten, founder of the firm of H. Planten & Son, capsule manufacturers of Brooklyn, and Consul-General for the Netherlands in this city for many years, was married on June 26 to Miss Ruth Savage, of Manhattan, Boston and Pittsburgh, daughter of the late Rev. W. H. Savage, of Boston. The wedding was in the Church of the Messiah, and after the ceremony a reception was held at Carnegie Hall in the studio of the bride's brother, Paul Savage. Within the past few years Mr. Planten has stepped out of active business and established a studio in Carnegie Hall. He is an admirable singer and is prominently identified with the University Glee Club of Brooklyn. He has a country home at Lake Mahopie.

### Drug Trade Section Protests Proposed P.O. Ruling.

The Drug Trade Section of the New York Board of Trade and Transportation has requested the Postmaster-General to amend his contemplated postal regulation defining "poisonous substances" admissible in the mails, by eliminating the two final proviso clauses, prohibiting the mailing of all preparations containing cocaine and derivatives and specifying the exact quantities of opium and opium derivatives in preparations which may be mailed. That State laws governing the sale of such preparations in intrastate trade make the above

exclusion and specification unnecessary and that the likely enactment and enforcement of the Harrison bill would regulate the sale and interchange of such preparations in interstate commerce was the decision of the Section's committee appointed to consider the matter. The committee also objected to the definition of the exact quantities of opium or derivatives because the provision would admit to the mails one tablet containing one-twentieth of a grain of morphine, for instance, and would prevent the mailing of more than five of such tablets. Customers could not receive these preparations by mail in quantities which would be of any benefit to them.

### Secretaries Abolish Insecticide Act Guaranty.

The Secretaries of the Treasury, Agriculture and Commerce have found that the guaranty legend on substances used for the destruction or prevention of insects and fungi is deceptive and misleading and have signed an amendment to the regulations under the insecticide act abolishing the use of serial numbers on insecticides and fungicides. The regulation as amended also holds that the use of the legend, "Guaranteed by....." under the insecticide act of 1910, on the labeling of insecticides and fungicides, or similar legends is misleading and deceptive. The new regulation becomes effective May 1, 1916. For goods packed previous to that date the amendment becomes effective November 1, 1916. Manufacturers may conform with the law at any time. A wholesaler, manufacturer or jobber wishing to guarantee his goods so as to protect the dealer may incorporate his guaranty in or attach it to the bill of sale, invoice, bill of lading or other schedule.

### Violation of Court Decree Alleged.

The Syrup Pepsin Co., of Scottsburg, Ind., has been cited by Judge Albert B. Anderson, of the United States District Court at Indianapolis, to show cause why it should not be punished for contempt. On action brought by the Pepsin Syrup Co., Monticello, Ill., the Scottsburg company was found to be violating the trade-mark rights of the Monticello company. The Scottsburg company was ordered to cease such violations and to turn over to the Monticello company all advertising matter conflicting with the trade-mark rights. The Monticello company has made complaint that the decree has not been observed.

Charles Leich & Co., wholesale druggists, Evansville, Ind., will move to more commodious quarters in the building at Fifth and Bond streets. The building, which is a three-story affair, will be remodeled.

PATENTS AND TRADE MARKS

**MENTHOL INHALER AND PENCIL.**

**C**ROCKER H. SANDFORD, Baltimore, Md., is the inventor of a new menthol novelty in the form of a combined inhaler and pencil (Patent No. 1,102,086). It comprises a body section having air inlets, a cap section detachably mounted upon the body section and adapted to be removed

1,102,086.

1,101,025.

therefrom and adjusted to expose said air inlets; a socket upon the body section having air passages communicating with the body section, a body of menthol fitted within and projecting from the socket and provided with a tapering passage communicating with the air passages, and a stopper carried by the body section and projecting into the socket and passage in the menthol. A tube carried by the cap projects into the passage in the menthol body and is adapted to be closed by the stopper when the cap is fully applied. The device is shown in the above illustration.

**Method of Making Chloroform.**

A new method of making chloroform has been devised by Thomas J. Griswold, Jr., and Charles J. Strosacker, and by them assigned to the Midland Chemical Co., of Midland, Mich. (Patent No. 1,101,025). It consists in reducing carbon tetrachloride by means of iron in the presence of water, such iron being introduced in the form of particles; and subjecting such particles to a grinding action during the progress of the reaction, whereby they are gradually reduced in fineness.

**Apparatus for Forming Medicinal Tablets.**

This apparatus, the invention of Henry E. Whitaker and James McDonald, assignors to Parke, Davis & Co., Detroit,

1,102,374.

Mich. (Patent No. 1,102,374), consists of a mould plate having a series of mould cavities therein, a roll extending transversely

of the mould plate for depositing a uniform layer of material over the latter, a blade, and means for operating said blade to scrape and knead the material into the mould cavities. When the material is deposited on the plate it is carried by a pair of oppositely rotating members across the bed of the plate and pressed and scraped into the mould cavities, suitable means being provided for removing the surplus material accumulated by scrapers. An ejector disengages the moulded tablets from the mould plates.

**Tablet Making Machine.**

This medicinal tablet making machine is the invention of Louis P. Tenca, assignor to Eli Lilly & Co., Indianapolis, Ind. (Patent No. 1,100,928). It comprises a plate provided with a hole or group of holes, means for intermittently moving the plate, feeder mechanism which feeds material to said holes

1,100,928.

during alternate periods of rest of the tablet plate, and a discharge mechanism for ejecting the tablets from the holes during the other alternate periods of rest of the tablet plate, this mechanism consisting of a plunger movable transversely to the tablet plate and provided with a pin which extends into each hole in the plate upon movement of the plunger. A stripper plate, spring-mounted on the plunger, is provided with a hole for each pin of the plunger, the face of the stripper plate toward the tablet plate normally being closer thereto than are the ends of the pin or pins, and means for reciprocating the plunger a plurality of times at each discharge period of rest of the tablet plate. The feeder mechanism comprises a rotatable spatula close to the tablet plate and operative only when the hole or holes are in position to receive material from the spatula.

**PATENTS.**

**Granted June 23, 1914.**

- 1,100,720—Paul Ehrlich and Alfred Bertheim, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Polyarseno compounds and process of making same.
- 1,100,730—Max Hamel, Treptow, assignor to Nitritfabrik Aktiengesellschaft, Copenick, near Berlin, Germany. Process for the preparation of gallic acid.
- 1,100,734—Robert D. Hughes, Lynchburg, Va. Bottle protecting device.
- 1,100,741—Emil Jagenberg, Dusseldorf, Germany. Label gumming and attaching machine.
- 1,100,751—Carl O. Lindstrom, Chicago, Ill. Disinfecting or perfuming apparatus.
- 1,100,818—Robert O. Boardman, assignor of one-half to Martin H. Dykstra, Grand Rapids, Mich. Bottle cap remover.
- 1,100,843—John E. Red, Wortham, Texas. Non-refillable bottle.
- 1,100,909—Hyman Presnick, Brooklyn, and Samuel Youngerman, New York, N. Y. Self-locking bottle holder.
- 1,100,928—Louis P. Tenca, assignor to Eli Lilly & Co., Indianapolis, Ind. Tablet making machine.
- 1,100,933—Helen J. Weed, Buffalo, N. Y. Bottle cap lifter.
- 1,100,935—Ross E. Yerby, New York, N. Y. Bottle closure device.
- 1,100,944—Jacob Benario, Frankfurt-on-the-Main, Germany. Adhesive plaster.
- 1,100,998—Max C. Traub, Basel, Switzerland, assignor to the firm of McKesson and Robbins, New York, N. Y. Process of manufacturing alkyl ethers of morphine.
- 1,101,003—Fritz F. Zuckerswerdt, Imlenau, Germany, assignor to Linus B. Kauffman, Columbus, Ohio. Thermometer.

- 1,114—A. W. Taylor, Chicago, Ill. Apparatus for the herbariums.
- 1,114,284—S. Orswell, Jr., and Charles J. Strosacker, assignors to Midland Chemical Co., Midland, Mich. Method of producing a germ.
- 1,114,750—Simon de Haan, Kraton, Java. Manufacture of cane sugar.
- 1,114,810—Ernst Zischer, assignor to Chemische Fabrik Griesheim-Heimbach, Frankfurt-on-the-Main, Germany. Process of making the salts of 2,3-dioxynaphthole acid.
- 1,114,811—August Kemper, Milwaukee, Wis. Bottle holder.
- 1,114,812—Paul W. H. assignor to Chinoim gyogyszer es vegyeszeti es vegyertanok irod. Dr. Keresztesy es Dr. Wolf, Ujpest, Austria. Process for the manufacture of aliphatic alkyl sulphates.
- 1,114,813—Walter F. Kummerich, Mulheim-on-the-Rhine, Germany. Sulphur oxidizing agents.

#### Granted June 30, 1914.

- 1,101,727—Thomas Roberts, Bolton, England. Means for taking samples of powdered substances or liquids.
- 1,101,730—William A. Shephard, Waukesha, Wis. Liquid mixing and dosing apparatus.
- 1,101,731—Clyde C. Beards, Terre Haute, Ind. Bottle closure.
- 1,101,732—Paul Fischer, Berlin, Germany, assignor to Synthetic Products Co., Inc., New York, N. Y. Salts of high molecular weight containing arsenic and a halogen.
- 1,101,733—Paul Fischer, Berlin, Germany, assignor to Synthetic Products Co., Inc., New York, N. Y. Iron salts of high molecular weight acids containing arsenic and a halogen.
- 1,101,744—Joseph V. Trems, Newark, N. J. Bottle feeding device for bottle capping machines.
- 1,101,754—Georg Merling, Otto Chrzescinski, and Ilugo Kohler, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Beta-acetylalkylene-tetraalkyldiamins.
- 1,101,772—Frank S. Young, Newark, N. J. Process of manufacturing magnesium carbonate from magnesium limestone.
- 1,101,954—Loren A. Whiting and Genio S. Parker, Hartford, Conn. Non-refillable bottle.
- 1,101,965—William Sanger, Orange, N. J. Method of making substitutes for cork.
- 1,102,086—Crocker H. Sanford, Baltimore, Md. Menthol inhaler and pencil.
- 1,102,120—Bernhard Benedix, Hamburg, Germany. Fatty saponaceous product and method of manufacturing same.
- 1,102,223—Frederick N. Bowne and Daniel I. Hawkins, New York, N. Y. Non-refillable bottle.

#### Granted July 7, 1914.

- 1,102,296—James S. Porter, Buffalo, N. Y. Bottle stopper.
- 1,102,349—Milton Murray, Williams Wharf, Va. Non-refillable bottle.
- 1,102,374—Henry E. Whitaker and James M. MacDonald, assignors to Parke, Davis & Co., Detroit, Mich. Apparatus for forming medicinal tablets.
- 1,102,447—John E. Green, Boston, Mass. Bottle stopper remover.
- 1,102,539—John H. Nield, Hackensack, N. J., assignor to General Chemical Company, New York, N. Y. Process of producing hydrochloric acid.
- 1,102,560—Samuel S. Williamson, Philadelphia, Pa. Non-refillable bottle.
- 1,102,670—Hermann von Keler and Anton Weindel, assignors, by mesne assignments, to General Chemical Co., New York, N. Y. Process for producing sulphuric acid anhydride according to the contact process.
- 1,102,699—Oscar Sondhelm and Harry M. Veit, assignors to Carl Bomerisler, New York, N. Y. Bottle stopper.
- 1,102,827—August Vagt, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing sulfonic acids.
- 1,102,832—Earl Porter Wetmore, Toledo, Ohio. Labeling machine.
- 1,102,945—Eviene Gibaudan, Chateau de-la-Coupe, near Narbonne, and Alphonse Jean Frager, Paris, France. Alcometer.
- 1,102,911—Christian Hansen, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing sulphur and sulphates.
- 1,103,077—David M. Sherman and Charles P. Kleebauer, assignors to the Kleeboe Company, Inc., New York, N. Y. Non-refillable bottle.

#### Granted July 14, 1914.

- 1,103,111—Frederick Wichter, assignor to Parke, Davis & Co., Detroit, Mich. Ampul holder.
- 1,103,259—John J. Buckley, Boston, Mass. Fly paper holder.
- 1,103,344—Vincent Capobianco, New York, N. Y. Non-refillable bottle.
- 1,103,371—Charles F. Myre and Joseph P. Hebert, Chippewa Falls, Wis. Aseptic thermometer holder.
- 1,103,515—Sylvester B. Husch and George S. Husch, New York, N. Y. Toothbrush.
- 1,103,600—Herbert N. McCoy, Chicago, Ill. Method of treating radio-active barium compounds.
- 1,103,658—Humbert Cantoni, Jean Chautems and Emile Degrange, assignors to Cantoni Chautems et Compagnie and Emile Degrange, Geneva, Switzerland. Manufacture of cream of tartar.
- 1,103,675—Jeremiah C. Lautenbacher and Albert Geary, Schuylkill Haven, Pa. Non-refillable bottle.
- 1,103,684—Elihu R. Pettit, Philadelphia, Pa. Atomizer.
- 1,103,692—Louis F. Seames, Buffalo, N. Y. Bottle stopper.
- 1,103,731—Owen Granville Ashley, Tolchester Beach, Md. Bottle opener.
- 1,103,737—Frank M. Budlong, assignor of one-third to John M. Curragh, San Jose, Cal. Closure for bottles, jars, etc.
- 1,103,752—Paul G. Fuegmann and Friedrich Herman Hummel, West New York, N. J. Sanitary bottle.
- 1,103,879—Edward F. Hoffman, Glandorf, Ohio. Toothbrush.

#### NEW INCORPORATIONS.

- The Hersey Drug & Mercantile Co., Grand Rapids, Mich., name changed to Hersey Drug Co.
- The Asenthol Company, Fort Wayne, Ind.; capital stock, \$10,000; directors, H. H. Rogers, M. A. Rogers and Henry G. Hogan; purpose, to deal in medicines and drugs.
- Eridanca Company, Brooklyn, N. Y.; capital, \$10,000; drugs; B. Mauro, A. Foye and C. Mule, Brooklyn.
- The Northwest Drug Co., Portland, Ore.; capital, \$35,000; incorporated by Cecil H. Bauer, Leland L. Smith and A. M. Schweitzer to do a wholesale and retail drug business in Portland.
- H. J. Mapp & Co., Chicago; capital stock, \$2000; to manufacture and deal in drugs, medicines, etc.; J. L. Mitchell, A. A. Cowin and H. J. Mann.
- Kenwood Drug Co., Springfield, Ill.; \$5000; retail drugs; George W. Bowen, Ora Dawson and Amel Wexter.
- Martin McDermott estate, Cohoes, N. Y.; incorporated to manufacture and deal in drugs, sundries, pharmaceutical, medicinal, chemical preparations, and electrical and medicinal, surgical and scientific apparatus; capital, \$5000; directors, Sarah A. O'Riley, Margaret A. and Sylvester E. McDermott, all of Cohoes.
- CACHE Valley Drug Co., Logan, Utah; capital, \$10,000; president, Mrs. W. L. Hendrickson; vice-president, Reid Shamhart; other stockholders, John A. Hendrickson, George Taysum, L. D. Naishitt, W. W. Hall, J. E. Wilson, Jr., E. J. Broberg, John Christensen.
- McCarthy Drug Co., Milwaukee, Wis.; capital, \$10,000; incorporators, C. L. J. E. and Margaret McCarthy.
- National Tonic Co., Biddford, Me.; capital, \$49,000; to make and deal in tonics; President, J. A. Lacharge, and treasurer, V. Beaudette, Jr.
- Elberbe Drug Co., Florence, S. C.; increased capital stock from \$3000 to \$8000.
- Peerless Drug Co., Cleveland, Ohio; increase in stock from \$25,000 to \$50,000.
- Monney Drug Co., Ltd., Alberta, Can.; capital, \$20,000.
- Allison Drug Co., Raleigh, N. C.; capital, \$25,000; incorporators, T. B. Allison, Rosalie Allison and S. A. Lynch.
- Pond's Extract Co., Englewood, N. J.; capital, \$750,000; incorporators, Charles A. Corliss, Robert H. Corey.
- Central Pharmacy, Inc., New Bern, N. C.; capital, \$25,000; incorporators, G. A. and J. A. Caton and D. E. Henderson.
- Sanavita Medical Co., Augusta, Me.; capital, \$200,000; president and treasurer, W. F. Peacock, Augusta.
- Davidge Drug Co., Hugo, Tex.; capital, \$10,000; incorporators, I. W. Davidge, R. V. Womack, W. L. Nesbit.

#### RECENT FIRES.

- At Fort Worth, Tex., Castleman's drug store, 3100 Avenue F, Polytechnic Heights; loss, \$5000; partially insured.
- At Ann Arbor, Mich.; Goodyear drug store; loss to building, \$10,000.
- At Kalamazoo, Mich.; Francis Drollet drug store; loss, \$5000.
- At Marion, Ind.; Brady drug store; loss, total.
- At Dundee, Ill.; Wagner Drug Co. and Sinclair drug store, damaged in fire which caused \$125,000 loss.
- At Burlington, Vt., Central drug store, I. H. Rosenberg, proprietor; loss by water to stock, fixtures, etc., \$2500; damage to building, \$1000; covered by insurance.
- At Mulberry, Ark.; Bost Bros. drug store; loss, \$2000.
- At Unionville, Mich.; Lowthian drug store totally destroyed by fire originating in explosion of barrel of alcohol due to ignition from gasoline lamp. Loss \$3000. Mont Lowthian, son of proprietor, died from effects of burns.
- At St. Louis, Mo., entire plant of Luyties Pharmacy Co. destroyed by fire; loss, \$150,000. Plant will be re-equipped.
- At St. Louis, Mo., Mallinckrodt Chemical Co. will immediately replace portion of plant recently destroyed by fire with loss of \$220,000.
- At Philadelphia, Pa., three fires of mysterious origin occurred in manufacturing plant of Smith, Kline & French Co. In the course of an investigation a watchman in the plant was arrested after an altercation with an assistant fire marshal.
- The McGehee Drug Co., McGehee, Ark.; capital, \$5000; L. G. Stephan, president.
- Italian Druggists' Corporation, Inc., Manhattan; capital, \$25,000;

#### Truax, Greene & Co. Fined \$650 for Selling Cocaine.

CHICAGO, July 3.—Truax, Greene & Co., wholesale druggists of this city, have been fined the sum of \$650 after a second trial by jury for selling cocaine without a physician's prescription. The company was charged in 11 instances with having made such sales and Assistant Corporation Counsel Reker asked for the imposition of the maximum penalty which would have meant a fine of \$2200. A self-confessed cocaine user furnished much of the evidence. He testified that he purchased cocaine from the drug house on 11 different occasions and that he wrote his own prescriptions. The witness alleged that it was common knowledge among the cocaine users of Chicago that the drug could be obtained from the firm without a duly authorized prescription. Suit for a fine of \$4000 against Truax, Greene & Co. was filed some time after the imposition of the above fine, the later charge being that the firm had sold cocaine on 20 different occasions without receiving the written order of a duly registered physician. A summons was issued for the appearance of the company's representative before Municipal Judge Newcomer on July 31.

NOTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, July 23.—The consuming demand for drugs and chemicals, as is usual at this time of the year, has been of rather light proportions during the past fortnight, buying being mostly restricted to orders for goods to supply immediate needs. The feature of the month has been the sharp advance in the quotations on opium, due to cables from abroad that holders were refusing to offer, and that the outlook was unfavorable to the growing crop, owing to excessive rainfalls in the growing districts. Quinine is in light demand with prices unchanged. Citric acid is still obtainable at last month's quotations, although a scarcity is reported in some quarters. A revision in the prices of citrate salts, however, shows higher values. A revision of quotations also shows a lower range for all of the essential and other oils listed above, the most notable decline being that for oil of rose, Kissanlik, the lowest point reached since the beginning of the Balkan troubles. Cod liver oil is moving slowly, but the market remains apparently steady. Red rose leaves are higher. Balsam of fir (Canadian) is slightly lower, and a decline is noted for short buchu leaves. American saffron (safflower) is in better supply and easier. Tragacanth is meeting with a fair demand and higher prices are asked for all grades. Silver nitrate is offered at a slight reduction from previous quotations. Salicylic acid and the various salicylates are also lower.

**OPIUM**—The advance in quotations on this drug furnishes the principal feature of the month's price changes, and is due primarily to the adverse crop reports received from producing districts, the heavy rains causing great losses to growers, who are also reported to be harassed by outlaws in some of the

growing regions formerly under the control of the Turkish Government. Present quotations in this market range from \$7.45@ \$7.60 per pound for natural; \$8.65@ \$8.75 for granulated, and \$8.55@ \$8.65 for U.S.P. powdered.

**QUININE**—Is in light demand, with prices unchanged at 26c. per ounce in 100-ounce tins.

**COD LIVER OIL**—Norwegian remains quiet and steady, dealers asking 80c.@ 90c. per gallon, and \$20@ \$23 per barrel. The fishing season is practically over.

**BALSAM FIR**—Canadian is slightly lower, jobbers asking \$1.45@ \$1.55 per pound. At the same time offerings from primary sources are reported to be light. Letter advices from Canada state that conditions are such that higher prices are looked for at an early date.

**BUCHU LEAVES**—While the short variety is meeting with a fair inquiry, the revision of prices shows a lower range, \$1.60@ \$1.70 per pound being asked for whole, and \$1.70@ \$1.80 for powdered. Reports from abroad indicate that the market there is advancing and above the local market here.

**BUCKTHORN BARK**—Is scarce both here and abroad, with only small parcels available. Jobbers quote 27c.@ 32c. per pound.

**CELERY SEED**—Has been reduced to 25c.@ 28c. per pound in consequence of reports from abroad relating to new crop. It is stated that this would be of inferior quality and late in coming to market.

**FENNEL SEED**—Is also easier, and is now obtainable at 14c.@ 18c. per pound.

**MANNA**—Large flake is easier, and quotations have been revised to 72c.@ 78c. per pound. Small flake is in diminishing supply and the tendency of the market seems to be upward.

**SAFFRON**—American (safflower) is in plentiful supply with only a moderate demand, jobbers quoting 60c.@ 70c. per pound.

**TRAGACANTH**—Market reports indicate a scarcity of first quality of Aleppo, and jobbing prices have been advanced to \$1.35@ \$1.40 for "extra," and \$1.15@ \$1.25 for "No. 1," while powdered is quoted at \$1.25@ \$1.35 per pound.

**RED ROSE LEAVES**—Are in small supply and dealers have advanced quotations to \$2.25@ \$2.50 per pound.

**SAW PALMETTO BERRIES**—Continue to arrive from Florida and are in plentiful supply, with quotations reduced to 18c.@ 20c. per pound.

**SUGAR OF MILK**—A reduction in quotations on 1-lb. cartons is noted, 18c.@ 22c. per pound being asked, the market otherwise being featureless.

**OIL ORANGE**—Sweet is still receding in value in sympathy with the lower range for lemon oil, quotations ranging from \$2.40@ \$2.50 per pound. No quotable changes are reported for the other Messina essences.

**OIL PEPPERMINT**—Reports from producing centers indicate a large crop of mint and a heavy yield of oil, the news of which has not been without effect on quotations. New York grade has been reduced to \$3.75@ \$4 per pound. Old crop goods are reported in scant supply.

**OIL SPEARMINT**—The present crop is reported to be above the average, with plentiful supplies in sight. As a result, prices have declined to \$4@ \$4.25 per pound.

**OIL ROSE**—A marked reduction is noted in the quotations for the Kissanlik grade, prices ranging from \$11@ \$12 per ounce. This is the lowest price reached since the conclusion of the Turko-Balkan war. Purchasers are cautioned to examine this product carefully, as much synthetic substitute for true rose oil is reported by various European authorities.

**SILVER NITRATE**—The recent advance of bar silver in London to 26d per ounce and to 56½¢. per ounce here has not been without effect upon the quotations for salts of this metal, nitrate in crystals being quoted at 46c.@ 49c. per ounce; fused cones, 59c.@ 61c. per ounce, and stick (lunar caustic), 51c.@ 54c. per ounce.

**ACID, SALICYLIC**—Increasing competition between domestic and foreign manufacturers has resulted in a lowering of prices, bulk being quoted at 28c.@ 30c. per pound; in 1-lb. cartons, 30c.@ 36c.; from gaultheria, 1-oz. vials, 22c.@ 30c. per ounce. For the same reason, sodium salicylate has been marked down to 32c.@ 37c. per pound.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, as intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures, it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
No. 3 PARK PLACE, NEW YORK.

### A YOUNG MAN FROM CONNECTICUT.

Who Should Be Heard from in the Pharmaceutical World Later On.

AS a human document, speaking vividly and clearly of ambitions, obstacles encountered and conquered, and of a determination that will surely enable its possessor to make his mark in any line of activity he enters, the following letter from Mr. Leslie B. Barrett, of Winsted, Conn., is one that will challenge the admiration and even arouse the envy of all young men and women who read it. We have not seen for some time so clear a record of work directed intelligently toward definite ends, each step denoting progress in the right direction, and all leading toward a praiseworthy goal. Mr. Barrett made a final average of 99 in the ERA Course in Pharmacy, a record which has never been surpassed and very seldom equalled. Now, at the age of 19, he is eagerly awaiting the beginning of his next stage in educational advancement. Mr. Barrett writes:

L. B. BARRETT

"I was born at Winsted in 1895, and was graduated from the grammar school in 1909. The path that led me to study chemistry is indeed a peculiar one. Immediately after my graduation I became interested in embalming, and notwithstanding my young age, spent much of my time with the secretary of the Connecticut State Board of Examiners of Embalmers, who conducts business in our town. Shortly after becoming engaged in that line, I came into possession of some standard works on sanitation, disinfection, and the manufacture of embalming fluids. These volumes involved more or less chemistry, and gradually I developed a strong desire to study the subject in detail. As I had much time to myself, I entered the Gilbert School, of this place, a school of high standing among institutions of the State, entrance being gained by a thorough examination. Along with the regular high school studies, I spent much time in special instruction in biology, physiology, and chemistry, which covered lectures and laboratory work. Along these lines I always seemed to attain excellent standing, and so I continued through three years of Gilbert School work.

"Early in the Spring of 1913 I decided to pursue a course in pharmaceutical chemistry and made all arrangements to enter college last September. However, I was disappointed in this case, and was compelled to postpone my plans for one year.

"My attention was then called to the ERA Course in Pharmacy through an ad. in THE PHARMACEUTICAL ERA, handed to me by a pharmacist. I was advised to enter the course, and promptly decided to do so, matriculating last September, an event that I have never regretted, but with which I am highly pleased. I do not believe, however, that the ERA Course or any other course will benefit one who merely glances at the lectures in an indifferent manner, but if anyone will study the lectures and take an interest in them, following up the points not clearly understood, that person will gain unlimited knowledge. As for myself, I am highly pleased and cannot praise the Course well enough. After I enrolled I was fortunate enough to obtain a place in a pharmacy, where I might gain

practical knowledge together with the lectures. I studied each lecture with enthusiasm, and believe the ERA Course is a medium that will broaden one's mind and thought along pharmaceutical lines.

"I have already matriculated in the department of pharmaceutical chemistry of the Medico-Chirurgical College of Philadelphia and expect to begin my studies there in September. My greatest ambition is to some day be graduated from the above institution, and gain knowledge sufficient to hold a position in some laboratory of chemistry, and be of service to mankind. I will surely inform the ERA Course of my standing in the future, and think that through it I have built a strong platform, upon which to take up higher studies."

### Useful When Preparing for Examination.

"I feel that I have been greatly benefited by pursuing your Course, and I think it is a good thing for anyone preparing for an examination in pharmacy."—OLIVER J. LAWYER, Physician and Surgeon, Tribbey, Okla.

### From Soda Clerk to Manager.

"I want to say that I have derived a world of good from the lectures of the ERA Course in Pharmacy. I had to start work when I was 14 years old. I started to work in a drug store four years ago as soda and errand boy. I studied very hard, as I could not afford to take a college course. I worked in a drug store in Denver for about two and a half years, and am at present manager of the City Drug Store of Elbert, having been so for one and a half years. I took up the Course after I took this position, and I would advise anybody who cares to better his standing in pharmacy to take the ERA Course."—CHAS. E. WOOD, Elbert, Colo.

### Sponges Not Dutiable Unless Chemically Bleached.

The status of sponges under the new tariff law taken directly from the sea appears to be settled in a decision handed down on July 9 by the Board of United States General Appraisers in the test protest case of Leousi, Clomney & Co. of this city. The sponges in question were taken in the Mediterranean Sea, and on arrival here were returned for duty by the Collector at 15 per cent. ad valorem as bleached or advanced under Paragraph 68.

The importers, through counsel, asserted that the sponges are not bleached or advanced by chemical process and should be admitted at only 10 per cent. At the trial Pantale Vares, a sponge diver, testified as to the method of obtaining the sponges, and described their treatment on board the vessels after taking them from the water. It was shown that the treatment includes the stamping of the feet of the crew on the sponges to beat out the animal matter and thus hasten the "death" of the sponges. Such chemical treatment as is given is for the obliterating of the coloring of the root so as to make the sponge more pleasing to the eye, as well as salable. The board held that the testimony overwhelmingly sustains the contention that the sponges have not been treated in a manner calling for the imposition of the 15 per cent. duty.

### Embarrassed Wholesale Firm and Creditors Agree.

BOSTON, July 10.—The H. & J. Brewer Co., wholesale druggists of Springfield, Mass., has had its agreement with its creditors confirmed by Judge James M. Morton, Jr., of the U.S. District Court. The offer, which has been accepted by most of the creditors and represented about \$55,000 of unsecured claims, was for 75 cents on the dollar. The bankruptcy proceedings have been arrested and the title remains with the company. The receiver has disposed of the retail business, including the store in Springfield and the two stores in Waterbury, Conn. The wholesale business will be continued under the management of Edwin O. Hapgood, president, and Samuel S. Pease, treasurer.

# THE PHARMACEUTICAL ERA.

PUBLISHED ON THE FIRST OF EACH MONTH.

**D. O. HAYNES & Co.** . . . *Publishers*

NO. 3 PARK PLACE, NEW YORK

Telephone, 7646 Barclay.

Cable Address, "Era, New York."

### SUBSCRIPTION RATES:

Single Copies, 15 cents.

Domestic Rates to U.S., Cuba, Hawaii, Porto Rico, the Philippines and Mexico.....	\$1.00 a year
To Canada, postpaid.....	1.50 a year
To Foreign Countries in Postal Union.....	2.00 a year

THE ERA PRICE LIST with Subscription, 50c. a Copy.

PRICES INCLUDE POSTAGE AND PAYABLE IN ADVANCE.  
REMIT by P.O. or Express Order or New York Draft payable  
to order of D. O. Haynes & Co. Add 10 cents for collection charges  
if you send local check.

Published at No. 3 Park Place, Borough of Manhattan, New  
York, by D. O. Haynes & Co., a corporation: President and treasur-  
er, D. O. Haynes; vice-president, E. J. Kennedy; secretary,

### OPPORTUNITY FOR AMERICA.

AUTHENTIC information regarding the develop-  
ments in the European war is at present too meagre  
to form a sound basis for prediction, either as to  
the duration or outcome of the struggle. The latest  
news, though censored to emasculation, would seem  
to indicate that the war will not be a mere 60- or  
90-day campaign, but will rather be a long, drawn-  
out, bitterly contested struggle for the balance of  
power in European affairs. And while we sympa-  
thize with all in general and none in particular,  
while we deplore the carnage and ruin that are  
inevitable, we cannot overlook the fact that the  
economic situation produced by the war affords the  
United States the greatest opportunity for com-  
mercial advancement and prosperity that it has  
had in this generation.

Those who have decried the tariff revision of the  
present administration, through a belief that a high  
tariff was the surest protection to American indus-  
tries, are confronted by a situation that the highest  
tariff could not have as effectually produced—a  
situation where the importation of practically all  
European products is prevented by the circum-  
stances surrounding the present hostilities. Not  
only that, but the productiveness of all Europe, at  
least so far as manufactures are concerned, cannot  
but suffer a setback that will take not months, but  
years to overcome.

To the United States, then, will fall the task of  
supplying all Europe with far more merchandise  
than ever before, and our great home markets must  
rely almost entirely on domestic manufactures.  
This will inevitably usher in one of the greatest,  
if not the greatest, eras of prosperity this nation  
has ever enjoyed. The opportunity for advance-  
ment thus offered is open not only to established  
trades and manufacturers, but should be the in-  
centive for the establishment of many lines of in-  
dustry that hitherto have been confined almost  
entirely to Europe.

The drug and chemical industries furnish a re-  
markable example of what might be done along  
these lines. Eighty per cent. of the aniline dyes  
used in the cotton, linen, and woolen industries of  
America comes from Germany. The dyes are  
manufactured from coal-tar by-products of the  
illuminating gas plants. In this country the by-  
products of our gas plants are practically wasted.

Is there anyone so ultra-Continental in thought as to believe that it is not possible for America to furnish from her coal-tar by-products enough dye to supply domestic manufacturers? Can we not utilize the same sources for the production of carbolic acid, and the host of other drugs of similar origin, and thus be independent of European markets to an appreciable extent?

During the past three years our imports of potash and potash salts from Germany have increased from \$7,000,000 to over \$10,000,000, yet we have sufficient clay and feldspar rock in America to manufacture and supply the entire demand from our soap, glass, fertilizer, and other industries using this chemical. These are but two of scores of examples that might be cited along this line. The war, deplorable and terrifying as it is, has given us this opportunity to increase the economic prosperity of America. And if we let the opportunity pass by, we are deserving of scant sympathy when we complain of the business depression, real or psychological, which occasionally forces its unwelcome attentions upon us.

#### WHERE DRUGS COME FROM.

In following the history of the present European war one can take it for granted that the geography of the countries in the contest will become better known to the average citizen. With the knowledge of geography there follows in its train the acquisition of certain facts which deal with economies in the line of natural and manufactured products, domestic and foreign commerce, individual and national wealth, in short, all of the factors which have a bearing upon the world at large, and more particularly, in the relation that one nation stands in toward another.

In its connection with the drug trade, the present seat of war has much to interest the student of pharmacy. The southern part of Belgium, nearly the whole of Germany, and many parts of France contain the richest land in the world, veritable gardens, where have developed for ages the highest exemplification of the agriculturist's art. From these regions have come many of the plants included in the materia medica and popularly known as "botanical drugs." War waged in a country where every foot of ground is tilled with the highest skill will mean an unusual waste, and the destruction likely to be wrought will involve the loss for many years, if not for all time, of the products which have made such districts famous. Digitalis, belladonna, buckthorn, colchicum, gentian, dandelion, valerian, lavender, anise, coriander, fennel, chamomile, rose, thyme, arnica, and many other drugs might be named as either originating in Central Europe or reaching the commercial world through the ports of the Mediterranean basin. When these facts are considered in their proper perspective, a fuller realization will be obtained of what the great contest means for the drug trade.

We are sure that the average pharmacist will soon know more of drug geography than he ever did before, and that from this knowledge he will take heart and be ready to take advantage of the

new opportunity for the cultivation of medicinal plants in this country. Of course, it will take years to place this industry upon a paying basis, but with the encouragement of the United States Bureau of Plant Industry, which in its work and investigations has made great systematic advance in studying these conditions, substantial results can rapidly be accomplished.

#### THE WORK OF THE N.A.R.D.

THE extended ramifications of the drug trade are reflected in the series of resolutions epitomizing the work of the National Retail Druggists' Association which appear in our news columns of this issue. The recent meeting of this association was held in Philadelphia, and like most of the gatherings in former years, it was well attended and much interest was exhibited by the delegates present. While the deliberations were lacking in some of the oratorical features that have characterized not a few of the meetings in the past, yet there was displayed a degree of earnestness in the work that speaks well for the future of the association.

As a whole, however, much of the business of the association consisted in affirming or reaffirming the stand taken on issues of which the delegates were well informed and upon which they were practically unanimous in opinion. One resolution which elicited considerable discussion was that which stated that many wholesale dealers and manufacturers were deliberately taking advantage of the grave conditions which confront the American people on account of the European war and were arbitrarily and unnecessarily advancing the prices of essential medicinal commodities. This statement did not go unchallenged, however, and although the resolution was finally adopted, one delegate was brave enough to assert that the substantial wholesalers were as honest as the retailers. The duty of the delegates presenting the resolution was emphasized by Thomas Stoddart, of Buffalo, in his contention that anyone knowing of such a combine to raise prices should bring the facts to the attention of his district attorney.

We have yet to be convinced of any predetermined and deliberate effort on the part of any manufacturer or wholesaler, either alone or in combination with others, to raise arbitrarily the price of drugs and medicines. It is true that manufacturers and jobbers have gone to great lengths to conserve the supplies and to distribute them as widely as possible in cases of actual need, but as yet we have no knowledge of an authentic case where prices have been arbitrarily raised other than for the economic reasons of supply and demand. If such a combination has been made it is the plain duty of those who have the information to make it public through the proper officials.

The growth of the association is reflected in the report that the State association affiliation has been increased from 33 to 35, while the number of local associations has increased from 1,056 to 1,068, a gain of 12. These figures are not phenomenal, but they show a healthy activity and afford considerable encouragement for the active workers. To the

drug trade they also show the direction for better things, a deeper interest, a closer relationship, a broader and more comprehensive brotherhood, but best of all, a united effort on the part of the retail trade to secure the greatest good for the greatest number.

**THE SOUTH AMERICAN FIELD.**

As soon as our American business men are awake to the fact that their foreign competitors are largely being put out of business, not only will many new lines be manufactured here, but new markets supplied with American goods. Among the latter, none seem to offer such advantages as our near neighbors, the South American republics.

The Bureau of Foreign and Domestic Commerce of the Department of Labor has been collecting information on South American markets, and a great amount of valuable data is now available for those interested. A recent Bulletin, No. 85 of the Special Agents Series, takes up the possibilities in the lines of drugs, patent and proprietary medicines, surgical instruments and dental supplies, and contains a wealth of detailed information of the most practical nature for manufacturers and shippers who contemplate entering the South American trade in these products.

The annual imports of drug and chemical products into South America are about \$17,000,000, of which the United States furnish about 10.5 per cent. This country also supplies 35 per cent. of the \$6,000,000 worth of proprietary remedies, soaps, and perfumes imported each year. In the drug and chemical lines it appears that trade has not been so keenly sought as in other branches, as the United States sent into South America, in 1913, over 14.5 per cent. of all imports. The chief competitors in the drug and chemical business are of course Germany, England and France, with Germany far in the lead in most countries. But no prejudice exists against American goods, and reports seem to prove that the chief reason why our houses have not captured more of the trade below Panama is simply because they have not wanted it, or have not been willing to make the concessions needed to win it, which have been granted by all European competitors. The opportunities for business are large. Some of the largest drug importing houses in the world are located in Buenos Aires. In Rio Janeiro there are more than 400 retail drug stores, nearly as many as in North or South Dakota, South Carolina or Oregon. The appearance of American package goods is well liked, and their quality is satisfactory.

There have been some obstacles in the way of increasing business in South America which cannot be laid to the doors of the American business men. First of all, the credit and banking facilities have been poor. Banks in those countries are mostly run on European capital, and exchange is made in London, Paris, or Berlin funds. Again, the time required to reach the South American ports from New York, for instance, is twice as long as it takes to travel from the southern part of Europe. But it is practically certain that in the

near future more direct steamship lines, with improved service, will be in operation between this country and South American ports. As for banking requirements, the National City Bank of New York is awaiting the Government's permission to establish two branches, one in Buenos Aires and another in Rio, while the First National Bank of Chicago wishes to open up in Lima, Peru. These banks will afford commercial service to prospective exporters, and will also adjust misunderstandings for their customers.

Another matter which has stood in the way of a greater growth in American exports has been an unwillingness on the part of some American manufacturers to cater to the wishes of South American customers. They have not seen fit to make the goods wanted in the sizes desired if these differed from their regular lines, and have objected to orders for special packages, labels, etc. Another very important factor is the long credits demanded by customers in Latin America, which often amount to six or eight months, while the American exporter wants his money in 60 or 90 days, or cash on bill of lading. Again, shipping cases have not received proper attention, with the result that goods have often been ruined in transport. This condition can be easily corrected, as European shippers have not allowed their customers to suffer in this respect.

There is every indication that all that is now needed to capture a large part of the rapidly growing South American drug business is ordinary horse sense, a proper consideration of the wishes of the prospective customers, without which no large business can ever be built up, and a utilization of the great mass of valuable data now at hand. Business methods in South America are different from those above the Isthmus, but it will be strange if the United States cannot adapt itself to the demands of this trade, just as European nations have done.

**THE INTERESTS INVOLVED.**

NINE nations are now engaged in the greatest war the world has ever seen. From every field of useful endeavor men have been drawn, and their productive capacities changed into barbarous destructiveness. Manufactures and transportation are pressed into the service of armies and navies, and the normal increase of wealth in the several countries will, for a time, almost cease. It is interesting to give a brief survey of the magnitude of the national wealth possessed by a few of the larger countries in the struggle, and of the volume of trade between each of them and the United States.

No very recent estimates of national wealth are available, but the following figures are sufficiently new to be valuable now.

<i>Country</i>	<i>Estimated Wealth in Billions of Dollars</i>
British Empire (1903).....	108
Germany (1908).....	78
France (1908).....	43
United States (1904).....	108

In foreign trade, the United States does not make such a showing, on account of the enormous demands of our domestic markets. Nevertheless, this country is the only one of the four principal manu-

facturing countries which has a credit balance of trade, due chiefly to the fact that we feed a large part of the world.

	Exports in Millions of Dols.	Imports in Millions of Dols.
Great Britain.....	3,741	3,089
Germany.....	2,754	2,305
France.....	1,588	1,296
United States.....	1,793	2,484

The total commerce of the world, including reports from 75 countries, was \$40,000,000,000 in 1913.

Here are given statistics showing the amount of our foreign trade for 1913 with six of the nations now at war:

Country	Exports to U.S.	Imports from U.S.
Austria-Hungary.....	\$19,000,000	\$23,000,000
Belgium.....	42,000,000	67,000,000
France.....	136,800,000	146,000,000
Germany.....	188,900,000	331,600,000
Russia in Europe.....	27,000,000	25,400,000
United Kingdom.....	295,000,000	597,000,000

The combined tonnage of vessels entering United States ports in 1913 was 37,565,000. Of this, English ships carried 19,696,000 tons, or considerably more than half. France, Belgium and Russia added a tonnage of 1,506,000, while Germany and Austria combined could claim only 5,915,000 tons. Thus the total amount of commercial tonnage bringing cargoes to our ports, and sailing under the colors of the Allies, is more than four times as great as that of Germany and Austria together. As long as Great Britain is "mistress of the seas," the most powerful factor in maintaining our foreign commerce will be active.

#### Wake Up America.

Instead of wasting days in cautious calculation and bootless argument, why doesn't American industry bestir itself and go forth to meet big opportunity in a big way?

Commercial gentlemen who are cautiously drawing into their shells and storing away millions of dollars' worth of goods in warehouses are doing nothing for the nation.

Manufacturers cut off from European supplies which their own workmen could be taught to replace are not serving their country by closing their factories. Why don't they take advantage of the most extraordinary protection the United States ever had to try to fill and hold the place of the foreign product?

We deeply deplore Europe's misfortunes. But they were not of our making. Whatever their causes, they lay upon this nation a positive duty to jump into the breach made by incalculable falling off of Continental industry and commerce. Surely we need not justify ourselves for trying to save the trade of the world from stagnation. If we profit in the effort, so much the better. Why be afraid?

Where is boasted American enterprise? Has it been lulled by prosperity and pampered by tariffs until it can no longer rouse itself when a great chance comes?—*N. Y. Evening World.*

#### Business Boom in U.S.

Now is our chance to benefit ourselves by helping humanity, writes Libbert Hubbard in the *New York American*. In all the history of the United States, commercially, we never had the opportunity that we have today.

Fate has eliminated America's commercial competitors. The world is ours.

I predict that for the next two years we will see a business boom in the United States the equal of which we have never before known. Everyone will make money who works, and all may partake of the prosperity.

In the past two weeks I have spoken at Chautauquas in five different States in the Mississippi Valley. On these occasions I have met a great many farmers, stock raisers and country merchants. I have also recently visited the cities of Chicago, St. Louis, New York, Denver, St. Paul and Minne-

apolis, meeting in each place bankers, merchants and manufacturers.

My prediction of a business boom, however, is founded on something more than the general feeling which I saw manifest.

## Giving Customers What They Want.

By H. U. BOLLES.

President of the Weatherhead Drug Co., Cincinnati, Ohio.

"ESTABLISHED in 1848," is the legend which is borne by the advertising matter and stationery of the Weatherhead Drug Co., of Cincinnati, which, in fact, was founded at that rather remote date by Dr. R. H. Weatherhead, who is still interested in the company. It is now actively handled, however, by H. U. Bolles, president of the concern, who keeps the two stores now operated by the company, at Sixth and Vine and Sixth and Walnut streets, respectively, going at top speed, with great success.

"Working hard and keeping at it all the time are two of the best pointers I know for a druggist to stick to," smiled President Bolles. "That's the way I handle this business, and, as far as I am able to judge by results, it seems to work. Both of our stores—and there's another one coming, by the way, in a very short time—are right in the middle of things, and they are busy all the time, in consequence; and the new one will be in the busy district as well.

"Of course, there are a good many things which go to make for success in the drug business nowadays. To check them off, as far as one can classify them, I should put them about in this order: Advertising, location, merchandise, personnel. That includes, in one way or another, about every factor you can consider as having any bearing on the business, or any business, from any standpoint. Emphasis may be placed on any one or more, if you like; but we prefer to emphasize them all.

"By our advertising we keep the public advised of what we have to sell, and the prices at which we desire to sell it. We advertise regularly, and we try to make our advertising interesting. Moreover, we use our windows to the fullest—they're one of the most valuable features of a good location. For example, our safety-razor blade-sharpening business, which is made conspicuous by keeping a machine running constantly in the window of each store, brings in around \$15 a day—which helps some.

"One thing which I think has gone far toward making the company a success is the fact that my unvarying policy has been to hire good men—and girls—at good salaries. If a man leaves for any reason, I try to replace him with a better one; and, somehow, I generally succeed. All of our employees are impressed with the idea which we try to keep uppermost all the time—that of serving our customers to the best possible advantage; and that has its effect on our business, of course.

"As may be gathered from this, we have a highly efficient force. We have been able to arouse an *esprit du corps* which makes everything go with a snap, because it means that everybody is interested in his work, and does all in his power to see that customers are well handled. It is as if every employee were a partner in the business. A man works about twice as well when he has that spirit, and we all have it in this company.

"Departmentizing the business helps a good deal, and it seems to me that any druggist can do it without much trouble, even if he is the only man in the store. In our case, we have a man to take care of each line of goods, although there is also the manager for each store. But these numerous lines—cigars and tobacco, wines and liquors, patents, toilet articles, candies—are all kept separate, and we have no difficulty in watching them, and keeping track of their movement and the way profits are going on them; which is a highly important thing to do.

"Finally, there is one thing which I think deserves mention, because, like most other merchandising ideas, it can be applied by any member of the trade. Around our stores, and on nearly all of our placards and signs, the old-fashioned suggestion, 'If you don't see what you want, ask for it,' is placed. We mean it, too. We try to keep everything possible in stock, but we make a specialty of sending for goods which customers want and we haven't on hand; and I know that we have made many friends by this, as well as by the other progressive methods I have indicated."

## Drug and Chemical Markets Hardest Hit by War.

*A survey of conditions arising from the European struggle, compiled from numerous interviews with members of New York firms, with statements from several of the larger manufacturers elsewhere.*

WITH importations entirely cut off, German cables cut, Government embargoes placed on shipments of drugs and chemicals from foreign countries, and the already low stocks rapidly dwindling, the drug trade in the United States faces a situation which is not only without a parallel, but which may cause a suspension of some branches of the trade. Temporary though this suspension might be, it is almost inevitable, for it is extremely doubtful whether the machinery for the transportation and distribution of foreign drugs and chemicals can be reorganized before the stocks in this country are exhausted. Estimates are given reluctantly by most dealers, but the opinions seem to indicate that some lines are already depleted, while others may last from three to six months, at the outside.

The declarations of war in Europe came at a time which, judged from the drug dealer's standpoint, was exactly calculated to play greatest havoc in the trade. A prevailing falling market had caused importers to buy in small quantities, resulting in unusually low stocks in many lines. New crops of drugs were awaiting harvest when the call to the front removed thousands of men from the fields. Unless these crops can be gathered by the workers remaining, and by the women and children, there is not the least doubt that the drug shortage will extend through considerably more than one year. And not only may the botanical drugs be lost through failure to harvest them at the proper time, but the contending armies themselves may complete the work of destruction in their manoeuvres across territory which furnishes a considerable proportion of certain staples. To give only one instance, the ground which has been the scene of much heavy fighting in Belgium is the district which grows large amounts of Roman chamomile.

Shipping facilities are still very meager. The German ports will not permit the clearing of German vessels, on account of the risk of capture, and English vessels can, of course, not enter German ports to receive cargoes. Insurance risks are either refused or taken at a maximum rate, and foreign exchange, which for a time was impossible to obtain, is still quoted at far above the normal figures. American ships which might be used to carry supplies across the Atlantic, unfortunately are not to be had. But the lack of a merchant marine of this country must not be blamed for the cessation of imports, as it is doubtful whether supplies could be brought in, even if a merchant navy were in full commission.

### Articles Prohibited from Export.

According to the *English Chemist and Druggist*, Great Britain has prohibited the export, among other articles, of glycerin, niter, carbolic acid, alcohol, iodides, bromides, bismuth and salts, chloroform, cinchona bark, quinine and salts, coca leaves and alkaloids and salts, belladonna and preparations, cresol and all preparations thereof, digitalis and its preparations, ether, nux vomica and its preparations, iodine and its compounds, mercury and its salts and preparations, lysol, morphine and other opium alkaloids, opium, protargol, salicylic acid and salts, and all fine chemicals. Austria-Hungary has prohibited the exportation of sulphur, crude and refined glycerin, acetone, picric acid, etc. Belgium has placed an embargo on several lines, which, however, do not closely affect the drug business, while, as might have been expected, the list of articles whose export is forbidden by Germany is a very long one, and includes, to give only a few items, camphor, potash salts, carbolic acid, benzene, toluene, cresol, barium nitrate, phosphorus, mercury, antimony, surgical dressings, iodides, iodine, iodoform, chloroform, antipyrin, pyramidon, opium and derivatives, paraformaldehyde, quinine and salts, salvarsan, bacteriological apparatus, vaccines and serums, and tar oils. Potassium nitrate is held up by all nations involved.

Since the opening of hostilities a few scattered shipments have come in, consisting of cargoes already afloat when war was declared. Since their arrival no foreign drugs from Europe, Western Asia, or Africa have arrived. The British fleet having now opened the North Atlantic for purposes of commerce,

efforts are being made to recommence trade in British ships through some of the neutral ports, such as Rotterdam, the goods being brought in Dutch bottoms down the Rhine, which flows past most of the German chemical centers. Such a move would depend for its success on whether the German factories were in operation, whether they were engaged in making lines which were not to be turned over entirely to the German Government, and whether the articles wanted were prohibited from export.

Shipments from Eastern Asia and Japan continue to arrive, but the entry of the latter country into the arena has affected the credit relations, and it is now said that Japanese firms are asking for gold payments. Camphor being contraband of war, and under the control of the Japanese government, we may expect to see it held closely, if the exportation is not cut off altogether. Unsettled conditions in the Mediterranean have caused a blockade of shipping in the Suez Canal, the vessels bound north from Asiatic and African ports not caring to risk capture after leaving Port Said.

Hamburg and London, the principal drug markets, belong to the belligerent nations, and the same is true of Trieste.

This brief survey shows the difficulties in the way of drugs reaching the United States. As a result, prices have reached unheard of levels, price lists have been withdrawn, and many contracts have been broken. All quotations now are merely nominal, orders are being refused on all sides, and a number of manufacturing plants have been forced to lay off large numbers of men, or even to suspend altogether. Taken all in all, it may well be doubted if any other line of business has been so severely struck by the war conditions as the drug and chemical branches. Dependent as this country is on Europe for many of its botanical drugs, fine chemicals, and raw materials, the cessation of commerce across the Atlantic means cutting off business at its source.

### Shortage Is General.

A list of articles in which a shortage exists or will soon exist would include nearly all chemicals and drug products. The stopping of shipments from Germany cuts off the great bulk of the synthetic remedies, as well as coal tar, benzene, and carbolic acid, which are needed as raw materials for the American works. Tartrates and tartaric acid have ceased to arrive from France, which also no longer sends out perfumers' materials and essential oils. Oxalic acid, potassium salts, especially the nitrate, iodine, iodides and bromides, opium alkaloids and their synthetic derivatives, cocaine, quinine and salts, mercurials, ergot, henbane, valerian, belladonna, cantharides, digitalis, licorice, gentian, oil of rose, lavender, stramonium, althea, spices, gums, nux vomica, citrus oils and citric acid, coconut oil, rhubarb, anise, myrrh, aloes, buchu, saffron, senna, are all affected. Dyestuffs from Germany are said to amount to only 60 days' supply in this country, and the woolen and cotton manufacturers are at present absolutely dependent upon these colors, as American chemical works do not manufacture them in anything like sufficient quantities. Photographic chemicals are very short, and the impossibility of obtaining supplies of the indispensable hydroquinone has forced several of the moving-picture concerns to close their developing rooms. This chemical is not made in this country, as American manufacturers are unable to compete in price with the Germans. Belgium, the principal seat of hostilities thus far, is also the great rubber market of the world, and importations of foreign refined rubber are seriously interfered with. However, it would be useless to attempt to enumerate here all the articles which have risen in price, since our market report gives full information on the condition of the drug market as we go to press.

### Advances Are Not Speculative.

It is very doubtful whether any considerable part of the rise in prices can be justly attributed to speculation. Wholesalers and importers alike are endeavoring to protect their regular customers; this is their unanimous affirmation. In order to do so, they have been forced to advance quotations, where any are possible, in order to drive off outsiders who might wish to take advantage of conditions. Isolated instances of large lots of chemicals and drugs which are being held for a heavy rise are said to have come to light, but there is every reason to believe that the unprecedented prices are in general

legitimate and inevitable. Stocks on hand are being doled out in a miserly fashion, and there is no tendency for dealers to take advantage of the demand. It is said that Western houses are not so opinionated that much of the Eastern talk about the danger of a general shortage is not altogether trustworthy, and there is a strong feeling in the West that New York firms are creating an atmosphere which will be favorable to themselves. Nothing could be further from the truth. The Eastern houses are right, and all, that their interests and those of their regular customers are inextricably bound up, and any trickery, however slight, would result in ultimate loss. If some of the Western dealers had been privileged to listen, as the ERA representative was, to many telephone conversations between officials of importing and manufacturing firms, and some of their best and oldest customers, they would have been convinced that the alleged state of the market is anything but fictitious.

#### Remedies Proposed.

What are we going to do about it?" is the most important question at present. Many remedies have been proposed to relieve the strain. We must use native drugs; we must use fewer drugs, and in smaller quantities; our factories must begin to manufacture fine chemicals and synthetics; we must—and this is everywhere declared to be one of the most pressing needs—organize a merchant marine; we must depend on those countries whose Transatlantic commerce is not affected.

As for depending, even for a short period, on native drugs, this is considered seriously only by editorial writers in the daily papers. Although the United States produces a number of valuable indigenous drugs, and is taking the lead in drug plant cultivation, there is not a sufficient variety of native drugs to furnish anything like an adequate supply. In the field of alkaloidal plants of the more potent kinds, this is especially true. For many years we shall still be dependent on all parts of the world for our botanical drugs and most of their active principles.

In regard to the use of fewer drugs, and those in smaller quantities, little need be said here. In the first place, such a suggestion is altogether beside the mark, as even if the consumption could immediately be made to proceed at only half its present rate, the day of famine would only be postponed, and the inevitable condition would confront us. In the second place, the question as to whether fewer drugs shall be used is not in the hands of pharmacists, but rests almost entirely with the physicians, and for this reason the question is out of our province.

#### The American Chemical Industry.

The third remedial measure proposed opens up wide possibilities, and at present conditions are too unsettled to make possible any predictions as to what the course of events will be. Nevertheless, we can discuss the question generally, and see the causes operating. The chemical industry of the United States is large, but by no means to be compared with that of several European countries, as England, France and Germany. We are obliged to import enormous quantities of drugs and chemicals and dyes, amounting in 1913 to more than 100 million dollars, while our exports were only a little more than four million. The raw materials come mostly from Germany and England, which send us the bulk of the carbolic acid, salicylic oils, and hydrocarbons from which much of the organic manufacturing starts. The installation of increasing numbers of by-product coke ovens in this country is enabling us to produce ourselves an increasing proportion of these raw materials, but at present the cost of production is greater than the cost of the same materials brought in from abroad. This is due largely to the greater cost of American labor, but also to greater refinements in manufacture. At present, the supply of raw materials of domestic manufacture, not considering the question of price, would not by any means suffice to keep our chemical factories going, even if no attempt were made to increase the number of lines produced. With normal conditions existing on both sides of the Atlantic, the day is probably far off when the same raw products can be produced at the same cost in Europe and America, and this factor must always be considered when estimating the probable value of further investments in chemical plants.

#### Short-Time Investments.

Another expedient suggests itself. Might it not be possible to encourage the manufacture of large lines of fine and bulk chemicals in this country, and put them on the market at prices determined on conditions here, assuring to the manu-

facturer a just profit calculated on the cost of domestic raw materials and with high-priced labor? This question is easily answered by another. Would investors be justified in sinking large amounts of capital in factories which would almost certainly be forced after three years at the latest, to compete again with the much cheaper goods of Germany and England? The outlook is bad for a general development of the American chemical industry just at this time. If it comes, it will not be brought about by conditions arising from the European war, but will ensue in the orderly evolution of American manufactures in general.

#### The Problem of Foreign Patents.

At the same time, a large number of chemicals and synthetic remedies can be made in this country, and present indications are that a number of our manufacturers are taking steps to put out many new lines. At this juncture they are confronted by a host of foreign patents. Is this country to be deprived of the benefits of these manufactured drugs because of patents which it has itself granted? We are not aware of the status of an international patent as affected by the contingency of war, but it may be justly maintained that our Government is free to act in any manner which is demanded to conserve the welfare of its citizens. Actual cancellation of the patents may not be necessary, but at least temporary licenses should be given to allow American factories to use the processes in question. Other contracts are rendered void by war, and a patent is in the nature of a contract, by which a national government agrees to grant the patentee the exclusive right to make or use his invention for a term of years. But in view of this contract, some obligation must also rest on the patentee.

With the difficulty of patents settled in some way or other, there next arises the question of technical skill and equipment for proper manufacturing. This is undoubtedly possessed by our chemists and workmen, at least in embryo. But it will certainly require some years before the enormous handicap of Germany's long traditions and extended practice will be overcome. For more than half a century that country has occupied a most prominent part in the chemical manufactures of the world. The technical organization of her industries is conducted on a principle entirely different from that in vogue in the United States; indeed, it may be said that in general the German plan of control of a large manufacturing establishment by the technically trained men is abhorrent to American manufacturers, who prefer to have "business men" at the head. This practice has contributed largely to the efficiency and success of the German plants, and it may be strongly argued that American capitalists will be forced to adopt the same methods.

On the whole, however, we may expect our own plants to make up for part of the shortage in fine chemicals and synthetics, without bringing about a great swing upward in the chemical industry. That they will be able to supply the entire lack of material caused by the war is scarcely to be thought of, patriotic statements in the lay press to the contrary notwithstanding. Large industries cannot be built up overnight; they cannot even be built up in the period probably to be covered by the European war and the subsequent era of readjustment; and lastly, resumption of normal production abroad will again bring into the home market the full supply of low-priced products.

The crying necessity for a merchant marine belonging to this country is a matter of such general knowledge, and the steps now under way looking toward the building up of an adequate mercantile navy are being so widely discussed that nothing more need be said here.

#### Trade Will Soon Be Resumed.

Trade with England, in all probability, will soon go on as heretofore, making due allowances for the curtailment of manufacture in that country. But in view of the long list of articles prohibited from export, no great relief in the drug situation need be looked for from England. English ships, however, carried in 1913 three times the tonnage of all vessels registered as German, French, Austrian, Russian and Belgian taken together. The unrestricted passage of English vessels in the North Atlantic is thus the greatest factor in the resumption of trade. Moreover, the recent proclamation of King George V of England, prohibiting trading with the enemy, does not apply to branches of German houses located in other countries, and it is hoped that in this way trade may be carried on to some extent. Commerce with Spain, Italy and Portugal will probably not be broken up, unless these nations

are also drawn into the widening vortex of the struggle. The manager of the largest cork manufacturing concern in this country believes that druggists and others will be able to get all the corks they need for an indefinite time, as their shipments are not interfered with, and supply sufficient for more than a year is in hand. With the opening of the Panama Canal, it is quite possible that some drugs formerly purchased from European markets will be brought directly to this country, placing us in an independent position.

#### Substitutes Will be Found.

Meanwhile, the druggist has it in his own hands to help himself in a number of ways. Intelligent substitution, of course with the physician's permission, will frequently enable him to make up for diminished or exhausted stocks. For instance, sodium salts can largely be used for the now unobtainable potassium salts. Some of the simpler synthetics, as acetanilide, can be manufactured "at home," with the simplest apparatus, and at fairly low cost. Quinine can be substituted, while it lasts, for some of the artificial antipyretics, and *vice versa*, according to local stocks.

Conditions are extremely serious, there is no denying the fact. But the market, at first panicky, has now assumed a steadier tone, and buying movements are sane and what might be expected. The war will not last forever, and temporary straits will not ruin us. More goods of every sort will be obtainable, sooner or later, and until that time we must face conditions with a strong heart, and utilize all our great national ingenuity to cover the lack of materials. This is a time when the "substitutor," of the legitimate variety, is the man of the hour.

PARKE, DAVIS & Co., *Detroit, Mich.*

1. From present indications, it would seem that Germany and Austria will be the last to export shipments of their material for two reasons: First, they will probably want to retain for their own consumption all raw material that can possibly be put to home use. Second, in case shipments were attempted by them and the allies secure control of the seas such material would be in danger of seizure. For this reason a very large quantity of crude drugs that should be harvested at the present time, and particularly a full line of potash chemicals, will be seriously affected. If crude drugs are not collected during the present season, of course they will be unattainable for at least a year, and many of the important drugs of our materia medica come from these two countries. Relief to the situation is the possible early resumption of shipments from England, Spain, France, Switzerland, Italy, Russia and the southern European countries not affected by the war. With the opening of shipments from these points a considerable line of crude or heavy and fine chemicals may be available.

2. We do not believe that American manufacturers are in position at present to take care of any considerable part of the fine bulk and chemical products ordinarily obtained from Europe. We doubt if they have the equipment for manufacture and we do not believe they can obtain raw material any more rapidly than the chemicals themselves could be imported, and in view of the fact that practically all of these countries have prohibited the exportation of material of this description, it does not look very bright for the marketing of unlimited supplies in the United States.

3. We are under the impression that under present tariff arrangements, the restrictions in free alcohol use as compared with other countries, and the exceedingly high cost of labor, investments for the manufacture of this line are not justifiable. The uncertainty of the time that war will prevail would scarcely warrant a very large investment in consideration of the fact that at the close of the war the cost of labor in America, as compared with its cost in other countries, would prohibit, in our opinion, a profitable investment.

4. We fancy the general plan with manufacturers will be that when they are unable to procure certain drugs they will simply "short" them on their orders. We are not looking for any general failure of manufacturers because in time many American drugs will naturally supplant the foreign article if the latter is not available.

WM. S. MERRELL CHEMICAL Co., *Cincinnati, Ohio:*

The war situation in Europe emphasizes the opinion expressed with increasing frequency in the past that the time has come when American manufacturers should perfect their arrangements for crude material, controlled in a large measure, heretofore, in the larger trade centers of Europe—to the end that the "splendid isolation," so called, of the United States,

may be made more and more independent under circumstances of which the present conflict is a striking type. We apprehend that in the beginning competitive efforts in this country may not prove altogether satisfactory in the direction of profit, but we will never be able, in our judgment, to open up the larger markets of the world, until we have made it possible to compete on equal terms with European manufacturers. Our impression is that stocks in the hands of jobbing distributors are not as large in variety or amount as would be desirable to meet the conditions with which they are confronted; but the financial ability of the drug trade generally seems to be unaffected, and we do not anticipate an unusual number of commercial disasters, growing out of the European war. The disposition on the part of American manufacturers to take care of their contracts and divide their stock resources in a fair and equitable manner, is a most gratifying incident of the present situation.

Finally, a strong effort should now be made to thoroughly test our many valuable indigenous drugs, in order that we may not be so dependent on the synthetic and patented products of foreign manufacture, as appears to be the situation at present.

E. FOUGERA & Co., INC., *New York:*

The largest importer of proprietary preparations for the drug trade is E. Fougera & Co., of New York, whose business is naturally very much affected by the war in Europe. This company imports some 3500 different articles from France and England, and M. M. Sterling, secretary and treasurer, was asked to give some information as to how the war would affect its trade and how it would be able to take care of its customers. Mr. Sterling stated as follows:

"This is the second time that our firm has had to face a situation which was the outcome of a war between France and Germany. However, in the Franco-Prussian War of 1870, shipping was not interfered with. In fact, the rival navies played practically no part in the war engagements.

"At present the outlook is favorable, for the ocean is being kept clear of vessels hostile to the interests of France and England, but it remains to be seen how soon enough ships will be put into commission to re-establish dependable service for merchandise freight. Another phase of the situation which our private advices indicate is, that the working forces in the factories of England and France are being greatly depleted. This is particularly true in France and will become more so should this most regrettable war be long continued.

"As to our ability to supply our American trade. One of our representatives is now in London and he has also visited Paris. Our intention is to keep him there to look after our interests and he will make frequent trips between the two cities if transportation facilities will permit. Under the circumstances we have been compelled to advance the prices of practically our entire list. This is forced upon us by the scarcity of these goods and the general advances made by the manufacturers because of the rise in raw materials; also because of advanced shipping and insurance rates and the very high rate of exchange at which foreign invoices must be liquidated.

"We are cutting all orders to a certain ratio and if our customers will limit their orders to their immediate needs we expect to be able to supply the demand, if the war is not too long continued. We cannot encourage any speculation or overstocking in the foreign goods which we handle, but we expect to be able to take care of the immediate necessities of our trade if both the wholesalers and the retailers will not attempt to lay in extra stocks.

"It is of course impossible to predict how soon we shall be able to return to normal prices. It is more than probable that the higher prices on these imported products will prevail for quite a period, even if the war should end shortly. The enormous war taxes which these countries will be obliged to meet and the substantial advance in the prices of all raw materials are sure to keep the finished products at a high level for quite a period."

FREDERICK STEARNS & Co., *Detroit, Mich.:*

We feel quite unable to satisfactorily analyse the situation at this time. However, there seems to be a shortage already of imported drugs and chemicals. To offset this the daily press advises that shipments from England of crude drugs, oils, pig tin and other commodities used by the drug trade are being resumed. That it will be difficult, if not impossible, to get certain drugs and chemicals produced in Europe and perhaps other countries, in considerable quantities, seems highly prob-

and that prices are bound to soar. For instance, all of the chemicals used is imported from Germany and England. These have been declared contraband of war and, we understand, cannot be purchased now at any price. It is quite possible that other similar cases will develop which will cause serious embarrassment to some manufacturers.

It is true that fine chemicals have been imported in great quantities, but this would rather indicate that manufacturers in this country are not in a position to supply them in competition with those made abroad. Whether or not they are in a position to supply them at all remains to be seen in the near future. Some chemicals for which there is a large demand are now made in this country on a very large scale and of superior quality. There is a question among manufacturers as to whether it would be profitable to establish expensive plants for the manufacture of chemicals the supply of which has been temporarily cut off. If the war should last but a short time, competition with the foreign product would be re-established to the very possible disadvantage of the American producer.

While we do not view the situation with alarm as yet, the fact cannot be denied that it is likely to prove embarrassing. It shows that we are quite dependent upon Europe for certain supplies that we should manufacture at home.

## Make the Right Use of Windows.

By H. G. SCHMUELLING.

*Prosperous Druggist and Active Business Man, Cincinnati, O.*

"I SUPPOSE there are not a few other men in the business who have done better than I have. But, on the other hand, there are many who have not done quite so well, perhaps, especially as I have been in the business for only six years.

"As far as I can see, it seems to me that success in the drug business is largely a matter of personality, as, in fact, success in most lines is. I believe it was Emerson, or some equally wise philosopher, who said something to the effect that the man who can write a better book, preach a better sermon, or make a better mouse-trap than his fellows can make his home in the wilderness, and the world will make a beaten path to his door.

"Well, that's the idea. That quotation has always impressed me as containing a world of truth, although, at that, I would not advise any druggist who wants to handle any business to place his shop in a wilderness, no matter how competent he may be. The point is, of course, that it is up to a man to show what is in him by the way he does business. The druggist, or any other man, who insists that luck has been against him, or anything of that sort, is merely confessing that there is something lacking in him; because in ninety-nine cases out of a hundred the right man rises above luck and circumstances, and makes good in spite of them.

"And one of the ways of making good in the drug trade, in my opinion, is to make the right use of the windows. I never place drugs in my windows, for one thing, for a very obvious reason. The display of goods is for the purpose of inducing people to buy them; they buy medicines not by reason of any inducement—you couldn't sell a well man a bottle of tonic in a thousand years—but because they have to have them. And when that is the case, they will come in and ask for them.

"Devote your windows, therefore, to goods that people may be induced to buy—photographic goods, say, or stationery, or cutlery, or toilet goods—anything but drugs. And, another thing, don't have things too cheap. I should say that there is more danger in having them too cheap, within certain limits, than of having them too high, although that should be watched, too. My point is that it is just as easy to sell 25-cent goods as 15-cent goods, and correspondingly more profitable.

"After all, though, the druggist must be, above all, a complete man, an all-around man, in order to grow. He must be like a tree, which, without roots, bark, trunk, branches and leaves cannot exist, but which, complete, grows on and on."

H. G. SCHMUELLING

## Tablet Making Twenty-five Years Ago.

By DANIEL M. GROSH, Philadelphia.

TWENTY-FIVE years ago the tablet business was practically in its infancy and had not attained its prominence as the most important product of manufacturing pharmacy. The pill was at its height of popularity and appeared to be so firmly established as a medicinal agent that it seemed unlikely that this time-honored institution, which had been one of the stand-bys of the medical profession for centuries, would be challenged and finally defeated in the race for supremacy. At this period the number of tablets on the market was comparatively small and but few had yet reached the privilege of being coated, they not yet having been adopted by physicians as the most important portion of their dispensing equipment.

Like all innovations in medicine, the adoption of the tablet was rather slow. The pill had been with us so many, many years that it was looked upon as one of the very foundations of pharmacy, being co-existent with the science. The tablet possessed many advantages which soon became apparent, such as minimum of bulk, quick solubility and rapid results. Likewise, many combinations could be had in tablet form that were impracticable otherwise particularly where local effect was desired.

In the early days the great importance of solubility was underestimated, and this essential feature seemed to be the main fact upon which all criticisms or condemnation was based. The advantage of the tablet as a medicinal product was primarily intended to be in the feature of compressing the medicament without the usual substances used in the pill mass; to compress the material so it would be stable; and also the possibility of compressing soluble and crystalline substances and material that could not be made into pills.

It was not until the necessity of producing a tablet that would disintegrate rapidly and produce the same results as the same material in a finely powdered form was recognized and provided for, that the tablet came into its own. The term solubility as applied to tablets outside of those composed of water-soluble substances, indicated power to disintegrate and liberate in a finely subdivided state the ingredients of its composition and the degree of solubility is relative to or influenced by the character of the tablet and its use.

Many condemnatory articles appeared in the pharmaceutical and medical journals and much criticism, evidently inspired, was directed against the compressed tablet. It was apparent that the tablet had come to stay and that in the course of time might even supersede the pill. The pill manufacturers, who had large sums invested in their plant and business, naturally flung down the gage of battle and the conflict waxed long and strong.

Any failure to obtain a desired result brought forth an indiscriminate tirade against tablet medication in general. There is no doubt that in the early days the tablet was open to criticism, as is every other product during its development. The tablets were first made along the same general lines as pills and naturally were at a disadvantage when compared with powders when prompt action was desired, just the same as pills were.

In the early nineties of the past century, the writer had his introduction to this branch of manufacturing pharmacy. A retrospection of conditions as they existed in the laboratory at that period, brings up many interesting facts and incidents and serves to emphasize the remarkable progress made, not only in this branch but the entire profession of pharmaceutical production. The mechanical development in particular of this branch seems to have influenced the whole profession and transformed it into an industry of remarkable proportions and magnitude. Indeed, the rapid advance seems to date from the time the tablet began to take its place in the medical armamentarium.

The compressing machines used at that time were crude and unwieldy as compared with the ingenious pieces of machinery now in use. They were cumbersome and heavy enough to punch half-inch iron, and were a mass of springs of various shapes and utility. The presses intended for compressing the larger-sized tablets contained enough metal to build a brick-making machine. The makes mostly in use at that time were Mulford's Crown, the McFerran and the Shoemaker. These

have all been superseded by new makes and designs to meet the demands of today. Several of the larger pharmaceutical manufacturers designed and built machines for their own use exclusively which were not placed on the market.

The manufacture of pharmaceutical machinery was not then the highly specialized business it is today, such mechanical appliances as were in use being built by general machinists. Indeed, there was little machinery in use at that period, most everything being done by manual labor. Today the use of automatic machines has replaced the human element to a large extent in modern laboratory operations.

It was not until the invention and introduction of the rotary tablet press that any radical departure was made from the plunger-type machine. In fact, this type press still remains the choice of many operators. With the improvements of multiple punches and the elimination of the many springs, the rubber feed tubes and a general refining of the construction, the general design remains the same as 25 years ago. The invention of the automatic pill plant and the vacuum gelatine coater enabled the pill to hold its own for a considerable length of time, and without these two inventions it would have been completely ousted years ago, as these improvements enabled it to compete by reason of cheap production.

Tablets, at that period, sold at a much higher price than at present, and several firms had practically the whole business in their own hands. It was soon found, however, that other firms could produce equally good products at a much lower price, and before some firms recognized this fact and changed their factory operations, they lost considerable business.

Workers in the laboratory in those days had to have the muscles of a stevedore and the physique of a prize fighter to do the work connected with tablet making. Most of the laborious operations are now replaced by machines. There are devices for almost every kind of granulating, mixing, mass-moistening, wet and dry masticating; mills of all kinds for grinding; machine triturators, power sifters and even apparatus for counting and bottling tablets.

There are very few operations now conducted manually. The vacuum dryers now dry out granulations without regard to climatic conditions and possibility of damage. In the early days drying was always a source of anxiety with tablets containing extracts; they were apt to show up mottled or spotted and granulations containing sugar or white goods would discolor, while volatile substances would be evaporated on account of prolonged or over-heating.

In those days we had not the vacuum-made concentrations used exclusively today, and our extracts were of all degrees of strength and efficiency. The only thing certain about them was their uncertainty. If they were all right in strength, it was at the expense of color and appearance; no two lots of an extract were alike in color and it is quite certain that between the two processes of making the extract and making the tablets, the volatile constituents were lost in the shuffle.

About this time the effervescent lithia tablet made its advent and we of the guild had our own troubles in perfecting a tablet to meet the requirements. Every tablet maker had his own pet processes and his own peculiar methods of manipulating, and the various formulas for excipients, diluents, disintegrators, lubricants, etc., were diverse to the extreme. As may be expected, many new ideas and methods of granulating were expounded and given considerable prominence. One in particular suggested the use of emulsion of theobroma for granulating. The formula looked very nice in print and sounded nice in theory, but like many other experimental processes, was totally unsuited and worse than useless when applied practically and commercially.

The same condition applied to other formulas for excipients for granulating; many wonderful concoctions containing almost everything under the sun in the nature of a cohesive and adhesive—glue, glucose, caseine, shellac, Venice turpentine—all of which went the voyage to the discard. Because a starch paste gave good results in certain granulations, some makers used it for everything, with the result that press operators were almost driven frantic by mushy granulations that would not feed or compress.

For disintegrators, some wizard-like combinations of lycopodium, dextrin, corn, potato and rice starches, arrowroot, salep and what not, were advocated by certain experimenters. As previously stated, every maker has his own methods of working

and manipulating and to produce satisfactory work depends not so much on what is used as how it is used.

For my own part, in the quarter century spent at tablet making, for general use I have found nothing better than the simple substances used in the early days. No combination or mixture has given as satisfactory results for disintegrating as a high-grade Irish potato starch. For some years much trouble was experienced in compressing sodium salicylate on account of its sticky nature preventing a smooth and finished tablet. Many experts presented formulas containing glue, syrup, adhesives and solutions of various kinds, but the simple fact that remedied the trouble was not discovered for some time. This consisted in sifting out the fine powder from the granules after grinding.

When a single substance is used for a certain purpose as, for instance, starch for a disintegrator, if any trouble occurs, one knows where to look for it and how to remedy it, but where a combination or mixture of various ingredients is used any one may be the trouble maker and must be found by an elimination process. I think all experienced makers will agree with me on the point that the best results are achieved, not so much by the materials used, as the experience and knowledge of the art—about equal parts inspiration and perspiration.

In the span of my life I have witnessed the birth, infancy, adolescence and maturity of the tablet. I have seen it grow from an experiment to an industry universal in extent, employing many people and involving great sums of money. The tablet was with Peary at the North Pole and Amundsen at the South Pole; with Stanley in Africa and Roosevelt in South America. Wherever civilization makes a stand, the tablet is with the pioneers. It is in the kit of the explorer and with our army and navy on land and sea. Wherever the white man's burden has been taken up, the tablet is with him on the march even though hunger and weakness force him to cast away valuables and equipment.

From the Steppes of Siberia to the jungles of Africa, in every village and city, metropolis and mining camp, the little disc is omnipresent. To the Indian it is "Big Medicine," to the Congo savage it is "Ju-ju-chop." Truly, the romancer could find inspiration for a "best seller" in the wonderful unwritten history of the tablet.

## NEW REMEDIES

*Empyrol* is a colloidal solution of tar, with 50 per cent. of oil of cade.

*Fandorine* tablets contain extracts of dried ovaries, lacteal glands, anemone, piscidia and viburnum. Used in menstrual disturbances.

*Gonoklein*, formerly called Gonotod, contains the extracts of uva ursi, Rheum palmatum, Erythraea centaureum, and Menyanthes trifoliata, kava resin, bismuth subnitrate and oil of juniper.

*Ilum* is the trade name of a very pure creatinin, used in testing the activity of the kidneys.

*Copper-Glycocoll* is used for chancre, as follows: 100 parts of 1 or 2 per cent. copper-glycocoll solution, 3 parts of tragacanth, 5 parts of alcohol; copper-glycocoll, 1 or 2 parts, water 10 parts, glycerol, 40 parts; kaolin, 50 parts; copper-glycocoll, 1 or 2 parts, water 10 parts, glycerol ointment 90 parts.

*Thiorubrol* is an organic colloid containing sulphur, which produces odorless sulphur baths.

### Syrup of Mullein.

Flowers and leaves of mullein.....	5 ounces
White sugar .....	2 pounds
Whites of egg.....	2
Orange-flower water .....	2 fl. ounces
Coloring (vegetable), if desired.	
Boiling water .....	1 quart

Pour the boiling water on the flowers and leaves, and allow to macerate upon a water bath for six hours. Express the fluid and allow to cool. Add the sugar and, when dissolved, the whites of egg, well beaten. Heat to the boiling point, and keep boiling briskly for five or six minutes, then filter through a flannel bag, with a sprinkle of animal charcoal. When cool, add the orange-flower water and any coloring matter.

## Abstracts of Papers Presented to the British Pharmaceutical Conference.

(By the ERA'S London Correspondent.)

The annual meeting of the British Pharmaceutical Conference was held at Clifton, from July 20 to July 24, 1914, under the presidency of F. H. Farr. The number and quality of papers were quite up to the average, and as the conference is no sign of any weakening in the usefulness of its status as a professional organization. There was a large attendance, and the papers and discussions were of a useful and interesting character.

### Presidential Address.

F. H. Farr devoted his presidential address to an account of his recent work on plant products. During the last 25 years a great amount of attention has been devoted to the study of the chemistry of plants and their products, and a great advance has been made in the direction of establishing the relationship existing between allied substances found in the same or different plants, ascertaining their chemical constitution and decomposition products, and thus making practicable a considerable degree of classification, depending on the presence of definite chemical groupings common to the members of certain classes. The physical constants and general reactions of an enormous number of compounds have been recorded, and the existence of these records very considerably facilitates the work of identification of the ultimate products of plant analysis. The president drew attention to the

F. H. FARR.

### Stabilization of Drugs.

That is, the rendering permanent of the easily decomposed natural combinations in which the active constituents of plants occur by the destruction of the ferments which cause deterioration. This process, in Mr. Farr's view, will become an important phase in the pharmaceutical practice of the future; but seeing that our drugs have gained their reputation on the strength of non-stabilized material, it behooves us, he thought, not to be too hasty in altering the whole of our methods, and in any steps to be taken the medical profession should, he suggests, be called on to co-operate by submitting the products to pharmacological test and to clinical practice. At the present time Mr. Farr thinks we might with advantage proceed to stabilize our liquid extracts and concentrated infusions, the proportion of alcohol in most of these preparations being too low to stop the action of any enzyme present. In conclusion, President Farr made a suggestion with reference to the production of the

### British Pharmacopoeia.

Under existing conditions the Pharmacopoeia is produced and revised by the General Medical Council, and although the bulk of the practical work connected with the revision is done by pharmacists who are members of the Pharmaceutical Society and of the British Pharmaceutical Conference, neither the Society nor the conference receives any statutory acknowledgment for this work. Pharmacists, however, have declared their intention to refuse to co-operate in the revision of any future edition unless their assistance is adequately recognized, and consequently something like a deadlock has been reached.

Mr. Farr suggested that a Pharmacopoeial committee, representing both doctors and chemists, should be appointed, and that the funds proceeding from the sale of the Pharmacopoeia should be devoted exclusively to defraying the expenses connected with its production, including the scientific investigations required in that connection.

The following are brief abstracts of some of the more important papers.

### Incompatibility of Strychnine and Nux Vomica.

This paper, by H. Finnmøre and E. Williamson was of no little usefulness to prescribers and dispensers. Very few systematic experiments have been recorded respecting the limits in which strychnine may be dispensed with alkaline substances without precipitation, and the series of investigations conducted by the authors shows that, speaking generally, there

is a great difference between the amount of strychnine hydrochloride that can be administered with alkalis when in solution in water and when in the form of the tincture or the liquid extract of nux vomica. In the first case, should crystallization occur, the alkaloid is deposited in well-defined crystals, which are in some cases fairly large, while with nux vomica preparations, although there is often a deposit, this is usually amorphous and does not appear to be alkaloidal. Of these two the tincture would appear to be the safer, because the alcohol in the latter retards crystallization. The most striking feature of the experiments is the difference in the behavior towards alkalis and strychnine in the form of the solution and that existing in its natural state in admixture or combination with those other ingredients of nux vomica seeds which are extracted with alcohol. It appears that whereas strychnine and alkalis or iodides may become dangerous under varied and indeterminate conditions, when the drug is given in the form of the tincture or liquid extract no precipitation occurs and no danger need be apprehended provided the concentration is not greater than that found under normal conditions of prescribing and dosage. From which it may be concluded that when it is desired to administer strychnine in combination with alkaline substances it is preferable to administer the strychnine in the form of tincture of nux vomica.

### Anesthetic Ether of Commerce.

A communication by H. Finnmøre dealt with a subject which has an important bearing in hospital economics. The ether of the Pharmacopoeia is prepared from rectified spirit, but an inquiry by the author showed that without exception all the large hospitals in London use ether made from industrial methylated spirit, which is about a quarter the price of that made from rectified spirit. It was also found that the higher-priced ether is used only in very small hospitals, or in special hospitals where very few operations are performed, and that the custom of anesthetists in their private practice is to use methylated ether. Mr. Finnmøre undertook an examination of the products of practically all the British makers with a view to ascertaining definitely whether the use of the cheaper article is justified. The results of his experiments show that in the main the samples of methylated ether reached a very fair average of purity, and there appears to be no reason why its use should not be continued.

### Composition of Decolorized Tincture of Iodine.

Hitherto the exact composition of this tincture has been uncertain. The authors of the 1884 "Companion to the United States Pharmacopoeia" mention that nitrogen iodide is liable to be formed, and that it contains "ethyl iodide, ammonium iodide, etc." Remington's "Dispensary" ascribes to it the composition, "A hydro-alcoholic solution of potassium and ammonium iodides, with more or less ammonia and a trace of iodoform," and states that nitrogen iodide is said to be formed. The "National Standard Dispensary" of the U.S.A. states that it is of "no value," an "unnecessary preparation," and "simply a solution of iodides."

W. R. Pratt, who communicated an interesting paper on the subject, finds that during the preparation of the tincture, on addition of the alcoholic solution of iodine to the ammonia, approximately half the iodine is precipitated in the form of nitrogen iodide; the remainder forms ammonium iodide. The nitrogen iodide partly decomposes by the action of light, nitrogen being evolved and more ammonium iodide formed. Hydrolysis of a part of the nitrogen iodide produces ammonium hypoiodite, this being hastened by the alcohol. The ammonium salt thus produced reacts with the alcohol to form a small quantity of iodoform, and also, if the temperature is sufficiently high, produces traces of iodate. The bulk of the hypoiodites, however, decomposes and forms iodide by loss of oxygen. Traces of acetaldehyde and hydroxylamine are also formed. The finished tincture is an alcoholic solution of ammonium iodide, with excess of ammonia, containing about 0.1 per cent. iodoform and in some cases traces of ammonium iodate, hydroxylamine, and acetaldehyde.

### Liquid Extract of Male Fern.

In this paper F. W. Crossley Holland suggested that this nauseous drug should be administered in the form of a jelly of the following formula:

Prominent Pharmacists Who Greeted A. Ph. A. Members in Detroit Last Week.

Visitors and members in attendance at the meeting of the American Pharmaceutical Association last week in Detroit will recognize most of the gentlemen whose features are delineated in the above illustration. They are all actively connected with pharmacy in its various branches, and they know how to entertain. They are reading from the list: O. W. Gerardi, who served as chairman of the entertainment committee; Harry B. Mason, publicity committee; W. A. Hull, membership committee; Charles F. Mann, finance committee; J. H. Webster, transportation committee; Leonard A. Seizer, local secretary; J. H. Hackney, secretary of the Detroit Retail Drugists' Association, and Grant W. Stevens, chairman of the reception committee. In organized team work and general efficiency they have made a record which will be hard to beat.

Liquid extract of male fern..... 90 minims  
 Gelatin ..... 56 grains  
 Glycerin ..... 1 dram  
 Elixir of saccharin..... 5 minims  
 Oil of cinnamon..... 1 1/2 minims  
 Water ..... 265 minims

**The Adulteration of Belladonna Leaves.**

In this paper G. Stafford Allen and Harold Deane stated that although a considerable area of belladonna is cultivated in England, the greater part of the crop is converted into the green extract, the dried herb which is used in making alcoholic extract of belladonna leaves being imported from the Continent at a lower price than it is possible to supply leaves of English origin. During the past 12 months the supply of belladonna has been very short; the price has, accordingly, risen, with the usual consequence that adulteration has been largely practiced—in fact, it has been practically impossible to buy unadulterated belladonna leaves for the past six months. It appears probable that the continuous collection of this plant is rendering it scarce in Austria and Hungary, a fate that has already overtaken it in France and Germany; so, unless Russia or Asia can provide it, there seems a possibility that in the near future the drug trade will have to rely on cultivated crops. The authors stated the results of the examination of the supplies available. No new sophistication was found but the chief diagnostic characters of the substitutes were given. The adulterants which have been found are *Phytolacca decandra*, *Scopolia carnolica*, and *Ailanthus glandulosa*. In some cases some of these plants have been offered either wholly or in admixture for belladonna.

**Estimation of Strychnine in Presence of Brucine.**

D. B. Dott described the modification of a process commonly employed and suggested that the nitric acid should be allowed to react at the ordinary temperature for 20 minutes, higher temperatures being avoided.

**Other Papers.**

In a paper dealing with dried salts, J. C. Umney and R. R. Bennett suggested that a reasonable standard for dried magnesium sulphate would be a product containing not less than 23 per cent. or more than 31 per cent. of water; dried sodium sulphate should contain not more than 5 per cent. of water and dried sodium phosphate not more than 5 per cent. of water.

R. R. Bennett and T. T. Cocking suggested an improved process for the preparation of "liquor opii sedativus." In a paper on "The Rate of Dialysis of Alkaloids in Aqueous

Solution and in the Form of Galenicals," by H. Finmore, it was shown that while a strychnine salt in aqueous solution begins to dialyze at once, the alkaloid in liquid extract of nuxvomica does not do so for two hours or more.

**Practice Section.**

In the practice section there was a lengthy and useful discussion on a suggested code of rules for dealing with abnormal prescriptions. One of the rules was as follows: "In the case of a prescription containing a preparation which is illegible, communicate with the first dispenser, if previously dispensed, or confer with other pharmacists; failing these, endeavor by tactful questioning of the patient to obtain information that may throw light upon the difficulty. If illegible drug or preparation is apparently, from its position in the prescription or for other reasons, subsidiary to more important ingredients, omit altogether and dispense only those preparations which are clear. This should be done with the full knowledge and consent of the patient. Unless the foregoing enable you to solve the difficulty, decline to dispense the prescription."

Another was as follows: "When the dose prescribed is apparently excessive, take into consideration the age, sex and condition of patient, amount of excess, and frequency of dosage. Dispense generally as written all drugs frequently prescribed above the official maximum. If drug is a potent or dangerous one, and you know of no circumstance which would indicate necessity for large dosage, dispense the Pharmacopoeial maximum."

"With regard to the dispensing of proprietary articles the following rule was adopted: When a proprietary article is prepared and found neither in stock nor immediately obtainable, it is not advisable to dispense a similar preparation. In the dispensing of proprietary articles the original label should be removed and the pharmacist's own label, with written directions, be placed upon the original container unless otherwise ordered or there are special circumstances to the contrary."

Two other papers were also read, one on "Business Science" and the other on "The Law as to Dispensing."

E. S. Peck was elected the new president and Scarborough was chosen as the meeting-place for next year.

**Whooping Cough Liniment.**

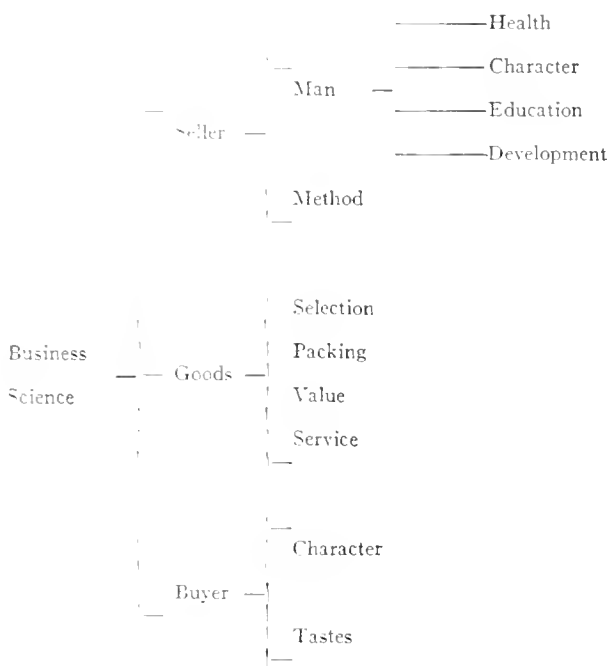

Oil of cloves..... 1/2 ounce  
 Oil of eucalyptus..... 1/2 ounce  
 Oil of amber..... 1 ounce  
 Camphor liniment, enough to make..... 6 ounces

## Business Science in Pharmacy.\*

By T. O. BARLOW, Southsea, England.

EVERY man out for a living has something to sell—brains, skill, time or goods, and there is nothing degrading in selling a commodity, in fact, his education is not complete until he knows how to obtain and hold a market or a customer. The seller must appeal to the purchaser, either by his personality, by advertising or by the exhibition of his goods. He is a professional man, who sells his opinion, but may not be a professional, he depends upon his personality and social intercourse with his clients. The trader uses all three methods, and, further, must give good reason, why a man should deal with him. That his goods will give greater satisfaction, better health, or more pleasure to the possessor, his business policy must be attractive and sound. Every customer is not amenable to one stereotyped argument. He must therefore study the various types and the character of each type. The seller must know how to present his goods to receive favorable attention, how to offer a logical statement in their favor, how to develop his abilities, how to maintain his health, what to avoid. He must understand bookkeeping, the collection of money, the working of systems of storage and stock-keeping, and how to prepare advertisements. These and a great many other matters have been classified by men of large experience.

Business resolves itself into a sale, and a sale divides naturally into three parts—(1) the seller, (2) the goods or commodity, and (3) the buyer. The seller is generally the most active party to the sale, so we will consider him first. As it is human to be attracted or repelled by everyone with whom we come into contact, it is essential that a salesman should discover those attributes that attract, so that he begins without

unnecessary handicap. To do this he must study the subject thoroughly. He will find that a bright, cheerful spirit, an open, trustful, and courageous manner, good, well-made, sensible clothing, a first-rate knowledge of his goods, a logical method of stating their points, clean and orderly surroundings, and a pronounced idea of being of service to the customer will attract most people. All these points belong to an active personality, and if any are missing they must be discovered and cultivated. A little honest self-analysis will reveal the absence of these qualities, and when revealed there is just one plan, and that is to cultivate them.

By study we learned more of pharmacy, and by study shall we know more of the science of salesmanship, that is business.

Business science may present more difficulty because of its human elements, but it is also more entrancing. To recognize a difficulty is to wish to surmount it.

The salesman must know the rudimentary laws of health, the value of exercise, the need of fresh air, good food and recreation, and what is more necessary still is that he acts upon his knowledge. Health is the greatest aid to cheerfulness, courage and cleanliness, and must be taken care of. He must study. The history of his calling, its present position, his goods, their history, value and use are a necessity to the progressive salesman. He must stock his mind with information from as great a variety of sources as possible to increase his ability to appeal to customers of every type. To do this the writings of great men will appeal to him, for though they may give no definite rulings on business matters, they guide the reader to a better understanding of the laws of life. To work in accordance with the laws of life means higher efficiency, therefore greater success. By study, the manner of his conversation will improve in clearness and force.

The last and most important quality laid down is that of service. Service stands for so much—it not only covers the supply, packing and delivery of the goods, but includes the salesman's advice as an expert, guidance in selection, and a description of their advantages and peculiarities. Good service precludes misrepresentation and exorbitant charges. The profit that the seller makes—that is the difference between cost plus working expenses and the price received—should bear a direct ratio to the service rendered. It is a tangible thing, and always commands a rate in proportion to its reliability. Good intelligent service that is reliable will always draw business, more business shows more profit. Good service therefore means greater profit. Two other qualities not already mentioned but which count are earnestness and loyalty; we all know them, and loyalty is about the sweetest thing we meet in our business lives.

The next great success factor is a business policy—what the seller is setting out to sell and how he proposes to sell it. It is essential to lay down some principle or principles to guide him through his career. One or two will suffice to begin with; he can add more as he grows. He must determine what class of goods is likely to be in demand in his particular district, whether the lowest priced or the best possible, whether he will sell just staples, or offer luxuries as well, and which class of people he will appeal to. He must know his position with regard to credit sales, and, having settled upon a policy, adhere to it until there are excellent reasons to change.

We now come to the commodity to be sold, generally "goods," but, whatever it is, the same principles apply.

The selection of the goods should be in accordance with the seller's character and inclinations. One prefers a scientific subject, another country life, another has no patience with anything outside the general run of town life. Whichever it is, it will pay him to follow, because he is more in sympathy with his subject, can speak more earnestly and make a far better appeal to that particular section. Failures occur most frequently amongst those who lack interest in their vocation or the goods they sell.

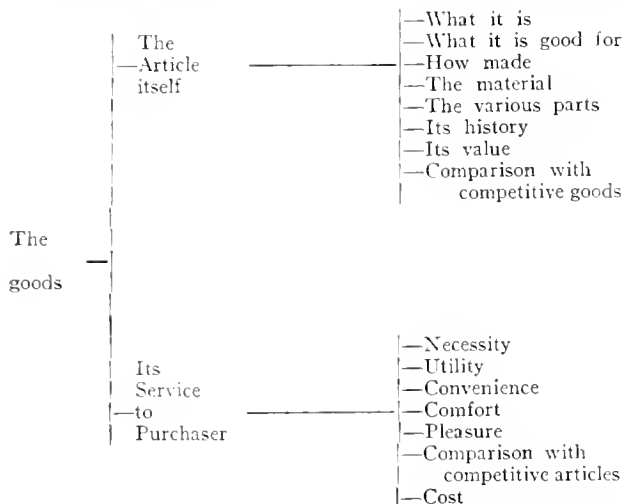

The first thing to do after choosing the goods is to pack or prepare them for sale carefully and well in packages that will attract favorable attention. This precludes gaudy, grotesque and unsuitable containers, and demands a package that will appeal to a customer by its suitability and general "get-up." The second care is that the contents are right in quality and condition. The packages may help to sell the goods, but it is the contents that make the "repeater."

The package being ready for sale, how shall he sell it?

By knowing all about it; by analysing it systematically which will also give him a logical statement of its merits. Analytical charts have been prepared for many things, and here is one for "goods." It is not claimed to be complete, but it will demonstrate what may be done to facilitate a logical presentation of a selling talk. The seller can add more to suit any particular case.

The buyer also requires earnest consideration. He is there for the seller to obtain such favorable attention from as will lead to business. The seller should be able to discover the type of man he is dealing with. The quickest and readiest way is to read his character from his face and manner. The result will provide the line of least resistance for the salesman to travel. By closer study of the various types he can more quickly de-

\*Read before the Practice Section of the British Pharmaceutical Conference, 51st annual meeting, Chester, July 22, 1914

termine the methods to follow to arouse interest to the buying point. It may be the beauty or utility of the article, or it may be an appeal to his desire to be more efficient, better equipped, or better informed, or an appeal to his vanity or his pocket. This is a convenient place to consider what the seller should avoid. He should avoid extravagant claims. Extravagant claims raise doubts—a state of doubt is not favorable to business.

He should avoid unfair criticism of a competitor or competitive goods. Most people are sporting enough to defend, at least, in their own minds the absent one—an unfavorable attitude to the seller. He must not argue—argument begets a state of active opposition. He must not talk too much, for he may “unsell” the buyer. He must avoid tendering advice to the buyer, who is impatient of any advice. The art of suggestion will lead such a one to the desired position.

It is now proposed to consider the relationship of what has been said to our every-day life, leaving bookkeeping, systems of all kinds, and advertising all well-defined, and very large subjects to be dealt with at future meetings of the Practice Section.

As already set out, the essential attributes of a successful salesman must include a complete knowledge of his goods—their collection, preparation, history, real worth and value to the purchaser, together with the elements of good service. Is this of value to pharmacy? I venture to think it is, because if its exponents wish to be successful in practice they must not only possess a good knowledge, but be continuously adding to that knowledge for the better exhibition of medicines and the introduction of sound remedies. For the better the work done the greater the service to the public.

The Conference was instituted for the purpose of friendly intercourse, for the advancement of pharmaceutical knowledge, and the maintenance of the purity of drugs. Business science teaches us that we must supply pure commodities, the best and most serviceable. It teaches us to be constant students that our work may be better and of more value to the public. To do better must be advancement. It also holds out a definite reward, greater satisfaction, more respect from our fellows, and lastly an increased income with which we can obtain those refinements that are almost essential to our education, and which enables us to come to these meetings to take part in the friendly intercourse with comfort and pleasure. Thus, then, does business science enter into every division of our constitution. Having chosen our vocation we have decided on at least a large part of the goods we shall supply, and the Pharmaceutical Society has seen to our knowing something of them—this knowledge is laid down as a necessity to the seller.

I believe there is no need to go outside pharmacy if we really love it. Dispensing, the supply of drugs, chemicals, dressings and sick-room requirements should be sufficient to give us a living worth having if we specialize, and I think the time will come when we shall be true to our titles and stick to our pestles and mortars. But at present many of us find it necessary to develop a side-line, and here to refer back we find it should be one in which we have a warm personal interest.

We will now traverse the whole statement with regard to ourselves. Have you noticed the caricature of a chemist in the illustrated papers?

A caricature accentuates the noticeable points of its subject. The upper portion of his head and face is quite favorable, but look at the eyes, nose, chin and cheeks he is given. What is there in them to express the great attributes of a business man—cheerfulness, courage, fearlessness, aggressive power, decision, or a good digestion? We are not quite so bad as all that, but it is as well to see through our eyes sometimes, and is it not a fact that we are inclined to be petty and dictatorial, to show our little knowledge a trifle more than is necessary, to be a little crotchety with our customers and look bored and weary. If those pictures tell us anything it is the story of a man who neglects his health and recreation. We cannot fasten ourselves up at work all hours of the day and night without fresh air, sunshine, exercise and recreation any more than other men. Nor is there any need. How often should it be “How slow we work,” instead of “What a lot we have to do?” Our health is as essential to our business as to ourselves, and to attain our highest expression we must arrange that due time is given up to exercise for our body’s sake and to recreation for our mind’s sake.

Do we sufficiently study our calling and how to develop ourselves, or do we rest on our oars as soon as the examinations are over? Each one can answer the question to himself, and he will know if he tries to hoodwink his inner consciousness. Do we know all that there is to know about our goods and the service they can be to the possessor? Do we analyse them and set out a logical selling talk? Have we read the philosophy of the great thinkers of the past as well as the present? Are we students of human nature and of business methods?

A few years ago it was a common sight to see a chemist’s window a repository for dead flies and the jetsam of the initial bright thoughts and hopes of the proprietor. This condition does not exist to the same extent today, but one cannot pass the statement that the seller’s surroundings must be clean and orderly without visions of pharmacies with their jumble of goods, their shop rounds with the dirty patch of congealed powder on the side facing the light, and the necks and stoppers of bottles containing liquids, clogged with the accumulations of time. Their shop windows a dusty, ill-arranged mass of out-of-date goods.

The level of education has been raised enormously, and the more educated people are the more particular do they become in matters of arrangement and cleanliness, especially in goods for personal consumption. The quality of “Service” pharmacists can reasonably claim to possess in a marked degree. It is the best of the whole bunch, but, remember, not so useful without the others. We saw that service was a tangible thing, and worth money. Do we receive proportionate payment for that service? Do we so present that service to the buyer that its value becomes so infinitely more important to him than the cost, that the price practically falls out of his consideration? We have always been pleased to give information about medicines, the dose, when and how to take, how to prepare, and any other information that could be given to render it more palatable or efficient, also instructions in the use of the various apparatus and sundries we supply. These are elements of good service for which anyone would be pleased to pay a reasonable amount, and upon which we should take our stand to meet competition. Cutting does not appeal to thoughtful men, for, carried to its conclusion, the longest purse will win, and pharmacy does not provide purses of such a type. Have we studied “earnestness” as a business asset, or do we still run in the “what’s-the-use” class? Earnestness will carry us over many a hurdle and show a profit instead of a loss. Meaning what we say, and showing the buyer that “service” to him counts for at least as much as a “sale” to us. We know perfectly well that there are places of business and salesmen we prefer to deal with, and we will go quite a distance out of our way to do so. Is not this an asset to a business? On the other hand, there are shops we can never think about without a black mark cropping up in our minds at the same time. We should for ever practice loyalty. Loyalty kills prejudice—prejudice is opposed to success in business by preventing the formation of a correct estimate. Loyalty to our customers, to our staffs, our craft and ourselves—all are necessary. Have we a business policy that we could explain to anyone succinctly? If not, we must prepare one so that it may be a guiding star in all our dealings. The adherence to a sound business policy has been the foundation of the greatest business houses of the times. It is as essential to pharmacists as to any other business men.

# SELECTED FORMULAS

## Carbolic Disinfecting Powder.

Carbolic acid ..... 2 grams  
 Potassium carbonate ..... 14 pounds  
 Sodium carbonate ..... 100 grams  
 Powdered sugar ..... 1 pound

Mix the carbolic acid with the potassium carbonate, and the sodium carbonate with the powdered sugar, and mix the two mixtures together.

## Blistering Liniment (Veterinary).

Castor oil ..... 1 ounce  
 Turpentine ..... 1 ounce  
 Oil of turpentine ..... 4 ounces

Put the oil in a mortar, and pour off the liquid, leaving the residue in the mortar. Add 4 ounces of alcohol, and 2 ounces of turpentine, and pour the mixture into a glass bottle. Strain off the residue, and mix with the turpentine mixture. Apply with a brush, or a slant stick.

## English Shaving Cream.

Lanolin ..... 1 ounce  
 Camphorated oil ..... 2 ounce  
 Soft soap ..... 1 pound  
 Oil of cinnamon ..... 5 drops  
 Oil of bergamot ..... 15 drops  
 Oil of bitter almond ..... 10 drops

Put the lanolin and camphorated oil in a warm mortar, stir, work in the soft soap in small quantities, and finally add the perfumes. Put up in collapsible tubes.

## Transparent Shampoo Jelly.

Transparent soap ..... 100 parts  
 Potassium carbonate ..... 12 parts  
 Water ..... 150 parts  
 Glycerin ..... 50 parts

Coarsely powder the soap, and place it in a suitable vessel. Dissolve the potassium carbonate in the water and add it to the soap. Heat over a water bath until melted, then add the glycerin, when a homogeneous mixture is made, then add a small sample. If this is too firm, add water in sufficient quantity to thin to the desired consistency. Thoroughly incorporate and perfume as desired.

## Theatrical Cold Cream.

Spermaceti ..... 16 parts  
 White tallow ..... 48 parts  
 Liquid petrolatum ..... 156 parts  
 Borax ..... 4 parts  
 Water ..... 128 parts  
 Perfume ..... q.s.

Put the spermaceti and white wax small and melt over a water bath. Then add the liquid petrolatum in divided portions, transfer to a warm mortar and gradually incorporate the water in which the borax has been previously dissolved, stirring constantly until all of the water has been worked in. When the mixture assumes the appearance of a thick cream, and just before it "sets," work in the perfume. Said to spread easily and quickly.

## Corn Solvent.

Salicylic acid ..... 1 dram  
 Extract of belladonna ..... 1/2 dram  
 Castor oil ..... 1/2 dram  
 Powdered resin ..... 15 grains  
 Flexible collodion (acetylated) ..... 1 ounce

Mix.

## Polish for Automobiles.

Yellow wax ..... 1 ounce  
 Deodorized benzene ..... 7 ounces  
 Alcohol ..... 30 minims  
 Ammonia water ..... 15 minims  
 Oil of lavender flowers ..... 15 minims

Shake well before applying. The polish is said to be effective when accompanied by hard rubbing with a soft cloth.

## Cloth Cleaning Paste.

Castile soap ..... 4 ounces  
 Boiling water ..... 2 ounces

Dissolve and when cooled add:

Strontian carbonate ..... 8 ounces  
 Ether ..... 2 ounces  
 Rectified spirit ..... 4 ounces  
 Oil of camomille ..... 2 dram  
 Water ammonia ..... 1 gram.

Mix the paste, spread the paste on the cloth or material, the stains appear, get rid of them by a folded towel beneath, the spots then rub them out with the sponge in a circular motion.

## Mentholated Tooth Paste.

Precipitated chalk ..... 10 ounces  
 Powdered white castile soap ..... 6 ounces  
 Magnesium carbonate ..... 3 ounces  
 Menthol ..... 6 grains  
 Thymol ..... 4 grains  
 Solution of carmine ..... q.s.  
 Glycerin or honey enough to form a paste.

Rub the chalk, castile soap and magnesium carbonate with the glycerin into a paste, dissolve the menthol in a little alcohol, add to the solution of carmine, using enough to color, and incorporate with the paste.

## Liquid Metal Polish.

Oleic acid ..... 3 pounds  
 Rotten stone ..... 1 pound  
 Kerosene ..... 16 fl. ounces  
 Solution of sodium silicate ..... 32 ounces  
 Carbon tetrachloride ..... q.s.  
 Oil of naphthalene ..... q.s.

Heat the oleic acid until hot, add the solution of sodium silicate, previously heated, pouring into the oleic acid gradually with constant stirring. After cooling, add the rotten stone, kerosene, and oil of naphthalene, lastly adding the carbon tetrachloride. According to the *Apothecary*, "this will be found, if mixed carefully, to fill all the requirements of a quick non-shaking article."

## Cement for Glass.

Finely powdered litharge ..... 3 ounces  
 Fine dry white sand ..... 3 ounces  
 Plaster of paris ..... 3 ounces  
 Powdered rosin ..... 1 ounce

Mix thoroughly and make into a paste with linseed oil to which a drier has been added. Beat well, and let stand four hours before using. It is impossible to use the cement if left standing more than 10 or 12 hours. Glass united with this cement will not break at the joint and the cement is recommended for repairing porcelain dishes, making aquariums, etc.

## Styptic Pencil With Formaldehyde.

Alum ..... 480 grams  
 Borax ..... 28 grams  
 Zinc oxide ..... 2.5 grams  
 Thymol ..... 8 grams  
 Solution of formaldehyde ..... 10 grams

Melt the alum, borax and thymol on a water bath, add with constant stirring the zinc oxide and solution of formaldehyde, remove from the bath and pour into suitable moulds just before solidifying. This formula is recommended as producing a new styptic pencil which possesses remarkable antiseptic and healing properties.

## Compound Solution of Eugenol and Thymol.

Eugenol ..... 384 minims  
 Thymol ..... 87 1/2 minims  
 Tincture of calendula ..... 10 fl. ounces  
 Tincture of krameria, enough to make ..... 20 fl. ounces

Dissolve the thymol and eugenol in the tincture of calendula and sufficient tincture of krameria to produce the required volume. The addition of about 40 minims of the solution to a half pint of warm water produces an excellent mouth wash. (B. P. C. Formulary.)

## FOREIGN ABSTRACTS

### GLEANINGS FROM EUROPEAN WORKERS.

#### Several Practical Hints for Prescriptions—Bacterial Impurities in Pepsin—More Glucosidal Work by Bourquelot—Color Tests.

**T**HIS month's Abstracts contain several short paragraphs, giving practical advice on the preparation of sterile sodium chloride solution, heroin solutions, and rapidly disintegrating tablets. Bourquelot and his students are continuing their work on enzymes and glucosides, and four articles treat various phases of the subject. Two new color tests for strychnine and morphine are presented, both of them very sensitive. Thurn points out the dangers of infection from microscope slides bearing bacteriological preparations. Martinet, writing on the proper administration of digitalis, believes that only those preparations should be used which contain all the constituents of the leaves. The active principle of squill is affirmed by Kopaczewski to be an amorphous glucoside, scillitin.

#### Sterile Sodium Chloride Solutions—

A new method for preparing sterile sodium chloride solutions for use in injections of salvarsan consists in bringing together the requisite amount of dilute hydrochloric acid and sodium hydroxide solutions. Dilute hydrochloric acid solutions are sterile, especially if the dilution has been made at a boiling temperature. When adding the sodium hydroxide, the neutral point is determined by means of a few drops of phenolphthalein. To prepare the salvarsan solutions, take 100 cc. of a 2 per cent. hydrochloric acid solution which has been previously boiled and cooled to blood heat, and dissolve in it 0.3 g. of salvarsan. Then add sodium hydroxide solution until the last drop just clears up the turbidity. (*Münch. Med. Wochschr.*, 1914, p. 1325.)

#### Hardened Fats Suitable for Food—

In recent times a large number of hardened fats and oils have been placed on the market, produced by treating cottonseed oil, arachis oil, and sesame oil with hydrogen in the presence of nickel as a catalyzer. According to a recent investigation there is no objection to the use of these hardened fats as human food. If nickel is present at all, it is in negligible traces. In view of the increasing consumption of fats in Europe, it seems highly rational to utilize a portion of the superabundant liquid fats, which have hitherto been difficultly applicable to human nourishment, and convert them artificially into a product which is apparently equal in nutritive value to ordinary animal and plant fats. The author thinks that the new fats are especially adapted for the production of margarine. (*Lehmann, Chem. Ztg.*, 1914, p. 798.)

#### Rapidly Disintegrating Tablets—

According to Lundin, tablets which break up quite readily when brought into a liquid, are prepared as follows: 1. Acetyl-salicylic acid 100 g., arrowroot starch 10 g., rice starch 10 g.; 2. acetyl-salicylic acid 100 g., arrowroot starch 7.5 g., rice starch 7.5 g., powdered agar-agar 5 g. Granulate with 90 per cent. alcohol, instead of water, dry at a general heat, and compress under moderate pressure. The second formula is said to give tablets which disintegrate with extreme rapidity. Each formula is calculated for 100 tablets containing 1 g. of acetyl-salicylic acid, or 200 tablets containing 0.5 g. (*Lundin, Farmac. Revy.*, 1914, Nos. 20 and 21.)

#### Specificity of Enzymes—

Bourquelot treats this subject from the viewpoint of the recent work on the synthesizing action of enzymes. The chief difficulty is that it is impossible to isolate the substances in the pure state. It is therefore necessary to study the ferments under varying conditions, to arrive at evidence for or against their specificity. For instance, it might be thought that invertin and diastase (amylase) are identical; but it has been shown that certain organic liquids act on sugar cane only, while others act only on starch, which fact can be explained only by admitting the existence of two ferments. Invertin was also formerly confounded with maltase, but was later proved to be a distinct substance. Several ferments have the power

to hydrolyze numerous compounds. The specific nature of the enzymes is seen more clearly in the synthesizing action. Alpha-glucosidase, made from dried bottom yeast, will hydrolyze or synthesize alpha-glucosides only, while the beta form, found in emulsin, acts on beta-glucosides, and builds them up. The two forms of glucoside are obtained from the same alcoholic solutions of glucose, according as one or the other ferment is employed. This is made possible by the passage of the ordinary alpha-glucose into the beta form. Similar phenomena are noticed with the galactosides, alpha and beta, for which there are two specific ferments. Again, it is now known that several enzymes have the power to synthesize a number of compounds, which must, however, have the same chemical constitution, and the same stereochemical structure. In this way the enzymes differ from the chemical agents used by Fischer to form glucosides. Hydrochloric acid, for instance, gave Fischer alpha- and beta-glucosides and galactosides, while with beta-glucosidase only beta-glucoside is obtained. The biochemical method gives pure products, in good yields, and is sometimes superior to chemical methods. (*Bourquelot, J. Pharm. Chim.*, Vol. 9, p. 603.)

#### Pharmacology of Strychnine Derivatives—

The marked action of strychnine on the nervous system, apart from its toxic effect, was pointed out by Magendie and others, and led to its being employed in all sorts of nervous affections, although in insufficient doses. Since then it has fallen into disrepute. This is doubtless due to the fact that when the alkaloid or its salts are administered, it is necessary, in order to get the full therapeutic value of the drug, to prescribe it in such large doses that the initial symptoms of intoxication are produced. Attempts have been made to modify the chemical molecule, in order to reduce the toxicity. Hildebrandt has used the methyl-betaine of strychnic acid. The toxic action is greatly modified in this compound, and the tetanic symptoms, in frogs, may be delayed for two or three days. Chevalier has instituted a series of experiments with the more soluble ethyl-betaine of strychnic acid. The toxicity toward animals is infinitely less than that of strychnine. It seems probable that the drug may be useful in therapeutic doses and be capable of safe employment as a nerve tonic, but further proof is needed. (*Chevalier, Comptes rend.*, 1914, 255; through *Pharm. J.*)

#### Administration of Digitalis—

In determining the method of administering digitalis, the kind of preparations and the dose must be considered. In regard to the former, there is a choice among the crystalline products, the classical galenicals, and the total extracts. The galenical preparations have many points in their favor, but their variability is excessive. The crystalline products of the digitalin type allow an exact posology. But the work of Wood, Focke, Pouchet and others has proved that the activity of digitalis is not proportional to the content of digitalin, that crystallized digitalin does not exist in the plant, but is an artificial product, and that the most certainly active preparations of digitalis are those which contain the totality of the active principles. These total extracts, standardized physiologically, and capable of administration by mouth or injection, are today the best forms of digitalis, and often succeed where the other preparations fail. (*Martinot, Presse Med.*, May 6, 1914.)

#### Color Tests for Strychnine—

The tests usually employed are those of Wenzell, Mandelin and Sonnenschein. The first consists in the use of a solution of 0.5 g. of permanganate of potash in 100 cc. of pure sulphuric acid, applied on the end of a glass rod to the alkaloidal residue, whereby a blue color is produced, which changes to cherry red. Mandelin's reagent is the well-known solution of vanadic acid in sulphuric acid. Sonnenschein's test consists in dissolving the residue in pure sulphuric acid, and adding a minute piece of cerium oxide, which produces the blue color, passing into red. The most common test, with sulphuric acid and potassium dichromate, will not indicate one-hundredth of a mg. of strychnine, while the other three tests named above are

sufficiently sensitive to do so. The same degree of sensibility is possessed by the following. Dissolve the residue in two or three drops of sulphuric acid, and add two or three mg. of manganese carbonate, stirring with a glass rod. A blue color, changing slowly to violet, and then to rose, indicates strychnine. (Guérin, *J. Pharm. Chim.*, 1914, p. 595.)

#### Agitation of Culture Media—

Recent experiments confirm the author's earlier observations, that a gentle and continuous movement of bouillon tubes in which anthrax bacilli are being incubated furnishes more abundant bacterial growths than those obtained by the usual methods. This is true of other germs as well. The microbes present more important modifications of form. They are shorter than those grown by the usual method, they stain less readily, and are poor in spores. The culture medium also appears more viscous and more deeply colored. The virulence of the organisms does not seem to be lessened. The explanation given is that the movement establishes a better contact between the bacilli and the nutritive medium, and disperses the toxic products which the bacteria secrete, and which, in a quiet medium, accumulate in their neighborhood and destroy the powers of assimilation. (Lucet, *Ann. Med. Vet.*, through *Pharm. J.*, Vol. 93, p. 9.)

#### Scillitin, Active Principle of Squill—

The author states that he has isolated the active principle of squill, other substances hitherto reported as being such having proved indefinite. It is an amorphous glucoside, of the formula  $C_{17}H_{25}O_6$ , to which the name scillitin has been given. It is a very light, non-hygroscopic, intensely bitter powder, soluble in the saturated alcohols of the fatty series, sparingly soluble in water, and insoluble in the ordinary organic solvents. It melts at 152-154°. On hydrolysis with acids or alkalis it yields glucose and highly colored hydrolysis products, which cannot be obtained crystalline. (Kopaczewski, *Comptes rend.*, 1914, p. 1520; through *Pharm. J.*)

#### Bacteriological Purity of Pepsin—

Six samples of powdered pepsin and five samples of scale pepsin were examined for physical characteristics and bacteriological contamination. The odor varied from the characteristic pepsin odor to a strong and unpleasant smell. Broth cultures after 24 hours produced, in four samples, unpleasant or foul odors, and eight showed Gram-positive bacilli. From the broth cultures growths were made on agar, in litmus-milk (anaerobic), and on gelatin. Agar showed in most cases profuse growths of *B. subtilis*, *mesentericus*, and *megaterium*. In the milk tests, the pepsins which had an acid reaction gave the most satisfactory results. On gelatin, some moulds were formed, and liquefaction took place in every sample except one. It appears that the bacteriological purity of commercial pepsin is far from satisfactory, and that it may be improved by the presence of free acid, and by sterilizing with chloroform. (*Quant. Pharm. J.*, Vol. 93, p. 120.)

#### Glucosides in Orchids—

Zeller having recently called attention to the reducing sugar found in *Neottia*, Bourquelot has undertaken an extended investigation into the presence of hydrolyzable glucosides in various species of the *Orchideae*. Extracts of the aerial portions of the plant, prepared with boiling alcohol, were submitted to the action of invertin and emulsin, and the amount of sugar produced was determined. Each cc. of extract represented one g. of fresh plant. The percentage of reducing sugars found varied from 1.5 to 4.0. The plants, of which 18 species were examined, divided themselves into two groups, one yielding dextrorotatory solutions, and the other laevorotatory. The index of reduction seems to show that cane sugar is present in the majority of cases, with the notable exception of *Neottia*. (Bourquelot and Bridel, *J. Pharm. Chim.*, Vol. 10, p. 66.)

#### Dangers from Bacteria on Microscopic Slides—

The opinion is general that preparations of micro-organisms, stained and dried, are incapable of reproduction, and are therefore harmless. That this is erroneous has been shown by several serious infections which have arisen from handling old slides and cover glasses. Thurn finds that of the sporeless bacteria, such as micrococcus, coli, typhus, the vegetative cells of anthrax, cholera, diphtheria, and yeast, when dried and prepared in the usual manner, all were reproductive after 24 hours, the majority after four days, and some even after 26 days. Drawing the slides thrice through a flame does not appear to exercise any great inhibitory effect. At 56° in the

thermostat, nearly all the preparations lived for 30 minutes. At 80° nearly all were killed. At 100° a few were still active, anthrax being the most resistant. Staining in methylene blue or fuchsin for five minutes does not kill. Diphtheria material treated with acetic acid and methylene blue is not reproductive. The Gram stain kills all vegetative cells. (Thurn, *Centralbl. f. Bakteriol.*, 1914, p. 81.)

#### Constituents of Purple Gentian—

This plant, which is official in the German Pharmacopoeia, is shown by Bridel to contain the same constituents, in about the same proportions, as the commonly used *Gentiana lutea*, and may be substituted for the latter where it can be easily obtained. Specimens of the wild plant, gathered in the Little Saint Bernard, yielded about 13 g. of gentiopicroine per kilo of fresh root. The wild root contains about twice as much of hydrolyzable constituents as the cultivated root. (Bridel, *J. Pharm. Chim.*, Vol. 10, p. 62.)

#### Preparation of Heroin Solutions—

In making up solutions of heroin hydrochloride, Fleissig uses the pure base instead of the salt. The molecular weight of diacetyl-morphine is 369.21, and each mol requires 36.46 g. of hydrochloric acid. If the ordinary 10 per cent. of the pharmacy is used, 3.69 g. of heroin requires 3.65 g. of dilute acid. One g. of heroin requires 0.0898 g. of HCl. For preparing 100 cc. of a 1 per cent. solution of heroin hydrochloride, use 0.9102 g. of heroin, and 0.898 g. of dilute hydrochloric acid, with distilled water to make 100 cc. Since the price of heroin and its hydrochloride is the same in Germany, but about 10 per cent. less of the former is used, the price of the solutions prepared by this method is lowered by about 10 per cent. (Fleissig, *Schweiz. Apoth. Ztg.*, 1914, p. 427.)

#### New Test for Morphine—

If to a solution of morphine a few drops of hydrogen peroxide are added, with a little strong ammonia, and the mixture stirred with a copper wire, the previously colorless solution assumes a deep port wine tint, with considerable evolution of gas. The test is said to be sensitive to 0.00002 g. of morphine. When very small amounts are present, it is necessary to add a little potassium cyanide to remove any blue color from the copper, adding the cyanide after the copper is inserted. Monomethylamine can be used instead of ammonia, but caustic soda will not give the color. Codeine and dionine, impossible to distinguish from morphine by ordinary tests, do not give the reaction; apomorphine gives an orange color. (Oliver, *Med. Chron.*, through *Chem. Drug.*, 1914, p. 249.)

#### Physiological Test for Male Fern—

Yagi uses rain worms for this test, and injects under the muscular skin the solution to be tried. Paralysis of the muscle can be observed at the point of application. This gives an indication of the qualitative effect. Quantitatively, the test cannot be used, as the action is not strictly localized. But a limit of toxicity may be established by immersing rain worms in the solution to be tested. There is then a close parallelism between the toxicity and the time in which the worms perish. The absolute limit for Filmaron was found to be 0.0003 per cent., while the limits for filicic acid and albaspidin were respectively 0.0004 and 0.001 per cent. The method can also be used to follow the rate of decomposition under various conditions of keeping. (Yagi, *Z. exper. Med.*, 1914, p. 64.)

#### Impurity in Potassium Carbonate—

Kohen noticed that samples of potassium carbonate which gave a weak reaction with silver nitrate and nitric acid, gave a much stronger test after being glowed in a crucible. This effect is due to their content in potassium chlorate. The latter is formed in the electrolytic tanks which produce caustic potash from potassium chloride solutions. Proof of its presence can be had by adding potassium iodide-starch paste to the solution acidified with nitric acid, or by comparing the reaction with silver nitrate in the original salt with the reaction obtained after treating it with ferrous sulphate in acid solution. (Kohen, *Chem. Ztg.*, 1914, p. 898.)

#### Adulterated Drugs—

Some adulterations recently noticed by Labbé were: Iodoform containing 40 per cent. of picric acid; cacao butter containing lard; minium mixed with colored lead carbonate; wax consisting of 82 per cent. of potato starch, 17 per cent. of lard, coloring matter, and odorous substances; and camphor containing 20 per cent. of sugar. (Labbé, *Bull. Sci. Pharmacolog.*, 1913, p. 343.)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Treatment for Reducing and Increasing Weight.**

(C. & M. Co.)—"Please furnish us a formula for reducing weight and also for increasing weight."

The queries you propound are of the class that should be answered by a competent physician, rather than by the pharmacist. Most frequently these conditions are induced by systemic disturbances which can only be intelligently treated by a physician, and who would begin his effort by attempting to remove the cause, which, if accomplished, the disease will disappear. However, in a general way, excessive corpulency is frequently due to lack of exercise, over-eating—especially of the fat-forming foods—and great activity of the fat-making organs of the body. The best results have been obtained by following a system of dieting, and abstaining from foods containing fat, starch or sugar. Water is fattening, and its use should generally be restricted by those inclined to obesity. Animal food, whole-wheat bread, and green vegetables are not fattening as a rule, and should be selected for food when it is desired to reduce the weight. Alkaline mineral waters, with exercise and dieting, have been found serviceable. Potassium permanganate has also been recommended by some authorities in doses of 1/4 to 1 grain in distilled water, three times a day. *Fucus vesiculosus*, or bladderwrack, has been used for years for the purpose, its value, it is said, depending on the amount of sodium iodide it contains. This seaweed is generally the basis of most of the so-called "anti-fat" combinations on the market. Pokeroot in one form or another is also a claimant for recognition. In many cases, daily exercise in the open air is necessary, and this of itself, if carried on systematically and accompanied by a just discrimination as to one's dietary, would seem to be the most efficient and least injurious method of reducing an excess of adipose tissue. As stated above, corpulency is sometimes brought on by disease or other systemic disturbance, and it is very plain that any course of treatment should be under the guidance of a competent physician.

Within certain limits, the ability to consume and digest fat-forming foods tends to increase the body weight, while, on the other hand, the lack of flesh is often due to anemia or impoverished condition of the blood. But here, likewise, the cause needs to be treated, the physician having a wide range of the materia medica to select from, a simple tonic frequently being all that is necessary. In recent years lecithin in its various forms and combinations has been extensively prescribed as a "fat-former," although many older physicians still pin their faith on the administration of cod liver oil or other remedy. From these considerations, you will recognize the difficulties in the way of attempting to give a satisfactory formula for the treatment of the conditions named.

**Resilvering Mirrors.**

(J.D.Co.)—We have frequently published processes for silvering mirrors in the ERA, and various formulas may be found by consulting the indexes to previous volumes. However, to help you out we reproduce the following:

1. Clean the bare portion of the glass by rubbing it gently with fine cotton, taking care to remove any trace of dust or grease. If this cleaning be not done carefully, defects will appear around the place repaired. With the point of a knife cut upon the back of another looking-glass around a portion of the silvering of the required form, but a little larger. Upon it place a small drop of mercury; a drop of the size of a pin's head will be sufficient for a surface equal to the size of the head of a nail. The mercury spreads immediately, penetrates

the amalgam to where it was cut off with the knife, and the required piece may be now lifted and removed to the place to be repaired. This is the most difficult part of the operation. Then press lightly the new portion with a piece of cotton; it hardens almost immediately, and the glass presents the same appearance as a new one.

2. Pour upon a sheet of tinfoil about 3 drams of quick-silver to the square foot of foil. Rub smartly with a piece of buckskin, until the foil becomes brilliant. Lay the glass upon a flat table, face downward; place the foil upon the damaged portion of the glass; lay a piece of paper over the foil and place it upon a block of wood or piece of marble with a perfectly flat surface; put upon it a sufficient weight to press it down tight; let it remain in this position for a few hours. The foil will adhere to the glass.

For an outline of a silvering process, see the ERA of January 9, 1908, page 40.

**Hair and Scalp Remedy.**

(J.A.H.Co.)—"Please give us a formula for a lotion to stop excessive oily hair and scalp, a preparation that will not injure the hair or scalp."

The following formulas have been recommended by a specialist for conditions similar to those described and we give them for what they are worth:

*Unna's Spiritus Capillorum.*

- Resorcin .....100 grains
- Castor oil .....2 1/2 fl. drams
- Cologne water ..... 3 fl ounces
- Alcohol .....12 1/2 fl. ounces

Mix. After thoroughly washing the hair with a neutral soap solution, apply the above lotion once a day to the roots of the hair. In the washing process all soap and alkali should be removed before applying the lotion, or the latter may cause a change in color. A somewhat similar preparation is:

*Gessner's Lotion for the Hair.*

- Resorcin ..... 3 drams
- Chloral hydrate ..... 3 drams
- Tannic acid ..... 4 drams
- Tincture of benzoin..... 1 fl. dram
- Castor oil ..... 4 fl. drams
- Alcohol, enough to make..... 14 fl ounces

Mix. Apply once a day to the roots of the hair.

**"Gray Beard."**

(B.D.)—We are unable to locate any manufactured article under the name "gray beard." Various botanical lexicons, however, give the name as a synonym both for *Clematis vitalba* (Virgin's bower), and *Hydrangea quercifolia* (Old-man's beard). For the therapy of the first-named, see the U.S. Dispensatory, last edition, page 1450. We are unable to find any other reference to this name in the literature at our command.

**Exterminating Buffalo Bugs.**

(A.M.S.)—By the term "Buffalo bugs" we presume you mean the well-known "Buffalo carpet bug," so-called on account of its predilection for destroying floor coverings. For the extermination of the bugs, benzine, kerosene and good insect powder appear to be the most efficacious, although various other substances have been recommended. Carpets which are infested may be soaked in gasoline, which, if of good quality, will leave no odor or stain. When carpets are taken up, it is a good plan to pack all cracks in the floor with cotton, which should then be saturated with gasoline. When the larvae are found to be injuring furs or clothes hung in the closet, it is best to use insect powder. It is also stated that the insects can be destroyed by laying a wet sheet on top of the carpet and passing a hot flatiron over it, the steam thus produced, destroying the grub.

The late Dr. Riley ("Injurious Insects and the Use of Insecticides") recommended the following treatment: Bare as

benzene is used at house-cleaning time, and after carefully spraying the carpet, spray benzine with an atomizer into all of the cracks and under the baseboards until every crevice has been reached. After thoroughly beating the carpets they should, in the same manner, be sprayed with the benzine, and should quickly evaporate after a short time and without leaving any inflammability of benzine, however, should be used in a room where no light should be brought near it. Lunge's formaldehyde formula has also been recommended.

**Dewees' Emmenagogue Elixir.**

G. E. J. in a letter reply to your query, this journal, last month, page 374, W. S. Bixen, Ramsey, Pa., gives the following formula, which states as the source formula for "Dewees' Emmenagogue Elixir":

- Tincture of ferric chloride..... 3 fl. drams
- Tincture of cambarides..... 1 fl. dram
- Tincture of guaiacum annulated..... 1/2 fl. dram
- Tincture of aloes..... 1/2 fl. ounce
- Sugar, enough to make..... 6 fl. ounces

Mix. One teaspoonful three times a day.

Mr. Bixen states that this formula appears in Hare's "Practical Therapeutics," edition of 1904, page 564. This is undoubtedly the formula wanted, although in the reference cited the title used is "Dewees' Emmenagogue Mixture," not "elixir," as given in the query. According to Hare, the formula has been largely employed in functional and organic amenorrhoea.

**Acid Ink Remover.**

W. H. N. If we understood your inquiry correctly, you want an "acid" to remove ink from paper that has been written upon. In suggesting a reply it must be said that on general principles the ink must be treated according to its composition, but for the old-fashioned tannate of iron ink, oxalic acid is usually best suited for the purpose. For many of the more modern inks containing aniline derivatives, other treatment is necessary, but the writing of many of such inks can be removed by the repeated application of a strong solution of tartaric acid. Here are two formulas:

(1)

- Oxalic acid ..... 1 ounce
- Water ..... 1 pint

Dissolve. Dip the writing or stain in this solution, using at first the solution somewhat diluted with water.

(2)

- Tartaric acid ..... 1 ounce
- Alum ..... 1 ounce
- Water ..... 4 ounces

Mix and dissolve.

For ordinary tanno-gallate of iron inks you can also use a solution of chloride of tin, 1 part, to water, 3 parts; or pure muriatic acid, 1 part, to water, 10 parts. Apply with a camel's hair brush and then wash with cold water.

**Kitchen Cleanser.**

J. N. M.—We are not familiar with the proprietary cleanser to which you refer, but from what you tell us we strongly suspect that the alkali employed in the powder is either soda ash, or sal soda (washing soda), which, for the purpose intended, are as good cleaning agents as any and are cheaper, commercially than pearlsh or other impure compounds of potash.

A typical washing powder for cleansing and scouring purposes is the following:

- Sodium phosphate (sal soda) ..... 6 parts
- Soda ash ..... 3 parts

Mix.

Some manufacturers combine these powders with ordinary curd soap by crutching the soda compounds into the soap in a melted condition, but not boiling, then spreading the mixture out on sheets of iron in a cool room in thin layers, frequently turning the mass with a shovel to break down the mixture, which is finally rubbed through a sieve or series of sieves to reduce it to pulverulent form. Other substances sometimes used in these combinations are lime, sodium silicate and borax, but so far as we are aware sodium carbonate in some one of its compounds is an active ingredient. As a rule, the commercial preparation of these powders requires special machinery, and they cannot be made except in large factories.

**Lozenges for Throat Dryness.**

(J. A. H.) "Please publish some formulas for lozenges or lozoches for throat dryness, hoarseness, etc., containing no cocaine, morphine or codeine."

Try one of the following from the new ERA Formulary:

(1)

- Fluidextract of pyrethrum..... 2a minim
- Pilocarpine hydrochloride ..... 1 32 grain
- Extract of licorice, pure..... 2 grains
- Acacia ..... 2 grains
- Glycerin ..... 1 minim
- Sugar, enough to make..... 20 grains

For one lozenge.

These lozenges are said to give great relief from the uncomfortable sensations of heat and dryness which characterize many acute and chronic affections of the mucous membrane of the throat and mouth, and one is used every 2, 3 or 4 hours, as necessary; but if used very freely, the quantity of pilocarpine should be reduced.

2. (Pectoral Tablets.)

- Purified extract of licorice..... 100.0 parts
  - Sugar ..... 25.0 parts
  - Ammonium chloride ..... 12.5 parts
  - Glycerin ..... 6.0 parts
  - Tragacanth ..... 5.0 parts
- Powdered licorice, a sufficient quantity.

Mix and make into a mass, then form into tablets of 5 grains each.

These formulas are typical of dozens that have been published, and the selection of any particular one to meet certain conditions is largely a question of individual preference.

**Potassium Chlorate Tooth Paste.**

(H. L. J.)—The trouble you have experienced by the finished product settling and the liquid rising to the top, thereby rendering your tooth paste unsalable, is undoubtedly due to the large proportion of glycerin in the aqueous mixture used as an excipient. Glycerin for this purpose should be diluted with three times its volume of water, for when used alone, or slightly diluted with water and mixed with the other ingredients to form a paste, it attracts moisture and tends to separate just as you have described. In fact, if you were to reverse the quantities of glycerin and water prescribed, and use 22 parts of glycerin and 84 of water, the final result would be more satisfactory. Some experience is necessary, however, in using the excipient, and the exact amount necessary to produce a paste of a given degree of consistency cannot always be predetermined. The other substances composing the powder should be thoroughly mixed and sifted and then massed, using only enough of the prepared excipient to reduce the mixture to proper paste form. From your letter we get the impression that your main difficulty is due to the presence of too much excipient. A formula of this character cannot be blindly followed, but must be adapted to the character of materials employed, as experience and judgment may dictate. We think you will have no difficulty if you will prepare an excipient of the strength we have indicated, and then after mixing your powder, disregard the quantity directed in the formula, and use only enough to make the paste of the desired consistency.

**Lice Powder for Poultry.**

(E. C. A.)—Sulphur either alone or in combination is the remedy usually recommended in powder form as an exterminator for lice on poultry. In the form of "flowers" it is dusted into the feathers; sawdust moistened with petroleum ether (benzene) or carbolic acid may be similarly employed. A much more effective remedy is the following, which, however, is not in the form of powder, but is a liquid:

- Gas tar ..... 1/4 pint
- Sodium hydrate ..... 2 ounces
- Sulphur ..... 1/4 pound
- Resin ..... 2 ounces
- Water, enough to make..... 1 gallon

Boil the tar with the soda and some of the water. Add the resin; after dissolving, add the sulphur and the balance of the water. The author of the formula states that this mixture can be sold at a dollar a gallon, and will kill the spider louse and all of the body lice that infect poultry. Apply to the roots, walls, etc., with a brush or whisk broom.

# WOMEN IN PHARMACY

Conducted by **EMMA GARY WALLACE**

## Featuring a Line of Women's Specials—How to List

*Goods for Supplying the Intimate Needs of Womankind  
Belong in a Drug Store—Hints on Promoting This Trade.*

**T**HE woman pharmacist has a highly profitable field before her, if she chooses to cultivate it intensively. It is a field peculiarly her own, which has been largely absorbed by the department stores, because there were always women on hand to serve women customers. This has drawn and held their trade on some lines of goods.

The goods—a line supplying the intimate needs of woman-kind—belong in a drug store. The woman pharmacist is a judge of quality, and is prepared to serve with intelligence and interest. The trade is profitable, and once the habit is formed of coming to a certain store for these things, it will indeed be strong reasons which will lure customers elsewhere.

It has long been supposed that it is enough to have such goods in stock ready for delivery if they are called for, and so they have been placed alongside other goods on the shelves. *This, in itself, is often a mistake, as the following incident will show:*

Miss M went into Blank's pharmacy and proceeded directly to the young woman pharmacist who was a business partner in the establishment. She made a quiet request for a certain package of goods and the young woman behind the counter promptly turned to the shelves. The stock wanted was higher than she could reach conveniently and a courteous young man clerk handed down the goods. Both girls flushed instinctively, though they conducted themselves with utmost modesty and decorum. Miss M afterwards declared she would never go there again to supply similar wants if a department store were open.

A good way to overcome a difficulty of this nature or rather to forestall it, is to devote a roomy case to goods used only by women. It may contain a varied assortment from rubber gloves to bathing caps.

Make a complete alphabetical list of the stock carried in that section and have a neatly printed folder prepared. Enclose this to a selected mailing list of women customers with a letter personally signed by the woman pharmacist herself. The letter may be along these lines:

MY DEAR MRS. SMITH:

I am taking the liberty of writing you at this time, believing that you will be glad to know that we carry a complete line of goods to meet all the personal requirements of a woman of refinement.

These are grouped together in one section and there is always a competent woman attendant on hand to serve you. The enclosed list will show you the nature of the goods assembled in our Women's Department. Whatever you may happen to want can be secured without delay, publicity, or embarrassment at any time.

From our buying connection with the largest and most strictly high-grade manufacturing houses in the country, we are able to make careful and discriminating choice of goods and to offer them at prices that are right.

Then, too, there are as many roads to our store as there are telephones in the city. Ask for Miss Brown, and I will gladly take your order for speedy delivery.

Assuring you of our cordial appreciation of your past favors and soliciting your future patronage in our line, we are,

Yours very truly,

MISS KATHERINE BROWN, PH.G.,

of the firm of

LEO, BROWN & LEO,

Cor. South and Broadway.

Of course, the women' department may include a wide variety of interests, and it is all the better that it should do so.

The same folders may be used to enclose in packages going out of the store, and so make the department more widely known.

There is a large bulk of women's trade of this kind which is scattered without the druggist getting as much benefit therefrom as he should. How much of this trade are you getting? It is not so much to the point to ask, whose fault is it, as to inquire, how can this trade be brought back and held?

That it can be done is being proved by some of our wide-awake women pharmacists, the ones who are on the alert for profitable opportunities and ready to exert a little ingenuity and perseverance to make them their own.

Then the fact is not to be overlooked that every satisfied customer in one department is sure sooner or later to become a customer in all departments.

The "women's specials" makes an excellent entering wedge.

## A Young Lady of the East and West.

**M**ISS EDITH CARLYLE PELOUBET is at the present time a resident of the beautiful town of Waverly, N. Y. She was born in New York City in 1894, so a little computation will show that the term "young lady" will apply to this fair professional worker.

In 1902 Miss Peloubet moved to Los Angeles, Cal., receiving her education in the grammar, high school, the University of Southern California Preparatory School, (and also) College of Pharmacy of that institution. Miss Peloubet entered the School of Pharmacy in 1910 and graduated two years later with the degree of Ph.C. She worked for and received the most of her practical experience with J. G. Vance, of the city of Los Angeles. She passed the examination for assistant druggist in California July, 1913.

With a brilliant future before her in the Golden West, circumstances arose which made it advisable for her to come back to the State of her birth. She soon became connected with the Terbell-Calkins Drug Company, and later went to work for L. E. Ingersoll in Elmira, New York.

Miss Peloubet became registered in New York City in June, 1914, passing the examination for druggist with an average of 93 per cent. For one so young in years, this lady has made a fine record indeed. Both the West and the East will be glad to claim her.

MISS E. C. PELOUBET

## LOUISVILLE FRESH AIR WORK.

The Louisville Chapter of the W.O., under the capable leadership of Miss Clara Hulskamp, is continuing its interest in the fresh air work in that city. The chapter held its regular monthly meeting on Aug. 6, and considering the hot weather and vacation time, there was a good attendance. Dr. Julia Ingram, the woman medical adviser of the Juvenile Court, addressed the members. She spoke of this branch of the court, its aims, purposes and work; also of the probation officers and volunteer probation officers.

The woman pharmacist is in a peculiarly favorable position for rendering valuable assistance along these lines. She is able to learn a great deal of the inside history of families concerned. Probation work and Fresh Air organizations form only two of the ever-growing number of lines of her activity.

### MRS. F. E. McBRIDE HEADS W.O.N.A.R.D.

#### Women's Organization Establishes A Scholarship— 34 States Are Represented in Its Membership.

Mrs. F. E. McBride, of Youngstown, Ohio, was elected president of the Women's Organization National Association of Retail Pharmacists at that organization's annual convention, held at the Bellevue-Stratford Hotel, Philadelphia. The following are the delegates:

1st vice-president, Mrs. B. A. C. Hoelzer, Chicago; 2d vice-president, Miss Clara Hulskamp, Louisville, Ky.; 3d vice-president, Mrs. A. C. Pauly, St. Louis, Mo.; 4th vice-president, Miss Nora A. Brendle, Wilmington, Del.; 5th vice-president, Mrs. R. G. Rutherford, Brooklyn, N.Y.; secretary, Mrs. Nellie Elmer, Philadelphia; treasurer, Mrs. Otto C. Greenland, Cincinnati; board of directors, chairman, Mrs. J. F. Waterhouse, New Highlands, Mass.; Mrs. Leslie O. Wallace, Auburn, N.Y.; Mrs. S. A. Eckstein, Milwaukee; Mrs. Louis Emanuel, Pittsburgh; Mrs. John T. Roe, Mobile, Ala.; Mrs. W. E. Wynn, Kaysport, N.J.; Mrs. Charles Brunstrom, Moline, Ill.; and Mrs. Howard A. Pearce, Providence, R.I.

Mrs. Jessie F. Waterhouse was unanimously nominated for reelection but was unable to serve.

Article V, Section 4, of the Constitution, was amended so that the widow of a registered pharmacist actively engaged in the retail drug business at the time of her joining the organization may be eligible to serve as a delegate.

A resolution was adopted expressing to Mrs. Wm. E. Lee the sympathy of the members anent the recent death of her husband, William E. Lee, of Philadelphia. By resolution, it was also decided to continue the W.O.N.A.R.D. bulletin and, if possible, to increase its size. The action of most importance taken during the convention was the establishment of a traveling scholarship. The recipient of the same must be a member of the W.O.N.A.R.D. or the daughter or sister of a member, and the institution chosen must be a recognized college of pharmacy easily accessible to the woman holding the scholarship. The executive committee will choose the recipient from among those whose names are presented to it by city and State chapters or by individual members.

The organization reaffirmed its stand as to Sunday closing, forest conservation, the preservation of National resources, child labor, unsightly billboards, cigarette smoking by women, obscene advertising, vulgar dancing, etc. The executive committee was empowered to offer financial assistance to the Red Cross Society in case events should make such action necessary. The organization as a whole resolved to use its influence in behalf of universal peace. The secretary was instructed to write a letter of sympathy to President Wilson relative to his recent bereavement and to express to him the organization's approval of his peace policy. A contribution for the Red Cross fund was collected at the final session of the convention.

A handsome bar pin of pearls and sapphires was presented to Mrs. Jessie F. Waterhouse, the retiring president.

The Women's Organization now has members in 34 States and it is hoped that the entire Union will be represented before the 1915 convention. About 150 delegates registered at this convention and the sessions were well attended.

A handsome seal traveling bag, fully equipped with ivory toilet articles, was presented to Mrs. W. E. Lee by the members of the board of management and other friends.

Mrs. McBride, the new president, is one of the charter members, the president of Youngstown chapter and a club woman of wide experience. She will fill her new position with dignity and efficiency.

The Milwaukee chapter won the beautiful gold and white banner, presented each year to the chapter having made the greatest percentage gain during the previous 12 months. Milwaukee is the "baby chapter" and it had almost doubled "in weight."

Mrs. Rutherford, of Brooklyn, N.Y., the oldest woman pharmacist in the United States, was in attendance at the convention. She is 5th vice-president.

The \$10 gold medal offered annually by the organization was awarded to Miss Frances Hindman, of Washington State University C.P., whose remarkable record warranted the honor bestowed upon her. Several others were close to her in the contest, but Miss Hindman was ahead, everything considered. On completing her five-year course she received the degree of

Master of Science, in pharmacy, having made a high percentage throughout her course.

The entertainment features for the women attending the convention were exceptionally fine. They included a 30-mile auto ride, a tour through Wanamaker's department store, together with an introduction to Mr. Wanamaker himself; a picnic at Willow Grove, a reception and musical entertainment by Philadelphia Chapter, No. 6, at which solid silver spoons were given to all visitors as souvenirs of the occasion; a boat ride on the Delaware and special trips to historic spots.

The financial report of the organization showed sufficient money in the treasury to liquidate all bills and to keep a thousand-dollar reserve out at interest.

### SYMPATHY FOR MRS. LEE.

Nation-wide sympathy for Mrs. William Estelle Lee has been expressed in the hour of her great trial. Mr. Lee was called home, July 20, 1914. He had not been well for some time, owing to attacks of heart trouble, but few thought he was so near the end of his journey, for he entered into the preparations for the great N.A.R.D. Convention with all his usual enthusiasm and earnestness.

A most unassuming man of sterling worth and character, a devoted husband and father, a helpful, loyal friend, a thoroughly dependable business man, and a kind-hearted neighbor has been summoned to his last reward. The heritage of such a name is worth more than silver or gold. Mr. Lee leaves behind him to mourn his loss one son, Dr. Walter E. Lee, and his widow. Her untiring labors in behalf of the women of her city, the women of her husband's profession, and the best interests of the profession at large are too well known to need remark. In all her work she has been aided and encouraged by Mr. Lee's sympathy and advice.

The offers and expressions of sympathy, only partially express what the drug people in the United States feel for Mrs. Lee. To most of them the word came not as a matter of news, but as the announcement of a personal loss.

### LOUISVILLE CHAPTER AIDS CHILDREN.

The Louisville Chapter of the W.O.N.A.R.D. held its regular monthly meeting at the Main Library July 2. The chapter voted to donate five dollars to the Fresh Air Fund. This fund is raised in the city by popular subscription through the efforts of one of the local papers. The object of the work is to enable mothers with small children who are in poor circumstances to spend a two-weeks vacation in the country near Louisville. This is a thoroughly worth-while object.

Mrs. J. H. Dickey, chairman of the press committee of the Kentucky Federation of Women's Clubs, addressed the members on "Some Phases of the Federation."

Mrs. J. V. Calver, the national organizer of the W.O. was also present and gave the members an informal talk which was thoroughly enjoyed. Later Mrs. Calver was entertained in a most delightful manner by the members at the Foutaine Ferry Park. The outing also included some time spent in beautiful Shawnee Park which adjoins.

The members are also planning to attend the Chautauqua to be held at Glenwood Park in the near future. A number of Louisville people are planning also to attend the N.A.R.D. convention in Philadelphia. Miss Clara Hulskamp is the president of this chapter.

[NOTE—It is with much pleasure that we read of the interest of the organized women in Fresh Air work. The editor of this department has the privilege at the present time of serving as president of the Cayuga County Fresh Air Association. Last Summer upwards of 250 children were given two weeks vacations, most of these coming through the services of the Tribune Fund of New York City. This fund provides for medical inspection and transportation, the Cayuga County Association with headquarters at Auburn, New York, furnishing entertainment, and where it is necessary clothing for the children. At the present time two colonies of these children are being maintained. Every one aiding in the work is sure to enjoy her vacation better and more worthily for having helped some little child to have a healthy, wholesome vacation.—E. G. W.]

# NEWS SECTION

## MOSTLY PERSONAL

### E. St. Elmo Lewis Enters New Field.

E. St. Elmo Lewis, advertising manager of the Burroughs Adding Machine Co., has been selected for the office of vice-president and general manager of the Art Metal Construction Co., of Jamestown, N. Y. During the past 10 years Mr. Lewis has achieved remarkable results through the medium of advertising, and has written into the text-books of that profession some of its most salient and important theories. His articles and speeches on efficiency in business management have gained him a national reputation, not only as an advertising expert, but as a close and deep-thinking observer of the trend of modern business as well.

During the past few years he has made a special study of the problems confronting the small retail merchant, with a view of standardizing these problems so that a solution of them could be more easily obtained. He has worked unselfishly and vigorously in a score of great civic and commercial movements to the end that lasting benefits might accrue to the retailer through the discovery and promulgation of time-, money- and effort-saving methods which were especially suited to the needs of the smaller merchant, and his efforts have secured for him a host of friends in almost every line of business endeavor.

### Pharmaceutical Personalities.

—**F. M. Mytinger**, who has been engaged in the drug business at White Hall, Ill., for the past 48 years, has retired at the age of 73. His successors are A. M. Nevius and George E. Bell, two young men who have advanced from a clerical capacity in the store to the ownership. Following his discharge from the army at the close of the Civil War in 1865, Mr. Mytinger entered business as a clerk. In 1879 he opened a store at the present location. He has now retired because of his age and impaired health. During the war Mr. Mytinger served as a member of Company D, 14th Illinois, and re-enlisted in Company C, 61st Illinois, receiving his discharge as adjutant of the regiment.

—**Charles Melbourne** and wife, of Chicago, were recent visitors at Lake Chabunagungamaug, near Webster, Mass. They were interested to see what the namesake of their pharmacy in Chicago was like. More than a year ago Mr. Melbourne picked up a postal card with a view of Point Pleasant and bearing the abbreviated name of the lake. The name interested him and shortly afterward when he opened his drug store he called the store the Chabunagungamaug. He told the curious it meant "pure, unadulterated, clean and healthful." The full name of the lake is Manchaugagoggagoggchargoggagoggchabunagungamaug. They were delighted with the lake.

—**Frank B. Walker**, the champion starting judge in this country, is, according to a recent newspaper story, a former druggist. He was advised by his physician to get out in the open. He interested himself in horses and was one day asked to act as timer. Later, he was made judge, and on another occasion, in the absence of the starter, was persuaded to start the horses. He was successful at this stunt and soon became a professional. He has never driven a horse in a race or owned a race horse, and, according to the account, has never been on a race track except to walk from the grandstand to the judge's tower.

—**Sam Zimmerman**, the Lodi, Cal., druggist, is reported to have been treed by a huge bear that turned out to be a dog, while on a recent hunting trip along the McCloud River. While returning to camp, the story goes, he used up his last two shells killing a rattlesnake. Hearing a noise behind him, he turned to find a bear following him. Mr. Zimmerman dropped his gun and climbed a tree. Mrs. Zimmerman, as a member of the party that went in search for him, found her husband roosting in the tree top. She also discovered that the "bear" was a big Newfoundland dog.

—**Ernst O. Engstrom**, of Pittsfield, Mass., who is American by birth, but of German parentage, is confident that the Germans will best the allies in the European war. He attributes the basic principle of the war to be the jealousy of other nations over Germany's rapid progress in the world. He thinks that American sentiment will change in the next several months and that we will realize that Germany is fighting for a just cause. Mr. Engstrom made a tour of Europe last Summer and was impressed with the strides that Germany was making in all directions.

—**Carl Bradshaw**, pharmacist at 1542 South High street, Columbus, Ohio, was burned on the face, neck and eyes when an explosion resulted from mixing nitric acid and other chemicals. Clarence Heil, proprietor of the South Columbus pharmacy, was also burned when he came to his employee's assistance. Both men were taken to the hospital. Mr. Heil was able to leave the hospital after a short time. Mr. Bradshaw's condition was not serious and the physicians thought his eyesight might be saved.

—**Charles A. Wood**, manager of E. C. DeWitt & Co., proprietary manufacturers, at 146 West 52d street, New York, was recently shot by a former employee. The bullet lodged in Wood's neck and he was removed to Flower Hospital. Until a short time ago the man who did the shooting, James D. Faucher by name, had been a salesman in the employ of the company for nearly 25 years. Mr. Wood had just written him a recommendation when Faucher shot. The latter had been discharged.

—**A. J. Killmer**, of Mason City, Ia., president of the Iowa State Pharmaceutical Association, in a recent newspaper interview published in his State, advocated a law that will place Iowa physicians under the same restrictions as are the pharmacists. He said in part: "What we need in Iowa is a law similar to the Boylan law recently enacted in the State of New York which places the physician under the same restrictions as the pharmacist."

—**A. A. Burnham**, veteran druggist of Pemberton, Mass., was recently presented with a gold watch by 50 Dorchester and Roxbury physicians for whom he had put up prescriptions during the past 27 years. He is now leaving the drug business. The presentation was made at the Pemberton Inn, by Dr. John Dudley. The toastmaster was Dr. Peter J. Fleming. A telegram of congratulation was received from Mayor Curley.

—**John Wheatcroft**, of Grayville, Ill., was recently appointed a member of the Advisory Board of the Illinois School of Pharmacy. The appointment was made by the Board of Trustees of the State University and is for a term of five years. Mr. Wheatcroft is a former member of the State Board and is the delegate of the State association to the A.Ph.A. convention.

—**Elwyn E. Young**, a Wickford, R.I., druggist, had his beard burned from his face when he sought to fill a jug with alcohol by the light of a match. The flames were smothered by a customer and Mr. Young was removed to his home. The fire department extinguished the flames, only slight damage being done to the store room.

—**W. J. Babin**, physician and druggist of Kenner, La., was dangerously wounded by burglars who shot him when they were detected trying to enter his pharmacy. At last report his condition was slightly better, although it was thought that he would have to undergo an operation for the removal of the bullet lodged in his chest.

**Jason Cory**, of Kingman, Ind., recently visited his sister at Saybrook, in which town he had lived 40 years ago, and where he was married 48 years ago. His wife accompanied him and they called at the house where they were married. Needless to say, however, very few of the old friends and neighbors were left to greet him.

—**W. L. Furgason**, proprietor of Furgason's drug store, Yuma, Ariz., was recently found unconscious in the prescription department. Two doctors worked over him until he revived. At last report he was in a critical condition. Poor health during the past several months and the hot weather are blamed for his collapse.

—**C. M. Brewer**, a druggist of Helena, Okla., was recently so unfortunate as to run down and injure a woman while driving his automobile. He continued on his way after the accident, and when overtaken later satisfied the authorities that he was unaware that he had injured anyone. He was not arrested.

—**A. C. Neveu**, proprietor of the Corner drug store and the West Side drug store at 107 North Broadway, Green Bay, Wis., will be a candidate at the primary election for the office of member of assembly. He is a Republican. He pledges himself to work for a businesslike administration if elected.

—**Miss Ada Bellows**, a nurse who for some time and till recently conducted a pharmacy at 11th and Madison streets, St. Louis, Mo., is reported to have attempted suicide by swallowing a number of strychnine and morphine tablets. Failure in business was given as a reason for the attempt.

—**Miss Laura Kamlah**, daughter of William Kamlah, the well-known Hoboken, N. J., druggist, has cabled her father that she is safe and well at Lausanne, Switzerland. She was touring Europe with a party of friends when war was declared. Her parents were much worried for her safety.

—**D. C. Woodworth**, of the Woodworth Drug Company, and two other business men of Albany, Ore., were judges in a recent contest arranged by the Albany Herald to determine who in the city could write the best letter on successful advertising. A prize of \$10 was offered.

**M. R. Ost**, the popular Atlantic City druggist, has completed the enlargement of his store at Massachusetts and Atlantic avenues, the new store being of more than four times the capacity of the original establishment, and one of the show-places of the resort.

—**A. E. Kiesling**, the Houston, Texas, druggist, who is president of his State Rexall organization, was recently elected to head the International Association of Rexall Dealers. The election was held at the latter body's convention at Niagara Falls, N. Y.

—**Flynn R. Person**, of Ware, Mass., has announced his candidacy for the nomination as representative from the Fourth Hampshire district on the Republican ticket. He has the approval of the Republican town committee and no opposition is expected.

—**Charles A. Sayre**, for 40 years a successful druggist at Victoria, Ill., is dead. He was 70 years of age and was a veteran of the Civil War, in which he served from April, 1861, to July, 1865. He then served as sergeant and quartermaster in the regular army for three years. He was a native of Rushville, N. Y.

—**John T. McWhirter**, president of the Baumann-McWhirter Chemical Co., New York, died suddenly in Cleveland, Ohio, on July 26, whither he had gone on a business trip. Heart disease was the cause of death. He was born in Norwich, Ohio, and received his education there. His widow survives.

—**Robert C. Wood** died at his home recently in Franklin, Ind. He had been 40 years in the retail drug business in that city. Mr. Wood was prominent in fraternal and civic affairs in his home town and was 12 years a member of the school board. He was 64 years old. He is survived by a widow and one son.

—**Joseph A. Maloney**, a well-known druggist of Wheeling, W. Va., died recently from an attack of apoplexy, a disease from which he had suffered for some time. He was a Civil War veteran, and served as a corporal in the 17th Pennsylvania Infantry. He was a staunch member of the Catholic Church.

—**J. C. Jennings**, proprietor of the East Lake Drug Co., East Lake, Tenn., died at the Morgan Springs Hotel on Aug. 3, where he had gone to regain his health. He was born in Morrow, Ohio, and went to Tennessee, settling in Dayton when he was 20 years of age. He was well known in Chattanooga.

—**Theodore Diehl**, 39, a druggist of 644 Bedford avenue, Brooklyn, N. Y., died on August 10 from the effects of poison taken with suicidal intent. It is said that he never recovered from the effects of the death of an intimate friend, who was mysteriously murdered in bed last January.

—**Mrs. J. A. Farnham**, one of the first women to be registered as a pharmacist in Wisconsin and who had conducted a drug store in Fennemore, that State, for 34 years, is dead, aged 58. She was born in Belvidere, Ill. Death followed an illness of short duration.

—**S. A. Dickson**, of Morris & Dickson Co., wholesale druggists, Shreveport, La., a former mayor of his city, is expected to put up quite a fight for the mayoralty in the coming election. The present mayor is one of the candidates.

—**Crittenden M. Edmunds**, a former Louisville, Ky., druggist, is dead. He was stricken with paralysis more than three years ago, and never fully recovered. He was a member of the Kentucky Ph. A. and well known throughout the State as an able pharmacist.

—**Samuel Kabn**, a drug clerk in the employ of the Ferry Park drug store, Detroit, Mich., died on Aug. 8 from internal injuries caused by the explosion of a carbonated soda tank. He was 20 years of age. Burial took place in Bay City, the home of his parents.

—**Henry E. Roe**, a young druggist in the employ of the Dr. Scott Drug Co., Seattle, Wash., was accidentally drowned while on a fishing expedition with his father at Rosedale a month ago. The body has just been recovered.

—**Cherte Borie**, a former Philadelphia druggist, but in recent years connected with the U. S. Customs service, died recently at Ocean City, N. J. He was 85 years of age and an early graduate in pharmacy.

—**Mrs. Susan N. Rogers**, wife of S. L. Rogers, Clinton, Ill., pharmacist, died in St. Louis hospital, whither she had gone for surgical operation. The remains were taken to Cape Girardeau, Mo., for burial.

—**Henry C. Riddlemoser**, junior member of Kefauvre & Riddlemoser, druggists of Smithsburg, Md., died suddenly of acute indigestion on August 7. He was 24 years old and is survived by his mother.

—**Frank A. Przybylski**, druggist at 3663 S. Paulina street, Chicago, Ill., was killed in an automobile accident while on his way to Waukegan, his machine overturning and falling upon him.

—**William Wallace Allison**, formerly a druggist at Camden, Ind., is dead at Penfield, Ohio. He was born in 1852 and in early life was a student in the Cleveland Medical College.

—**Samuel H. Walden**, 69, died at his home in Evansville, Ind., on Aug. 7. He was one of the oldest retail druggists in Evansville. He is survived by a widow and four children.

—**Lyda W. Martin**, a druggist of Worthington, W. Va., died July 19 at St. Mary's Hospital at Clarksburg, W. Va., after an operation. He was 40 years old and left a wife.

—**W. D. Keller**, 60, a pioneer druggist of Culesac, Idaho, is dead from an attack of heart failure. He was formerly a resident of Spokane and of Metaline Falls.

—**Miss Flora Scarborough**, of Laurel, Miss., is canvassing the State in the interest of the Mississippi Pharmaceutical Association. She will spend a month or so endeavoring to enlist every pharmacist in the State.

—**Frank Nau**, the Portland, Ore., druggist, and family were members of a motor party which recently toured along the Deschutes River and to Crater Lake. They returned home enthusiastic over their excursion.

—**B. O. Driver**, pioneer druggist of Roanoke, Ala., is dead, following a surgical operation he recently underwent. A wife and two sons survive.

—**Burton Cassaday**, of Terre Haute, Ind., has been appointed by Governor Ralston to succeed himself as a member of the State Board. His new term will run for three years from May 6, 1914.

—**Lynn Fort**, of the Lamar & Rankin Drug Co., sales department, Atlanta, Ga., returned home recently after a pleasant vacation spent with his family at Wrightsville Beach.

—**Ralph Kauffman**, employed at the Bryant & Klocke drug store, Lansing, Mich., was recently married to Miss Ida Bergman, a popular young school teacher of Nashville.

—**F. A. Scheuber**, of Helena, president of the Montana State Ph. A., recently made a tour of the principal cities of his State. He was accompanied by his wife.

—**Ray D. Fox**, a well-known druggist of Saginaw, Mich., was married recently to Miss Blanche Irene Gavigan. Mr. Fox is a graduate of Valparaiso University.

—**Charles Hoepfner**, a prominent West Side Chicago druggist, is reported to have opened his campaign for the Progressive nomination for sheriff.

—**Pierce L. Graham**, the Chapline street druggist of Wheeling, W. Va., recently became the proud father of a fine baby boy.

—**M. J. Ryan**, proprietor of the Moran St. Pharmacy, Detroit, Mich., died on Aug. 6 from heart disease.

—**Dr. William Jay Schieffelin** has been making frequent trips this Summer to his country place at Ashville, Me.

## OBITUARIES

### James A. Watkins.

James A. Watkins, 65, proprietor of the Union avenue pharmacy, Union boulevard and Suburban tracks, St. Louis, was killed early in the morning of July 8 at Centralia, Mo., when returning to St. Louis from a visit to his brother at Henrietta, Mo. The crew of a freight train found Watkins' body near a water tank in the Centralia yards. The head was severed from the body. In Watkins' pocket was a draft for \$1000 payable to himself and a letter addressed to his brother, William H. Watkins, of Henrietta. Watkins boarded a Wabash train at Lexington Junction, presenting a ticket to St. Louis. This was at night. At Wellsville the conductor found he was short the man who had presented the ticket from Lexington Junction to St. Louis. An examination revealed blood-stains on the trucks of the chair car and the rear sleeper. The supposition was that Watkins left the train at Centralia and in attempting to board it again as it was pulling out he fell under the wheels.

### Donald Porter.

Donald Porter, said to be one of the most widely known traveling men in the West, and who since 1882 had carried a grip for four wholesale drug houses, died at his home in Wichita, Kan., on Aug. 12. He had been ill since February with Bright's disease, which with heart trouble caused his death. He was born in Bellefontaine, Ohio, in 1859, and his first traveling job was with H. E. Bucklen & Co., of Chicago. He was then employed by the C. D. Smith Drug Co., of St. Joseph, Mo., and by McPike & Fox before accepting a position with the Van Natta-Lynds Drug Co., of St. Joseph, Mo., for whom he sold drugs in Kansas for many years. He was one of the leading members of the commercial travelers' organization and a great friend of the circus folks. Prominent men over the Middle West claimed him as one of their most intimate friends, and to the majority of them he was familiarly known as "Don." His wife, a sister and brother, Frank S. Porter, of the Shelley Drug Co., Wichita, survive.

### Charles H. Howard.

Charles H. Howard, one of the best-known druggists in Greater Boston, died at his late home, 76 Norwood street, Everett, on July 19. He was stricken with paralysis two days earlier, which was his 49th birthday. He was born in Lyme, Conn., and at the age of 18 came to Everett and secured employment in the drug store of G. H. Kimball in Everett square. That was 31 years ago, and "Bert" had risen from errand boy to senior partner, but everybody still called him "Bert" and

liked him. He was a member of Palestine Lodge of Masons, Everett Lodge of Elks, and Everett Lodge of the A.O.U.W. A wife and a daughter, aged 15, survive. Burial was at his native place.

### Charles B. Kinnan.

Charles B. Kinnan, of Wading, Kinnan & Marvin Co., wholesale druggists of Toledo, Ohio, died on Aug. 11 at Whetstone, Ind., whether he went about a month ago to recuperate. He had been in failing health for some time. Mr. Kinnan was prominent in business circles in his home town, and had been a resident of Toledo for 30 years. He was a stockholder in the above-named company, and until the last few years was its treasurer. His early home was in Cambridge Springs, Pa. He was a member of the Toledo Club and the Country Club, and was 56 years old. His brother, John S. Kinnan, was with him at the time of death.

### John W. Bell.

John W. Bell, pioneer druggist of Omaha, Neb., whose death occurred recently in that city, was born in Lexington, Mo., in 1859. In 1870 he went to Omaha and engaged in the drug business with James K. Ish, at 12th and Douglas streets, moving a few years later to 10th and Marcy streets, where he continued in business for 17 years. He then engaged in business at 1216 Farnam street until last year when a disastrous fire caused him to open a store at 1316 Farnam street. This he operated up to the time of his death, which it is believed was brought on by overwork. He is survived by his wife, a daughter, and a son, A. L. Bell, of New York City.

### Bert C. Haines.

Bert C. Haines, a druggist and one of the most prominent business men of Pontiac, Ill., died recently, death being due to Bright's disease. He was born in Bloomington, Ill., in 1867, where he received his education and served his apprenticeship in the drug business. On the retirement of J. T. Crosswell, 14 years ago, he purchased the former's pharmacy in Pontiac, which he was conducting at the time of his death. Mr. Haines was noted for his genial disposition and was universally liked. He was taken sick about a year and a half ago and never fully recovered his health. He was last at his store on July 4.

### Norman N. Mason.

Norman N. Mason, one of the founders of the Rhode Island College of Pharmacy, and for a number of years a member of the Rhode Island Board of Pharmacy, which he had served both as president and secretary, died of cerebral hemorrhage at his home in Plattsburgh, N.Y. He was well known in Providence, R.I., where he conducted a drug store and laboratory until about eight years ago. He was an ex-president of the Rhode Island Pharmaceutical Association.

## RECENT DEATHS.

—**Charles A. Winn**, president of the Coraline Drug & Chemical Co., 465 Greenwich street, New York City, is dead of paralysis. He was 63 years old, a native of Maine, and left a widow and three sons and a daughter.

—**Romeo Russell**, 23, of Greenfield, Mass., for several years a clerk in the store of C. N. Payne, is dead following an operation at the Franklin County Hospital.

—**Charles E. Boulineau**, 63, pharmacist, Augusta, Ga., in active business until death from ptomaine poisoning.

—**Lewis A. Gable**, for 33 years engaged in the retail drug business at Illinois and 16th streets, Indianapolis, died at his home in that city on Aug. 13 after an illness of four months. Mr. Gable entered the drug trade at the age of 17, when he became a clerk for Peter S. Miller, at Farmland, Ind. He bought the store and was married to Mr. Miller's daughter. Mr. Gable was 73 years old. He is survived by a widow and one daughter.

—**Dr. Webster M. Dyas**, for 32 years proprietor of a drug store at Arlington Heights, Ill., is dead from a lesion of the arteries of the brain. He was 61 years of age. He was born at Montello, Wis., and learned the drug business of George Miner, an uncle, at Cedar Falls, Iowa. He secured his medical degree from Rush Medical College from which he graduated in 1896.

## NEWS FROM ASSOCIATIONS

### ANNUAL CONVENTIONS.

N. W. D. A. Indianapolis, Ind., week of Sept. 21.  
Geo. W. Lattimer, president; J. E. Toms, secretary, New York City.

### G. A. S. PARTY DIVIDES AT FRANKFORT-ON-MAIN

**Thirty-Two Elect to Go to England, the Rest Stay in Germany Where They Are Now—14 Arrive Home.**

The European tour of the German Apothecaries' Society, an event which was about a year and a half in preparation and which has ended in an experience which none of the participants will ever forget, was successful up to the arrival of the party at Frankfort-on-Main, Germany, Aug. 3. Here, on account of the sudden outbreak of hostilities, the 120 members were obliged to separate and each look for the most convenient way of getting back to America. Thirty-two participants managed, with great difficulty, to get to London, via Flushing, Holland, by boat to Queenboro, England, and a two-hour trip by train to the English capital. The 29-hour trip from Frankfort to London was one of discomfort from start to finish.

At Frankfort the party was advised at 2 p. m. that the last train out of Germany would leave at 3:02. The 32 who had elected to leave had just one hour and two minutes to pack—according to the announcement. At the station they waited until five o'clock, the military trains being given the precedence. The G. A. S. party managed to board the last train, and as the ERA goes to press only a few of the 90 or so who decided to remain in America have been heard from since.

Of the 32 who arrived in London, 14 booked for Montreal, Canada, on the *Royal George*, of the Canadian Northern Line. They left Avonmouth, near Bristol, England, on Aug. 10, 9 p. m., and the passage from land to land took only six and a half days. The arrival at Montreal at 8 p. m., Aug. 18, concluded an eventful voyage, features of which were the hidden lights, covered port holes and the extreme north-ly course taken by the ship. On the afternoon of Aug. 15, the passengers saw four icebergs. At 2 p. m., Aug. 16, the engines were reversed to keep from running into an ice floe. The 14 fortunate enough to return on the *Royal George* were the following:

Prof. Gustave Bachmann, Minneapolis; Prof. C. M. McKellips, Portland, Ore.; S. K. Sass, Chicago; Dr. M. L. Kroschel, Hallettsville, Texas; C. A. Washburn, Hallettsville; Charles F. Hahn, Philadelphia; George Burns, Robert S. Lehman, Richard Jorgensen, Hugo Kantrowitz and Miss Claire Kantrowitz, all of this city; Dr. Wm. C. Alpers and Mrs. Alpers, Cleveland, and Mrs. Virginia Cassebeer, Frankfort, N. Y.

Mr. and Mrs. E. W. Runyon, members of the party, have booked for a steamer leaving England in September. Mr. Runyon is the assistant secretary of the New York College of Pharmacy.

The plans of the society were carried out until war was declared. The members had been overwhelmed with the hospitality of their German, Austrian and Swiss colleagues, the latter receiving the tourists as though they were old friends. It was while eating their midday meal in the early afternoon of Aug. 3 that the party received the news that they must catch the last train or stay in Germany for an indefinite period. The decision was left to each individual, no one wishing to take the responsibility of such a difficult step. That is the reason why 32 decided to make a break for England and the rest elected to await results.

The *Deutsch-Amerikanische Apotheker-Zeitung* asserts that Americans in Germany are treated with the greatest hospitality and the American consul in Frankfort will aid the members of the party wherever necessary. An agent for McCann's tours is there also, and has the means for securing transportation. The journal quoted practically asserts that its next issue will announce the safe arrival home of the entire party.

### LAST CALL FOR N. W. D. A. CONVENTION.

THE 40th annual convention of the National Wholesale Druggists' Association will be held in Indianapolis, Sept. 21 to 26, inclusive, and from present indications it promises to be one of the largest gatherings of the jobbing drug trade in the history of the organization.

The headquarters of the convention will be the Claypool Hotel, the largest and most widely known hostelry of the Hoosier Capital. This hotel was planned specially for the accommodation of conventions. On the eighth floor there are two excellent convention halls, of which the larger will accommodate an audience of approximately 1000, the smaller about 250. There are also convenient club rooms and other apartments which provide excellent quarters for committee meetings. The hotel maintains several excellent cafes and a large banquet hall in which over 700 can be comfortably served.

There will be plenty of entertainment in addition to the business sessions, chief among which will be a side trip to French Lick by special train returning the following morning. Thomas Taggart, president of the French Lick Springs Hotel Co., will be the host on this occasion. There will be the usual reception and ball in the evening of the first day. Plans have been made for a trip to the world famous Automobile Speedway and a real live race will be pulled off for the special benefit of the guests. There will be an entertainment at the Indianapolis Country Club and a theater party at the Murat—Indianapolis' finest play house. Several private entertainments have also been arranged by the ladies' committee especially for visiting ladies.

The homes of several of the local members of the association will also be thrown open on this occasion for the accommodation of the visitors. While the Claypool will be headquarters, Indianapolis hotel facilities are such that excellent outside accommodations may be secured for those who desire, the following hostelries being named:

Claypool Hotel—600 rooms, 400 baths, fireproof, European plan.

New Severin—400 rooms, 400 baths, fireproof, European plan.

New Washington—300 rooms, 300 baths, fireproof, European plan.

Denison—250 rooms.

All members are urged to reserve accommodations early by writing to the hotels or to W. A. Caperton, of Eli Lilly & Co., who is chairman of the committee on hotel accommodations.

### Colorado Pharmacal Association.

The Colorado Pharmacal Association will hold its 25th annual meeting at Pueblo on September 8, 9 and 10 and all druggists of the State are invited to attend. In preparing the programme of the meeting the committee has had in mind not only the "serious business" but has made arrangements for sundry entertainment features, particularly for the ladies. Prizes will be offered to the winners in various athletic events. Those wishing to contribute should address the local secretary, A. B. Tipple, Pueblo, or Secretary Charles J. Clayton, 1775 Humboldt street, Denver.

### War Prevents Chemical Society Meeting.

The European war has caused the postponement of the annual meeting of the American Chemical Society, which was to have been held at Montreal this month. While the society is contemplating holding a meeting later during this year, at some place other than Montreal, the probabilities are that the next gathering will take place in New Orleans, April 1 to 3, 1915. This has not been definitely settled, however, and members of the society will be notified to that effect if plans are perfected for a meeting during the latter months of this year.

### International Federation's Annual Meeting Postponed.

The meeting of the International Pharmaceutical Federation, which was scheduled to take place at Berne, Switzerland, on Aug. 7, has been postponed indefinitely. This organization is composed of men representative of the drug and pharmaceutical trade of the world, and the difficulty which the majority of these members would experience in attempting to go to Berne, owing to the present European hostilities, prevented the proposed meeting.

## Members of Cincinnati Branch of A. Ph. A. Celebrate First Anniversary.

*Pharmacists and their wives after the old-fashioned Kentucky Chicken Dinner.*

**I**N celebration of its first anniversary, the Cincinnati Branch of the American Pharmaceutical Association went on an outing recently to White Villa, Ky., where they were the guests of J. M. Myers, through whose hospitality the White Villa Club was thrown open to the members of the organization. So excellent were the arrangements for the entertainment of the druggists that the outing was unanimously conceded to have been the most enjoyable of any ever held by a Queen City pharmaceutical organization. The programme included boating, bathing, baseball and other amusements, the committee in charge of the arrangements consisting of Charles G. Merrell, chairman; Otto Katz, Louis Werner, Prof. C. T. P. Fennel and Frank Freericks.

About 70 people sat down to the old-fashioned Kentucky chicken dinner which was served. Speeches were made by E. H. Thiesing, Theodore Wetterstroem, Charles Harding, Fred Ott, C. T. P. Fennel and Frank Freericks. Among those who contributed to the enjoyment of the visitors were the French-Bauer Co., which donated ice cream and cake; Dolly Varden Chocolate Co., candy, while cigars were furnished by the J. B. Moos Co., Isbold Cigar Co., and S. Joseph & Co. The Wm. S. Merrell Chemical Co. donated a number of prizes for the various games in which the victors were Miss Lula Faller, Mrs. Frank Freericks, Mrs. Otto Kistner, Mrs. Scallan, Mrs. Jackson, Miss Helen Heister and Mrs. Weissman. As a result of the outing a considerable addition was made to the membership list, and the development of an interest which promises increased attendance at the meetings during the coming season.

#### Chemists Wanted for U.S. Departments.

The United States Civil Service Commission have issued notices inviting attention to the open competitive examination for junior chemist, both men and women, scheduled to be held on Sept. 9 and 10 at various centers in the United States. The following vacancies in such positions exist at the present time: One junior chemist, qualified in biological chemistry, Bureau of Animal Industry, \$1200 a year; one junior chemist, same qualifications, Bureau of Chemistry, \$1200 to \$1620 a year; one chemist, qualified in pharmaceutical chemistry, Bureau of Chemistry, \$1200 to \$1440 a year; two chemists, qualified in pharmaceutical chemistry, Bureau of Chemistry, \$1620 to \$1740 a year. The applicants will be examined in general chemistry, elementary physics, French and German, practical questions on each optional subject chosen, the list of these embracing advanced inorganic, analytical, biological, dairy, food, metallurgical, organic, pharmaceutical, sanitary and soil chemistry. Applicants must specify in their application all of the optional subjects in which they wish to be examined. Persons who meet the requirements and desire to take the examination should apply to the U.S. Civil Service Commission for the proper blank form which must be filled out and filed with the Commission, Washington, D.C.

#### Standards Should Not Handicap Progress.

*Dr. Alsberg Addresses Food and Drug Officials and Suggests Introduction of Tolerances for Foods.*

**T**HE work of the 18th annual convention of the American Dairy, Food and Drug Officials, held last month in Portland, Me., was largely devoted to food problems, but drugs received sufficient attention to bring the discussions to the attention of the drug trade. As is well known, the association has for its membership the officials charged with the enforcement of the food, dairy and drug laws throughout the United States. In only a few States, however, are these officials charged with the supervision of narcotic drugs. Among those present and frequently seen at pharmaceutical meetings were Dr. Charles Caspari, Jr., Baltimore; Dr. Charles E. Caspari, of St. Louis; W. T. Hankey, Cleveland; Dr. L. F. Kebler, Washington, and J. F. Windolph.

#### General Standards.

Dr. Carl L. Alsberg spoke on the subject of general standards. He emphasized the desirability of legal standards, thus eliminating litigation, expense and pitched battles in court. Court cases frequently settle little or nothing. The lack of standards unsettles manufacturers, consumers and food officials. Standards are flexible, law is not. He believed that in formulating standards the following should be kept in mind:

Standards should not permit any deleterious agent. (This applies to food products only.)

Standards should permit no fraud on the consumer.

Should be so formulated as not to exclude useful or wholesome products.

Standards should not handicap progress.

Dr. Charles Caspari, Jr., thought it would be wise to introduce tolerance in food standards the same as now obtained for drugs recognized in the U.S. Pharmacopoeia. The general feeling is that Congress should authorize the Secretary of Agriculture to study the question and ultimately formulate and promulgate standards.

At this point Commissioner Flanders referred to the report of committee memorializing Congress to empower the Secretary of Agriculture to prepare and formulate standards.

#### Distinctive Names.

This question was discussed somewhat freely and all appeared to be of the opinion that it was a mistake to introduce into any law reference to a distinctive name. It simply afforded a means of evading responsibility. Attention was called to the fact that this feature was introduced into the law because of the constant cry of trade secrets. Numerous illustrations were given to bring out the undesirable features involving a distinctive name. It was clearly shown that by using a distinctive name under many of the laws, it was possible to concoct any form of mixture and impose upon the consuming public. Attention was called to the fact that certain

States, and delineated the distinctive name features; for example, Massachusetts.

#### Collecting Samples.

The question of collecting drugs by inspectors received considerable attention. Some advocated the idea of the inspector going to the store, introducing himself to the proprietor and making careful observations and purchasing such commodities as he desired. Others were of the opinion that the best method of purchase was for the inspector to purchase his commodities the same as any ordinary customer would do. The latter method was criticised by some as a form of detective work which should not constitute a part of our duties.

It was shown, however, that under some laws it is impossible for the inspector to do otherwise, and the fact was fully brought out that some State drug inspectors were empowered to go into any drug store and demand of the druggist any substance that may be found upon shelves. Educational methods and co-operation were highly advocated. The fact that such a large percentage of samples were found to vary materially from the standards, was deplored.

Attention was called to the impracticability of purchasing under a regulation calling for three samples. Such a regulation could not be complied with in many instances. For example, the druggist would not have on hand three samples of a given product. The Federal regulation originally called for three samples, but it was soon found in practice to be inoperative, particularly in goods shipped into interstate commerce by mail to consumers. The line of business which brought this out most conspicuously was the treatment of drug addiction by mail or express.

#### Quality of Drugs.

The character and quality of drugs often found in drug stores are not what they should be.

The so-called "field tests" were referred to only to be condemned. Sub-standard drugs were not approved of.

F. L. Shannon, of Michigan, referred to the shortages found in many tablets, such as aspirin and potassium iodide. The work of the Bureau of Chemistry on tablets was also commented on.

In Michigan the percentage of illegal drugs in five years was lowered from 56 per cent. to 35 per cent. Co-operation played a large part.

Mr. Lithgoe spoke of likely variability of proprietary articles, citing the finding of wood alcohol in a "dandruff cure" and a little later ethyl alcohol. Reference was made to the deaths of several soldiers camping in Vermont caused by drinking bay rum containing wood alcohol. Regret was also expressed at the appearance of an article by a prominent Pennsylvania druggist advocating the use of wood alcohol in certain drugs.

The poor quality of powdered asafetida received attention in a paper by Mr. Zieffe. Some considered this article a malodorous pharmaceutical monstrosity, and should be relegated to the scrap heap.

Dr. Kebler called attention to the results of the examination made on drugs collected in the District of Columbia, stating that there was need of improvement in the District, as well as in the States. Considerable leniency had been extended to the drug trade, but it was decided to make it possible to purchase as good drugs in the District of Columbia as in other sections of the United States. He stated that extreme leniency was shown. In fact, he believed that the leniency was subject to criticism in some quarters. For example, not a single druggist was cited whose tincture of iodine came within 20 per cent. of the Pharmacopoeial standard. Yet with this exceeding liberality, a goodly number of samples were found wanting. The same leniency has been extended to other drugs examined.

#### False Advertising.

Dr. S. J. Crumbine discussed the subject of false advertising, and referred particularly to the deception practiced by nostrum manufacturers. He referred to the influence for good of advertising clubs throughout the country in eliminating fraud and deception from advertising columns. There have been a number of State laws enacted to punish misrepresentations of an advertising character.

R. M. Allen, of Kentucky, stated that editors and managers of papers should not be held responsible. Attention was called, however, to the fact that in some instances, at least, editors

had full knowledge of the fraud and deception, and under such conditions should certainly be held responsible.

#### Contaminated Water.

Dr. Crumbine also called attention to the fact that much of the water used in the manufacture of soft drinks was contaminated. He urged careful investigation of this matter. It is believed by some that carbon dioxide gas destroys bacteria in impregnated liquids. Others think this is incorrect.

#### Habit-Forming Agents.

Dr. C. E. Caspari referred to habit-forming agents and was of the opinion that this line of drugs should not form a part of the work of food and drug commissioners. He thought that these officials had ample work to do and that the enforcing of laws dealing with narcotics is quite well attended to by boards of pharmacy. The fact was brought out that in a number of the States the food and drug commissioners did the most effective work in conjunction with habit-forming agents. The general belief prevailed that the enforcement of a law must be placed in the hands of disinterested parties or the results will be unsatisfactory.

#### Manufacturer's Day.

To give manufacturers an opportunity to be heard was an innovation for this organization. A goodly number of industries were represented, as well as the Chamber of Commerce of the United States. The industry, however, of special concern to the drug trade was that represented by J. Fred Windolph, of the Norwich Pharmacal Co. In common with all other speakers representing industry, he appreciated greatly the opportunity afforded them to present their side of the case. He stated that the organization he had the honor to represent—the American Association of Pharmaceutical Chemists—was the oldest of its character in the United States, and its purpose was mutual protection and improvement. The members of that organization, he said, did not manufacture so-called patent medicines, but prepared medications from well-known formulas for the purpose of alleviating human suffering. Substitution was deprecated to the utmost. The industry he represented involved a multiplicity of details and required exacting supervision regarding the purity, nature and character of the initial ingredients used, thus requiring an examination not only of the initial ingredients, but of the finished product as well. As would readily be seen, a corps of chemists for this work was required. The purpose of the association was to be right and stay right. The members greatly appreciated all assistance given them by the commissioners and others. In this connection he spoke very favorably of the work embodied in Dr. Kebler's paper now appearing in the *Journal of the American Pharmaceutical Association*, on the tablet industry. Formerly the members of the A. A. Ph. C. worked independently, but now they are working and meeting to discuss problems of mutual interest and improvement. "Our slogan," said he, "is harmony, improvement and co-operation."

A dealer in one of the other industries gave some very wholesome advice relative to cleanliness. He advised looking into the sleeping and breeding places of cats, rats, mice and flies. He called attention to the great menace of the rat and referred to rodents as expensive tenants. His advice to all was embodied in this phrase, "Either to clean up or shut up"; not only "swatting the fly, but also batting the rat."

The next meeting of the association will be held in Berkeley, Cal., in 1915, the time to be designated by the executive committee.

#### HARRISON BILL, No. 6282, PASSES SENATE.

##### Receives Many Unimportant Amendments But Exempts Physicians, etc., from Record Provisions.

The Harrison anti-narcotic bill, H. R. 6282, was recently passed by the Senate at Washington after having received some 35 amendments, most of which are reported to be of minor importance. The principal change made in the bill by the Senate was the exclusion of physicians, dentists and veterinarians from the provision requiring the keeping of records of the giving of narcotic drugs. As will be seen in the report of the recent N. A. R. D. convention, presented upon another page, this exemption is strenuously opposed by the retail trade. The scope of the bill is also extended by amendment to insular possessions and the sale of the narcotics provided for is permitted to army and navy and other hospitals and prisons, and to State governments and political sub-divisions.

## National Association Retail Druggists Meet at Philadelphia.

*Work of the organization epitomized in a series of resolutions relating to many fields of endeavor—Samuel C. Henry, of Philadelphia, the new president—Price-maintenance legislative effort endorsed—To work for special internal revenue stamp for druggists who sell liquors for medicinal purposes only—Price standardization and one-cent postage—List of prominent exhibitors.*

THE 16th annual convention of the National Association of Retail Druggists, although marked by a registration of almost 1500 and a seated delegation of 154, was rather passive in nature, the organization having well under way the matters of vital importance to the retail trade. Much of the business of the convention consisted in affirming or reaffirming the stand of the association on issues of which the delegates were well informed and upon which they were practically unanimous in opinion. The intense heat had much to do with curbing any inclination to unusual activity, and on at least one occasion it looked as though the presiding officer would not succeed in assembling a quorum to consider the scheduled business.

Samuel C. Henry, of Philadelphia, was elected president for the ensuing year. The other officers elected were:

First vice-president, A. S. Ludwig, St. Louis; 2d vice-president, W. H. Humphrey, Huntsville, Ala.; 3d vice-president, T. C. Coltman, Lagunta, Colo.; secretary, Thomas H. Potts, Chicago; treasurer, Grant W. Stevens, Detroit, Mich.; executive committee, T. S. Armstrong, Plainfield, N.J., two years, to succeed S. C. Henry; James F. Finneran, Boston, three years, and Robert J. Frick, Louisville, Ky., three years.

The rise in price of imported drugs coincident with the state of war in Europe was the cause for a resolution presented by J. H. Rehffuss, of Brooklyn. It was adopted after an extended discussion and a copy ordered sent to the U.S. Attorney-General. The resolution follows:

WHEREAS, There exists because of the European war, a scarcity of drugs and chemicals and sick-room necessities employed in the conservation of the health of the people of this country; and

WHEREAS, The welfare of the nation demands that every effort should be made to conserve the existing supply of these articles; and

WHEREAS, It is common knowledge that many wholesale dealers in and manufacturers of drugs, chemicals, and medicinal products, employed in relieving the conditions of the sick, are displaying a lack of humanitarianism and patriotism by taking advantage of the grave conditions that confront the American people, to advance unnecessarily the price of the essential medicinal commodities; therefore be it

*Resolved,* That the N.A.R.D., through its committees and organization forces, and the efforts of its individual members, extend every assistance to local, State and Federal governments in conserving the supply of drugs and medicines and preventing forestalling, and be it

*Resolved,* That the N.A.R.D. hereby condemns most vigorously the practices of those wholesale dealers and manufacturers in the drug field, who have needlessly advanced the price of many of the products they supply.

Mr. Rehffuss expressed the opinion that the retailers were being gouged. He presented one specific instance. Mr. Guilford, whose signature was also on the resolution, asserted that there was no doubt that a concerted effort was being made by the wholesalers to advance prices and the public should be informed as to who was raising the price of medicines. It was also contended that there was no reason why the prices of articles of domestic manufacture should be increased. Thomas Stoddart, of Buffalo, assumed that the gentlemen presenting the resolution must have some facts at hand and thought that anyone knowing of a combine of wholesalers or manufacturers to raise prices on account of the war should inform their district attorney thereof. T. S. Armstrong, of Plainfield, N.J., also thought that facts should be presented. "The substantial wholesalers are as honest as we are," he asserted.

At a protracted night session the association acted upon the resolutions which had been presented by delegates to the committee on resolutions, and had in turn received that body's approval or disapproval. In substance, the resolutions which

the committee recommended for adoption, and the action of the convention, follow:

1. The incoming president be instructed to appoint a committee of three to confer with similar committees from other organizations upon the advisability of forming a congress of National Drug and Pharmaceutical bodies under the auspices of the American Pharmaceutical Association, and the result of this conference shall be reported to the several organizations represented and to the A.P.A. at their 1915 annual meetings, with such recommendations as may be agreed upon. Approved.

2. The N.A.R.D. recommends that manufacturers of eth-pharmal and specialty products place "retail selling prices" on the containers of their products. It is believed that the execution of this suggestion will create a better commercial feeling between the manufacturers, the retail druggist and the consumer. Approved.

3. That the association put forth every honorable effort to secure the passage of a law that will more strongly differentiate between the medicinal and beverage sales of alcohol than the present laws do, and that every effort be made to secure the passage of a law reducing the alcohol tax of retail druggists to the sum of five dollars. Approved.

4. That the association urge all its members and retail pharmacists in general throughout the U.S. to have the name of the pharmacist in charge of any drug store displayed prominently and permanently either above the door of his place of business or on the show windows, and that the N.A.R.D. through its proper officers and committees attempt as soon as possible to have this regulation enacted into a law through all the States. This in view of the fact that the number of pharmacies operated under company names or other impersonal firm names is increasing and in that such a condition tends to diminish pride in professional excellence on the part of individual pharmacists, makes for the lessening of individual responsibility and renders more difficult the enforcement of the pharmacy laws. Approved. An unsuccessful attempt was made to amend this resolution.

5. That N.A.R.D. reiterate its objection to the retail liquor dealer's special tax required of druggists and that a suitable memorandum of this protest be submitted by the secretary to the Secretary of the U.S. Treasury and . . . that the association respectfully request the Secretary of the Treasury to give an official opinion as to why retail druggists should be compelled to pay this tax. Approved.

6. That the members once more declare themselves for the standard of \$2, \$4 and \$8 or letter per dozen or less on all patent medicines marketed by them and call upon all manufacturers to conform to it in the marketing of their products, and . . . that in the future all contracts for advertising trade-mark preparations upon which there is a set retail price and for which over \$2, \$4 and \$8 wholesale is asked be discouraged. This, in view of the fact that the journal of the N.A.R.D. has accepted advertising from manufacturers who have stood aloof from the association's appeal to conform with the \$2, \$4 and \$8 basis. Approved.

7. That the N.A.R.D. heartily endorses the Stevens bill and calls on Congress to enact it into law at the present session, and commends the utterances of President Wilson at Philadelphia, on October 29, 1912, when in defining his policy he said:

"Safeguard American men against unfair competition and they will take care of themselves. If you make the processes by which small men are undersold in particular markets criminal; if you penalize in the same way those discriminations by which retail dealers are punished, if they deal in the goods of anybody except the big manufacturers; if you see to it that raw materials are sold upon the same terms to everybody; if you see that the closed market for credit is opened up by a very different banking system, then you have freed America, and I, for my part, am willing to step there and see who has the best brains."

That the delegates pledge him their earnest support in any effort he may make to enforce the principles of equal rights and equal opportunity to honest dealing with the consuming public. Approved.

8. That the N.A.R.D. executive committee be instructed to give the extensions of the service features their serious consideration at the December meeting of their committee. Approved. Resolution was based on actual experience of the C.R.D.A., the members of which were of the opinion that the service features, if extended, would become much more useful to the members.

9. That the public relations of the association be put in the hands of a committee consisting of one man from every State, to operate under the direction of the editor of the Journal, and the Washington representative. Approved.

10. That the N.A.R.D. congratulate the lay press upon its acuteness (in omitting in the past several months the names of poisons used in suicide cases) in the cause of humanity, and hopes to see the improvement eventually extended to all lay publications. Approved.

11. This eleventh resolution was regarded as "unfortunate" in its wording and was referred back to the committee on resolutions and the delegates who had drafted it for revamping. It aimed to effect the formation of an effective legislative organization which should contain representation from each State, and should replace the previous small committee, either as a newly constructed committee or as an auxiliary organization. Each State representative should be the head of a subordinate body of county representatives from his respective State.

12. That the N.A.R.D. condemn as "unfair" the giving of rebates of all kinds by coupons, or otherwise, and that copies of this resolution be forwarded to President Wilson and to every member of Congress. Approved.

13. That the N.A.R.D. re-endorse its action on one-cent letter postage (endorsed at Cincinnati in Aug., 1913), and co-operate with the American Bankers' Association in the movement for one-cent letter postage, and instruct the secretary to continue his efforts

to accomplish the results which the National One-Cent Letter Postage Association is endeavoring to secure. Approved.

14. That the N.A.R.D. strenuously oppose a stamp tax on proprietary medicines and toilet articles. Approved. The preamble of this resolution recites the fact that the war in Europe has caused a shortage in import revenues and the Departments at Washington are proposing a revenue stamp tax to make up the deficiency. As usual, such tax will fall most heavily upon the retail druggists, as proposed stamps will be required on all proprietary medicines, toilet articles, checks, deeds, mortgages, etc. Profranchise will add the tax to the price of their products and the additional price will always remain. A protest against such a tax "on our part" will probably be useless, as the money is needed and this is an easy method of obtaining it. Recent events make it clear that druggists must fight their own battles and that the N.A.R.D. is the organization to whom "we" must look to protect "our" interests.

15. That the work of organizing a country-wide auxiliary legislative committee, be continued until every State and Territory is so organized. Approved.

16. Original resolution that the delegates approve the Harrison bill, provided that its requirements are applicable to all alike, was not approved. Dr. Wm. C. Anderson, of Brooklyn, pointing out that it had very probably been drafted before the bill passed the Senate. A substitute resolution was approved placing the bill in the hands of the executive and legislative committees with full power to act.

17. A further endorsement of the Stevens bill. Not considered.

18. That the association approves and will support the Hinebaugh bill for the taxation of mail order business. Approved.

19. That the association favors an amendment to the Food and Drug Act that will establish a single standard for official drugs and preparations. Approved.

20. That the association is strongly opposed to the further extension of the parcels post system, and is strongly opposed to the autocratic powers invested in the Post Office Department, for making rules and regulations. Approved.

21. That the association favors one-cent postage on first-class matter. Approved.

22. Opposing the creation of a National Department of Health, unless pharmacy, as an allied profession, be recognized in its make-up. Approved.

23. That the association urge upon the revision committee the desirability of providing for an official form for tablets of bichloride of mercury. Approved.

24. Favoring legislation that will forbid the distribution, in interstate commerce, of convict-made goods. Approved.

25. Heartily endorsing the great work being done by the American Fair Trade League, in the interest of Price Maintenance legislation. Approved.

26. Instructing the legislative committee to cause the introduction into Congress of a bill to provide for a nominal tax upon the sale of alcoholic liquors, when sold by pharmacists for medicinal, mechanical and scientific purposes only, and that a special stamp be issued for this purpose. Approved.

27. That the association use every effort to the end that T.D. 153 be so modified as to properly protect retailers. Approved.

28. That the association continue its support of legislation to improve the condition of pharmacists in the army and navy. Approved.

29. Approving any legislation that will suppress fraudulent or misleading advertising. Approved.

30. That the N.A.R.D. make strenuous efforts to bring about a general increase in compensation to druggists having postal stations. Approved.

31. That the secretary, and when convenient, the president, attend State association meetings whenever possible. Approved.

The committee disapproved of resolutions calling for the following actions: Fixing the date of future meetings in September, or later; basing State representation on convention committees in proportion to delegates present; asking manufacturers of nationally advertised goods to appropriate part of their advertising appropriation for the use of retailers who made window displays of such goods; withdrawing the N.A.R.D. from membership in the U.S. Chamber of Commerce; fixing delegate representation at conventions in a ratio of one delegate to ten dues-paid members; and refusing to consider San Francisco as a meeting-place for 1915.

A resolution tendering to J. Leyden White and his assistants the thanks of the association for his work in endeavoring to remedy the cut-price evil, and directing the new administration to retain him in his present capacity, giving him every possible assistance, was referred to the executive committee, as was a resolution providing that permanent legislative counsel be secured, and also one expressing the belief that the Harrison Anti-Narcotic Bill H.R. 6282, with the Nelson amendment, and the Stevens Price Standardization Bill H.R. 13305, should be passed for public protection. The Harrison bill was referred back to committee in order that reference to the Nelson amendment might be omitted. Similar action was taken on a resolution seeking to place the names of two physicians on the mailing list of Therapeutic Topics for each dues-paid member.

During the convention it was announced by President Finneran that the Harrison bill had passed the Senate in such form as to exempt physicians from the recording provisions, the very feature which the druggists had fought so hard to have incorporated therein. Mr. Finneran urged every delegate present to telegraph his representative immediately of the unsatisfactory character of the bill. Secretary Potts was also directed to send telegrams to Senators Thomas and Smoot, Secretaries Garrison and McAdoo, and President Wilson, expressing the N.A.R.D.'s dissatisfaction with the bill passed.

President James F. Finneran's annual report contained no direct recommendations. It was, however, an interesting resumé of the work of the association during the past year and of events pertinent to the retail drug trade. Mr. Finneran sought to impress upon the convention the need of a greater membership. "It is an undisputed fact that an organization composed of practically every retail druggist in the country would be much more influential than one which had only one-half of the druggists as members."

President Finneran called attention to the continuous campaign being waged through the association's U.S.P. and N.F. propaganda work in the interest of the professional side of the business. The propaganda work, however, was only in its infancy and should be broadened out from year to year.

Anent the association's membership in the U.S. Chamber of Commerce, the president recommended to the members of the incoming executive committee the desirability of continuing the same. Relative to business conditions, he stated that from such information as can be obtained from all sources, it was evident that the majority of retail druggists were in better condition financially today than they were five years ago. The main reason for this improved condition he ascribed to the fact that the members, through N.A.R.D. activities, had begun to realize the possibilities of an increase of patronage through better service, more attractive stores, a better assortment of merchandise and more solicitous service.

The N.A.R.D. must work with other retail organizations to the end that some mark of identification acceptable to the department at Washington—that will clearly establish the fact as far as the retailer is concerned that the manufacturer is willing to stand behind the statements made upon the label of the various preparations or articles which they offer for sale—shall be adopted.

President Finneran explained how the executive committee had come to form the National post offices committee on sub-stations. The members of the former committee had obtained information from various parts of the country that many of the members had post office sub-stations and were in a great many cases receiving inadequate compensation. By co-operative efforts, a number of these sub-station clerks had been enabled to have their compensation increased to a considerable degree. The new committee was deemed advisable so that all the necessary information relative to the work could be gathered together by one committee and handled in an intelligent manner.

The work of 16 years on cut prices on patent and proprietary articles was bearing fruit, according to Mr. Finneran, but the members "cannot stop now, feeling that your work is completed." "You must continue to work hard and persistently in favor of price standardization and against unfair competition."

Secretary T. H. Potts reported that the organization's State association affiliations had been increased from 33 to 35. Kansas and Maine having reaffiliated. The number of local affiliated associations had been increased from 1056 to 1068. The organization department now consists of six men. This small force necessarily causes an increase of territory that each has to cover.

Relative to the immense amount of missionary work performed by the organization force, Mr. Potts cited one case as an illustration. One of the organizers had sent him the information that 70 retail druggists in one city had never heard of either the Harrison or the Stevens bill.

Depressed business conditions that have existed during all of last convention year caused a depreciation in the association's revenue of about \$8000. A decrease in expenditure of about \$15,000 had been accomplished, however, and a net gain had been made of \$7000 over the year previous. The secretary's financial statement showed total assets of \$22,356, total liabilities \$22,356, the latter including a surplus of \$18,846. Trust funds held by the N.A.R.D. consist of \$1215, organizers'

security on deposit in bank, 82 cents, N.A.R.D. relief fund balance and \$5000 N.A.R.D. relief fund invested in mortgage, against which is a \$4000 loan.

Treasurer Grant W. Stevens reported total receipts amounting to \$90,298.75, which sum included dues received during past year, \$20,883.25; *Journal* receipts (subscriptions and advertising), \$54,524; *Therapeutic Topics* receipts, \$771; U.S.P. and N.F. propaganda, \$1015; books and merchandise, \$1758, and Cincinnati convention receipts, \$2558. The disbursements amounted to \$78,287, exclusive of a \$6000 mortgage, and the secretary and treasurer's balances of \$2000 and \$4011, respectively. This sum included the following items, per diem, mileage, expense of executive committee, \$1279; expenses of publicity department, \$36,621; expenses of organization department, \$18,785; expenses of *Therapeutic Topics*, \$4684; expense of legislative department, \$2365, and sales department (books and merchandise), \$1171.

A very extensive recapitulation of the national pharmaceutical legislative situation as it existed at a period about two weeks previous to the convention was presented by Charles F. Nixon, chairman of the legislative committee. Most of the subject matter of the report has been covered in the columns of the ERA as it came up. The report told how a more or less successful attempt had been made to organize each State so that every Senator and Congressman could be quickly reached by one of his own druggist constituents. It summarized the work of the National Drug Trade Conference and the part played in the consummation of the same by the N.A.R.D. representatives, President Finneran, Frank H. Freericks and Charles F. Nixon.

The status of various measures was elaborated upon, these including the various bichloride bills introduced into Congress, the Harrison bill, the Stevens price maintenance bill, the Metz price-maintenance bill, the Covington or trade commission bill, the Metz bill to amend the patent laws, the Hinebaugh bill to tax mail order houses, the Sabbath bill which aims to reconstruct the pure food and drugs law, the "net weight" law, the Hughes-Bacon bill to improve the condition of pharmacists in the army, the Underwood bill to tax trading coupons, the "book trust" decision won by R. H. Macy & Co., treasury decisions 153 and 155, abolishing the serial number and guarantee legend; and treasury decision, 33,456, providing for a sworn declaration of all purchasers of cocaine, coca or any of their products.

Issues before the drug trade were touched upon, including false and misleading advertising, national prohibition, the enlargement of the parcels post system, one-cent postage, the unjust treatment of druggists having contract postal stations, the necessity of proper protection to the retailer in view of the abolition of the serial number and guarantee legend.

The committee submitted a summary of recommendations for the action of the association. It recommended that the work of organizing a country-wide auxiliary legislative committee be continued until every State and territory is organized, that the association reaffirm its approval of the Harrison bill, provided that its requirements are applicable to all alike; that the Stevens bill, H.R. 13,305, be heartily endorsed and every effort made to ensure its passage, that the Hinebaugh bill for the taxation of mail-order business be supported, that the association favor an amendment to the Food and Drugs Act that will establish a single standard for official drugs and preparations, that it is strongly opposed to the further extension of the parcels post system, and strongly opposed to the autocratic powers invested in the Post Office Department, for making rules and regulations.

The committee further recommended that the association favor one-cent postage on first-class matter, that it oppose the creation of a National Department of Health, unless pharmacy, as an allied profession, be recognized in its make-up; that the association urge upon the revision committee of the U.S.P. the desirability of providing for an official form for tablets of bichloride of mercury, that it favor legislation that will forbid the distribution, in interstate commerce, of convict-made goods; that it heartily endorse the great work done by the American Fair Trade League, in the interest of price-maintenance legislation, that it instruct the legislative committee to cause the introduction into Congress of a bill to provide for a nominal tax upon the sale of alcoholic liquors, when sold by pharmacists, for medicinal, mechanical and scientific purposes only, and that a special stamp be issued for this purpose; that the

association use every effort to the end that T.D. 153 be so modified as to properly protect retailers, that the association continue its support of legislation to improve the condition of pharmacists in the U.S. army and navy, and that it approve of any legislation that will suppress fraudulent or misleading advertising.

Chas. H. Huhn was the chairman of the executive committee, which presented an extensive report, much of the matter in which was touched upon in the report of the committee on national legislation.

The committee regretted that the apparent fear of legal entanglements on the part of the wholesalers had resulted in the suspension of reciprocal relations with the N.W.P.A. Quite different in contrast, it pointed out, were the relations between the Proprietary Association of America and the N.A.R.D.

Throughout an entire day of its April session the committee had considered the proposition to take over the Druggists' National Home. It found that without regard to its limited powers the members of the committee could not consider "the saddling on to the N.A.R.D. of a project which, to say the least, would have bankrupted this organization even if the Home were handed over free from debt instead of having to assume an initial obligation of \$50,000." The maintenance alone would have been a vastly larger expense than the N.A.R.D. could hope to assume.

Wilhelm Bodenmann, of Chicago, presented the report of the committee on telephones, in the course of which it was emphasized as a fact that in every city the situation lies in the hands of the local association working in harmony with the telephone companies. The committee expressed the opinion that the trade are at least \$250,000,000 "to the good" since the introduction of the coin box.

A propaganda experience meeting was a feature of the convention presided over by Frank W. Piluck, who had previously presented the report of the committee on U.S.P. and N.F. propaganda. Professor E. L. Newcomb, of Minneapolis, elaborated upon propaganda as carried on in Minnesota. Professor Newcomb brought out at least two points—that those who have had to do with the handling of drugs know nothing of them, and that pharmacists make a mistake in trying to carry on propaganda with 200 drugs. There are only 22 drugs upon which authorities are unanimous. "Confine your efforts to a few important drugs," he asserted.

Among the entertainment features arranged for the visiting delegates and their ladies were the grand ball at the Bellevue-Stratford Hotel, the trip on the Delaware River to Scottissee plant, and Wampole day at Willow Grove, Henry K. Wampole & Co., Inc., being the hosts at the latter affair.

A drug show was another feature of the convention. It was held at the Bellevue-Stratford and proved so popular with the general public that the management was obliged to provide itself with police protection. Among the exhibitors were the De Vilbiss Manufacturing Co., Emerson Drug Co., Tampa-Cuba Cigar Co., Johnson & Johnson, S. S. White Dental Manufacturing Co., Richard Hudnut, The Aromint Co., V. H. Smith & Co., Powers-Weightman-Rosengarten Co., Andrew Jergens Co., Coca Cola Co., Bromo-Mint Co., M. P. Gould Co., Blickensderfer Manufacturing Co., Taps Pharmacal Co., Scholl Manufacturing Co., Creighton Sales Co., Bromo-Lithia Co., N.A.R.D., Morgan Drug Co., Philadelphia C.P., Carpenter Chemical Co., Wm. S. Merrell Chemical Co., Chasco Co., Melba Manufacturing Co., Hy. K. Wampole & Co., Inc., Scott Paper Co., The S. & S. Water Co., Torsion Balance Co., Wells & Richardson Co., Welch's Grape Juice Co., Stephen F. Whitman & Son, H. O. Wilbur & Son, Inc., Horlick's Malted Milk Co., H. K. Mulford Co., Smith, Kline & French Co., Colgate & Co., Myers Manufacturing Co., Otto Eisenlahr & Brothers, Armour Soap Works, J. Hungerford Smith Co., French Lick Springs Hotel Co., Schandain & Lind Co., The Kolynos Co. and E. R. Squibb & Sons.

#### Chicago Druggists Held Following Opium Raids.

CHICAGO, Aug. 10.—Jules Rivard and Viator Rivard, of Rivard Bros., druggists, 601 South Clark street, and Joseph Langerman, druggist at 52 West Harrison street, and his manager, Isador L. Berger, were held in \$2500 bail each following a raid of the two drug stores by Government officials. The men were charged with conspiracy to violate the Federal statute prohibiting the illicit manufacture of opium for smoking purposes.

## AMONG THE ASSOCIATIONS.

A joint convention of the Dallas County (Texas) R.D.A. and the Dallas Retail Drug Clerks' Association was held at the Orient Hotel at its usual place recently, with Dr. C. A. Duncan as guest speaker. The most interesting features were: "Why Our Annual Banquet?" Dr. F. G. Libberle; Solo, Mrs. Jacob Schrodt; "The Value of Drug Education," Sam A. Althoff; "Pharmaceuticals," R. J. Berger; Solo, J. F. Parchmann; "Some Incompatibilities I Know of," C. O. Lamy; J. T. Covington, Cecil Rogers and John F. Coulson constituted the arrangements committee for the Dallas County Retail Druggists' Association, and A. H. Sinclair, Barnes Ashton and W. J. Powell for the clerks' organization.

The Fitchburg and Leominster (Mass.) Druggists' Association held its annual meeting at its recent annual meeting: President, Harry A. Estabrook, Fitchburg; vice-president, E. L. Bunker, Leominster; treasurer, Roscoe Howe; secretary, J. C. Ryan; executive committee, John F. Hayes, C. F. Nixon, Frank H. Moore and Clinton R. Davis. The candidacy of John F. Hayes for membership on the State Board was endorsed. C. F. Nixon was elected delegate to the N.A.R.D. convention. Clinton R. Davis and A. T. McFarland were elected members. The attendance was about 200. L. O. L'Esperance, president for the past three years, declined re-election.

A druggists' unit of the Merchants' Auxiliary of the Hammond (Ind.) Chamber of Commerce was formed at a recent meeting. Harry Weiss was made chairman and Carl Nelson, secretary. They will work for co-operation among themselves and the other merchants of the city. A "Booster Day" movement launched by the auxiliary will receive their support. After perfecting the local organization the druggists will work to build up a county organization. Present at the meeting were Messrs. Weiss, Nelson, Aubrey, Kepert, Norris, Joseph Weiss, Negle and Summers.

The members of the Dubuque (Iowa) Retail Druggists' Association recently had "the time of their lives" at the annual picnic held at White City, one of the best and largest of these affairs which the organization has ever arranged. About 75 people were in the party that set out early in the day and after the tents were pitched about 25 physicians arrived. A baseball game, in which the physicians were badly beaten, was a feature. "Gov." Torbett, veteran druggist, umpired.

Two hundred members of the Toledo (Ohio) Drug Club, some of them accompanied by their wives and sweethearts, recently picnicked at Monroe Piers. They arrived at Monroe, Mich., aboard four special interurban cars and paraded through the streets. The parade was headed by President Paul A. Loesser and other officers. Following were six girls in white. A band added to the stir created in the city by the peaceful invaders.

The American Medico-Pharmaceutical League's executive committee appointed delegates at its recent monthly meeting to work with a committee of 100 citizens to secure a high school for East New York. The assistance of the league was urged in this direction. Samuel F. Brothers, secretary, reported 275 new members elected during the past 15 months.

The Indianapolis Retail Drug Clerks' Association and the Order of White Elephants, consisting of retail druggists of Indianapolis, recently held their annual picnic north of Broad Ripple at the Ripple Outing Club. A picnic supper, athletic events and a circus in which members of the organization appeared to advantage, were special attractions.

The Meyer Brothers Employees' Mutual Aid Association recently elected the following officers: President, C. A. Jorns; vice-president, J. H. Brandau; secretary, F. J. Bitner; treasurer, E. J. Habegger; directors, Frank Decker, S. B. Simpson, P. J. Singer, L. Heilman, J. J. Weiler, Charles Sublette, J. Weitz, Theodore Schroeder and J. G. Finnegan.

The Syracuse Druggists' Association on June 11 elected the following officers: President, T. B. Furnival; vice-president, William J. Smith; secretary, Frank J. Lawyer; treasurer, Louis E. Ireland; executive committee, W. B. Bunker, F. K. Heldman and Robert Van Wagner. The Boylan law and the Stevens bill were discussed.

The Women's Pharmaceutical Association of the Pacific Coast has appointed the following delegates to the meeting of the A.Ph.A. to be held in Detroit this month: Miss Clarissa M. Roehr and Dr. Josephine Barbat Winslow, of San Francisco, and Mrs. K. K. Voluntine, of Palo Alto.

The Scranton (Pa.) Retail Druggists' Association elected as officers at a recent meeting the following: President, Wm. H. Knoepel, secretary and treasurer, John J. Davies. Julius G. Bone, of Dunmore, was named as a delegate to the A.Ph.A. convention. Next meeting at call of chair.

The sixth annual convention of Manchuria pharmacists was held at the Dalny Young Men's Christian Association on June 22. Japanese members were present from Dairen, Lüshutun, Port Arthur, Wafangtun, Yingkou, Fushun, Mukden, Antung, Fiehling, Kungchuling and Changchun.

The West Tennessee, West Kentucky and East Arkansas Medical, Dental and Pharmaceutical Association, composed of negro doctors, dentists and druggists, held its 19th semi-annual session at the Negro Masonic Temple, Memphis, recently, with an attendance of 250 delegates.

The Cumberland County (Maine) Pharmaceutical Association held its annual outing at Spurwink. Senator Murphy's baseball team lost the first game it has ever lost at one of these outings. The outing was well attended. The members rode home by way of Old Orchard.

Members of the Chicago Retail Druggists' Association, their families and friends, enjoyed the organization's annual outing which consisted of a boat ride to South Haven, Mich. The outing was directed by President Julius Reimenschneider and Secretary Isaac S. Light.

The Brooklyn College of Pharmacy Alumni Association held its annual outing at Witzel's Pavilion, College Point, L.I., the party leaving the city at Battery Park. A shore dinner, dancing, bowling, games, swimming, etc., were features.

The Mercer County (N.J.) Druggists' Association held a largely attended annual meeting at Cadwalader Park. Addresses were made by John F. Pentz, president; George M. Lynch, secretary; Isaac J. Keuper, and others.

The Jacksonville (Fla.) R.D.A. has elected the following officers: President, R. W. Bennett; vice-president, Sam Dunlap; recording secretary, S. O. Griffin; financial secretary, J. H. McManus; treasurer, W. D. Jones.

The Norwich, Conn., R.D.A. has elected these officers: President, William H. Nickerson; vice-president, Rollin C. Jones; secretary and treasurer, Charles C. Treat. A banquet followed.

The Women's Pharmaceutical Auxiliary, of Pittsburgh, gave a dinner party with covers laid for 26 at the Fort Pitt Hotel recently, after which the members attended a theatrical production.

The Belmont County (Ohio) branch of the Ohio State Ph.A. discussed the insecticide and fungicide laws and the Stevens bill at their recent meeting at Martin's Ferry.

The St. Paul Retail Druggists' Association is planning a river excursion the latter part of this month.

#### Seven Pharmaceutical Societies to Meet at the 1915 Exposition.

More than 50,000 druggists will be represented at the Panama-Pacific International Exposition during "Drug Week"—which for good measure is nearly two weeks, being from July 12 to 24, 1915—in the conventions of the seven principal associations of druggists and pharmacists in America. K. B. Bowerman, secretary-treasurer of the State Ph.A., in commenting on this fact, said:

"This joint convention of all the drug men in America is unique in history. It is the first time they have ever got together on anything like so large a scale. The bodies which will meet here in 1915 as the guests of the exposition, and of the California Pharmaceutical Association are the American Pharmaceutical Association, with about 12,000 members; the National Association of Retail Druggists—the largest body of the kind in the world—with about 22,000 members; the National Association of Wholesale Druggists; the Conference of Faculties of Pharmaceutical Colleges, the Retail Drug Clerks' Association and the American Druggists' Syndicate, with 17,000 members. The delegates from the Syndicate will go by steamer to San Francisco through the canal, transacting most of their business on the way, so as to give their time while here to enjoyment of the wonders of the exposition.

"It is expected also that the various State Boards of Pharmacy from the States generally also will be present. We expect to establish a downtown headquarters and bureau of information for the benefit of the delegates, and in connection with it the manufacturing druggists are contemplating installing a fine exhibit."

## SCHOOLS AND COLLEGES

### Valparaiso University.

The Summer term closed on Aug. 13 and the following received their degrees of Ph.C.: George Hugi, Robert L. Perkins, Robert K. Hutler, Fischer, Ernest Ryan and I. W. Anderson. George Hugi has accepted a position with the Procter & Gamble Co. at Cincinnati. Robert Perkins will enter the University of Michigan for the coming year, and the other members of the class have good positions in view.

Alumni: H. S. Frank Gullstrom, M. J. Quigley, Frank Conroy, Arthur Bruce, Robert Wiesjahn and Walter Wieszorek, members of the class of 1914, returned to the university for the next term season.

Dean Timmons was the guide for the annual pilgrimage to Chicago of about 100 students. On the trip among the places most visited were those of the Universal Portland Cement Co., Buffalo; Standard Oil Co., Whiting, Ind.; the Illinois Steel Co., South Chicago, and the Chicago Gas Company.

These trips give the students an opportunity to see at first hand many of the processes that have been discussed in the class room.

Earl Warren, '14, has received his certificate and has a position in Sedan, Kan.

G. C. Chester is with Allaire-Woodard & Co., Inc., Peoria, Ill., during the Summer vacation, but will return to the university at the beginning of the school year to take up his duties as assistant in the manufacturing laboratory.

J. M. Faul, '14, has a position with Zaehm's pharmacy in Michigan city.

C. E. Dixon, '14, has a position with Phelps Drug Store, Martinsville, Ind.

Claude M. Sisco has a position in the leading drug store of Green Forest, Ark.

LeRoy Cruger, '14, has a position with the Mueller pharmacy, Milwaukee, Wis.

Dean Timmons and other members of the faculty, attended the annual convention of the American Pharmaceutical Association at Detroit.

The enrollment for the term opening Sept. 15 points to a most successful year for the department of pharmacy and the Valparaiso Ph.A.

### University of Minnesota College of Pharmacy.

The college enters upon its 23d year on Wednesday morning, Sept. 16. Registration begins in the office of the Dean on Sept. 9. The programme of work will not be ready until Sept. 15, when it will be posted on the college bulletin.

Students' steel dispensing work-tables, to accommodate 40 students working at one time, have been installed in the new dispensing laboratory and have been equipped with hot and cold water, gas low pressure and high pressure steam and electric current for light and power. Twenty prescription scales have also been added to the dispensing department.

The usual annual duty-free apparatus and supplies order from Germany arrived early in August, fortunately before the breaking out of war in Europe.

Prof. Gustav Bachman, who was traveling in Europe this Summer, fortunately reached England in safety soon after the opening of hostilities in Austria and Servia. He is scheduled to sail from England via Montreal and expects to arrive in Minneapolis about Aug. 26.

Dean Wulling has spent part of the Summer sojourning between town and his Summer home on Lake Ida near Alexandria, Minn. The latter half of August he spent in Detroit and the East. He returned from Detroit to Minneapolis in a new auto acquired in Detroit.

The medicinal plant laboratory has just been given a fresh coat of white paint, while the brick walls have been covered with stucco-cement of a color to match the main pharmacy building adjoining.

The College had an exhibit of 36 of the chief drugs, grown and produced in the medicinal plant laboratory, at the Detroit meeting of the A. Ph. A. The exhibit was prepared by Dr. Newcomb who was in charge of the exhibit at the meeting.

Additional steel furniture equipment for the pharmaceutical library is expected to be put into place during September.

### Academic Doings Throughout the Country.

The Alumni Association of the Pharmacy Department of the National University of Arts and Sciences gave a banquet for the graduating class at the Hotel Jefferson, St. Louis. The alumni officers are: Richard A. Walker, M.D., president; F. J. Killalee, vice-president; C. Harvi Altheide, M.D., secretary; Otto N. Speckart, treasurer. Committee on banquet and entertainment, G. Houghton, chairman; O. N. Speckart, F. J. Killalee, Fraper, R. Williamson, Pepmoeller, W. J. Houghton, Williams.

Beta Ipsilon Chapter, Kappa Psi fraternity, of the Rhode Island College of Pharmacy, held its annual session June 5 at the Noon Day Club, Providence. The following officers were elected: Regent, Michael Deady; vice-regent, Carl Carlson; secretary-treasurer, Andrew Gray; historian, C. Leo Higgins; chaplain, Leon Field; Earl H. Mason, James Chanley, Jr., and Andrew Gray are members of the committee in charge of the annual Summer outing to be held later in the season.

At the annual meeting of the Alumni Association of the California College of Pharmacy, the following officers were elected: President, W. Bruce Philip, Oakland; 1st vice-president, Dr. Mitchell, San Francisco; 2d vice-president, O. Knowlton, '04, secretary, Mabel Dolinis, San Francisco; treasurer, Charles Abrams; registrar, Mrs. Fayette H. Philip, Oakland.

The following students of the State College, Brookings, S. D., passed the recent examinations held by the State Board of Pharmacy: Miss Anna Siverston, Pierpont; Tyrell MacDougall, Britton; Louis Nelson, Oldham; Louis Kladinger, Hartford; Winifred Ray, Brookings; Roy Soule, Brookings; Ralph Null, Miller.

The commencement exercises of the Pharmacy Department of the Detroit Technical Institute were held on July 12, when Dr. G. A. Studer conferred the degree of graduate in pharmacy upon a class of ten.

The annual commencement exercises of Marquette University of Milwaukee, were held on June 18, when 170 students were graduated. There were 21 graduates of the department of pharmacy.

The University of Notre Dame, near South Bend, Ind., has conferred the following degrees: Pharmaceutical Chemist, Harry B. Tierney, Ansley, Neb.; Graduate in Pharmacy, Joseph P. Costello, Kewanna, Ind.; Edmund G. Steis, South Bend, Ind., and Leo S. Zgodzinski, South Bend, Ind.

### University of Iowa.

The State University of Iowa opens on September 21, and the slogan "3000 in September" is sure to be realized, if advanced registration may be taken as an indication. The registration to date for the College of Pharmacy is the largest, with but one exception, in the history of the institution.

The annual "Home-Coming Day" for the university has been set for October 24, the date of the Minnesota football game at Iowa City. For the home-coming pharmacists, special lectures on salesmanship and store management will be arranged.

An important action was recently taken by the Educational Board by which, after September, 1915, a high school diploma will be required for entrance in the college of pharmacy. For the present year, two years of high school work will be accepted.

The pharmacy college placed its order for imported laboratory supplies early and will not be inconvenienced in this direction during the ensuing year.

Professor R. A. Kuever and Miss Ruth Wilburta Hindman, of Iowa City, were married on June 20. Professor and Mrs. Kuever spent a month in the mountains of Colorado and are moving into a fine new bungalow.

Thurston J. Long, Ph.G., '13, Ph.C., '14, of Iowa City, has just received an appointment as assistant drug analyst and inspector under State Food and Drug Inspector Guy G. Frary.

Karl Kullman, Ph.G., '13, received his Ph.C. degree at the Summer session commencement. Mr. Kullman will do relief work for the Hansen Drug Co., of Davenport, where he was employed in a similar capacity last Summer. He will return to the university to continue his studies.

### War Causes Canadian Ph.A. to Call Off Convention.

TORONTO, ONT., Aug. 15.—The Canadian Pharmaceutical Association, which was to have held its annual convention in Winnipeg Aug. 17 to 21, will not meet this year. This action was taken because of the war. The convention at Toronto last year was attended by 500.

# BOARD EXAMINATIONS

## Pennsylvania.

**WILLIAMSPORT, Aug. 15.**—At the recent meeting of the Pennsylvania Pharmaceutical Examining Board at Pittsburgh and Philadelphia, 47 persons applied for registration, 288 as pharmacists and 179 as qualified assistants. 153 applicants passed the examinations for pharmacists and 117 for assistants.

An election for officers of the board resulted as follows: President, Louis Emanuele, of Pittsburgh; vice-president, Charles F. Kramer, of Harrisburg; secretary, Lucius L. Walton, of Williamsport; treasurer, George D. Stroh, of Pittston. The next examinations will be held in Harrisburg on September 4 and 5. Those passed were as follows:

**Pharmacists**—William A. Beighley, Archie D. Canon, Henry O. Coleman, George N. Coeman, Clyde R. Erskine, John L. Fischer, Robert R. Gaw, George W. Gillen, Leo F. Jerome, Merle J. Naldony, William N. Stewart, Robert S. Wittmer, Frank D. Thompson, Salvatore Viggiano, Wesley R. Wilson and George O. Yoye, all of Pittsburgh; Harry F. Baumgartner, Joseph E. Bodorf, Robert L. Bellegli, Louis Cohen, E. Clifford Cameron, Marcus H. Dotts, Meyer C. Epstein, Morris Epstein, William Edelson, William R. Frank, Abe Folstein, Rose L. Finestone, Barnett R. Greene, Harry P. Goodfriend, Raffaele Grassi, Benjamin Goodman, Leo Greenstein, Joseph J. Hagenman, William D. Hall, Karl N. Krogh, Louis Kron, H. L. Hruski, Elmer F. Merz, George Needle, George N. Netsky, Joseph H. Oeste, Joseph W. Pastor, Henry Pchemek, Max Rosencoff, Julius J. Rosenber, Nathan Rachmell, Maurice Kosoff, John Seidel, Harry M. Sagarosky, Isadore Szapokoff, Morris Senn, Benjamin Smiler, Rebecca Shore, Earl F. Train, C. Joseph Veigel, Abraham Weiner, Abram Weinstein, D. Wallace Youngken, all of Philadelphia; George N. Rice and Ralph M. Neudt, of Allentown; Ray D. Cassidy, Altoona; John M. Wyble, Apollo; Robert G. Murtoff, Boiling Springs; Dana A. West, Butler; J. Edmund Slater, Butler; Edgar S. LaWall, Catawauqua; Ronald Corbett, Clarion; William P. Eldredge, Conshohocken; William G. Kocher, Danville; Thomas F. Van Buskirk, Doylestown; Martin Kovacs and Daniel Kovacs, Duquesne; Michael L. Bush, Dunbar; Edwin R. Spangler, Ephrata; Charles P. Kaetzl, Ellwood City; David F. Whetstone, Everett; Enzer L. McCall, Falls Creek; John V. Stephenson, Jr., Greensburg; Fred L. Kaetzl, Harmony; Henry B. Waltz, Hastings; Forrest S. Marshall, Nyrvin A. Myers, Stewart G. Leidich and Walter M. Kaufman, Harrisburg; Anthony LaCourse, Jr., Hamburg; Christian A. Stutzman, Hegins; George H. Harris, Honesdale; W. Frank Bast, Johnstown; Charles D. Drach, Jeanette; L. Thomas Frambley, Johnsonburg; William J. Hurley, Kane; Irvin C. Semmel, Lehighton; William N. Baker, Lewistown; W. W. Bearley, George H. Kostenbauder and Henry W. Shumaker, Lewistown; Roscoe C. Davis, Linesville; Joseph S. Hagenbuch and Joseph D. Morgan, Mahanoy City; Maurice Schonberger, McKeessport; Howard M. Smith, New Castle; Oscar S. Carlson, Mt. Jewett; N. Dean Rowland, Nanty Glo; Jacob H. kulp, Perkasie; Reginald Scheetz, Pottstown; George W. Daugherty, Punksutawney; Charles L. Gantert, Reading; George W. Shade and Hatten L. Crowl, Shamokin; Francis C. Cassmer and Xavier Zemaitis, Shenandoah; Raymond L. Shover, Shippensburg; John E. Collins, Troy; Judson B. Plotner, Turtle Creek; William O. Shaffer, Vintondale; Paul C. Cautner, Waynesboro; James W. Acklin, Waynesboro; Woods D. Balier, Watsonstown; Mortimer A. Kentch, Wellsboro; Harold Marsh, Irvin; Charles H. McGwire, Chicora; William H. Fitzsimmons, Kane; Walter I. Watson, West Chester; Donald I. Brown, West Hazleton; Allen S. Leinbach, West Leespott; Edward Schafer, White Haven; Leo E. Kijanski, T. L. Stableton, John Bowen and Robert R. Colley, Wilkes-Barre; Walter J. Sutch, Wilkensburg; John C. Way, Jr., Williamsport; Robert C. Morehead, Pulaski, Va.; Glenn B. Hamilton, Fairmont, W. Va.; George F. Stines, Conneaut, Ohio; J. Bonsall Hall, North East, Md.; William H. Griffin, Oswego, N. Y.; Fred C. Wolverton, Newark, Ohio; Clarence A. Rigby, East Liverpool, Ohio; Charles V. O'Hara, Nicholasville, Ky.; Marion C. McArtor, East Liverpool, Ohio; G. Byron Levi and Roy P. Lodge, Atlantic City, N. J.; Ralph B. Rogers, Moorestown, N. J.; Leander G. Taylor, Jr., Cape May Court House, N. J.; John H. Hayes, Oswego, N. Y.; Edwin C. Errickson, Millville, N. J.; Clarence H. Berryman, Camden, N. J.; Arthur H. Carrington, Trenton, N. J.; Walter P. Llewellyn, Paget West, Bermuda; Morris Kanto, N. Y.; Chas. D. Webster, Buffalo, N. Y.

**Qualified Assistant Pharmacists**—I. J. Bdosky, DeWitt C. Barr, James A. Jackson, S. W. Jefferson, Milton A. Kant, Raymond K. O'Brien, Katherine Snyder, Harry A. Starret, Jack Schoenberg, David Lefkowitz, Walter R. Spohn, Thomas F. Weger and Christian W. Zeiner, all of Pittsburgh; Alfredo d'Aloia, Samuel Ankrum, Max Biser, Isaac B. Bloomfield, Charles J. Blum, Herbert C. Brightbill, Rudolph K. Dorfman, Charles K. Eisman, Joseph A. Ferko, Maurice S. Feldman, Herman Feuerstein, Louis Greenberg, Elmer Canton Gruver, Herbert R. Hawthorne, Charles J. Heinle, Joseph F. Kennelly, Morris Kramer, Charles J. Koerber, Emanuel Light, I. J. Lindenbaum, Levy Meshkov, Charles A. Montichiello, Samuel B. Ostrum, Herman L. Pastor, K. Hobart Roatch, Lester F. Raabe, Irene H. Rosensweet, Rose F. Smith, Morris L. Senn, Joseph Sarlo, Myer Skloff, Samuel Shuman, John J. Small, Elizabeth Sternthal, Benjamin J. Wexlar, Robert K. Worrell, Samuel Caban and Walter L. Brandon, all of Philadelphia; Eleanor G. Hoffman, Allentown; Ivan L. Carter, John W. James, Fred S. Lowther, James H. Shoop, E. Raymond Smith and Louis P. F. Weinberg, all of Altoona; Charles R. Silva, Boswell; William W. Heckenberger, Catawauqua; John W. Searight, Carlisle; Stanley J. Taylor, Canonsburg; Walter F. Aukerbrand, Chambersburg; Charles A. Pennock, Collingdale; John R. Kurtz, Denver; Malcolm E. Reed, Don E. Gillung, Du Bois; Homer H. Bury, Erie; Oscar G. Tucker, Edwardsville; Albert R. Guthrie, Ellwood City; William J. Heymann, Galeton; Floyd C. Hoffman, Greensburg; Raymond

Green, Grardsville; James E. Stuart, Harrisburg; Carl I. Nelson, Glen Campbell; R. Grey Smith, West Sunbury; William H. Oppy and Grafton F. Porch, Johnstown; Norman H. Tagg, Littlestown; Nathan A. Simpson, Lower Providence; G. Edgar Herzel, Lansdale; John C. Gray, Miners Mills; George E. Hairy, Monessen; John E. Smith, New Florence; Guy P. Coulter, North Braddock; William D. Wallace, Jr., New Castle; Frank S. Kornacvitz, Nantcoke; Lester V. Stallsmith, Parsons; Alfred B. Stellwagon, Pottsville, Carl O. Haas, Port Carbon; Irvin E. Lehr, Pine Grove; D. Elvin Rosenberger, Perkasie; Harry S. Wood, Rockwood; D. R. Buchanan, St. Clair; Howard E. Seid, Steinsville; Paul F. Ziegler, Steelton; Edward E. Whitesell, Town Lane; Lynn J. Carson, Washington; Joseph W. Piekarski, Warrior Run; J. Raymond D. C. W. Wilkesburg; Edyth B. Powell, Wilkes-Barre; Lony L. Opper, Bachmann, W. Va.; Charles M. Memmerson, Weston, W. Va.; Harry B. Honaker, Monograph, W. Va.; Harry Johannes, East Liverpool, Ohio; Elmer E. Cole, Martins Ferry, Ohio; Herman Meiser, Ellenville, N. Y.; Arthur Rowner, Carmel, N. J.; Charles F. Kutter, H. McKee City, N. J.; Howard I. Scaggs, Lower Marlboro, Md.

## Delaware.

**WILMINGTON, Aug. 21.**—The first quarterly meeting and examination, held at Newark on July 1, by Delaware Board of Pharmacy, ended applicants were examined for pharmacists and four for assistants. Of this number the following were successful:

**Pharmacists**—William B. Jester, Delaware City; Joseph O. Wilson, Loch Raven, Md. **Assistants**—W. Floyd Jackson, Wilmington; J. LeGrand Liles, Chestertown, Md.

The following officers were elected to serve during the ensuing year: President, Norman C. Downs, Wilmington; vice-president, Walter R. Keys, Clayton; secretary and treasurer, John O. Bosley, Wilmington. Governor Miller has reappointed R. M. Kaufman, of Seaford, to be a member of the Board for another term of five years. The next meeting will be held on October 7 at Newark.

## Kentucky.

**FRANKFORT, Aug. 20.**—At the meeting of the Kentucky Board of Pharmacy, held at Dawson Springs, July 14 and 15, the following applicants out of a class of 14 passed as registered pharmacists:

C. H. Brockmeyer, Fremont; Chas. W. Davis, Normal; Howard F. Ealder, Newport; M. E. G. Glasgow, Glasgow; C. A. Passmore, Louisville; David S. Sesmer, Louisville; Morris D. Spoonamore, Louisville.

**Assistants**—Allen S. Birnbaum, Middlesboro; Sidney V. Wortham, Owensboro; Chas. H. Harrison, Louisville.

An unusual feature of the examination was the detection by the examiners of a marked similarity in the papers of two of the applicants. When these applicants were confronted with a comparison of their papers they acknowledged that one set had been copied from the other. Their examination was declared void and a denial of the privilege of re-examination for one year was imposed. The next examination will be held in Berea, October 13 and 14.

## Virginia.

**RICHMOND, Aug. 20.**—At the regular quarterly meeting of the Virginia Board of Pharmacy, held on July 21, there were 29 applicants for registered pharmacist's certificate. Of this number the following were successful:

R. L. Miller, Charlotte, N. C.; G. V. Durrer, Charlottesville; C. C. Fleshman, Richmond, L. W. Armentrout, Strasburg; C. L. Pedigo, Blacksburg; J. S. Patterson, Newport News; P. V. Chitty, Woodland, N. C.; T. H. Bryan, Norfolk; J. C. Hudgins, Norfolk; R. K. Hawkins, Tazewell, Brem Bonner, Hickory, N. C.; R. M. Hawthorne, Victoria.

Registered assistant's certificates were given to the following: R. B. Grom, Richmond; Abraham Caplan, Richmond; R. R. Mosby, Newport News; N. K. Shaner, Lynchburg; R. C. Morehead, Pulaski; F. B. Singletary, Lumberton, N. C.; C. A. Cleveland, Staunton.

Eleven applicants took the examination for registered assistant's certificate, and of this number the following were successful: W. R. Smith, Cape Charles; C. G. Jackson, Velma; C. B. Harloe, Winchester; F. B. Smith, Capon Bridge, W. Va.; E. W. Morrow, Richmond.

The following were registered by reciprocity: T. A. Finch, Dyersburg, Tenn.; Guy Miller, Barboursville, Va.; I. J. McGuffin, Bluefield, W. Va. The next examination will be held in Richmond on Oct. 20, and all applicants accompanied by fee of \$5 must be received 10 days prior to examination date.

## Wisconsin.

**MILWAUKEE, Aug. 20.**—At the meeting of the Wisconsin Board of Pharmacy, held in Madison, on July 14-17, the following were granted certificates:

**Registered Pharmacists**—Walter A. Ritter, Milwaukee; Henry W. Spearbraker, Clintonville; Einar O. B. Wang, Chippewa Falls; Charles E. Bacon, Stoughton; Isaac N. Lovejoy, Stoughton; Oscar A. Hoyer, Milwaukee; Rudolph C. Scheen, Kenosha; William H. Borchart, Marion; Louis Moersch, Milwaukee; John J. Kazmierowski, St. Francis; Joseph R. Culbertson, Madison; Milton G. Giese, Menomonie; Asa T. Marshall, Milwaukee; Sylvester H. Dretzka, Cudahy; Alvin A. Mahre, Amery; Alphonse J. Stintzi, Madison; Harrison H. Hannon, Green Bay; Carl J. Flusche, Milwaukee; Dale F. Ruedig, Milwaukee; Irvin J. Heymann, Milwaukee; James H. Forsyth, Sharon; Edwin F. Flintrop, Milwaukee; William H. Kropp, Milwaukee; Henry W. Hammersley, Lake Geneva; Sidney L. Scheldrup, Stoughton; Henry E. Wieand, Milwaukee; Frank T. Tobin, Milwaukee.

**Registered Assistant Pharmacists**—Harry O'Neill, Beloit; John T. Martin, Manitowoc; John P. Galvin, Mauston; Rex E. Mather, Superior; George W. Beck, Milwaukee; Felix J. Idziorek, Superior; Oscar A. Schraut, St. Louis; William E. Weber, Milwaukee; Leonard J. Draeger, Tigerton; Homer D. Kesten, Milwaukee;

Cuticura .....	.25	size 15c.

**T**HIS happens to be part of an advertisement in a Chicago Sunday paper.

In other Sunday and week-day papers in Chicago and other cities large and small throughout the country millions of people read the offers of large stores to sell them advertised products at cost or less.

JAMES W. MORRISSON

### WHY?

Have the large stores become philanthropists, and are they engaged in a nation-wide campaign to reduce the high cost of living at a heavy loss to themselves?

That theory does not exactly fit the fact that they are organized for, and do make large profits. And yet, they do undoubtedly sell these particular goods at a loss.

### AGAIN WHY

"These particular goods!"

There is the answer. The advertisement these were taken from covered two pages of close-set type. There were a good many advertised goods listed at low prices. But there

were hundreds of items that no purchaser would know the proper price of and in that store's stock there are many thousands more. These other hundreds and thousands when sold bring long profits.

"When sold!" Don't forget that. But they can't be sold unless purchasers can be brought to the store to buy them.

What will bring purchasers? Telling them of undoubted bargains, of chances to buy for 59 cents goods that ought to bring a dollar.

Of course the big store loses on the bargain. It can afford to if it sells enough of the long profit goods.

Try to get a mental picture of a purchaser determined to get as much bargain goods as possible and the big store determined to sell him—or more often her—as much long profit goods as possible, and you see the system. Picture to yourself the tempting display, the salespeople with special commissions, and the weakness of human nature, and you will see one of the reasons why the big store prospers.

We have been talking of Chicago and big stores, but it is all equally true of smaller places, and smaller stores—of any store where there are some standard priced goods, and many more that are not.

Now, what is the result? There are three answers to that. The result to the purchaser, to the manufacturer and to the retailer.

Let us admit, first of all, that if the purchaser is strong-minded and fortunate, that is if he gets his bargain and nothing else, the result to him may be economy. But that

the system enjoys these two gifts of the gods is best shown by the success of the system. The Supreme Court of Washington is quoted as having taken judicial notice of this fact in these words: "It is a fallacy to assume that the price-cutter pockets the loss. The public makes it up on other purchases."

And how can the public make it up on other purchases except by paying an excessive price for them, which tends neither to lower the high cost of living nor raise the level of commercial morality?

Now, how about the proprietor of one of these standard priced articles? What is the result to him? But first, what distinguishes a branded identified article from other merchandise of the same general class? The name, of course; and what is the name but the proprietor's way of saying to the public, "I believe that this article has merit. I assume responsibility for it." He usually goes farther and says to the public, "This article is worth \$1.00 or \$10.00," or some other amount.

Under this name he advertises it and creates a demand, which he must satisfy through the retail dealer. So he says to the dealer, "Here is an article of ready sale that will cost you \$8.00 per dozen and which you can sell at \$12.00 per dozen," and the retailer is content with his profit and buys the goods. But along comes a customer who says to him, "Why should I pay you a dollar for this when I can buy it of Big Store & Co. for 59 cents?" And by the time several more customers have asked him the same question and gone to the big store feeling that Mr. Retailer asks too much for his goods, he begins to lose interest in that particular article, and perhaps tries to sell something else in place of it.

Now, multiply our retailer by some thousands, and the proprietor of that article will notice a falling off in sales. He may be perfectly innocent of the cut price, may have objected strenuously to it, but he gets punished just the same. He feels that he has been injured—and he has. Also, if he put his price upon the article, and told the public it was worth \$1.00, and then some one sells it for 59 cents, he feels that his article is being discredited in the public mind—and it is. So the proprietor of the bargain article cannot see the value of the bargain.

And the retail dealer, what of him? Some of them can meet the big store on its own ground and live. But the average, and that means the medium-sized and small, cannot.

And that has led many intelligent men to fear that unless a way could be found to stop this system of merchandising, large numbers of retailers would be forced out of business. Everyone admits that that would be a calamity, and there has been widespread interest aroused in the proposed remedy. Now, the remedy must be some way of protecting the prices. And we all know something of the difficulties these plans for price protection have heretofore met with in the Supreme Court.

But the new remedy is not an individual plan, but a bill now in Congress, which will, if enacted into law, legalize the fixing and maintenance of resale prices on certain classes of goods and under certain conditions. As a matter of fact, there are several different bills, but the one that seems to have the right of way is the so-called Stevens bill, H.R. 13305.

This provides, among other things, that a vendor of an article sold under trade-mark or special brand, the proprietor of which has filed with the Bureau of Corporations his trade-mark or brand, and a schedule setting forth his uniform prices to wholesaler, retailer and the public, and has affixed to the article his price to the public, and has no monopoly or control of the market of articles in this general class, and no agreement or understanding as to price of such articles with any

\*From a recent issue of "The Pink Sheet," the organ of Morrison, Plummer & Co., Chicago.

competitor may lawfully prescribe the sole uniform price at which such article may be resold, and that from this uniform price there shall be no concessions either by rebate, discount or any other device whatever.

Now, it seems, on the face of it, a radical departure from the established theory that this is a land of free competition, and that only strictly sincere people have seen in this proposal the beginnings of oppressive monopoly. They will tell you that if you allow a man to fix a price, he will fix it too high, and thus rob the consumer. But they forget two things. First, that the consumer does not have to buy these articles, and second that if the manufacturer fixes his price too high, which means that he gets an excessive profit, some other manufacturer will put on the market a competing article at a lower price and get the business.

The only monopoly in the average trade-marked, or otherwise identified article, is the monopoly of the public goodwill, and there is and always will be competition among advertised articles for that. As a matter of fact, the purpose of this bill is the prevention of monopoly—the prevention of the kind of monopoly that is brought about by the big and powerful organizations when by price-cutting and other unfair competition they drive out of business their smaller competitors.

Some sort of competition is undoubtedly an economic necessity, but this unbridled and tyrannical competition is destructive of equality of opportunity, the servant of monopoly, and an economic evil.

Congress naturally proceeds slowly in matters of this sort. One of its committees has been holding extended hearings upon this subject. The bureau of corporations is conducting an elaborate investigation to determine the effect of such legislation upon the public and upon the various branches of the trade interested. It is quite probable that it will be some time before a bill of this sort will pass. There is still time to tell your Representatives and Senators that you want it to pass.

The Fair Trade League and many organizations of manufacturers, wholesalers and retailers, in addition to very many individuals, have urged upon Congress the righteousness of such legislation. The National Association of Retail Druggists has been one of the leaders in this movement, and through its officers and its journal has done most effective work for the cause. We urge every man who is in doubt upon this subject to get in touch with that organization and have his doubts dispelled, and we urge every man who is informed upon the subject, and in favor of such legislation, to write at once to his Senators and Representatives asking their support for the Stevens bill, H. R. 13305.

#### Change in Price of Creme Elcaya.

James C. Crane, sole agent for the Elcaya Toilet Preparations, 108 Fulton street, New York, announces a change in price of Creme Elcaya from \$4 per dozen to \$4.50 per dozen, the same to become effective on September 1. Mr Crane states that the raw materials essential to the manufacture of this well-known specialty are imported from Europe and are not made in this country. The effect of the war is already felt in the increased cost of raw materials and great difficulty is experienced in getting a sufficient supply for the immediate future.

#### Biological Products to Stranded Americans.

In line with its established policy of supplying diphtheria antitoxin and other biological products for the treatment of contagious diseases when the local authorities have no appropriation for the purpose, the H. K. Mulford Co. soon after the declaration of hostilities cabled its London office to supply such products of its manufacture free of charge to the Americans delayed in London and to whom sickness might work a hardship.

#### Behrens Drug Co.'s Trade List Changes.

The Behrens Drug Co., Waco, Texas, has issued a new wholesale price list, effective Sept. 1, in which quotations are given for the following specialties: Mrs. McCormick's Beauty Cream, 50-cent size, \$45 per gross; 25-cent size (advanced), \$24 per gross; Oxidine (regular or tasteless), \$45 per gross. The company also announces the withdrawal of the offer of free goods with orders.

## LEGAL DECISIONS

### Trade-Names — Unlawful Competition — Distinctive Dress-Color.

A chewing gum company manufactured and sold gum cut in disks called "Violet Chips" and "Mint Chips," put up in enameled round tin boxes, the violet in violet boxes and the mint in green. The lettering on both was in white in white with the words "Colgan's Violet Chips—The Gum That's Round." It was put up in pasteboard cartons colored to correspond with the boxes, the cartons being marked with the same lettering as the boxes. The gum was largely sold in the South and Southwest. In 1912 another gum company began to put out a round gum called "Winterton's Satsuma Chips," and adopted a box of the precise shape, size and form of that used by the makers of Colgan's chips. It used a light blue and red color, respectively, and the words "Winterton's Satsuma Chips—A Dainty Box for the Purse," were in the same positions on the box as in the case of the Colgan chips. This gum was sold in competition with the Colgan gum at a less price to the retailer, and after objection was made by the makers of that gum, and shortly before they brought suit, the name of the new gum was changed from "Chips" to "Wafers," and different colors were adopted for the boxes and cartons, which were otherwise practically the same. The makers of the Colgan gum brought suit for unfair competition. It was therein held that the defendant was guilty of unlawful competition in the dress of the gum considering the prior trade, and that the complainant was entitled to an injunction restraining the defendant from using boxes or containers which might be of sufficient similarity to mislead the ordinary purchaser.

While the word "Chips" as applied to disks of chewing gum is a descriptive word which may not be exclusively appropriated by a manufacturer, yet, having been appropriated, a competitor may not use the word as describing its goods in connection with other words, and such a form of dress as will mislead the public to believe that its chips are the complainant's product. While color, in trade-mark cases, cannot, except in connection with some definite, arbitrary design, be the subject of exclusive appropriation, it may be one of the elements making up a dress entitled to protection against unlawful competition. In order to obtain relief against unlawful competition, it is not necessary that the imitation be such as to mislead the careful and discriminating purchaser; it is enough if it is calculated to mislead the ordinary and casual buyer. While a manufacturer is not responsible for the fraud of a retailer of his goods, the former is guilty of unlawful competition if he so dresses his goods as to represent the goods of another and assists the retailer in palming off his goods as those of the competitor. Decree awarding injunction and account was affirmed. (H. E. Winterton Gum Co. v. Autosales Gum & Chocolate Co., C. C. A., 211 Fed. 612.)

### Unlawful Sale of Cocaine—Sufficiency of Evidence.

In proceedings for unlawfully selling cocaine, the evidence of five female witnesses that they were habitual users of the drug and were familiar with its effects, and also that they had bought the drug from the defendant within two years preceding the time when the accusation was preferred against her was held to be sufficient to sustain a conviction, although it did not appear that any of them had any chemical knowledge of cocaine. There is no hard and fast rule requiring that the nature of a substance should be proved by analysis, and not otherwise. (Butler v. State, Georgia Court of Appeals, 81 S. E., 370.)

### Alteration of Order by Verbal Agreement.

An order for the purchase of stock medicine provided that the amount of goods shipped should be \$1000, and the "amount of free goods shipped to pay freight, \$270." It also provided that verbal or special agreements affecting the payment of the bill as stated should not be allowed. In an action for the balance due, the purchasers alleged that the goods were sold on condition that the seller's salesman should return and work up the trade. It was held that the order was complete in its terms and could not be varied by parol evidence of such an agreement. A mere statement by the seller, in response to the purchaser's request that additional free goods to make a 25 per cent. profit be furnished, and a man be sent to the pur-

chaser's territory to work up a trade, to the effect that the additional free goods would be sent, followed by a request, "accept shipment. Writing salesman to call upon you." was not an agreement to furnish a salesman to work up the trade for the purchaser. (*Capital Food Co. v. Mode & Clayton*, Arkansas Supreme Court, 105 S.W. 637.)

#### Meaning of Words Used on Labels—Adulteration and Misbranding.

The Circuit Court of Appeals, Fourth Circuit, holds that pure food laws are intended to protect the public whose members may be, and usually are, ignorant of the technical significance which ordinary words may have acquired in particular trades or industries. It adopts as the true rule of construction to be applied to pure food statutes, whether State or Federal, that stated by the Supreme Court of Michigan, that decisions construing revenue acts "do not apply to cases arising under the pure food laws of State governments. Courts will take cognizance of the well-known fact that farmers, laboring men, and consumers are not generally familiar with the customs of trade and commerce in importing goods, or of the understandings of the trade between manufacturers and merchants who buy these products for retail trade. Such construction would emasculate the pure food law, and deprive the people of the protection, which the Legislature wisely intended to give them."

Section 8 of the Federal Food and Drugs Act, which provides that mixtures or compounds known as articles of food under their own distinctive names shall not be deemed adulterated or misbranded when sold under such name, does not, it is held, apply to a case where the name used in its popular meaning is accurately descriptive of another well-known food product. A food product sold under the name of "Condensed Skimmed Milk" was held to be adulterated and misbranded, where it contained 42 per cent. of cane sugar, the presence of which was not indicated on the label; it being shown that condensed skimmed milk unsweetened is also made and sold. (*Libby, McNeill & Libby, v. U.S., C.C.A.*, 210 Fed. 148.)

#### Sale of Intoxicating Liquors—Attestation of Permits.

A druggist, carrying on business in a town in Iowa, in making sales of liquors under permits, omitted to attest two of them, as required by Iowa Code, §2394. In proceedings for violation of the statute it was held that, although there was no bad faith in the omission, the statute had been violated. An active duty is required of the permit holder in each case, and it must be performed in fact before he can lawfully make the sale. (*McAllister vs. Campbell*, Iowa Supreme Court, 145 N.W. 867.)

#### Action For Price—Misbranded Drugs—Agreement to Advertise.

Action was brought for the purchase price of a quantity of patent medicine called "Nott's Melon Seed Kidney Cure." The defences were that the plaintiff had broken its contract in regard to advertising agreed therein to be done, and also that the goods were misbranded. The trial court instructed the jury that the only question which they could consider was whether the drugs in question were misbranded. It was held, on appeal, that this was error, because it appeared that the plaintiff was not able to carry out the advertising part of the contract as it had agreed, and this evidence should have been submitted to the jury. In regard to the alleged misbranding, it appeared that the defendant was prosecuted by the State for having this misbranded article in its store, and that it was fined \$10, and required to pay the costs of the prosecution. It was therefore held that the plaintiff should be required to take back the goods and credit the defendant with the price thereof, in accordance with the terms of the contract of sale. (*Hessig-Ellis Drug Co. vs. Harley Drug Co.* Nebraska Supreme Court, 146 S.W. 716.)

#### Druggists—Sale of Patent Medicines—Liability for Purity.

A druggist who holds himself out as the actual manufacturer of a patent medicine put up by a wholesaler with the retailer's name on the package is held not entitled in *Wilson vs. Faxon*, 47 L.R.A. (N.S.) 693, to the benefit of an exception in a statute making druggists responsible for the quality of medicine sold by them, except those sold in original packages of the manufacturer, and those articles known as patent or proprietary medicines.

#### Gasoline Explosion—Proximate Cause.

An action was brought against the owner of a drug store for injuries to the plaintiff's automobile, caused in the following manner: The plaintiff's son drove the automobile to the defendant's drug store to have it filled with gasoline. After stopping the machine in front of the store and ordering the gasoline, he turned down the light of a lamp attached to the rear of the automobile about 20 inches under the cap of the tank into which the gasoline was poured, and walked away to talk to some boys. The side of the lamp next to the defendant's store was of metal, so that the light did not show in that direction. The defendant's clerk brought out a five-gallon gasoline can, and, without noticing that the light was burning, placed a funnel in the mouth of the tank, and lifted the can to pour in gasoline, when some of the gasoline ran down, causing an explosion. There was no proof whether the cap on the tank was originally removed by the plaintiff's son or by the defendant's clerk. It was held that the plaintiff's son was negligent in merely lowering the light and removing the tank cap and walking away without explaining to the defendant's clerk that the tank was not ready to be filled. The negligence was a proximate cause of the explosion. Even if the defendant's clerk had been negligent, the plaintiff could not recover, under the rule that where the plaintiff and the defendant are guilty of acts of negligence which together constitute the proximate cause of the injury, then the negligence of the plaintiff, however slight, bars a recovery. (*Grigsby & Co. vs. Bratton*, Tennessee Supreme Court, 163 S.W. 804.)

#### Pills and Tablets Under the Boylan Law.

Warren L. Bradt, secretary of the New York Board of Pharmacy, recently asked for a ruling by the Attorney-General on Section 245 of the Boylan law in its application to the points raised by the following question:

There are many preparations in pill and tablet form that contain small amounts of some of the above-named drugs and are sold and dispensed by the dozen and hundred and not by weight.

In each of these pills and tablets the dose of the drugs is not more than would be in a dose of a liquid or solid preparation as permitted in the above quoted section.

Will you advise me if "one avoirdupois ounce" applies to pills and tablets and if not, can they be sold without a physician's prescription?

The Attorney-General gives the following opinion:

"I reply to your letter of July 22nd, wherein you ask my construction of the Boylan law in that part of Section 245 which reads as follows:

"\* \* \* \* \* Provided that the provisions of this article shall not apply to the sale of domestic and proprietary remedies, actually sold in good faith as medicines and not for the purpose of evading the provisions of this article and provided further that such remedies and preparations do not contain more than two grains of opium, or one-fourth grain of morphine or one-fourth grain of heroin or one grain of codeine, or ten grains of chloral or their salts in one fluid ounce, or if a solid preparation, in one avoirdupois ounce, nor to plasters, liniments and ointments for external use only.

"Proprietary and domestic medicines are, therefore, classed as either fluid or solid, and such medicines in the form of pills and tablets would, in my opinion, be in solid form, regardless of the method of sale, whether by weight or by count. They may without a prescription be sold by weight, by the box or dozen unless one avoirdupois ounce of them would contain more than the above specified quantity of either of the drugs."

(Signed) THOMAS CARMODY,  
Attorney-General.  
By JAMES A. PARSONS,  
Deputy.

**Pharmacy Law Violated in Illinois.**—R. G. Rosenstone, a registered pharmacist in Sandwich, Ill., was fined \$75 and costs by the State Board of Pharmacy for permitting an unregistered clerk to sell drugs during his absence from the store; Roy Seymour, of Dwight, was fined \$50 and costs for selling drugs without being registered.

## FROM THE BUSINESS FIELD.

The case of Humiston, Keeling & Co., Chicago, against Catherine A. Yore, George C. Bridgman and John A. Hinman, all of the latter being plaintiffs, was recently heard in the Supreme Court of Kentucky and judgment was granted by Judge Perkins, of Kent county, in favor of the defendants. The case now goes back to the circuit court to be tried on its merits. John A. Hinman, several years ago was the owner of the Yore block pharmacy, owned by the late Mrs. Yore, and sold the business to Catherine A. Yore and her son, George Humiston, Keeling & Co. about 5000 retail packages. A few days later Mrs. Yore sold the store to George C. Bridgman. The wholesale druggists sued to collect the amount and made Mrs. Yore and Mr. Bridgman co-defendants with the former owner. A demurrer was entered by the latter on the ground that there was no liability.

**The Physicians and Dentists' Corporation of America** has a new laboratory on Croton avenue, New Castle, Pa., which is engaged in filling orders. E. E. Craft is general manager. All goods are sold direct to physicians and dentists. The general offices of the company are located in Cleveland, Ohio, and the company took over the property of the United Physicians Supply Co., in Cleveland, and have since spent about \$100,000 in improvements, making it, it is reported, the first of a new class of distributing stores. Branches are planned for Pittsburgh, Rochester, Indianapolis, Chicago, Cincinnati, Denver and San Francisco. The company owns the factory known as the Seiber Welch Co., at Massillon, Ohio.

**Saenger Bros.' drug store**, Shreveport, La., was invaded by a frightened horse one evening recently, the animal dashing through the front door. It slipped and fell on the smooth tile floor. Frank Allen, a soda dispenser, was equal to the occasion, and by sitting on its head prevented it from running through the salesroom and into the prescription department. The store was filled with an after-theater crowd, consisting mostly of women and children. There was a wild stampede for the rear of the store. One woman was painfully but not seriously cut on the arms by a piece of broken glass.

**George P. Warner and Isabella Bess Warner** have filed a bill in equity in the Superior Court at Salem, Mass., seeking to prevent J. Maro Harriman from disposing of any stock in the Harriman Drug Co., of Lynn, until after more than \$2000 has been paid them. Besides Harriman, George B. Durgin, of Beverly, is named as a defendant. This action was taken as the result of a legal and financial tangle of some years' standing. The bill was brought to reach and apply Harriman's interest in the 25000 drug store stock as may be determined in the claim.

**The Spurlock-Neal Co.**, wholesale druggists, Nashville, Tenn., recently gave a luncheon to its office force and field staff. The affair was in celebration of the opening of the new addition to the company's store on Second avenue. Among those who responded to toasts were Charles Marlin, general manager; E. A. Gilliland, sales manager; Smith Tenison, assistant manager; Frank Smith, manager of the laboratory; C. D. Campbell, manager of the sundry department, and E. P. Gilbert, representing the salesmen.

**The Fitchburg (Mass.) Drug Co.'s pharmacy** at Main and Oliver streets, including the stock in trade and good-will of Harry M. Brooks, was recently sold to Clinton B. Davis, of Springfield, and George G. Tyler, of North Adams. The new proprietors took possession at once. Mr. Brooks was regarded as one of the most popular druggists in Worcester county and was known as a progressive, and up-to-date business man. He had been in business in this city about eight years.

**George H. Bartell**, proprietor of six drug stores, Seattle, Wash., recently invited the ladies of the city to be his guests at a local theater. The invitation was extended in celebration of the 25th anniversary of Mr. Bartell's establishment in the drug business in that city. Mr. Bartell came to Seattle from Kansas, opening his first store before reaching the age of 20. He now has a store convenient to every shopping district in Seattle and advertises by the page in the local papers.

**Husband's pharmacy**, is one of five Modesto, Cal., firms styling themselves the "Stork Merchants." They have a scheme for giving each baby born to a customer a saving account, the baby being registered at the store and five cents in script

being presented with each dollar spent in purchases. The script is deposited in the baby's name in a local bank and draws four per cent. interest. The accounts are to stand until the child reaches the age of 15 years.

**The Geer Drug Co.**, wholesale and manufacturing druggists, of Charleston, S. C., will establish a branch house at Columbia. A modern brick warehouse will be built and the branch will carry a stock valued at about \$120,000. North Carolina and Georgia, in addition to South Carolina territory, will be covered from this point. The Geer Drug Co. has been established in Charleston for about 17 years and the company has a branch at Spartanburg.

**Jacob S. Kaufman**, of Hartford, Conn., is not entitled to discharge from bankruptcy is the report of the referee filed recently. That official found that Kaufman has been the beneficial owner of the fixtures, stock on hand, accounts receivable and good-will, from May 8, 1906, to the present time. Kaufman and his wife had executed a release of their interest to other parties and a creditor objected to the druggist's application for discharge.

**The Square Drug Co.**, Market Square, Knoxville, Tenn., recently opened to the public, following an extensive remodeling of its store. About 4000 were in attendance at the opening. The store was decorated for the occasion with palms, Japanese parasols, flowers and artificial decorations. In escorting visitors through the establishment, physicians were shown special attention, demonstrations for their benefit being made in the prescription department.

**Roy True**, sanitary officer at Council Bluffs, Iowa, has sold his drug store at 2819 West Broadway, that city, his duties as city official taking too much of his time to allow him to retain the store. The store was purchased by John Vitamvos, formerly employed at the Clark drug store, and Herman Kundle, Jr., who has been with the True company since its establishment. The store will now be known as the Eagle drug store.

**J. A. Bengston**, of Rock Island, Ill., a nephew of John Bengston, the veteran druggist of that city, will open "The Twentieth Century Pharmacy" in the Sherman house building at the corner of 17th street and Third avenue. J. A. Bengston is a former superintendent of the city schools in Altoona and Maranetta, and is a graduate of Northwestern University, where he attended the school of pharmacy.

**Vincent M. Flood**, druggist of Dewey avenue, Rochester, N. Y., has been sent into bankruptcy by three of his creditors, who filed an involuntary petition against him, alleging that he had committed an act of bankruptcy in that he had preferred another creditor by giving him a chattel mortgage on his stock and fixtures and other property. The case has been sent before a referee for settlement.

**E. W. Eaton** recently held a formal opening at his drug store at 1 State street, Newburyport, Mass., following the enlarging and remodelling of the establishment. The fountain was placed in charge of the ladies of Anti-Tuberculosis Society from 9 a. m. to 9 p. m., all receipts being turned over to the cause. During the evening hours an orchestra played and souvenirs were given out.

**The H. K. Mulford Co.**, Philadelphia, has established a branch in London. H. Hilson Whyte, sales manager for the company, recently returned from England after getting the branch in full swing. He found that the British are rapidly adopting American ways of doing business, one being that salesmen in the big shops are no longer fined when they fail to make a sale.

**The G. Armstrong Company** opened the first drug store in a railroad terminal in New England in the North station, Boston, Mass. The new store represents an investment of approximately \$35,000 and is one of the finest and most up-to-date in New England. It is managed by W. A. Brown. A registered lady drug clerk is a member of the organization.

**Shelley Stemen and Chester Hall**, of Columbia City, Ind., and who are connected with Meier & Keiser, retail druggists, have contracted with Dr. John Richards, of Loud, Jefferson township, for the sole right to manufacture and distribute his entire patented line of formulas. Dr. Richards is one of the oldest practitioners in the county.

**J. C. Johnson**, known to the residents of McAlester, Okla., as "Johnnie" for short, recently announced that he would open a drug store on Sept. 1 at the corner of Third and

Choctaw avenue. His store will be called the Johnson pharmacy. He is one of the pioneer drug men of the city, having settled in McAlester nearly 25 years ago.

**Morrison & Armstrong**, Pontiac, Ill., have disposed of their drug and jewelry store to Edward Biasi, formerly with Weis & Theodore, at Sreator. Mr. Morrison is actively engaged with the Pontiac Motor Car Company and Mr. Armstrong may spend some time with Mr. Biasi in the store.

**George W. Weiss** has opened an attractive store in the Nertney building, Madison street, Ottawa, Ill. Mr. Weiss designed the fixtures himself. Mr. Weiss has been in the drug business for 17 years or more. He recently disposed of his interest in the Weiss & Theodore drug store in Sreator.

**The DeMotive Drug Co.**, Church street and Fourth avenue, Nashville, Tenn., has had one of the walls of its building condemned. The building is one of the oldest in the city and was erected before the Civil War. The drug company has occupied it practically since its erection.

**Lanier Robb**, of Heyworth, Ill., is now conducting the drug business operated for more than 25 years by his father, the late Hugh Robb, who died in March last. Mr. Robb, Sr., was prominent in church and lodge work and was one of the substantial business men of his community.

**August Knoeller**, druggist at DePere, Wis., has remodeled his building in several respects. Various changes have been made in the store and several improvements have been made on the second floor, which has been remodeled into living quarters for Mr. Knoeller and his wife.

**Bossmann & Pluck**, druggists at Horicon, Wis., have dissolved partnership. L. A. Bossmann has purchased the interests of T. A. Pluck and will now conduct the business under his own name. It is understood that Mr. Pluck will travel in the interests of a furniture concern.

**Public Drug Store, No. 2**, was recently opened by Dietz & Wright at San Joaquin street and Weber avenue, Stockton, Cal. It is one of the finest in the city. A beautiful soda fountain, at which free soda was served on the opening day, is a feature.

**Claude Herndon** will open a modern drug store at the corner of Elm and Gaston streets, Greensboro, N.C. Mr. Herndon aims to make his store one of the most attractive in the State and the store room is now undergoing extensive renovation.

**W. O. Kleinheinz** has opened a new pharmacy at 714 South Park street, Madison, Wis. New fixtures and a new soda fountain have been installed. Mr. Kleinheinz graduated in 1911 from the school of pharmacy of the University of Wisconsin.

**The Pettit-Stewart Drug Co.**, of Attalla, Ala., has been incorporated with \$5000 capital to do a general wholesale and retail business in drugs. E. D. Pettit is president; C. E. Stewart, vice-president, and J. W. Stewart, secretary-treasurer.

**E. F. Hoffset's** drug store, Estelline, S. D., was recently entered by burglars who got away with jewelry and goods to the value of \$1500. Entrance was effected through a coal chute, and it is thought that the work was done by two hoboes.

**The L. K. Preston Drug Co.'s** store, Beaumont, Texas, will be sold at auction, according to a recent report. This decision was arrived at following the election of G. R. Noguera, trustee of the defunct company, as receiver.

**Shumate's Pharmacy, Inc.**, has leased the corner store in the new Physicians' building, northwest corner Sutter and Powell streets, San Francisco, Cal. The lease is for a period of 10 years and involves total rental of about \$40,000.

**The Owl drug store**, at its recent opening in Roseburg, Ore., served free soda water. Manager Karr, of the new store, a graduate of Northwestern University School of Pharmacy, has had 23 years' experience in the drug business.

**The Gwynn-Burns Drug Co.**, Tallahassee, Fla., has purchased the entire stock and fixtures of the Tallahassee Drug Co., and will for a time at least conduct the latter company's store at College avenue and Monroe street.

**The United Drug Company**, through local brokers, has leased the Broadway store adjoining Liggetts, in the Hotel McAlpin, Broadway and 34th street. The store is 27 feet wide and held for rent at \$18,000 per year.

**The D. B. Spagnoli** drug store at Jackson, Cal., has been sold to William J. Peters, who has been in charge of the prescription department for some years. The store has been in existence since the "early" days.

**The Bronson Drug Co.** and the Cousins Drug Co., of Bronson, Texas, have consolidated and will occupy the Hodgson building. G. D. Hodgson being one of the heaviest stockholders in the merger.

**Joseph O'Hearn**, the Hannibal, Ill., druggist, has installed a photographic developing and printing department over his drug store and has engaged a professional photographer to look after this feature.

**The American Stores Products Co.** is a new Delaware corporation to own and operate drug stores. It is capitalized at \$2,000,000 with M. Sweeney, E. R. Devine and E. R. Cochran, Jr., as incorporators.

**The National Sales & Supply Co.** has been incorporated with \$500,000 capital, to deal in chemicals and druggists' supplies, by F. E. Karlsen, Jr., B. Schaffer and W. S. Gordon, New York City.

**Cailler & Co.**, the New York essential oil house, has had a petition in bankruptcy filed against it, following an assignment. The liabilities are estimated at \$50,000 and the assets about \$35,000.

**The Union Wholesale Drug Co.**, of Boston, has been incorporated with \$40,000 capital, by C. A. Stover, of Cambridge; F. A. Epstein, of Boston, and A. H. Ackerman, of Boston.

**Brewer & Co.**, wholesale druggists, Fall River, Mass., are having plans made for a warehouse to be erected on Pearce street, at the north end. It will be three- or four-story brick.

**Charles L. Gimbel**, for some time manager of the Hansen drug store, No. 3, at 2046 West Third street, Davenport, Iowa, has purchased the establishment and will continue the business.

**John Belles**, a well-known druggist of Cocington, has purchased the Geo. D. Cook drug store, South Washington street, Crawfordsville, Ind., and will conduct the two stores.

**The Lewis Bear Driving Co.** is a new Wilmington, Del., corporation with \$500,000 capital which will purchase drugs and chemicals and manufacture medicines of all kinds.

**The Meyer Brothers** drug stores, Fort Wayne, Ind., recently celebrated the 62d anniversary of the founding of the business. A week of special sales marked the event.

**The Riker-Hegeman Co.** has leased a large space in the Smith, Gray & Co. building, Fulton street and Flatbush avenue, Brooklyn. The building is being altered.

**The Feind & Hain Drug Co.**, of Newark, has been incorporated with \$150,000 capital, by F. W. A. Hain, F. L. Feind, M. J. Hain and M. E. Feind.

**C. F. Dirickson**, pharmacist at 319 Granby street, Norfolk, Va., recently filed a petition in voluntary bankruptcy. He gave his liabilities as \$2315; assets \$4385.

**Carl Hintz**, Milwaukee druggist, has been given authority to establish a postal station in his store, 841 First avenue, to be known as No. 70.

**John Wyeth & Bro.**, Philadelphia, have opened a New York office at 449 West 42d street, with Charles Howard as their representative.

**The Walding, Kinnan & Marvin Co.**, wholesale druggists of Toledo, Ohio, has increased its capital stock from \$100,000 to \$250,000.

**The Fink Theater pharmacy**, Springfield, Mo., has been sold to A. C. Fisher, formerly of Bolivar. The consideration was \$4650.

**Haggard & Falkenhainer**, the Algona, Iowa, druggists, have traded their drug store for a 240-acre farm to O. G. Jones, of Cresco.

**A. C. Liepe**, of Milwaukee, has awarded contracts for erecting a substantial addition to his drug store at 1412 Green Bay avenue.

**Walter Cole**, who has clerked for three years at Fernald's drug store, Rumford, Me., recently purchased a store at Freeport.

**The Riker-Jaynes Co.**, Boston, has opened a store at 447 Washington street, that city.

## DRUG LAWS AND RULINGS

**New Amendment to Harrison Bill.**—Senator Pomerene, of Ohio, has introduced an amending clause to line 6, page 3, of the Harrison anti-narcotic bill as it now stands in the Senate, the amendment being as follows: "Provided further, That this act shall not apply to physicians and surgeons regularly licensed to practice their profession in the State, Territory or District where they reside, who may prescribe, dispense or administer said drugs in good faith; nor to nurses or attendants who may dispense or administer in like good faith said drugs under the direction of a physician or surgeon regularly licensed and given in good faith as aforesaid."

**Anti-Narcotic Bill Beaten in Louisiana.**—The Samuel bill in the Louisiana House providing for the regulation of the sale of chloral, cocaine, opium or any of its salts, alkaloids or derivatives has been killed. This bill was opposed by both druggists and physicians on the ground that it would work an unnecessary hardship on them. The first draft provided that no pharmacist, druggist or other person should sell, have or offer for sale or give away any chloral, cocaine, opium, or any of its salts, alkaloids or derivatives, or any compound or preparation of any of them except upon the written prescription of a duly licensed physician, veterinarian or dentist. An exception was made in the case of domestic or proprietary medicines actually sold in good faith as medicines and not for the purpose of evading the act. The bill further provided that physicians should make a physical examination before prescribing such drugs, and that doctors should keep a duplicate record of all such prescriptions. The druggist would be required to verify such prescriptions by telephone or otherwise before filling them. The author of the bill announced that he would continue to fight for its passage.

**Starts Fight on "Refill" Druggists.**—A Chicago court has fined a Chicago druggist \$50 for practicing substitution in the matter of filling two prescriptions. A servant was sent to have a bottle refilled at a certain drug store where the original prescription had been filled; the servant took the bottle to another drug store, where the druggist filled it with what he supposed the bottle had contained. The Board of Pharmacy sought to have the maximum fine imposed, but the court gave the offending druggist the minimum.

**Kentucky Pharmacy Board Upheld by Court.**—The Kentucky State Board of Pharmacy has been upheld in its right to make its own rules relative to the granting of certificates of registration to applicants, the court refusing a writ of mandamus against the board asked by C. C. King. King applied for a license to practice pharmacy in December, 1911, producing a license from the State of Georgia. He asked the board to grant him a reciprocal license under authority conferred on the board by an act of the Legislature of 1910. The license was refused King and subsequent thereto the board adopted a resolution that no applicant from a foreign State would be granted a reciprocal registration in Kentucky unless he had practiced his profession in the foreign State for a period of not less than one year. It was admitted by the board that the resolution was adopted to cover the King case and the court holds that the board acted within its province in adopting the resolution. Relative to the action of the board in adopting the resolution the court said: "If it were not for this regulation a resident in the State of Kentucky might, after having failed upon an examination before the board to obtain a certificate, go to another State and obtain a certificate and return immediately to the State of Kentucky and by reason of the act of the Legislature herein quoted, as a matter of right have issued to him a certificate by said board. The injustice of this course and the absolute necessity of this regulation seems so apparent that the court is of the opinion that the mandamus should not be granted, and so holds." King obtained a certificate from the Georgia State Board of Pharmacy Nov. 10, 1911, and applied to the Kentucky Board for a reciprocal registration within a period of 30 days.

**Clerk Fined for Not Answering Demands of Court.**  
Legal punishment for too strict attention to a plain legal duty was the rather hard fate which recently befell Harry F. Decker, prescription clerk in Lakamp & Sentker's drug store in Cincinnati. Decker was subpoenaed in the Common Pleas Court

as a witness in the \$15,000 damage suit of George A. McGahan against the Cincinnati Traction Co., but was not served until the morning of the trial, when his immediate presence was required. At the time the subpoena was served it happened that Decker was the only prescription clerk in the store, and had a number of prescriptions on hand to be filled immediately. The deputy sheriff reported this fact back to the court, with Decker's consequent refusal to come, and the court ordered an attachment issued, which was served by another deputy. Even then Decker refused to appear until he had finished filling several prescriptions which, as he pointed out, might mean life or death to the persons for whom they were prepared, and then went to the court house with the deputy.

The court refused to accept the explanation which Decker gave, on the ground that the prescriptions might have been taken to other drug stores, and fined him the costs of the attachment. Harry J. Sentker, one of the proprietors of the store, relieved Decker in the meantime, and the latter was therefore free to answer the demands of the court. The action of the court, in view of the statutory requirement that a licensed pharmacist be kept in a drug store at all hours, has caused considerable discussion among local druggists.

### DRUG ADULTERATORS RECEIVE FINES.

**Products Bearing U.S.P. Names Fall Below Official Standards—Salicylate Tablets Not Per Label.**

WASHINGTON, Aug. 20.—The Department of Agriculture has given public notice of judgments 2880 to 2985, imposed by the courts in cases brought by the United States involving violation of the Food and Drugs Act, most of them relating to misbranding or adulteration.

A fine of \$20 and costs was imposed upon John T. Milliken, doing business as John T. Milliken & Co., St. Louis, Mo., for shipping in interstate traffic a quantity of so-called "Ammonium Salicylate Compound Tablets," which were adulterated and misbranded. The tablets were labeled: "500 compressed tablets No. 23, Ammonium salicylate comp. Each tablet represents phenacetine 1 gr. Salicine, 1½ grs. Ammonium salicylate 3 grs. Caffeine ½ gr. Dose, 1 to 2 tablets. . . ." Product fell below the approved standard under which it was sold.

A fine of \$10 and costs was imposed upon the Brunswick Drug Co., Los Angeles, Cal., for shipping a quantity of oil of lavender flowers which was adulterated and misbranded. Product was labeled: "Oil of Lavender (Oil Lavender Flowers) . . ." but differed from the U.S.P. standard. The real standard of strength, quality and purity of product was not stated on the bottle in which it was offered for sale.

George J. Fox, trading as the Carolina Pine Products Co., Cleveland, Ohio, was fined \$25 and costs for shipping in interstate traffic a quantity of turpentine, which was adulterated and misbranded. Product was labeled with the word "turpentine," but differed from the U.S.P. standard.

A fine of \$25 was imposed upon James B. Horner, New York, for shipping a quantity of oil of juniper berries which was adulterated. Product was labeled: "Oil Juniper Berries twice rectified, James B. Horner, New York." Product was made and sold under a U.S.P. title, but differed from the standard laid down in the U.S.P.

The Brunswick Drug Co., of Los Angeles, was fined \$10 and costs for shipping a quantity of oil of red thyme which was adulterated in that it was labeled "Oil of Origanum (Oil of Thyme Red) . . ." but differed from the U.S.P. standard.

A fine of \$25 and costs was imposed upon the Ohio Spice & Extract Co., Toledo, Ohio, which shipped a quantity of adulterated and misbranded mace. Product was labeled "Guthrie's Best Mace," but consisted wholly or in part of Bombay or false mace, which had been substituted for the genuine article.

A fine of \$25 was imposed upon Charles J. Heineman and Albert T. Evans, co-partners, trading as the Baltimore Drug Co., Baltimore, Md., for shipping in interstate commerce a quantity of spirits of niter which was adulterated and misbranded. Product was labeled: "Golden Horse Shoe Brand. . . . Trade Mark . . . Spirit Nitre Alcohol 92 per cent. Ethyl Nitrite 18 min. Manufactured for The Four Co., Norfolk, Va. . . ." Adulteration of the product was alleged in the information for the reason that its strength fell below the professed standard under which it was sold. It contained but 9.1 minims of ethyl nitrite per fluid ounce. Statement on carton false and misleading. Defendants entered pleas of guilty.

PATENTS AND TRADE MARKS

**FUNNEL.**

**T**HIS funnel, the invention of Cuthbert Gentle, Dorchester, Mass., assignor to Thomas H. Bowdidge, Boston, Mass. (Patent No. 1,104,354), is the combination with a fluid container of a spout composed

1,104,354.

of a short inner tube section and a long outer tube section rigidly secured together, the upper end of the long tube section fitting around and spaced from the short tube section and having slots extending below the end of the inner tube section which is normally closed by a valve, said valve having arms extending out through slots in the outer tube section and normally spaced below the end of the inner tube section, the latter serving as a stop to limit the upward movement of the arms for opening the valve. Longitudinal air vents in the outer tube also serve as guides for the arms opening the valve.

**Illuminating Device.**

George T. Fielding, New York, N.Y., has invented an illuminating device (Patent No. 1,105,414), a reproduction of which is shown in the accompanying engraving. It consists of a vessel of diaphanous material filled with a cloudy liquid, a series of lights adapted to be intermittently burned and arranged in the rear of the vessel, differently colored media between the lights and the rear of the vessel, whereby the refraction of the rays of light emanating from the lights is retarded by the cloudy particles in the fluid, and the said cloudy fluid appears in rapid succession in the various colors produced by the blending of the colors of the media. The

1,105,414.

1,106,609.

liquid in the vessel is rendered cloudy by the addition of a substance tending to retard the refraction of light, the light being produced by a series of incandescent electric lamps having differently colored bulbs and which are adapted to be intermittently burned to produce irregular flashing. The rays

Copy of Patent or Trade-Mark 15c. Trade-Marks & Labels Registered. Advice under F. & D. Acts. Send for Book. G. H. DAVIS, 918 F St., N.W., Washington, D.C. (Adv.)

of light emanating from the lamps are retarded by the liquid and appear in rapid succession in the various colors of the bulbs and in the various colors produced by the blending of the bulb colors.

**Casing for Bottles and the Like.**

This invention, devised by George P. Altenberg, assignor to the Icy-Flot Bottle Co., Cincinnati, Ohio (Patent No. 1,106,609), is a combination of an inner fragile container, an outer casing having a central threaded wall in its bottom, a cushion coating with said fragile container for cushioning the same, and a shell the wall whereof has inner and outer threads, the cushion being an integral body of elastic material coating with said inner threads for adjustably positioning the cushion in the shell toward and from the fragile container, the outer threads coating with the threaded wall to position the shell and cushion toward and from the container. The bottoms of the container and the lower casing are separated by a resilient cushion, while the casing members in assembled relation are locked by means of an outwardly extending spring-pressed pin, as shown in the illustration.

**PATENTS.**

**Granted July 21, 1914.**

- 1,104,149—Gustav Spiess, Frankfurt-on-the-Main, and Adolf Feldt, Oberursel, Germany. Auric compounds from cantharidylethylene-diamin and process of making same.
- 1,104,291—Frank Lenzi, Boston, Mass. Non-refillable bottle.
- 1,104,285—Otto K. Zwingerberger, assignor to Roessler & Hasslacher Chemical Co., New York, N.Y. Method of heating and evaporating liquids.
- 1,104,316—Arthur Rosenthal, assignor to Rose Label Machine Company, Grand Rapids, Mich. Label cutting and folding machine.
- 1,104,354—Cuthbert Gentle, assignor to Thomas H. Bowdidge, Boston, Mass. Funnel.
- 1,104,418—Theodore A. Gey, Norristown, Pa. Bottle stopper.
- 1,104,430—Joseph H. Gruver, Baltimore, Md., assignor of one-half to Francis Norris, Jr., Raspeburg, Md. Non-refillable bottle.
- 1,104,421—Same as above. Non-refillable bottle stopper.
- 1,104,457—George W. Weber, assignor to American Can Co., New York, N.Y. Sifter top powder can.
- 1,104,450—David Weiss, Cleveland, Ohio. Toothbrush.
- 1,104,578—Nels F. Thompson, Kansas City, Mo. Bottle closure.
- 1,104,590—Utley Wedge, Ardmore, Pa. Manufacture of sulphuric acid.
- 1,104,594—Robert W. Wigg, Middle Brighton, Victoria, Australia. Non-refillable bottle.
- 1,104, 03—Robert F. Alexander, Kramer, Ind. Straining device for funnels.

**Granted July 28, 1914.**

- 1,104,854—John H. Webster, Carrickfergus, Ireland. Manufacture of salt.
- 1,104,897—Henry Howard, Boston, Mass. Process of making bisulphite of soda.
- 1,104,913—Peter Loffler, Vienna, Austria-Hungary. Process for the manufacture of sodium bisulphate in a directly calcinable form.
- 1,104,972—David Leon Dover, Seattle, Wash. Non-refillable bottle.
- 1,104,978—Edward H. French, Dayton, and James R. Withrow, Columbus, Ohio. Process of producing acetic acid.
- 1,104,994—Emil Linderme, Philadelphia, Pa. Bottle washing machine.
- 1,105,195—Conrad V. Greenwood, assignor to Alfred S White, Chicago, Ill. Manufacture of mucilage or gum.
- 1,105,229—Gunther P. Wild, assignor to the Caloris Co., Philadelphia, Pa. Closure.
- 1,105,275—Raymond E. Ingalls, Seattle, Wash. Hypodermic syringe.
- 1,105,276—Max Jasper, Berlin, Germany. Safety closure for containers of inflammable liquids.
- 1,105,304—Elliott W. Reed, Savannah, Ga. Process of making calcium acid phosphate.
- 1,105,378—Carl Ruder, Wandsbek, Germany. Process for producing a mixture of camphene and isobornyl acetate from pinene hydrochlorid.
- 1,105,387—Charles L. Weil, assignor to Diamond Crystal Salt Co., St. Clair, Mich. Process of making salt.
- 1,105,414—George T. Fielding, New York, N.Y. Illuminating device.

**Granted August 4, 1914.**

- 1,105,601—Paul Altenfeld, New York, N.Y. Process of making a ferment.
- 1,105,831—Friedrich J. Poths, Hamburg, Germany. Bottle closure.
- 1,105,838—Emanuel L. Richards, Philadelphia, Pa. Tablet machine.
- 1,105,934—Ernest J. Stevens, Philadelphia, Pa. Inhaler.
- 1,106,033—Otto Eick, Baltimore, Md. Apparatus for handling bottles or other containers.
- 1,106,034—Otto Eick, Baltimore, Md. Brush for cleaning bottles or other containers.

- 1,106,47—Felix Kautler, Bruckl, Austria-Hungary. Method of producing amyli acetate and its homologues.
- 1,106,100—Fred H. Knapp, Westminster, Md., and Clarence W. Blackstone, Chicago, Ill., assignors to Fred H. Knapp Co., Westminster, Md. Labeling machine.
- 1,106,191—Harry R. Vrooks, Philadelphia, Pa. Bottle.
- 1,106,222—Aron Johnson, New York, N.Y. Bottle capping machine.
- 1,106,263—Robert H. Weathersby and Edward E. Putnam, Mammoth, Ariz. Non-refillable bottle.

**Granted August 11, 1914.**

- 1,106,366—Erik C. Clemmensen and Walter M. Jenkins, Detroit, Mich. Bottle closure.
- 1,106,505—George Fussell, Chicago, Ill. Non-refillable bottle closure.
- 1,106,578—Spencer B. Newberry and Harvey N. Barrett, Baybridge, Ohio. Process of making barium hydrate.
- 1,106,598—Charles A. Turner, Mount Carmel, Ill. Non-refillable bottle.
- 1,106,619—George P. Altenberg, assignor to the Icy-Ilot Bottle Co., Cincinnati, Ohio. Casing for bottles and the like.
- 1,106,616—Michael J. Bartol, Dunlo, Pa. Non-refillable bottle.
- 1,106,707—Lee F. Hawley, assignor to Arthur D. Little, Inc., Boston, Mass. Process of refining wood alcohol.
- 1,106,738—Edgar A. Shontz, Phillipsburg, Pa. Bottle centering attachment.
- 1,106,862—Ferdinand W. Beard, Yountville, Cal. Bottle opener.
- 1,106,919—Carl Bosch, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing ammonium sulfate.
- 1,106,925—Lewis D. Castor, Binghamton, and Andrew Kiefer, Rochester, N.Y., assignors of one-third to said Kiefer and two-thirds to Eisler Manufacturing Co., Rochester, N.Y. Labeling machine.
- 1,106,990—Tley Wedge, Ardmore, Pa. Sulphuric acid manufacture.
- 1,107,019—Erich Baum and Martin Muegan, assignors to Consortium für elektrochemische Industrie G.M.B.H., Nuremberg, Germany. Process for preparing acetaldehyde.

**NEW INCORPORATIONS.**

The Economy Co-operative Drug Stores, San Francisco, incorporated to buy, sell and manufacture drugs, novelties, merchandise, etc., by J. M. Casselman, Wm. Murphy, V. G. Whetson, W. Gierck, H. Haman; capital stock, \$1000, 200 shares at \$5 each.

Hill Drug Co., Evanston, Ill., incorporated by Robert L. Leffingwell, William T. Hill and D. C. Duncan, to buy and sell merchandise as a retail drug store; capital stock, \$1000.

The C. H. Barnes Druggists' Fixture Co., Boston, had its common stock decreased from \$84,500 to \$74,500 at a recent meeting of the stockholders held at Portland, Me.

Virus Limited, Inc., New York City, incorporated by W. Harris, E. Bambara, Jamaica, and A. B. Casner, Brooklyn, to manufacture and deal in drugs; capital, \$250,000.

Rumo Chemical Co., New York, incorporated by A. Jacobson, Jersey City; W. Jacobson, Summit, N. J., and P. Elert, Hoboken, N. J., for the manufacture of drugs, chemicals, etc.; capital, \$100,000.

Cassell Medicine Co., Arcadia, Fla., incorporated by J. A. Hendry, president; T. A. Cassell, vice-president; J. G. King, secretary-treasurer; has a plant having daily capacity of 500 bottles, it is reported, and plans increasing output; capital stock, \$10,000.

Mitchell Medicine Company, Alexandria, La., was incorporated with \$20,000 capital stock to manufacture medicine.

Long Drug Co., Columbus, Ohio, drug store, \$5000; incorporated by W. L. Long, A. Y. Long, H. H. Long and G. L. Rang.

Federal Serum and Chemical Co., Indianapolis, Ind., \$125,000; incorporated by M. B. Wilson, B. B. Cohen and A. C. Burrell, to manufacture and sell serums, etc.

Indu Kosmetic Co., Chicago; capital stock, \$2500; by W. N. Marshall, M. B. Wahl and Edwin Price, to manufacture, purchase and sell toilet articles, etc.

The Foster Drug Co., a new Delaware corporation to manufacture and sell medicines, deal in drugs of all kinds, has been incorporated by C. H. Foster, F. F. Sprout, F. L. Martin, Scranton, Pa., with a capital of \$25,000.

The Everene Medical Co., Tulsa, Kan.; capital stock, \$1000; incorporated by P. A. Mangum, Tulsa; Drew Beame, E. A. Stubble, Bartlesville; capital stock, \$1000.

The Thermopolis pharmacy, Thermopolis, Wyo., has incorporated with a capital stock of \$10,000 to conduct a modern drug store in the Richards block. Fred C. Businger is to be in charge. The incorporators and directors are F. A. Dean, Casper; Jay Smith, Glenrock, and Fred C. Businger, Thermopolis.

Stanton Drug Co., Stanton, Mercer county, N.D., has been incorporated by S. A. Sjoblom, Stanton; Burt Finney and Henry Halverson, of Bismarck, N.D.; capital stock, \$25,000.

The Commerce Drug Co., Commerce, Hunt county, Texas; capital stock, \$7000; incorporators, J. T. Vaughan, R. A. Bagwell, J. E. Boswell.

The Watson Drug Co., Spokane, Wash.; capital, \$10,000; incorporated by G. E. Hunt and F. O. Rose.

The Wakefield Medicine Co., Bloomington, Ill., heretofore conducted as a partnership, has been incorporated by L. O. Eddy, Max Eddy, Mrs. H. N. Woods, Mrs. H. W. Brady, and Mrs. A. C. Eddy; capital stock, \$50,000. Incorporation was decided upon following the purchase of the charter of the Vaco Company.

Fix-a-Lax Remedy Company, Chicago; capital, \$500; incorporated by Abraham Privat, I. M. Lauder and Adolph V. Pavlicek, to manufacture and deal in drugs.

Ligon's drug store, Spartanburg, S.C.; capital stock, \$5000; incorporated by H. A. Ligon, J. T. Temple, L. B. Crosby and J. McD. Kennedy.

Pardoe-Selover Drug Co., Minneapolis; capital stock, \$20,000; incorporated by Charles M. Pardoe, George W. Selover, Flora E. Pardoe, Elizabeth B. Selover, all of Minneapolis.

The Henry Lindholm Co., Cleveland, Ohio, drug stores; capital stock, \$25,000; incorporated by H. L. Lindholm, Georgia Lindholm, H. Cooper, Adele Cooper and L. B. Robinson.

The Lowry Medicine Co., Cambridge, Ohio, incorporated to manufacture medicines and chemicals, by O. F. Lowry, I. H. Chambers, C. M. Johnson, H. S. Lowry and W. J. Hood; capital stock, \$10,000.

The Schuermann-Jones Co., Cleveland, Ohio, has been incorporated for the purpose of doing a drug business. The capitalization is \$25,600. The incorporators are C. K. Arter, B. H. Davis, E. W. Williams, M. A. Clancy and D. M. Yarger.

Carman-Toot Sterile Co., Cleveland, Ohio, recently organized with a capital stock of \$10,000 and will handle a full line of physicians' and surgeons' supplies. Incorporators are E. S. Carman, George Toot, Estaine M. DePeltquestangue, Blanche Gelhart and G. M. Kinleyside.

Atlantic Chemical Co., Boston, incorporated with a capital stock of \$50,000, by Henry M. Carruthers, James S. Whitelock and Thomas M. Whitney.

The Somore Gum and Sweets Co., Waltham, Mass., incorporated by E. Rae Pearce, Charles W. McIntosh and Frank A. Farwell. Company will engage in manufacture of chewing gum. Capital, \$25,000.

NEW YORK, Aug. 23.—Never in the history of the drug trade has so much uncertainty prevailed in this market as has been the case since the beginning of the great European contest now under way. The record of the last two weeks has been one of changes, prices not infrequently advancing several times a day. As a general proposition, quotations for drugs and chemicals of foreign origin are merely nominal, with no definite basis to work upon. In the above list an endeavor has been made to get the latest market changes up to this date, but in many instances these are far from satisfactory on account of the entire absence of trustworthy information. The situation is further accentuated by the fact that many manufacturers and jobbers have withdrawn all price lists and are refusing to give out quotations. So far as they are able, however, they are attempting to supply a somewhat limited demand at prices which are made at the time of sale only.

Subscribers in referring to the ERA'S price changes should take into consideration the uncertainty now prevailing and that no guaranty can be given that these quotations will represent the prevailing prices that may obtain on the day this paper reaches them through the mails. So completely and radically has the entire structure of the market changed that it is impossible to forecast the probable prevailing quotations for a longer period than from day to day.

As will be noted, the declines reported are emphasized by their fewness in number, damiana, gelsemium root, golden seal, lovage root, oils of erigeron, juniper berries, pimenta and spearmint; Paris green, pleurisy root, prickly ash bark and berries, all being quotably lower. Among the most striking advances in price are those for iodine and the iodides, various herbs or botanical drugs of German origin, as digitalis, belladonna, celery seed, gentian root, henbane leaves, hops, etc.; lycopodium, musk root, and the various essential oils from France, Italy and the Balkans. Such staples as opium, quinine, carbolic acid, citric acid, caffeine, camphor, chloral hydrate, chloroform, codeine, morphine, quillsilver, cod liver oil and the various potassium salts and combinations have all experienced advancing fluctuations and the end is not yet, jobbers and brokers in many instances refusing to quote flat prices. In many places stocks are abnormally low, from the fact that trade conditions for the past six months have been so unsettled dealers and brokers have hesitated to keep on hand even the small normal supply. As a result many drug and chemical houses are conserving

what supplies they have and are endeavoring to make these meet immediate demands.

**OPIMUM**—Stirring developments have characterized the position of this staple abroad and prices have been advanced to \$9.10@ \$9.20 per pound for natural; \$10.50@ \$11.00 for granulated, and \$10.40@ \$10.90 for U. S. P. powdered, with case lots being no longer offered in this market. Just what the future will develop, is problematical, owing to the practical elimination of all communication between the primary producing centers and consuming countries. According to the Bureau of Statistics, there was imported into this country 455,200 pounds of opium, valued at \$1,810,429 for the 12 months ending June 30, 1914, against 508,433 pounds, valued at \$2,565,965 for the corresponding period in the preceding year. Advices from abroad indicate that about 80 per cent. of the present crop is already harvested.

**CODEINE**—In sympathy with opium and the contributing uncertainty induced by hostilities abroad, this article occupies a strong position, and has been advanced to \$7.25@ \$7.50 per ounce for alkaloid, the various salts being quoted as follows: Phosphate, \$6.75@ \$7.50; sulphate, \$7@ \$7.25 per ounce.

**QUININE**—Has been advanced 5 cents per ounce and is now quoted at 31c.@ 32c. per ounce in 100-ounce tins. There is a firm demand, and this, together with the embargo on shipments and the probable heavy demands for use by the armies in the field and camp, tends to strengthen the belief that higher prices will soon be realized.

**CARBOLIC ACID**—This was one of the first articles to experience an advance in price on the declaration of hostilities, and already quotations have been withdrawn by manufacturers who are unable to ascertain the possibility of getting supplies from Germany, the principal country of production. The quotations reported are given with some reserve, 35c.@ 50c. per pound for crystal in bulk being asked, with 30c.@ \$1 per gallon for crude (10 to 95 per cent.).

**ACID, CITRIC**—Prices have mounted steadily upward, and jobbers have some hesitation in giving quotations for keg lots. Small lots are quoted at 75c.@ \$1.25 per pound. Very little acid is for sale at any price.

**MENTHOL**—Is firmer on account of foreign developments and also because of increase in demand, jobbers quoting \$4.50@ \$4.75 per pound. The declaration of war against Germany by Japan also tends to cause further advances, menthol being a leading article of export from the Island Empire. The exports of menthol to the U. S. from Japan for the five months ending May of this year was 52,432 kin, about one-fourth of the total exportation of that country.

**THYMOL**—Because of a deficiency in crude material with a corresponding increased demand, and the further influence of the war, this article has furnished one of the spectacular features among the advances, jobbers quoting at this writing \$7@ \$10 per pound. This represents a wide range, but the figures given are about as logical as any that can be advanced.

**ACID, OXALIC**—Stocks on hand are light and the market feverish, all grades showing the effect of the demand for war purposes, jobbers quoting with some reserve 25c.@ 30c. per pound for small quantities.

**CANTHARIDES**—Russian, as might be expected, are very scarce and jobbers ask \$4@ \$5 per pound for sifted.

**GLYCERIN**—The use of this article in the manufacture of explosives has made enormous inroads upon the visible supplies, this country being dependent upon foreign sources for about 60 per cent. of that consumed here. The nominal price asked is about 27c.@ 30c. per pound. The leading local refiners have announced their withdrawal from the market.

**SEDLITZ MIXTURE**—Following the advance for Rochelle salt, dealers have marked up their quotations to 18c.@ 22c. per pound.

**ROCHELLE SALT**—Has been advanced to 22½c.@ 24c. per pound.

**ERGOT**—Prices have been advancing daily and the market is very unsettled, Russian being reported to be below quality and the crop very small this year, and this condition, coupled with the Russian entrance into the Continental war, has developed very uncertain prospects. Spanish ergot is in better supply, but it, too, is subject to the precarious state of international shipping. It is impossible to note all the changes, but jobbers give \$2@ \$2.25 as about the logical figures for whole, and \$2.20 @ \$2.25 for powdered.

**POTASSIUM SALTS**—Permanganate has scored the sharpest advance, 50c.@ 60c. per pound being reported as the ruling quota-

tion for small lots. Other salts which have advanced are the following: Bitartrate (cream of tartar), 34c.@ 36c. per pound; bromide, 60c.@ 65c.; carbonate (pearl ash), 12c.@ 16c.; carbonate (refined, sal tartar), 18c.@ 22c.; red prussiate, 60c.@ 65c.; yellow prussiate, 28c.@ 32c. per pound.

**COUMARIN**—This article has been advancing and is tentatively quoted at 55c.@ 60c. an ounce. It is extensively used as a base for many perfumery lines, and sympathetic advances have developed in the quotations in many toilet preparations.

Buyers of drugs and chemicals are again cautioned that all quotations are strictly nominal, owing to the unsettled condition of the market, and that the figures above given represent the last jobbing price obtainable or the last offering price available.

#### Must Denature Shipments of Spoiled Food Products.

WASHINGTON, D. C., Aug. 20.—The U. S. Department of Agriculture has issued a ruling which hereafter will require any spoiled food to be denatured before it can be shipped into interstate commerce.

This will permit the shipment of spoiled eggs for use in tanning, and other spoiled substances for the making of fertilizer, or oils or greases used in machinery, but will require them to be treated with salt, kerosene oil, or coloring matter or in other ways so that they cannot possibly be used for food. The denaturing substances to be required will not interfere with the use of the filthy, decomposed or putrid animal or vegetable substances in the manufacture of nonedible products for use in the technical arts, but will be of a nature that will absolutely prevent the converting of the substances into products that could by any chance, be eaten. This is on the analogy of the denaturing of grain alcohol for use in the arts.

**The Daniel Stewart Drug Co.**, Indianapolis, wholesale druggists, have bought at public auction the retail drug store of J. H. Smith at Columbus, Ind. The store recently was turned over to the creditors to be sold for their benefit. The store was established 60 years ago and was one of the oldest in the State.

**Makes Fight for Drug Stock.**—J. B. Bailey, of Oklahoma City, is contesting the seizure of a stock of drugs, valued at \$1800, now in the hands of the sheriff, following a raid on the drug store at 212 West Grand avenue. The point is made that the confiscation of goods is in violation of the State constitution.

#### RECENT FIRES.

- At St. Louis, Mo., Charles L. Penny pharmacy; loss about \$800.
- At Marvell, Ark., Brooks & Brassfield drug store destroyed; origin unknown.
- At Deadwood, S. D., two warehouses belonging to estate of the late Kirk G. Phillips, Charles street, were destroyed by fire. They contained, it is reported, \$20,000 of drugs and chemicals. In one of the buildings were \$5000 of potassium cyanide and a supply of sheet zinc worth the same amount. Cause, supposed to be spontaneous combustion. Buildings and contents were fully covered by insurance.
- At Philadelphia, Pa., McIlvaine Brothers drug mill, southwest corner 15th and Hamilton streets, fire did \$10,000 damage. Thick smoke from burning chemicals hampered the work of the firemen.
- At Bluffs, Ill., F. T. Curtis drug store; loss, \$3200; insurance, \$1300; fire started in pharmacy and spread rapidly into business district and for a time threatened to destroy a large part of the town. General loss was estimated at \$35,000.
- At Princeton, Kan., J. R. Thornbury and wife celebrated their 52d wedding anniversary in the morning; in the evening their drug store was destroyed by fire.
- At Louisville, Ky., W. E. Klusmeyer pharmacy at Eighth and Jefferson streets; damage, \$4000; insurance, \$2500.
- At Boston, Mass., the Otis Clapp Drug Co., 439 Boylston street, damage about \$1000. A prompt still alarm did much toward minimizing the damage.
- At Rio Vista, Texas, the Lacewell drug store was damaged by a conflagration which did \$90,000 damage in the town. Twenty-four buildings were destroyed and the water plant put out of commission.
- At Rockland, Mass., W. A. Phillips' drug store on East Water street badly damaged by fire. Loss estimated at \$1700; \$1300 insurance was carried.
- At Jasonville, Ind., Bryan's drug store was burned in a fire which did \$300,000 damage, ruining almost the entire south side of the business section.
- At Hoopston, Ill., G. E. Lester's drug store damaged by fire; loss covered by insurance.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
No. 3 PARK PLACE, NEW YORK.

### FROM THE NORTH AND THE SOUTH.

Two Young Men Who Have Used the Era Course to Prepare Themselves for Advancement.

**A**BOUT six months ago, Homer J. Nowlan, of Roanoke, Va., decided to enroll as an ERA COURSE student. He had already received an excellent preliminary education, and had also studied for four years at the Alderson Academy, of Alderson, W. Va., followed by a year of Latin, English, French, and mathematics at Roanoke College, Salem, Va. He then entered the drug business as assistant in Thornton's pharmacy, Roanoke, and later held positions with H. C. Barnes, Inc., and with Van Lear Bros. pharmacy, where he is now employed. But he felt that he needed a systematic guide, to give him rational explanations for his practical work, and this he found in the ERA COURSE Lectures.

HOMER J. NOWLAN.

In his words: "The ERA COURSE has benefited me many times in excess of the price you charge for it, and I thank you for the assistance you have given me." In spite of being kept busy at Van Lear's, Mr. Nowlan made it a point to set aside a regular time for study, with the result that he completed the ERA COURSE work in just six months after enrolling. His recitations arrived as regularly as the changes in the moon, and his sincere efforts were rewarded by a graduating average of a shade under 99 per cent.!

#### Direct Benefits from the Course.

**N**OTHING could better show the direct benefits which the aspiring young pharmacist derives from the ERA COURSE IN PHARMACY than the following letter, recently received from George C. Schicks, Jr., of Lowell, Mass.:

"I have just received the announcement of my graduation, with an average of 96 per cent., from the ERA COURSE IN PHARMACY.

"I started in the drug business three years ago, and found it to be a business absolutely new to me. I studied the United States Pharmacopoeia, and then took up the ERA COURSE in connection with it. The Course explains many things in the U.S.P. that would otherwise seem complicated to the beginner. Systematic studying is what the novice needs, and he gets a very good training in this course.

"When I took the State Board examination a few months ago, I had many questions asked me that are explicitly answered in this Course. I would probably never have heard of them if I had not taken up a course of systematic studying. Not being eligible to take the full examinations on account of age and inexperience, I took the examination for assistant pharmacist, and passed it. I hope very soon to pass the full examination.

"I shall keep the Lectures with great care, and I am sure they will be very instrumental to me in passing the final examination."

GEO. C. SCHICKS, JR.

#### Era Course Graduate Wins Honors.

At the recent commencement of the Philadelphia College of Pharmacy, the honor "Meritorious" was awarded Mr. Elwyn J. Wheeler, of Philadelphia, and at one time of Lancaster, N.H. Mr. Wheeler entered the college in the Fall of 1911, having enrolled as an ERA COURSE student a few months previously. Using the lectures as a guide for his more extended work in the college, he carried on both courses simultaneously, and was so industrious that he was ready to receive his diploma from the ERA COURSE in the early Fall of 1912, with a final average of 98. He then concentrated all his efforts on his regular studies at the College of Pharmacy, and graduated this year with the high honor previously mentioned. He was entitled to Honorable Mention in the contests for the *Materia Medica* prize, *Commercial Pharmacy* prize, *Instructors' prize*, *Pharmacy Quiz prize*, and the *Kappa Psi Fraternity prize*.

Matriculation Graduates to Aug. 20, 1914. Graduating Number. Average.

### PRACTICAL ADVICE.

#### Explosiveness of Picric Acid.

(H.F.B.)—"We keep on our prescription shelf, a few feet away from where employees work, not more than one ounce of picric acid. We would like to know if such a quantity should explode would it be dangerous to life or limb? Or, do you consider it dangerous to have 1 ounce of picric acid in such a place? Is it likely to explode spontaneously?"

While picric acid is considered as an explosive, we believe there is no great danger in keeping on hand an ounce bottle of the substance, provided due care is taken as to storage, etc. According to advance notes, the forthcoming edition of the *Pharmacopoeia* will define picric acid as an official substance, and will say that the substance "explodes when heated rapidly and when subjected to a percussion. Keep in well-stoppered bottles, in a cool place, remote from fire." This is evidence that the *Pharmacopoeia* authorities, at least, do not consider the acid extra hazardous when properly kept in the usual quantities needed for drug-store dispensing.

As showing how the substance is considered in this city we would state that under the regulations of the Municipal Explosives Commission of New York, picric acid finds a place in Schedule B, and druggists holding a permit from the Fire Commissioner can store, sell or use in a retail drug store picric acid in any quantity not greater than 1 ounce. This regulation also contains a section which states that "it shall be unlawful for any person to store chemicals in close proximity to each other when they are of an explosive character, or when one increases the energy of the other, or when they are so constituted that they may react upon one another and become explosive or inflammable." We do not think that a sample of picric acid of the quantity named, when kept under proper conditions, is likely to explode spontaneously. Picric acid, like most other organic nitro-compounds, however, is explosive under certain conditions, and it forms with alkalis well-defined salts, which are also extremely explosive. In the form of a saturated solution it is used as a hardening agent in microscopical work, and also employed in urine analysis to detect and estimate glucose; for the approximate determination of albumin (Esbach's test), and for staining solutions in microscopical work. Stains on the skin caused by picric acid may be removed by means of a solution containing 1 per cent. each of boric acid and sodium benzoate.

#### Dementholized Mint Oil.

This is the name given in the trade to Japanese mint oil from which part of the menthol has been removed by freezing; it contains from 45 up to 55 per cent. of total menthol. Recently much larger proportions of the latter have been extracted in Germany by a more efficient process, leaving a residue very poor in menthol, which is yet sold as dementholized Japanese mint oil. The author calls attention to the fact that purchasers should insist on a guaranteed percentage of menthol of at least 45. (*Umney, Perf. Essent. Oil Rec., 1914, p. 41; through J. Soc. Chem. Ind.*)

### WHY NOT DRUGGISTS FIRST?

The New York City Board of Health, in defending the recent Ordinance No. 182, prohibiting the sale by druggists of any preparations containing opium, morphine, codeine or other narcotics, except upon presentation of a physician's prescription, states that self-medication is an evil which shall, as far as lies in the power of the Board, be stamped out. Commissioner Goldwater deems it proper that a physician should prescribe for all ailments; the Board's slogan can almost be said to be, "The physician first and the druggist afterward."

The Commissioner points to the fact that years of education are required before a man is fitted to practise medicine, as evidence that the lay mind cannot cope with the problems of illness. The Commissioner advises druggists, in case their customers insist on having brown mixture tablets, Stoke's expectorant, Sun cholera mixture, and other household remedies, to sell these preparations with the narcotic or opiate left out. The Board proposes a campaign of education for the public, pointing out the dangers of taking medicines the ingredients of which are not fully known, and as the first step in this campaign proposes another ordinance, which will require the labels of all proprietary preparations to bear a qualitative analysis of their contents. A similar ordinance is now enforced in the Philippines, says the Commissioner, and its effects have been salutary.

The druggists of New York City will agree to obey Ordinance 182, the proposed new measure, and all other similar legislation, if the Board of Health or the Commissioner will go on record to the effect that the average intelligence of New York City is as low as that of our "little brown brothers" in the Philippines, and that public health measures of similar nature are needed for the protection of our citizens. The druggists of New York City will not oppose the ordinances if the Board will furnish statistical proof that the average physician is able to make a correct diagnosis in 75 per cent. of all cases submitted to him, and to prescribe the correct remedy, in proper form. The druggists of New York City will see-

and every effort of the Board of Health to educate the public if the Board will require all physicians to write their prescriptions in legible English, since, to quote the words of Commissioner Goldwater in another connection, "an individual should know not only from what disease he is suffering, but also what he is taking to cure that disease"; and if dispensing physicians are also required to label the packets of medicine they deliver to patients.

The druggists will gladly comply with the new regulations if the Board of Health will furnish satisfactory evidence that the physicians of New York City, on the average, know what is required for a cold or cough or colic contracted under circumstances which are fully known by the sufferer, better than the sufferer himself. The druggists of New York City will be glad to sell Warburg's tincture, brown mixture, and other pharmacopoeial preparations with the narcotic ingredients omitted, if the Board of Health will furnish a satisfactory guarantee of immunity from prosecution for violation of Section 273 of the State Pharmacy Law. Finally, the druggists will cheerfully—oh, so cheerfully—co-operate to conserve the public health, if the Board and its subordinates will adopt another slogan—"Be a physician first and a politician afterwards."

#### PATENT LAW REVISION NEEDED.

IN the opinion of experts the industrial policy of the German Government that has done more to develop chemical manufacturing in that country than in any other is largely due to the working clause of the German patent law and the provision that processes but not products shall be patented. The working clause requires that if the owner of the patent omits for three years to work the patent adequately in the Fatherland the holder's rights can be withdrawn. In this country we have no such provision, and in this field the alien manufacturer has a positive advantage over the domestic manufacturer. In other words, we have failed to take the self-protective precaution that all other industrial countries have taken in formulating their patent legislation—by providing that the manufacturer of a patentable article shall, in order to retain the protection of the patent law, make provision for the manufacture of his product in this country in quantities at least sufficient to supply the domestic demand.

If such a requirement had been exacted of all foreign manufacturers whose goods are protected under our patent law, the present shortage of many patented medicinal products would not be so acute, and there would be a likelihood of securing them in sufficient quantities to supply the domestic demand of the future. It is perfectly logical to ask why the manufacturer who fails to supply the legitimate demand for a protected product should be entitled to a monopoly in our markets. We do

not think he should be given these rights, and Congress should be requested to amend the patent law so that future contingencies of this character may be avoided. If the failure of a foreign manufacturer to supply his goods is owing to the closing of his factory by his own country going to war, that is his misfortune and the fault of his Government, not our fault. Conditions such as these should not be possible, but they are sure to develop just so long as our own patent law does not exact a requirement that is exacted of the patentee of every invention by all the great industrial nations of the world. It is not yet too late to place the situation before Congress and to ask for remedial legislation.

#### REORGANIZATION OF THE A. PH. A.

THE recent meeting of the A. Ph. A. in Detroit may be characterized as one of the most successful that organization has held in recent years. Not only was the attendance unusually large and the entertainment features dispensed on a liberal scale, but the work was so well planned that no time was lost in the deliberations. To such an extent was the programme thought out in advance, there was no time lost and the number of sections meeting concurrently was reduced to a minimum, thereby giving to every member the greatest opportunity to attend most of the gatherings of his favorite group. This was accomplished, as told in our news report elsewhere in this issue, by eliminating from the general sessions of the association the customary addresses of welcome by the mayor and other distinguished citizens on the part of the city and the responsive felicitations thereto, and by excluding the reading of unimportant reports of the detail work done by the Council during the interim between meetings. It is believed that the average member will lose nothing by this arrangement and, in our opinion, he will have a greater opportunity to hear the reading of papers and the discussions than he ever had under the method followed in previous years.

The meeting this year, therefore, may be said to mark the beginning of a new era in the method of the Association's work. It also ushers in a reorganization of the sectional divisions, the principal changes being in the consolidation under the Scientific Section of the new subdivisions (a) chemistry, (b) botany and pharmacognosy, (c) biologic assays, and (d) bacteriology, the other sections remaining practically as they have been organized for a number of years. Greater recognition was also given to the Women's Section by extending its scope, which, as set forth in the new amendment, is "to consist of women who are regular members in the A. Ph. A., the women of the families of regular members in good standing united for promoting the aims of the A. Ph. A. and for advancing the interests of women engaged in pharmaceutical work." This greater recognition by the Association of women and women's

work in pharmacy is in keeping with the tendency of the time in other callings, and it is sure to have real significance in any future consideration of a study of the industrial opportunity offered to women, or to the progress they are making in the field of present day activity.

Viewed in its entirety, the result of the Detroit meeting is sufficient to convince anyone at all familiar with the development of pharmacy that the Association is working in the right direction, and that whatever else it may do for the benefit of the trade, its real mission is to broaden the viewpoint and contribute to the dissemination of knowledge for the benefit of all concerned. In thus elevating pharmacy in matters professional and commercial, the Association is really bringing the individual pharmacist to realize that within the organization he can be sure of greater progress than will come to him by following his old policy of secluded isolation. The moral is obvious—join the Association and help to promote the betterment of pharmacy.

#### REVISE PRESCRIPTION PRICES.

ALTHOUGH definite prices are often difficult to quote in these war times, and dealers' lists change daily and hourly, one thing is certain—many drugs and chemicals used in prescription work are only at the lower end of a long price incline which is to be utterly unprecedented. With so many sources of supply of the finer chemicals and synthetics cut off by governmental embargoes in Europe, the United States faces a famine which cannot be relieved in a few months, no matter how enterprising or industrious our chemical factories are. Prices on many lines will continue to rise, and the retailer must make his arrangements accordingly.

In the first place, the retailer should have access to some source of reliable information, so as to follow the price changes of those articles which are still on the market. As the supply shortens, the value of the goods he has on hand increases, and now, when stock-taking time is approaching, he should correct his inventories to keep pace with the revised quotations. Any article is worth as much as it will cost to replace it, and it is not true that because a pound of caffeine purchased a year ago cost \$3.75, that same carton of caffeine is worth to-day only the original outlay.

Changes in prescription pricing are also imperative. The time will surely come when many a prescription will carry a price two or three times as great as that legitimately charged at present, and the druggist must prepare his customers for what would be apparently an exorbitant increase, if instituted all at one time, by gradual revisions upward from time to time, following the upward trend of jobbers' prices for the articles concerned. To prove to the public that these increases are entirely justified, and in order to forestall any criticism anent "gouging," it might be advisable to display present-day quotations on a list of

drugs and chemicals used in prescriptions, and compare them with the corresponding figures of six months ago.

#### WEEKLY DRUG MARKETS.

UNPRECEDENTED conditions have been created in the drug and chemical markets by the European war, and every dealer in these goods has been compelled to face them because they have directly affected his business. In such a time as this the very commercial existence of the druggist depends upon his ability to meet such conditions as they arise, and to do this intelligently, he must have authoritative information. In the present crisis drug buyers have been quick to recognize the necessity for reliable and complete market reports, and we have been flooded with requests from subscribers to keep them more promptly advised in regard to the market than is possible in a monthly journal.

These requests are legitimate and show that business instinct is sharpened under the spur of necessity. The druggists do need the information, and to supply these demands the publishers have started a weekly journal, a Market Edition of THE PHARMACEUTICAL ERA, to be known as the WEEKLY DRUG MARKETS, the sole aim of which is to give drug buyers the most complete and authoritative information relating to the drug and chemical markets, covering not only the prices for these commodities in original or manufacturers' packages, but jobbers' prices current as well. There is a distinct need and field for such a publication and we expect to make the Market Edition of THE PHARMACEUTICAL ERA the most complete journal of its kind, adding many new features not heretofore carried in journals of this character. We urge our subscribers to take it.

#### IMPROVED METHODS OF COST-KEEPING.

Too often the druggist gives insufficient attention to the accounting end of his business. Of course, every retailer keeps a set of books of some sort, but does his set of books enable him to see an accurate picture of his business day by day, or does it really serve to drop a curtain before his eyes which is only lifted at thirty day intervals, when the monthly balance sheet is prepared? The difference between the great success often achieved by the large store and the dismal failure common among the small retailers is not so much a question of either intrinsic ability or personality, but is due rather to the accurate check which the large establishment keeps upon every detail of its business, as compared with the hap-hazard and careless attention too often paid by the small retailer to the accounting of his store. The old fashioned ledger-journal-day-and-cash-book method of accounting cannot give accurate daily information concerning the fluctuations of business, and many new methods of accounting have been devised which enable the retailer to watch his income and outgo, over-

head and depreciation, much in the same way the physician watches the fever chart of his patient.

Harvard University established its Bureau of Business Statistics some three years ago for the purpose of studying the accounting problems in different lines of endeavor, and from the knowledge thus gained to devise a standard system of accounting for each particular line. Bulletin number three, issued a short time ago by the Bureau, contains an accounting and cost-keeping system intended for the retail grocer, but the problems of merchandising in the drug and grocery trades are sufficiently similar for the retail druggist to obtain a large amount of valuable information from the grocery bulletin. Conditions in the drug trade to-day are sufficiently keen to make it necessary for the retailer to keep his sails trimmed and his wheel steady, lest he founder and sink beneath the waves of competition, and the best chart and compass for a safe voyage across the sea of business is an accurate understanding of the real cost of doing business, gained from some system of accounting which is sufficiently comprehensive to enable him to learn the essentials of his financial problems as fast as they arise.

#### CULTIVATION OF MEDICINAL PLANTS.

THE principal obstacle in this country to the successful cultivation of medicinal plants on a commercial scale has been, with few exceptions, due to the low prices for which such drugs were obtained from abroad, and as a result, the returns were insufficient to warrant anyone in taking up the work for profit. Far-seeing individuals continued to predict that even under such conditions the time was not far distant when practically all of the most important drugs would be so much higher that farmers and others would grow medicinal plants for the market, the soil and climatic conditions of the United States being favorable for the production of most of them.

Renewed interest in this subject has come to the forefront at the present time, owing to scarcity of such drugs, and the cessation of importations due to European hostilities, the principal countries of production being ravaged by contending armies. The visible supply of such drugs has consequently greatly increased in value, while some of them are likely to become unobtainable. These facts have been sufficient to attract the attention of agriculturists and others, and already many individuals and farmers have written the U. S. Department of Agriculture inquiring about the possibilities of growing medicinal plants profitably. These inquirers have been uniformly answered, as anyone who has at all followed the Department's investigations would predict, that a number of important drug plants could be profitably grown here if the present high prices continue, but at the same time, the possibility of an early restoration of shipping facilities was a factor, and in any event, the

inexperienced grower of drug plants would be more liable to meet with failure than with success.

The basis of this opinion is not hard to discover. The successful production of drug plants requires special knowledge in the matter of cultivation. The time of harvesting and method of drying have an important bearing upon the constituents of the plants in the cured state, a knowledge of which is absolutely essential for the production of drugs of high quality. Then, too, the prospective grower, with a knowledge of drug plants, could scarcely hope to harvest a crop before the end of next year's producing season. Another disquieting feature toward immediate success is seen in the Department's experts by the statement that the quantity of crude drugs required by the market is relatively small as compared with fruits, vegetables or staple crops, and any numerous or extensive plantings by individuals throughout the country might easily result in overproduction, which would cause a decline in the market price independent of the conditions abroad. In any case there must be an available market.

There are doubtless many drug plants which cannot be grown here under any circumstances, and for those that might be cultivated, there are many factors that tend to make the future of the market uncertain. But even with these handicaps, the future holds possibilities. There is bound to be greater progress in this direction, but no immediate hope that American growers can supply all of the needs of this country for botanical drugs. The knowledge and experience that have taken generations to gain cannot be replaced in one, two or many years, to say nothing of having the right kind of soil and most favorable climatic conditions.

#### VALUE OF TRADE ORGANIZATIONS

A prominent Philadelphia drug manufacturer who is a member of several trade organizations, and who is keen for the association spirit in the trade said in discussing the apparent unwillingness of drug manufacturers to join trade organizations:—

"Some of these manufacturers appear to be afraid that mingling with the other members of the trade would result in their losing some of their trade secrets. They therefore not only do not cultivate the acquaintance of others in the business, through association meetings and otherwise, but hold themselves aloof on the assumption that they are thus securing a monopoly on the part of the wisdom and successful methods pertaining to the business.

"Never was a more mistaken idea. Instead of losing the manufacturer who meets his fellows invariably gains; for every idea he puts out, he gets others back that are equally valuable. If there were twelve drug manufacturers in an association, each one contributes one-twelfth to what is said and suggested; consequently, he receives eleven times as much as he gives. How then can a single individual suppose that his own limited experience is greater and worth more than that of all others in the business in his community combined?

"The very fact that associations exist in all lines and have grown, prospered and multiplied is sufficient proof if it were needed, of the benefits to be derived from their use; and the manufacturer who imagines that he is acting in a wise and shrewd manner by refusing to ally himself with others in the business is merely pursuing the plan of the ostrich, which covers its head in the sand."

## Manufacture of Biological Products\*

By F. E. STEWART, Ph. G., M. D.

(Scientific Department, H. K. Mulford Company.)

**I**F a protein, (for example, egg albumin, casein, blood serum, or vegetable albumin), is introduced into the alimentary canal of an animal or man, the secreting cells of the glandular organs connected with the digestive apparatus are stimulated to produce proteolytic ferments for its digestion. Digestion in the alimentary canal is known as "enteral" digestion.

If a protein is introduced into the tissues or blood vessels of an animal or man, the body cells, (tissue cells, white corpuscles or leucocytes, etc.) are stimulated to produce proteolytic enzymes for its digestion. Digestion in the body outside of the alimentary canal is known as "par-enteral" digestion.

Normal blood serum, when freshly drawn, also has the power of digesting proteins, and that power may be enormously increased toward any particular protein by injecting a portion of it into the tissues of the animal. The blood serum of such animal will digest a comparatively large amount of that particular protein, but shows no increased power of digestion toward any other protein. In other words, the digestive action is *specific*. The doctrine of specificity is stated as follows:—

*Each protein when introduced into the animal body stimulates the body cells to produce a powerful specific proteolytic enzyme or digestive ferment which will digest that particular protein and no other.*

This fact is of the greatest importance to the existence of living beings on this earth of ours, for except for the power possessed by the tissues of animals and of plants to produce enzymes for digesting their food, and for defence against the yeasts, which are constantly seeking to obtain a foothold and grow in and on the bodies of animals and of plants at the expense of their tissues, these lower forms of life would soon destroy the higher forms, and then, they themselves would perish for lack of food.

For the sake of simplicity, let us consider the bacteria in their relation to animal life.

We know that the food we eat, the water we drink, and the air we breathe, contain myriads of bacteria of multitudinous kinds, all seeking to devour us. Examination of the skin and of the mucous membranes lining the cavities of the body shows the presence of millions of them. They live with us as messmates, subsisting on waste matter, such as particles of food, cast-off epithelium, etc. Why do they not attack the tissues and destroy us? Simply because when they attack the tissues, the body cells are stimulated to produce a powerful specific proteolytic ferment for their destruction. For bacteria are mainly composed of protein, and the proteolytic ferment produced by the body cells digests the bacterial protein.

However, victory does not always attend the body cells in defending the tissues against the attacks of bacteria. Sometimes the proteolytic enzymes produced by the bacterial cells are strong enough to overcome the body cells and then the bacteria gain foothold and become *parasites*, living at the expense of the tissues. Now what happens?

What happens is this: Certain groups of symptoms are manifested by the individual attacked, depending in character upon the kind of bacteria, and the kind of tissues attacked. The animal becomes sick, has a fever, functions of the tissues attacked are disturbed, the nervous system is poisoned, the

entire system is disarranged, and, unless something occurs to check the attack, the animal dies. In the meantime other kinds of bacteria take advantage of the situation and also attack the poor victim. And, after the victim dies, the bacteria continue their destructive work until all of the organic matter of which its body was constructed is decomposed back to inorganic forms.

Nothing prevents every one of us from sharing this awful fate except the power of our body cells to produce a powerful, specific, proteolytic enzyme or ferment capable of digesting and destroying the protein of the kind of bacteria that calls it forth.

As just stated, the groups of symptoms resulting from the attacks of different kinds of bacteria differ in accord with the kind of bacteria that attack and the kind of tissue attacked. If, for example, the tubercle bacillus attacks the lung tissues, a group of symptoms follows which markedly differ from those following an attack upon osseous tissue or bone, or upon the meninges or lining membrane of the spinal cord. If the lung is attacked, we have pulmonary phthisis; if the bone of the hip is attacked, we have hip disease; or if the meninges are attacked, we have tubercular meningitis.

The diseases, or groups of symptoms caused by *microbes*, (as these minute forms of life are called) are known as infectious diseases. The infectious diseases differ from each other because each is produced by a different kind of micro-organism, at least in the beginning, although every infectious disease as a rule becomes sooner or later a *mixed infection*.

Now, when a certain bacterium obtains a foothold and commences to grow at the expense of the tissue, say of the lung tissue as happens when the pneumococcus grows in the lungs and causes pneumonia, the healthy tissues in some other part of the body may be stimulated to produce the necessary specific proteolytic enzyme for its destruction. Nature has provided a way of doing this by supplying the blood with what are known as white blood corpuscles or cells called leucocytes. When the lung tissue is attacked the leucocytes are attracted to the site of invasion. They rush to the aid of the tissue cells, and immediately commence to ingest or engulf the bacteria and digest them by means of specific proteolytic enzyme secreted by the leucocytes for that purpose. The peculiar power of the leucocytes and other body cells of ingesting and digesting bacterial and other proteins is known as *phagocytosis*, and the body cells are therefore named phagocytes or cell-eaters by Metchnikoff, to whom we are indebted for this knowledge.

But suppose the tissue cells and leucocytes are unable to overcome the infection, what can be done?

Sir Almroth E. Wright, of the British Army, has developed a method for aiding nature under such circumstances, known as Wright's Vaccine Therapy, or Bacteria Therapy. It consists of injecting killed bacteria of the kind causing the disease into the healthy tissues whereby the tissue cells are stimulated to produce specific proteolytic ferment. This is absorbed, taken up by the circulation and carried to the area invaded by the disease germs where it aids the tissue cells and leucocytes in overcoming the invading bacteria.

Bacterins (or bacterial vaccines as they are called by Wright and his followers) are killed pathogenic bacteria suspended in sterile physiological saline solution, protected by antiseptics from contamination, and standardized to contain a definite number of bacteria in each cubic centimeter. They are prepared in the following manner:—

An agar tube is inoculated with the proper organism. The tube is incubated 24 hours when the growth is emulsified and drawn into a Miquel bulb containing sterile bouillon. From the bulb it is distributed into the special flasks in which the cultures are grown in large quantities. The agar flasks are incubated for 24 hours. Then they are removed from the incubator and each flask examined microscopically to be certain the culture is pure. After this a small quantity, about 10 to 20 c.c., of sterile saline solution is placed in each flask. The flasks are shaken to loosen the growth from the surface of the agar. When this is accomplished the thick suspension of bacteria is removed from each flask with a Miquel bulb. The Miquel bulb is then shaken thoroughly to break up clumps of bacteria as far as possible and a small sample is removed for counting. The stems of the bulb are then sealed off in a blow-pipe flame and the bulb

F. E. STEWART.

\*Read before the Amer. Pharm. Assoc., Detroit, 1914.

is immersed in a water bath the temperature of which is exactly 60°C. It is kept in here for one-half hour. This temperature will kill the bacteria without destroying their specific immunizing properties. The contents of the bulb are then ready for dilution in sterile saline solution. After dilution, one-half of one per cent. of trikresol is added as a preservative.

The bacteria are counted by Wright's method. This consists of a comparison of the number of bacteria in a certain quantity of the emulsion with the number of red blood corpuscles in the same quantity of blood. Having all the apparatus necessary in readiness a mark is made with a paraffin pencil about one-half inch from the end of a capillary pipette, to the upper end of which is attached a small rubber bulb. A piece of bandage or a rubber band is wound tightly around the finger or thumb and a small prick is made just back of the nail. As the blood comes out it is drawn into the capillary pipette exactly to the mark made with the paraffin pencil. Then the column of blood is allowed to travel up the pipette for a short distance when the emulsion of bacteria is drawn into the pipette to the mark made with the paraffin pencil. The column of blood and the column of bacterial emulsion are now thoroughly mixed by forcing them out on a clean slide and drawing up the mixture. This is repeated several times. After thoroughly mixing, one drop of the mixture is placed near the end of a clean slide and the edge of another slide is drawn over the first, spreading the mixture of blood and emulsion in a thin layer. This slide is now allowed to dry. It is fixed either by heat or alcohol or bichloride and stained in the ordinary way. The stained slide is now examined under a microscope which is fitted with an Ehrlich eye-piece.

#### Standardization of Bacterins

Computing number of bacteria per c. c.

Field	Erythrocytes	Bacteria

15	36	72
Total	500	750

500:750::5,000,000:X (7,500,000).

Then in 1 c. c. there are 7,500,000,000.

In 1902, Besredka, working in the Pasteur Institute, produced an improved form of bacterial vaccine to which the names, sensitized-vaccine, sero-vaccine, senso-vaccine, sero-bacterin and senso-bacterin, have been applied. Sensitized bacterial vaccines are prepared by mixing homologous immune serum and corresponding bacteria, permitting the mixture to stand for a time, and then centrifugalizing the bacteria out of the serum and washing them entirely free by repeated centrifugalization with saline solution. The bacteria attract to themselves the specific part of the proteolytic ferment which the immune serum contains, and are thus prepared for digestion by the body cells and blood serum of the individual treated.

To make what happens clear, it is necessary to consider the structure of the digestive ferment produced by the body cells for the digestion and destruction of infecting bacteria.

Professor Victor C. Vaughan of the University of Michigan, and now president of the American Medical Association, says that all enzymes consist of *amboceptor* and *complement*. Let us therefore consider these two principles and their functions.

When an animal is immunized against a certain bacterium by injecting it into his tissues or in other ways introducing it into his body, a substance appears in the serum with a

combining affinity for that particular organism. To this substance several names have been given. Bordet calls it *substance sensibilisatrice*. Ehrlich refers to it as the *immune body*. It is specific; *i. e.*, it appears only on call of the corresponding bacterium, although normal serum is said to contain a small amount of non-specific amboceptor. It is comparatively stable, resisting usually a temperature of 70°C. for an hour. Its function is to sensitize the bacterium calling it forth, and thus to prepare it for the joint digestive action of amboceptor and complement. Complement is a principle which is always present in the normal blood serum of animals and man. It is spoken of under various names—*complement* (Ehrlich), *alexin* or *cytase* (French authors). It is relatively unstable, being rapidly destroyed at 60°C. It is not specific; it is not increased by the process of immunization. Its function is to digest infectious agents after they have been sensitized or prepared for digestion by amboceptor.

The specific power of the blood serum to digest and destroy a certain bacterium is enormously increased by the immunizing process, *i. e.*, the process that goes on in the animal body after the introduction of the bacterium. The serum of an immunized animal is called *immune serum*. In its relation to the bacterium that called it forth, it is *homologous*.

It is, of course, proper to infer that the blood serum of the individual suffering with an infectious disease contains homologous immune serum, and that such serum contains specific proteolytic amboceptor. Consequently, when an ordinary bacterin is injected there ought to be sufficient specific amboceptor in the patient's blood serum to prepare the injected bacterium for digestion by the body cells and sufficient complement present to digest it. But the fact that the invading bacteria are both stimulating the body cells to produce enzymes and are using up the enzymes produced, should not be lost sight of. Therefore it is of great advantage to *sensitize* the bacterin before injecting it and thus to insure its immediate digestion when used as a therapeutic agent.

This advantage is the more apparent when the sensitized bacterin is employed as a prophylactic. The British Army Commission concluded from their investigations of typho-bacterin immunization against typhoid fever that eight or ten days elapse after injecting the bacterin before an immunizing response occurs. Besredka and his followers claim that an efficient immunizing response follows the injection of a sensitized bacterin in from 24 to 48 hours. The great advantage of this fact in combatting epidemics is apparent.

The claims for sensitized bacterial vaccines made by Besredka are thus summarized: (1) They produce but slight local reaction (inflammation at the site of injection); (2) they cause no general reaction (malaise, increased temperature, etc.); (3) they may be given in much larger doses and much more frequently than the unsensitized bacterins (every 24 hours); (4) the immunizing effect is almost immediate (manifesting itself within from 24 to 48 hours); (5) they sometimes give successful results in very late stages of a disease when no response is secured from the ordinary bacterins and even serum treatment is ineffective.

In one of his most recent articles, Besredka states: "Whatever the nature of the virus, whether the microbes of plague, dysentery, cholera, or typhoid fever, or whether the virus of rabies, or the toxin of diphtheria, whether the microbes are killed or living, sensitization confers upon them properties which convert them into vaccines of the first order, possessing an action which is sure, rapid, inoffensive and durable."

This brings us to the question of serums as prophylactic and therapeutic agents.

(To be Continued)

#### Salol Mouth Wash.

Salol	½ ounce
Thymol	22 grains
Spirit of anise	96 minims
Oil of peppermint	48 minims
Elixir of gluside, B.P.	½ fl. ounce
Alcohol, enough to make	20 fl. ounces

Dissolve the thymol and salol in 10 fl. ounces of alcohol, heating gently if necessary; then add the oil of peppermint, spirit and anise, elixir of gluside, and alcohol. Filter.

## Office Dispensing and the Druggists \*

By O. J. S. BOBERG, Eau Claire, Wis.

HERE can scarcely be any doubt about it that the dispensing doctor is here to stay. The physicians' supply houses and some of the manufacturing pharmacists will surely see to it that there be no retrograde movement in the present state of affairs. It would therefore seem that the sensible thing to do for the retail druggist is to try to make the best of conditions as they are, and at the same time endeavor to improve on these conditions. This can be done, in more ways than one.

If the druggist, who bewails his lost prescription business and denounces the dispensing doctors, would only stop to think, he would soon discover that the chief causes why physicians dispense are, in the first place, because of the persistent work done by the traveling representatives of the physicians' supply houses, and, in the second place, because of his, the druggist's own, gradual perhaps, unconscious withdrawal from the professional side of pharmacy.

By looking over the contents of the shelves in an average drug store it appears that more time is being spent by some druggists listening to silver tongued oratory from members of the traveling fraternity and loading up on ready made compounds, with more or less free goods thrown in, than there is time spent by the same druggists in making U. S. P. or N. F. galenical preparations. A reversal of this would, without doubt, soon prove beneficial in bringing doctors and druggists nearer together. Many of the simpler preparations used and dispensed by physicians can easily and profitably be made by the druggist and sold to the doctors at the same prices charged by physicians' supply houses or wholesale drug houses. Complicated formulas, requiring more time in putting up, may be ordered in suitable quantities from manufacturing pharmacists and kept on hand when wanted. In towns, where there are several dispensing physicians a tablet machine would, no doubt, prove a good investment. Get your pharmaceutical equipment, make or buy your stock and, next, get in touch with the physicians.

Be frank with the doctor and have him thoroughly understand that you, as a professional pharmacist, stand ready to serve him by preparing his medicines, be it by filling his prescriptions or furnishing him medicines for dispensing purposes. Find out just what the doctor wants and start right in filling his orders, at prices which are fair to the doctor and fair to yourself. If the doctor wants a certain ointment, put it up for him in one pound lots, or in one ounce jars, a half dozen or a dozen at a time. If a doctor wants an antiseptic solution or a certain elixir, put it up for him by the quart or by the gallon.

Buy your supply of gauze bandages, absorbent cotton, adhesive plasters, clinical thermometers, hypodermic syringes and needles in quantity lots, direct from manufacturers, so as to get jobbers' discount, and re-sell to the physicians at jobbers' prices. Keep also a good stock of biological products, such as antitoxins, bacterins and vaccine. The writer has worked up a nice business in this line by taking care always to have on hand a fresh supply, which is kept at the proper low temperature, and by selling all biological products to doctors at list price, less ten per cent. Have on hand, always, a supply of test tubes, C. P. nitric acid, Fehling's solution, microscopical stains and other items, commonly used by physicians in the office. Call the doctor's attention to the splendid formulas contained

in the N. F., and occasionally offer to make samples of U. S. P. and N. F. preparations.

By proving to the doctors that you not alone are willing to serve them, but that you have the ability to do so, and the stock to do it with, you will, no doubt, soon gain their good will, and it is not at all unlikely that you will notice an increase in your prescription business.

Thus, office dispensing, in its relation to the retail drug trade, may be made a profitable proposition for the doctor as well as for the druggist, and by showing some activity and making the efforts, as outlined in this paper, the druggist, besides the financial gain, will also have the satisfaction that he has done his duty to his chosen profession as a pharmacist.

O. J. BOBERG.

## Corrosive Sublimate Antidote \*

By WILLIAM A. HALL, Ph. B., Detroit, Mich.

WITH the publicity attending a fatal case of corrosive sublimate poisoning of a Southern banker a few months ago and as usually obtains following the detailed description of such events in the daily press a marked increase in the use of that poison for suicidal purposes, the thought must have occurred to many, "How best to divert the public attention from this poison and what is an effective antidote?"

It is not for us to discuss the surgical methods used in a few cases after the poison has entered the circulation, but what what can be done at the outset in the way of mechanical relief by means of the stomach pump and emesis, the administration of albumen and mucilage or oils to retard the absorption in the stomach and intestines. These general points will all occur to the good practitioner but he wants something else on which he can rely as an antidote. Studying over these matters, about a year ago an idea came to me that by using one of the general alkaloidal reagents in reverse manner, we could solve the problem.

Obviously whatever was tried should be safe in itself, and not make a bad matter worse, and also the employment of medicines beneficial in themselves even if they failed in attaining the special object desired.

With such limitations I settled on the well known Mayer's Reagent which as you all know, is a solution of mercuric potassium iodide, a general precipitant of the alkaloids. Selecting quinine as the alkaloid to harness, I considered if we could administer the requisite potassium iodide and quinine in solution, after emptying the stomach, we could fill out Mayer's formula and the result would be (Mercuric Chloride—Potassium iodide—Quinine salt) insoluble in the acid gastric juice, and as will be shown later insoluble in the dilute alkaline intestinal liquids as certainly as we can tell from bottle reactions. While all my work was done in grammes, the results, excepting Mayer's formula itself, are given in grains—the more popular term.

Mayer's reagent N I — 20 is

Mercuric chloride ..... 6.775 grammes  
Potassium iodide ..... 25.000 grammes  
Distilled water to make 1 Litre.

(You will notice the HgCl<sub>2</sub> to KI is about 1 to 3.75)

I c. c. Mayer's reagent N I — 20 =

.025 Potassium iodide  
.006775 Mercuric chloride  
precipitates (approx.) .0056 Quinine (Lyons)

Gravimetric factor for alkaloid (averaging, Lyons) .311

It is stated by authorities (U. S. D.) that Mayer's solution is HgI<sub>2</sub>+2KI, but on the basis of his proportions it would seem to be HgI<sub>2</sub>+4KI.

271     996  
HgCl<sub>2</sub>+6KI = HgI<sub>2</sub>+2KCl+4KI  
271 : 996    : : 6.775 : x = 24.9  
6.775 : 25    : : 2        : x = 7.38  
6.775 : 24.9 : : 2        : x = 7.35

and the formula seems to provide a slight excess of potassium iodide

HgCl<sub>2</sub>+4KI = HgI<sub>2</sub>+2KI+2KCl  
HgI<sub>2</sub>+2KI+QCl—2aq. = HgI<sub>2</sub>—KI—QI+KCl

corresponding to

\*Read before the Wisconsin Ph. A., Delavan Lake, 1914.

\*Read before the A. Ph. A., Detroit meeting, 1914.

Mercuric chloride	2 grains	
Potass. iodide	4.9 "	Modified Mayer's
Quin. muriat	4 " (2.91)	
Mercuric chloride	2 grains	
Potass. iodide	7.5 "	Mayer's
Quin. muriat	4. " (2.91)	

The filtrates in both bases were free from mercury H<sub>2</sub>S or K<sub>2</sub>S<sup>+</sup>. The *modified* Mayer filtrate showed very slight test for iodine (HNO<sub>3</sub>+chloroform). Filtrate from *Mayer* tested a little stronger but still slight.

In both equations, however, there is no appreciable solvent action of the potassium iodide in solution on the precipitate which in Mayer's was 6.64 grains. Modified Mayer's 4.00 grains.

Choosing quinine hydrochloride because of its solubility, the following formula was constructed:

Mercuric chloride	2 grains
dissolved in H <sub>2</sub> O	2 ounces
Quinine hydrochloride (large excess)	.20 grains
Potassium iodide	7.5 grains
Hydrochloric acid 10%	.55 minims
dissolved in H <sub>2</sub> O	4 ounces

Mix the two solutions which you observe contain acid to make the whole 2-10 of 1% and filter after two hours on a tared filter. Wash and dry to constant weight on the water bath.

Weight dried precipitate	6.64 grains
Duplicate	6.625 grains

To determine if a small excess of potassium iodide in presence of quinine muriate has an appreciable solvent action on the precipitate trial was made using

Mercuric chloride	1 grain
Potassium iodide	7.5 grains
Quinine muriate	4 grains

Net weight of precipitate dried on water bath to constant weight: .210 gramme=3.24 grains

which is practically the same proportion and answers the question in the negative.

Filtrate evaporated to dryness in tared dish on water bath =16.4 grains. Using the gravimetric factor .311 (Lyons) for the *alkaloid* and calculating the salt from that the ppt. of 6.64 grains=2.54 QHCl.

Residue from filtrate	16.4 grains
Deduct KCl (1 mol)	.553 grains
Deduct KI (excess)	.15 grains
	7.03 grains

	15.697 grains
add water of crystallization	1.57 grains
	17.267 grains

20.—17.267=2.733 grains

Two grains Mercuric chloride then in acid solution were precipitated as an insoluble mass by 2.54 grs. QHCl+7.5 grs. potass. iodide in aqueous solution.

Calculated from residue of filtrate	2.733 grs.
Theoretically from above formula	2.19 grs.

Gm. 0.2 of the alkaloid precipitate was rubbed up with 250 c. c 2 10 of 1% Na<sub>2</sub>CO<sub>3</sub> solution, shaken vigorously at frequent intervals for several hours, filtered and residue on tared filter evaporated to dryness on water bath.

Weight of residue.....Gm. .180 showing the maximum solvent action of the dilute alkali to have been 20 mg., or less than 1/3 grain. As some of the mercuric antiseptic tablets sold contain one-third of citric acid the action of that acid was considered, in presence of mercuric chloride on albumen solutions and also on the antidote described in this paper.

With the *antidote* no hindrance but rather a more complete precipitation was noted.

With *albumen* solutions the following reactions were observed:

Solution of albumen is precipitated by HgCl<sub>2</sub>, but this is prevented if an appreciable amount of citric acid is previously added to the mercury solution.

Mercuric chloride+HCl (1%) is precipitated by albumen, insoluble in excess of HCl and practically insoluble in citric acid (large excess).

Mercuric chloride+Citric acid is *not* precipitated by *albumen* except in rather large excess, but on further addition of dilute HCl (1%) a copious precipitate occurs. In case you have added a large excess of albumen there is no mercuric salt in the filtrate (H<sub>2</sub>S).

Albumen (in excess) acidulated with 1% HCl remains clear; but on further addition of 1% mercuric chloride solution a heavy precipitate falls. The filtrate shows a faint yellow coloration with H<sub>2</sub>S but no ppt. even on standing.

Mercuric chloride (1%)+HCl (1%)=no ppt.

On further addition of albumen a heavy precipitate unchanged by adding HCl in excess.

Mercuric chloride+albumen in excess, a light precipitate partially soluble *at first* in HCl but precipitating again shortly.

Mercuric chloride+Citric acid is *not* precipitated at first, but adding albumen in large excess a precipitate falls and on further addition of HCl a copious precipitate falls. No mercury in filtrate.

To sum up:—Remove the stomach contents as thoroughly as possible; give plenty white of eggs and remove in the best way, then for every 2 grains of mercuric chloride supposed to have been taken administer the following:

Potassium iodide	7.35 grains
Quinine hydrochloride	4 grains
Dissolved in water	4 ounces

It forms a precipitate with the mercuric chloride, insoluble in dilute acids or alkali carbonates (2%). While investigating these reactions I found another equation using 4.9 grains potassium iodide would work, but the precipitation is not so rapid or complete, nor does the precipitate separate as quickly, an important point.

A solution could be kept on hand ready for use of the formula above with the addition of HCl to make it 2/10 of 1%.

The study and analyses of the subject are somewhat intricate and perplexing, especially as to the composition of the precipitate with Mayer's reagent but the results for our purpose seem clear, well defined and simple. The well known chemicals Quinine Muriate and Potassium Iodide are obtainable at any good drug store and with the proportions given, good results may be expected in accordance with my tests. A notable *excess* of the *iodide* is to be *avoided*, an excess of quinine does not harm but the proportions given should be followed.

It is to be hoped that these suggestions of the writer will be tried physiologically, and medical men use the results given in this paper to help solve a serious problem.

## NEW REMEDIES

**Iodeol** is an electrically prepared colloidal suspension of iodine, of 20 per cent. strength, in sterile oils, and is extremely active. It is administered in tuberculosis, etc., by intramuscular injection or is taken internally.

**Castycal** contains chestnut leaves, thyme, and potassium sulpho-guaiacolate, with aromatics. It is to be employed in all affections of the lungs, influenza, grippe, asthma, etc.

**Gramonervin** is a new hay-fever remedy which contains butyl-chloral hydrate and calcium glycerophosphate in tablet form.

**Thigan** is said to be a combination of thigenol and silver, containing 1 mg. of silver in each cc. It is used by injection in gonorrhoea.

**Haemaphilin** contains iron "caseino-tartrate," calcium glycerophosphate, sodium salts, carbohydrates, and 45 per cent. of cacao. It is recommended in chlorosis, anemia, rachitis, etc.

**Kleol** is a substitute for mastisol, consisting of Venice turpentine, mastic, rosin, and colophony, dissolved in alcohol.

**Gynormon** is a stable ovarian preparation, each tablet of 0.25 g. representing 0.5 g. of fresh pig's ovaries.

**Menogen** is an ovarian preparation with iron and arsenic, consisting of a mixture of Arsen-metaferrin with Gynormon. It is used in doses of 1 to 2 tablets daily, in menstrual disturbances.

## Proprietaries in Great Britain

(From our London correspondent)

THE report of the Parliamentary Committee on Proprietary Medicines which has been long awaited has now made its appearance. It constitutes a powerful and fearless attack on the patent medicine interests, and there can be no denying that the character of the report comes as a shock to the proprietors. The report is a very lengthy one but I will endeavor to give as fair a summary as possible in a brief space. At the outset I should mention that the Committee examined 42 witnesses, of whom a large number represented proprietary medicine interests, and that the object of the inquiry was to consider what alteration in the law is necessary to check abuses connected with the traffic.

### The Value of the Trade

Evidence showed that something like \$15,000,000 are spent in Great Britain each year on proprietary medicines, and the following details give some idea of the value of individual concerns:—The annual turnover of the proprietor of "Beecham's Pills," selling over a million pills a day, Sundays included, is about \$1,800,000 a year. The proprietors of "Siegel's Syrup," who have sold 100 million bottles in forty years, pay upwards of \$200,000 a year in wages alone. The proprietors of "Wincarnis" spend on advertising \$250,000, employing between thirty and forty persons in their advertising bureau. "Elmer Shirley" spent at one time \$5,000 a week. The proprietors of "Daisy" powders, a comparatively small business, spend \$15,000 a year. The late A. L. Pointing is believed to have spent \$100,000 a year in advertising an "alcohol cure" called "Antidipso." At his death he left \$400,000.

### America's Share in the Trade

The only reference in the Report to the United States (with the exception of a summary of American legislation) is the following paragraph:—"There is no record at the Custom House of the importation of these preparations. It is therefore impossible to discover from our own records the respective proportion of home-made and imported remedies, but without doubt a large quantity comes from the United States. Professor Cushny stated that this has increased of late, owing to greater restrictions upon their sale there. As he put it: "We are getting the benefit of the legislation of the United States. We are getting a lot of quack remedies which were formerly confined to the United States." These enter free of all import duty except upon their content of materials in themselves dutiable. One witness quoted an official American statement to the effect that "about 15,000,000 packages of proprietary remedies were exported from the United States to this country in 1911 of a total value of about \$2,000,000."

### Absence of Restrictive Legislation

The situation as regards the sale and advertisement of proprietary medicines is summarized in one sentence as follows:—"For all practical purposes British law is powerless to prevent any person from procuring any drug or making any mixture whether potent or without any therapeutical activity whatever (so long as it does not contain a scheduled poison), advertising it in any decent terms as a cure for any disease or ailment, recommending it by bogus testimonials and the invented opinions and facsimile signatures of fictitious physicians, and selling it under any name he chooses, on the payment of a small stamp duty, for any price he can persuade a credulous public to pay. The Report gives a number of instances in which extravagant and fraudulent claims are made by proprietors of secret medicines and among the examples are the names of many remedies that are known all over the world.

### The Recommendations

The conclusion arrived at by the Committee and the recommendations made constitute, of course, the most important part of the Report. Briefly, the most important points are as follows:

(1) That proprietary remedies are of widely differing characters, comprising (a) genuine scientific preparations; (b) unobjectionable remedies for simple ailments; and (c) many secret remedies making grossly exaggerated claims of efficacy, causing injury by leading sick persons to delay in securing medical treatment, containing in disguise large pro-

portions of alcohol, sold for improper purposes, professing to cure diseases incurable by medication, or essentially and deliberately fraudulent.

(2) That this last-mentioned class (c) of remedies contains none which spring from therapeutical or medical knowledge, but that they are put upon the market by ignorant persons, and in many cases by cunning swindlers, who exploit for their own profit the apparently invincible credulity of the public.

(3) That this constitutes a grave and widespread public evil.

(4) That grave injury is caused to the public by the existing large sale of medicated wines.

(5) And that while it is not desirable to require the exhibition of formulas of every secret remedy, nevertheless it is improper that under the protection of the law enormous quantities of alleged remedies should be sold the composition of which is unknown to any person except the manufacturers of them; and that, therefore, the formulas of all secret remedies should be required to be communicated to a competent officer appointed under the authority of a Minister of State, but that such formulas should not be divulged.

### Recommendations of the Committee

The Committee recommends (1) that the administration of the law governing the advertisement and sale of patent, secret, and proprietary medicines and appliances be co-ordinated and combined under the authority of one Department of State.

(2) That an exact and complete statement of the ingredients and the proportions of the same of every patent, secret, and proprietary remedy; of the contents other than wine, and the alcoholic strength of every medicated wine, and a full statement of the therapeutic claims made or to be made; and a specimen of every appliance for the cure of ailments other than recognized surgical appliances be furnished to this Department, such information not to be disclosed except as hereinafter recommended, the Department to control such statement, at their discretion, by analyses made confidentially by the Government chemist.

(3) That a special Court or Commission be constituted with power to permit or to prohibit in the public interest, or on the ground of non-compliance with the law, the sale and advertisement of any patent, secret, or proprietary remedy or appliance, and that the Commission appointed for the purpose be a judicial authority, such as a metropolitan police magistrate sitting with two assessors, one appointed by the Department and the other by some such body as the London Chamber of Commerce.

(4) That a registration number be assigned to every remedy permitted to be sold, and that every bottle or package of it be required to bear the imprint "R.N." (with the number) and that no other words referring to the registration be permitted.

(5) That the Department be empowered to require the name and proportion of any poisonous or potent drug forming an ingredient of any remedy to be exhibited upon the label.

(6) That every medicated wine and every proprietary remedy containing more alcohol than that required for pharmacological purposes be required to state upon the label the proportion of alcohol contained in it.

(7) That the advertisement and sale (except the sale by a doctor's order) of medicines purporting to cure the following diseases be prohibited:—Cancer, consumption, lupus, deafness, diabetes, paralysis, fits, epilepsy, locomotor ataxia, Bright's disease, rupture (without operation or appliance).

(8) That all advertisements of remedies for diseases arising from sexual intercourse or referring to sexual weakness be prohibited.

(9) That all advertisements likely to suggest that a medicine is an abortifacient be prohibited.

(10) That it be a breach of the law to change the composition of a remedy without informing the Department of the proposed change.

(11) That fancy names for recognised drugs be subject to regulation.

(12) That the period of validity of a name used as a trade mark for a drug be limited, as in the case of patents and copyrights.

13. That it be a breach of the law to give a false trade description of any remedy.

There are other recommendations but the above are the most important. These proposals cannot of course take effect until they are embodied in an Act of Parliament. It is inevitable that any steps will be taken to introduce legislation at present, but in due course a Bill is sure to be framed to give effect to the recommendations.

### Jottings from Great Britain

*By our London correspondents*

#### Pharmacists and the War

YOU will no doubt be wondering what effect the great European War is having on pharmacists in Great Britain. The fact is that it is having surprisingly little effect except that prices of something like a hundred drugs have advanced very considerably but with this aspect I shall deal in the next paragraph. It is true that many young pharmacists have volunteered to fight and that business, especially in "side lines" is much quieter but nothing has happened as yet to cause any widespread loss or inconvenience. You could make a tour of English pharmacies, in fact, without observing any difference in the state of affairs as compared with an ordinary summer season. Of course the war is the one topic of conversation but nobody is down-hearted and everybody looks on the bright side of things. The price of food is practically normal; one or two articles are slightly dearer, but on the other hand, fruit is abnormally cheap and on the whole housekeeping expenses are unchanged.

#### The War and the Prices of Drugs

It goes without saying that one of the effects of the war has been a considerable increase in the price of drugs. Nearly all drugs are affected to some extent but especially those which are either made on the Continent or those in the manufacture of which raw material of German origin is essential. Some examples are as follows:—Acetanilide has doubled in price; acetyl salicylic acid has quadrupled; artificial benzoic acid has doubled as also has carbolic acid while permanganate of potash has trebled; gallic acid, tannic acid, bromides, cantharides, citric acid, cocaine, phenacetin, antipyrin and sulphonal are at least doubled in price. The above are only a few examples. Among drugs which have not been affected to the same extent are opium and its alkaloids, quinine, mercurials, cod liver oil, etc. Resorcin is about four times the normal price and chloral hydrate three times. There is, however, nothing in the nature of a panic and doctors have been instructed by the Government to be as economical as possible in prescribing.

Shortly after the outbreak of the war information came into the possession of the Government indicating that speculative purchases were taking place of certain drugs of value to the community, the supply of which was at present limited. The Government has therefore extended to drugs the Act which enables the Board of Trade during the present war to take possession of food-stuffs in the public interest. This Act has now been put in force to prevent holders of stocks of commodities which are in restricted supply in consequence of the war from unreasonably keeping such stocks off the market. The measure empowers the Government to require any person who is ordered so to do to give particulars of any drug of which he is the owner; the Government is also empowered to enter premises for the purpose of testing the accuracy of the information supplied by the holder, and to take possession, under certain conditions, of any supplies that are being unreasonably withheld from the market, paying the owners such price as may be decided to be reasonable. These precautions have prevented undue advances in prices. The position is well summed up by one of the leading firms of wholesale druggists who point out that:—Many articles made in this country are dependent for one or more ingredients on a country affected by the war (as Epsom salt). Many articles are manufactured or grown only in Germany and Austria, with which countries we are at war, and so cannot be replaced until the war is over (as salicylates and many synthetic chemicals). Other articles come from France, Russia and Belgium, which are in a state

of war, and in consequence the goods cannot be transported from the factories to a port for shipping (as French essential oils, Russian ergot, etc.). There is also a difficulty in getting goods from countries that are neutral (as olive oil from Italy and oil of lemon from Sicily), as exportation is precluded. Many articles have been bought up by the Government to satisfy the requirements of the Navy and Army and must remain scarce until new supplies can be either manufactured or imported.

#### The War and Synthetic Drugs

Parliament has passed an emergency Act giving facilities to British subjects to use patents granted to Germans and Austrians, and manufacturers are making provision for the manufacture of synthetic drugs and fine chemicals. The Government has also appointed a committee to consider and advise as to the best means of obtaining for the use of British industry sufficient supplies of chemical products, colors and dyestuffs of kinds hitherto mainly imported from Germany.

#### A New Bankruptcy Act.

A new bankruptcy act has just come into force which strengthens very considerably the law concerning insolvent debtors. It is enacted in one of its provisions that a foreigner, who though resident abroad carries on business in England, or is a member of a firm carrying on business in England, may be made bankrupt, thus revising a judicial decision of the House of Lords under the previous law. It makes it an offence for any insolvent person, who has on any previous occasion been adjudged bankrupt, to fail to keep proper books of account, and it makes it a criminal offence for any person who has been adjudged bankrupt to have materially contributed to or increased the extent of his insolvency by gambling or by rash and hazardous speculation unconnected with his trade. An undischarged bankrupt, who obtains credit to the extent of \$50 or upward without informing the creditor that he is an undischarged bankrupt, is liable to prosecution, and an undischarged bankrupt, who trades under an assumed name without disclosing his position, commits an offence. The new act also brings married women within the law.

#### The Late T. J. Barratt.

T. J. Barratt, managing director of the Pears' Soap business, died on April 26 at the age of 72. He was a pioneer in the modern method of advertising, and was well known in America. At the Philadelphia Centennial in 1876 there was a tendency among exhibitors to show things a hundred years old. One American house displayed a carpet that had been imported in 1776 and used until threadbare. Mr. Barratt thought he would go one better, and as he happened to have a cake of Pears' Soap which was 50 years old he put it in a glass case and with it a card on which was printed:

: . . . . . :  
: This piece of soap is half as old as the :  
: American Constitution, and twice as good. :  
: . . . . . :

At the same exposition he recalled the circumstances which led to the formation of the American Republic by having printed this contrast.

: . . . . . :  
: 1776 :  
: Import duty on tea, 6c. per lb. :  
: :  
: 1876 :  
: Import duty on Pears' Soap, 20c. per lb. :  
: . . . . . :

This, said Mr. Barrett, caused such consternation among patriotic Americans that the British Commissioner had to interfere and all the Pears' placards were taken down. It is estimated that Mr. Barratt spent \$15,000,000 in advertising during his career.

#### Working Hours for Drug Clerks.

The National Amalgamated Union of Shop Assistants, Warehousemen and Clerks is promoting a bill which provides, among other things, for a 60-hour week, inclusive of meal-times; the ultimate aim of the Union is a "48-hour working week." Unless the mood of Parliament changes vastly there is little hope that these demands will be satisfied.

## Commissioner Goldwater Explains New York City's New Narcotic Law

**In an Exclusive Interview, the Commissioner of Health Points Out the Salient Features of Section 182, and Explains the Motives Underlying Its Revision—Says Druggists Will Benefit Through Increased Prescription Business—Other Measures for Protection of the Public Health May Be Expected.**

Section 182 of the Sanitary Code of the City of New York, relative to the selling of opium and morphine and their derivatives by druggists, was amended on July 28th at a meeting of the Board of Health by the adoption of the following resolution:—

Resolved, That Section 182 of the Sanitary Code be and the same is hereby amended, to take effect immediately, so as to read as follows:

**SECTION 182.** No cocaine or salts of cocaine, alpha or beta eucain, either alone or in combination with other substances or any substance under any other name giving a physiological reaction similar to the physiological reaction of cocaine; and no opium or preparation of opium, and no morphine or salts of morphine, and no cannabis indica or preparations of cannabis indica, or the derivatives of either or any of the substances named herein, shall be held or offered for sale or sold or given away at retail, by any person in the City of New York, except upon the written prescription of a duly licensed physician, veterinarian or dentist.

Nothing hereinbefore mentioned, however, shall apply to compounded mixtures containing opium or morphine or cannabis indica or their derivatives for external use only, in the form of liniments, ointments, oleates or plasters.

Under the unrevised section, druggists were permitted to sell compounded mixtures of the above-mentioned drugs, provided the formulas were in conformity with the standards of the U. S. P. or National Formulary, and provided that the maximum dose of such mixtures did not contain more than one-half grain of powdered opium or the equivalent of its alkaloids, the opium content being plainly stated on the label of the package as dispensed. (Popular mixtures barred from counter sale.)

The revised section prohibits the druggist from selling without a prescription such common remedies as brown mixture, syrup of pine, Warburg's tincture, Sun or any of the N. F. cholera mixtures, Stoke's expectorant, and many similar preparations. Many retailers affected by this ruling deem the revised section to be a direct blow at the druggist, and some have even expressed the opinion that the revision of the section was merely done to augment the practice of physicians in New York City. It has also been held that the revised section was contrary to the spirit of the Boylan law, which permits the sale in New York State of mixtures containing not more than two grains of opium, one grain of codeine, etc., without a prescription, and that by prohibiting the New York City druggist from selling over the counter goods that could be sold anywhere in the State outside of the corporate limits of the city, a discrimination was being made against the city druggist which was unwise and unlawful as well.

In order to present in a fair and unbiased manner the motives actuating the revision of this statute, the ERA requested an interview with Commissioner Goldwater on the subject, which request was courteously and immediately granted. In addition to the general statement which Commissioner Goldwater made he referred to Deputy Commissioner Haven Emerson for full information as to the circumstances which produced the revised section. Deputy Commissioner Emerson having been in charge of the work which resulted in the revision.

### The Reason for the New Ordinance

Deputy Commissioner Emerson said, in commenting on the Section:—

"The conservation of public health is the ever-increasing aim of the Board of Health, and the revision of section 182 was made solely with that idea in view. The American people have been falsely educated away from reliance upon the physician for competent advice and attention in minor ailments, and the resulting habit of self-medication is leading

to harmful and dangerous results. We believe that the man who is sick needs the doctor first, and the druggist afterwards, and that much unnecessary suffering and economic waste through illness would have been prevented had the sufferer gone to a physician when he first noticed the symptoms of his disease, instead of depending on self-medication until the disease had progressed so far that prompt and strenuous work was often necessary on the part of the tardily-called physician to prevent chronic illness, or possibly death.

"As regards the so-called home remedies, affected by this ruling, such as brown mixture, Stoke's expectorant, syrup of white pine, etc., we believe that the opium or morphine content makes these preparations dangerous unless taken under the supervision of a physician. A tablet of brown mixture contains 1/25 of a grain of opium. The druggist tells the purchaser to take a tablet every hour or so until relieved. Many people argue that 'if one is good, two are better,' and the patient takes a tablet as often as he thinks about it, possibly every half-hour, until in the course of a day he has taken twenty-five or thirty tablets, and goes to bed at night practically doped from the grain or more of opium he has taken during the day. The use of paregoric in the treatment of children's ailments is liable to be pernicious, unless given under and according to physician's advice, and the child's health suffers through the constant sedative action of the drug which his mother buys by the bottle and administers by the spoonful whenever he cries. Paregoric fiends are by no means uncommon, and any drug that is capable of producing an appetite for it is best kept away from free access by the general public.

"Some two or three years ago the hospitals in New York City gave up the use of opium entirely, and substituted other less harmful sedatives because of the insidious action of the drug.

"This revised section will in a large measure awaken the public mind to the dangers which lurk in the use of mixtures containing habit-forming drugs. The Pure Food and Drugs Act did more to arouse people to the dangers in the use of artificially colored and preserved foods, and alcohol-saturated preparations, than did all the hygienic movements of the previous twenty years. So will this statute, properly enforced, awaken people to the fact that mixtures with an opium or morphia content are injurious and should be shunned. The revised statute does not cause any loss of sales to the druggist, by prohibiting him from selling the common remedies to which reference has been made. For instance, Warburg's tincture, containing opium, cannot now be sold over the counter, but Warburg's tincture, without opium, can be sold to anyone asking for it. This preparation, with and without opium, has been freely sold to the public heretofore, as has the same tincture with and without aloes. If this preparation has been prepared and used successfully without the opium content, then these other mixtures can be prepared without the sedative ingredients, and lose nothing of their real therapeutic value, so that under the new ruling, when a man asks for brown mixture tablets, he can get a bottle of tablets, without opium, which will have just as much effect on his cold as though the opium were present. He will not be doing the wisest thing, which would be to obtain medical advice in the treatment of his cold, but he will at least be taking a medicine which, whether it helps him or not, cannot harm him through its sedative or habit-forming content."

### Commissioner Goldwater Explains the New Ruling

Commissioner Goldwater reiterated the idea expressed by Deputy Commissioner Emerson concerning self-medication and its prevention. "The general intent," he said, "of the revised section is to curtail to some degree the promiscuous and dangerous self-medication so common in this country at the present time, a habit which is one of the most deadly factors in existence against a better public health. For example, a

man may be suffering from an incipient tubercular affection, and he develops a cough. He goes to the druggist, who gives him one of the popular cough mixtures, which probably contains opium or morphine. The mixture may ease the cough, and allay the pain, but the tubercular infection is growing worse all the time, and when the man finally goes to a physician he has passed from the curable to a more advanced stage, and the final result of his delay may be death. If this man were discouraged from buying medicines without a prescription he would have gone to a physician in the first instance, and might then have received advice and treatment which would have resulted in the arrest of his disease while still in the early stage of its development. The manufacturers of many of the mixtures affected by the revised section claim that the opiate content in their remedies is so small as to be negligible. If this is so, then of what value is its presence in the formula? But if, as it is more logical to believe, the opiate is present to such an extent that its influence is felt, then these remedies are dangerous because they mask the symptoms of the disease by allaying pain, and every physician knows the value of pain as a guide in diagnosis. Besides this, I believe that the continued use of a mixture containing opium or some similar drug will result in a drug-habit.

#### Boylan Law and Revised Statute do not Conflict

"The revised section in no way conflicts with the Boylan law, which is the law under which the general practice of pharmacy as regards the sale of opiates is regulated throughout the State. The Boylan law does not state that a druggist shall be allowed to sell opium-containing mixtures without a prescription, but it merely says that this particular law does not forbid him to do so. The Board of Health has the right to make such regulations for the promotion of public health in its jurisdiction (New York City) as it may see fit, and it may impose local regulations and requirements in addition to those stated in the statutes of the Commonwealth. This section cannot be construed as being discriminatory from the point of view of the city; it does discriminate between the city and the rest of the State, but so also does every local or municipal ordinance. Such discrimination is, in its essence, home rule. While the ordinance prevents the New York City druggist from selling mixtures that his confrere in Buffalo, for instance, can sell, still the city druggist is able to assure his customer that any remedy which is sold over the counter cannot induce a drug-habit of any sort, and the increased confidence in the customer's mind relative to the harmlessness of the remedies he buys will be of great value to the druggist.

"Section 182 was revised only after careful consideration of all sides of the question, and full opportunity was afforded druggists and manufacturers to present their own viewpoints. Does the New Law Foster Unnecessary Red Tape?"

"Isn't it true," the Commissioner was asked, "that a man often goes to a physician, suffering from a cold, and the physician, after a cursory examination, writes a prescription for one of the mixtures affected by this section, so that the man gets the same medication he would ordinarily have gotten, but is forced to pay 'prescription prices' for it, plus the doctor's bill?"

"That is true," the Commissioner replied, "in the case of some physicians who are derelict in their duty and for whom their brother practitioners have the profoundest contempt. No physician worthy the name will offer any medical advice until he has made a thorough examination of the patient, and while many mixtures containing opiates are prescribed, and very legitimately so, the point is that the patient does not use these opium-filled mixtures until the physician tells him to do so, and the physician, knowing what the man is taking, can keep proper watch over him, so that no untoward effects will result from the medication.

"It has been suggested that by thus forcing a man to go to a physician we are gradually building up a monopoly for physicians, to the detriment of the druggists, and the financial benefit of the physician. Nothing could be more misleading. Monopolies have been the target of most of the important federal laws which were passed during the last few years, and if this measure was monopolistic in idea or execution it would be wiped off the statutes in much less time that it took to adopt it. Of course, if this section encourages patients to consult physicians, the druggist will profit equally through

the increased business in the prescription department, but the purpose of the law is purely benevolent and not economic. Again, if sufferers adhere to the practice of self-medication, and ask for brown mixture tablets, for instance, they will either get the tablets without the opium, or else will buy some other cold tablet which contains no opiate. In that case we have at least prevented the patient from drugging himself with a mixture in which habit-forming dangers lurk.

"The use of sedatives of any kind, without proper medical supervision, is dangerous to a degree, and if the citizens at large do not know the deadly effect of opiate-containing mixtures, then the health officials should see that they are educated into that knowledge, and also that they are protected against their own ignorance, if you please, while they are being educated.

"The whole idea of the revision of the section may be summed up thus: We believe, indeed, we know, that promiscuous self-medication is pernicious, is fraught with grave danger, and we would like to see it eradicated, in the interests of a better and more stable public health. But since we cannot do away with this insidious evil, we can at least restrict self-medication to those mixtures which do not contain habit-forming drugs, and thus protect the people who are enmeshed in the doubtful practice of self-medication from the danger that, perhaps unknown and unseen to most of them, lies ready to strike at health, happiness and life."

#### Retailers' Co-operation Necessary to Enforce the Law

When asked concerning the steps that would be taken for the enforcement of this statute, Commissioner Goldwater stated that he depended upon the co-operation of the druggist to make it a success. "We know that the law must have the hearty support of the retailer if it is to accomplish the object for which it was created," he said, "and I am confident that every rightminded man in the drug trade will lend his aid toward this end. The drug inspectors will of course watch for violations, and will have offenders arrested, the same as offenders against the cocaine law are apprehended, but we hope that the druggist will realize the great public good engendered by this measure, and that arrests for violations will be few and far between."

While Commissioner Goldwater was not definite upon the question of the immediate rigid enforcement of the law, Deputy Commissioner Emerson stated that there was no desire on the part of the Board to work a hardship upon the druggist who was stocked up with the remedies in question. He also stated that the manufacturers of proprietary and other remedies containing opiates had been notified of the provisions of the revised section, even before it was enacted into law, so that they had ample time to change their formulas so as to conform to the new ruling in their preparations intended for counter sale. "We want every druggist," said Dr. Emerson, "to work with us in the education of the public, and to lend his efforts to the great campaign which the Board is making for better and more lasting public health. This revision is but the first of a number of educative and protective measures which we hope to see in effect,

#### New U. S. P. May Be Ready in July, 1915.

In reply to a letter from the ERA, asking whether the European War would have any effect upon the publication of the Ninth Revision of the U. S. P., as it had held up the issuance of the new British Pharmacopoeia, the following letter was received from Professor Remington, under date of September 23rd: "The British Pharmacopoeia has been printed and is all ready for distribution, but has been held up at the last moment by the declaration of war. I am unable to tell at this time how soon the embargo will be lifted.

"The revision of the United States Pharmacopoeia is proceeding regularly and steadily. The printing of the Appendix and Tables is practically finished and the regular printing of the text will begin next week. If no unforeseen events occur, the correction of the proofs and other work should be completed by March 1st. Three or four months must then elapse before the new Pharmacopoeia will be in force. This will probably make the date July 1st, 1915; but this date cannot be announced officially because we are not sufficiently advanced to say anything more than that this outlook is tentative.

"Very truly yours,

"JOSEPH P. REMINGTON."

## BOOKS REVIEWED

**REPORT OF THE COMMISSIONER OF EDUCATION** for the year ended June 30, 1913. In two volumes. Vol. I, 931 pages; Vol. II, 700 pages. Washington, Government Printing Office.

An examination of these volumes shows that they constitute a fairly complete resumé of the progress of education in the United States for the period under review and a record of the most important events connected with the progress of education in other culture countries. An interesting fact shown by the statistics reported is that the number of pupils of all ages enrolled in the public schools was 18,182,937, which was 72 per cent. of the total estimated number of children of school age, and a slight increase over the previous year. Reduced to comparative figures, by taking the daily attendance throughout the country, it would appear that the average number of days of schooling for children of school age was only 90, in the words of the Commissioner, "a dangerously small amount of schooling for the future citizens of our democratic Republic."

The statistics relating to professional schools show a decrease in number as compared with the previous year, the decrease being greatest in schools of medicine, a net loss of 7 schools and 1214 students, 6 per cent. of the total number of schools and 7.6 per cent. of the total number of students. The dental schools decreased by four in number, with an increase of \$25 in the number of students. In the schools of pharmacy the statistics remain, relatively, the same, the 75 schools reporting having a total of 784 instructors, and 5938 men and 277 women students. The total number of graduates for 1913 was 1813, 73 of whom were women. From the general summary of statistics of professional schools, the following data relating to colleges of pharmacy are of interest; value of grounds and buildings, \$2,211,763; endowment funds, \$205,000; benefactions, \$54,284; total income, \$510,251; volumes in library, 105,434.

**CASPAR'S TECHNICAL DICTIONARY.** English-German and German-English. Compiled by C. N. Caspar, 6x4½ inches. 264 pages. Cloth, \$1.00. C. N. Caspar Co., Milwaukee, Wis.

The character of this book is very accurately described by the above title, the definitions given covering the most important words and terms employed in technology, engineering, machinery, chemistry, navigation, shipbuilding, electro-technics, aviation, etc., particular attention having been given to the selection of words and phrases that have been coined within recent years and which have found their way into technical literature. As a handy word book for the American reader of technical literature in German, this dictionary will be found most serviceable, and it well supplements any large or small general dictionary of the languages named. It should prove of value to the pharmacist.

**ART OF COMPOUNDING.** A text-book for students and a reference book for pharmacists at the prescription counter. By Wilbur L. Scoville, Ph.G., formerly professor of theory and practice of pharmacy in the Massachusetts College of Pharmacy; member of the Eighth Committee of Revision of the U.S.P., etc. Fourth edition, revised and enlarged with 76 illustrations. 8vo., 390 pages. Cloth, \$3.00. Philadelphia. P. Blakiston's Son & Co.

Previous editions of this book have been of such a high standard that they have held first place in the libraries of dispensing pharmacists and on the prescription counter for everyday use. As a text-book, this new edition is sure to commend itself to students in colleges and more especially, those who are preparing for board examinations in practical dispensing pharmacy. The author has apparently kept in touch with the latest developments in the various fields related to prescription compounding, as is shown by his treatment of colloid chemistry in relation to dispensing, antiseptics and the parenteral administration of remedies in ampoules, emulsions from the phyto-chemical point of view, biological products, etc. The book contains a very large number of prescriptions representing various difficulties that have been encountered in compounding. These prescriptions are intelligently discussed and methods given wherever possible for overcoming these difficulties. For the purpose of adding interest to the study of individual prescriptions, the author has compiled and presents some 225 prescriptions from State Board examinations, the idea being to show the applicant for registration just the kind of prescriptions he is likely to meet when he undertakes an examination. The book is emi-

nently practical and is intended to familiarize the compounder with the underlying principles of a large number of problems that confront him in his work. We are sure it will answer most of the questions the compounder wants answered in this particular field.

### Van Schaack & Sons Price Current

This volume, the annual catalogue of Peter Van Schaack & Sons, the "Old Salamander Drug House," of Chicago, marks the 44th consecutive year of publication. Like its predecessors, it shows evidence of careful preparation and a comprehensive knowledge of the average druggist's wants, both in the number of articles listed and the classes of goods carried by jobbers. The classification of the different departments is carefully indicated at the top of each page, and this arrangement, supplemented by a very comprehensive index, enables the user of the book to locate easily any item named in the pages. An inspection of the book confirms Peter Van Schaack & Sons' claim that the book "is carefully revised each year, the items and lines for which a demand has ceased being eliminated, while those new and of interest to the progressive druggist have been embodied."

### Roure-Bertrand Fils' Bulletin

The April, 1914, Bulletin, issued by the well-known house of Roure-Bertrand Fils, producers of essential oils, Grasse, France, comes to hand replete with information relating to the scientific investigation and industrial conditions of the perfume industry throughout the world. Part I contains a resumé of the scientific work done by the company's own experts; Part II consists of an industrial review of the entire industry, while Part III is a review of recent publications and investigations on perfumes and essential oils, constituting a very complete bibliography of the present-day literature of the subject. The Bulletin is embellished with three full-page illustrations in color and reproducing exhibits shown at the Agricultural, Horticultural and Industrial Exposition held in Grasse last March and April. There are also page plates showing exterior and interior views of Roure-Bertrand Fils' works for extraction with volatile solvents.

### Analysis of Printing Inks

A procedure of analysis of printing inks has been developed by the Bureau of Standards, Department of Commerce, which, during the years in which it has been used, has been found to be very satisfactory. Technologic Paper Number 39 is devoted to the subject. By means of suitable solvents, the ink is divided into two parts—oil and pigment. The oil fraction is analyzed for unsaponifiable matter and rosin. The former may consist of mineral oils, or the hydrocarbon portion of rosin oil. A qualitative test for rosin oil and rosin is given. The analysis of the pigment fraction will depend very largely on the color of the pigment. Methods are given for the determination of the principal constituents of the more common inks, such as black, red, blue, green, etc. The paper contains a brief discussion of the relation of aniline dyes in the inks to the paper. This covers the question of the permanency of the blue dyes used to neutralize the yellow color of the oil, and emphasizes the necessity for a careful selection of the dyes to be used. Several methods for the determination of the permanency to light of the various colored pigments are given.

A few special tests for some abnormal constituents of ink are given. They are not considered to be very important. Figures are given showing how closely one may expect duplicate determinations on the same sample to check, based on the experience of this Bureau during the past two or three years. It is claimed that these checks are at least as close as the manufacturer can duplicate his ink and may therefore be considered satisfactory for practical purposes.

### Liquid Tar Soap

Tar .....	200 grams
Oleic acid .....	400 grams

Mix, warm slightly, and filter. Then warm the filtrate on a water-bath and neutralize the acid by adding an alcoholic solution of potassium hydroxide. Then add 100 grams of alcohol, a small amount of olive oil, and bring the weight of the finished product up to 1000 grams by the addition of glycerin.

# SELECTED FORMULAS

## Syrup of Lactophosphate of Lime, Iron and Manganese

Calcium lactophosphate	1.00 gram
Iron lactate	0.25 gram
Manganese lactate	0.05 gram
Distilled water	3.70 grams

Dissolve in water and add

Simple syrup	60.00 grams
Oil of lemon	1 drop

Mix.

## Elixir of Condurango with Peptone.

Fluextract of condurango	100.00 grams
Wine	45.00 grams
Dried peptone	2.00 grams
Aromatic tincture	2.00 grams
Tincture of ginger	0.50 gram
Tincture of orange peel	1.25 grams
Acetic ether	5 drops
Tincture of vanilla	2 drops

Mix.

## Tar Shampoo Liquid.

Green or soft soap	12 ounces
Potassium carbonate	2 ounces
Oil of tar	2 fl. drams
Alcohol	16 fl. ounces
Water, enough to make	64 fl. ounces

Mix all and dissolve, let stand a few days and filter

## Hard Tooth Soap.

Precipitated chalk	2 drams
Carmine	3 grains
Powdered soap	5 drams
Oil of peppermint	10 drops
Alcohol	45 minims

Triturate the carmine with a few drops of ammonia water and add the precipitated chalk. Dissolve the oil of peppermint in the alcohol; add the solution to the soap contained in a mortar and thoroughly incorporate; then add the precipitated chalk and when the whole is homogeneous transfer to suitable moulds and dry.

## Lotion for Sweaty Hands.

Boric acid	11½ drams
Borax	½ ounce
Salicylic acid	1½ ounce
Glycerin	3 ounces
Alcohol	3 ounces

Dissolve the solids in the liquids of the mixture and apply to the hands three times a day.

## Spray for Dry Catarrh.

Eucalyptol	2 fl. drams
Oil of cassia	40 minims
Oil of gaultheria	40 minims
Menthol	40 grains
Liquid petrolatum	4 fl. ounces

Mix and use in an oil nebulizer.

## Cucumber Cream.

White wax	3 ounces
Spermaceti	3 ounces
Benzoinated lard	8 ounces
Cucumbers	3 ounces

Melt together the wax, spermaceti and lard, and infuse in the liquid the cucumbers, previously grated. Allow to cool, stirring well; let stand a day, remelt, strain, and again stir the "cream" until cold.

## Poison Fly Paper.

Quassia chips	150 parts
Cobalt chloride	10 parts
Antimony tartrate	2 parts
Tincture of pepper	80 parts
Water	400 parts

Boil the quassia chips in the water until the volume of the latter is reduced one-half. Add the other ingredients and with the resulting mixture saturate paper, which dry.

## Graphite Stove Polish.

Ceresine	12 parts
Japan wax	10 parts
Oil of turpentine	100 parts
Best lampblack	12 parts
Levigated graphite	10 parts

Melt the ceresine and wax together, remove from the fire, and when half cooled off, add and stir in the graphite and lampblack, previously mixed with the oil of turpentine.

## Hand Cleaner.

Powdered castile soap	5 ounces
Pumice powder	½ ounce
Kaolin	7½ ounces
Sodium perborate	3½ ounces

Mix. Only a little water is required with the smallest quantity of the powder to thoroughly clean and bleach the hands.

## Peruvian Bark Dentifrice.

Powdered Peruvian bark	2 ounces
Powdered ammonium chloride	½ ounce
Powdered orris root	1 ounce
Powdered catechu	6 drams
Powdered myrrh	6 drams
Oil of cloves	5 drops

Mix and sift.

## Pile Ointment.

Zinc oxide	160 grains
Boric acid	160 grains
Oil of camphor	2 ounces
Distilled extract of witch hazel	1 ounce
Lanolin	4 ounces

Mix.

## All-Round Wound Salve

Fresh lard	16 ounces
Dry white lead	3 ounces
Dry red lead	1 ounce
Yellow beeswax	3 ounces
Black rosin	2 ounces

Mix, melt and boil for 45 minutes, then add—

Common turpentine	4 ounces
-------------------	----------

Boil for three minutes and cool.

Apply locally to cuts, burns, sores, ulcers, etc. It first draws, then heals.

## Anti-Frost Solution for Windows

Apply to the window glass a mixture consisting of 55 parts of glycerin dissolved in 1000 parts of 62 per cent. alcohol, containing, to improve the odor, some oil of amber. As soon as the mixture clarifies, it is rubbed over the inner surface of the glass. It is claimed that this treatment not only prevents the formation of frost, but also stops sweating.

## Peroxide Face Bleach

(1)

This consists of two powders—a citric acid powder and alkaline powder to be applied separately for one treatment. The alkaline powder is made as follows:

Sodium perborate	90 per cent.
Zinc peroxide	10 per cent.

Sprinkle a little of the acid on a wet sponge and apply to the face. Then, while the surface is still wet, apply the alkaline powder with a puff.

(2)

The following mixture is less troublesome to use and gives quicker results:

Starch	50 parts
Citric acid	25 parts
Zinc peroxide	10 parts
Sodium perborate	15 parts

Mix. Apply with a puff to the moistened surface. (*Am. Dr.*)

# FOREIGN ABSTRACTS

## NOTES FROM EUROPEAN LABORATORIES

### General Assay Methods—Ointment of Potassium Iodide—Syrup of Iodotannin—Milk Preservatives—Enzyme Syntheses

THE Abstracts for this month deal mostly with analytical methods, including assay methods for digitalis and nuxvomica, the determination of caffeine in coffee, the estimation of acetone in urine, and of free and total cholesterol in fats. Two papers take up ointment of potassium iodide, one describing a method for preparing a stable, colorless product, and the other giving a simple assay method for it. Glycerin heated to above 100° is highly recommended as a sterilizing agent. Attention is called to the fact that potassium dichromate, formaldehyde, and carbolic acid are all unsuited for use as milk preservatives when taking samples, unless the milk is absolutely fresh to begin with. Bourquelot reports his results with the syntheses of two new glucosides, derived from the glycols of meta and para-xylene.

The European war has interfered to a great degree with the publication of the foreign drug journals, as is to be expected. Since August 1 only one copy of a French journal of any sort has been received, while two of the leading German journals have not sent us any copies. The Berlin *Apotheker Zeitung* has reduced one of its semi-weekly editions to a single four-page form.

#### Assay Methods for Digitalis—

After a thorough investigation, Rapp states that the Hale method of physiological assay of digitalis is far preferable to the Focke method, and on account of its simplicity, and because we know no more accurate method, should be adopted in the new pharmacopoeias. The attempt was made to utilize some of the enzyme reactions of the leaves as a measure of the strength. The peroxidase reaction, with the guaiac reagent, shows that the drug has been properly collected, and dried, and not subjected to too high a temperature. The quantity of sugars formed by ferments and hydrolysis also gives some indications of the value of the leaves, but is not trustworthy, since the sugars themselves may be broken down by other ferments and bacteria in the drug, thus giving false results. The toxic strength of digitalis cannot yet be determined by chemical methods in any accurate or moderately rapid way, but may be accurately evaluated by the physiological method. Corvult, said to be a digitalis preparation freed of its enzymes by heat, is not such, but is made by the action of chemicals. It was shown that enzyme action causes the toxicity of moist leaves to diminish slowly but constantly. On heating in an autoclave to 105°, an enzyme-free drug is obtained, which will later conserve its strength when moist. The gastric effects are the same as with the unsterilized drug. (Rapp, *Schweiz. Apoth. Ztg.*, 1914, p. 321.)

#### Determination of Potassium Iodide in Ointments—

In a small beaker or wide-mouthed flask treat 2 g. of the ointment with 50 cc. of hot water, melt the fat over a small flame, whirling the beaker continuously, and set aside to cool. Filter the aqueous solution through a pledget of cotton into a 200 cc. flask, and wash three times with 5 cc. of water. Add 5 g. of solution of ferric chloride, and set aside for three hours, protected from light. Acidify with 10 cc. of official (D. A. B. V.) phosphoric acid, bring the separated iodine into solution with 1.5 g. of potassium iodide, and titrate immediately with decinormal thiosulphate solution, using starch as indicator. (Darge, *Apoth. Ztg.*, 1914, p. 749.)

#### Determinations of Esters in Essential Oils—

Behal has recommended that the determination of esters in essential oils be carried out in sealed vessels, as otherwise losses occur through volatilization of certain constituents. Niviere, on the other hand, finds that the classic methods give quite concordant results, and that closed vessels cannot be used, since they give too high values. The high results are not due to the action of the alkali on an alcohol, like linalool,

but apparently to a mutual action of the aldehydes present. (Niviere, *Bull. Soc. Chim.*, 1914, p. 677.)

#### Decolorized Tr. Iodine—

This preparation, according to the British Codex, is made by dissolving iodine in alcohol, and adding ammonia water. The iodine color disappears from the solution, a dark colored precipitate being thrown down, which is found to be iodide of nitrogen. After standing a day or two, the brown precipitate disappears, and after two or three weeks of standing in the sunlight or in a warm place, the solution fades to yellow, due to iodoform. About half of the iodine is changed at once into ammonium iodide. Hydrolysis of the nitrogen iodide produced ammonium hypoiodite in small amount, which later seems to oxidize some of the alcohol. The finished tincture contains ammonium iodide with an excess of ammonia, about 0.1 per cent. of iodoform, and traces of acetaldehyde, ammonium iodate, and hydroxylamine. The therapeutic value of the tincture must be practically nil. (Pratt, *Pharm. J.*, Vol. 93, p. 130.)

#### Colloidal Sulphur—

This preparation is made by the action of hydrogen sulphide gas on dilute solutions of sulphurous acid, whereby the solution becomes charged with polythionic acids, while flakes of sulphur are formed which are rendered insoluble by the acids. The deposit of sulphur is separated, diluted with pure water, and dialyzed in order to free it from acids, etc. The colloidal material is left on the dialyzer as a whitish yellow emulsion. It must be protected from air, and its action is much more intense than that of the other forms of sulphur. (Robin, *Repert. Pharm.*, 1914, p. 161; through C. A.)

#### Colorless Oint. Pot. Iodide—

If the ointment is prepared by mixing solutions of potassium iodide and sodium thiosulphate, it soon turns yellow. But if the solutions of the salts are mixed separately with the fat, no color change takes place. The formula and method recommended are as follows: Melt 165 g. of lard at the lowest possible temperature, and allow it to cool in a porcelain mortar by standing overnight. Dissolve 20 g. of potassium iodide in 14 g. of water which has been boiled and cooled, and make another solution of 0.25 g. of thiosulphate in 1 cc. of water. Then incorporate these salt solutions with the fat, adding the thiosulphate first. The formula makes 200 g. of 10 per cent. ointment. (*Schweiz. Apoth. Ztg.*, 1914, p. 325.)

#### New Biochemical Syntheses—

The latest compounds of the glucoside series to be synthetically prepared by Bourquelot are the beta forms of the mono-glucosides of glycols corresponding to m- and p-xylene. The glycols were prepared from the xylene dibromides, by saponification with potassium carbonate. The synthesis reaction was carried out in a solution of aqueous acetone, containing the glycol, glucose, and emulsin. No attempt was made to attain equilibrium, which would not have been reached for several months. The excess of glucose was destroyed in the usual manner, by means of yeast, and the glucoside was extracted with ether. The meta compound crystallizes in very fine needles, slightly bitter, and very soluble in water. It softens and melts at 85-95 deg. One molecule of water of crystallization is present. The glucoside does not reduce Fehling's solution, but is hydrolyzed by dilute acids and by emulsin. The molecular rotation is -46.9 deg. The para compound forms prismatic plates, melting at 157-158 deg. It is also laevorotatory, the rotation being -50.5 deg. The other properties closely resemble those of the meta glucoside. (Bourquelot and Ludwig, *J. Pharm. Chim.*, 1914, p. 111.)

#### Sterilizable Rubber Plaster—

Klinoplast, devised by Engelbrecht, is a rubber plaster having the advantage of being sterilizable by live steam, without losing its adhesiveness. The interior face of the plaster is covered with a fabric of large mesh, made of coarse threads, easily permitting the passage of water vapor. After sterilization, it is separated from the plastic mass. Bacteriological tests have demonstrated that the sterilization is perfect, not

only for the surface, but also for the interior of the plaster. (Engelbrecht, *Centralblatt für Chir.*, 1913, No. 51.)

#### Protein-Free Emulsion—

Ohta recommends the following method to obtain an emulsion free of protein substances: Commercial emulsion is digested with one-tenth its weight of pancreatin, in the presence of 100 times its weight of slightly alkaline water containing ammonia. A large amount of protein material passes into solution during the digestion, and the solution is then dialyzed, concentrated, and the emulsion thrown out by alcohol. The product is a little more active than ordinary emulsion, and contains calcium, magnesium, and phosphorus. On hydrolysis it gives a reducing substance. It hydrolyzes amygdalin and salicin, but the ferments which usually accompany emulsion are absent. (Ohta, *Biochem. Z.*, 1913, p. 329.)

#### Caffeine Determinations in Coffee—

In order to avoid the inaccuracies or inconveniences of the methods hitherto proposed, Fendler and Stüber have devised a new method for this determination, in which the caffeine is purified by means of strong oxidizing agents. Coffee powder which passes a 1 mm. sieve is used. Ten g. are shaken 30 minutes with 200 g. of chloroform and 10 g. of ammonia water. After passing part of the menstruum through a filter, until it runs perfectly clear, 150 g. are filtered off, corresponding to 7.5 g. of substance, evaporated in a roomy flask, and the last traces of chloroform blown out. The residue is treated with 80 cc. of hot water, digested on the water bath, and cooled. With roasted coffees, this aqueous solution is treated with 20 cc. of 1 per cent. permanganate solution, while raw coffees require 10 cc. The mixture is allowed to stand at ordinary temperature for 15 minutes. Then add sufficient 3 per cent. hydrogen peroxide solution, containing 1 per cent. of acetic acid, to reduce the excess of permanganate, from 2 to 4 cc. usually sufficing. After all reddish color is discharged, place on the boiling water bath, and continue to add the acid peroxide solution until the mixture does not become lighter in color. Cool, filter, and wash the filter with cold water. Shake out the filtrate, which should amount to about 200 cc., once with 50 cc. and three times with 25 cc. of chloroform. Unite the shakings in a weighed flask, evaporate, and dry to constant weight. Weigh the residue as caffeine. (Fendler and Stüber, *Z. Nahr. Genussm.*, 1914, p. 9.)

#### Glycerin for Sterilizing Purposes—

Seiffert and Spiegel have shown experimentally that a glycerin bath heated to 120 deg. answers all requirements as a sterilizing medium. All bacteria are killed by it in a very short time, since the antiseptic action of the glycerine is added to the effect of high temperature. The liquid is easily removed from the instruments, which it does not attack in any way. Its widespread use for such purposes is to be recommended. (Seiffert and Spiegel, *Centralblatt f. Bakteriologie*, 1914, p. 518.)

#### Preservatives in Milk Samples—

Several authors have recently called attention to the unsuitability of phenol and potassium dichromate as preservatives in milk samples, unless the milk is perfectly fresh to begin with. Van Ketel reaches the same conclusion, and adds formaldehyde to the list. Five hundred cc. of milk were treated with 20 drops of formaldehyde solution, and the fat content determined from time to time. In five weeks, according to the Rose-Gottlieb method, the percentage of fat dropped from 3.16 to 1.73. With the Gerber method, the figures were higher, but the fat was dark colored. The formaldehyde apparently enters into combination with the albuminous substances of the milk, and becomes inactive. It was also shown that perfectly fresh milk remains unchanged much longer than old milk, which already contains organisms which cannot be subsequently rendered harmless by the preservatives. (Van Ketel, *Apoth. Ztg.*, 1914, p. 708.)

#### Assay of Nux Vomica—

For the determination of total alkaloids the author recommends a method based on precipitation by silico-tungstic acid. The silico-tungstate of strychnine forms a brown powder, insoluble in cold water, slightly soluble in hot water, and not affected by acids. When calcined it leaves a yellow or greenish residue of silicic and tungstic acids. The formula shows that it consists of 12 molecules of tungstic anhydride, 1 of

silicon dioxide, 4 of strychnine, and 12 of water. The alkaloids are extracted by a mixture of ether and chloroform, taken up in nitric acid solution, and thrown down by silico-tungstic acid. The precipitate is collected in a filter, washed, ignited, and the residue weighed. The weight multiplied by 0.498 gives the amount of alkaloids. (Azadain, *Ann. Chim. Analyt.*, 1914, p. 164; through *Pharm. J.*)

#### Determination of Acetone in Urine—

The urine is distilled with a few drops of hydrochloric acid, and the distillate treated with iodine and potassium hydroxide. The iodoform thus produced is collected, carefully washed until free from uncombined iodine, and then boiled with the filter with silver nitrate and fuming nitric acid, using a reflux condenser. The silver iodide is dissolved in ammonia water, the solution filtered, and the insoluble iodine again precipitated by adding nitric acid, after which it is collected, dried and weighed in the usual manner. Each g. of silver iodide represents 0.1171 g. of acetone. (E. and L. Sobel, *Pharm. Zentralhalle*, 1914, p. 588; through *Pharm. J.*)

#### Modification of Kjeldahl's Method—

The new method makes use of the catalytic action of vanadium oxide. The digestion is made with sulphuric acid, potassium sulphate, and a small amount of vanadium pentoxide. The modification is recommended where the Gunning method cannot be applied, or only with difficulty; or in cases where the use of mercury as a catalyzer would give rise to mercury-nitrogen compounds that are not decomposed by alkali. Ammonia does not appear to be retained by vanadium, even when the latter is present in quantity. (Marino and Gonnelli, *Atti dei Lincei*, 1914, p. 523; through *Pharm. J.*)

#### Iodine in Syrup Iodotannin—

Additional proof that the iodine in syrup of iodotannin exists in the state of hydriodic acid, and not as a combination with tannin, is furnished by recent experiments of Debreuil. If the syrup is dialyzed through a vegetable membrane, no trace of tannin compounds passes through, while the dialysate contains a large amount of hydriodic acid, these two points being proved by the facts that although there is no color change with ferric salts, yet the solution is acid, is precipitated by silver nitrate, forming silver iodide, liberates iodine when treated with chlorine water, etc. On evaporation and calcination, no residue remains. The syrup, treated with sodium chloride, and evaporated in a vacuum, gives free hydrochloric acid, to the extent of about 25 per cent. of the theoretical. Finally, when the syrup is treated with pure zinc carbonate, free of chlorides, all the iodine passes into solution as iodide of zinc, without any trace of tannic compounds being formed, which can only be explained on the supposition that free hydriodic acid is present. The use of zinc carbonate or a mixture of calcium carbonate and zinc sulphate, furnishes a choice method for assaying the syrup, the solution of zinc iodide being titrated with silver nitrate volumetric solution in the usual manner. Debreuil, *Bull. Sci. Pharmacolog.*, 1914, p. 409.)

#### Estimation of Cholesterol—

For free cholesterol dissolve 20 g. of the fat in 200 cc. of a mixture of equal parts of ether and petroleum ether. For total cholesterol saponify 20 g. of fat by boiling for 15 minutes with 40 cc. of 20 per cent. alcoholic potash solution, wash into a separator with water, liberate the fatty acids with hydrochloric acid, and shake out with 200 cc. of the ether-petroleum ether mixture. Wash the shakings several times with water and dry with dried sodium sulphate. To each of the ether solutions add 10 cc. of a 1 per cent. solution of digitonin in absolute alcohol, and allow to stand a short time. Add water a few drops at a time, shaking violently, until not more than 2 or 3 cc. have been added. Allow to stand until the precipitate settles, and then decant the mother liquid through cotton. Test to see if precipitation is complete. Wash the crystals with the ether-petroleum ether mixture, adding a little water. Dry the precipitate on the water bath, and then dissolve in 50 cc. of hot alcohol. Dilute the alcohol to 90 per cent., cool, and allow to stand 2 hours. Evaporate a little, filter through a tared Gooch, wash with 90 per cent. alcohol, dry, and weigh. The crystals consist of equal molecules of cholesterol and digitonin ( $C_{27}H_{46}O_2$ ,  $H_{34}O_{28}$ ). (Klostermann and Opitz, *Z. Nahr. Genussm.*, 1914, p. 713; through *C. A.*)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Formaldehyde Disinfection**

(J. D. Co.)—"What is the proper proportion for mixing permanganate of potassium with 40 per cent. formaldehyde solution for disinfection in connection with contagious diseases?"

As given by the various authorities, the proportions of the substances named vary somewhat, but the process outlined by the New Hampshire State Board of Health and required by law to be used by local boards in that State is as satisfactory as any. It is as follows:

- Potassium permanganate ..... 6½ ounces
- Solution of formaldehyde (40%)..... 1 pint

The quantity of formaldehyde evolved is sufficient to disinfect 1,000 cubic feet of space. It is used after carefully sealing up all openings of the room or other place to be disinfected, and exposing as much as possible all clothing, bedding, or other contents of drawers, closets, etc. For generating the gas one large, flaring pail is the only apparatus needed. The pail should be not less than the ordinary water pail of ten or twelve quarts in size, and under it should be placed a few newspapers or a piece of old carpet, so that in case it should overflow or spatter during the intensely rapid effervescence which takes place, the floor may be protected. A wooden or indurated fiber pail is better for the purpose than one made of metal, as it retains the heat which is evolved and which is essential to the best results. When all is in readiness, place the potassium permanganate in the pail, then pour the solution of formaldehyde upon it. The operator will be obliged to leave the room almost instantly, on account of the rapid formation of the gas. The premises should remain closed for not less than five hours; a longer time would be better. If several rooms are to be disinfected, the process may be carried out in each room separately, having everything in readiness in all of the rooms, so that the operator may be prepared to do the work as rapidly as possible. The temperature of the rooms to be disinfected should not be less than 60° F. If lower than that, they should first be warmed. If the temperature is below 60°, an increased amount of chemicals will have to be used to be effective. The formaldehyde solution should be poured upon the potassium permanganate, and never the reverse.

**Cocaine Muriate and Sodium Borate**

(J. D. C.)—"Please criticise the following prescription":

- Cocaine muriate ..... 13 cg.
- Sodium borate ..... 30 cg.
- Water ..... 30 cc.

Mix.

On combining this mixture cocaine is precipitated, the reaction being in accordance with the well-known principle that borax being alkaline, precipitates nearly all alkaloids from solutions of their salts, cocaine muriate being included in the category. Some dispensers overcome the incompatibility by triturating the borax with a little glycerin (about 1 dram) and then dissolving the alkaloid in the aqueous mixture. This induces another reaction, the glycerin decomposing the sodium borate and forming sodium metaborate and boric acid, which, however, does not interfere with the therapeutic activity of the cocaine. If boric acid be substituted for the sodium borate in the prescription, no precipitation will occur. The incompatibility should be brought to the attention of the prescriber.

**Aspirin and Sodium Bicarbonate**

G. E. J.—"Please criticise the following prescription, and tell what chemical reactions take place?"

- Aspirin ..... 1 dram
- Sodium bicarbonate ..... 1 dram
- Elixir of lactopeptine, quinine and strychnine, or 120 to 160 grs. .... 2 ounces

Aspirin (acetyl-salicylic acid) is incompatible with heat, moisture, alkalis, their carbonates and bicarbonates, and in this prescription, when compounded, the aspirin will be decomposed by the sodium bicarbonate with the production of acetic acid and salicylic acid or sodium salicylate, carbonic acid gas being evolved. The wisdom of combining sodium bicarbonate with the digestive agents the elixir of lactopeptine is reported to contain is not apparent. According to most medical authorities, aspirin is best taken in capsules or wafers, or dissolved in sweetened water, or dry on the tongue, followed by a swallow of water. The powder should be dispensed in waxed paper. As stated above, aspirin should not be dispensed in solution.

**"Gray Beard"**

(B. D.)—In further reply to your query, this journal, last issue, page 419, I, A. Solomons, Jr., Savannah, Ga., writes that a patent preparation of this name was formerly manufactured by a local concern in his city, and enjoyed quite a sale at one time in that section. He states, however, that it has long since been off the market and is no longer obtainable.

**Spirit Gum**

(W. B.)—"Please give me a formula for spirit gum adhesive, a theatrical preparation?"

Try the following which has been published under the above name:

- Resin ..... 1 ounce
  - Castor oil ..... ½ ounce
  - Rectified spirit to ..... 4 ounces
- Dissolve and perfume.

The Era Formulary, under the name "Pomade Collante," gives the following combination for wigs and short curls: Take 1½ pounds of the best Burgundy pitch, 8 ounces virgin wax, and melt them together in a stoneware vessel, and add 1 ounce of liquid pomade. Remove from the bath and, while yet liquid and warm, stir in 7 ounces of alcohol; when the spirit has been well incorporated, replace the vessel upon the sand bath, and heat up to a slight boiling; then strain through a linen cloth, perfume with 2 ounces essence of bergamot, and when cold enough, run into molds.

**Bleaching Feathers.**

(B. D. L.)—Here are some processes.

(1)

The feathers are put into a bath of permanganate of potassium, containing 4 or 5 parts of the salt to 1000 parts of water; a solution of sulphate of magnesium of the same strength is added, and the mixture heated to 140°F. The feathers, previously washed, are put into this bath, then taken out, rinsed, and passed through weak sulphuric acid of about 1½ to 3°Tw.

(2)

Put the feathers in a bath of 1 part of barium peroxide in 100 parts of water at 80° F. and bleach. Leave for 48 hours in this solution, wash, pass through a weak acid bath, and again wash.

(3)

Expose the feathers in a moist atmosphere to the vapor of burning sulphur (sulphurous acid). Before this treatment, however, the oily matters should be removed from the feathers by immersing them for a short time in good benzine or naphtha, rinsing in a second vessel, also containing some of the benzine or naphtha, and thoroughly dry by exposing them to the air. This treatment, it is claimed, does not injure the feathers.

**Constituents and Effects of Face Powders**

(J. W. T.)—The principal effect of plain talc on the skin is mechanical, and for such reason it is extensively used as a protecting and soothing powder to the skin. It is insoluble and not absorbed, and when rubbed or dusted upon the skin it imparts a slight feeling of greasiness. This quality makes it of value as a protective for chafed skin, and by medical men generally it is considered of value as a dusting powder in intertrigo, prickly heat, pruritis, and other conditions of dermal irritation.

Boric acid is a mild antiseptic. When applied in concentrated form to denuded surfaces, it is generally considered to be somewhat irritating and mildly astringent; in solution, while slightly astringent, it is sedative rather than irritating. It is added to dusting and face powders principally for its antiseptic effect. The prolonged use of boric acid, especially if not mixed with some suitable diluent, is liable to give rise to scaly eruptions of the skin. The amount that should be added to any face powder is largely a matter of individual opinion, for so far as we can discover there is no hard and fast rule on the subject laid down by medical authorities. We are inclined to believe that not more than 10 per cent of boric acid need be added to any dusting powder, and this proportion is that employed in the standard furnished by the National Formulary for "salicylated powder of talcum," which is used as a dusting powder for irritated surfaces, intertrigo, excoriated surfaces, etc. This powder is made as follows:

Salicylic acid .....	30 parts
Boric acid .....	100 parts
Talc, in fine powder.....	870 parts

Mix.

Answering your third question in a general way, most of the toilet talcum powders on the market consist wholly or in large part of talc as a base, to which are added suitable odoriferous substances. Among the constituents of face powders which are supposed to exercise some medicinal or curative effect are zinc oxide and the basic salts of bismuth, chiefly of the oxychloride. Zinc oxide has a slight physiological action on the skin as a mild astringent, exercising a curative effect on cutaneous eruptions and on excoriated surfaces. It also possesses a property which makes it valuable in face preparations—that of adhesiveness to powders containing it. Bismuth salts are reputed to have an injurious influence, though they are not uncommonly used. Bismuth salts also exercise an astringent effect similar to that of zinc oxide. Very light forms of zinc oxide and bismuth oxychloride are used in connection with face powders, while the various starches, rice flour, orris root, magnesium carbonate, etc., are also employed. As a rule, however, a face powder is not used for "medicinal" effect, but as a mechanical protective to irritated surfaces and which is applied particularly to shield them from the effects of the wind and sun and from external abrasion. For a more extended account of the effect of face powders upon the skin it is suggested that you consult a professor of dermatology in one of the medical schools in this city.

**Grease Proof Boxes**

(T. R. M.)—According to "Pharmaceutical Formulas," paper, willow, or turned wood boxes may be made impervious to air, water, or grease by immersing them in hot melted hard paraffin. Another method recommended is to apply inside and out two coats of a varnish made of

Sandarac .....	2 ounces
White shellac .....	4 ounces
Alcohol .....	10 ounces

Mix and apply with a stiff brush.

Solution of silicate of soda and kaolin mixed together is used for painting on the inside of turned wood boxes to make them waterproof.

A so-called "impermeable wrapping paper," according to the Era Formulary, may be made as follows: Dissolve 1½ pounds of white soap in a quart of water; then dissolve 2 ounces of gum arabic and 6 ounces of glue in another quart of water. Mix the two solutions; warm the mixture; dip the paper in the liquid; pass it between two rolls (a clothes wringer, for example) and allow to dry. In default of rolls, let the paper drip well, or, better, pass it between two sheets of dry paper. Then let it dry in a mild temperature. For many purposes ordinary paraffin paper can be satisfactorily employed, and at

less expense than will result in any attempt to manufacture a special impermeable or so-called "waxed" paper on the small scale.

**Cold Laxative Tablets**

(G. M. D.)—The following are typical formulas for tablets exploited under the above designation:

(1)

Quinine sulphate .....	1 grain
Acetanilide .....	2 grains
Tincture of gelsemium.....	1 minim
Aloin .....	1 20 grain
Podophyllin .....	1 40 grain
Capsicum .....	¼ grain

For one tablet.

(2)

Quinine sulphate .....	2 grains
Dover's powder .....	2 grains
Capsicum .....	¼ grain
Tincture of capsicum.....	1 minim

For one tablet.

(3)

Dover's powder .....	2½ grains
Quinine hydrobromide .....	2 grains
Aloin .....	⅛ grain
Calomel .....	⅛ grain
Powdered capsicum .....	½ grain
Tincture of aconite, U.S.P.....	½ minim

For one tablet.

**Tincture of Benzoin and Water**

(J. D. Co.) "Would there be any way of making a presentable mixture of the following?"

Tincture of benzoin.....	30
Glycerin .....	60
Rose water .....	30

Mix.

When tincture of benzoin is mixed with water a milky mixture is produced, the resin of the benzoin being thrown out of solution and depositing on standing, the rate of deposition depending somewhat on the proportions of the ingredients employed. The formula here given is a modification of the well known formula for "lait virginal" which, however, is usually made by gradually mixing 2 drams of tincture of benzoin with enough rose water to make 8 fl. ounces. However combined a milky mixture will result.

**Violet Toilet Water.**

(H. L. T.)—According to the ERA Formulary, any good extract of violet can be made into a violet water by mixing 1 part of extract with 4 parts of alcohol, adding a small quantity of powdered orris root, and filtering after 8 days. Here are two other formulas:

(1)

Extract of violet (from pomade).....	8 fl. drams
Extract of cassia (from pomade).....	8 fl. drams
Spirit of rose.....	4 fl. drams
Tincture of Florentine orris.....	4 fl. drams
Cologne spirit .....	1 pint

Mix and filter.

(2)

Spirit of ionone, 10%.....	2 fl. drams
Orange-flower water .....	4 fl. ounces
Rose water .....	4 fl. ounces
Distilled water .....	16 fl. ounces
Alcohol .....	36 fl. ounces

Mix and let stand for a time to blend.

**London Throat Lozenges**

Finely powdered cubebs.....	60 grains
Extract of licorice.....	350 grains
Powdered tragacanth .....	20 grains
Powdered sugar .....	60 grains
Black currant paste,	
Water, of each enough to make a paste.	

Mix and divide into 100 troches.

## WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

### Mr. Finneran and Prof. Remington Suggest Ways the Druggist's Wife Can Help

A VERY suggestive address was made by J. F. Finneran, retiring president of the N.A.R.D., to the delegates and visitors in attendance at the W.O.N.A.R.D. Convention in Philadelphia the week of Aug. 17, 1914. Mr. Finneran's suggestions were so eminently practical as to the manner in which the women folks in the druggists' families could be of real help, that they are well worth passing on to the great family of ERA readers.

He urged that women work to bring about shorter hours for the profession. This can be done by encouraging movements for Sunday rest, etc., and by bringing about good feeling among the druggists so that all will be willing to join in doing the right thing.

Another valuable point made was that the women could help by seeing that the druggist goes back to the store on time when some member of the force is due to have an evening off. This point was one which seemed to strike a familiar chord, yet it had probably never been touched upon in public before. Naturally, clerks are dissatisfied when they have to remain way behind their time because the head of the business or department head has not yet returned. Perhaps it becomes necessary to break an important engagement or to inconvenience others seriously, when the clerk has had every reason to believe his time would be his to plan for as he chose. Clerks have been known to leave otherwise satisfactory places for this reason, and they could scarcely be blamed. The women can help by

having meals ready, keeping accurate track of the clerks' days off, so that the schedule may not be lost sight of. The speaker is a large employer of help and so he knows whereof he speaks, for it is sometimes difficult to perfect a time schedule in as large an establishment as that of which Mr. Finneran is the head. Doubtless, he has had occasion to know that having meals ready on time in the home is a great aid all along the line.

Mr. Finneran pointed out that it was entirely within the province of our women to tell their friends of the position of the drug business in regard to matters of vital importance. Many, through ignorance, think that the druggists are opposing bills limiting the sale of narcotics and a serious injustice is worked them because as a matter of fact, they have no objection to properly framed laws of this kind which apply to all alike. The best of narcotic legislation has emanated from the druggist himself. In this and in other points, the women folk of the drug business can help to set public opinion right.

This gentleman declared that the N.A.R.D. had the kindest feelings for the organization and hoped that it would continue to be a power for good.

Another inspiring address was made by Professor Joseph P. Remington, who also outlined some ways in which the women could help. He emphasized the point of unselfishness on the part of sweethearts of college of pharmacy students, urging that they insist on deferring marriage until the student has

### Prominent Members of the W. O. N. A. R. D. at Philadelphia

THAT the Woman's Organization National Association of Retail Druggists is progressing along satisfactory lines is evident from the report made by the secretary at the recent annual meeting held in Philadelphia, the roster showing members residing in 34 States. About 150 delegates were in attendance at this meeting, among them being those represented in the group shown in the above picture and "rounded up" by a photographer at Willow Grove. The ladies shown in the group are (left to right): First Row—Mrs. H. Wagner, Cincinnati; Mrs. David Ross, Philadelphia; Miss Stella Wagner, Cincinnati; Mrs. S. C. Henry, Philadelphia; Mrs. E. G. Wallace, Auburn, N. Y.; Mrs. W. L. Brittain, Cincinnati; Mrs. Otto Groenland, Cincinnati; Mrs. Louis Emanuel, Pittsburgh. Second Row—Miss Areta B. Johnson, Penns Grove, N. J.; Mrs. W. E. Lee, Philadelphia; Mrs. J. C. Otis, Cincinnati; Mrs. Walter E. Lee, Philadelphia.

For his part Professor Remington, who speaks from out a long and varied experience, declared it had been his observation that the students during the course detracted from the student's progress in his work, oftentimes raising a serious question of finances and sometimes necessitating the giving up of the work. The goal was almost in sight. True love is surely shown by consideration of the best interests of one's devotion rather than by a weak yielding to hasty impulses.

Professor Remington has long been an earnest advocate of pharmacy as a field for young women and was much pleased in the idea of the establishment of a scholarship by the Women's Organization. He also expressed himself as convinced that where the interests of husband and wife were a common interest, she being able to understand and sympathize with his difficulties, happiness and success were much more likely to wait upon them.

### Mrs Emma Hutson Hutchinson

**D**AN CUPID is responsible for another Gold Medalist Lady Pharmacist. The well-known aphorism—"A prophet is not without honor save in his own country," can well be applied to Mrs. Hutchinson. Born and reared in Decaturville, Tenn., she attended the public schools preparing herself for entrance to the Fairview Academy at Centreville, and later entered Peabody College, graduating in the class of 1909. She took up the profession of teaching, being Principal of Schools in Tennessee, Missouri and Louisiana.

In the Spring of 1912 she married Mr. Hutchinson, a young drug clerk, giving up her chosen profession as they together decided to solve the "drug clerk" question. They both entered the Pharmacy Department of the University of Tennessee in the Fall of 1912 and graduated in the Spring of 1914.

As is characteristic, Mrs. Hutchinson entered into this work with the same spirit that marked her previous achievements and as a result, graduated with the highest mark, being awarded the Gold Medal. When she came up for examination before the State Board of Pharmacy, she again made the highest mark for the year, entitling her to a second Gold Medal. Both she and Mr. Hutchinson are clerking in Memphis with an eye on a good opening to embark in the drug world, and we predict for the Hutchinson Drug Company "success."

It is most interesting to observe that the work being done by Women's Clubs on Pure Food and Sanitation is now including likewise work along the line of pure drugs and information concerning unsafe medication. At the recent Congress of Woman's Achievements held in Chicago at the Coliseum, June 18 was observed as Clean Food Day. Three places on the programme were occupied by women from our own ranks—Miss Olive B. Pierce and Miss Charlotte E. Stimson, both registered pharmacists, and Mrs. C. A. Storer, ex-president of the W.O.N.A.R.D. The subjects selected were "Foods," Mrs. Sarah Tyson Rohrer, Boston; "Drugs," Miss Olive Pierce; "Women in Pharmacy," Miss Charlotte Stimson; "Propaganda Work of Woman's Organization, National Association of Retail Druggists," Mrs. C. A. Storer. There was also an address by Miss Helen Louise Johnson, chairman of the Home Economics Department of the General Federation of Women's Clubs, and on each day at 2 p.m. demonstrations were given on the purity and care of foods.

Owing to the resignation of two of the officers elected by the Woman's Club of the Allied Drug Trade of Chicago for 1914-1915 the following corrected list of officers has been ratified: President, Mrs. George Lenz; 1st vice-president, Mrs. E. G. Earle; 2d vice-president, Mrs. George Mathison; recording secretary, Mrs. H. C. McCracken; corresponding secretary, P. J. Minter; treasurer, Mrs. Louis Pelikan.

MRS. E. H. HUTCHINSON

### Miss Christina Baumstark

**M**ISS CHRISTINA BAUMSTARK found chemistry to be her most interesting subject during her course of regular study. This led her to enroll in the Pharmacy Department of the Marquette University, Milwaukee, Wis., in the Fall of 1912. Here she found her work intensely interesting and still feels that her time was more than well spent. She graduated in due season with an average of approximately 85 per cent. in all her subjects.

Miss Baumstark has been offered several positions in retail stores but has decided to devote her time for the coming year to serve as an assistant in the laboratories of the Marquette Medical School. For so young a lady to be called to so responsible a position is remarkable, for this Milwaukee girl was only 20 years of age when she finished her course.

As a profession for women, she considers that there is nothing better for those adapted to it, as it calls forth their exactness, their tact, and their ability to do well whatever they undertake. That Miss Baumstark will make a place for herself in her chosen calling is to be expected from her past fine record.

MISS C. BAUMSTARK

### AROUND THE CIRCUIT

Miss Sara Richardson, daughter of Frank Richardson, Cambridge, N. Y., treasurer of the New York State Pharmaceutical Association, has accepted the position of pharmacist in the New York Infirmary for Women and Children. Just before her departure for New York City she was given a surprise at her home by a company of 30 young lady friends who presented her with a traveling bag.

Miss Grace Irene Harper, Ph.G., is again engaged as head of the Department of Pharmacology of the New York Medical College and Hospital for Women for the year 1914-1915.

Among those for whom a short memorial service was held at the recent W.O.N.A.R.D. Convention in Philadelphia, were Mrs. Edwin Yarnold, of Washington Chapter, No. 4; Mrs. William G. Brown, San Diego, Cal.; Mrs. Marie Blahnik, of Chicago Chapter No. 2; Mrs. S. D. Van Deventer, LeRoy, Ill.; Mrs. Olga Kochuken, Cincinnati Chapter, No. 5.

The Louisville Chapter of the W.O.N.A.R.D. held its September meeting at the Public Library. Mrs. W. B. Dixon, president of the Ladies' Auxiliary of the Kentucky Humane Society gave an interesting address on her work. Besides the regular routine of business, the chapter decided to take a boat trip on Labor Day to Carrolton, Ky., to visit one of the members who has recently moved there. The organization finds that having a speaker of this kind is productive of much interest and in addition to this, it is bringing the work of the W.O.N.A.R.D. to the favorable attention of other organizations.

Mrs. Charles A. Storer, ex-president of the W.O.N.A.R.D., has met with a rather serious accident. She fell and broke one of the bones in her right hand. The sympathy of her many friends in the organization is extended to her.

A most courteous and interesting letter from Aime J. Lachapelle, Ph.D., of Turner's Falls, Mass., says that it is his desire "To encourage all young women to enter the pharmaceutical fields, for it is an interesting one, and, as a rule, what a woman undertakes is generally a success." These words of encouragement are gratefully received. When a woman goes into a profession of this nature, it usually requires ability, courage and determination, hence, perhaps, our women are "picked" ones, which accounts in a measure, at least, for the splendid nature of their achievements.

## MOSTLY PERSONAL

### Baltimore Druggist Talks of Travels

**H.** A. B. DUNNING, of the firm of Hynson, Westcott & Co., manufacturing pharmacists at Franklin and Charles streets, Baltimore, who was the only Baltimorean on the trip with the New York German Apothecaries to Europe, has returned, and speaks interestingly of his travels. For one brief period he fell under the suspicion of being perhaps a British spy, but he soon proved to the satisfaction of the German authorities that he was an American citizen, and thereafter he experienced no serious trouble on account of the war, though the conflict proved unfortunate in that it prevented the visits of inspection to some of the largest of the German chemical works, such as the *Farbenfabriken Merck & Co.*, and

H. A. B. DUNNING

others. Only one of the laboratories of any size was seen, this being in Berlin, where Professor Dr. Thoms lectured at the university for the benefit of the Americans on some of the wonders of liquid air and other subjects, the discourse being in a popular rather than a severely scientific vein. Mr. Dunning found the establishment of the *Deutsche Apotheker Gesellschaft* in Berlin very interesting. This organization conducts a co-operative concern, manufacturing a line of products and buying others in large quantities, much after the manner of some of the American corporations, such as the Calvert Drug Company in Baltimore. Members are supplied with goods at wholesale prices plus the cost of doing business, or, in the case of manufacturers, of the expense of production. The Berlin establishment proved to be well arranged, liberally stocked and progressive in its methods, and the officials were very hospitable, giving the visitors a dinner, and providing other entertainment.

Because of the war, as stated, the program was greatly interfered with and the Americans had small opportunity to get in touch with pharmacists as a class. Mr. Dunning, however, visited a number of the drug stores in the different countries traversed and found them as a rule smaller than American establishments. They carried few, if any, patent medicines and none of the side lines so common in this country, and the number of stores was also far below that in any American city. The pharmacists, however, appeared to be held in high respect and ranked with professional men rather than with merchants, their educational standards being very advanced.

In Germany, for instance, a Ph. D. is required for the study of pharmacy, which brings into the profession a select and thoroughly equipped class of men, whose relations with the physicians are necessarily close.

The party left New York July 2, with Bremen as its destination. From Bremen the Americans went to Berlin, thence to Leipzig, to Dresden, to Bienna, to Nuremberg, to Munich, to Luzerne, to Basle, to Freiburg, to Heidelberg, to Darmstadt, to Frankfort, where the trip down the Rhine was to have been made. This journey was not entirely omitted, but the party broke up at Frankfort, some going here and other there. Mr. Dunning, the war having commenced, went down the Rhine and headed for Flushing, Holland, whence he proceeded to London. He toured portions of England and Scotland, and after a week went over to Belfast and Dublin. Then he backtracked to England, landing at Liverpool, where he took the steamer for home. He really saw little of the war excitement and experienced few of the discomforts and checks which other Americans suffered, and got back in fine spirits.

### Pharmaceutical Personalities.

—**Dr. John F. Hancock**, of John F. Hancock & Son, manufacturers of medicated lozenges and a list of other pharmaceutical products, in Baltimore, observed early in September the eightieth anniversary of his birth. The event was recalled by a host of his friends, and a flood of good wishes poured in upon him. Dr. Hancock is not only the oldest pharmacist in Baltimore, but remains in active pursuit of business. Every day finds him down at his laboratories, applying himself to details with the vigor and alertness of a young man. He is commonly believed to have discovered the fountain of youth and to take liberal draughts thereof at intervals. His virility was strikingly shown at the annual meeting of the A. Ph. A., where he attended all of the sessions, not missing one, performed a lot of work as chairman of the Procter Memorial committee and in other capacities, took part in the social events and returned home feeling as fresh as any one. Mrs. Hancock continues to share with him the happiness of a hale old age, time also having dealt lightly with her.

—**Frank I. Pierson** has been appointed postmaster of Leominster, Mass. This ends one of the most determined contests ever made in that city for a political office. The brother of the State governor was also a candidate for the position. It is reported, however, that Governor Walsh remained neutral throughout the contest. The defeated candidate called at Mr. Pierson's drug store after the news of the appointment had been given out and congratulated the druggist. Mr. Pierson came to Leominster in 1894 from Fitchburg. He opened the drug store in Monument square which he still conducts. He was born in Boston in 1869. He has had drug store experience in Lawrence, Lynn, Cambridge, Boston and Marlboro. He was for some time associated in the drug business at Fitchburg with John Hayes, under the firm name of Hayes & Pierson. He is a member of the Leominster Club, Court Leominster, F. of A., Leominster council, Knights of Columbus, Division 4, A. O. H., and Leominster lodge of Elks.

—**M. S. Ingalls**, a pioneer druggist of Halstead, Kansas, who is past the threescore and ten mark, has set his fellow townsmen wild with curiosity. While a concrete bridge at Halstead was in the course of construction, Mr. Ingalls secreted in one of the forms a small steel box containing a

message and a cigar to be forwarded to the President of the United States at the time the bridge is destroyed, and a gold coin to pay the expenses of the finder in taking the message to Washington. There is also a history of Halstead and a roster of the inhabitants. Placing the steel coffin and the enclosed articles in the bridge was a whim of Mr. Ingalls. He put it into one of the pier forms one night after work hours and covered it with a wheelbarrowful of concrete. Early the next morning he went down to the bridge and remained in the vicinity until after the workmen had poured many loads of concrete into the form. Mr. Ingalls later told all of his secret, except to disclose the contents of the message.

—**H. B. Watkius**, in an address before the Aberdeen, S. D. Merchants' Association, pointed out that the business of the retail druggist had been completely revolutionized in the last few years. He asserted that the druggist had graduated into the ranks of commercialism from the ranks of a profession. The apothecary shop has become the drug store. The druggist must keep abreast with the advances in pharmacy and at the same time must become familiar with buying lore, must learn to sell and advertise, must be able to analyze his cost of doing business and must study out the proper method of moving his stock. The most important thing the druggist must learn is the importance of placing his business on a safe and sane credit basis.

—**O. B. Thuma**, of Cincinnati, president of the National Co-operative Drug Company, who has been the manager of the Economy Drug Company, the retail string affiliated with the National, was painfully injured in an automobile accident just as he was about to leave for St. Louis. He and George E. Brown, secretary of the company, were in an automobile which overturned, both of Mr. Thuma's arms being broken, necessitating hospital treatment. Mr. Brown, however, was able to go on to St. Louis to take up the work which the two drug men had started out to handle there. As soon as he recovers Mr. Thuma will join him there.

—**James B. Deshong**, Harrisburg, Pa., and Mrs. Mabel A. Boyer, of the same city, were recently married at Lancaster by the Rev. J. W. Deshong, father of the bridegroom. The wedding was a surprise to the many friends of the couple, as the plans had been kept secret. According to report the druggist had gone to Lancaster to visit his parents. Mr. Deshong is a ward leader of the Republican party. He is said to have the reputation of having obtained more State, county and municipal positions for his constituents than any other ward leader in the city.

—**Fred W. Cook**, president of the San Antonio Drug Co., San Antonio, Texas, returned last week from a three months' holiday spent in Germany, Switzerland and France. Mrs. Cook and daughter, who have been absent in Germany for two years accompanied him. This is the first vacation that Mr. Cook has taken in a number of years. On his return he said: "While abroad I saw many interesting things, but nothing impressed me so much as the sight of the Statue of Liberty on my return. There is only one Europe and that is the United States."

—**Robert R. Levy**, proprietor of the Forty-seventh Street Company and president of the Revelry Theater Company, Chicago, Ill., is candidate for the Republican nomination for clerk of the Criminal Court. He has been associated during the past with realty men in building up his district. He is president of the Illinois branch of the International Moving-Picture Association and a director of the national organization. He is also a member of the Masonic fraternity, the Elks, North American Union, Illinois Athletic Club, Hamilton Club and the Independent Order B'nai B'rith.

—**Rochester Haddaway**, North Fort Worth, Texas, druggist, has been conferring with his fellow townsmen on plans to improve the city. One movement in this direction has led to the improvement and beautifying of the church yards. The church people have organized and agreed to an assessment of fifty to seventy-five cents monthly for the purpose of improving the church yards and putting in sidewalks. Mr. Haddaway is among those who are taking the initiative in the good work.

—**H. C. Swartley**, pharmaceutical chemist, 1518 Chestnut street, Philadelphia, figured prominently at the luncheon

of the Rotary Club, held at the St. James Hotel recently. Mr. Swartley selected as his topic the reasons for the upward sweep of drug and perfume prices since the outbreak of the war. The medicinal plants in Germany and France, he said, were practically waiting for the harvest when the war started, and as a result the supply of last year's stock is very much depleted.

—**H. C. Darby**, of Roseburg, Wash., by letter requested U. S. Senator George E. Chamberlain to work for congressional action in the direction of annulling patents on drugs and chemicals of European manufacture. Senator Chamberlain acknowledged the request by telegram, stating that the suggestion was a very important one and worthy of consideration. Mr. Darby is employed by the Hamilton Drug Co., Tacoma.

—**E. J. Liebetrut**, proprietor of a drug store in East Genesee street, Buffalo, N. Y., was held up by an armed highwayman who got away with a gold watch and chain, a diamond scarf pin and a small sum of money. The thief followed the druggist from where he had alighted from a trolley car. At a secluded spot he drew a revolver and commanded Mr. Liebetrut to halt. The latter halted and was relieved of his valuables.

**Dr. Henry P. Hynson**, of Hynson, Westcott & Co., Baltimore, celebrated the thirtieth anniversary of his wedding on September 8. The event was observed quietly, but none the less brought a number of congratulatory messages and many gifts. Though Mrs. Hynson is an invalid she retains a most active interest in current affairs and keeps up with the progress of pharmaceutical developments to an extent that is a constant source of surprise to her numerous friends.

—**D. W. Bole**, president of the National Drug and Chemical Co., Montreal, Que., was quoted recently as asserting that never again will the time be so propitious for the Canadian manufacturers of chemical products. Canada must study Germany's methods, if she wishes to turn to the manufacture of aniline dyes, etc., and liberal funding for research purposes will be necessary.

—**O. H. Soetje**, prominent druggist of Monticello, Ia., was perhaps fatally injured when an automobile in which he was riding jumped over a 30-foot embankment, throwing him head first into a sandbank. One or two of the bones in his back were badly shattered and his injuries were such that it was not thought he could live. He is the senior member of the firm of Soetje & Tiarks.

—**Leonard Coolbaugh**, who for five years or more was intimately connected with the drug business of Elmer Apple, at 22d and Berks street, Philadelphia, Pa., has resigned and will make a tour of the West and Southwest, the trip to cover a period of three months. He will then open a pharmacy in Houston, Texas. Mr. Coolbaugh is a recent graduate of the Philadelphia C. P.

—**Mr. and Mrs. M. W. Bamford**, Reading, Pa., tendered the employes of Bamford & Kemp, proprietors of two pharmacies in that city, a reception at their summer home on the Kutztown road. The day was pleasantly spent in games, contests and music. Baseball was played between teams composed of the married and single men in which Mr. Bamford figured prominently.

—**C. E. Bradish**, manager of the Live and Let Live Drug Co., Chattanooga, Tenn., recently spent several weeks of vacation and business in New York and Boston and vicinity. Following a buying tour which included the two cities named and Philadelphia, Mr. Bradish predicted that the supply of perfumes imported before the war would be exhausted within the next 90 days.

—**The Misses Clara and Anna Haase**, daughters of F. F. A. Haase, of Newark, N. J., a member of the German Apothecaries' Society, have begun their engagement with the Italian Grand Opera Company and will participate in its tour of the western and southern states and the larger cities of California. After their return next Spring they will go to Havana, Cuba, to begin their third season in that city.

—**E. Stauffen**, of Sharp & Dohme, New York, recently returned from his annual visit to Europe. The rest evidently has done him much good. He made his way from the continent by easy stages and with little discomfort. At London,

he succeeded in securing passage on the steamer *The Royal George*, of the Canadian Northern line, from Bristol to Montreal.

—**William A. Sailer**, general manager of Sharp & Dohme, Baltimore, who has been enjoying week-end visits with his family at their summer home, Snug Harbor, on the Severn river, near Annapolis, was in this city on a flying visit recently. He is looking fine and fit, a result, no doubt, of the numerous cruises on the Chesapeake Bay which he has enjoyed in his gasoline yacht, the *Sinbad*, during the summer.

—**Randolph Hinnen**, manager of the Pioneer drug store, Avard, Okla., is a candidate on the Progressive ticket for the office of county judge. Mr. Hinnen has, for years, borne the title of "W. J. Bryan's double." He is also a member of the Oklahoma Ph. A. and a representative of the press of his city.

—**John B. Raser**, prominent Reading, Pa., druggist, writes from Munich, Germany, to the paper in his home town sympathizing with the difficulty people there are having in naming their new hotel. The message from Mr. Raser came 26 days after mailing and it was indicated that he was on his way to Zurich, Switzerland.

—**P. Henry Utech**, the well known druggist of Meadville, Pa., was a member of the German Apothecaries' Society party which was touring Germany when broken up by the war. Shortly after his return home he delivered a very interesting address upon his trip before an audience which packed the local Zion Evangelical church.

—**S. R. Claves**, of Stockton, Cal., was painfully injured when he was thrown from a street car. He was attempting to get on when the car started suddenly and threw him to the pavement. A floating rib was fractured and his left ankle was also injured. He was confined to his bed for some time after the accident.

—**E. W. Knoechlman**, a druggist of Louisville, Ky., was dismissed in police court recently following an accident in which he ran down J. A. Abbott, an engineer. The latter sustained injuries which resulted in his death. Evidence was introduced to the effect that the accident was unavoidable.

—**Frank Gassaway**, of the Miami drug store, Miami, Ariz., recently returned home after a six weeks' automobile trip spent in Southern California and Northern Arizona. En route he visited the Grand Canyon. With him were his wife and Dr. and Mrs. Brayton. He reported having had the time of his life.

—**George Pohlmann**, until August 1st with the Spokane (Wash.) Drug Co., was inspired with sufficient patriotism to resign his job and leave for the front aboard the Italian steamer *Ancona*. At Gibraltar he and 23 other Germans were seized by the British. George, at last report was a prisoner of war, but had escaped the perils of battle.

—**Theodore Tpetrowicz**, drug clerk of Chicago, Ill., lit a match while drawing denatured alcohol from a barrel. He was burned on the face and arms. He is employed by the R. W. Hartwig Drug Co., 800 Milwaukee avenue. The resulting fire did \$5,000 damage.

—**A. B. McIntyre**, prescription clerk at the Corner drug store, Roundup, Mont., was recently painfully injured when he attempted to open a bottle of ammonia. When the cork did come out the liquid followed it and his right eye happened to be in the way.

—**C. P. Trepanier**, Grand Rapids, Minn., who had been spending some time at Dorset on a fishing trip, was suddenly taken ill. He was brought to Bemidji and placed in St. Anthony's hospital.

—**John L. Brown**, clerk at the Battlement drug store, Benton Harbor, Mich., was married recently at Fort Wayne, Ind. His bride came to that city from her home in Toronto, Canada. A two weeks' honeymoon followed the ceremony.

—**Edwin H. Whittaker**, of the Red Cross drug store, Ishpeming, Mich., was recently united in marriage to Miss Ida Olson, of the same city. Mr. and Mrs. Whittaker spent their honeymoon at Grand Island, near Munising.

—**George B. Cole**, well-known West Side druggist,

Wichita, Kans., was chosen as assistant secretary by the executive committee of the Democratic county central committee. His headquarters will be in the Biting building.

—**E. R. Saylor**, of Springfield, Ill., well-known druggist and past grand master of the Odd Fellows' lodge of Illinois, has been appointed superintendent of the Odd Fellows' old folks' home at Mattoon.

—**Chester B. Ryan**, assistant manager of the sundries department of Lehn & Fink, New York, accompanied by Mrs. Ryan, left recently for his old home, Detroit, Mich., where he spent a short vacation.

**Sharp & Dohme** will soon have at Baltimore, Md., one of the most complete and scientifically equipped laboratories in the United States, the extensive additions to their plant progressing most satisfactorily.

—**Thomas E. Shoemaker**, of the drug manufacturing firm of Robert Shoemaker & Co., 201 N. 4th street, Philadelphia, has been enjoying a very pleasant motorboat cruise to Jamestown, R. I. Mr. Shoemaker returned by rail.

—**Mr. and Mrs. D. C. Hickey**, of Rosen Heights, Texas, are the proud parents of a fine baby boy. Mr. Hickey is proprietor of the Red Front Drug Co.

—**Clarence H. Dougal**, the Main street druggist, Waterbury, Ct., recently announced that he was not a candidate for the shrievalty nomination on the republican ticket.

—**Fred E. Robinson**, pharmacist for the Elliott-Wilson Drug Co., Boone, Ia., and Miss Violet Frances Brewster, were recently married.

—**Reed Crane**, who has been on the road for some time for the United Drug Company, has been made assistant manager of that company's St. Louis office.

—**John J. Boehm**, a druggist of Chicago, Ill., has received the democratic nomination for alderman in the 15th district.

—**Milton M. Mitchell**, associated with his father in the business of the West Side pharmacy, Lima, O., was recently married to Miss Leonore Maud Cox.

—**Frank Kelley**, with Flannery Bros., druggists, Jacksonville, Ill., recently married Miss Lucile Smythe.

—**L. D. Wallace**, druggist of Rowley, Ia., was recently married to Miss Blanche Peyton, of Coggon.

—**George Patterson**, druggist, New Britain, Ct., recently married Miss Claire Creau, of the same city.

#### Proposed Compensation Act in Pennsylvania

By a resolution changing the constitution of the state manufacturers throughout Pennsylvania as well as retailers can prepare for a workmen's compensation act which is sure to be the outcome of the next State Legislature which convenes in January next. The drug trade, retail, wholesale and manufacturing, will be directly affected by the act. The last United States Census shows that in Pennsylvania there were 367 drug establishments and 37 chemical plants. In the former industry the number of wage earners who would be subject to the law 2,761. Their wages aggregate \$1,145,000. The number of salaried employes who would not be exempt from the operation of the law's 1,264 whose salaries are \$1,342,000. There are 3,185 wage earners engaged in the chemical industry of the state. Their wages total \$1,892,000. There are 369 salaried employes and their salaries total \$559,000. The laws of the State, while never directly partial to industry in preference to the laboring element, has been, it is said, unintentionally more or less in favor of the former class and for that reason has failed in a compensation law. The druggists are working with other lines to have an equitable and impartial law passed.

#### Special Meeting Ohio Ph. A. October 7th at Columbus

The Ohio State Ph. A. will hold a special meeting October 7th at the Hotel Chittenden, Columbus, Ohio. All members are requested to attend. It is called by President Bowman upon the petition of 25 members. The five-dollar dues are not being paid with sufficient promptness to insure the placing of an organizer, legislative lobbyist and publicity man in the field. Some plan must be devised to start this work at once, as was pledged at the last annual meeting.

## OBITUARIES

### ALBERT BRUEN

**A**LBERT BRUEN, senior member of the wholesale drug house of Bruen, Ritchey & Co., New York City, died on September 21 at his home, 256 Cumberland street, Brooklyn, after a brief illness from bronchial pneumonia. Mr. Bruen was in his 84th year, but up to the time of his final attack went daily to the Madison office of his firm and was active in business.

Born in Madison, N. J., on March 12, 1831, Mr. Bruen entered the drug business as a clerk in Morristown, but soon came to New York, where he became employed in the retail store of Alfred Hill, on Greenwich street. After a year at the Hill pharmacy, he was engaged as clerk in the wholesale house of Israel Minor, at 214 Fulton street, and six years later in 1857, was made a member of the firm. In 1860, upon Mr. Minor's preparing to retire from business, Mr. Bruen interested Mr. Alfred Pinchot, of Milford Pa., to enter into partnership with him, the new firm name being Pinchot and Bruen. In 1867 Charles H. Hobart was taken into the firm, and the name was again changed to include all three partners. Not long after the retirement of Mr. Pinchot necessitated another change to Bruen and Hobart. In 1881, upon the retirement of Mr. Hobart, Mr. William P. Ritchey became a partner, the house becoming known as Bruen Bros and Ritchey. The accession of Mr. Charles C. Bruen, Albert Bruen's oldest son, later caused a final change to Bruen, Ritchey & Co.

Mr. Bruen was married in 1855 to Miss Electa Cook, and took up his residence in Brooklyn, where he became strongly identified with church and philanthropic work. He was a deacon in the Baptist Temple of Brooklyn, and president of the board of trustees. At one time he was chairman of the Drug Trade Section of the New York Board of Trade and Transportation, and was reputed to have been longer engaged in the wholesale drug business than any other man in this city.

Mr. Bruen is survived by his widow, three sons, Charles C., Albert E., and George D. Bruen, and one daughter, Mrs. U. D. Frisby. Interment took place on Thursday, September 24, at Madison, N. J.

"Commodore" C. H. Tompkins, of Schieffelin & Co., relates that on February 1st, 1902, he called on Mr. Bruen at his office, not having seen him for many years. Mr. Bruen greeted him with "Hello, Tompkins, what brought you over here? I didn't know that you ever left your desk to call upon anybody." Mr. Tompkins answered: "Bruen, I am out to make semi-centennial calls. Just 50 years ago to-day I entered the employ of Israel Minor, and they put me to work under their head clerk, Mr. Albert Bruen, at \$8.00 a week!" "Probably they paid me \$9.00," was Mr. Bruen's reply.

### Jesse Mercer Battle

Jesse Mercer Battle, millionaire, founder of Battle & Co., chemists, died of heart disease at midnight on Sept. 15, at the home of his son-in-law, Eugene F. Smith, 4505 Berlin avenue, St. Louis. He was 64 years old and had been ill for two weeks, or shortly after his return from his summer home in Michigan. Mr. Battle went to St. Louis about forty years ago from North Carolina and began the manufacture of proprietary and patented products in 1875.

He was a thirty-second degree Mason, an Odd Fellow, and a member of various other fraternal organizations. His resi-

dence was at 4163 Lindell boulevard, St. Louis, and he also had homes in St. Louis county and Clayton, N. C. He was a horse fancier and was for many years an enthusiastic yachtsman.

He was the author of several biographical and religious treatises, a Universalist in religion and an Independent in politics. He served four years as charity commissioner of St. Louis. He is survived by a widow and one child, Mrs. Eugene F. Smith, and a sister, Mrs. H. F. Joy, of St. Louis.

### Dr. John J. Louis

Dr. John J. Louis, for 32 years a well known physician and druggist at Haselton, Ct., a suburb of Youngstown, died at his home of cancer of the liver. Although ill for some time, his end came with comparative suddenness and was a shock to his family and numerous friends. Dr. Louis was born in Vermont in 1848. He came to Youngstown 32 years ago, and for 15 years was engaged in the practice of medicine. At the conclusion of the latter period he decided to devote his entire time to his drug business. This he continued until his death. He was a Mason. His widow, an adopted daughter and his aged mother survive him. He was buried at Middletown Springs, Vt., his native town.

### Charles L. Mason

Charles L. Mason, a well known educator and prominent lawyer of North Granville, N. Y., and father of Harry B. Mason, editor of the *Bulletin of Pharmacy*, Detroit, Mich., died at his home in the former place on Sept. 7, aged 90. He was a man of iron constitution, and until about five years ago he exhibited more endurance than most men of sixty. Mr. Mason traced his ancestry back in a direct line to John Mason, an Englishman who came over to Massachusetts about 1690. He was twice married and had five sons of whom two survive—Frank B., of Springfield, Mass., and Harry B., of Detroit.

### RECENT DEATHS

—**Edward S. Bloom**, proprietor of The Temple Pharmacy, Ashland, Pa., died of uremic poisoning. For almost 30 years he was the representative in central Pennsylvania of the wholesale drug house of Shoemaker & Busch, of Philadelphia. Following the death of the late Louis C. Voshage, a year or so ago, Mr. Bloom purchased the drug store that the former had founded more than a quarter of a century ago. Mr. Bloom was born near Bloomsbury, N. J., in 1852. He studied at Gettysburg and Lafayette colleges, finally taking up the study of pharmacy. He was an Elk and an Odd Fellow. His widow, three daughters and two sons survive.

—**Henry Berlin**, well-known St. Charles avenue pharmacist of New Orleans, La., died at his home from Bright's disease. He was born at Hickory, Tenn., in 1861. At 12 years of age he became a clerk in a drug store at Poydras and South Basin streets. While thus employed he studied pharmacy. Later he became manager of Cusachs' pharmacy. He never married. He was a member of Union lodge F. & A. M. and of the local B'nai B'rith lodge, and for many years was an active member of the Pythians. He was also a member of the Y. M. H. A. and a director of the Touro Infirmary.

—**F. J. Hunt**, of the Michigan Drug Co., Detroit, who was well known both as a Mason and a traveling salesman, died at his home at the age of 63 years. He was born at Parma, Mich., and came to Detroit when 16 years old. He was a member of the famous Hickory club, numbering 500 Michigan men who were cured of tuberculosis at Hickory, N. C. He was also a member of Charlotte commandery, Knights Templar, Ashlar Lodge No. 91, F.&A.M., and the United Commercial Travelers. His widow, two sons and two daughters survive him.

—**Lewis M. Hudson**, 40, a graduate of Massachusetts C. P., died at the home of his father Herbert A. Hudson, of Concord, Mass. Mr. Hudson's death was due to spinal trouble which had its origin in a fall that occurred while working in a drug store at Newtonville two years ago. He belonged to United Brethren lodge of Masons, Houghton

ALBERT BRUEN

Royal Arch chapter, Trinity commandery and Aleppo Temple, Nobles of the Mystic Shrine, Royal Council, R. and S. F. C. Curtis camp, Sons of Veterans, Union club.

—**John C. Pecor**, of Maysville, Ky., died after a brief illness at the age of 67 years. He was engaged in the drug business 52 years ago with Seaton & Broderick, later with G. W. Blatterman, who succeeded the above-named firm, and in 1877 he established the drug business conducted by him up to his death. He was one of the best-known druggists in northeastern Kentucky. A wife, two sons and three daughters survive. He was a member of the L. O. O. F.

—**J. Griffith Howard**, died at Pitman, N. J. He was born in 1860. At the time of his death he was proprietor of a hotel, but was at one time a pharmacist at 36th and Market streets, Philadelphia, and later at the Medico-Chirurgical hospital. He was a graduate of the P. C. P., and a member of the Pennsylvania Ph. A. He was Past Regent of Apollo Senate, No. 6, and a member of the Great Senate, Order of Sparta. A widow and one son survive him.

—**Charles H. Leickhardt**, 43, a prominent druggist of Nashville, Tenn., escaped from the Oakgrove Sanitarium, Flint, Mich., where he had been under treatment for several months, and making his way to the Grand Trunk Railroad tracks, was killed by an express train. He had been suffering from mental depression. The pharmacy he owned was located on the Public Square in Nashville, and was one of the largest in that city.

—**William K. Davidson**, a pioneer druggist of Alexandria, Va., died in a hospital near Baltimore. He was a member of Andrew Jackson lodge, No. 120, F & A M. Mt. Vernon chapter, Royal Arch Masons, and Old Dominion Commandery, and of Almas Temple, Mystic Shrine of Washington. He was one of the charter members of the Bachelors' club. A brother and a sister survive.

—**Francis Davis Colby**, Galveston, Texas, died at the family residence, age 89. Mr. Colby had lived in Texas 40 years, 16 of which were spent in Galveston. He had retired from business. He was a native of Warner, N. H., but had spent many years in the drug business in San Antonio and Houston. He always took a keen interest in Galveston's civic advancement.

—**George L. Robbins**, vice-president of the W. B. Hunt Drug Co., conducting stores at Wakefield, Boston, Cambridge and Malden, Mass., died at Corey Hill hospital, following an operation for stomach trouble, from which he had suffered for years. His home was in Brookline. Previous to his connection with the above company Mr. Robbins owned a drug store at Woburn.

—**William Henry Hall, Jr.**, this city, youngest son of Wm. H. Hall, for many years connected with the wholesale drug firm of Hall & Ruckel, died recently at his residence, 44 Riverside Drive. He was a member of the New York Yacht Club, life member of the New York Athletic Club, Automobile Club of America and also of Kane Lodge F & A M.

—**Edward T. Rice**, long a resident of Albany, where he was a member of Clements & Rice, druggists, died recently at his home in Weehawken, N. J., in his seventy-sixth year. Mr. Rice was a member of the Twenty-fifth New York Regiment during the civil war and belonged to G. A. R. Post No. 1. His widow survives him.

—**Walter Brody**, a druggist of 5809 Glenwood avenue, Chicago, Ill., ended his life (on Aug. 19) by swallowing poison with suicidal intent. His body was discovered by the clerk in a room of the Plymouth Hotel where he had registered as a guest. He left a letter telling his father that both his business and domestic life had been failures.

—**C. C. Stratton**, well-known druggist of Redwood City, Cal., died suddenly at his home in Wellesley Park, following a recent nervous breakdown from which it was believed he had recovered. He came to the above city six years ago and became associated with the Walsh Drug Co. His widow and two young sons survive.

—**John Francis Slattery**, 37, graduate of N. Y. C. P., died at his father's home at North Adams, Mass., of pneumonia. He was born in North Adams and had spent the greater part of his life there. On account of ill health he had been confined to his father's home for some time past.

—**Mrs. Ruth H. Plaisted**, Norwalk, Ct., died at her home in that city. She came to Norwalk 30 years ago, a son conducting for a time Plaisted's drug store. Upon his death, Mrs. Plaisted took over the management and ran the business herself. A brother and sister survive.

—**R. E. L. Smith**, until a year or so ago city salesman for the Wherrett-Mize Wholesale Drug Co., Atchison, Kans., died recently in Washington, D. C., where he was seeking to improve his health. He was subject to heart trouble. A wife and five children survive him.

—**A. N. Wachs**, one of the oldest residents of Oakland, Calif., died recently at the age of 72. He had been in poor health for more than a year. Three sons and one daughter survive him. Two of the sons are druggists at Oakland.

—**Franklin Bosworth Crouch**, pharmacist and proprietary manufacturer, died of valvular trouble of the heart at his residence in Brooklyn, N. Y. He passed away while sleeping in a chair. He was 67 years of age.

—**Walter G. Hedden**, 57 years old, a former druggist of Louisville, Ky., died recently at his home of paralysis which resulted from concussion of the brain received in an accident August 26.

—**E. Wayne Butterfield**, 25, a registered pharmacist employed in Dorchester, Mass., was drowned in Grand Lake, Danforth, Me. He was in bathing at the time in company with his brother.

—**Homer Kendrick**, the North Fort Worth (Texas) druggist was drowned Aug. 21, in the Trinity river. His wife, a daughter and a baby boy survive.

—**J. C. Fox**, 73, died recently at Harper Beach, Mich. For many years he was a member of the one-time firm of McPike & Fox, Atchison, Kans.

—**R. A. Roy**, druggist at Valley Falls, Kans., committed suicide. Financial trouble was given as the reason for his act.

—**Clarence J. Bechtol**, 39, a North Manchester, Ind., druggist, died in Hope hospital, Fort Wayne.

—**Jacob Kelly**, druggist of Toledo, O., died after an illness of nearly a year.

—**W. A. Briggs**, druggist, Hutchinson, Kan., died recently.

#### Cincinnati Drug Clerks' Outing

The Cincinnati Central Drug Clerks' Association held its sixth annual outing recently at Diamond Star Grove, in Rosedale, about 200 of the members and their families attending. Probably the most exciting feature of the program was the regular ball game between the wholesalers and the retailers, which was won by the wholesalers, by the liberal score of 13 to 7. Handsome prizes were awarded to the winners of the various athletic events, as follows: Fifty-yard dash for ladies, won by Edna Wise; 100-yard dash for ladies, won by Margaret Wagner; 100-yard dash for fat men, won by George Schultes; 100-yard dash for thin men, won by Fred Meyer; three-legged race, won by George Wittenberg and Edward Mossmeier; ball-throwing contest for ladies, won by Clara Christopher; shoe race for boys and girls, won by Laura Laugfels. A prize for the best waltzing couple went to Miss Viola Sculos and George Bogert. The committee in charge of the event consisted of Charles E. Meinberg, Frank Berg, E. C. Klein, Robert Wetterstrom, William Schultz and Albert P. Krause.

#### Agency contract—Liability of Agent

A contract between a medicine company and an individual required the company to ship proprietary medicines to the individual for sale at retail, and bound him to sell at prices fixed by the company, to remit each week one-half of the receipts of the business, to submit weekly reports of the business, and on the termination of the contract settle in cash for the balance due the company on account. In an action by the receiver of the medicine company it was held that the contract was not a contract of sale, but an agency contract, and the individual paying the half of the receipts for goods sold was not liable for the value of goods in his possession at the termination of the contract. (*Dabis vs. Woolsey*, South Dakota, Supreme Court, 147 N. W. 977.)

## NEWS FROM ASSOCIATIONS

### CHARLES A. WEST HEADS THE WHOLESALERS

**Members of N. W. D. A. Elect Boston Man President at Indianapolis Meeting—Main Made Secretary.**

Charles A. West, of Boston, was elected president of the National Wholesale Druggists' Association, at its 40th annual convention, held at the Claypool hotel, Indianapolis. The other officers elected are:

Vice-presidents, W. J. Mooney, Indianapolis; John R. Taque, Memphis, Tenn.; F. E. Bogart, Detroit; John Phmizy, Augusta, Ga.; John G. Mason, Waco, Texas; secretary, Thomas F. Main, New York; treasurer, S. E. Strong, Cleveland; board of control, Charles Gibson, Albany, N. Y.; Charles E. Bedwell, Omaha; James W. Morrisson, Chicago, and George R. Merrell, St. Louis. F. E. Holliday, of New York, was elected as the association's general representative.

In his annual report, President George W. Lattimer, of Columbus, O., praised President Wilson and asserted that business is rapidly adjusting itself to the conditions imposed by recently enacted legislation.

The new president and a near-dozen of former presidents attended a dinner at the Claypool. Those present were: W. A. Hover, Denver; George W. Lattimer, the retiring president; Albert Plaut, New York; C. P. Walbridge, St. Louis; M. Cary Peter, Louisville; L. B. Hall, Cleveland; C. F. Weller, Omaha; Edgar D. Taylor, Richmond; Charles A. West, Boston; Theodore F. Meyer, St. Louis; Charles S. Martin, Nashville, and Wm. Jay Schieffelin, New York.

A miniature 500-mile race at the Speedway was a feature of the entertainment afforded the members.

### GROVER PRESIDENT OF SOUTH DAKOTA PH. A.

**Retiring President Urges Prerequisite Requirements. Consolidation of State Schools Is Urged**

R. O. Grover, of Huron, was elected president of the South Dakota State Pharmaceutical Association at the twenty-ninth annual convention of that organization held at Aberdeen during the past month. The other officers elected are the following:

First vice-president, C. D. Kendall, of Brookings; second vice-president, L. E. Sasse, Vienna; secretary, E. C. Bent, Dell Rapids; treasurer, A. A. Woodward, Aberdeen.

The following is the personnel of the new legislative committee:

A. R. Fellows, Sioux Falls; H. A. Sasse, Henry; F. W. Brown, Lead; F. G. Stickles, Mellette, and L. E. Highley, Hot Springs.

H. J. Schnaidt, of Parkston, the retiring president; C. D. Kendall, of Brookings, and F. D. Kriebs, of Beresford, were recommended to Governor Byrne as candidates for the vacancy in the State Board made by G. F. Swartz, of Redfield.

In his annual address, President Schnaidt recommended that the standard of pharmaceutical education in the State be raised, and also that only graduates in pharmacy be eligible for registration in South Dakota. He also recommended that a strong legislative committee be appointed to look after the interests of the association at the next session of the legislature. He especially urged the enactment of legislation curbing the sale of narcotics and habit-forming drugs.

The matter of prerequisite pharmaceutical education was referred to the legislative committee. The special committee appointed to consider the proposed consolidation of the State colleges of pharmacy and medicine recommended that the matter be brought up at a future meeting. It was argued that the college of pharmacy, now at Brookings, would be considerably strengthened if the medical faculty at the Vermillion institution could be utilized for the instruction of the classes in pharmacy.

Secretary E. C. Bent in his report asserted that no failures had been reported by druggists during the past year and business conditions were very encouraging. I. A. Kieth, a former secretary, Joseph Wegener, W. R. Irwin and I. L. Preszler

had died during the year. Thirty-two new members had been secured and 24 names had been stricken from the roll. The membership totaled over 800.

Treasurer A. A. Woodward reported that the association was in a good financial condition. The balance on hand at the last report was \$3,872; total receipts amounted to \$3,016; disbursements, \$3,072, and the balance on hand to date was \$3,816.

D. F. Jones, of Watertown, urged that South Dakota require attendance at a recognized college of pharmacy of all applicants for registration. He also urged that the association take steps to secure an increase in the faculty at the school of pharmacy at Brookings in case that institution was not consolidated with the State medical college. Mr. Jones was supported by F. D. Kriebs, of Beresford, who recommended that the possession of a college degree by an applicant be one of the requirements for registration.

Interesting addresses were delivered by J. S. Brewer, of the Minneapolis Drug Co.; W. G. Noyes, of the Noyes Brothers & Cutler Co.; Professor E. F. Ladd, whose subject was "The Druggist of the Future," and others.

The next meeting will be held at Lake Madison, probably in the second week in August, 1915.

A musical and dance at Dreamland hall was an entertainment feature thoroughly enjoyed by the 300 members of the S. D. Ph. A., the ladies' auxiliary and the travelers' auxiliary. An entire day was spent by all at the Country Club.

### H. C. LITTLEJOHN HEADS VIRGINIA PH. A.

**Members Would Require Diploma of Pharmacists from Other States—Object to Handling Liquor**

H. C. Littlejohn, of Leesburg, was elected president of the Virginia State Pharmaceutical Association at that organization's recent annual meeting held at Richmond. The other officers are:

First vice-president, John Bauer, Richmond; second vice-president, T. Ramsay Taylor, Norfolk; secretary, E. L. Brandis, Richmond; treasurer, H. C. Eley, Suffolk; local secretary, J. W. Barnett, Roanoke; member executive committee for three years, W. H. Lawson, South Boston; member entertainment committee, three years, H. J. Brady, Roanoke.

The association named John E. Jackson, of Tazewell; H. E. Orchard, Lynchburg; C. D. Fox, Roanoke; W. T. Reeves, South Boston, and C. D. Owens, Wytheville, as candidates for a vacancy on the State Board.

The following were appointed members of the legislative committee:

W. G. Williams, Charlotte Courthouse; T. A. Miller, Richmond; T. R. Taylor, Norfolk; C. H. Goldsboro, Culpeper, and G. T. Mankin, Falls Church.

The association decided to make an effort before the general assembly to secure legislation providing that pharmacists wishing to practice in Virginia must present a certificate of graduation from a college of pharmacy in order to qualify for registration. The members favored a prohibitive tax on peddlers of medicines throughout the State. Stricter anti-narcotic legislation was also deemed necessary. A resolution was adopted to the effect that the druggists of Virginia protested against the handling of intoxicating beverages by druggists. A committee of five was appointed to draft a bill covering this last matter and it will be pushed before the general assembly regardless of the election of September 22.

The next meeting will be held at Mountain Lake, Giles County, the third Tuesday in June.

### G. A. S. Collects Money for War Sufferers

At a meeting of the officers of the German Apothecaries' Society, held early last month, the sum of \$300 was subscribed in less than five minutes for the benefit of German war sufferers. The subscription list will be circulated by the society's messenger and all the members will be given an opportunity to subscribe. It is expected that a large sum will be collected in this way. There were present at the meeting President Dr. Charles F. Klippert; Vice President, Otto P. Gilbert; Secretary, Carl Baum; Treasurer, Robert S. Lehman, and Messrs. Otto Raubenheimer, Fred Schaefer, August Diehl and Hugo Kantrowitz.

## Reorganization Changes Effected at Detroit Meeting of the A. Ph. A.

*Sixty-second Annual Gathering Marked by Large Attendance—House of Delegates to be Continued—Treasurer's Report Shows that Total Association Assets, Including Funds Held in Trust Are \$55,790.11. Pharmaceutical Syllabus is Harshly Criticized. W. B. Day Succeeds Prof. J. H. Beal as General Secretary—To Meet Next Year in San Francisco.*

THE dominant features of the sixty-second annual meeting held in Detroit were the vast amount of business transacted and the promptness with which the various officers and committees did the work assigned to them. The local committee was largely responsible for the innovation and the printed programmes distributed and bulletin boards well placed served to enlighten all members and visitors of the progress of the scheduled work and put them "wise" as to what was going on. In this work the local committee exemplified the "new school of advertising" in that the information given was informative and well served the purpose. There was but little conflict of interests, and each member was given the opportunity to decide with some degree of intelligence which of the various sections of the association he would attend.

Another new feature adopted was the reorganization of the sectional work of the association, the new arrangement providing for a scientific section with four subdivisions; (a) chemistry, (b) botany and pharmacognosy, (c) biologic assays, and (d) bacteriology; a section on commercial interests; a section on practical pharmacy and dispensing; a section on pharmaceutical legislation and education; a section on historical pharmacy; and a women's section. Provision was also made in the by-laws for additional sections.

The attendance was one of the largest that has been recorded in recent years, and the interest was sustained from the opening session of the council to the last general session of the convention when the officers were installed for the ensuing year, as follows:

President, Caswell A. Mayo, of New York; 1st vice-president, L. D. Havenhill, of Kansas; 2nd vice-president, C. Herbert Packard, of Massachusetts; 3rd vice-president, Charles Gietner, of Missouri; general secretary, W. B. Day, Illinois; members of the Council Otto Claus, Missouri, M. I. Wilbert, District of Columbia, Caswell A. Mayo, New York, and George M. Beringer, New Jersey.

San Francisco was chosen as the meeting place for 1915, and the following nominations were made for next year's officers, to be voted on by mail:

*For President:* Dr. W. C. Alpers, Cleveland, Ohio; Wilbur J. Teeters, Iowa City, Ia., and L. D. Havenhill, Lawrence, Kansas.

*For 1st Vice-President:* Charles H. LeWall, Philadelphia; Leonard A. Seltzer, Detroit, and D. F. Jones, Watertown, S. D.

*For 2nd Vice-President:* E. A. Ruddiman, Nashville, Tenn.; E. O. Kagy, Des Moines, Ia., and C. F. Nitardy, Denver, Colo.

*For 3rd Vice-President:* Linwood A. Brown, Lexington, Ky.; E. N. Gathercoal, Chicago, and C. Osseward, Seattle, Wash.

*For Members of the Council* (Three to be elected): G. M. Beringer, Camden, N. J.; F. M. Apple, Philadelphia; Phillip Asher, New Orleans; E. C. Bent, Dell Rapids, S. D.; H. V. Army, New York; R. H. Walker, Gonzales, Texas; J. O. Burge, Nashville, Tenn.; C. B. Jordan, Lafayette, Ind.; and Andrew Sherer, Chicago, Ill.

*New Officers of the House of Delegates:* President W. S. Richardson, Washington, D. C.; 1st vice-president, C. B. Jordan, Lafayette, Ind.; 2nd vice-president, H. M. Faser, Oxford, Miss. Secretary, Joseph Weinstein, New York.

Following the new order of business, there were no addresses of welcome by officials or responses by members; the association after convening and a prayer by a local clergyman, started right in with the delivery of President Beringer's annual address. The address was a masterly review of the progress of pharmacy during the year and contained a number of recommendations, which were referred to a committee consisting of J. H. Lemberger, Otto Raubenheimer, Thomas F. Main, R. H. Walker and Joseph P. Remington. This com-

mittee presented a report later, the main features of which were adopted, as follows:

1. Approving the objects of the International Pharmaceutical Federation, and recommending that the Council be authorized to make application for active membership of the A. Ph. A. in the same.

2. Approving the recommendation that the number of members necessary for the organization of local branches be reduced from 25 as at present to 15, and that the Chairman of the committee on local branches should provide a bulletin to be issued to the local members suggesting topics for discussion.

3. Approving the recommendation that a special committee be created on Prerequisite Laws to take action to encourage the passage of such laws in States where the same do not exist.

7. Approving the recommendation that the A. Ph. A. join with other associations in urging a modification of the postal regulations to permit the shipment of medicine by parcel post or through the mail, provided such medicines are not of a volatile, corrosive, or explosive character, or do not belong to the class of habit-forming drugs.

8. Approving the preparation and introduction of a new bill at the next session of Congress for improving the status of pharmacists in the U. S. Army.

9. Approving the recommendation that some plans should be formulated for the protection of the public, and for the prevention of accidents due to swallowing bichloride tablets, or their solutions. This subject was left open for further action of the Association.

10. Approving the recommendation that a year-book of the A. Ph. A. should be completed and published within a reasonable time after the expiration of the year which it represents. It was also recommended to continue the publication of the Code of Ethics in the year-book.

12. Approving the recommendation that the Committee on Publication be paid in quarterly sums in advance to cover such additions to the clerical force as may be needed.

13. Approving the publication of an Epitome on the N.F., and the establishment of a committee on propaganda to increase the use and extend the influence of N.F. preparations.

15. Approving the recommendation that the President or Council shall fill any vacancies in offices of the various sections that may occur during the year.

16. Approving the recommendation that the nominating committee when selecting candidates for the various offices in the Association shall be given more time in which to meet and make up its report.

17. Approving the recommendation that local branches of the A. Ph. A. should nominate a member for the Council and that the Council itself shall elect or decline to elect as may in its judgment seem best.

18. Approving the recommendation that the function of the House of Delegates be restricted to the consideration of topics of general interest. The report also stated that a special committee should be appointed to take into consideration the whole subject of the function of the House of Delegates.

19. Approving the recommendation that the Association should have its own committee on resolutions, and that the committee should hold open session for the discussion of such resolutions.

20. Approving the recommendation to provide an auxiliary of lady members who shall be eligible.

21. Approving the recommendation for the consolidation of some of the sections.

These recommendations were adopted by the Association, a few of them, however, being referred to the Council. The President's recommendation that the Council take into careful consideration the preparation of a Pharmaceutical Syllabus, expressive of the views of pharmaceutical educators, and his recommendation that a special committee, consisting of the President and living former Presidents be provided to report to the Association at its next meeting upon the subject of stan-

of the Association adopted by the

### Greetings From Other Associations

The following greetings were received from other associations: Dr. J. A. Avila, Secretary, and Dr. Herrera, Secretary, of the Pharmaceutical Society. The first named addressed the Association in Spanish. Other delegates were: George W. Howell, of the Bureau of Chemistry, U. S. Department of the Public Health Service; J. A. Avila, of the Bureau of Standards; Prof. W. F. Puckner, of the American Medical Association; Dr. Wm. Jay Schieffelin, of the N. W. D. A.; C. M. Woodruff, of the National Manufacturers' Association; and Charles F. Mann, of the N. A. R. D.

### Treasurer's Report

	Aug. 15, 1913	Jan. 1, 1914	Aug. 15, 1914
Membership Fund	\$19,520.58	\$19,692.03	\$20,122.51
Procter Monument Fund	5,713.81	5,828.07	5,944.63
College Prize	3,193.09	3,206.46	3,235.52
Rice Memorial	2,702.81	2,735.95	2,800.65
Excess Prize	1,019.02	1,039.49	1,060.18
Total	\$32,149.31	\$32,508.91	\$33,163.49
Jan. 1, 1914			\$2,598.91

Aug. 15, 1914, Net Increase from Jan. 1, 1914 ..... \$ 654.58  
The Association Assets August 15, 1914, may be summed up as follows:

Cash in Bank	\$5,372.95
Bonds	10,000.00
Available Assets	\$15,372.95
Permanent Funds	33,163.49
Total Association Assets	\$48,536.44
Funds held in trust:	
Procter Monument Fund	\$7,048.90
College Prize Fund	34.80
Rice Memorial Fund	169.91
	7,253.67
Grand Total	\$55,790.11

Henry M. Whelpley, Treasurer.

### SECOND GENERAL SESSION

At this session E. W. Nitardy, of Denver, secretary of the Committee on Nominations, presented a report containing the names of the candidates for next year's officials, as given above. This list will be sent to the members and the vote taken by mail.

H. V. Army, chairman of the Committee on Weights and Measures, presented resolutions which were adopted relating to revival of the campaign to make the metric units the official system of weights and measures in this country. The incoming committee was directed to co-operate with the American Association for the Advancement of Science, the American Chemical Society, the National Wholesale Grocers' Association, and all other interested bodies in an educational campaign to further the general adoption of the metric system. Steps will also be taken to enlist the N. W. D. A. in such a campaign.

The reports of the Committee on Editing Rules, and on pharmaceutical nomenclature were adopted, while the recommendation for the Association to become a member of the International Pharmaceutical Association was referred to the Council. C. H. Packard of Boston, reporting for the committee on membership, stated that eighteen members had died, 130 had resigned, 98 had been dropped, showing a total loss during the year of 240. There had been 390 applications for membership. The Committee on Procter Memorial presented its report showing that sufficient funds had been collected to build a monument to the late Prof. Procter, and the committee was authorized to draw on the fund as might be needed to defray the expenses connected therewith. A resolution was also passed that the Association should petition Congress to provide a suitable site in Washington.

### LAST GENERAL SESSION

At the last general session, held on Saturday morning, the resolutions reported from the House of Delegates were approved, and the following officers were announced as hav-

ing been elected by the Council: General Secretary, W. B. Day, Chicago, Ill.; Historian, F. G. Eberle, Dallas, Texas; Reporter on Progress of Pharmacy, C. Lewis Diehl, Louisville, Ky.; Acting Editor of the *Journal* of the A. Ph. A., E. C. Marshall, Columbus, Ohio. The salary for the General Secretary was fixed for the year at \$750, while the salary of the Editor is to be fixed by the Council. To defray expenses of the Committee on Syllabus \$25,000 was voted, and for the Committee on National Formulary \$4000 was provided.

Considerable discussion followed the presentation of the report by H. B. Mason, Chairman of the Committee on Reorganization. This report contained a number of recommendations and proposed changes in the By-Laws to make them effective. As finally adopted, the report provided for the general reorganization of sectional work as outlined above.

Among the changes in the By-Laws are those which permit members to attend Council meetings and speak from the floor; that the Council may elect members duly proposed at any convenient time; abstracts of the minutes of the Council may be called for and read at any general session and amended or approved; lady members of the A. Ph. A. and women of members' families are eligible for membership in the women's section. The standing committees recommended were: pharmacopoeial revision, transportation, and resolutions, each to consist of ten members; pharmaceutical syllabus and formulary to consist of seven members; time and place of meeting, Ebert Prize, general prizes, programme committees each to consist of three members. The appointments are to be made by the president, and to take the place of committees discontinued. The committee on programme hereafter will consist of the local secretary, general secretary, and secretary of the Council. The annual programme is to be published in the *Journal*.

A vote of thanks was given to the former general secretary, Prof. J. H. Beal.

### HOUSE OF DELEGATES

On the organization of this body, the committee reported that more than 250 delegates had presented or forwarded credentials from various pharmaceutical organizations and colleges of pharmacy. President C. M. Snow, of Chicago, was in the chair; in his introductory remarks he outlined the work and aims of the delegates, and urged prompt consideration of all questions that should come before them. A committee of five was appointed to study the best means of promoting the usefulness and efficiency of the House of Delegates, the committee to report at the next annual meeting. The committee appointed consisted of H. P. Hynson, of Baltimore, Chairman; F. H. Freericks, of Ohio; Joseph Lemberger, of Pennsylvania; W. C. Anderson, of New York; and F. M. Apple, of Philadelphia. In an address Mr. Hynson presented the outline of a plan to form a congress, which should represent the various branches of the drug trade and aim to unite all interests for handling problems of legislation, business, and the general welfare of the trade. The endorsement of the Veteran Druggists' Association was approved, as also the Metz and Stevens bills now before Congress. Following are the resolutions reported favorably by the House of Delegates:

(1) *Resolved*, That the House of Delegates indorse the aims and purposes of the Chicago Veteran Druggists' Association, and recommend the formation of similar associations as sections of the local A. Ph. A. branches, provided that the members of such associations should also be members of the A. Ph. A.

(2) *Resolved*, That the A. Ph. A. instruct its representatives in the National Drug Trade Conference to act immediately in connection with the representatives of the allied branches of the drug trade in the Drug Conference to draft at the earliest possible moment a bill to reform the present patent laws, registration of names of drugs, and the granting of sole rights to sell certain drugs to the people of the United States suitable to the best interests of the drug trade in the United States, and to urge its passage at the earliest possible opportunity, and support of the A. Ph. A. is hereby pledged to such reform.

## Stearns' "Smoker" one of the Features of A. Ph. A. Week in Detroit

ONE of the features of the entertainment programme provided for the visitors at the recent meeting of the A. Ph. A. in Detroit, and which will be long remembered by those who were present, was the "smoker" given by Frederick Stearns & Co., in the mammoth Wayne Gardens in that city. One thousand druggists representing the membership of the A. Ph. A., the Michigan Ph. A., and the Michigan Travelers' Association, sat down to the forty tables provided, at each of which was a representative of the Stearns Co. There the guests were served with a mighty good supper followed by "smokes" and interspersed with stories and reminiscences. The novel programme, after the supper, started off with everybody singing "Hail, Hail, the Gang's All Here," and this was followed by many special cabaret, musical and vaudeville features. Even a motion picture theatre was leased outright for the night and moved to the Wayne Gardens to provide entertainment between the acts.

(3) *Resolved*, That the A. Ph. A. make all possible efforts to have only graduates of recognized schools of pharmacy nominated as members of the State Board of Pharmacy by the State associations and where possible to have such amendments made to State laws as will make such qualifications a prerequisite.

(4) *Resolved*, That the incoming president be and is hereby instructed to appoint a committee of three members, which committee shall confer with similar committees, appointed for the same purpose by other organizations, upon the advisability of forming a congress of national drug and pharmaceutical bodies under the auspices of the A. Ph. A. And be it further

*Resolved*, That the results of the conference of these committees shall be reported to the several organizations represented and to the A. Ph. A. at their annual meetings in 1915, with such recommendations as may be agreed upon.

(5) WHEREAS, The usefulness of the House of Delegates, during its two years' existence, not having been such as was expected at the time of its installation, it is important that something be done to increase this usefulness; therefore, be it

*Resolved*, That it is the sense of this House of Delegates that increased efficiency can be secured by making this body a permanent one instead of making its existence dependent upon the actions of the Council.

(6) *Resolved*, That it is the belief of the House of Delegates that the Year Book should contain abstracts of papers submitted by the members of the A. Ph. A. and published in the *Journal*.

(7) *Resolved*, That the president of the A. Ph. A. at the opening session of each annual convention, shall appoint an official censor whose duty it shall be to supervise matter given to representatives of the local press, and insure that fair and accurate accounts of the proceedings and business of the association during such meetings shall be fairly and accurately printed.

#### THE SCIENTIFIC SECTION

This important section held two sessions, the chairman, Prof. E. A. Ruddiman, of Nashville, Tenn., delivering a short address covering the work done by the members in former years and making some recommendations as to future effort. He was followed by Prof. W. L. Scoville, who, as secretary, pre-

sented his report for the year. The committee on the award of the Ebert Prize, through Benjamin L. Murray, chairman, reported that it had not found any of the papers presented at the last meeting of a grade fulfilling the requirements of the donor, and therefore no award could be made. Dr. E. M. Houghton, of Detroit, presented the report of the committee on physiological testing of drugs. A resolution was adopted requesting the Public Health Service to continue the publication of the *Digest of Criticisms on the U. S. P. and N. F. preparations*.

The following officers of the section were elected and installed: Chairman, H. Engelhardt, Baltimore; first vice-chairman, W. L. Scoville, Detroit; second vice-chairman, L. A. Brown, Lexington, Ky.; secretary, W. Mansfield, New York.

This section was opened by Chairman Hugh Craig, of Chicago, who called attention to some of the educational needs of pharmacy. He recommended among other things that the association should create a committee to survey educational methods, and that it should take steps towards supplying efficient pharmaceutical educators, trained along pedagogic lines. He also thought that the Association should interest itself in the modern movement toward the concrete and practical in general educational practice, and that steps should be taken to secure the better enforcement of the statutory provisions that safeguard the practice of pharmacy. This address was referred to a committee consisting of W. B. Day, E. A. Ruddiman and M. I. Wilbert.

Frank H. Freericks presented a report as secretary of the section which contained a review of the legislation enacted during the past year, as also that which had been proposed for enactment. Caswell A. Mayo, chairman of the special committee on postal regulations, presented a report on the mailing of poisons. He stated that the post office department had under consideration a regulation which he believed would permit the legitimate use of the mails for the transportation of poisons, and at the same time would prevent the abuse of postal privileges. On Friday evening the section held a joint session with the American Conference of Faculties and the National Association of Boards of Pharmacy to discuss the report of the Committee on Syllabus. The debate was very spirited. H. L. Hilton, of Washington, condemning the syllabus, and stating that it was a disgrace to American pharmacy. A resolution presented by H. P. Hyn-

son, of Baltimore, was adopted, recommending that the Association request the N. A. B. P. and the Conference of Faculties to appoint committees of three to confer with similar committees from other national organizations with a view to bring about a congress of national pharmaceutical organizations under the auspices of the A. Ph. A. The section then installed the new officers: F. H. Freericks, chairman; and R. A. Kuever, of Iowa City, secretary.

#### SECTION ON PRACTICAL PHARMACY AND DISPENSING

This section was called to order by Chairman F. W. Nirtardy, of Denver, who said that the section had been founded to give pharmacists a clearing house for the exchange of practical hints and information about dispensing and to aid and foster the advance of pharmacy. He spoke of higher professional attainments and of the reward which came from the practice of true professional pharmacy. A number of interesting hints in prescription work were brought out in this section, and the discussions were of a most practical character. A number of papers were presented. The officers are: Chairman, Cornelius Osseward, Seattle, Wash.; secretary, I. A. Becker, Chicago, Ill., associate, D. F. Jones, Watertown, S. Dak.

#### SECTION ON HISTORICAL PHARMACY

This section was called to order by Chairman W. C. Alpers, whose address was a strong plea for the continuation of the section. Among the recommendations made by him were, the compilation of a bibliography of past, present and future members, and the collection and arrangement of the historical matter now in possession of the Association. The custodian of the collection should be paid a suitable salary.

Secretary F. T. Gordon, of Philadelphia, read a report setting forth the activities of his office during the year. The report of the historian, Caswell A. Mayo, was read by title, and was accompanied by a list of manuscripts, photographs, etc., presented to the Association during the year. One of the most interesting addresses presented during the week was that of Dr. Edward Kremers before this section, on the study of the history of pharmacy. In this address, the author pointed out by means of numerous lantern slides how the study of pharmaceutical history could be made both interesting and useful. Following the address of Dr. Kremers, a resolution was passed that the historical section recommend the affiliation of State Pharmaceutical Associations with the established historical societies of their respective States, the object being to encourage the collection and preservation of historical pharmaceutical material.

The following officers were installed: Chairman, Frederick T. Gordon, Philadelphia; secretary, A. H. Clark, Chicago; historian, E. G. Eberle, Dallas, Texas.

#### COMMERCIAL SECTION.

This section was presided over by Harry B. Mason, of Detroit. A number of interesting papers followed the very comprehensive address of chairman. The officers elected for the ensuing year are: Chairman, E. H. Thiesing, Cincinnati; secretary, David Stoltz, Syracuse, N. Y.; associates, W. A. Hall, Detroit; E. R. Selzer, Cleveland, and J. B. Thomas, Baltimore.

#### WOMAN'S SECTION.

Space will not permit a complete report of the activities of this section. The reports, however, indicated a gratifying increase in membership and that the financial condition of the section was satisfactory. The new officers are: President, Mrs. John Culley, Ogden, Utah; first vice-president, Miss Kate Harbord, Salem, Ore.; second vice-president, Mrs. H. M. Whelpley, St. Louis; third vice-president, Miss Jean Gordon, Chicago; secretary, Miss Anna G. Bagley, Columbus, O.; treasurer, Mrs. F. H. Carter, Indianapolis, Ind.; historian, Mrs. G. B. Kauffman, Columbus, O.; executive committee, Mrs. J. O. Burge, Nashville, Tenn.; Miss Zada M. Cooper, Iowa City, Ia.; Mrs. J. G. Godding, Boston. After the final adjournment a general reception was held.

#### ENTERTAINMENT.

The entertainments provided for the visitors were upon a scale that has seldom been equaled at any annual meeting in recent years. There were the president's reception, followed by a ball. On Tuesday the ladies were taken on a trip to Bois Blanc Island and given a supper, and on the following day they were shown through the shopping district. In the evening a card party was provided in their honor, the gentlemen being given a supper and smoker at the Wayne Gardens by Frederick Stearns & Co., as related elsewhere in this issue. On Thursday evening the entire association, including the ladies, were taken by boat up the river to Parke, Davis & Co.'s laboratories and shown through the plant, and afterward photographed. The trip was continued up the river through St. Clair Flats, supper and dancing being provided en route by P. D. & Co. On Friday afternoon the visitors were given an automobile ride through the principal thoroughfares of Detroit and round the famous Belle Isle Park.

#### "OBEY BOARD OF HEALTH ORDINANCE"

**Members of Kings County Ph.S. are Advised by J. H. Rehffuss to Wait Until 182 is Tested**

The policy of the New York City Board of Health was the principal topic under discussion at the September meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy. J. H. Rehffuss suggested that the members might just as well obey amended ordinance 182, until this measure is tested. The publication of secret formulas on the labels of proprietary preparations, as provided for by the ordinance now tabled by the Advisory Council, would drive many of these products from the New York market as their owners would not sacrifice their formulas for New York City. T. J. France expressed the opinion that the only way to determine whether the Board of Health can enlarge upon the work of the State legislature would be to bring a test case.

Otto Raubenheimer reported that the work on the new pharmacopoeia was practically completed and the volume is now in the hands of the printer. It should be in the hands of every pharmacist by the middle of next year. He outlined the make-up of the new National Formulary. It will consist of two parts: (1) the formulary, and (2) standards of drugs and chemicals not in the U.S.P.

Secretary A. E. Hegeman read a letter from the Workmen's Compensation Commission, which was to the effect that druggists were not mentioned specifically in the compensation act, but might come under the paragraph relating to the handling of merchandise on "any dock, platform or place." J. H. Rehffuss thought that the insurance provided under the act was the cheapest that one can buy and advised the members to buy. Ten dollars, he said, covered a pay roll up to \$5000. For \$6.50 the public was also included.

Communications from Brooklyn druggists were read to the effect that they considered the Boylan law a workable and adequate anti-narcotic measure, providing that Board of Health ordinances were not permitted to interfere with its enforcement. Otto Raubenheimer elaborated upon the little evil done by the use of paregoric and the great good accomplished through its general use. He asserted that it was the duty of pharmacists to put a check on the Board of Health—now.

Treasurer Adrian Paradis reported the sum of \$456 in the society treasury.

#### Illinois Examination for Inspector of Pharmacies

The Illinois State Civil Service Commission will hold an examination for Inspector of Pharmacies on Saturday, October 3rd, at seventeen points in the state. The examination is open to residents of Illinois who are between 25 and 60 years of age. Applicants must have a high school education, or its equivalent, and should be familiar with the pharmacy law and the methods of making investigations and reports. The duties of the office are to inspect pharmacies to prevent violations of the pharmacy law, and to institute suits to recover penalties.

Application lists were closed on the 23rd of September. The salary ranges from \$125 to \$150 per month.

### CONFERENCE AUTHORIZES TEST ON 182

#### Time Has Arrived to Ascertain How Far Local Health Board Can Go—Will Defend a Member

At a recent meeting of the New York Pharmaceutical Conference, held at the New York College of Pharmacy, and called to order by Chairman Dr. Wm. C. Anderson, the delegate-members present authorized a committee, consisting of Peter Diamond, John Roemer, Otto Raubenheimer, Thomas J. France, Vito Calcagno and Alexander Gardner, to take steps to protect legally any person affiliated with the conference who is prosecuted under the recently enacted Board of Health ordinance 182, which, in the terms of the resolution, is in direct opposition to the Boylan anti-narcotic law. This ordinance and a proposed measure similar to the Philippine proprietary regulation, which has been temporarily tabled by the Advisory Council, are regarded by the members of the Conference as "leaders" on the part of the Board of Health toward the ultimate abolition of the sale of household remedies except upon prescription. "This is really a national issue. If the Board of Health can do it here, it can be done elsewhere," was the way one speaker expressed himself. The consensus of opinion was that it is about time that druggists found out under just what laws they must proceed and how far the Board of Health can go. Immediately upon the unanimous adoption of the resolution, delegates from Kings County Pharmaceutical Society, the German Apothecaries' Society, the New York County Pharmaceutical Society and the New York Retail Druggists' Association pledged their organizations for their proportion of the expense of a test case.

Another resolution also unanimously adopted was to the effect that the Conference favored the clause in the National Pure Food and Drugs Act providing for the label statement of the names of all habit-forming drugs, but was opposed to the proposed local ordinance which would require the label statement of the names and quantities of all ingredients in a preparation. Such regulation would be a discrimination against the druggists of this city and was really a matter for State legislation.

Secretary C. A. Mayo reported that 2700 cards containing the provisions of legislation which must be observed by local druggists, had been distributed.

Dr. Anderson reported a proposition made by an attorney to destroy the chain store system, the same requiring a fund of \$50,000 to finance. The proposal was tabled, the state of the conference treasury not justifying its acceptance.

The scheme of a local evening paper to run a "pure drug" column and make the same a paying proposition by advertising "investigated" druggists, was elaborated upon by Dr. Wm. C. Anderson, who with a Conference committee, had called upon the publication's advertising manager. The committee learned that the "investigation" was to consist of interrogating eight or ten people, possibly neighbors of the druggist, and asking whether his store was all right. The committee, in the name of the retail drug trade, voiced its protest against this form of publicity, and the business manager, who was also interviewed, took the matter under advisement. It was pointed out that drug stores were licensed by the State and inference against them was contrary to law. The committee was thanked by the members of the Conference for its work.

Among those who attended the meeting were Dr. Joseph Kahn, Dr. Joseph Weinstein, John Roemer, Otto Raubenheimer, T. J. France, Louis Berger, C. A. Mayo, Dr. Wm. C. Anderson, S. V. B. Swann, Dr. H. V. Army, Thomas Latham, Vito Calcagno and others.

### AMONG THE ASSOCIATIONS

The Los Angeles, Cal. R. D. A. decided at a recent meeting to act with the grocers of that city in keeping down the price of merchandise and to be influenced in price-making only by supply and demand.

The National Federation of Drug Clerks, a French organization, held its sixth congress at Paris. The status of the trained chemists who prepare drugs, compound prescriptions, etc., was the principal business discussed. Poor organization was given as the reason that the members did not enjoy the

weekly day of rest which was the custom in other callings. It was deplorable that men whose duties were hardly less than those of the physician should be forced to endure the long hours and underpay of the sweatshop worker. The demand of the clerks is for a ten-hour day, with a system of shifts which will enable each clerk to have one full holiday a week.

The South Dakota Ph. A. Travelers' Auxiliary have elected as officers: President, Charles R. Long, Mankato, Minn.; secretary-treasurer, William Holliday, Flandreau.

Boston (Mass.) Drug Clerks' Union 28, has been revived since the discharge of the president and three other members of the union who were employed by one company. In one case, it is said, the discharged employe was offered his job and increased pay if he would withdraw from the union. The union's membership is reported to have increased last month to more than 500.

The Wisconsin Historical Society will have an o'd-time "corner drug store" as a feature of its Museum at Madison which is now being reorganized. Druggists of the State long ago donated the necessary articles for the exhibit.

The Wisconsin Ph. A. following the recent meeting of its executive committee, issued a circular containing a list of all articles on which it was deemed there was a legitimate reason for a raise in price. The circular aims, it is reported, to throw the responsibility for high prices upon manufacturers, wholesalers and importers.

Houston (Texas) pharmacists have raised \$200 toward a \$1,000 fund to be used for the purpose of stamping out the house-to-house vendors of drugs.

Miss Flora Scarborough, of Laurel, secretary of the Mississippi Ph. A., was authorized at the last annual meeting of that organization, to tour the State for the purpose of collecting dues and enlisting new members. After several weeks of work in this direction she had obtained about 100 new members and had been very successful in collecting dues. She has reported to the officers of the association that many of the drug stores throughout the State are conducted without the services of a licensed pharmacist. This will very probably be brought to the attention of the Board of Pharmacy. The next annual convention will be held at Jackson. J. W. Harding, local secretary, is chairman of the entertainment committee.

The Troy (N. Y.) Ph. A. held its 13th annual field day and clambake recently, about 85 members and their friends attending. A baseball game was a feature, the teams being captained by James T. O'Sullivan and Michael P. Cavanaugh. The game was terminated because of the losing of the third baseball the picnickers had brought with them. Warren L. Bradt, secretary of the New York Board, was a guest of the association.

The executive board of the Milwaukee Ph. A. held a meeting last month which was largely attended. Those present discussed the problem of securing imported drugs at reasonable prices and a resolution was adopted which called for a meeting to be held in the near future for the purpose of working out a solution.

The Michigan State Ph. A. elected the following officers at its recent convention, held at Detroit: President, Grant Stevens, Detroit; vice-president, J. A. Skinner, Cold Springs; secretary, D. D. Alton, Fremont; treasurer, E. C. Varnum, Jonesville; executive committee: Edward Austin, Midland; A. L. Hemzinga, Holland, and J. A. Webster, Detroit.

The San Francisco R. D. A. has elected the following officers: President, H. A. Gerdes; vice-president, J. M. Caselman; secretary-treasurer, N. S. Schwartz; executive committee: D. R. Rees, J. R. Lewis, I. Beck, E. R. McDonald, J. Farren, L. Harris and K. B. Bowerman.

A number of Canton, Ohio, druggists, members of the local Chamber of Commerce, have secured permission from the directors of the Retail Merchants' Association, to organize a supplementary organization. The new association will be auxiliary to the R. M. A., which in turn is supplementary to the Chamber of Commerce.

The Henry County (Ill.) Druggists' Association held its semi-annual meeting at Galva. The attendance was large. H. L. Day, of the Illinois Ph. A. and secretary of the above organization, made the principal address. At noon a fine banquet was served at the Hotel Best. All the physicians of the city were the guests of the druggists.

## SCHOOLS AND COLLEGES

### **New York College of Pharmacy, Columbia University**

The 85th session of the New York College of Pharmacy will begin September 21, with the following enrolment: Junior class, 275; senior class, 180; post graduate class, 12. There are 20 students in each of the University classes.

The registration books for the Thursday evening course under the direction of Professor Wm Mansfield have not yet been opened, but from the number of communications received it is believed that every seat will be occupied. Special drop lights for the desks in the pharmacognosy laboratory have been installed in order that the microscopic work may be pursued as well as by daylight.

The re-arrangement and addition of desks in the dispensing laboratory has increased the capacity of that room by 132 students. Most of the gas lights in the building have been removed and high-powered electric Tungsten lamps substituted.

Mr. Keon has plans under way to make this a big year for the student organizations. Many of the members of last year's successful glee and mandolin clubs and of the orchestra have returned to college, which gives these organizations a good start for the coming year.

On the evening of October 20, the first regular meeting of the college will be held, on which occasion an interesting lecture on stock keeping in the retail drug business will be given by a well known New York pharmacist.

During the summer months the library was entirely renovated, the lighting facilities having been markedly improved. There has recently been installed a crystal showcase for the exhibition of the rare books which the library possesses. It is planned to make systematic exhibits of these books. The back numbers of the *Chemisches Centralblatt*, which were ordered for completing the college files of that journal, have been held up by the war.

### **College of Pharmacy, University of Iowa**

C. B. Burnside, '12, '13, was married recently to Laura E. Woodward at the home of her parents at Lewis, Ia. Since September 1 they have been at home to their friends at 501 West 8th street, Davenport, Ia. Mr. Burnside has been employed at the Schlegel pharmacy since his graduation.

I. A. Anderson, '09, of Dow City, Ia., is secretary of the Crawford County R. D. A.

The third annual home-coming will be held October 22, 23 and 24, at the time of the Iowa-Minnesota football game.

W. J. Husa, '13, will be storekeeper in the department of pharmacy during the coming school year.

H. E. Rutenbeck, '14, has accepted a position at West Liberty, Iowa.

J. E. Kiedaisch, '14, is now located at the Third street pharmacy, Burlington, Ia.

The college was represented at the APh.A. convention at Detroit by Dean W. J. Teeters, Professor R. A. Kuever and Professor Zada M. Cooper. Dean Teeters was re-elected secretary of the Conference of Pharmaceutical Faculties, and was also nominated a candidate for the presidency of the association.

Professor Cooper was elected an associate in the section on education and legislation of the APh.A., and Professor Kuever was elected secretary of the same section for the ensuing year.

H. C. Otto, '08, has purchased a drug store at Park River, N. D.

R. O. Grover, '00, Huron, S. D., was elected president of the South Dakota Ph. A. for the ensuing year. Mrs. Grover was elected vice-president of the ladies' auxiliary of the above organization.

### **University of Illinois School of Pharmacy**

A. H. Clark, assistant professor of chemistry in the University of Illinois School of Pharmacy, will pursue advanced studies during the ensuing year at the University of Michigan.

His position will be filled by E. A. Lynn, A. B., M. A. Mr. Lynn is a graduate of the University of Washington, where he earned his first degree, and the University of Wisconsin, where he secured his Master's. He has been an assistant in chemistry at the University of Washington and the University of Wisconsin. He was at one time instructor in physics at the Adelphi College. He is the author of a laboratory guide in pharmaceutical technique. His latest work has been in connection with research on the poisonous (to stock) plants of Wyoming.

### **St. Louis College of Pharmacy**

"If you have ever attended the St. Louis College of Pharmacy, send your name and address at once to Fred W. Sultan, chairman, semi-centennial committee, 112 North Second street, St. Louis." This is the text of an appeal, which is being sent broadcast in an effort to find all those among the living who have attended St. Louis C. P. at any time during the fifty years of its existence. The college will celebrate its semi-centennial on the 7th and 8th days of October and it is aimed to have present all of the living alumni of the college. A feature of the celebration will be an organized effort to build a new college edifice.

### **College of Jersey City Department of Pharmacy**

An interesting announcement is made in the recently published bulletin of what was formerly known as the University of the State of New Jersey, Jersey City. According to the bulletin, the people of Jersey City requested that the institution connect itself in name with the city. Prompted by this request and with the approval of the State Board of Education of New Jersey the name of the college was changed from "University of the State of New Jersey" to that of "College of Jersey City."

### **Cincinnati College of Pharmacy**

The annual alumni banquet of the Cincinnati College of Pharmacy was attended recently by thirty-seven graduates and a number of other guests. Joseph Visconti was toastmaster, calling upon a number of speakers, including Dr. F. Cain, President Arthur James, of Lebanon University, who spoke on the educational side of the profession; T. W. Kisker, on "The Ethics of a Pharmacist"; C. T. Whitticamp, Theodore Wetterstroem and James Fabie.

### **Department of Pharmacy, S. D. State College**

At the recent annual convention of the South Dakota State Ph. A., held at Aberdeen, considerable time was devoted to a discussion of a proposition to move the department of pharmacy from the South Dakota State College of Agriculture and Mechanical Arts, at Brookings, to the University of South Dakota, at Vermillion, and uniting it with the college of medicine at the University. A committee was appointed to consider the matter and report back to the association.

### **Philadelphia College of Pharmacy**

The 94th session of the Philadelphia College of Pharmacy was opened September 19th, Dean Dr. J. P. Remington introducing the members of the faculty to the students who assembled for the occasion in the college auditorium. The year's work in each department was briefly outlined. The incoming class represents the Philippine Islands, Honduras, Cuba, Egypt and 18 different states.

### **University of Colorado School of Pharmacy**

This institution will not be hampered by any interruption of its supply of chemicals and laboratory equipment, Dean Homer E. Washburn having received a year's supply previous to the declaration of war by Germany.

The prospects are for the largest attendance in the history of the school.

### **Creighton University College of Pharmacy**

Professor Howard Newton, Ph. C., instructor in pharmacy at the Massachusetts College of Pharmacy, has joined the faculty of the Creighton University College of Pharmacy. Professor Newton takes the place of Professor J. C. Forling who will act as assistant to C. F. Crowley, professor in chemistry in the medical department at Creighton.

## BOARD EXAMINATIONS

### Alabama

**SELMA, Sept. 20.**—At a recent meeting of the Alabama Board of Pharmacy held in Anniston, fifty candidates presented proper papers for examination. Of that number, the following passed:

Pharmacists—Thos. M. Cottrell, C. W. Bethany, W. A. Hillerman, E. H. Murphree, W. A. Hill, E. D. Bright, C. L. Schilling, E. G. Rockhill, I. H. Beasley, L. A. Pearce, J. L. Hereford, Chas. F. Grove, Louis Letaw, Jas. T. Vinson, Hall Van Allen, G. W. Irwin, E. L. Burton, A. E. McWilliams, B. G. McKenzie (col.), Mrs. M. A. Wood, Miss Alberta Noel.

Assistants—Louis E. Andrew, Nat. Washington, E. E. Caldwell, H. E. Mangum, Arthur J. Thigpen, Roswell O. Win, C. H. Taylor, R. C. Hill, E. C. Pope, J. C. Kent, H. E. Benbow, W. J. Watkins, H. R. Faucet, Carl Busey, J. F. Watson, J. C. Massey, Chas. L. Krebs, Jno. W. Reid, C. D. Teryin, Henry M. Goldstein, W. G. Hall, J. E. Blackwell, C. J. Barden.

The next meeting will be held in Montgomery on October 13th and 14th, 1914.

### California

**SAN FRANCISCO, Sept. 20.**—The State Board of Pharmacy has recently raised the passing average for examination of applicants for registration, and now requires that each applicant for a licentiate's certificate shall make a general average of 75 per cent. and not fall below 60 per cent. in two or more branches. For an assistant's certificate the applicant must make on the examination a general average of 65 per cent., and not fall below 50 per cent. in two or more branches. Applicants for examination must furnish the Board of Pharmacy with affidavits showing the actual pharmaceutical experience they have had.

The following applicants for registration successfully passed the recent examination held in this city:

Licentiates—Florence Dunlap, John M. Myers, Manlio C. Silva, Fred A. Wilson, A. B. Davison, Geo. A. Mehlfeld, Arthur E. Wagner, Louis L. Topper, Walter L. Scott, L. C. Henderson, Sister Flavia Farren, W. M. Rockwell, Livingstone O. Hunter, Beltrandi Enrico, John J. Hamilton, Maurice L. Koplan, Carl Kratt, Lester Tozier, Fred E. Smith, I. Milton Haun, V. A. Marchese, J. Clifford Mendonse, V. E. Meeker, Maximilian A. Citron, C. Bruce Warner, Daniel Cohen, Glen T. Garner, Michael Citron, C. Bruce Harner, Daniel Cohen, Glen T. Garner, Michael Waldon Conway, Leslie A. Ramey.

Assistants—Fred M. Woolley, Lee Holtzman, Wm. F. Brisgoll, Frederick Wm. Hawkes, Bernard Herman, Harry Wm. Davis, Wm. Cavanaugh, William D. Bell, Leon G. Brosemer, Emil Nelson, Cecil Adams, Jas. A. Cairns, Everett F. Northrup, Staten E. Griffin, James S. Sharpe, Ernest J. Young, Raymond W. Noble, Leo J. Sabini, O. Van Duyn, Chas. C. Moore, Mary Jennings, John O'Connor, Perry B. Clark, Lyndon L. Davidson, Fred R. Robinson, Arthur L. T. Jorgensen, Wallace L. Cornwall, Frank W. Goldsmith, Horace L. Wolfe, J. D. Vernon Nichols, Gilbert J. Lanyon, Columbus T. Crenna, Jos. C. Hair, Will Martin, Valentine Geo. Clementz, Ylo Yssle Hopwood, Fred F. Ventuleth, Lorrin E. McGee, Oliver Trewartha, Arthur W. Reum, Clarence Powell, Mont. L. Preston, Louis U. McIndoe, Harold E. Hockox, Robert L. Nichols, C. H. Carson.

The next examination will be held in Los Angeles beginning October 7, and in San Francisco beginning Wednesday, October 14.

### Massachusetts

**BOSTON, Sept. 20.**—Nine more registrations in pharmacy have been granted by the State board, as follows: Lawrence C. Feloney, Cambridge; Ladislav G. Lavelle, Milford; John M. O'Brien, Roxbury; H. C. Newton, Southboro; Robert E. Bems, Boston; Mrs. Nellie Sargent Houle, Lowell; James J. Mattimore, Worcester; Ezra Saillant, New Bedford, and C. T. Williams, Brookline.

Certificates as assistants were issued to the following: John Andrews, Salem; Clarence Cameron, Beverly; Samuel Lourie, Malden; Joseph N. Myers, Boston; Anthony F. Praino, Boston; John H. Reidy, Weymouth; Joseph E. Carey, Marlboro; David Ginsburg, Chelsea; John M. Thal, Roxbury; Joseph D. Ahearn, Framingham; John C. Colwell, New Bedford; Herbert S. Coombs, Chelsea; John A. Darragh, Springfield; William H. Hevey, Winchester; Frederick M. Nye, New Bedford; Anthony J. Ziegel, Somerville; William B. Galligan, Taunton; Robert M. Malone, Worcester; Howard M. Beverly, Ayer; Arthur St. Pierre, No. Cambridge.

### New Jersey

**BRIDGETON, Sept. 20.**—Henry A. Jordan, secretary of the State Board of Pharmacy, announces the list of successful candidates for registration who took the recent examination in Trenton as follows:

Registered Pharmacist—Bartholomeo Albini, New York, N. Y.; Frank J. Antonini, West New York; Charles Bain, Philadelphia, Pa.; Abraham Blank, New York, N. Y.; Samuel Cahau, Philadelphia, Pa.; Camillo Cianculli, Raritan; Louis Cohen, Philadelphia, Pa.; Michele Conza, Schenectady, N. Y.; Harry Ivan Darr, Chester, Pa.; Clarence F. Dennis, Augusta; Vincent Del Plato, Newark; Christian De Vries, Jr., Paterson; Arthur H. Einbeck, West New York; Jacob Eisenstadt, Brooklyn, N. Y.; Martin Eisenstadt, New York; Edwin C. Erickson, Millville; Leo F. Feindt, So. Orange; Elmer D. Fox, Philadelphia, Pa.; Samuel H. Fritz, New York, N. Y.;

Samuel L. Furman, Philadelphia, Pa.; Herman J. Godes, New York, N. Y.; Harry E. Gittleman, New York, N. Y.; Francis S. A. Hasenplue, Lakewood; Jacob Hoewech, Bayonne; William F. Kalesse, Philadelphia, Pa.; Frank P. Kalibat, Brooklyn, N. Y.; Norris L. Klar, New York, N. Y.; George F. Krech, Paterson; Louis Kron, Philadelphia, Pa.; Albert Kummer, Paterson; Jacob Landau, Newark; Ludwig Lechner, New York, N. Y.; Joseph Lenkts, Brooklyn, N. Y.; Isadore H. Leventhal, Newark; Joseph H. Levy, Hoboken; Alexander Livingstone, West Philadelphia, Pa.; Frank Mader, Elizabeth; Bert Edgar Niles, Trenton; Herman Harrison Oxman, New York, N. Y.; Frank Joseph Pastern, New York, N. Y.; Joseph W. Pastor, Philadelphia, Pa.; Orlando Passanante, New York, N. Y.; Illuminato Patri, New York, N. Y.; John R. Reay, Cranford; Maurice Rosoff, Philadelphia, Pa.; William F. Ruther, Newark; Nathan Schimmel, Jersey City; Alfred Joseph Edward Schmidt, Newark; William H. Schultz, Newark; John Scaccia, New York, N. Y.; Louis Sherrifine, New York; Herman B. Springer, Newark; Loring S. Strang, Borden-town; J. Harry Swain, Haddon Heights; Thomas Allen Sykes, Newark; Frank Anthony Urban, Brooklyn, N. Y.; Charles Joseph Viegel, Philadelphia, Pa.; John J. Weidner, Newark; Abram Weinstein, Philadelphia, Pa.; Frederick Gerard Williams, Newark; Edgar K. Zeigler, Philadelphia, Pa.

Registered Assistants—Philip A. Cahin, Newark; Francis Cascioli, Bangor, Pa.; Laurence Cohen, Jersey City; Thomas T. N. Dargosa, Vineland; Louis Franklin, Trenton; Joseph B. Greenwood, Newark; Samuel Grubin, Newark; Jacob D. Kaplan, Newark; William J. Korboints, New Brunswick; Lorenzo D. W. Lewis, Philadelphia, Pa.; Herbert A. Norris, Jersey City; Tobias Schulhof, Newark; Louis M. Wojakiewicz, Perth Amboy; Otto Louis Zocklein, Paterson.

The next meeting of the Board for examinations will be held in Trenton on Thursday and Friday, Oct. 15 and 16.

### NEW INCORPORATIONS

The Elliott Remedies Co., Inc., Rochester, N. Y., incorporated by A. C. Elliott, W. P. Martin, G. A. Engert, jr., of Rochester, to deal in drugs, medicines, chemicals, etc.; capital, \$100,000.

Practitioners' Pharmaceutical Co., Inc., Manhattan, incorporated by T. S. Roberts, R. S. Parnass, of New York City, and J. A. Crumble, Brooklyn, to do a drug and chemical business; capital, \$100,000.

Surpass Chemical Co., Troy, N. Y., incorporated with capital of \$5,000 to manufacture and deal in bleaching, salts, dye-stuffs, chemicals, machinery and implements used in washing, cleaning, bleaching and dyeing fabrics, and in goods, wares and merchandise. Directors are Emma M. Smith, of Menands; Harry B. Smith, Auburn, and Marion L. Kellogg.

Buckingham Drug Co., Dallas, Texas, incorporated by J. T. Buckingham, W. T. McConnell and E. H. Lowrance; capital, \$1,000.

E. A. Neverman, Druggist (Incorporated), Evanston, Ill.; capital stock, \$10,000; retail drug store; incorporated by John Weiland, Margaret Weiland, Howard A. Neverman and Irene M. Neverman.

Salsa Chemical Co., Bridgeport, Conn.; officers: President, William M. Clampett; treasurer, George E. Cook; secretary, William L. Colegrove, all of Bridgeport. These officers are also directors. There are 40 shares of the par value of \$25 each.

Rumbarger Manufacturing Co., Elkins, W. Va.; drugs and medicines; capital stock, \$5,000; incorporators, R. R. Rumbarger, R. R. Rumbarger, jr., W. E. Rumbarger, J. G. Nestor and Samuel V. Spears, of Elkins.

Western Laboratories, Chicago, Ill., incorporated by F. T. Gordon, D. S. Giles and M. L. Gordon, of Chicago, to manufacture drugs, chemicals and flavoring extracts; capital, \$30,000.

Keefer Mfg. Co., New York City; incorporators, G. W. Keefer, D. Emison and I. A. Johnson, 170 East 63rd street; purpose, to deal in vermin exterminators; capital, \$10,000.

Morales Medicine Co., Tegucigalpa, Honduras, incorporated by M. Del Morales, L. K. Pudom, J. H. Walter, all of Honduras, to manufacture, to sell and deal in and with medical goods of all kinds; capital stock, \$25,000.

Winsdor-Medford Drug Co., Muskogee, Okla., incorporated with a capital stock of \$5,000 by B. O. Winsdor, E. Medford and J. H. Bishpham, of Muskogee.

Hosken's Derma Cream Co., Grand Rapids, Mich.; officers, Elsie D. Hosken, president; Raymond B. Hosken, vice-president; Harry E. Hosken, secretary and treasurer; object, to manufacture and sell Hosken's Derma Cream, a skin remedy; capital, \$3,000.

Bungalow Drug Co., Los Angeles, Cal.; capital stock, \$30,000 (\$16,000 of which is reported subscribed); directors, F. J. Burke, L. L. Bradford and H. I. Roden.

Marvelous Sweeping Model Wine Tonic Co., Chicago, incorporated by Charles Fisher, Arthur Berbrauer and Jeanette Fisher; capital stock, \$2,500; purpose, to manufacture and deal in medicines, chemicals, drugs, etc.

Callendar Pharmacy, Inc., Waterbury, Conn.; President and treasurer, Lewis B. Callendar; secretary, R. Augustus Callendar; directors, Lewis B. Callendar, R. A. Callendar and Charlotte Callendar.

Lawdale Drug Co., Chicago, dissolved.

Peoples Drug Store, Johnson county, Tenn.; charter surrendered.

Coonley Drug Stores Company of America, Detroit, Mich., \$15,000 capital, incorporated by Raymond B. Coonley, Oliver D. Denry, Frank Renard.

Mackey Medicine Co., Inc., New York, incorporated by Newton A. Mackey, James A. Williamson and Wm. H. Buckley to do a general drug, confectionery, etc., business; capital, \$10,000.

Laval Laboratories, Chicago; capital stock, \$2,500; incorporated by Edgar W. Jenkins, Henry S. Lighthall and Frank N. Hillis to manufacture and sell proprietary medicines, chemicals, etc.

Yergin Russian Oil Co., Chicago, incorporated by John F. Rosen, John P. O'Shaughnessy and Joseph L. Toohy for the purpose of general dealing in Russian mineral oils and other mineral oils used for medicinal purposes; also for dealing in proprietary drugs and chemicals generally; capital stock, \$6,000.

Lanier-Keith Drug Co., Sherman, Texas, filed amendments changing name to Glasscock Drug Co.

Rhodes Drug Co., Jackson, Miss., incorporated by L. D. Rhodes, Mrs. C. E. Rhodes and others; capital, \$5,000.

John Coffin & Co., Kittery, Me., organized for the purpose of manufacturing and dealing in chemicals and merchandise of all kinds and descriptions, also purchasing any property with \$50,000 capital stock, of which nothing is paid in; officers: President, Horace Mitchell, Kittery; treasurer, H. A. Paul, Kittery.

Palace Drug Co., Beaumont, Texas, capital stock, \$9,000; incorporated by W. C. Wiley, O. B. Sawyer and R. W. Abbott. New corporation has purchased stock and fixtures of the L. K. Preston Drug Co. from the receiver and an order has been placed for a lot \$2,000 of new stock. W. C. Wiley is president, treasurer and manager of the new store. O. B. Sawyer is vice-president and R. W. Abbott is secretary.

Hook Drug Company of St. Louis (Mo.), incorporated by A. C. Stewart, R. W. Price and John A. Hook; capital, \$10,000.

Red Cross Chemical Company of New York, capital, \$10,000, directors: Solomon and David Kaplan, Brooklyn.

George H. Wilson Ginseng & Golden Seal Co., Bowling Green, Ky.; capital, \$3,000; incorporators: George H. Wilson, W. P. Wilson and H. L. Wilson.

Dixie Drug Co., St. George, Utah; capital stock, \$5,000; incorporators: Clark Watson, Warren Cox, F. J. Woodbury, D. A. McGee and George F. Whitehead.

Dewerry Medicine Co., Atlanta, Ga., incorporated with capital stock of \$10,000, to manufacture medicines.

Blackwell Drug Company, Blackwell, Okla.; capital stock, \$5,000; incorporators: William K. Bell, Sarah A. Bell, A. C. Johnson, Grace L. Johnson, of Blackwell.

Bortle Drug Co., Claremore, Okla., capital stock, \$5,000; incorporators: E. H. Bortle, L. W. Moore, B. V. Bortle and A. C. Moore.

Blythe Drug Co., Hopkinsville, Ky., incorporators: Thomas Cushman, Max J. Blythe and Alvan H. Clark.

Reed Disinfecting Co., Middleboro, Mass., incorporated with capital of \$75,000; officers: F. W. Woodbury, president; treasurer, Edward C. Reed, Middleboro. These men with W. A. Carpenter comprise the directorate.

L. P. Bond Drug Co., Chelsea, Mass., recently filed articles of incorporation. Directors are: President and treasurer, L. P. Bond; W. B. Sproule and Bertha R. Sproule.

Nully Laboratories, Inc., Manhattan, incorporated with a capital of \$75,000 by E. D. Feldman, W. E. Lowther, P. E. Greenfield, of New York City, to manufacture and deal in drugs, chemicals, etc.

Pittsburg Wholesale Drug Co., Philadelphia, Pa., capital stock, \$50,000; incorporated by F. K. Hansell, Philadelphia; George H. B. Martin and S. C. Seymour, of Camden, N. J., to operate and maintain a wholesale drug store, and to deal in and with foodstuffs, etc.

Southern Spice and Extract Co., Jackson, Miss., capital, \$10,000; includes among stockholders W. A. Montgomery, Edward Yarger, R. C. Smith, Robert Phifer, jr., and C. Wade; incorporated to engage in the manufacture of extracts and staple drugs.

Rejuvenator Co., New York City, corsets, toilet preparations, etc.; capital, \$50,000; incorporators: H. L. Mann, Frederick Munns, jr., and G. E. Fleming.

Rasmus Process Co., New York, incorporated by J. Dannenberg, C. F. Fuerst and H. M. Diamond to deal in chemicals and foodstuffs; capital, \$10,000.

F. W. Andrews Chemical Co., Dayton, O., capital, \$100,000; incorporated by Bert Drake, T. C. Whetsel, F. N. Shidaker, H. H. Rannels and F. W. Andrews.

Cochran drug store, Houlton, Me., capital stock, \$8,500; officers: President, Margaret B. Cotton, and treasurer, W. H. Ormsby, both of Houlton.

Rumford Drug Co., Rumford, Me., incorporated by C. M. Bisbee, R. L. Mecher, E. M. McCarty, G. G. Brown, all of Rumford; capital, \$10,000.

Community Drug Co., Cleveland, O., N. E. Alport, et al; capital, \$1,000.

Casco Chemical Co., Inc., Portland, Me., incorporated with a capital of \$25,000 to manufacture, sell and deal in all kinds of chemicals; officers: President, J. W. Stone, Portland; treasurer, G. P. Locke, Norway.

Healene Co., Boston, Mass., has been incorporated with a capital stock of \$10,000 to manufacture medical preparations. Incorporators are F. P. Wood, Boston, and H. R. Johnson, Reading.

Gittes Drug Co., New York City, voluntarily dissolved.

Referts drug store, New York City; capital, \$5,000; incorporated by C. J. Lipman, H. Belitsky and M. J. Kane.

National Co-operative Drug Company, St. Louis branch, incorporated to do a general wholesale and retail drug business, by George E. Brown, Charles W. J. H. Hahn, Orval J. Cloughly, Andrew S. Ludwig, William F. Ittner and Robert F. Nuller; capital stock, full paid, \$35,000.

Frank L. Young Co., Boston, incorporated to deal in chemicals and oils, by Cornelius J. Murphy, Frank L. Young and Harold W. Young; capital, \$300,000.

Quicklet Co., Boston, incorporated with a capital of \$10,000, to engage in business of making and selling drugs, chemicals and candy, by Robert Rinehard, Emil Koessler and Marcus Tishler.

Abbott's Menthol Plaster Co., Boston, incorporated by Katherine A. Bradt, Alice M. Kelley and John J. Mansfield; capital, \$35,000. New England Orthopedic Apparatus Co., Boston, incorporated by William O. Faxon, Joseph Shattuck, Henry M. Kingman, William H. Carter and Frederick Harris; capital, \$500,000.

Twentieth Century Chemical Co., Springfield, Mass., incorporated by Ralph W. Wight and Miller J. Meeker; capital, \$15,000.

Grauville Pharmacy, Inc., Creedmeor, N. C.; capital, \$5,000; L. V. Pearce and others.

Richart & Co., Elizabeth, N. J.; capital, \$25,000; incorporators, W. R. Richart, H. W. Schenerman, W. G. A. Kroemmelbein.

### Bristol-Myers Representatives Attend "School"

Thirty-four traveling representatives of the Bristol-Myers Co., Brooklyn, attended the annual get-together meeting or salesmen's school held by that firm at its headquarters, 281 Greene avenue. The salesmen and detail men, the former selling the full line of pharmaceuticals manufactured by Bristol-Myers Co., and the latter advertising the company's specialties, discussed methods for obtaining business, plans, policies, etc., and listened to talks on various Bristol-Myers products. Those who attended were:

Salesmen O. F. Ives, Hartford, Ct.; R. M. Tripp, Boston; P. A. Coughell, Pennington, N. J.; A. W. Roberts, Brooklyn; L. Wilkinson, Providence R. I.; W. J. Grassman, Syracuse; R. R. Featherly, Syracuse; S. W. Upham, Bath, N. Y.; H. L. Chase, Brooklyn; H. R. Steele, Staunton, Va.; H. E. Jones, Buffalo; W. R. Jackson, Rochester; T. C. Conolly, Buffalo; G. S. Boyd, York, Pa.; E. D. Ting ex, Boston; W. C. Sage, Rutland, Vt.; W. G. Haynes, Cayuga, N. Y.; detail men—Dr. D. W. Rounds, Boston; G. A. Wood, Cleveland; J. J. Bye, Pittsburgh; Dr. L. B. Castell, New York City; J. G. Corolis, Montreal; G. G. Harwood, San Francisco; T. G. Goodwyn, Atlanta; A. A. Wehrman, St. Louis; J. W. Brooks, Chicago; C. M. Crawford, Dallas, Texas; N. J. Booth, New York City; R. G. McEnany, Des Moines, Ia.; E. H. Smith, Philadelphia; P. L. Williams, Portland, Ore.; L. W. Burbage, Washington, D. C.; V. J. Hayden, Minneapolis; W. B. Johnson, Indianapolis.

The meeting continued throughout the week of August 31st to September 5, inclusive. Entertainment provided included a theater party to see "On Trial," and a shore supper at Witzel's Pavilion, College Point. To take in the latter feature the participants were driven in trucks to the foot of Manhattan Bridge where they embarked in a boat chartered for their sole use. After the supper, they were taken up the Hudson as far as the Palisades Park. Music, "smokes," etc., with a sufficiency of the latter, made the occasion extremely enjoyable.

### Berlin Institute Aids Red Cross

With the sanction of the Minister of Spiritual and Educational Affairs, the Pharmaceutical Institute of the University of Berlin has placed its facilities at the disposal of the National Women's Red Cross Society, and will undertake to carry out gratis all analyses of foods and other wares prepared by the people of the neighboring Berlin-Steglitz community for the use of the German armies, and also to provide for bacteriological control of the products. The institute will also keep a watchful eye on the new sanitary and disinfecting plant of the community, where the contributions of clothing will be disinfected.

### Cannot Legally Fill Jersey Prescriptions

Replying to a question submitted by Secretary Warren L. Bradt of the New York State Board of Pharmacy relative to the right of a New Jersey physician to prescribe the purchase of drugs in this State, Attorney General Thomas Carmody states that in his opinion "druggists should not fill prescriptions of New Jersey physicians, residents of that State and regularly practicing there. The law clearly indicates that a druggist has no power to fill a prescription unless it is made in accordance with the statute of this State."

### Wisconsin Ph. A. Plans for Next Year's Meeting

At a special meeting of the executive committees of the Wisconsin Ph. A. and the Wisconsin Pharmaceutical Travelers, held recently in Milwaukee, it was decided to hold the 1915 convention of the two organizations at Fond du Lac, Wis., some time during the latter part of June. It is the wish of some of the Wisconsin druggists to hold a winter meeting in Milwaukee some time during the coming winter, but no action along this line has been taken.

## Department of Agriculture Warns Against Growing Drug Plants

**Although European War Has Raised Prices of Crude Drugs, Many Factors Make Future of the Market Uncertain.**

WASHINGTON, D. C., Sept. 26.—The cessation of the harvesting and shipping of many crude drugs because of hostilities in Europe has caused a sharp advance in their market price. As a result many individuals and firms have written the U. S. Department of Agriculture inquiring about the possibilities of the American farmer growing drug plants profitably. The Department's specialist in charge of drug-plant investigations has written a number of these correspondents that, although it is probable that a number of important drug plants could be grown profitably here if the present high prices continue, nevertheless there is a possibility of the early restoration of shipping facilities, and in any event the inexperienced grower of drug plants would be more liable to meet with failure than with success.

Some medicinal plants, says the Department's specialist, may be grown as easily as ordinary garden crops; others, however, require the special knowledge and skill of a practiced gardener. There are many varying factors in the commercial production of drug plants. The constituents of many of them vary in quantity according to the time of gathering and method of drying, and a knowledge of proper methods of harvesting and curing is absolutely essential for the production of drugs of high quality.

Even if the prospective grower possessed some knowledge of drug plants, beginning now, he could scarcely hope to harvest a crop before the late summer of 1915. In the case of some varieties he might even have to wait until the end of the second or third year after planting. Therefore, the farmer who began at once might not find himself with a supply of crude drugs on hand until after prices had returned to their former level.

In any case, the quantity of crude drugs required by the market is relatively small as compared with fruits, vegetables, or staple crops, therefore, numerous or extensive plantings by individuals throughout the country might easily result in overproduction, which would cause a decline in the market price independent of the conditions abroad.

For successful production of drug plants on a commercial scale there must be an available market. Its accessibility must be considered above all things, by the successful grower. The cost of production must be carefully estimated and to this must be added the cost of packing and shipping to this market. The packing and shipping expenses might easily make the enterprise unprofitable.

Drug plants to be profitably grown should yield returns at least equal to those from other crops which may be grown on the same land. The farmer must determine that this is the case. The fact that much hand work is necessary in the production of most drugs is liable to make the cost of labor high.

### Many Drug Plants Will Not Grow Here

Among the inquiries regarding drug plants addressed to the Department have been requests regarding plants which cannot be produced in this country at all. Others that might be grown here are also produced in South America and other localities not involved in the war where they can still be produced more cheaply than here.

There are, nevertheless, certain drug plants now produced chiefly in Europe which under suitable conditions may be grown in parts of the United States. Among these are the following:

Althea	Conium	Henbane
Anise	Coriander	Horchound
Belladonna	Dandelion	Marjoram
Burdock	Digitalis	Sage
Calamus	Elicampane	Thyme
Caraway	Fennel	Valerian

Seeds of many of these plants may be obtained from the large seed houses. Even the above-mentioned, however, need peculiar conditions in order to thrive, for drug plants vary widely in their relations to soil and climate. Satisfactory yields can only be expected when the requirements of these plants are understood and met.

Of course, well established companies, already engaged in similar work, and with gardeners possessing training and experience, could undoubtedly meet with more success in growing drug plants than the inexperienced individual. These companies would understand at the beginning many essential details regarding soil, climate, and desirable varieties. They would, however, have to prepare for unexpected changes in market values, and remember that the principal reason certain plants have not been previously raised here is that under normal conditions they can be more cheaply grown in Europe.

### Jacobean Architecture in Wisconsin Drug Store.

The Baldauf Drug Co., Milwaukee, has opened what it claims is the finest drug store in that city. It is located in a handsome new building, recently erected at North avenue and Thirty-fifth street. The fixtures are all inlaid mahogany. A special three-side showcase, five feet square and of plate glass, is devoted to fancy soap and perfumes; another, five feet long, with large plate glass cabinet and shelves, is devoted to candies. All the counters and showcases are of the sanitary type, standing fully four inches from the floor. The floors are of a fine pattern of inlaid tile. Eight large, rich globes, making up the indirect lighting system, hang from the ceiling.

One of the unusual features of the new store is the "soda grill," something entirely new for Milwaukee and one of the few in the country. The grill is apart from the store and is about 25x25 feet in dimensions, with a seating capacity for at least 75 people. This room also has an inlaid tile floor, while the walls are of a soft, old rose tint, inlaid with panels of two-tone silk. The room is lighted by four large indirect lighting globes.

### Brundage Drug Co. Celebrates Fortieth Anniversary

The fortieth anniversary of the founding of the Brundage Drug Co., Muskegon, Mich., was celebrated on September 23rd. The company was organized by Fred Brundage in 1874, who opened the first store with a stock inventoried at only \$420, the entire stock being drugs. Today the business is carried on by Mrs. Margaret M. Brundage, the widow of the founder, and Fred Castenholz, who is manager of the large and up-to-date establishment which has grown from the small shop of forty years ago. That the Brundage store is wide-awake and progressive is shown by its display advertising in the local papers, quarter and half-page ads being used to urge upon the public the slogan "Try America First."

## WHITEHILL WINS RIKER-HEGEMAN PRIZE

Awarded First District Prize of \$100 in "More Customers Campaign" Conducted by Big Company

**J**OHN WHITEHILL, district manager for Riker-Hegeman Company in the Washington Heights section, was awarded the first district prize of \$100 in a "More Customers Campaign" conducted in the Riker stores in New York, Pennsylvania and New Jersey during the months of June, July and August. Of the seven capital prizes offered, no less than three of the recipients hailed from Mr. Whitehill's district. It is interesting to note that these fortunate individuals are unanimous in the opinion that they owe much of their success to the enthusiasm he succeeded in inspiring in them.

JOHN WHITEHILL

The contest was an interesting event and its features might well be imitated by any retail pharmacist. The Riker-Hegeman management took the number of customers served at each store during the months of June, July and August, 1913, added a certain percentage for each particular

establishment, and then offered money prizes for the seven stores showing the highest percentage increase during the corresponding three months this year. The prizes were awarded to the stores managed by the following:—First prize, \$300, William Shears; second, \$250, A. J. Schellings; third, \$150, C. S. Lowenstein; fourth, \$100, J. F. Mitchell; fifth, \$50, A. P. Huels; sixth, \$50, E. E. Senft; seventh, \$50, E. J. Van Tassell. Mr. Whitehill received the \$100 first district prize, as noted above, and C. G. Judge was awarded the second district prize of \$50. E. E. Burlingame, G. F. Platt and C. N. Harlowe were honorably mentioned.

Mr. Whitehill has been with the Riker-Hegeman Company for more than 25 years. He is a licensed pharmacist and a graduate in chemistry of Cooper Union. He was employed by the old Hegeman & Co. in its laboratory at 203 Broadway long before he was licensed. Until the merger of the Riker and Hegeman concerns several years ago, Mr. Whitehill was generally recognized as the head of the laboratory. For several years much of his time was occupied as a buyer for Hegeman & Co. When the laboratory was transferred to 640 Broadway and a store was opened there he was made manager of both. The merger consummated, Mr. Whitehill became district manager of the new concern's stores at 640 Broadway, 9th Avenue and Broadway, 2 West 14th street and 7th Avenue and 14th street. Two years ago last month he was placed in charge of the company's Washington Heights district, where he is now.

Mr. Whitehill was born in Andrew Carnegie's town, Dunfermline, Scotland. Ten years ago he transferred his residence from Brooklyn to Rutherford, N. J., and he now makes his home in that town, ten miles from New York. His early education was obtained in London, at the Kensington Science and Art School, where he received a first-class certificate and prize in elementary chemistry.

CHARLES G. JUDGE

## LEGAL DECISIONS

### Liability for Explosion

Action was brought for personal injuries caused by the explosion of a cylindrical tank containing liquid carbonic acid gas. The tank was on the premises of the defendant, a drug company, when it exploded, and the plaintiff was working on the floor above. It was held that the mere fact of the explosion of the tank upon the defendant's premises was not sufficient to charge it with negligence. There must be some evidence that the tank was at the time of the explosion in the defendant's custody and control. In the absence of such evidence judgment was entered for the defendant. (Conley vs. United Drug Co., Massachusetts Supreme Court, 105 N. E. 975.)

### Sale of Liquor—Pretended Druggists

On appeal from a conviction of a violation of the local option law it appeared that the two defendants were partners in business as pseudo-druggists; neither had a license as a pharmacist, nor did they have a pharmacist in their employ. They employed a retired physician, and under what they claimed was a prescription written by him a sale was made of a quart of whisky. The sale was made by one of the partners in the defendant's store. The evidence was contradictory as to whether the other defendant was present, and there was no evidence that the sale was contrary to his wishes or instructions. It was held that, the defendants not having a pharmacist's license, and having no licensed pharmacist in their employ, they were not druggists and had no right to sell whisky on a prescription, or without it. Every sale of whisky made by them was unlawful. The very nature of the partnership, so far as the sale of liquor was concerned, was a conspiracy to violate the law, and under these circumstances each was liable for a sale made by the other. (State vs. O'Kelly, Missouri Supreme Court, 167 S. W. 980.)

### Contract of Sale for Cash—Inspection of Goods—Buyer's Remedies

The contract of sale of a showcase stipulated: "Terms net cash. All terms mean from date of shipment, and not from date goods are received," and provided that, if goods were not up to contract, the seller might enter on the buyer's premises and remove the same, and that a retention of the goods for ten days by the buyer without complaint was an acceptance, and a conclusive admission of the representations made by the seller. It was held that this did not prevent the seller from requiring the buyer, through draft, with bill of lading attached, to pay for the goods before obtaining possession. Where the buyer paid the draft and took possession of the goods, he had ten days within which to examine them. If during that period he discovered that they did not comply with the contract, he might complain to the seller, and either return the goods and demand the price, or he might keep them and sue for breach of warranty. (Eason Drug Co. vs. Montgomery Showcase Co., Alabama Supreme Court, 65 So. 345.)

### Misbranding of Insecticide

In proceedings for the condemnation of insecticide labeled "Sulpho-Naphthol" and "Inert Substance Water 7%, Insecticide" 93%, it was held that the product was misbranded for the reason that it contained less than four-tenths of 1 per cent of sulphur, the presence of which was due to chemical or accidental impurities, although the usefulness of the article was not affected, and also because it contained as much as 10.5 per cent of water. A manufacturer, it was held, may not give to his product a name which indicates the presence in it in substantial quantities of a constituent when such is not the fact. (Libby, McNeill & Libby vs. United States, C. C. A., 210 Fed. 148.) The manufacturers of the product expressed themselves as willing to consent to a decree of condemnation. They did not wish to put out their product under a name which could lead any reasonable person to believe that he was getting something other than he was. It was

willing to adopt another name, and in some way convey the information that the article, heretofore called sulpho-naphthol, does not contain any appreciable quantities of sulphur or any sulphur derivative. (United States vs. Two Cases of Sulpho-Naphthol, 213 Fed. 519.)

#### Taxation—Advertising Patent Medicines

Appeal was made from a conviction for an alleged violation of section 2 of chapter 90 of the Mississippi Laws of 1912, by which a tax of \$150 is imposed on each person, firm or corporation selling or advertising by harangue, in any town or city, patent medicines, except a licensed merchant or druggist selling from his place of business. The appellant sold a lot of patent medicine to the Marks Drug Company, either a corporation or a partnership, engaged in the sale of drugs in the Town of Marks, Miss., having a regular place of business, and agreed, as a part of the consideration for the purchase thereof, that he would assist the company in advertising and introducing it. This he did in the following manner: A platform was erected in front of the company's store on which the appellant would stand, accompanied by a negro with a banjo. This negro would attract a crowd by playing his banjo, singing, and telling stories, and the appellant would then make a speech telling the crowd of the great benefits to be derived by them from the use of this medicine, which they could purchase from the Marks Drug Company. He would then invite the crowd to follow him into the store. After the crowd would congregate in the store, sales of the medicine would be made to the members thereof by employees of the drug company. It was held that, as it appeared that the appellant, in advertising this medicine, was acting for the Marks Drug Company, which company had the right to have its medicine so advertised if it desired to do so, no crime was committed. (Hass vs. State, Mississippi Supreme Court, 65 So. 502.)

#### Liens for Wages

The prescription clerk and porter of a drug store, the stock in which had come into the hands of a receiver, filed a petition for the establishment of a preferred lien for employee's wages given by Tennessee Acts 1897, c. 78, as amended by Acts 1905, c. 414. The property was described as the drug business at the corner of C. and M. avenues in Memphis, Tenn. There were other prior liens on part of the fixtures. It was held that the petition was properly denied, as it should have described the property specifically, with a statement of the nature of the lien, or an attachment should have been issued and levied. (Hessig-Ellis Drug Co. vs. Stone, Tennessee Supreme Court, 167 S. W. 864.)

#### Violation of Local Option Law—Sufficiency of Evidence

The proprietor of a drug store was indicted for selling intoxicating liquor to one Brown without having a license and in violation of the local option law. Brown was the only witness for the State and defendant the only witness for himself. Brown testified that he made one purchase of a quart of whisky from the defendant's clerk in charge of his drug store, without having a prescription for it. He was indefinite as to the date, but stated that it was about the middle of the winter of 1912 and 1913 and during the defendant's absence; he thought while the defendant was out of town. The defendant testified that he was absent in Arkansas from the first week in February to the first week in March, and that he never heard of the sale in question until after the indictment; that he never authorized his clerk to make a sale; on the contrary, had directed him not to sell liquor without a written prescription from a physician. This was all the evidence except that between five and six years before the sale, and before the adoption of the local option law, he had pleaded guilty to selling liquor without a license. On appeal it was held that the evidence was insufficient to authorize a conviction. (State vs. Walls, (Mo.) 167 S. W. 1160.)

Vegetable sponges are used a great deal by the poorer classes of Ecuador. They assert that for many purposes the vegetable sponge is superior to the sponges of animal origin.

## FROM THE BUSINESS FIELD.

The Economy Co-Operative Drug Stores is the style of a new corporation consisting of some of the "live wire" druggists of San Francisco, Cal. The membership in the corporation, it is reported, was selected by an impartial committee, the members of which considered volume of business, progressiveness and location. It was aimed to have a representative Economy drug store in every section of the city, each with a reputation for square dealing and an A1 financial rating. There are 18 firms in the corporation and they own 23 retail drug stores, the largest chain of advertised drug stores on the Coast. The new co-operative concern's scheme of advertising includes the publication of full-page ads. A recent issue of the *San Francisco Bulletin* contained the pictures of the 23 members.

**J. Albert Stackhouse**, for years a well-known and popular pharmacist at Asbury Park, N. J., and James C. Field, of Plainfield, formerly a salesman for Koehler & Kuehler, wholesale druggists, of Newark, have purchased the Grenelle & Schanck pharmacy, at 608 Cookman avenue, Asbury Park. Mr. Stackhouse until recently was manager of the Asbury Park store of the Lauer Drug Co. Mr. Field has been manager of the Grenelle & Schanck pharmacy since early in July, when the death of Mr. Grenelle's daughter caused him, temporarily, to give up active work. Grenelle & Schanck will continue to conduct their Allenhurst pharmacy, the year around, and will also continue their ice-cream manufacturing business.

**George P. Mills**, one of the oldest merchants of Evanston, Ill., has sold his drug store at Maple avenue and Davis street. Mr. Mills has been engaged in the drug business since January, 1880. He came to Evanston in 1884 and began working for N. P. Williams, becoming a partner with the latter shortly thereafter. After several changes of address, the partnership was dissolved in 1900, Mr. Mills keeping a store on the west side and Mr. Williams retaining the east side establishment. Mr. Williams later sold out to J. H. Wells. Mr. Mills has just sold out to E. A. Neverman, for 10 years in the drug business on Davis street. Mr. Mills is city treasurer. He has been closely identified with the Evanston Ph. A.

The American Thermos Bottle Co., Norwich, Ct., has received a shipment from Germany, comprising about three carloads of the finest pistons produced on the continent. This company's glass supply from abroad has been interfered with, due to the war. The international combination of the Thermos factories has been only partially consummated, due to the same interruption, and the English factory, which formerly received supplies from Germany, has now turned to the Norwich plant. Arrangements have been made to ship 100,000 bottles to London. The British government has guaranteed the safe arrival of the first cargo.

The Read Drug Company, Lexington and Howard streets, Baltimore, Md., is planning to erect a new building on the site of the old one recently destroyed by fire. The new structure will be six stories high. Plans are now being prepared and the building is scheduled to be completed within four months. It is aimed to make this drug store one of the sights of the city and the interior, it is said, will show every advance in the retail drug business. The Read drug store, it is reported, will remain indefinitely in its present location at Lexington and Liberty streets, two squares away from the new main store.

**A. G. Manulis**, druggist Brooklyn, was held in \$500 bail for the Grand Jury on a charge of grand larceny preferred by the Assay Laboratory, Inc., in which a number of prominent South Brooklyn physicians are interested. The charge was based on the allegation that the druggist held \$200 worth of the corporation's machinery and supplies as security for rent, after, as the plaintiffs declared, he had accepted under an agreement 180 shares of the corporation's stock in lieu of rent. Manulis acknowledged receiving the shares, but denied that any agreement existed and insisted that he was entitled to his rent.

The United Drug Co., Boston, has voted to issue \$1,000,000 of additional preferred stock for cash in full. The company

has declared the regular quarterly dividend of 13.4 per cent. on the preferred stock payable in cash and the payment of 2 per cent. on the common stock in 6 per cent. scrip, redeemable one year from date or, at the option of the company, at any prior quarterly dividend date. It is reported that the payment scrip is due to a desire to conserve cash resources for the merchandise market, in which the company has been a heavy purchaser during the past four weeks.

**Allen Paul**, acting for himself and the Paul pharmacy, Houston, Texas, and the Houston National Exchange bank, has sued H. S. Fox for \$150,000 damages, which he alleges has been incurred to his business. He charges, it is reported, that Fox has circulated false reports and has thereby affected his business and credit. He asks for an injunction restraining the defendant from further injuring his business in any way. The suit was filed just 24 hours after a suit for \$5,000 alleged debt had been filed by the above bank against Allen Paul.

**The L. K. Preston Drug Co.**, Beaumont, Texas, whose drug stock and fixtures have been in the hands of a receiver for several weeks, has been purchased by a new company, incorporated with a capital of \$9,000. The consideration is understood to have been slightly less than \$5,000. W. C. Wiley is president, treasurer and manager of the new corporation. O. B. Sawyer is vice-president, and R. W. Abbott, secretary. The company opened for business under the name of Palace drug store.

**The Day Drug Co.**, of Akron, Ohio, has secured a temporary restraining order, preventing the collection by the county treasurer of \$1200 as a liquor tax, alleged to be due the county on account of liquor sold at one of the stores operated by the company. The company, in its petition filed by William Shoemaker, its president, declares that no intoxicating liquors whatever were sold by the company for the year ending May 25, 1914, and that there is therefore no liquor tax due.

**McCormick & Co.**, manufacturers of drugs and spices, Baltimore, are making alterations in their establishment at a cost of some thousands of dollars. The firm some time ago acquired a wooden box factory on the corner of Lombard and Concord streets, and this building has been reconstructed so as to adapt it to the needs of the new owners. The firm now has possession of the entire block, with the exception of a small lot on the southeast corner which is occupied by a cafe.

**The 20th Century** drug store, 17th street and Third avenue, Rock Island, Ill., was recently opened, hundreds of people visiting the establishment the first day. John A. Bengston, proprietor of the pharmacy, was present to greet all his friends and the store was crowded all day and throughout the evening hours. The corner has been entirely remodeled during the last few weeks and the store has been fitted out until entirely transformed.

**Walker & Gibson**, wholesale druggists, Albany, N. Y., are rushing the construction of their new building at Broadway and Orange street. The building will be five stories in height, with a large basement. It will have a frontage of about 200 feet on Broadway and will extend from Broadway to Montgomery street. Several store houses on Norton street, now used by the firm, will be abolished when the company moves into its new headquarters.

**The Red Cross Drug Co.**, through its president, T. W. Thiesen, Racine, has been dickering with the attorney for the creditors of the Public Drug Co., Kenosha, Wis., to take over the company's store, which, it is reported, has been in straitened financial circumstances for some time. It is said that the liabilities of the drug firm amount to about \$3,000 and the assets are placed by the attorney at \$1,200.

**James F. Hart**, a druggist of Marietta, Ohio, recently filed a voluntary petition in bankruptcy, scheduling liabilities of \$5517 and assets, including stock in trade, of the estimated value of \$3889. The largest single claim against Mr. Hart is held by a Marietta bank, in the sum of \$2940, which is partly covered by a life insurance policy. Poor collections and bad business are given as causes of the failure.

**C. F. Powers**, Portland, Mich., is reported as having received a miniature olive oil can through the mail in reply to his order to the Michigan Drug Co. for several cans of olive oil. It was filled with sand and printed on the top were these

words: "This can contains sand, not olive oil." The company, according to a local reporter, took this way to inform its customer that there was no olive oil to be had.

**A receiver** for the Syuyita Medicine Co., Lima, Ohio, has been requested by the Fort Wayne Box Co., of Fort Wayne, Ind. The petition declares that the local firm is hopelessly insolvent and asks to recover from the defendant \$1,051.28, with interest from July 21. According to the petition, the Lima firm has total assets of not more than \$500 and outstanding indebtedness of \$4,500.

**The Wangler Brothers'** drug store, Cedar Falls, Ia., has been sued for \$10,000, which sum has been asked for because of the tragic death of William Schneiderman in an explosion in the pharmacy last December. The suit was filed by the administrator of young Schneiderman's estate. It is reported that the young man was in the act of compounding some chemicals which were highly explosive.

**Angelo C. Serra**, a wealthy Italian druggist of Cleveland, Ohio, has received two letters within 10 days from a gang of blackhanders demanding that he pay \$5,000 or be killed. He has not followed the instructions in the letters and has remained in his store during business hours surrounded by a bodyguard. Meanwhile the police of Cleveland are hunting for the gang that made the threat.

**J. T. Moore** and **B. D. Woodward** are retiring from the drug business at the "Old Round Corner," Lawrence, Kans. Woodward & Co., the oldest business house in Lawrence was established in 1855 and in the early days did considerable manufacturing. Then, too, much of its business was of a wholesale nature. The late F. A. Faxon was at one time identified with the firm.

**The Von Phul & Gordon Drug Co.**, Beaumont, Texas, has been dissolved and S. W. Gordon will continue the business, F. A. Von Phul retiring. The realty has been transferred to the Von Phul & Gordon Realty Co., which will continue in control. The Von Phul & Gordon Drug Co. succeeded the Lake Charles drug store established there in 1895 by Dr. Meyers.

**D'Orsay, Inc.**, of Paris, a leading French manufacturer of perfumes, is to open an establishment at 716 Fifth avenue, New York. This house has shops in the Rue de la Paix, Paris, and in Unter den Linden, Berlin. The European war has prevented the bringing over of the fixtures and furniture for the American store. The lease is for 17 years from Sept. 1.

**The C. C. Reed drug store**, established in Lincoln, Ill., 25 years ago, was sold recently to Frank Pfau, Jr., who assumed charge at once. Mr. Reed has been in ill health for some time and is at present at Santa Cruz, Cal. His wife has had charge of the store during the past two years, but will join her husband as soon as the invoice is completed.

**E. M. Funk**, the pioneer druggist of Hampton, Ia., has, after a business career of thirty-three years spent in the same building, sold his stock of goods to John J. Marschall, who immediately took possession. Mr. Funk came to Hampton in 1881. Until 19 years ago the business was a partnership, his brother-in-law at one time being interested.

**The U. S. district attorney** at Kansas City has had warrants issued for the arrest of C. F. Larey, Paul L. Hess and John W. Kepner. They are alleged to have sold cheap cigars in boxes of costlier brands. The druggists were arraigned before the U. S. Commissioner and released under \$500 bonds to appear later in court.

**The Matthews** drug store is the sixth to be opened at Modesto, Cal. It is located in the Modesto theater building. The proprietors are W. H. Matthews and his son, W. E. Matthews, who have come to Modesto after disposing of stores at Chico and San Francisco. The new company will manufacture a malarial remedy.

**I. B. Kahn & Co.**, druggists, Zion City, Ill., are prepared for a legal fight, if necessary, with Voliva, the successor of John Alexander Dowie. According to Voliva, "the three D's stand for Drugs, Dances and Devils," all of which have been prohibited since the founding of the city. He is trying to oust the drug store.

**Leo Chulock**, who conducts a drug store at 12th avenue

## Notable Feature of N. A. R. D. Drug Show in Philadelphia Last Month

**A** FEATURE out of the ordinary was the Drug Show held in the Bellevue-Stratford Hotel last month in Philadelphia in conjunction with the N. A. R. D. Convention, and so popular did it prove with the general public that the management was forced to provide itself with police protection. Among the notable exhibits was that made by the J. Hungerford Smith Co., the well known manufacturers of soda fountain requisites, of Rochester, a reproduction of which is shown in the above illustration. The booth was in charge of Joseph M. Schilling and Charles F. Port, the Philadelphia and New York State representatives of the company, respectively, and who are credited with the arrangement and decorations of the exhibit. Following a custom of previous years, "Golden Orangeade" was dispensed free to visitors, and that this popular beverage was well liked is evident by the fact that at times as high as three gallons were dispensed in four minutes. The J. Hungerford Smith Co. received many compliments on the appearance of the booth and thanks for the souvenirs distributed and drinks dispensed during the Convention, the members of the association being unanimous in their appreciation of the company's effort to entertain them.

and Fourth street, Maywood, Ill., is erecting a two-story brick store and flat building, which will include room for himself and offices for a physician and a dentist. Mr. Chulock opened his drug store at its present location five years ago.

The committee, appointed to investigate the financial condition of Grandfield's pharmacy, Inc., Fall River, Mass., was further adjourned at the meeting held Aug. 28, in order that some one with an expert knowledge of the drug business might furnish advice as to the value of stock, etc.

The United Drug Company has purchased ten lots of land adjoining its property on Leon street, Boston. Eight of the lots are on Leon street, near Greenleaf street, and the rest are on Field street, near Madison court. The areas acquired are 41,080 and 10,161 square feet.

C. A. Coley, who conducted for many years a drug store in Pittsfield, Ill., recently filed a petition in bankruptcy. His assets are placed at \$2000 and his liabilities at between \$9000 and \$10,000, most of which, it is stated, is due to friends for small loans or security debts.

The Riker-Jaynes Drug Co. stores in New York and Connecticut have been transferred to the Riker-Hegeman Co., of New York. This change from Boston to local headquarters was made in order to handle the business of the two states more expeditiously.

O. O. Gates has moved his pharmacy from the Bauchman building, corner Main and Sixth streets, Benwood, W. Va., to a room in the Bank of Benwood building. When the installation is complete Mr. Gates will have one of the most attractive drug stores in the State.

The Burke-Bradford Drug Co., Los Angeles, Cal., has leased the corner store room of the Black building, at Fourth

and Hill streets, for a period of ten years, the total rental amounting to \$90,000. The lessees will open a modern drug store at once.

E. R. Squibb & Sons, manufacturing chemists, New York, with a branch at 311 West Washington street, Chicago, were recently robbed of 133 bottles of cocaine hydrochloride worth \$585 by burglars who entered their building in the Windy City.

Brewer & Co., wholesale druggists, Fall River, Mass., have broken ground for a new storehouse and office building to be located diagonally across from the Fall River station. The building will be 100 by 100 feet and three stories in height.

Frank Frazier, Opelika, Ala., has purchased an interest in the drug business of J. H. Thomason, of that city. Although a native of Opelika, Mr. Frazier has been connected with a Selma drug firm for several years.

E. A. Holmes, formerly a prescription clerk at Byrne's pharmacy, Atchison, Kans., is conducting his own drug store at Lemonville, Mo., and his wife has charge of the soda fountain and a cafeteria.

A. D. Loar, who has conducted a drug store at Grove and Main streets, Bloomington, Ill., for the past six months, is reported as expecting to move his stock to the 400 block on North Main street.

J. A. Hamilton, Jr., Wharton, Texas, has filed a voluntary petition in bankruptcy. His liabilities are listed at \$14,007 and his assets at \$10,050. Of the liabilities, \$12,228 is in unsecured debts.

Benjamin Burken, a drug clerk of this city, who formerly conducted a drug store at 2039 Madison avenue, has filed a petition in bankruptcy, showing liabilities amounting to \$2,049, and no assets.

**Israel Bass**, druggist, Brooklyn, N. Y., was recently sentenced to 18 months in the penitentiary at hard labor, for selling a quantity of heroin to a pupil without a physician's prescription.

**C. L. Gill**, Tutlock, Cal., has acquired an interest in the United States Pharmacy, Sandpoint, Idaho. Mr. Gill is a pharmacist who has taken the place of F. E. Saunders who sold his interest to M. Howard.

**Yerian Brothers**, Tehachapi, Cal., will move their pharmacy to a new brick building which now occupies the old Kessing block, formerly the site of the first building erected in that city.

**Felix Resnick**, 1256 Amsterdam avenue, this city, has filed schedules in bankruptcy, showing liabilities of \$5,814; nominal assets, \$2,600, and actual assets, \$1,350.

**The Riker-Jaynes Drug Co.** has opened a new store at New Bedford, Conn. This is the 99th store opened by this company. J. H. Coakley is the manager.

**Mrs. Minnie Phares** has purchased all interests in the Phares drug store, Liberty, Ind., and is now in complete control. She expects to continue the business.

**Herbert A. Blackmer**, New Bedford, Mass., has taken over the drug store of Frank Church at Purchase and Middle streets. William E. Jennings will take charge.

**The Bass City Drug Co.**, Waterbury, Conn., recently elected the following officers: President, James F. Colwell; treasurer, Mary E. Colwell; secretary, Cecilia Colwell.

**George W. Withrow**, proprietor of the Witt drug store at Witt, Ill., has been adjudged a bankrupt on a voluntary petition; assets scheduled, \$11,415; liabilities, \$8,742.

**Henry M. Grotta**, druggist, 1392 Broadway, this city, has been placed in bankruptcy; assets, \$2000; liabilities, \$15,000. Edward J. Rayher is the receiver.

**The General Chemical Co.**, Chicago, has had plans prepared for a two-story warehouse, 32 by 250 feet, to be erected at Hegewisch at a cost of \$40,000.

**Charles Smith**, druggist, Lacon, Ill., has moved to the K. of P. building and is said to have the finest drug store in his section of the State.

**George Douglas**, druggist, Holdingford, Minn., has opened a branch at Bowlus. His sister, Mrs. Calhoun, is in charge.

**Halper Brothers, Inc.**, New York, have filed schedules in bankruptcy with liabilities of \$11,019 and assets of \$3,400.

**Ralph Stonerhas** has sold his interest in the drug store at Hamburg, Ia., to his partner, H. H. Griffith.

**A. J. Ayres**, Hannibal, Mo., has moved his drug store to 716 Broadway, that city.

#### REPORTED THEFTS AT DOW'S UNTRUE

General Manager A. M. Hopkins branded as entirely untrue the story published recently in a Cincinnati paper to the effect that the employees of the Dow string of drug stores had been engaged in systematic peculations for several months, the amount taken being reported as aggregating \$50,000. "It is preposterous to believe that we have been suffering from such wholesale thieving as this story described," said Manager Hopkins. "I suppose we suffer, along with every other retail establishment in the world, from the occasional 'bad egg' who holds out something now and then, but we suffer less than does the average store from this annoyance, because we have created an organization spirit among our employees, which is the best possible safeguard against this sort of unpleasantness." The story in question claimed that about twenty clerks had been arrested, and that many had confessed their guilt, but no names were given, and no more has been heard concerning the evidently "faked" story in any of the Cincinnati papers.

The New Orleans College of Pharmacy opened on Sept. 22. The enrollment, while excellent, did not exceed that of former years, the plague situation and stringencies in the cotton belt being blamed for the deficiency. Twelve Cuban students and eight women are taking the course.

#### Drug Week at the Panama Exposition

The American Pharmaceutical Association will hold its convention next year at San Francisco, in connection with the Panama-Pacific International Exposition. So many other associations connected with the drug and medical field have signified their intention to hold their annual convention in California next year that the time from July 12 to 24, 1915, has already been designated Drug Week, during which period over a dozen conventions will be held. Among the bodies which will meet in San Francisco during Drug Week are the California Pharmaceutical Association, which will act as host to many visiting bodies, the N. R. D. A., with 22,000 members, the N. W. D. S., with 17,000 members, the Phi Delta Chi, a pharmaceutical fraternity, the American Association of Dairy, Food, and Drug Officials, the American Medical Association, which body will contribute a most elaborate exhibit during its convention, the American Academy of Medicine, and several other associations of specialists and hygiene and sanitation experts. It is estimated that over 50,000 members of the various druggists' associations will be represented at different conventions during Drug Week.

President Charles C. Moore, of the Exposition, has addressed an official statement to the commissioners from foreign nations to the Panama-Pacific International Exposition, denying the rumor that the exposition would be postponed on account of the European War. The original plan will be strictly adhered to, the Exposition will open on February 20th, 1915, and will continue until December 4th. None of the warring nations has signified her intention to withdraw her exhibit, and France and Italy have re-assured the Commission that their plans will remain unchanged, no matter what the length or outcome of the War. President Moore believes that the chaotic conditions which must exist in Europe for some time, even if the war were brought to a speedy end, will make European travel a rather uncertain proceeding, so far as pleasure is concerned, and that hosts of Americans who otherwise would visit the Continent next year will stay at home rather than endure the inevitable discomforts which will attend foreign travel. To these people, as well as to the great army of citizens who are already planning to go west next summer, the Exposition will offer a wonderful opportunity not only to "See America first," but also to see the most important features of life and conditions in other countries gathered together "under one roof" where they can be fully studied and assimilated without discomfort or annoyance of any kind.

#### Look out for Imposter From Syracuse

Jobbers and druggists are warned to be on the lookout for an imposter who is traveling in the east, representing himself to be Nelson P. Snow, treasurer of C. W. Snow & Co., wholesale druggists of Syracuse. He is described as being about 5 feet 10 inches in height, about 35 years old, profuse brown hair parted in the middle, thin brown mustache, rather short, teeth irregular, not very good, and very noticeable, weighs about 170 pounds and appears to be familiar with the drug business, and especially acquainted with Syracuse and its vicinity.

When last heard of he was in Boston, where he victimized a jobbing firm, borrowing a sum of money from one of the officers. It is believed that he is the same man who fleeced several jobbers in New York, Boston and Philadelphia in a similar manner about three years ago, and the drug trade is requested to keep a sharp watch for him, and if apprehended, he should be turned over to the police. The genuine Mr. Nelson P. Snow is warning many of his friends through personal letters to be on their guard, as the imposter is extremely clever in his impersonation.

#### Youthful Linguist Becomes Pharmacist

William J. Korbonits, of New Brunswick, N. J., eighteen years old, passed the New Jersey State Board of Pharmacy examination in July with high honors, thereby becoming one of the youngest pharmacists in the state. He is an excellent linguist, and speaks English, Polish, Slavish and Hungarian. At the age of twelve years he was court interpreter at Newton, N. J. He is now connected with Stormberg's pharmacy, French Street, New Brunswick.

## WEATHERHEAD CO. OPENS THIRD STORE

More Than 20,000 Visitors Drop In To Take a Look and Greet the New Management

The opening of the third store of the Weatherhead Drug Co., Cincinnati, Ohio, at the corner of Ninth and Vine streets, recently, was a pronounced success, judging from the number of people who visited the new store. President H. U. Bolles, who was on hand all day assisting in waiting on the big crowd, estimates that not less than 20,000 persons visited the store during the day. The cash registers showed that over 4,000 people had actually made purchases, which gives an idea of the number who must have dropped in just to take a look. The opening was announced a day in advance by means of well-arranged advertisements in several of the Cincinnati papers, giving full details of the plans.

E. F. Nehring, who has been with the company at the Sixth and Vine store for some time, was installed as manager of the new place, with several assistants, including a competent dispenser at the handsome Puffer fountain. The store is not especially large, being about 20 by 45 feet, but the up-to-date and compact arrangement of the stock and the working space makes it possible to take care of business with the greatest possible efficiency. No counters are used, wall-cases with glass down to the floor, showing the goods attractively, being used instead. The prescription department and stock room are in the basement, which is reached from the store proper by means of a stairway at the rear, and is made quickly accessible by a dumb waiter arrangement. The woodwork is fumed oak and the floor is finished in an attractive mosaic tile pattern. The windows will be a feature, a man being employed to devote his entire time to this work.

"The opening was much more of a success, in the point of attendance than I had anticipated," said President Bolles. "Of course, I selected that particular location because I believed it to be a good one, but I had no idea that such crowds would attend as turned out for it. It indicates, to my mind, that business at this point will very nearly approximate that of the downtown stores, which is certainly very gratifying." Practically all of the leading wholesale drug firms of the city, as well as many others, sent handsome floral offerings; which were used effectively in the decoration of the store for the opening.

## OHIO OPIATE LAW SCORED BY JUDGE

In holding Dr. Joseph S. Podesta and J. W. Vester, a druggist, both of Cincinnati, not guilty of unlawfully prescribing and selling morphine, Municipal Judge Fricke recently pointed out that the case illustrated a serious weakness of the Ohio statute on the subject, in that the law does not attempt to control the discretion of physicians in prescribing drugs, but only prescribes penalties for those who sell unlawfully, thus leaving a gap which it has been found easy to enter. Witnesses testified at the trial that Dr. Podesta gave one of the investigators for the State drug inspector's office two prescriptions, each for 60 grains of morphine, charging 50 cents for the first prescription and \$1.00 for the second, although both were given at the same time. He also suggested, it was testified, that the prescriptions could be filled at Vester's pharmacy, and the witness then secured the drug there. After Podesta was acquitted of legal guilt, the prosecution dismissed the case against Vester, as he was obviously guilty of no offense in supplying the drug upon a prescription by a physician.

In connection with Podesta's discharge the court said: "This is a seeming miscarriage of justice, but is due to what the court believes to be a failure in the law. There is no limitation placed in the law on the amount of morphine a physician may prescribe. The court believes the defendant morally guilty, but legally not guilty. The Legislature should be appealed to and a fixed standard be set, and an amendment should render guilty any physician who prescribes, as well as the druggist who fills, prescriptions where the amount is greater than the amount fixed by law." It was announced by the State at the time of the trial that an appeal would be taken, in order to determine whether such cases as Podesta's are within the meaning of the law as it now stands.

## MERCHANDISE IMPORTS INTERRUPTED

Successful Merchant Advises Early Stocking For Holiday Trade—Explains His Business Methods

It is generally granted that the European War has affected the drug trade more than it has any other line of commercial activity in this country. Immediately upon the outbreak of hostilities druggists became aware of the disturbed drug market. Imported drugs skyrocketed in price and the extreme cost of a drug was a sure criterion of its foreign source. American dealers were caught short and the effect on the market was immediate. A secondary effect will soon be felt in the drug trade. Druggists will soon learn the geography of various sundry lines, especially many of those in large demand during the holiday season. Such a line is musical merchandise.

MR. BUEGELEISEN

According to Mr. Buegeleisen, of Buegeleisen and Jacobson, 111 University Place, the war has entirely cut off the importation of harmonicas, violin strings, violins and other musical merchandise. "The only goods in this line available for the Christmas trade," said Mr. Buegeleisen to an ERA representative, "are those now in stock. Druggists who would stock up for the coming holiday trade should order early." As his firm is the only house in the musical merchandise trade that specializes wholly in this line, Mr. Buegeleisen is qualified to speak authoritatively. A feature in Buegeleisen and Jacobson's method of doing business has been to put itself in the place of the local merchant. Said Mr. Buegeleisen: "We have studied his needs, and that we have been able to supply those needs satisfactorily, systematically and expeditiously is the reason why the business has grown to such proportions. My aim has been to work in a co-operative sense with the dealer, supplying him the best of merchandise at thoroughly consistent figures." After specializing in the musical merchandise business since the age of 15 years, Mr. Buegeleisen was of the opinion that it should be profitable to the retailer in every sense.

## Court Enjoins Substitution of Trademark Goods

The habit of some unscrupulous retailers of substituting inferior brands of goods for standard makes was dealt a severe blow by Judge Learned Hand, of the District Court, New York, in a decision handed down in the case of the B. V. D. Co. against Lucien J. Freund. The ruling carries with it an injunction prohibiting the defendant from selling substitutes for goods asked for by the customer, representing such substitutes to be the same as the original goods. This decision involves a new line of correction against dealers who carry extremely small stocks of trademarked articles, usually in sizes few people can wear, while prominently placarding the store and window with announcements of the genuine article, and selling imitation merchandise to customers thus lured into the store. It also forbids alluding to a trademark in any manner and then selling other goods therewith.

The point covered by this decree is a step in the direction of cleaner and more honorable methods of merchandising. The advertiser who through national advertising and the intrinsic quality of his goods builds up a name that is recognized as standard for the line he handles should be allowed to reap the just profit which accrues from his labor, instead of having to suffer the injustice of having the retailer secure customers through lavish advertising of the standard goods, and then palm off on them goods of inferior make. This decree is but one of the many decisions that have been made in recent years whose influence is bound to make for better salesmanship, better business methods, and greater confidence between the customer and the man who sells.

## WAR TAX BILL TO RAISE \$105,000,000

The War Tax Bill, which passed the House of Representatives on September 25th, and is now before the Senate, does not impose as heavy duties on the drug trade as did the Spanish War Bill. The proposed bill taxes wines, and other alcoholic liquors, tobaccos, gasoline, commercial paper, telegraph and telephone messages, the business of brokers, bankers, and agents places of amusement of all kinds, and insurance business.

Additional revenue to the amount of \$105,000,000 is expected to be raised by this measure. Dealers in leaf tobacco will pay \$6 on sales not exceeding 50,000 pounds annually, and \$12 on sales not exceeding 100,000 pounds annually. Any dealer whose total sales for the year exceed 100,000 pounds will pay a tax of \$24.

Manufacturers of tobacco pay the same rate as do the dealers, except that manufacturers of cigarettes will pay a uniform rate of \$224. Telegraph and telephone messages will be taxed one cent each. Theatres, museums, and music halls in cities of more than 15,000 will pay a tax of \$100. Bowling alleys and pool tables will be taxed at the rate of \$5 each. Gasoline bears a tax of 2 cents per gallon, dry wines will be taxed 12 cents per gallon, and wines containing more than 3 per cent. of sugar will be taxed 20 cents.

Custom house brokers will pay \$10, commercial brokers \$20, and stock and bond brokers will pay a special tax of \$50. Life insurance will be taxed 8 cents per \$100 of value, powers of attorney, notes, brokers memoranda of sale, and proxies for voting stock will be taxed ten cents each. A tax of 2 cents on chair car and sleeping car tickets will be levied. The taxes will be collected at the source wherever practical.

## LOOK OUT FOR THIS IMPOSTOR

*Editor the Pharmaceutical Era:*

Information has reached us that one Herz is calling on druggists in New York, Brooklyn and eastern New Jersey, claiming to be a representative of this company and ingratiating himself into favor by stating that he is looking for an opportunity to buy a store. The so-called Herz then proceeds to steal whatever he can, picking up such items as aspirin, etc., and in one instance stealing money from the cash register. In one store he stated he had some morphine to sell; that this company had asked him to deliver it to a druggist, providing he paid a long past due account, etc., and as the druggist in question had failed to do so, this Herz could offer the drug at a reduced price rather than carry it about with him all day. In other stores he has advanced similar tales concerning aspirin, veronal, etc.

Will you kindly announce through your columns that this man is an impostor and request the trade to notify the authorities and phone our New York branch, 57-59 East 11th St., telephone Stuyvesant, 4385-6, at once should such an individual call on them. Thanking you for your co-operation in running down this rogue, we remain,

Very truly yours,

THE NORWICH PHARMACAL COMPANY,

G. L. Vanderveer,

Manager of Advertising Department.

Norwich, N. Y., Sept. 19th, 1914.

## Heavy Purchases by United Drug Co.

The United Drug Co., of Boston, has declared its regular quarterly dividend of 13½% on preferred stock, payable in cash, and 2% on common stock in 6% scrip, redeemable one year from date, or at the option of the company at any prior quarterly date.

The desire of the company to conserve its available cash for the payment of purchases recently made is the reason for the issuance of scrip on the common stock. The company is a large buyer of imported drugs, and as the stocks of many of the drugs and chemicals used in the manufacture of the company's trademarked remedies are in danger of depletion, through the cessation of imports, it was thought wise to lay in a large supply, while it could be obtained, so that the

original formulas would not have to be changed because some ingredients could not be obtained.

Some eighteen months ago the company purchased the business of Deitsch Bros., brush manufacturers, and through this channel loaded its French factories to capacity. The shipments from France arrived here just before the war, and the company now has the largest and most complete stock of brushes in America.

Besides this, the United Drug Co. is the second largest producer of American perfumes, and with the greatly widened field for the sale of American made goods that the war has afforded, and the always heavy demand for this class of merchandise during holiday time, the profits on this line are expected to be extremely large. The August business in perfumes was 33½% greater than the corresponding business last year, and future shipment orders were heavier than ever before. The United Drug Co. of New Jersey, a subsidiary concern, showed a profit for the year ending June 30th last of \$134,000 in excess of the previous twelve months.

## P. O. Regulation Re Mailing of Medicines Unchanged

The following proposed amendment to paragraph 4 of section 472 of the postal regulations, relating to the admission to the mails of medicines and anaesthetics when enclosed in packages and properly labeled, was recently submitted to the Drug Trade Section, New York City Board of Trade and Transportation, for criticism:

4. Poisonous substances used for sanitary or medicinal purposes or in the arts and sciences which are not outwardly or of their own force dangerous or injurious to life, health or property, and not in themselves unmailable (see sections 454 and 480) may be admitted to the mails for transmission in the domestic mails when inclosed in containers made of metal, wood, papier-mache or similar materials, in such manner as to render impossible the escape of any of the contents; provided, that the article mailed bears the label or super-scription of the manufacturer thereof, or dealer therein, or of the licensed physician, dentist or veterinarian preparing or prescribing the same, and that there be written or printed on such label and on the outside wrapper of the package the word "Poison" in plain letters in red ink, *and also that the name and address of the sender shall appear on the outside wrapper of the package; provided further that no preparation of cocaine, its salts or derivatives, or any preparations containing any of them or any preparation of coca leaves, shall be admitted to the mail; provided further, that no preparation containing more than one of the following substances in the amount stated, viz., two grains of opium or its equivalent of an opium preparation, one-fourth of a grain of morphine, one-fourth of a grain of heroin, one grain of codeine, or any salt or derivative of any of them in one fluid ounce, or, if solid or semi-solid preparation, in one avoirdupois ounce, shall be admitted to the mails.*

The Drug Trade Section objected to that part of the amendment printed above in italics upon various grounds, chief and most important of which was the fact that the Harrison bill would make it unnecessary. At the date of writing, September 25, the amendment had *not* been promulgated—despite a contrary report which appeared in the September issue of a Sacramento publication.

## Insurance Act and the English Drug Market

In view of the large increase in the amount of drugs consumed as a result of the insurance doctors prescribing on a lavish scale, it is not surprising that the manufacturers of galenicals and the jobbers are doing an increased business. There is also a steadier tone in the drug markets, but as London is more or less the drug market of the world the increased demand for drugs for home consumption is not the important factor it would be otherwise. On the other hand, manufacturers of special preparations are placed at a disadvantage by the Insurance Act since the prescribing of special products is discouraged by the Insurance committees. The manufacturers in question naturally resent this, claiming that insured persons should have the benefit of the best medicines available as promised by Lloyd George, the Chancellor of the Exchequer.

# PATENTS AND TRADE MARKS

## CORK EXTRACTOR

Frank Janouch, Lincoln, Neb., has devised a cork extractor which comprises a casing consisting of side portions securing devices connecting the side portions together, U-shaped members slidably mounted in the casing and having heads in the path of movement of which the securing devices are located,

1,110,265.

1,107,774.

and points carried by the U-members. The device is shown in the above illustration (Patent No. 1,110,265).

## CORKSCREW.

A corkscrew presenting some novel features is the recent invention of John H. Kissinger, Spokane, Wash. (Patent No. 1,110,210). As shown in the accompanying illustration, it comprises spaced parallel members forming a lever, each of the members being curved upwardly adjacent one end and having a portion extending outwardly therefrom, the forwardly extended portion having longitudinally disposed slots, the upper wall of the slots being formed with aligned recesses opening in a downward direction, an arm adjustable in said slots and adapted for interchangeable engagement with the recesses, the arm forming a fulcrum for the lever, and a corkscrew pivoted between the members rearwardly of the arm described. The fulcrum arm is pivotally mounted between the bifurcated ends of the sheet metal lever and adapted to be swung upwardly and over between the bifurcated end portions to folded position. Suitable means are provided for retaining the device in folded position.

1,110,210.

tion extending outwardly therefrom, the forwardly extended portion having longitudinally disposed slots, the upper wall of the slots being formed with aligned recesses opening in a downward direction, an arm adjustable in said slots and adapted for interchangeable engagement with the recesses, the arm forming a fulcrum for the lever, and a corkscrew pivoted between the members rearwardly of the arm described. The fulcrum arm is pivotally mounted between the bifurcated ends of the sheet metal lever and adapted to be swung upwardly and over between the bifurcated end portions to folded position. Suitable means are provided for retaining the device in folded position.

## FUNNEL

The funnel above shown (Patent No. 1,101,774), the invention of John H. Frederick, Casper, Wyoming, includes a spout, a substantially U-shaped wire having its ends fasten-

ed to the spout, a float slidable on the wire, the connecting portions of the wire acting as a support for the float, which is secured to a rod extending upwardly, the rod having a notch formed therein near the top, a cross bar having an opening through which the rod extends, and means carried by the bar adapted to engage and maintain the rod against an edge of the bar at the opening and to force the rod into position with the notch in engagement with the bar. The bar is held in engagement with the rod by means of a spring, while a tubular member disposed within the funnel extends from the top to the bottom thereof to form an air passageway, as and for the purpose set forth.

## FUNNEL.

Henry M. Case, Syracuse, N. Y., has devised the self-

1,110,670.

closing funnel described herewith (Patent No. 1,110,670), which comprises a cylindrical nipple having at its top an annular flange formed with a cone-shaped valve seat, a funnel body attached to said flange, a movable spout having a tapered lower end to seat in the neck of a bottle and a cylindrical upper end to receive and slide on said nipple; a cross bar fixed in the intermediate portion of the spout and having a centrally arranged screw threaded opening, a cone-shaped valve to engage said seat and formed on its bottom with a cylindrical stem of less diameter than the nipple, the lower end having a cylindrical socket, a plug having a shouldered enlargement between its ends and a lower externally threaded end to screw into the opening in the cross bar, the upper end of the plug being formed with a longitudinally extending slot and being cylindrical and of less size than the socket in the valve stem into which the latter projects, and a pin passed transversely through the lower end of the stem.

## PATENTS

### Granted August 18, 1914

- 1,107,280—Joseph E. Fouyer, Marseille, France. Antiseptic case for tooth brushes.
- 1,107,384—Joseph L. Van Rensselaer, New York, N. Y. Non-refillable bottle.
- 1,107,519—Geo. A. Foster, Chicago, Ill. Liquid package.
- 1,107,522—William H. Inman, Keokuk, Iowa. Bottle cap.
- 1,107,774—John H. Frederick, Casper, Wyo. Funnel.
- 1,107,799—Thomas H. Holroyd, Southfields, England. Non-refillable bottle.
- 1,108,012—Judge N. Shows and Clyde B. Tucker, Ponchatoula, La. Non-refillable bottle.
- 1,108,691—Max Berger and Rudolph Weisbach, San Francisco; said Weisbach assignor to said Berger. Non-refillable bottle.
- 1,108,099—John L. Sellar, assignor of two-thirds to Henry Castellberg, Baltimore, Md. Non-refillable bottle.

### Granted August 25, 1914

- 1,108,129—Alfred Burger, New Brighton, N. Y. Process for the production of boric acid.
- 1,108,360—Gustaf W. Gustafson, Seattle, Wash. Bottle closure.
- 1,108,583—Junius R. Johnson, Charles S. Hamilton, and Richard D. Van Duyne, East Highlands, Cal. Label pasting and marking machine.
- 1,108,676—Bruno Beckmann, Berlin, Germany. Process of manufacturing the carbamic acid ester of dichlorhydrin.
- 1,108,752—Hugo Henkel and Walter Weber, assignors to Henkel & Co., Dusseldorf, Germany. Manufacture of hydrogen peroxide.

### Granted September 1, 1914

- 1,108,876—Joaquin Alemany, assignor to Havana Commercial Co., Habana, Cuba. Delivery mechanism for labeling machines.
- 1,098,959—Geo. A. Williams, assignor to The Williams Sealing Corporation, Waterbury, Conn. Bottle cap.
- 1,108,996—Frederick G. Kollenberg, assignor of one-half to William E. Danhauer, Owensboro, Ky. Bottle cap.

- 110,500—John K. Mackay, Boston, Mass. Patent for
- 110,501—Otto Lange, Chicago, Ill. Bottle filling and capping machine.
- 110,502—Anton Messerschmitt, Stolberg, Germany. Manufacture of capsules.
- 110,503—Albert P. Falmer and Frank M. Nebinger, Wilmington, Del. Bottle closure.
- 110,504—Gottfried Gaertner, Newark, N. J. Fly-paper holder.

**Granted September 8, 1914**

- 110,505—Alis Schaudauf, Frankfurt-on-the-Main, Germany, assignor to Boessler & Hasslacher Chemical Co., New York, N. Y. Stable hydrogen peroxide and method of making the same.
- 110,506—Richard C. Bradshaw and Thomas A. Garvey, St. Louis, Mo. Non-refillable bottle.
- 110,507—Thomas W. Burns, LaCrosse, Wis. Label holder and return label.
- 110,508—Herman C. Degner, Los Angeles, Cal. Non-refillable bottle.
- 110,509—Frederick Grover, assignor to The Forge-Machinery Co., Ltd., Leeds, England. Tablet wrapping machine.
- 110,510—John H. Kossinger, Spokane, Wash. Corkscrew.
- 110,511—Edmund Dalgleish, Lakewood, Ohio, assignor to The Chase Machine Co., Cleveland, Ohio. Bottle handling apparatus.
- 110,512—Frank Janouch, Lincoln, Neb. Cork extractor.
- 110,513—Heinrich von H. Christetter, Constance, Germany, assignor to Perle-Am'g Chemical Works, New York, N. Y. Process of making formaldehyde.

**Granted September 15, 1914**

- 110,514—Edward Schreck, Columbus, Ohio. Tool brush.
- 110,515—Emil C. Leit, assignor to Norsk Hydro-Elektrisk Kvaefabrikselskabet, Christiania, Norway. Process of obtaining nitrate and nitrites from nitrate-nitrite mixtures.
- 110,516—Ott. Eick, Baltimore, Md. Apparatus for cleansing bottles.
- 110,517—Henry M. Case, Syracuse, N. Y. Funnel.
- 110,518—Bernard G. G. Smith, N. Y. Dispensing can.
- 110,519—John B. Phelps, Birmingham, Ala. Nitrate bottle.
- 110,520—Joseph R. Schaffa, St. Louis, Mo. Bottle dispenser.
- 110,521—Thomas W. Pincus, Wilmington, N. C. Process of producing wire tempering.
- 110,522—Milton C. Whitaker, New York, N. Y. Process of dispensing.
- 110,523—Charles A. Candia, Elizabeth, N. J. Teflon for bottles.
- 110,524—John K. Greeter, assignor to The Lew. Manufacturing Co., Cleveland, Ohio. Bottle clearing apparatus.

**RECENT FIRES**

- At Buffalo, Pa., S. Warner's drug store building destroyed.
- At Memphis, Tenn., N. J. Drug and Chemical Co. building destroyed; damage, approximately estimated at \$50,000.
- At Boston, Ill., Owl drug store building damaged.
- At Chicago, Ill., A. W. Reed's drug store building destroyed; damage, extent of \$1,000, covered by insurance.
- At Cleveland, Pa., J. A. Drugg's drug store destroyed.
- At Cincinnati, Md., Real Drug and Chemical Co. Howard building destroyed; damage, estimated at \$1,000. Five premises insured.
- At Houston, Tex., Lester's drug store; \$5000 damage.

- At Saskatoon, Can., Central drug store; little damage.
- At Canisteo, N. Y., E. C. Barker's drug and book store struck by lightning; damage, about \$2,000.
- At Bluffs, Ill., Francis Curtis' drug store stock destroyed by fire originating from a gasoline stove explosion.
- At Sandusky, Mich., H. H. Hoffman's drug store damaged \$500 by fire and water; crossed electric wires caused fire.
- At Hartford, Ct., Goldfield Brothers' drug store; slight loss.
- At Trumann, Ark., Campbell Drug Co.; building destroyed.
- At Ashville, Ind., Henry Payne's store destroyed.

**Elixir of Iron, Quinine and Strychnine**

A contributor submits the following formula to the *Bulletin of Pharmacy* with the comment that if instructions are followed to the letter, the result will give a beautiful dark olive-green color, and in addition an absolutely permanent preparation:

Soluble ferric phosphate.....	4 ounces
Quinine phosphate .....	1 ounce
Strychnine phosphate .....	16 grains
Potassium citrate .....	1/2 ounce
Compound spirit of orange.....	1 dram
Alcohol .....	2 pints
Syrup .....	4 pints
Water, enough to make.....	1 gallon

Dissolve the iron phosphate in about a pint of hot water, and to cool, add the remainder of the water. To this solution add the syrup. Next dissolve the quinine phosphate and strychnine phosphate in alcohol, adding the compound spirit of orange. Mix the two solutions, add the potassium citrate, and shake. Add 1/2 ounce of kaolin and filter through well-wetted paper.

**Ointment of Marshmallow**

Venice turpentine .....	1 ounce
Fenugreek seed .....	1 1/2 ounces
Linseed .....	1 1/2 ounces
Marshmallow root .....	3 ounces
Rosin .....	3 ounces
Yellow wax .....	6 ounces
Distilled water .....	12 ounces
Olive oil .....	24 ounces

Boil the seeds and root with the water for half an hour over a slow fire, then add the oil, and continue the boiling until all the water has evaporated, and the oil alone is left with the residual herbs. Strain the oil, and in it dissolve the wax, rosin and turpentine by the aid of gentle heat. Stir until cold.

Members of the Winnebago County (Wis.) R. D. A. met recently to compare invoice prices. At the time of meeting, they had no accurate means of ascertaining proper prices on drugs.

NEW YORK, Sept. 23—A careful study of the market conditions shows a general tendency towards a settling of prices on the new levels raised by the inauguration of the European war, and while many of the drugs and

chemicals enumerated above show great advances in price, the atmosphere is clearer and the markets are steadier in tone, having lost that "explosive tendency" so strongly in evidence a fortnight ago. The drug trade is now beginning to know something of what it may expect, and consequently, is somewhat prepared for the shortages and wants that in some cases are likely to develop. Of course, even at the present time, there are some commodities for which no reliable quotations can be obtained, or if given they are nominal only, but in the majority of instances all quotations are more or less firm with no indication that former levels will be reached in a long time to come. The financial situation also has an important bearing upon trading, especially in the matter of foreign exchange, and until the channels are cleared in this direction, the drug trade in common with other commercial enterprises is bound to feel the effects of this lack of financial articulation.

A revision of the quotations shows a preponderance of advances, the declines reported being emphasized by their fewness in number. Among the items showing a recession in prices are celery seed, formaldehyde, guarana, iodine, menthol, cod liver oil, oils of lemon, lemongrass, sweet orange, peppermint, pimenta, wormseed and American wormwood. Among the most striking advances are atropine and its salts, belladonna, bismuth salts, camphor, and the various botanicals, synthetic drugs and fine chemicals supplied or controlled by the nations now at war.

**OPIMUM**—Quotations are higher, \$11@13 per pound being asked for natural, \$12.50@14.50 for granulated, and \$12.40@14.40 for U. S. P. powdered. Stocks of opium now in the United States are conceded to be very low and there are small prospects of moving any from Turkey, the country of production. It is said that a large part of this year's crop is being held in the Turkish capital on order of the Government. It is also reported that the several stocks bought by American purchasers before the war and now held under embargo in London will soon be released and be permitted to proceed to the United States. The quantity of opium imported during the twelve months ending June of the present year was 455,200 pounds, valued at \$1,810,429, as compared with 508,433 pounds, valued at \$2,565,965 for the previous year.

**QUININE**—Is firm at the recent advance of 31c per ounce in 100-ounce tins, with proportionate advances for smaller packages. Stocks of cinchona bark in this country are becoming depleted and manufacturers manifest firmer views with the outlook and the possibility of being unable to obtain further supplies in quantity.

**CAMPHOR**—Is in strong position, with jobbers quoting 75c@ \$1.10 per pound for refined, and 78c@1.13 per pound for 1/4-lb. squares. For Japanese in ounces \$1.20@1.40 is asked. Domestic refiners are reported to be short of crude material, but recent arrivals have eased the situation somewhat. New crop supplies from Japan are expected to be available some time next month.

**MERCURIALS**—Quicksilver is in strong demand and jobbers are quoting \$1.15@1.35 per pound. The various mercurial salts have also advanced and are now quoted as follows: Ammoniated, \$1.25@1.35 per pound; bichloride (corrosive sublimate), 94c@1.05, powdered, 91c@1.10; bisulphate, 75c@85c; mild chloride (calomel), \$1@1.10; green iodide (proto.), \$3@3.15; red iodide (biniodide), \$3.25@3.40; nitrate solution, 30c per ounce; red oxide (red precipitate), \$1.20@1.30 per pound.

**MENTHOL**—A brighter outlook for continued shipments from Japan has not been without effect on quotations, which are considerably lower, jobbers asking \$4.25@4.50 per pound. The situation has also been eased by a lessening in demand.

**POTASH**—The shortage of potash continues, there being practically none shipped from Germany, the principal country of production. Caustic is obtainable in ordinary retail druggists' quantities at 18@28c per pound, 40@50c being asked for white sticks. All potassium salts have been correspondingly advanced and are quoted as follows: Bitartrate (cream tartar), 70@75c per pound; bromide, 90c@1.00; carbonate (pearl ash), 18@22c; carbonate, C.P., 50@55c; refined (sal tartar), 45@50c; hypophosphite, \$1.10@1.25; iodide, \$3.60@

\$3.85; permanganate, 75@90c; sulphate, C.P., 36@40c; tartrate (soluble tartar), 65@75c per pound.

**SALICIN**—Scarcity of supplies has caused this article to advance, \$5.75@6.25 per pound being asked.

**CARBOLIC ACID**—The shutting off of all exports from Great Britain, this article being contraband of war, and a scarcity of stocks here, have brought a further advance in prices, jobbers now quoting 60@65c per pound for crystal in bulk, and 35c@1.15 per gallon for crude.

**BENZOIC ACID**—Practically all shipments of acid from abroad have ceased since the beginning of the war, and prices have advanced considerably. English, true, is quoted at 18@20c per ounce, while \$1.20@1.40 per pound is asked for German. For similar reasons, sodium benzoate is also scarce and higher, \$1.75@1.85 per pound being the ruling price; sodium benzoate from true benzoic acid is quoted at \$4.00@4.25 per pound.

**SALICYLIC ACID**—The scarcity of carbolic acid from which this article is derived is not without effect on prices, and quotations are largely nominal, \$1.35@1.40 per pound being asked for bulk and \$1.45@1.50 for 1/4, 1/2, and 1-lb. cartons. Salicylic acid from gaultheria is quoted at 40@50c per ounce.

**LICORICE**—Scarcity of Corigliano has caused a strong advance in prices, with jobbers' quotations ranging from 37@42c per pound for whole, 44@50c for powdered. Licorice mass is obtainable at 36@39c.

**CITRIC ACID**—Recent arrivals of stock have caused second hands to slightly lower their quotations within the last week, but the article is still scarce and holders are disposed to conserve supplies. Jobbers quote 85c@1.33 per pound. Domestic manufacturers are offering their output only sparingly to regular customers at about the former contract price, refusing to sell to other consumers.

**ESSENTIAL OILS**—Most of the standard brands of Messina essences show a decline in quotations, the following prices being asked: Lemon, \$2.85@\$3 per pound; sweet orange, \$3.25@3.50. Declines noted on other oils are: Lemongrass, \$2@2.25; peppermint, New York, \$2.40@2.60; pimenta, \$2.25@2.75; Baltimore wormseed, \$1.80@2; American wormwood, \$4.25@\$5. A growing scarcity for both natural and artificial oils of mustard is reported, and jobbers have advanced their prices for the latter to \$3.75@4.50 per pound.

**BELLADONNA**—Cable advices from London report a noteworthy scarcity of this root and prices have been marked up to \$1.25@1.40 per pound for German; powdered, \$1.35@1.45; for German leaves \$2.90@3.25 is asked. The alkaloid atropine has been correspondingly advanced and is now quoted at \$15@24 per ounce in eighths; sulphate, \$14@23 per ounce, according to brand and maker.

### Bluing for Gun Barrels

For bluing gun barrels by staining dissolve separately 4 1/2 ounces sodium hyposulphite in 1 quart of water, and 1/4 ounce lead acetate in 1 quart of water. Mix the two solutions and bring to a boil in a porcelain dish or stone pot. Clean the barrel free from grease, oil, or varnish, warm the barrel and smear with the hot solution, using a piece of sponge tied to a stick. When color develops wash and wipe dry, and finish with boiled linseed oil.

Another formula used for bluing steel and which may answer the purpose, calls for a mixture of antimony trichloride, 25 parts; fuming nitric acid, 25 parts, and hydrochloric acid, 50 parts. Apply with a rag and with a piece of green oak rub until the desired color is obtained.

### Flour Paste

Alum, in powder.....	1 dram
Rosin .....	30 grains
Cloves .....	30 grains
Flour .....	a sufficiency
Boiling water .....	a sufficiency

Dissolve the alum in a quart of water; when cold, stir in as much flour as will make a thick paste, avoiding any lumps; then stir in the rosin and cloves. Pour the mixture into a saucepan on the fire containing about 8 ounces of boiling water, and stir constantly. When it is thick, pour it into a jar and allow it to cool. This will keep for 12 months

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures, it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

THE ERA COURSE IN PHARMACY,  
D. O. HAINES & CO.,  
NO. 3 PARK PLACE, NEW YORK.

### BEFORE ENTERING COLLEGE

THE value of the ERA COURSE in Pharmacy to a young man who is intending to enter a college of pharmacy is well illustrated in letters we have recently received from two graduates. Before taking up the detailed studies of the college curriculum, a course of training which can give a broad survey of the whole field to be covered is of the greatest benefit, both to introduce the prospective college student to the branches of the pharmaceutical knowledge which he will later pursue, and also to allow him to ascertain which subjects will probably be most difficult to him.

A. I. PASSIGLIA

August Passiglia, of Brooklyn, N. Y., having made up his mind to become a pharmacist, began his apprenticeship in the usual way, so as to have some pharmaceutical experience before going to college. But as a preparation for the extended work to come, he also felt the need of a guide in his drug store work, and accordingly enrolled as an ERA COURSE student. He writes as follows:

"After I graduated from public school in February, 1912, I secured a position in a drug store, with the intention of studying pharmacy. In January, 1913, I was registered as an apprentice. By that time I had, of course, gained a little knowledge of the work, but decided to enroll in the ERA COURSE, which I did a few months later, in April, 1913. The Course has been of great benefit to me. I am now going to prepare myself to enter a college of pharmacy, and will enroll in the fall of 1915. My ambition is to become a pharmacist, and to specialize myself in one of its branches.

"I advise any young man who has the intention of becoming a pharmacist to take up the ERA COURSE before beginning his college course, as I am sure he will make more rapid advancement later on."

Another graduate in a State where the college pre-requisite is in force, writes as follows:

"The ERA COURSE in Pharmacy has helped me exceedingly. The Lectures have given me a clearer insight into the pharmaceutical branches, which I had pursued before, but unsystematically, and I feel sure that the Course will make my approaching college work less difficult. Yours very truly,  
"Richard K. Latshaw, Swissvale, Pa."

### Matriculation Graduates to Sept. 24, 1914. Graduating Number. Storage.

7857—August J. Passiglia, Brooklyn, N. Y.	95
7858—Forrest C. Valentine, Ft. Wayne, Ind.	97
7937—Wm. Thoenes, St. Louis, Mo.	93
7953—George C. Bast, Tampa, Fla.	93
8143—W. Curtis Stacy, Paris, Tenn.	90
8168—Morris Citrenbaum, Baltimore, Md.	92
8246—W. V. Watson, Lexington, Tenn.	94
8333—Emil J. Hanggi, Little Rock, Ark.	92
8341—Bley C. Grant, Worden, Ill.	91

### Infants' or Baby Foods

A very good idea of the whole subject of infants' and invalids' foods may be obtained by consulting Wiley's "Foods and their Adulteration," 2nd edition (1911), pages 498 to 592 inclusive, where reports of analyses of most of the foods on the market are also given. Information is also given in the following abstract, taken from Thompson's "Practical Dietetics."

Prepared farinaceous foods are made by the following methods: 1. Application of heat alone. 2. Digestion with malt or diastase combined with heat. 3. After dextrinization, the food is evaporated with milk or cream. The prepared farinaceous foods may be eaten alone or diluted with water, but they are usually given to invalids in a cup of broth or beef tea, which disguises their sweetness. The sweeter varieties are best combined with milk.

1. Farinaceous Foods Prepared by Heat Alone.—Wheat and oats are sometimes prepared by roasting (not steaming), a process which removes all moisture besides producing some chemical changes in the fats and starches. Cereals treated in this manner will keep from moulding in any climate, and are both digestible and nutritious. Flour ball, Ridge's Food, Blair's Wheat Food, Schumacher's Food, Imperial Granum and Robinson's Patent Barley are examples of this class. Starr gives the following rule for the making of flour ball: Tie one pound of unbolthead wheat flour firmly in a pudding bag and boil for ten hours. At the end of this time it will be found, on opening the bag, that the outer layer of the ball is doughy, while the interior is hard and dry, it having been baked by the long-continued heat. This hard mass may be used for infant feeding in the latter part of the first year, but it should not be given more than twice a day. The flour ball is grated fine, and it may then be prepared according to Starr's rule, as follows: "Rub one teaspoonful of the powder with a tea-spoonful of milk into a smooth paste, then add a second table-spoonful of milk, constantly rubbing until a cream-like mixture is obtained. Pour this into 8 ounces of hot milk, stirring well, and it is then ready for use." The flour ball thus prepared is quite digestible, and it prevents the formation of large curds of milk. As a diluent of milk it is much cheaper for the poor man than the prepared amyaceous foods which are on sale.

2. Farinaceous Foods Digested with Malt or Diastase with Heat are often called "Liebig's Foods." These foods are made of equal quantities of wheat flour and barley malt, with bran, and 1 per cent of bicarbonate of potassium. These ingredients are mixed into a paste with water and digested for several hours at fixed temperatures, until the starch is transformed into soluble carbohydrates, maltose and dextrin. The food is strained, pressed and extracted with warm water, evaporated, dried and pulverized, when it is ready for use. Examples of Liebig's type of dextrinized foods are: Mellin's Food, Horlick's Food and Savory and Moore's Infant Food.

3. Foods which are Dextrinized and then Evaporated with Milk or Cream.—These are sometimes called "milk foods." Such are Lactated Food, Malted Milk, Loefflund's Cream Emulsion, Nestle's Food, and Gerber's Food. The general process by which foods of this class are made is as follows: Wheat or other flour is first made into dough, baked, ground, mixed with more or less condensed milk or cream, and then dried at a moderate temperature. By addition of malt or diastase the starch is partially converted into dextrin and maltose, and the albuminoids are rendered slightly more soluble, the casein is dried, and the lact-albumin is precipitated. One form of "cereal milk" is made from a mixture of wheat and barley meal with milk. It is claimed for some of the malted foods prepared for infant and invalid use that the artificial digestion is not wholly completed, and this is said to be an advantage in stimulating the digestive organs.

4. Bread Jelly.—A bread jelly may be made to add to milk for invalids and for use while weaning infants who are old enough to digest a little starch, i. e., over one year of age. The crumb of stale bread is broken into small fragments and covered with boiling water, in which it is allowed to soak until well macerated. The water is then strained off, fresh water is added, and the mass is boiled until quite soft. On cooling, a jelly forms which may be mixed with milk in any desired proportion.

ESTABLISHED 1887

# THE PHARMACEUTICAL ERA

AN ILLUSTRATED MONTHLY PUBLICATION FOR THE DRUG TRADE

VOL. XLVII

NEW YORK, NOVEMBER, 1914

No. 11

## THE PHARMACEUTICAL ERA.

PUBLISHED ON THE FIRST OF EACH MONTH.

D. O. HAYNES & Co. . . . Publishers

NO. 3 PARK PLACE, NEW YORK

Telephone, 7646 Barclay.

Cable Address, "Era, New York."

### SUBSCRIPTION RATES:

Single Copies, 15 cents.

Domestic Rates to U.S., Cuba, Hawaii, Porto Rico,  
the Philippines and Mexico.....\$1.00 a year  
To Canada, postpaid..... 1.50 a year  
To Foreign Countries in Postal Union..... 2.00 a year

THE ERA PRICE LIST with Subscription, 50c. a Copy.  
PRICES INCLUDE POSTAGE AND PAYABLE IN ADVANCE.  
REMIT by P.O. or Express Order or New York Draft payable  
to order of D. O. Haynes & Co. Add 10 cents for collection charges  
if you send local check.

Published at No. 3 Park Place, Borough of Manhattan, New  
York, by D. O. Haynes & Co., a corporation: President and treas-  
urer, D. O. Haynes; vice-president, E. J. Kennedy; secretary,  
N. W. Haynes. Address of Officers is No. 3 Park Place, New York.

Entered at the New York Post-Office as Second-class Matter.

### LABELING OF MEDICINES

DRUGGISTS and particularly manufacturers will be interested in the suggestions recently issued by the Bureau of Chemistry relative to the labeling of medicines, and the claims of therapeutic effects, character of testimonials, etc., that may be made a part of the literature accompanying medicinal preparations. An outline of these suggestions appears elsewhere in this issue of the ERA, the most important point in their consideration being the stress laid upon the necessity of telling the truth; in other words, every claim made for any medicinal preparation must be in harmony with facts, and the medicine in the light of its composition must be actually capable of fulfilling the promises made for it. The status of the "testimonial," too, comes in for attention, and the contention is made that even though it be genuine and honestly represents the opinion of the person writing it does not justify its use if it creates a misleading impression with regard to the results which the medicine will produce.

These principles represent the advanced lines of a new dispensation in food and drug regulation, and the responsibility is placed directly upon the manufacturer; there must be no unwarranted claims, the principle enunciated being that the product of low grade must be sold for what it is, and that it cannot pass under the colors of a higher grade to the deception of the buyer and unfairness to the competitor. The halcyon days when the imagination and superlatives of the patent medicine "word artist" were allowed full swing are to be no more, and henceforth the "censor" will take his place alongside the chemist in the effort to determine the responsibility of the manufacturer in regard to the preparations he may exploit.

The strict enforcement of the Foods and Drug Act since the passage of the Sherley amendment has done much to eliminate the tendency of manufacturers to make unwarranted claims and has struck a severe blow at the vaunted claims of the "shot gun proprietary" and the "enre all"; and while the line of demarcation between "warranted" and "unwarranted" claims may not be so easily determined—there are many honest differences of opinion—yet there can be no question but that the banishment of the "fake" and the

"fakir" will greatly tend to the development of higher business ideals on the part of the proprietary medicine manufacturer.

#### CONTROL OF DISINFECTANTS NEEDED

ONE of the principal gaps in laws which relate to the purity or strength of commodities entering only into intrastate trade, and hence not under the jurisdiction of the National interstate commerce regulations, is in the field of disinfectants. It appears that only one State—Maryland—has a law which requires a statement of the carbolic acid coefficient of disinfectants on the label. In any other State, solutions and compounds which are devoid of strength may be sold, if manufactured in that State. Fortunately, we possess in the Rideal-Walker test a method for determining with fair accuracy the efficacy of any given substance in terms of pure carbolic acid. The test is official with the U. S. Department of Agriculture and in the British Empire, and has thus the weight of authority behind it.

The importance of having at hand disinfectants which can be relied upon in epidemics or in private cases does not need to be pointed out. The only way to prevent typhoid fever, for instance, from spreading from a single case to each member of a family lies in careful and thorough disinfection. It is therefore gratifying to know that at the next session of the New York State Legislature, a bill will be introduced requiring all manufacturers of disinfectants to show the carbolic acid strength of their products on the labels. Such a bill, if properly drawn, should meet with no opposition from anyone who has the public welfare at heart, and even private interest should prompt support of it, as no one knows when he may be made the unwitting victim of a fake germ-killer on which he has implicitly relied to protect himself and family.

#### THE PRESENT MARKET OUTLOOK

FULLY three months have elapsed since the beginning of the European war and the drug trade has become somewhat accustomed to the conditions resulting therefrom, conditions which have brought about scarcity of supplies, advanced prices and all of the disturbances injected by the rumors incident to a world contest. The rank and file have viewed the situation philosophically and in the spirit of "come what will, we are to meet it." Some no doubt have been hard pressed at times and have suffered financial losses, but they were buoyed up by the hope that with the cessation of hostilities there would come better days, and that in the rejuvenation of trade and commerce they would have a share.

A careful study of market conditions throughout the country and particularly here in the Metropolis, tends to show that the initial blow has somewhat lost its force, and that there is already a readjustment of prices on new but higher levels. In fact, the explosive disturbances of the first few weeks of the war have practically ceased and all tendencies in this direction are quite foreign to the present status of the market. Viewed in its en-

tirety, this steadiness augurs well for the future. A comparison of the advances and declines in quotations in the prices of drugs and chemicals printed in our market report in this issue of the ERA, shows a preponderance in favor of lower levels on many articles, as also, that but few of the products advanced have reached their present figures as a result of speculative manipulation. The financial situation has and will continue to exert an important bearing upon trading, and the drug trade in common with all other commercial enterprises will have to meet the conditions imposed. But however considered, and with whatever may come to change the present outlook, we believe that the worst is over so far as speculation and boom in quotations are concerned. The sentiment of the leading men in the trade, the demand to meet present requirements only, and the satisfactory reasons for prevailing quotations, all tend to confirm this belief. The pharmacist has nothing to fear if he uses judgment in making purchases and keeps pace with revised quotations.

#### FIRST BLOOD FOR THE DRUGGISTS

As told elsewhere in this issue, the New York City Board of Health's amendment to Section 182 of the Sanitary Code, prohibiting the sale of any medicines containing narcotics except upon prescription, has been declared by the Attorney General to be contrary to a specific provision of the Boylan law, and of no effect. The druggists of this city were preparing to make a stiff legal fight along this very line, when the decision of the Attorney General rendered a test case unnecessary. As was remarked by a prominent member of the American Pharmaceutical Association, this occasion should be remembered as the first time that a band of druggists in New York City got together and hired a lawyer to fight for what they considered to be their rights.

What steps the Health Board will next take in their campaign is problematical. Among the measures to be considered is one prohibiting the sale of patent medicines in New York City. (Query: Will such an ordinance carry a clause prohibiting the prescribing of patent medicines in the same territory?) Another move which is under discussion is the recodification of the whole Sanitary Code. One thing may be depended on. So many measures enacted by the City Board of Health have been unpopular that it is extremely doubtful whether any additional powers will be conferred on that body by the State Legislature. New regulations must be built on the foundation of the powers already in their possession and under the restriction of the existing State laws.

But we would like to raise the question whether the Board is empowered to connive at infractions of its own ordinances. It has been stated more than once, on the best authority, that after the Board had passed a regulation requiring that all drugs and medicines sold under U. S. P. or N. F. labels should be of full strength, members of the druggists' advisory delegation were told informally after the conference that the breaking of this ordi-

nance in connection with sales of family remedies containing narcotics would be winked at. To be sure, those familiar with the Pharmacy Law of this State realize that such an ordinance is a work of supererogation, being fully covered by Paragraphs 1 and 2 of Section 237 and Paragraph 10 of Section 240. The Board should study the existing laws before making any new ones. But by just so much more is it impossible to excuse any member of the Board for having suggested a vicious compromise, by which it was hoped to have druggists obey the anti-narcotic ordinance.

The end of the fight is not yet. Until the Board abandons its apparently unfriendly attitude, druggists here must be prepared to resist, by all legitimate means, any attempt to invade their rights. Let those faint-hearted druggists who doubted the propriety of preparing for a test case take fresh courage from the precedent which has been set, and let the old warriors gird up their loins for other conflicts, always bearing in mind the fact that future ones may not be as easily won as the first.

#### DRUG JOURNAL PATRIOTISM

ONE of the inconsistencies of war is, that although nationalism may be pushed to any extreme in the effort to maim or destroy a human being, yet, when once a foe has been wounded, he becomes an object of non-national care. The flag of the Red Cross in every land is white. In all matters relating to the relief of human suffering, true patriotism consists in lending a hand, without inquiring the nationality of the sufferers. It was therefore with utter astonishment that we found, after a page of abstracts of papers read at a pharmaceutical meeting in another country, the following footnote in one of our contemporaries, published in a far land now at war: "The above reports were edited and in type before the outbreak of the present war. Only for this reason are they printed here." Many of the papers presented were extremely valuable to all pharmacists; yet, because the two nations are at war, a reason is supposed to exist why the pharmacists in one country should be deprived of the benefits of research in another! Since the appearance of the abstracts referred to, we have not seen any papers admitted to the columns of this drug journal which came from ——— or ——— sources, the only ones deemed worthy of notice being those published in ———. [Proper names have been deleted by the censor.]

Quite a different spirit do we find in the journals of the hated nation, whose contributions to the sum of human knowledge were utilized only because rejecting them would have caused a little extra labor in the editorial offices and composing room. (Oh noble patriotism, which perishes when confronted with the prospect of preparing a few thousand words of "copy"!.) One of the leading pharmaceutical publications of this country speaks of the scientific affection felt for the great laboratories of the ——— universities and technical schools. "How many will remain intact in three months' time? The names of the great ——— chemists surge into our minds, and we wonder if they are fight-

ing ———, or if, like those old scientists of Napoleonic days, they are still carrying on some researches. We wonder when we shall next see a '——' or an '——' [names of journals deleted by censor]. We remember those happy days of peace when ——— [name of prominent ——— chemist deleted by censor] came over from ——— to tell us of his work on ——— and ———, and of his high praise for those ——— who had so ably assisted him. When shall we have him here again?"

Superficial indeed must be the civilization of a nation which believes in carrying war into its enemy's intellectual domains, and in throwing obstacles in the way of the spread of knowledge which is intended to benefit all mankind in our efforts to relieve pain and disease. Art, opera, literature, and architecture—each must be home-brewed to be respectable in Europe at present; but in the name of humanity, let no attempt be made under a gloss of patriotism to cut off any worker in the field of medical or pharmaceutical science from any information available.

#### UTILIZING YOUR SURPLUS STOCK

THE extent to which the pharmacist should endeavor to manufacture his own galenicals has been a much discussed question in the journals and at meetings during the last twenty years or more, the evidence going to show, however, that many of the products formerly made in the laboratory of the drug store were now fabricated on a large scale, and usually in the most economic manner, by the large pharmaceutical house. A recurrence of this question is brought up in the suggestion amplified by E. F. Heffner in his paper printed on another page of this issue of the ERA, that druggists should convert the accumulated, slowly-moving stocks of crude drugs in their back rooms into fluidextracts, thus turning them into a form that can be intelligently utilized to meet present day requirements.

The suggestion is a good one, and the scarcity of many crude drugs makes the effort to do this commercially practicable. Mr. Heffner enumerates a number of drugs he has worked up in this way, and the figures he presents show that he has made money by the operation. Under ordinary circumstances one would be compelled to carry this stock for years, but here is an opportunity for turning it into money by the application of one's training as a pharmacist. There are but few stores in the country where stocks of this character have not been allowed to accumulate, and these should be utilized. With a scarcity of crude drugs and war prices it would savor of commercial suicide not to take advantage of an opportunity to realize on an investment already acquired.

#### THE "MADE IN AMERICA" SLOGAN

IN the unsettled conditions of the present time there is a tendency on the part of some to play to the imagination and feelings of those who are apt to be influenced by any special argument that falls under the eye, rather than by an understanding of their own based upon competent and trustworthy information. In this category of phenomena we

would place the perverted use of the slogan "Made in America." We believe in arousing national sentiment and all that the love of country implies, but we also believe that expressions embodying our highest ideals and conceptions of patriotism and liberty should never be used to subvert the principles of true freedom or business ethics. Conclusions based on any other rule of action are unwarranted and wide of the mark. As a great statesman has said, "patriotism must be founded upon great principles and supported by great doctrines."

"Made in America" is a mellifluous collocation of words that appeal to the imagination of the average citizen, but when dissociated from the patriotism they are supposed to embody and diverted to other uses, the phrase sounds like hollow mockery. As a rallying cry simply to further personal schemes or financial advantage, its use wounds our sensibilities and shocks the most cherished aspirations of American citizenship. As a subterfuge to allow a wider scope for the practice of substitution the use of this phrase is unpardonable. And it is the rankest kind of patriotism that will permit the pharmacist under the guise of helping the American workman to put forth an inferior product for any medicinal preparation, even though it be of foreign manufacture. Such deception is reprehensible and indicative of moral incompetency.

## BOOKS REVIEWED

**THE HYDROGENATIONS OF OILS.** Catalysts and catalysis and the generation of hydrogen. By Carleton Ellis, S.B., member of the American Chemical Society, American Institute of Chemical Engineers, etc. 145 illustrations, 6 x 9 inches. 340 pages, cloth, \$4. New York. D. Van Nostrand Company.

This book is the outgrowth of a number of years of observation and experience involving on the part of the author the collection of a considerable amount of data from many sources, particularly the literature on the hydrogenation of oils scattered through many periodicals. In this respect, the work is very comprehensive, and the user of the book can confidently assume that in possessing the volume he has at hand about all of the published investigations to date. According to the author, the extensive use of the hydrogenation process in its application to the technology of oils must be regarded as a most important advance, but the probable effect on the oil and allied industries, and on the oil and oil seed markets, is yet difficult to forecast, as the full possibilities of the process cannot yet be determined.

The whole structure of hydrogenation resides in the catalytic action of practically only a limited number of metals and their compounds which awaken the usually passive element hydrogen from its dormant condition and thus enable its combination with unsaturated bodies. In the practical application of the process to oils the object has been to find some means of converting oleic acid into stearic acid, or olein into stearin, by the addition of hydrogen, so as to make valuable hard fats from relatively cheap raw material. Less than one per cent. of hydrogen is required to effect this transformation of oleic acid into stearic acid, but the problem was not so simple as it looked, and not until recent years, with the discovery of effective hydrogen carriers or catalyzers, did it become possible to bring about this conversion economically with yields sufficiently large to warrant commercial exploitation. Now enormous quantities of "hardened oil" are prepared by the hydrogen process, and, to quote the author, "so eagerly has the oil handling world lent itself to the idea that already the stearin market has lost its firmness and much speculation is rampant as to the nature of price adjustments which perhaps

are on the way. Unquestionably hydrogenated or hardened oil has taken its place in the oil market as a staple product." As a work of reference, this book should belong to every manufacturer and dealer in oils and also find a place in the library of the pharmacist.

**HEALTH AND LONGEVITY THROUGH RATIONAL DIET.** Practical hints in regard to food and the usefulness or harmful effects of the various articles of diet. By Arnold Lorand, Carlsbad. Royal octavo, 416 pages, cloth, \$2.50. Philadelphia. F. A. Davis Co.

The author of this book is well and favorably known for his various contributions to medical literature on the causes of old age and its postponement by hygienic and therapeutic measures, and this companion work to his "Old Age Deferred" is sure to attract attention. The hygiene of the food is exceedingly important, and while wholesome and appropriate diet is within the reach of all, the woeful lack of knowledge and indifference make any effort in this direction a rather sorry pretence of following the laws of health. The author, who has had large practical experience in the dietetic treatment of many disorders at the oldest and greatest of the world's health resorts, Carlsbad, in this book places before the reader an immense amount of trustworthy information relating to the influence of food upon man, the fundamental laws of rational feeding, injurious modes of feeding, the good and evil effects of various food substances, vegetarianism and its advantages and disadvantages, useful hints on rational feeding, etc.

That the quantity and character of food consumed bears a certain relationship to the maintenance of a normal state of health is conclusive. When the consumption of food is beyond the requirements of the system, or beyond the powers of digestion, the food fails to be properly assimilated, and the surplus acts as a clog to the digestive process. Some philosopher has remarked that it requires extraordinary mechanism to transform food into bone, muscle, nerve, and thought, and we cannot be too careful in closely obeying the laws which govern these functions. Our duty to ourselves and to mankind is, therefore, plain. Common experience and observation teach us that inadequately nourished persons are least resistant to infections, and that persons who take good food and do not overeat may live to the allotted score of man. That this book is a noteworthy contribution to the subject of dietetics we can confidently assert, for it contains a vast amount of information everyone should know about.

**INTRODUCTORY NOTES ON QUANTITATIVE CHEMICAL ANALYSIS.** By Charles William Foulk, professor of analytical chemistry in the Ohio State University. Third edition. 64 x 9½ inches. 250 pages, cloth. New York. McGraw-Hill Book Company.

For beginners in quantitative analysis this book does not follow the outline usually presented in many text books, in that it aims to present the beginning work in quantitative analysis in such a way that the student will be led to think more of the general aspects of the subject than of learning merely to carry out a succession of methods. Thus, in his introduction, the author discusses such topics as cleaning chemical apparatus, simple glass working, the outfit for quantitative analysis, the balance, the art of weighing, a most important factor in accurate work, preparation of samples, filtration, washing, ignition, etc., as also the miscellaneous operations and laboratory work connected with this department of analysis. No one but an experienced teacher and chemist could present these facts as vividly and in connected sequence as the author does, and this presentation is sure to be of great service in "starting" the student on the right track.

Part II of the book is devoted to practice work, the exercises selected being the determination of various samples which shall furnish a variety of manipulative experience to the student. Working in the way outlined by the author, and on a basis of four hours a week college credit, it is expected that the average student will occupy a year in accomplishing what is in the book.

### Tartar-Mint Dentrifrice

Cream of tartar .....	1½ ounce
Prepared chalk .....	11½ ounces
Powdered white sugar.....	1½ ounces
Heavy magnesia .....	3 ounces
Essence of peppermint.....	10 drops
Mix and sift.	

## Manufacture of Biological Products

By F. E. STEWART, Ph. G., M. D.

(Scientific Department, H. K. Mulford Company.)  
(Concluded from page 454, October ERA.)

**E**XAMINATION of the serum from an animal which has been immunized against a certain bacterium, by introducing into its body the bacterium itself, either living or dead, shows that it has had conferred upon it during the process of immunization certain properties not possessed by normal serum, except in a very slight degree. These properties are specific; that is, each kind of bacterium when introduced into the body gives rise to properties in the serum, antibacterial to itself and to no other.

The properties of this *immune serum*, as it is called, are assumed to be due to the presence of separate and distinct active principles referred to under various names, as *immune bodies*, *antibodies*, etc.

In order to learn the nature of these antibodies it would be necessary to isolate them chemically. Thus far all such trials have been unsuccessful. It is even uncertain whether these so-called antibodies are definite chemical entities. Only the effects of the serum as a whole are known and the ingredients to which these activities are attributed are conceived of as antibodies.

Antibodies impart to immune serum three main actions: namely, (a) bactericidal and lysogenic action, (b) opsonic action, (c) agglutination and the closely allied precipitating action.

The bactericidal and lysogenic action of the serum is assumed to be due to the presence of bacteriolysin (*lysis*, to dissolve).

It is assumed by some authors that the serum also contains bactericidin, having the property of killing bacteria without dissolving them.

The opsonic action is assumed by Wright and his associates to be due to the presence of opsonins (non-specific and specific), so named because the function attributed to them is to prepare bacteria for ingestion and digestion by the phagocytes. "Opsonin" is derived from the Greek word *opsono*, meaning "I prepare food for." The function of the opsonins is to prepare the bacteria for the action of the leucocytes. The leucocytes will not devour microbes until they are first prepared by opsonins.

Grüber and Durham found that when a small quantity of immune serum is added to a suspension of the corresponding bacterium, the organisms become agglutinated into clumps and rendered inactive. Accordingly, he assumed that this phenomenon is due to the presence of definite bodies in the serum to which the name *agglutinins* has been given. Soon after the discovery of agglutinins, Kraus showed in the case of the organisms of typhoid fever, cholera and plague, that the immune serum not only caused agglutination, but when added to the filtrate of a culture of the corresponding bacterium, produced a cloudiness and afterwards a precipitate. Hence, the name *precipitin* was given to this hypothetical substance.

It has already been stated that during the immunizing of an animal by introducing into its body a certain bacterium, living or dead, the body cells are stimulated to produce a specific proteolytic ferment. Possibly the properties above described are all due to enzyme action. Metchnikoff explains how the various enzymes or antibodies are formed by the body cells (phagocytes), which circulate in the blood (leucocytes) or compose the tissues (tissue cells), and how these substances secreted by the body cells or set free by their dissolution (phagolysis) impart to the blood serum the properties just described. These protective substances or antibodies which give the serum the properties referred to, are divided into several classes, namely, antitoxins and antiaggressins, which respectively neutralize toxic poisons and aggressins; bacteriolysins, which cause *lysis* or solution of the bacteria, and bacteriotropins (opsonins, etc.), which prepare the bacteria for phagocytosis. These specific protective bodies can be transferred from immunized animals into the circulation of other animals or man by means of the immune serum. If the blood is drawn from the veins of an animal immunized against an infectious disease by any of the above methods and allowed to clot, the antibodies remain in the supernatant serum.

By injecting this serum into the veins of another animal or man (or introducing it subcutaneously) the contained antibodies are conveyed into the blood of the individual injected and immunity results. This immunity is called passive because the immunized individual's body cells take no part in producing it. The production of diphtheria antitoxin by immunizing a horse against diphtheria toxin and then using the resulting antitoxic serum for producing immunity against diphtheria in man is a well-known example of passive immunity.

Antitoxins and antibacterial serums are used for producing passive immunity against infectious diseases; also as therapeutic agents in their treatment. As diphtheria antitoxin is typical, the description of the method whereby it is prepared will serve in a general way to demonstrate how this class of products are produced.

When bacteria grow and multiply in the body, symptoms of poisoning (toxemia) are manifested, consequently it was inferred that bacteria either produce poisons during their growth or contain poisons. Subsequent experiments proved that the poisonous effects of a few bacteria are traceable to substances elaborated during their growth, which pass out into the surrounding media, and the poisonous effects of the other class seemed to be due to the actual constituents of the bacterial cells. To the former, the name *exotoxins* or *extracellular toxins*, was given. The latter were named *endotoxins* or *intracellular toxins*.

The injection of soluble toxins into the body stimulates the tissue cells to produce "antitoxins." These toxins when injected without the bacteria do not give rise to antibacterial substances.

Among the bacteria producing soluble extracellular toxins or exotoxins, the bacillus of diphtheria and the bacillus of tetanus are the most important. Serum from an animal immunized by injecting into its body small and increasing doses of toxin administered at regular intervals and given over a long period (months) of time, is rich in antitoxin. This antitoxic serum, when properly prepared and standardized, constitutes the antitoxin of commerce. Diphtheria antitoxin and tetanus antitoxin are prepared in this manner. When such antitoxin is introduced into the bodies of other animals or man, they become temporarily immune to the toxin produced by the living organisms. Consequently antitoxins are used for immunizing healthy persons against diphtheria and tetanus.

The preparation of diphtheria antitoxin will serve as an example to show how all antitoxins and anti-sera are prepared, except as to minor details.

The first step in the preparation of diphtheria antitoxin is the propagation of the Klebs-Loeffler bacillus, the cause of diphtheria. A culture is selected, capable of producing a large amount of antibodies. The so-called seed cultures are planted in test tubes 24 hours before they are wanted for use. These cultures are used for inoculating large Fernbach flasks and are grown on the surface of bouillon for six or seven days.

After they are inoculated, the Fernbach flasks are placed in the incubating room and kept at about 35 to 37°C. during the time of cultivation. At first the bacilli grow rapidly and at the end of 24 to 48 hours, the surface of the bouillon is covered with a thin pellicle. This pellicle continues to extend, becoming thicker, until it curls under and some of the growth falls to the bottom of the flask. During all this time the metabolic products of growth are being received by the bouillon, which becomes strongly toxic in character. The cultures are now removed from the incubator and the diphtheria germs killed by an antiseptic and filtered out—first through asbestos and then through Berkefeld filters. The filtrate, known as diphtheria toxin, is then placed on storage in a refrigerating room, ready for use in preparing diphtheria antitoxin.

The next step is the immunizing of horses against the diphtheria toxin. Only healthy horses are used. This is assured by keeping the animals under observation of veterinarians for at least two weeks, and testing them for glanders before they enter the antitoxin laboratory. Previous to injecting the diphtheria toxin into the tissues of the horse for producing immunity, the toxin is standardized on guinea pigs. The toxin injections are made subcutaneously. Because of the differences in susceptibility noted in various horses, only very small doses are at first employed. The intervals between injections depend upon the time necessary to complete sub-

sides of the toxin produced by the toxin. The doses of toxin are usually increased until at the end of two or three injections the original dose is given.

Horses vary greatly in the strength of antitoxin which they will produce. Some animals will produce an antitoxic serum, 1 c.c. of which usually contain 250 antitoxic units. Another may supply an antitoxic serum containing 800 antitoxic units per c.c. Some horses may produce a serum containing 1000 per c.c. Park stated that none of the horses used by him has ever yielded 2000 units per c.c. After the horses have reached the point where the injections are not followed by an increase in the antitoxic power of the serum, the animals are bled. For that purpose, a sharp cannula is introduced into the jugular vein, the horse being prepared for the purpose by being led into a specially constructed stall where it is under perfect control during the operation. The skin is previously shaved and sterilized. The cannula is then plunged into the vein and through a sterile rubber tube, the blood is allowed to flow into high-glass cylinders protected by parchment covers, as much as five or six liters of blood being drawn without injuring the animal. The cylinders containing the blood are then permitted to remain standing in the blood-cooling room for two or three days, preferably at or below 10°C. At the end of this time, the serum has separated from the clot, which is then drawn off and stored in the refrigerating room. This antitoxic serum, standardized and preserved by the addition of one-half of one per cent. trikresol or other antiseptic, constituted the antitoxin of commerce until the introduction of Gibson's process for concentrating and purifying the product.

In the preparation of concentrated and purified diphtheria antitoxin by the Gibson process, the antitoxic serum is treated by the addition of saturated ammonium sulphate solution, which throws down the globulins. After filtration, the pseudo-globulin (containing the antitoxin) is separated from the euglobulin by means of saturated sodium chloride solution, in which the former is dissolved.

The pseudo-globulin is next precipitated from the solution by acetic acid. It is then collected on the filter, dried between filter papers, placed in parchment dialyzers and dialyzed in running water to free it from organic matter.

When placed in the dialyzers, the antitoxic globulin is a white waxy mass. During the process of dialyzation, it is dissolved and becomes a clear, limpid, straw-colored fluid. This fluid is further purified by passing through several layers of filter paper and then twice through Berkefeld filters. The next step is the standardization of the concentrated solution of antitoxic globulin by the U. S. Government process.

During the process of preparation, tests are employed to insure the safety of the product.

Concentrated diphtheria antitoxin is practically a solution of pseudo-globulin in normal saline solution.

Tetanus antitoxin is prepared in a similar manner.

Antibacterial serums are produced in a similar manner to that employed for the production of antitoxins, with the exception that the bacteria themselves are used for immunization, either living or dead, or immunization is conducted with bacterial extracts or bacterial extracts plus full bacteria. Such serums contain various antibodies, including agglutinins, precipitins, bacteriotropins and amboceptors and anti-endotoxins. These products are also known as immune serums. In their preparation, bacteria are used which do not have the power of producing soluble toxins.

#### Dosage of Bacterins and Serums

The dosage of bacterins when used for prophylaxis has been approximately decided upon quite generally by the dosage originally adopted for immunizing against typhoid fever, namely, initial dose of 500 million killed bacteria to be followed in ten days by a dose of one billion killed bacteria, and ten days later by another dose of the same amount, namely one billion. The doses of sensitized bacterins for immunization are double the amount used when unsensitized bacterins are employed, to be given at intervals of six to seven days. The bacterin is administered by injecting beneath the skin with an ordinary hypodermic syringe. Following the injection, there is a certain amount of reaction when unsensitized bacterins are employed. This reaction is almost unnoticeable in most cases, and more severe in others. It is characterized by more or less lassitude, perhaps fever, and sometimes by a sore arm. The sensitizing of the bacteria according to Besrodka,

greatly lessens the tendency to reaction, as has already been stated.

When used for the treatment of infectious diseases, no definite rule for dosage can be laid down. All authorities agree that "vaccine treatment does not consist in merely administering certain doses of vaccine at certain intervals." As one writer in the *Medical Record* has truly said, "The only arbitrary dose of a bacterial vaccine is the initial dose. Every successive dose must be guided by the effect obtained from the preceding dose. Or as Dr. John B. Murphy says in regard to tuberculin, "There is no average dose; there is no common dose; there is a dose for one individual and that individual alone."

As a general statement, the intervals between doses are usually from two to four days in acute cases and from two to seven days in chronic cases. Later on in the course of treatment, the intervals may be lengthened or shortened according to indications.

Contrary to the scheme usually employed with the ordinary bacterins, the dose of sensitized vaccine is large, rapidly increased, and repeated at short intervals. For example, Gordon, in the treatment of erysipelas with sensitized streptococcus vaccine, usually employed the following graduation: First dose, 500 million; second dose, 24 hours later, 1000 million; third dose, 24 hours later, 2000 million. In some cases, from two to three doses were sufficient to bring about a cure. The series of cases reported by Cruveilhier from the Pasteur Institute show the remarkable effectiveness of sensitized vaccines in gonorrhoea, gonorrhoeal rheumatism, etc. Patients, some of whom had been confined to bed with gonorrhoeal rheumatism, were improved within 48 hours, and a few days sufficed for complete cure, although the duration of the illness had been from four to eight years. Gay and Force employ doses of 500 million killed sensitized typhoid bacilli at two to three-day intervals for preventive immunization.

However, these large doses sometimes produce marked reactions, as attested by physicians in this country who have been using sensitized killed bacteria for therapeutic purposes; and it is a question whether a better rule would not be to use the initial doses recommended by Wright for ordinary bacterins, and then rapidly increase the dosage if no reactions occur. Probably, in most cases, the full dosage used by Besrodka and his followers, both as to amounts and intervals, may be safely employed.

The prophylactic doses for children recommended by Major Russell of the United States Army for the employment of typho-bacterin are based on the body weight of the child. The child is given that portion of the adult dose which his weight bears to the average adult weight, 150 pounds. If the fraction proves inconvenient, a little more rather than a little less is administered. As with adults, the best time for inoculation is four o'clock, or later in the afternoon, since any reaction will then come after bedtime. The dosage of typho-bacterin recommended by Dr. Max Goltman in his report to the Hygienic Congress at Washington, D. C. (1912), is contained in the following:—"During the recent epidemic of typhoid fever in the city of Memphis, there were 13,308 recorded immunizations, of which number 517 were given to children from one to five years of age. Most of these children received the full adult dose, which was tolerated better than in adults; 3726 immunizations were given between 6 and 15 years of age, and 1965 from 16 years upward. There were probably in all 30,000 persons immunized. No serious results were recorded and it was believed that the city was saved from a most serious epidemic of typhoid fever by prophylactic use of typho-bacterin.

These observations serve as a partial guide in determining the therapeutic dosage for the treatment of children.

The following dose table (tentative only) is of service in determining the initial dose of bacterial vaccines. This table is accredited to Sir Almroth E. Wright.

Name	Injection of Killed Bacteria.	
Bacillus Coli Vaccine	5,000,000 to	50,000,000
Gonococic Vaccine	5,000,000 to	50,000,000
Neoformans Vaccine	50,000,000 to	100,000,000
Pyocyanous Vaccine	5,000,000 to	50,000,000
Pneumococic Vaccine	10,000,000 to	50,000,000
Staphylococic Vaccine	50,000,000 to	1,000,000,000
Streptococic Vaccine	10,000,000 to	25,000,000
Typhoid Vaccine	5,000,000 to	50,000,000

The dosage of antitoxins and antibacterial serums, both for prophylaxis and treatment, has been greatly augmented within the past two or three years. In regard to diphtheria antitoxin, the general agreement seems now to be that the number of units advisable is to be governed by the clinical symptoms. Beginning with 5000 units, the injections are made at such intervals as are clinically indicated in each case, bearing constantly in mind that antitoxin in itself is harmless and acts only as an assistant to the antitoxin already formed within the body. If a longer interval than 24 hours has elapsed before the patient is first seen, the dose should be still larger, and if threatening symptoms of any kind exist, the physician should not hesitate to inject 10,000 units or more at the time of his first visit. Some writers have used much larger amounts, up to 100,000 units and have reported favorable results in the most desperate cases. In severe cases, the subcutaneous administration, should, according to the best authorities, be abandoned, since the absorption owing to the lowered blood pressure, must then be still slower than in the healthy individual where the maximum antitoxin content of the blood is scarcely reached before the third day. In such cases, lives may be saved if the injections are given intravenously or even intramuscularly. As to the quantity of antitoxin which may be administered in the course of the disease, there is apparently no limit. Bankier thus reports a case of a child in which 72,000 units were given and in which recovery occurred in spite of the most ominous symptoms. Gabriel, at Neisser's clinic, gave 4000 to 5000 units every five days for four weeks in severe cases. Doses of 10,000 to 18,000 units are common amounts and in the severest cases 35,000 to 65,000 units have been used. State Commissioner Dixon of Pennsylvania reports records of cases of 52,000, 57,000, 63,000, 68,000, and 117,000 units, resulting in recovery without renal or cardiac complications. When the disease has progressed for several days before the injection of antitoxin, it has been found that large doses, 25,000 to 50,000 units, given at a single injection, intravenously, may save the life of the patient.

With regard to tetanus antitoxin, the immunizing dose generally agreed upon is 1500 units. Thousands of individuals injured by fourth of July fireworks have been immunized against tetanus with this dose and the mortality reduced to a minimum.

When symptoms of tetanus already exist, very little is to be expected from the use of antitoxin subcutaneously because these symptoms indicate that a union has already occurred between the toxins and the sensitive receptors in the central nervous system. However, there is a possibility of saving life even after the symptoms of tetanus have manifested themselves, by injecting the antitoxin intravenously. Dr. William H. Park of New York, in his Cutter lecture on Preventive Medicine, delivered at the Harvard Medical School, March 13, 1912, said, "In tetanus, I have frequently seen the life-saving action of the intravenous injection. I believe it is almost criminal negligence not to give an intravenous injection. Consider a case of tetanus in which, by the symptoms, you know the important cells of the body are already affected—it is foolish to rely on a subcutaneous injection with its slow absorption. I have urged the surgeons of New York to keep antitoxin on hand and at the very first sign of tetanus, to inject intravenously about 20,000 units of antitoxin. In those cases of continuing rigidity, I confess I advise to go on giving injections every twelve hours for several days, but the more I test the product in these cases, the more doubtful I am as to the good of repeating the injection. At intervals of twenty-four hours, they keep up the strength of antitoxin. I am sure that a large intravenous injection given within a few hours of the onset of the symptoms will save many patients in acute stages of tetanus, who would otherwise die. The usual practice after seeing the patient is to wait twelve hours in order to be certain of the diagnosis, and then administer antitoxin; thus twelve to eighteen hours are wasted. We know that many animals treated within a few hours by large doses are saved."

The *Journal of the American Medical Association* for April 11, 1914, emphasizes the importance of early and liberal use of antitoxic serum, largely by intraspinal introduction, in order to neutralize the toxin that still is free and on its way to the nerve-cells; the necessity of thorough cleansing of the wound to remove all source of continued intoxication, and of conserving the strength of the patient in the hope that the morbid process caused by the toxin already in the nerve-cells may be overcome.

## Board of Pharmacy Examinations

By H. C. CHRISTENSEN, Chicago, Ill.

*A very comprehensive report of the Advisory Examination Committee was presented to the National Association of Boards of Pharmacy at the recent meeting held in Detroit. After summarizing the points covered in the Report of the Committee made last year, it is related how letters and inquiries were sent to the various colleges and boards of pharmacy throughout the country asking for information and sets of questions used in recent examinations. The concluding portion of the report, which represents the conclusions of the Committee is presented below:*

**T**HERE has not been in the past the co-ordination between the colleges of pharmacy and State boards that there should be. Each has gone its way ignoring the other, I am sure, with material loss to both. On behalf of this Committee I want to place great stress upon this point: *Any scheme or plan of examination that does not take into consideration the institutions that prepare candidates for these examinations is doomed to final failure, and, conversely, the educational institutions that do not take into consideration the examining bodies are limiting the scope of their usefulness and not doing full justice to their students. The principle is basic and fundamental.*

The ground may be taken, as it was by one noted educator in pharmacy, that examinations should be abolished and the qualifications to practice left wholly with the schools. We cannot agree with this view. We do believe, however, that a person graduating from a recognized school or college of pharmacy, if he has also had proper practical experience, should be equipped with sufficient knowledge to pass successfully a State board examination. He has a right to expect to pass. If he fails, it seems to be selfevident that there was something wrong with his school or college course, or something wrong with the board examination in which he failed to pass.

With prerequisite laws being passed in the various States requiring candidates to hold a college degree before being admitted to examination, a grave injustice will be worked upon students unless there is some co-ordination between the preparing and examining bodies. With this as one of the things in mind, we sent the before-mentioned letter to colleges asking professors and faculties to submit to us sets of questions, which in their judgment, would furnish a fair test for candidates who aspired to practice pharmacy in their respective States. General suggestions and ideas were also asked for, with reference to questions and examinations. I think there were some of them that did not take this request seriously. At least the response was not as general as we could wish. Fortunately, the men who did respond—both promptly and generously—are the very men who have established positions in the educational world and are recognized as leaders in their line. There may have been an element of self-protection on the part of those who failed to comply with our request—the presumption of the committee is, however, that they were too pressed for time to give the matter the necessary attention, or that they considered the request unimportant.

The answers received from boards, schools and individuals emphasize the great divergence of both ideas and ideals, and the tremendous necessity of closer relation between the boards themselves as well as between the boards and colleges. It would be interesting and illuminating to read to you, had I the time, letters received from educators, illustrating their varying ideas. That they are in hearty accord with our efforts to establish reciprocal registration does not admit of doubt. One writes, "The work which you have undertaken, viz., to obliterate state lines in the practice of pharmacy, is certainly a commendable one. It strives for a condition that must ultimately obtain, no matter what the obstacles that present themselves at present." In the same letter he writes, however, in reference to examinations in general, "I would propose that the qualifications of prospective candidates in all theoretical aspects of pharmacy and the sciences related to pharmacy be left to the colleges and universities and that all of the time which the board can devote to this aspect of its duties be restricted to what, for want of a better term, has been called the practical aspect."

From another noted educator, I get the following: "The purpose of any State board is to protect the citizens of the

State against the dangers which arise from incompetent practitioners. The duty of the State board is therefore to satisfy itself by the most severe and strictest examination that every person who contracts a pharmacy or is employed therein is equipped with knowledge and practical skill to secure the right protection for the other citizens of the State." And again, further on in his letter he says, "The State board should not accept the diploma or certificate of any individual. Its duty is to the citizens of the State to whom it is responsible is to investigate personally" (the fitness of the candidate). And so, again, when discussing his ideas as to the character of the questions, he writes, "I would further advise that the State board omit, or at least limit as much as possible such questions as can be answered only when the applicant has memorized, and not logically studied."

Another educator, whose name I would but have to mention to command immediate attention, writes in reference to the character of questions: "I think your idea an excellent one in both its scope and intention (keep in mind the letter written to these men which I read a few minutes ago), but it will require time to single out questions which are typical. In fact the whole subject should be gone into most thoroughly and I would suggest the classification of questions under several heads such as questions which will show mere exercise of memory; second, those which will call forth reasoning power on the part of the student, etc." I merely quote these few extracts, which are typical of many letters received, to show you the tremendous divergence of ideas that exist among recognized authorities, and to emphasize the necessity of an immense amount of work over a long period of time in order to get at bedrock.

The number of replies to our letters to the various State boards was fairly generous. We are satisfied that, except in very few cases, where no reply was made, the failure to do so was due to neglect rather than the desire to withhold questions. Possibly there may have been, as I suspect in the case of some of the schools, an element of self-protection in concealing their questions. However, that does not concern us particularly.

In addition to requesting questions and suggestions, the members of the committee visited several State boards to study examinations and methods on the ground. All the boards visited showed a friendly and enthusiastic interest in our work. We are satisfied, that the personal meeting with boards, during examination periods, is destined to become one of the most important features of the work with reference to bringing about uniformity, and certain standards, in examination methods and questions. A personal visit with board members will establish a mutual confidence between the members and the association representative that it would be impossible to attain through correspondence. It also gives the association representative a chance to see just where and how to suggest changes. After such a visit board members, in general, feel more friendly and will more readily avail themselves of the opportunity to get suggestions through correspondence. Also the committeeman learns many things from observation, that could not possibly be learned by correspondence, nor deduced from board questions submitted. The reason for not meeting with more of the boards during the past year is much the same as the reason for not accomplishing more with reference to the sample sets of questions. In order to accomplish maximum results in both, it is imperative that a definite system or plan must first obtain.

Detailed reports on the States visited have been submitted to the President of this Association.

### Criticisms and Suggestions

Regarding the questions used, the method of distribution of the questions through the various subjects, the correlation between the various subjects, etc., not much can be added to the report was made last year. It is very evident from a study of the submitted questions that the average board member has either little time or little inclination to devote to question making, or to the study of examination-giving as an art or science. Nor is this condition to be wondered at. Under the present system of making appointments to the various boards of pharmacy, men are called to act as examiners, with I fear, little reference to their ability along this particular line. Likewise, each man has his own business to attend to, his own living to make, his tenure of office is uncertain, and it is hardly to be expected that he will devote hours of unremunerative work

to a study which, in a very short time, he probably will not use. I merely mention this to show you that the prevailing status of examinations is due to the conditions surrounding boards rather than to the delinquency of the individual members, and to emphasize the great necessity of this association acting as an organized and co-operative body to extend to boards all the help in the way of giving examinations it can command.

In a study of the questions submitted by boards during the year we find—

First: a lack of correlation between the different subjects embraced in the examinations. We find pharmacy papers merging into chemistry, and chemistry running over into materia medica, etc. This could be avoided if members would submit to each other, drafts of examination papers to be used in an examination, asking for comparisons, criticisms and suggestions.

Second: we find in a great many cases, no particular regard paid to the distribution of questions throughout the various portions of a subject. We find an examiner, apparently, with a hobby on some particular portion of a subject—or possibly his knowledge of that portion of the subject is especially complete—and his entire examination is tinged with his hobby. It is all very well for the candidate on examination who may be fortified in that particular fraction of the subject, but how about the poor fellow whose stock of knowledge is not so replete along the lines of the examiner's specialty?

Let me illustrate, more especially, what we mean by lack of distribution. We all admit that reaction writing is a legitimate and important part of an examination, but would you think of giving an entire examination in chemistry on reaction writing? Listen to this:

No. 1.—Write the reaction occurring in the manufacture of sodium phosphate, using tricalcic phosphate, sulphuric acid, and sodium carbonate. Do not balance.

No. 2.—Write the reactions that occur in making sodium, etc. (In order to save time I will not read entire questions.)

No. 3.—Write the reaction that occurs in making Labarraque's solution.

No. 4.—Write the reaction making calcium hypophosphite, etc.

No. 5.—Write the reaction that occurs in making phosphorus, etc.

No. 6.—Write the reactions that occur in making tricalcic phosphate, etc.

No. 7.—In estimating urea in urine we generally use NaOH and bromine, etc. Write reactions but do not balance, etc.

No. 8.—Show the changes that occur in milk when the lactic acid germ gets in, also when the butyric germ gets in, lactose being  $C_{12}H_{22}O_{11}$ ; lactic acid being  $C_3H_5O_3$  (some oxygen in that acid, what?) butyric acid being  $C_4H_7O_2$  (The reaction was not asked for here but the intent was obvious.)

No. 9.—Ethyl alcohol mixed with sulphuric acid and heated to right temperature produce ether. Write reaction but do not balance.

No. 10.—"What is glycogen, from what foods is it formed, where is it stored, and by what, and into what is it converted when used by the animal?" (No reaction was called for in No. 10, but by the time the candidate had reached this point he would, from force of habit, write the reactions.)

Not a question on the laws of chemistry; not a question in qualitative analysis; not a question in volumetric or gravimetric analysis; not a question on the basic principles of organic chemistry; not a question on pharmaceutical testing; not a question on assaying, but six questions out of ten in straight chemical technology, and two questions containing reactions of a somewhat different character, but nevertheless reactions. If any member here recognizes that set of questions do not for one moment think that we selected the set of any particular State, or any individual examiner intentionally. We are trying to illustrate what we mean by "bunching" one's questions or a lack of proper distribution. We simply cited this set as being a somewhat extreme example. This lack of distribution is a very common thing in examination papers. Do not let the author of this set think he has any monopoly along this line. It may be argued, of course, that if a candidate is found well qualified in one particular portion of a subject it is safe to assume he is qualified in all, but I do not believe that argument is tenable.

Third:—Coming down to individual questions, we find many that cause food for thought. For years and years the readers of the pharmaceutical journals have been regaled with the answers that candidates have given on examination, and as examiners of several years experience we must confess that there are answers that stimulate one's "risibles," but I want to say that only one side of the story has been told. The boards have carefully concealed their questions and thus limited our merriment to 50 per cent. Take fifty examiners with their questions and fifty candidates with their answers, pick them hit and miss, and I venture to say that if you consider the absurdities humorous, the board members will get, when the curtain is rung down, at least 51 per cent of the applause.

From a materia medica paper we pick two gems. "What is the difference between the *alkaloids* extracted from *milk* sugar and those extracted from cane sugar?" "Give the botanical name of the plant containing strychnine, atropine, salicin, and *actanilid*." Why not ask for the botanical source of Swamp Root (Kilmer's) or the "habitat" of the "Anheuser Busch"?

Fourth:—We find a strong tendency on the part of many examiners to give an undue proportion of elementary questions; questions on the very rudiments of the subject; questions that might be admissible for an assistants' examination but which do not serve to test a candidate's fitness for the high position of registered pharmacist. For example: "Define water as follows: Is it an atom, a molecule, or an element? If neither, what is it?" Now practically any well-read person, even one who had not studied chemistry, can answer that question. And, from the same set; "The three great divisions of the material world are divided into three kingdoms. What are they?" Now you can go out on the street and pick the first ten adults who come along, yes, you may even include the children, and nine will answer that correctly. The tenth probably does not understand English.

Fifth:—We find in some instances what appears to be a lack of conception of the proper purpose or function of the examination. Examiners seem to consider it a sort of a contest between themselves and the candidates, the latter trying to make a grade of 75 per cent, and the former trying to prevent it, a sort of a tug of war. Some boards, it is reputed, so formulate their questions and mark their papers that only rarely does a candidate actually obtain a passing grade, but by "boosting" the grades all along the line a proportion of the candidates satisfactory to the board "get by." We, of course, cannot prove this by documentary evidence. There seems, however, to be some foundation for the rumor.

As we understand it, the purpose of a board as regards examinations is to test a candidate's *fitness to serve the public as a retail and dispensing pharmacist*, and any effort of a board to *regulate the number of pharmacists by examinations is nothing short of vicious*. The duty of the board is not to the proprietors or clerks of a State, but to the people of the commonwealth, and when a candidate shows by a proper examination that he is qualified to serve that public with safety to the people, *he should be granted his certificate* absolutely regardless of supply or demand.

#### Conclusion

The work before us is not one of days or of months, but of years—years of patient, untiring, and at times, perhaps, of thankless effort. Do not think that this year, or next year, or the year after we will have reached the millennium in examination questions and methods and that thereafter all we will have to do is to "sit tight" and let the machine run itself. It will take constant aggressive work without let up or relaxation—a constant "dinging" to accomplish very measurable results

#### Silver Cleaning Soap

Household soap ..... 3½ pounds  
Water ..... 1 gallon

Dissolve and add aniline red to color. Next incorporate this in a mill with—

Kieselguhr ..... 14 pounds  
Whiting ..... 14 pounds  
Dextrin ..... 8 ounces  
Water ..... 2 pints

When thoroughly mixed, press into cakes and dry in a current of air.

## Utilize Your Supply of Crude Drugs

By E. F. HEFFNER, Lock Haven, Pa.

WITH the exhaustion of our stock of fluidextracts of ipecac, hydrastis and guarana, purchased before the present high prices, we were confronted with the necessity of soon replenishing supplies, and so made a systematic overhauling of our stock of the crude drugs—powdered, ground and whole—with the idea of converting this slowly moving stock into a form in which it could be utilized at once, i.e., fluidextracts.

Our stock rooms yielded enough odd lots of ground, whole and powdered hydrastis to make more than two pounds of fluidextract, thus saving an investment of over \$16. A similar result was obtained with ipecac and guarana, saving us an outlay of more than \$50 for fluidextracts of these drugs and enabled us to utilize a crude drug stock that ordinarily would be carried for years and one which no doubt can be replaced later at less cost than at present.

Every druggist who has been in business for a number of years will find on examination that his stock room contains many odd lots of drugs that are now touching the sky in price, and which can be converted into marketable material at a comparatively small cost. As these drugs in crude form are no longer purchased by the public, the druggist, by using them for manufacturing as suggested, will not only be making supplies that he needs, but he will be converting into cash what would otherwise remain as dead stock.

With fluidextract of hydrastis listed at \$16 a pound, belladonna at \$6, cardamom at \$7.50, guarana at \$15, ipecac at \$12, etc., it will pay the druggist to go over his stock, including ounce packages, and see if he does not have enough of the crude drugs to warrant making fluidextracts from them and thus save paying the present high prices. Many druggists are now paying \$3 and \$4 a pound for fluidextract of belladonna, while they have pounds of belladonna leaves and root in store that could be turned into fluidextracts without any great expense.

The stock argument used by the manufacturers against the retail druggist making his own fluidextracts is that of the loss in alcohol, which most retail druggists are not in a position to recover by distillation. As the loss in making a pint of fluidextract of hydrastis (or any other extract) cannot amount to more than 50c, this argument don't hold good, and even this amount can be saved if a still, as it should be in all modern stores, is part of the equipment. With ground ipecac, U.S.P., selling at \$2.75 a pound and alcohol costing 33c a pint, fluidextract of ipecac of standard strength can be made for less than \$4 a pound, including cost of solutions for assay, in your own laboratory at your odd moments. With hydrastis selling at \$5 a pound, the finished assayed extract should not cost over \$6 a pound as against \$9.60, the price you would have to pay to a pharmaceutical house.

Study the market prices of crude drugs and the pharmacopoeia, buy or make the necessary test solutions and then you will be in a position to make more money by saving it.

Another way to save money is by installing a tablet machine. Many druggists will tell you they haven't time and the few cents saved per thousand tablets is not worth while. They would be surprised to know that on some tablets they are paying the manufacturers over cost of material a profit of half a cent on a tablet or \$5 a thousand. Take ¼ gr. morphine sulphate tablets now quoted by manufacturing houses at \$6 a thousand, with morphine sulphate at \$5.30 an ounce the material used in 1,000 tablets could not cost more than \$3.

If the wholesale druggist is satisfied with his profit on the \$3 worth of materials, why should a manufacturer who buys his materials at least as cheaply as a wholesaler ask you \$3 for making 1,000 tablets, where on 1,000 calomel tablets he is satisfied with 10c profit? (We buy some tablets in bulk at 18c per thousand). On 1,000 ½ gr. codeine tablets you are asked to pay \$13.50, while with codeine sulphate at \$7 an ounce, the cost of material would be about \$7.85. Allowing 15c for manufacturing cost, the pharmaceutical house on this basis will have a gross profit of \$5.50 a thousand tablets. On many other tablets the manufacturers' margin is just as large, so that it will surely pay every druggist to investigate tablet-making for himself.

## ORDINANCE CONFLICTS WITH STATE LAW

### City May Not Require Prescription For Sale of Narcotics Permitted Under Public Health Act

New York City may not require the written prescription of a physician, dentist or veterinarian for the sale of those domestic and proprietary remedies, containing no more than two grains of opium, one-fourth grain of morphine, one-fourth grain of heroin, one grain of codeine or ten grains of chloral or their salts, the sale of which is permitted without a prescription under the Public Health Law of the State. The city ordinance is in conflict with the State Law, and must give way.

Such is the opinion of Attorney-General James A. Parsons, of Albany, given in response to an inquiry submitted by Warren I. Bradt, of the State Board of Pharmacy, as to whether the New York City Board of Health has the right to make and enforce ordinance 182 which is contrary to the State law regulating the sale of certain narcotics. The principal points in the Attorney-General's conclusions are here set forth:

At the last session of the Legislature a statute was enacted (Chap. 363 of the Laws of 1914) familiarly called the Boylan Anti-Habit Forming Drug Law, which seeks by circumscribing the sale of opium, chloral and their derivatives, to protect the health of those addicted to their constant use. The law requires the written prescription of a physician, veterinarian or dentist before the drugs may be delivered to an individual by any pharmacist, druggist or other dealer, except that domestic and proprietary remedies not containing more than two grains of opium or one-fourth grain of morphine, or one-fourth grain of heroin or one grain of codeine or ten grains of chloral, or their salts, in one fluid ounce, or if a solid preparation, in one avoirdupois ounce, may be sold without a prescription, if in good faith as medicines, and not for the purpose of evading the statute.

The Boylan Act became a law April 14, 1914, and since that date the Board of Health of the City of New York, on July 28th, 1914, has adopted an amendment to the Sanitary Code wherein the sale in the City of New York of opium, morphine or their derivatives, in any amount, separately or in compounded mixtures, without the prescription of a physician, veterinarian or dentist is absolutely prohibited. Neither the statute nor the ordinance applies to the sale of such drugs in liniments, ointments or plasters.

Can the provision of the Sanitary Code, wherein it differs, as noted above, from the State Law, be given any force or effect; or in other words, may the City of New York compel the written prescription of a physician for the sale of that class of domestic and proprietary medicines which the State Law permits to be sold without a prescription?

Placing the State statute (§245 of the Public Health Law) and the City Ordinance (§182 of the Sanitary Code) in juxtaposition, it is apparent that both advance into the same field, the City ordinance, however, proceeding, as an additional protection to the public health, to shut out entirely the sale of any quantity of the prohibited drugs in any medicine without the prescription of a duly licensed physician, veterinarian or dentist.

The Sanitary Code of the City of New York, enacted by the Board of Health of that City, under broad powers delegated to it to protect the public health, has from time to time received the approval of the State Legislature, and stands within the limits of the city with authority equal to that of State statutes. That is, it so stands where its provisions are "not inconsistent with the Constitution or laws of this State." Section 1172 of the Greater New York Charter provides:

"§1172. The sanitary code which shall be in force in the City of New York the first day of January, nineteen hundred and two, and all existing provisions of law fixing penalties for violation of said code are hereby declared to be binding and in force in the City of New York, and shall continue to be so binding and in force, except as the same may, from time to time, be revised, altered, amended or annulled as herein provided. . . . Said Board of Health is hereby authorized and empowered, from time to time, to add to and to alter, amend or annul any part of the said sanitary code and may therein publish additional provisions for the security of life and health in The City of New York, and confer additional powers on the department of health, not inconsistent with the constitution or laws of this State, and may provide for the enforcement of the said sanitary code by such fines, penalties, forfeitures, or imprisonment as may by ordinance be prescribed. The Board of Health may embrace in said san-

itary code all matters and subjects to which, and so far as, the power and authority of said department of health extends, not limiting their application to the subject of health only. Any violation of said sanitary code shall be treated and punished as a misdemeanor."

To be inconsistent with a State statute the city ordinance must be in real, not apparent, conflict with the State law, otherwise, both may operate together, the one to the advantage of the Public Health generally throughout the State, and the other to the additional advantage of the public health within the City of New York.

The Boylan Law has not, in my judgment, preempted the entire field of regulation of the sale of these drugs, so as to preclude the City from enforcing additional or supplemental regulations. But since it has expressly omitted in this instance the regulation of sales without a prescription of domestic and proprietary remedies containing the small amounts of opium, morphine, codeine, and chloral specified, "actually sold in good faith as medicines," I am forced to the conclusion that the statute lends sanction to such sales, and therefore the City of New York has no power to prevent them. Not only does the statute prescribe that the provisions shall not apply to such sales, that is, except from the operation of the statute, which might leave to the municipalities the matter of further regulation, but it speaks of the lawfulness of their actual sale in good faith. There can be no division of the field of regulation here. The directions of the legislature are so specific as to provide for the exact amounts which it has deemed domestic and proprietary remedies may safely contain, and be sold unrestricted without injury to the public health.

A city ordinance which denies the sale of such preparations except upon prescription is in clear conflict with the State Law, is "inconsistent" with it, and is accordingly beyond the power delegated by the legislature to the city. The legislature has said that the public health law does not require a prescription in the instances in question, and New York City is without power to say that the Public Health law does require it.

The ordinance of the City, therefore, in the particular portion here considered, is without effect.

### Interstate Commerce in Sale of Medicines

A Minnesota corporation entered into a contract with a resident of Missouri whereby the former agreed to sell and deliver to the latter in Minnesota or any of its regular places of shipment, certain medicines and extracts, to be paid for at the usual wholesale prices, and to be delivered when required by the purchaser. The contract also required the purchaser to make regular canvasses in a specified county for the sale of such medicines and extracts, and forbade him to sell to any others. All deliveries of medicines and extracts were made without the State of Missouri. In an action to recover the price of medicines and extracts delivered under the contract it was held that, as the plaintiff reserved no title to the property sold, and merely gave the defendant the option of returning it, the contract constituted "interstate commerce," and hence was not governed by the Missouri anti-trust laws. The plaintiff's right to sue could not therefore be defeated because, though a foreign corporation, it had not procured license to do business in Missouri, as required by Missouri Rev. St. 1909, §3040. (J. R. Watkins Medical Co. v. Holloway, (Mo.) 168 S. W. 290.)

300 READY-TO-USE ADS FOR DRUGGISTS. By Charles L. Archbold and other advertising experts. 56 pages, paper, \$1. The Spatula Publishing Co., Boston, Mass.

As noted above, this is a collection of advertisements written by Mr. Archbold and other experts especially for the use of druggists, the ads being so arranged that they may be cut out of the book as needed and sent to the local newspaper or to the printer as copy from which to make counter slips. The "sample" ads outlined are very comprehensive, and will be found to cover almost every article the druggist will care to advertise, and even should he not be able to use them in their entirety, he will find in them suggestions that can be well and easily adapted to almost any local advertising he would attempt to do. Nearly all of the ads are illustrated by appropriate cuts which may or may not be used as the user prefers.

WEEKLY DRUG MARKETS, the market Edition of the PHARMACEUTICAL ERA, keeps you in touch with all price changes.

## LEGAL DECISIONS

### Shipment of Intoxicating Liquors

The Delaware Hazel Law (27 Del. Laws, c. 130) provides by section 5 that it shall not apply to the shipment or delivery to physicians or druggists of such liquors in unbroken packages not exceeding five gallons at any one time. Section 6 prohibits any person from bringing into local option territory any liquor greater than one gallon within 24 hours. The Delaware Constitution, art. 13, §1, provides for an election to determine whether the sale of liquors in certain districts shall be licensed or prohibited, and that, after a vote against license, no person shall thereafter manufacture or sell liquors except for medicinal or sacramental purposes. The Prescription Act. (26 Del. Laws, c. 147) requires all prescriptions for intoxicating liquors for medicinal purposes to be written by practicing physicians. It is held that, in view of the recognized necessity of liquor as a drug, and therefore readily to be obtained by those authorized to prescribe or sell it, the discrimination in favor of physicians and druggists was reasonable, and that the Hazel Law did not deny the equal protection of the law.

The Webb-Kenyon Act (Act March 1, 1913, c. 90, 37, Stat. 699), by its title purporting to divest liquor of its interstate character only "in certain cases," and prohibiting transportation of intoxicating liquors from one State into another, to be received, possessed, sold or used in violation of any law of such state, does not divest liquor of its interstate character in all cases, but removes the protection of the commerce clause only when the liquor is to be used in violation of any law of the state. Therefore the Hazel Law is held to be invalid as to a shipment and delivery of liquor from another state into a prohibition district of the State of Delaware for the receiver's personal consumption, a purpose recognized by the act itself to be lawful. But, though invalid as to such a shipment, the act is a valid enactment in so far as it regulates, limits or prohibits the shipment of liquor from one part of the state into a prohibition district in another part of the state. (Van Winkle v. State, Delaware Supreme Court, 91 Atl. 385.)

### Sale of Intoxicating Liquor by Druggist

It is held that, under Louisiana Act No. 66 of 1902, a druggist who, in a prohibition district, sold alcohol for medicinal purposes, without a prescription, was properly convicted. Under this statute it suffices to charge the offense in the words of the statute, and it is not necessary to state that the offense was committed in a prohibition district. (State v. Tullos, Louisiana Supreme Court, 65 So. 870.)

### Selling Cocaine, Etc., Without Prescription

Texas Penal Code, 1911, art. 747, makes it unlawful to sell, furnish, or give away cocaine or morphine, except upon the prescription of a physician. It excepts preparations recommended in good faith for cholera, etc., sales at wholesale to retail druggists, and to manufacturers or regular practitioners of medicine. It is held that an indictment for unlawfully selling, furnishing, and giving cocaine and morphine to one not having a written prescription of a physician was sufficient, without negating the exceptions as to sales in good faith for cholera, etc. (Brown v. State, Texas Criminal Appeals, 168 S. W. 861.)

### Distinction Between "Surety" and "Guarantor"

An agency contract to sell medicines and extracts within fixed territory required the agent to canvass the territory, keep a record of all goods sold, and to make reports of sales and collections and of all goods on hand, and to pay wholesale prices, and at the termination of the agreement to pay the whole amount remaining unpaid and return the goods on hand. A separate instrument recited that the undersigned jointly and severally guaranteed the payment of a specified sum for medicines, extracts, etc., in the manner provided for in the contract. This instrument was signed by two obligors at a place indicated by the words "Sureties sign here," and

an added statement read: "The a. w. mentioned sureties to be furnished, upon request, at any time, a statement of amount due the company, from the party of the second part." In an action against the agent and the two signers of the instrument it was held that the instrument created only a guaranty, and the signers were not sureties.

Contracts of suretyship and of guaranty have much in common—the undertaking in both is to answer for the debt, default, or miscarriage of another. The difference is that a surety insures the debt, is bound with his principal as an original promisor, is a debtor from the beginning; a guarantor answers for the debtor's solvency, must make good the consequences of his principal's failure to pay or perform, is bound only in case his principal is unable to pay or perform. From this difference, one consequence of importance in respect of the procedure to be followed in the enforcement of liability results. A principal and a surety, being equally bound, may be joined in the same suit; but a guarantor, being bound by a separate contract, must be sued separately. Judgment for the guarantors was therefore affirmed. (J. R. Watkins Medical Co. v. Lovelady, Alabama Supreme Court, 65 So. 52.)

### Intoxicating Liquors—Validity of Druggist's License—Transportation

A civil action was brought by a regularly licensed druggist and pharmacist in North Carolina against an express company to recover a statutory penalty for non-delivery of goods. The plaintiff also held a license from the sheriff of the county as a retail liquor dealer. He ordered six quarts of cognac brandy from a firm in Tennessee and paid charges thereon, but delivery was refused by the express company. The plaintiff alleged that it was his purpose to sell the brandy for profit, but only in the way of filling prescriptions in the bona fide pursuit of his calling, and this was well known to the defendant's agent. It appeared that the plaintiff had not applied for his license to sell liquor to the board of aldermen of the town in which he did business nor to the county commissioners, as required by the North Carolina statute, but had merely gone to the sheriff for his privilege license tax, and the sheriff had given him the license. The exception in the statute permitting the sale of intoxicating liquor by pharmacists on physicians' certificates, as an exception to the public policy of the State forbidding its manufacture and sale, does not, by the express terms of the provision, relieve druggists from complying with the law as to license and taxes. The plaintiff's license was therefore held to be invalid. As a sale of liquor by him would have been unlawful, it was held that the court would not aid him in this intended breach of the criminal law, nor penalize one who, knowing the facts, declined to deliver the liquor, in furtherance of his unlawful purpose. (Smith v. Southern Express Co., North Carolina Supreme Court, 82 S. E. 16.)

### Construction of Employer's Liability Policy

A drug company's employer's liability policy stated that the premium of \$113.90 placed therein was based or estimated upon data furnished in the schedule as to the amount of compensation paid employes, and, further, that the premium should be subject to adjustment if the compensation was greater or less than the estimated sum stated in the schedule. The compensation paid was in fact greater than the amount so estimated. It was held that the \$113.90, the amount estimated, was not conclusive of the amount of the premium, and the insurer could recover the additional amount shown to be due. (Fidelity & Casualty Co. of New York v. J. W. Crowds Drug Co., Texas Civil Appeals, 166 S. W. 1156.)

### Cash Coupons—Illegal Contracts

An offer by the proprietor of a drug store to give a piano at the end of a designated period to any person who shall present to him the largest amount of cash coupons, representing purchases from the drug store, is guilty of maintaining a lottery, and if he purchased the piano from a dealer who agrees to furnish the literature and advertising necessary to carry out the scheme, such dealer cannot recover the price of the piano and the advertising, inasmuch as it was an illegal contract and therefore not enforceable. (Main v. Mackey, 3 Pa. Co. Ct. 58.)

## SELECTED FORMULAS

### Antiseptic Powder for the Skin

Starch, in fine powder	3 pounds
French chalk	1 pound
Powdered orris root	4 ounces
Salicylic acid	10 grains
Essence of musk	20 minims
Essence of bergamot	30 minims
Oil of neroli	15 minims

Mix and pass through a sieve.

### Antiseptic Talc

Powdered talc	1 pound
Boric acid	2 ounces
Salicylic acid	2½ drams
Oil of eucalyptus	½ dram
Oil of thyme, white	20 drops

Mix well.

### Aromatic Castor Oil

Amyl acetate	10 minims
Gluside	20 grains
Absolute alcohol	1 fl. ounce
Castor oil, enough to make	20 fl. ounces

Mix the amyl acetate and the gluside (soluble saccharin) with the alcohol, and set aside until a clear solution is obtained, then add the castor oil. This preparation should be stored in filled and well-closed bottles.

### Curry Powder

Mace	1 dram
Allspice	1½ ounces
Cumin seed	½ pound
Turmeric	½ pound
Coriander seeds	1 pound
Black pepper	1 pound

Reduce all to fine powder, and mix thoroughly, passing through a sieve.

### Vanishing Cream

Zinc stearate	4 ounces
Precipitated chalk	4 ounces
Glycerin	4 ounces
Water	4 ounces
Oil of rose geranium (or rhodinol II)	30 minims

Mix the powders intimately and incorporate with the mixed glycerin and water by rubbing all together in a mortar, gradually adding the perfumes during the operation. The preparation may be tinted with carmine solution, if desired.

### Violet Witch Hazel

Liquid oil of orris	1 dram
Essence of jasmine	4 fl. ounces
Hamamelis water	54 ounces

Mix and filter clear through talcum. The solution may be colored pale green with chlorophyll, if desired. Recommended for use in place of bay rum, especially for use by barbers for application after shaving.

### Liquid Bandoline

Irish moss	2 ounces
Water	16 ounces
Boric acid	2 drams
Cologne water	2 ounces

Boil the Irish moss and boric acid with the water, strain, add water to make 14 fl. ounces, and mix with the cologne water.

### Sweeping Compound

Sawdust, dry	10 pounds
Paraffin oil	½ pint
Paraffin wax	2 ounces
Coarse salt	½ pound
Eucalyptus oil	2 ounces
Sea sand	4 pounds

Warm the paraffin oil and mix with the melted wax. Dissolve in the mixture any aniline color desired, add the eucalyptus oil and saturate the sawdust, finally incorporating the mixture with the sand.

### Polishing Paste for Windows

Castile soap	2 ounces
Boiling water	3 ounces

Dissolve and add the following in fine powder:

Precipitated chalk	4 ounces
French chalk	3 ounces
Tripoli	2 ounces

Mix thoroughly and dilute to the consistency desired with water.

### Silver Cleaning Soap

Cocconut oil	80 parts
Soda or potash lye, 38° B.	40 parts
English red	10 parts
Water	10 parts
Ammonium chloride	1 part

Heat the oil and lye together until saponification takes place; mix the coloring matter, water and ammonium chloride together, and stir into the soap mixture. Let the whole come to a boil, then remove from the fire.

### Polishing Cream

Denatured alcohol	400 parts
Spirit of ammonia	75 parts
Water	150 parts
Petroleum ether	80 parts
Infusorial earth	100 parts
Red bole (or white bole)	50 parts
Calcium carbonate	100 parts

Mirbane oil, enough to scent the mixture.

Mix.

### Furniture Cream

Oleate of ammonia	2 ounces
Solution of ammonia	2 ounces
Shellac varnish (1 in 8)	6 ounces
Linseed oil	6 ounces

Mix the solution and oleate, add the shellac, and shake well; then add the linseed oil and shake thoroughly.

### Furniture Polish

Dragon's blood	½ ounce
Oil of turpentine	6 ounces
Linseed oil	20 ounces
Hydrochloric acid	1½ ounces

Powder the dragon's blood and shake well with the turpentine. After a day strain into the linseed oil, and then add the hydrochloric acid.

### Piano Polish

Butter of antimony	1½ ounces
Alcohol	1½ ounces
Raw linseed oil	8 ounces
Cider vinegar, enough to make	16 ounces

Mix.

### Liquid Bluing

Soft Prussian blue	1 ounce
Oxalic acid	1 ounce
Water	1 quart

Dissolve the oxalic acid in the water, then add the Prussian blue. A very small portion suffices for a large amount of clothing. This formula is typical of most of the preparations on the market.

### Mixed Bird Seed

Canary seed, Sicily	10 ounces
German rape seed	2 ounces
Hemp seed	1 ounce
Millet seed	3 ounces

Mix.

### Rheumatic Elixir

Potassium iodide	1 ounce
Sodium salicylate	1 ounce
Wine of colchicum seed	2 ounces
Simple elixir, enough to make	16 ounces

Mix and dissolve. Dose: a dessertspoonful.

# FOREIGN ABSTRACTS

## NEW RESEARCHES ABROAD

**No Definite Principles in Cotton-Root Bark and Chamomiles—Several New Analytical Methods—Uniform Card Advertising to Physicians Needed—Grape Juice as a Vehicle and Solvent**

**A**MONG the most important papers reviewed this month are two emanating from the Wellcome laboratory, dealing with recent examinations of cotton-root bark and chamomile flowers. No definite substance to which a medicinal action could be ascribed was found in either. New methods of estimating tragacanth, petroleum derivatives in turpentine, glucose in urine, berberine, and terpenes in lemon oil are given. A novel suggestion from a Swiss physician points out the advantage of having pharmaceutical houses send out their advertising literature to physicians on cards of uniform size, so that valuable information contained thereon may be filed in a card index for future use. Another abstract shows some unexpected properties of concentrated grape juice, which appears to possess remarkable solvent powers for certain drug products. The properties of mercury benzoate in solution, especially in connection with sodium chloride, are discussed. An interesting paper draws attention to the possible reason for certain contradictory statements recently made regarding the properties of homeopathic triturations of radioactive bodies.

### Examination of Cotton-Root Bark—

This drug is official in the U.S. P. and the Indian and Colonial additions of the B.P., its use being based on its reputed value as an emmenagogue and hemostatic. The lack of chemical knowledge concerning it led Power and Browning to make a closer study. About 21 kg. of the bark furnished 3.07 kg. of a viscid, dark red alcoholic extract, yielding a small amount of a pale yellow essential oil, which gave the color reaction of furfural, and appeared to contain a little acetovanillone. From the aqueous liquid remaining after the distillation were obtained the following: A new phenolic substance, consisting of a dihydric alcohol,  $C_8H_{10}O$ , in too small amount to be fully investigated; a yellow phenolic substance, also a dihydric alcohol,  $C_{15}H_{16}O_3$ ; a sugar giving d-phenylglucosazone, and betaine to the extent of 0.18 per cent. of the bark. The resin was fractionated by extraction with various solvents. From the petroleum extract, a fatty alcohol,  $C_{24}H_{48}O$ , was isolated, which may be identical with the medicagol of Etard, found in 1892. A phytosterol was also found, as well as the hydrocarbon triacontane, oleic acid, palmitic acid, and more sugar. No alkaloid was present, and no tannin. (Power and Browning, *Pharm. J.*, 1914, p. 420.)

### Alkaloids of Papaver Orientale—

Gadamer reports that among the amorphous alkaloids of *Papaver Orientale*, in addition to thebaine and isothebaine, at least two bases of non-phenolic character are present, and probably not less than three others with phenolic properties. They are under further investigation. (Gadamer, *Arch. Pharm.*, 1914, through *Pharm. J.*)

### Substitute for Varnishing Negatives—

A solution is used containing alum 2 oz., tannic acid 60 grains, and water 16 oz. The negative should be immersed in this solution for not more than 4 minutes; if soaked longer, the film is liable to become so hard that it tends to crack and split at the edges. The solution can be used repeatedly, and will be found to serve the purpose of a waterproof varnish. The hardened film is so impermeable that water spilt on it can be wiped off with a cloth without marring the gelatin. (*Brit. J. Phot.*, 1914, p. 713; through *Pharm. J.*)

### Estimation of Concentrated Lemon Oils—

The amount of terpenes and sesquiterpenes left in a concentrated lemon oil is found as follows: Ten to twenty c.c. of the oil are treated in a flask with a saturated solution of sodium sulphite to determine the percentage of citral. Five c.c. of the citral-free oil are shaken in a large separatory funnel with 500 c.c. of alcohol cooled to about zero. The funnel

is placed inverted in a freezing mixture for 10 hours at zero, then hung in a stand until the alcohol layer becomes clear, which may require 2 days. The alcoholic solution, which contains the oxygenated constituents, is drawn off, and the residual hydrocarbons drawn off into a measuring glass. Drops of oil left in the funnel are washed into the glass with alcohol, and the volume of oil is measured. (*E. Sachse & Co., Perf. Essent. Oil Record*, 1914, p. 262; through *C. A.*)

### Grape Juice As Food and Medicine—

Monti, of Turin, has brought out a process for concentrating grape juice by freezing, which causes it to separate into ice, and a portion which is about three or four times as heavy as the original juice. To the heavy portion is then added an aqueous extract of the grape residues, which contains tartaric acid and tannin, and which improves the taste, the latter becoming pleasantly sour. To quench thirst the concentrated juice may be given to patients diluted with three or four volumes of water. A grape honey is formed by evaporating the juice at low temperature and pressure. This honey can be eaten on bread, or mixed with water as a drink. It has the remarkable power of dissolving albumen, casein, fibrin, and resins, and can be used like alcohol in the preparation of tinctures of rhubarb, guthan, ipecac, colchicum, etc. The solutions of meat, eggs, and milk are perfectly clear and keep indefinitely. Thus is afforded a means of giving in solution large amounts of food rich in albumen. The taste is very good. (*Bender, Münch. Med. Wochschr.*, 1914, p. 424.)

### Varieties of Shellac—

T. N., the standard grade of shellac, comprises about 60 per cent. of the yearly production. The letters stand for "truly native." The color is dark, but the low price gives it a large sale. M. G. shellac, in consequence of the addition of orpiment, has a lighter color ("medium grades" of orange). H. G. shellac forms the "high grades", of a fine orange color, and made from the Palas tree, without addition of orpiment, or very little. It is used for the finest furniture polishes, for picture frames, etc. Garnet shellac contains part of the coloring matter of the lac, and is much used in hat manufacture and in making shoe polish, either pure or with 10 per cent. of rosin. Button lac takes its name from its form; it resembles the orange lac, but contains more wax. Tongue lac is the same as button lac, but in a different form. The raw material, or "stick lac," is taken from the twigs of the lac tree, and contains pigment. Grain lac is like the former, but is granulated and washed, being partly freed from pigment. Kala, another name for a variety of button lac, is made from the residues of other grades, and contains some rosin. Bleached lac is an orange grade treated with chlorine. (*Oil and Color Trades J.*, 1914.)

### Uniform Advertising to Physicians—

Roch, of Geneva, discusses the usual fate of the advertising literature sent to physicians extolling the merits of new remedies. First, all of such material received may be thrown into the waste-paper basket, which after a long absence may not be a light task. Or, any one remedy may be selected and tested, to the great detriment of the patient's health and invariably of his pocket-book. Lastly, from the long list a few of the more serious-sounding offers may be selected, and arranged in order, so as to be found when needed. But this consumes much time. In order to make the advertising material of practical value to the physician, Roch proposes that all such matter be printed on cards the size of the Swiss postal card, 9 by 14 cm., and that on the front only objective facts, which are not open to question shall be printed, such as chemical composition, name, maker, dose, price, etc. The back of the card can be used for literature references. The cards can then easily be assembled in a valuable index. (*Roch, Corr.-Blatt f. Schweiz. Aerzte.*, 1914, p. 882.)

### Homeopathy and Radioactivity—

Bailey, in Chicago, is said to have found that the twelfth trituration of radioactive materials produces greater effects on the sensitive plate than the sixth. According to Boericke and Tafel, of Philadelphia, even the sixtieth decimal trituration of radium shows the presence of radium on the photographic

with 800 mg. of milk sugar. On the basis of these statements, it is assumed that the reactions of the triturations from 100 to 500 mg. in upward are stronger, which would be the case if the twelfth is stronger than the sixth. The amount of radium in 1 g. of D6 must be 100 times as great as in D12. If this is so, why has not Professor Bailey had this new method of obtaining metals from the emanation, the following tests. He prepared D1, D2 and D3 triturations of uranium nitrate, and placed 5 g. of each in parchment paper, spread over a few square centimeters of surface. These packets were laid on a sensitive plate for some days. D1 gave a dark spot, D2 a faint one, and D3 showed no action, as was to have been expected. He explains Bailey's observation by the fact that, since D6 and D12 practically contain none of the original substance, the activity must come from the milk sugar, which might have gained in activity from long contact with the mortar. He proved this by placing a mortar and a box of milk sugar on a sensitive plate. After three weeks the plate where the mortar had stood was darkened, and the rim of the box could also be made out, showing some radioactivity in each. That some radium can be demonstrated in D60 is not to be wondered at, but that it comes from the original substance may well be doubted. The mortar could easily be activated by the emanation. (Scheringa, Pharm. Weekblad, 1913, p. 1237.)

#### Berberine and Its Estimation—

Richter recommends the use of picrolonic acid for determining berberine in its drugs and preparations. Two and one-half g. of the coarsely powdered drug are exhausted in a Soxhlet with alcohol, and the extract evaporated on the water bath. The residue is washed into a flask with three portions of 5 c.c. of water, treated with 10 c.c. of 15 per cent. caustic soda, and 60 g. of ether, after which the flask is shaken for 15 minutes, and 1 g. of tragacanth is added. After the solution is clear, filter off 24 g. of the yellow ethereal solution, and add 5 c.c. of an approximately tenth-normal solution of picrolonic acid. The resulting precipitate is collected on a Gooch, washed with a little mixed alcohol and ether, dried and weighed. The weight obtained, multiplied by 56.1, gives directly the percentage of berberine in the drug. (Richter, Arch. Pharm., 1914, p. 192.)

#### Determination of Petroleum Oils in Turpentine—

According to Grimaldi and Prussia, all turpentines, since they consist largely of pinene, are attacked by mercury acetate solution, while tar derivatives, as benzene, toluene, and xylene, are not affected. In a 500-c.c. flask, the neck of which contains about 10 c.c. and is divided into fifths, bring 75 g. of mercury acetate, 200 c.c. of water, 100 c.c. of glacial acetic acid, and 10 c.c. of the turpentine under examination. Attach a vertical condenser, place the flask in a water bath of 50°, and leave it there for 2 hours, shaking occasionally. Cool, and add dilute nitric acid (2 parts of strong acid to 1 of water) in drops, until the flask is filled to the zero of the scale on the neck. After standing a short time, the volume of undiluted oils is read off on the neck. Pure turpentines give a homogeneous solution at the end of the operation, with only a few drops of any kind. The smallest amount of benzene which can be detected is from 6 to 12 per cent, while 1 per cent of toluene, as can be found. (Chem. Ztg., 1914, p. 111.)

#### Constituents of Chamomile Flowers—

Blanc and Inghel have investigated the heads of Belgian chamomile, *Matricaria inodora*, yielding an essential oil. The following definite compounds were isolated: 3,4-dihydroxy-cinnamic acid, a glucoside of apigenin, choline, inactive camphor, caproic, arbutin, urticantare, taraxasterol, and a phytosterol. The leaves also found a mixture of fatty acids, consisting of stearic, oleic, erucic, palmitic, and linoleic acids. A phytosterol is present. The bitter taste is apparently not due to any of these substances, but to dark colored and gummy matter. (Chem. Druuz., 1914, p. 376.)

#### Substitute for Celluloid—

Dr. Wm. S. Szlajski, Vienna, has recently patented an improved process for the manufacture of a substitute for celluloid. It consists in allowing 200 g. of glue or gelatin to become saturated with water, and then dissolving them by the use of heat until a thickish mass is obtained, into which 30 g. of casein and 50 g. of sodium silicate are stirred. The mixture, which may be colored with any suitable transparent coloring material, is poured in layers on level sheets of glass,

where it is allowed to dry. After drying is complete, the sheets are brought into a suitable hardening bath, such as tannin, alum, or chrome alum. Even before drying the mass becomes impermeable to water, and when completely dry is transparent, flexible, and entirely incombustible. (This substance is not properly a substitute for celluloid, as it must lack the plasticity which is the distinguishing feature of the latter, and might better be classed with galalith, etc.—Ed.) (British Patent No. 1223 of 1914.)

#### Mercuric Benzoate—

This salt is official in the French Pharmacopoeia, and has been recommended as most suitable for hypodermic injection. The fact that it is a normal salt makes it difficult to see why it should not be readily ionized in solution, whereas the superiority of the salicylate, which is really an inner anhydride, would be easily comprehended. The method of preparation used by the French Codex is most suitable; namely, the precipitation of a mercuric salt by sodium benzoate. But the product cannot be recrystallized from water, on account of its low solubility, 1 in 250, and the partial hydrolysis. When sodium chloride is used to dissolve it, decomposition occurs, and mercuric chloride is formed, and can be shaken out with ether. A solution commonly used, containing 1 g. mercuric benzoate, 0.75 g. sodium chloride, and 100 g. of water, is identical with one prepared from mercuric chloride 0.59, sodium benzoate, 0.72, sodium chloride 0.5, and water 100 g. The increased solubility in the presence of ammonium benzoate is due to the formation of a complex salt. The effect of mercuric benzoate on albumen is exactly the same as that of a solution of mercuric chloride with the same amount of sodium chloride, and if sufficient of the latter is present, no albumen is thrown down. (Rupp and Hermann, Arch. Pharm., 1914, Heft 252, p. 3.)

#### Estimation of Tragacanth—

Fromme has elaborated the following method, depending on the solubility of acacia and other adulterants in cuoxam, an ammoniacal solution of copper oxide. Variable results are obtained, and the test is useful only for approximate evaluations. Two g. of purified sand are placed in a strong test tube 16 by 150 mm. in size, with 0.1 g. of the powdered tragacanth to be tested, and both are well mixed by shaking. Add 1 c.c. of alcohol, 5 c.c. of water, and 20 c.c. of cuoxam. Shake well and set aside for several hours. Make a similar test with powdered tragacanth of known purity. By comparing the height of the deposits in both tubes, the percentage of real tragacanth in the sample can be roughly judged. (Fromme, Apoth. Ztg., 1914, p. 617.)

#### Use of Ossein as a Food—

In 1870, Frémy called attention to the value of ossein as a food. Shortly afterward, it was prepared from slaughter-house bones and issued as a ration during the siege of Paris, with very satisfactory results. It now appears to have fallen into disuse, although it contains just four times the nourishment of fresh meat. The amount to be taken daily is from 50 to 100 g. To obtain it, bones are decalcified by hydrochloric acid, then removed from the acid and neutralized with soda. The residue is then cooked, dried and granulated. In this form it is immediately ready for use, first being moistened for an instant with any liquid. The best way to prepare it is to soak it in water for 12 hours, in which time it swells. Then it is washed with water, and boiled in water for 10 minutes. After cooling any particles of bone are removed by picking. The pieces are then minced, and dried in a current of air at a temperature not exceeding 50° C. The product is then powdered coarsely, and may be used in any soup or broth. (Maurié, Compt. rend., 1914, p. 450; through Pharm. J.)

#### Simple Test for Glucose in Urine—

Measure 10 c.c. of the urine into a 200-c.c. flask, and make up to the full volume with water. Make up a solution of potassium carbonate, 2 oz. in 6 oz. of distilled water, filter, and add water to make 8 oz. To 20 c.c. of the diluted urine, add 10 c.c. of the potassium carbonate solution in a small flask, boil carefully for three minutes, cool, and dilute to 50 or 100 c.c. with water. Prepare a solution of pure glucose, containing 1 g. in 200 c.c. of water. Treat 20 c.c. of this solution in the same manner as the diluted urine. By observing the tints of the two solutions in glass tubes, and measuring the depth of layers of equal color, the percentage of glucose in the diabetic urine is readily determined. (Dimmock, Brit. Med. J., 1914, p. 399.)

## ? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

### Interpretation of Prescription Abbreviations

(R. V. McL.)—"Will you please explain the meaning of the abbreviations 'A. C.' and 'B. C.' as used by physicians in writing directions for prescriptions?"

Any opinion expressed on the interpretation of the above abbreviations should be based upon the manner in which they are employed by the physician in connection with the rest of the directions. As you have not submitted a copy of the prescription in which they were employed, an answer to your query is somewhat problematical, but it is quite probable that "A. C." stands for *ante cibum*, meaning "before eating," a very common phrase used by physicians in abbreviated form. As to the other part of your query, we cannot recall any common Latin phrase in abbreviated form used in prescription writing that begins or is represented by the letters "B. C." To interpret these one should have a copy of the prescription in which they appear. It is possible, however, that a mistake may have been made in transcribing, and that the abbreviated letters should be "P. C." instead of "B. C.," thus standing for *post cibum*, the Latin equivalent for "after eating," a phrase that is also frequently used by prescribers. In order to suggest a reasonable interpretation we should have the complete prescription, and if you will send us a copy, we shall endeavor to help you out of your difficulty. For a very complete list of Latin words and phrases used in prescription writing, with their corresponding contractions and English equivalents, we would refer you to the last edition of the Era Dose Book, pages 44 to 49 inclusive.

### Detection of Preservatives in Milk

(M. L. T.)—The following are the most usual tests recommended for the detection of boron compounds and formaldehyde in milk:

Take 20 c.c. of milk, add 10 c.c. of lime water, place in a porcelain dish, and evaporate to dryness. Burn the residue (in a fume closet) at as low a temperature as possible. Cool the residue, moisten with strong sulphuric acid, add alcohol, and stir well. Heat gently and apply a flame to the alcohol vapor—this will burn with a green color at the edges of the flame if boric acid or borax has been added to the milk.

Or, the ash of 20 c.c. of the suspected sample may be moistened with dilute hydrochloric acid and a piece of turmeric paper placed in the dish. Remove the paper and gently dry it; if the milk contained boric acid, the paper will turn a reddish-brown color, and if then treated with sodium carbonate solution, will become bluish-black in color.

Formaldehyde can be detected as follows: Take one-third of a test-tubeful of milk, add an equal volume of water, then add, drop by drop, down the side of the test-tube, strong sulphuric acid containing a very small amount of ferric chloride. If formaldehyde is present a violet ring will be formed at the junction of the liquids. In the absence of formaldehyde a slight green or brown tint only will be noticed. If the amount of formaldehyde is very small the color may take half an hour to develop.

Salicylic acid may be detected as follows: Acidify 25 c.c. of milk with acetic acid, boil, and filter. Extract the filtrate with an equal volume of ether. Shake the ether extract with a dilute (straw-colored) solution of ferric chloride. On separating, the aqueous solution shows a reddish-violet color when salicylic acid is present.

Benzoic acid is detected by proceeding as in the foregoing test, but shake the filtrate with an equal volume of solution of hydrogen dioxide before extracting with ether. By this treatment benzoic acid is converted into salicylic acid, which is then tested for by ferric chloride.

According to Wiley ("Foods and Their Adulteration"), there is very little adulteration of milk with chemical preservatives in the United States, the laws of all the States forbidding the use of boron compounds and formaldehyde for this purpose. According to the same authority, sodium benzoate may be used, provided its presence and the amount employed be stated on the label, but this substance is a poor preservative of milk, since milk is an alkaline body, and as such it does not tend to decompose the sodium benzoate and set the benzoic acid free, and it is only the free benzoic acid which is very active as a preserving agent.

### Dose of Croton Oil for Cattle

(R. D. C.)—"We are having some controversy as to the dose of croton oil which we notice is given in your Dose Book as 3 drams for cattle. We are told by some druggists that this dose will kill anything. Kindly give us some reference and authorities showing if as much as 3 drams can be given?"

The Era Dose Book gives the range of dosage for croton oil for cattle as from  $\frac{1}{2}$  to 3 drams, but recent veterinary medical literature seems to indicate that the maximum dose should not be more than 1 dram, and the statement of dosage should be corrected accordingly. Dun ("Veterinary Medicines") has this to say: "For horses, croton oil is too violent and irritating for safe and general use; dose, 15 to 25 minims. For cattle, it is sometimes valuable, operating with certainty when most other purgatives are ineffectual, and, if carefully used, is rarely attended with evil consequences, dose,  $\frac{1}{2}$  to 1 fl. dram. In obstinate constipation or torpidity of the bowels among cattle, half doses are given, with 20 or 30 grains of calomel, a pound of salts, or a pint of linseed oil; and few purgative mixtures are more effectual. The oil is best administered made into a bolus with linseed meal, or dissolved in castor or linseed oil or mucilage. The oil is sometimes dropped on the tongue, but unless freely diluted, is apt to irritate both tongue and fauces."

Hassloch ("Veterinary Materia Medica and Therapeutics") agrees with the foregoing as to dosage, stating that the oil "is a drastic purgative, producing copious watery evacuations. It is somewhat too irritant for general use on the horse, and is more often employed in cattle practice, since it acts quicker than aloes. Large doses act as corrosive poison. On the dog and pig its purgative qualities are not accompanied by as much irritation as with the horse."

Users of the Era Dose Book should correct the statement of dosage of croton oil for cattle (page 29, line 12 from bottom) to read " $\frac{1}{2}$  to 1 dr.," instead of " $\frac{1}{2}$  to 3 dr." as now given.

### Oleum Cinereum Benzoatum

(G. F.)—This is a modification of "oleum cinereum" of German origin, and recommended by Dr. Neisser in the treatment of syphilis. From our scrap book we take the following formula and method of preparation:

Oil of sweet almond .....	1 part
Benzoïn .....	4 parts
Sulphuric ether .....	8 parts

Mix, dissolve, and filter. Of this solution mix 1 part with 4 parts of metallic mercury, and rub together until the ether disappears by evaporation. Then add 40 parts of liquid paraffin, and continue rubbing until the mercury is thoroughly incorporated.

The more common formula for "oleum cinereum" (also known as "grey oil") is that of the British Pharmaceutical Codex, which is as follows:

Mercury .....	40 grams
Wool fat .....	26 grams
Liquid paraffin, enough to make 100 c.c.	

Sterilize the wool fat and liquid paraffin by heating to 120° C., maintaining that temperature for twenty minutes; then place the mercury and wool fat in a mortar, sterilized by rinsing it with alcohol and burning off, triturate until a homogeneous mixture is obtained, and add the liquid paraffin gradually until the product measures the required vol-

ume. Grey oil is applied by intramuscular injection (1 to 2 minims), preferably in the gluteal region, the injection being given about once weekly. It should be used with caution.

#### Preservation of Medicinal Roots

(H. H. M. & I. C.)—We know of no one book conforming to the specifications you outline descriptive of medicinal plants. There are large works on botany like those of Britton & Brown, 3 volumes, published by Charles Scribner's Sons, this year at \$9.00 which give a description of plants with illustrations, but the authors approach their subject only from the direction of botany, and say nothing about the medicinal value or commercial importance of medicinal plants. The various dispensaries give good information as to medicinal uses, but they are also silent on commercial values, and also much perplexed with regard to plant descriptions. However, it is probable that the various bulletins issued by the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C., may prove of service, for they contain at least some of the information you seem to be seeking. The following bulletins are particularly recommended: Bulletin No. 26, "American Medicinal Flowers, Fruits and Seeds"; Bulletin No. 89, "Wild Medicinal Plants of the U. S."; Bulletin No. 107, "American Root Drugs"; Bulletin No. 139, "American Medicinal Barks"; Bulletin No. 188, "Weeds Used in Medicine". We suggest you write to the Bureau of Plant Industry for a list of these bulletins from which you can make such selections as you may wish.

For curing and preserving medicinal roots, the following general directions may be of service: Roots of annual plants should be dug immediately before the time of flowering; of biennials, or perennials, late in the fall, or very early in the spring. If the latter, it should be immediately after the first appearance of the plant above ground. Perennial roots should not be gathered until after two or three years' growth. Rhubarb is allowed to mature for four or five years—asparagus till three years old. Fleshy or succulent roots require to be cut previous to drying, so as to expose a large surface to the air: the mode in which they are sliced, whether longitudinally or transversely, is of interest in judging of certain foreign drugs, such as calumba root, which is always met with in transverse slices, gentian in longitudinal, the English variety of colchicum cornus, cut transversely, that from the Continent entire, etc. The mode of cutting is little regarded by herbalists in preparing the indig-nous roots for the market. In all cases it is important that the root, or other part of the plant, should be thoroughly dried. In the case of taraxacum, parsley, and other succulent roots, it is necessary to apply a heat of about 150° F., to destroy the eggs deposited by insects, which, through neglect of this precaution, may occasion the speedy deterioration of the root by worms. For drying roots, recourse may be had to a barrel open at both ends, and having a network suspended in it for holding the roots; it is to be stood over the register of a common house furnace. The smaller and more fibrous roots, and especially those containing essential oils, require to be less thoroughly dried, and as soon as their condition will permit of it, should be carefully put into tight drawers, bottles or tin cans. The stems of herbaceous plants should be gathered after foliation, but before flowering, unless the flowers are to be used with the stem (Parrish).

#### Liver Spots

(Roy P.)—"Liver spots," or chloasma, consist of large, irregular brownish blotches, located principally on the forehead and face, and though so-called, medical men state that the liver has but little or nothing to do with their development. Derangements of the secretions, more especially those peculiar to women, favor their appearance. Nervousness, an irritated condition of any internal organ, and internal piles, are said to produce them. The treatment usually recommended is the same as that for freckles, one formula being as follows:

Corrosive sublimate .....	4 grains
Dilute acetic acid .....	2 drams
Borax .....	40 grains
Rose water .....	4 ounces

Mix. Apply to spots twice daily. Mark "Poison".

Fluidextract of dandelion in one-half teaspoonful doses, three times a day, continued for a long time, is also said to favor the removal of liver spots. In any course of treatment

an effort should be made to remove the cause of the blotches, and our advice would be for you to consult a reputable physician.

#### Dry Cleaning Cleanser

(J. C. A. & H. F.)—Various formulas are extant for cleansers of this character. Here are two:

(1)

Soap bark, ground .....	4 ounces
Powdered borax .....	4 ounces
Ivory or other good soap.....	4 ounces
Wood alcohol .....	16 ounces
Ammonia water, 16° .....	16 ounces
Boiling water .....	6 pints

Shave the soap fine and dissolve it in the boiling water. Pour the solution at once upon the soap bark and borax, stir well and let stand half a day, then strain or filter, adding enough water through the filter to make 6 pints, and add the ammonia water and wood alcohol. This mixture is recommended for the use of tailors for renovating and cleaning garments.

(2)

"Scientific American Cyclopedic of Receipts" gives this information under "dry cleaning soaps": Soaps soluble in benzine are employed for the dual purpose of assisting the cleaning process and to minimize the risk of fire. The following quantities give satisfactory results, parts by weight: Oleic acid, 5; caustic potash, 1; dissolve in methylated spirit, 4. These quantities are arranged to provide a slightly superfatted soap freely soluble in benzine. By increasing the quantity of oleic acid the solubility of the soap in benzine is increased. For brushing on the slab, an ordinary hard oil soap may be employed, green-olive oil soap being perhaps the most satisfactory. A brush dipped in benzine, and rubbed on a bar of this soap, dissolves enough to produce a plentiful lather when brushing the goods. When a solid or semi-solid benzine soap is employed—e.g., saponine—it is usual to make a stock solution (a 5 or 10 per cent. solution by weight) and to add the necessary amount of the stock to the machine. For use in the Barbe process, neutral soaps must be employed, those containing free acid being found to attack the galvanized fittings at the temperature to which the machine is raised.

#### Ammonium Hypophosphite

(T. A. M.)—We cannot give the formula for the proprietary article. However, ammonium hypophosphite may be made by bringing calcium hypophosphite and ammonium oxalate together in the presence of a little ammonia, or according to the following formula:

Calcium hypophosphite .....	6 ounces
Ammonium sesquicarbonate (translucent).....	7.23 ounces
Water, a sufficient quantity.	

Dissolve the calcium salt in 4 pints of water, and the ammonium salt in 2 pints of water; mix the two solutions, drain the resulting carbonate of calcium, and wash out the retained solution with water. The filtrate should then be evaporated carefully to dryness; then dissolved in alcohol, evaporated, and crystallized. This salt is deliquescent in the air, very soluble in alcohol and water, and, when carefully heated, evolves ammonia, leaving hydrated hypophosphorous acid. It is used for the same purpose as the other alkaline hypophosphites in doses of from 3 to 5 grains.

#### Yellow Ink for Stamping Leather

(E. P. C.)—A waterproof yellow ink for stamping leather may be made by rubbing up a little boiled linseed oil to which some varnish has been added and then incorporating a sufficient quantity of chrome yellow. Or make a stencil ink, as follows: Take of shellac, 2 ounces; borax, 2 ounces; water, 25 ounces; gum arabic, 2 ounces; yellow pigment, q.s. Boil the borax and shellac with water, until dissolved; then add the gum arabic and withdraw from the fire. When the solution has become cold, dilute with water to 25 ounces (or to the proper consistency) and incorporate the pigment.

Another vehicle which is claimed to be waterproof is made by dissolving bleached shellac 10 parts, Venice turpentine, 5 parts, and oil of turpentine, 10 parts, on a water bath; then incorporate 5 parts of chrome yellow. A little experimenting is necessary to produce a mixture of the right adhesiveness and fluidity.

## Jottings from Great Britain

(By Our London Correspondent.)

### The War and the English Drug Market

The drug market has recovered very considerably from the first effects of the war, and considering the circumstances the improvement is remarkable. Drugs and chemicals continue to arrive from practically all sources (except of course two), and though buyers are not making larger purchases than necessary to cover immediate requirements, they are much less timid than they were a few weeks after the commencement of the war.

Synthetic drugs and chemicals naturally continue very scarce and dear; but salicylic acid, salicylates, and acetyl-salicylic acid and a few other drugs which had not been manufactured in England before are now being produced in commercial quantities by British firms. The arrival of appreciable quantities of bromides from the United States has relieved the stringency in this market and prices are substantially lower than they were a few weeks ago. On the other hand, there is a considerable scarcity of botanical drugs; for instance, belladonna is fetching at least three times its normal price, and stramonium, which is an important ingredient of some of the popular English asthma remedies, is almost unobtainable. Citric acid, tartaric acid, cocaine, cream of tartar and essence of lemon are among the drugs the prices of which are tending downward. At the first public drug auctions held since the war began, the demand was quiet, and generally speaking, prices were lower. Codliver oil is fetching prices which are not much above the normal, and the value of morphine is kept in check by the large stock of Persian opium on the spot.

### The New British Pharmacopœia

The new British Pharmacopœia will come into force on Jan. 1, 1915, but a few advance copies have been exhibited with the object of giving manufacturers an opportunity of making ready to comply with the new conditions. The new volume is more remarkable by reason of the greater precision of processes and tests than by reason of the new additions. In fact, the number of drugs added is only 43, which is about half the number added to the previous edition. On the other hand, no less than 168 drugs and preparations that were official in the Pharmacopœia and Indian and Colonial Additions have been omitted. Of the new additions the most important are the following:

Acetyl-salicylic acid, adrenalin, barbitonum (diethyl-barbituric acid), benzamine lactate (beta eucaine), chloral formamide (chloralamide), cresol, diamorphine hydrochloride, ethyl chloride, guaiacol, hexamine, (hexamethylenetetramine), liquor cresolis saponatus, liquor formaldehydi, methyl salicylate, methyl-sulphonal, pelletierine tannate, phenolphthalein, resorcin, senna pods, strontium bromide, syrup of hydriodic acid, acetum cantharidini, unguentum cantharidini, unguentum lanæ compositum, unguentum plumbi subacetatis.

It will be observed that very few indeed of the so-called "new remedies" have justified their claim for official recognition. Of the 168 drugs and preparations omitted, the majority are seldom prescribed, but some of them on the other hand are not uncommonly used. The crude drugs omitted number 51, the chemicals 17 (the two most notable being the sulphocarbulates of zinc and sodium), and the galenical preparations 98 (including 3 aceta, 3 decocta, 7 emplastra, 15 extracta and extracta liquida, 8 infusa, and 16 liquores concentrati). Some surprise is expressed at the exclusion of sarsaparilla root, poppy capsules, elder flowers, henbane, and several other drugs which still have considerable popularity. Other excluded articles are cantharides (which is represented, however, by cantharidin), ammonium phosphate, gallic acid, silver oxide, arnica rhizome, bismuth oxide, gamboge, cerium oxalate, coca leaves (cocaine of course remains), saffron, elaterium, opium plaster, pitch plaster, green belladonna plaster, liquid extract of coca, extract of jalap, iron arsenate, iron phosphate, mustard, brandy, compound spirit of ether, sumbul root, tincture of aloes, tincture of arnica, figs, galbanum, hops, jaborandi, thyroid solution, musk, poppy heads, picrotoxin, black pepper, pitch, prunes, sassafras root, scammony (the resin remains), veratrine, etc.

Most of the recommendations of the International Committee on the Unification of Potent Drugs have been adopted, and this has necessitated changes in the strengths of 7 drugs and preparations, but the strengths of 33 other articles have

also been changed. Tincture of strophanthus is 4 times the strength of the old, tincture of opium is 33 per cent stronger, tincture of nux vomica is half the strength, and tincture of aconite about half as strong as before.

A considerably larger number of drugs and preparations are required to contain a definite proportion of the chief active constituent. For instance, aconite root must contain not less than 0.4 per cent of ether-soluble alkaloids; nux vomica is adjusted to contain 1.25 per cent of strychnine; belladonna leaves are required to contain not less than 0.3 per cent of alkaloids.

Limits for the proportion of lead and arsenic permissibly present as impurities in some 90 pharmacopœial substances have been laid down. The metric system alone has been employed for all pharmaceutical and analytical computations, but doses are stated in terms of both the imperial and metric systems. The O=16 system of atomic weights has been adopted, but no material change has been made in chemical nomenclature. The "mil" is recognized as a short official designation for milliter. The discarding of the imperial system in pharmaceutical computations is not popular among the older school of British pharmacists.

## NEW REMEDIES

*Ancson* is the trade name for a brand of acetone-chloroform. *Apicol* is a compound syrup of guaiacol with iron.

*Atropapacerin Injection* contains in each ampule 0.0005 g of atropine sulphate and 0.05 g. of papaverine hydrochloride.

*Bacidolin*, a preservative, contains benzoic acid and sulphites.

*Calcikose* is a guaiacose syrup of pleasant taste, containing lecithin.

*Cupronat* tablets are used in typhus fever, and contain 1 g. of copper-albumen, equal to 0.004 g. of metallic copper.

*Dissolvin* is a liquid iodine soap.

*Dixol* tablets contain 0.05 g. of antipyrin, 0.6 g. of acetyl-salicylic acid, and 0.0005 g. of sunjavin. The latter is prepared from an Indian species of the *Melanthaceae*. Used in gouty affections and rheumatism.

*Dr. Münch's Antiepilepticum* contains methylene blue and zinc valerate.

*Elixir Vigorosa* is a slightly fermented sweet Greek wine, with about 50 per cent of an alcoholic cinchona tincture.

*Foligan* is a harmless hypnotic and sedative, said to contain the active constituents of orange leaves.

*Gelonida Neurentica* contains cocaine, menthol, and a small amount of sodium bicarbonate, and is used in diarrhoea.

*Gelonida Somnifera* contains in each piece 0.25 g. of ervasin-calcium and medial, with 0.01 g. of codeine phosphate.

*Grabley's Physiological Mineral Salt Tablets* contain iron, manganese, calcium fluoride, magnesium silicate, calcium, sodium, and potassium glycerophosphates, calcium hypophosphite, magnesium peroxide, sodium sulphate and chloride.

*Katamen* is pyrazolon-phenyl-dimethyl-sulphamido-benzoate, used in dysmenorrhœa.

*Kodan*, for disinfecting the hands, contains chlor-metacresol in alcohol, with a substance derived from seaweed, which renders it gelatinous.

"*Koko for the Hair*" consists of rose water, glycerin, borax and a trace of alcohol.

*Kolarsin* is made from kola nuts, nux vomica, arsenous acid, and cinchona bark.

*Korrelatin-Poehl* contains maltose, hemoglobin, glycerophosphates, the non-specific immune body of milk, the so-called milk spermin, and similar materials.

*Krcarsan* pills contain arsenic and creosote.

*Lakine Balsam* contains 21 per cent. of quinine, mostly in the form of bromide, with thymol, eugenol, camphor, and eucalyptol.

*Lekosan* tablets contain lecithin, kola, and casein.

*Menthescin* contains the allyl ester of cinnamic acid, and of menthol, with a high-melting paraffin-like substance.

*Metranodina Sero* is prepared from hydrastis, viburnum, ergot dialysate, and cannabis indica. Used in dysmenorrhœa.

*Neorheuman* ointment contains free salicylic acid, and is said to be of value in ischias, rheumatism, nervous pains, etc.

*Nerostea* contains valerian with fluidextract of kola.

*Nori*: *Faec* is beer yeast suddenly dried at 120°, and containing no living cells or enzymes.

*Nourbital Ointment* is recommended by Neisser in the treatment of gonorrhoea, and consists of 6 g. of protargol, 24 g. of distilled water, 2 g. of alypin, 35 g. of anhydrous eucerin, and 35 g. of anhydrous lanolin.

*Hexal* is the hexamethylene compound of the omega-methyl-sulphonic acid of p-amidosalol. *Kaffeosal* is the caffeine compound of the same acid, and *Salition* is the corresponding sodium salt.

*Iodoglobin* is identical with di-iodotyrosin, or the so-called iodogloboic acid.

*Oxygen* is an oxygen bath containing perborates. The evolution of oxygen lasts for about 20 minutes.

*Oxypan* is the name given to vitamins prepared from rice, for combatting pellagra and beri-beri.

*Osteine* contains organic calcium silicofluoride and the phosphates from cereals.

*Panatin* is said to consist of codliver oil powder, glycerophosphate of lime, and lecithin.

*Peydal* is a dusting powder containing formaldehyde and Peru balsam.

*Providorin* is a formaldehyde soap solution, with 1 per cent. of tribromnaphthol.

*Purostrophan* is a crystalline preparation from *Strophanthus gratus*.

*Radexol* is the name given to a radioactive preparation of acetyl-salicylic acid.

*Siccocitin* is a palatable lecithin preparation, which contains the most important constituents of the nerve substance, and of milk.

*Tetrapyrin* tablets contains 0.05 g. of caffeine, 0.15 g. of pyramidon, 0.2 g. of acetyl-salicylic acid, 0.1 g. of guarana, and 5 per cent. of starch.

*Thymohypnin* contains a hormone of the thymus gland, prepared by a special process. Used in Basedow's disease, and goiter, as a hypnotic.

*Thyreoeduoicid* pills contain thyroid glands, theobromine-sodium salicylate, podophyllin, quinine hydrochloride, cascara extract.

*Tirisin*, a food product, consist principally of lecithin, calcium glycerophosphate, blood salts, albumen, and milk sugar.

### BRANCH BANKS FOR SOUTH AMERICA

New York Merchants are told of Established Financial Agencies—Commercial Methods and Trade Conditions

The establishment of branch banks in South America by the National City Bank and their probable effect toward making New York the money market for that continent, at least to the extent that American bills shall be paid in dollars on New York and not in pounds sterling on London, were subjects discussed by W. S. Kies, manager of the foreign trade department of the above named banking institution, in the course of an address delivered before 1000 merchants of New York City and the consul-general of practically all the South American and Central American countries, at the recent monthly luncheon of the Merchants' Association, held at the Hotel Astor.

Mr. Kies asserted that "New York cannot hope to become a financial city of world importance until the dollar becomes accepted and its value respected in the markets of the world."

According to Mr. Kies, the National City Bank has authorized the establishment of branches at Buenos Aires and Rio de Janeiro and intends to locate branches in other South American countries as rapidly as commercial possibilities justify. With the right to accept bills drawn against merchandise provided for in the Federal Reserve Act, there will be created in this city a market for a new and very high class commercial paper. The bill being accepted will result in a credit becoming at once available to the South American exporter, which can be used for the purchase of American goods. The branches likewise will be able to accept bills for responsible parties in South America, and the market for these bills being created, the exporting manufacturer will be enabled to realize upon his shipment without delay.

Mr. Kies enlarged upon the service which would be provided by these new branch banks. Reliable credit information will be available after the work of capable credit men now

at work in South America is completed. Commercial representatives at the various branches will study closely the local markets in an effort to develop trade opportunities for American merchants. A publication, called the "Americas," devoted to the upbuilding of trade between the two continents, will be issued. Trade bulletins and letters will also be used in keeping American merchants informed of trade opportunities, and financial and economic conditions in South America. A Foreign Trade Department has been organized and in connection therewith a bureau of statistical information for the purpose of digesting trade statistics, and methods of packing will be readily available, and the statistics vital to any particular trade can be readily ascertained.

Other speakers were John F. Fowler, vice president of W. R. Grace & Co., and Charles M. Pepper, former trade adviser, State department, Washington, D. C. The former pointed out how Americans were too often lacking in appreciation of the size of South America. "It is really a great continent, comprising quite apart from its three European colonies, ten distinct nations." He said that business depression had been general in South America previous to the war, and dependent as they were upon European capital, those countries have been struck a hard blow and have been left bewildered. It must be realized that the buying power of the South American countries has been terribly crippled and will remain so for a long time to come.

Mr. Fowler asked: "How can we dream of entirely replacing Europe in this trade?" Europe has 450,000,000 of both consumers and producers, while we have a population of only 100,000,000, most of whom are content with our own production. He laid emphasis, too, upon the fact that Europe has always been the large market for South American products and, reciprocally would naturally get the corresponding share of the return trade. Also, our trade with South America would be helped if this country can help those countries in their present financial dilemma. It is money that keeps trade alive.

Speaking of liberal credits, Mr. Fowler asserted it to be a fact that American merchants were really very liberal in credits in South America, much more so than "our home merchants would concede to domestic trade." Shipping facilities are surprisingly good. "Our trade with South America is relatively as well served with shipping facilities as are the principal ports of Europe or Asia or Africa. . . . And the ocean rates to ports 4,000 to 6,000 miles distant have been little, if any, more than we have to pay in domestic trade to ports only 600 or 800 miles away." Mr. Fowler concluded his remarks by presenting some excellent "Don'ts for exporters," by expressing the opinion that American manufacturers might better pack their goods well for the South American trade and charge fairly for the packing, and by emphasizing the fact that people in South America do not buy on sentiment, but that price and quality decide them. The speaker would adopt as his motto "Please the customer."

Mr. Pepper asserted that the merchants of this country had got past the point of looking on South America, or any other foreign market, as merely a dumping ground for the surplus products in occasional years. He stated that today, "we are in South America in iron and steel, and are able to compete with England or Germany in peace times, and to supply the deficiency in their supply which the war causes." Mr. Pepper is a great believer in permanent exhibits of goods. "The bigger the exhibit the more is the attention drawn to all classes of commodities, and the more imposing is the effect." The helplessness of the individual exporter places a premium on selling organizations in the South American field and they should be encouraged.

Mr. Pepper's answer to American merchants considering going into the South American field is, "that if you are going in at all it is not for a day or for a year but with the purpose of getting that market permanently, and that is the very reason why you should go in now, study the local conditions and requirements, get at the basic facts, find out all about the consumer, and take orders sparingly. But take some of them, and take them because they will mean much business in the future when normal conditions are restored, and the South American countries go on increasing their purchasing power, and instead of buying a billion dollars of foreign goods, as they do now, buy \$1,500,000,000.

Each issue of WEEKLY DRUG MARKETS contains the latest prices on articles you are interested in. Use them intelligently and save money.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## A Patrician Package—Household Paper

WHILE the calamity howler is relating what desperately evil times the drug business has fallen on, the wide-awake, resourceful, and far-seeing woman pharmacist has recognized and welcomed the splendid modern paper products especially designed for household use, and has marked the profits thereon for her own.

The grocer, the department and stationery store may sell some, but bless you, what chance have *they* of corralling the trade if there is a lady Ph.G. attending strictly to business somewhere near? When Mrs. New-Mother comes to the drug store to buy baby food, nipples, baby soap, talcum, sponges, etc., etc., the wise little woman behind the counter inquires if she knows about the fine, soft, white absorbent paper dydees made especially for baby's use. She has at hand a cloth or rubber outside diaper and a paper dydec to show how this labor-saver is used as an inside lining. The normal cost being only a few cents a dozen, no more than baby's daddy pays for a cigar perchance, Mrs. New-Mother is delighted with the vision of easy traveling and visiting as well as home care and goes forth with a supply of these paper garments.

Do you realize, oh Woman Pharmacist, what it would mean to supply a fair percentage of the mothers in your town with these goods? How? Oh, newspaper advertising, personal letters, mailing list made from birth notices in paper and birth registry. Lots of ways. *The main thing is to set about it and keep at it.*

Then the paper towel trade is an item of importance. Paper towels afford *absolute sanitation, individual service, and economy*, for the expense of laundering soon duplicates the original cost many times. These towels come in large and small sized rolls with convenient metal holders to place in kitchen, bath room, or public wash room. They are simply invaluable. A roll can often be sold with a package of cold cream, as it is more absorbent than linen, for removing the cream from the skin. Other rolls will be welcomed by the auto owner—one for the garage and another to carry under the seat. Paper towels are the handiest things ever, when there is a picnic lunch or the need of cleaning the hands after a repair job. They will polish windows par excellence, they will clean up the brass and nickel fittings in a jiffy, or wipe up a grease or ink spill like a blotter. Sell paper towels to the housekeeper, to the nurse for use in the sick room, to the automobilist, to the local school boards, hotels, waiting rooms, Y. M. C. A., Y. W. C. A., clubs, hospitals, the various "Homes," church lavatories, and other institutions. Why, the field for paper towels is simply e-n-o-r-m-o-u-s. Cultivate it. It will yield a wonderful crop of good round dollars.

It is a safe venture that three-fourths of the people and institutions in *your* neighborhood who *ought* to be paper towel customers, have never given the matter a thought. Get a neatly painted board, screw in place a towel roll holder of each size—and go after business—literally go after it, or have some member of the store force spend spare time demonstrating. This ought to mean case-lot towel orders. Easy money!

And what about paper tablecloths and napkins? I mean the fine, soft, attractive ones which look like linen and cost no more than laundering? Girls' schools, bachelor women doing "light housekeeping," women with small families, women with large families, church entertainment committees, etc., etc., will all be glad to buy, provided you let them know about the goods.

Make a window display that will make your store the headquarters for these things. Set a table with paper goods—tablecloth, napkins, paper plates, drinking cups. Use candelabra with fancy tissue paper shades. Borrow or rent two figures from a nearby drygoods store, and dress one in a brown crepe paper Camp Fire Girl costume and the other in Boy Scout uniform. Easy to make with crepe paper and glue, or borrow real costumes. Have confections and soda water goodies on the table. Make the window pull for several de-

partments. Such a window will be out of the usual run. Be sure to ticket paper goods for sale with prices. This sells goods as well as entertains. Tourists' packages should go like hot cakes to regular summer vacationists and Southern winter resort travelers. Call their attention to these when you fit out their traveling medicine cases.

Housecleaning time is coming, therefore show some bureau drawers lined with spotless paper toweling; demonstrate how handy this same material is to wrap a fresh cake in to keep it perfectly fresh. Use a real cake, perhaps a special kind you are featuring at the fountain. Have a sign card tell how to wrap it properly and state price of paper per roll.

The sale on regular toilet papers is easy to hold if some fine brand of goods is featured. Quantity orders should be encouraged and deliveries made.

Paper trade of this nature has much to recommend it. There is no loss by shrinkage, the goods are pleasant to handle, easy to sell, in constant demand, and give a satisfactory profit. It has so many, many points of contact with the drug business itself that as a side line, it is all wool and a yard wide. The war is making linen high. Push paper!

## An Albany Drug Store Principal

HATTIE May Seely was born in Atton, Chenango County, New York, August 20, 1883. She graduated from Afton High School as valedictorian of her class in 1902.

Because of her brother, who was a young physician, she decided to become a druggist. Soon after leaving high school she spent two years as an apprentice under B. B. Hyde of Afton. She then entered the Buffalo College of Pharmacy, from which institution she graduated with honor in 1906. In July of the same year she accepted the position as pharmacist of the City Hospital of Rochester, N. Y. At this institution she was employed nearly four years. Her plans and ambition were to own and operate a store with her brother's assistance, but these plans were sadly terminated by his untimely death.

H MAY SEELY

After hesitating for a time, and with the assistance of her father and another brother, neither of whom were pharmacists, she opened a store in Albany, N. Y., in the fall of 1912, where they are now conducting a profitable drug business.

The following are a few comments upon her work as pharmacist in the Rochester Hospital by its superintendent:

"I am mindful that neither money nor thanks are any adequate recompense for the faithful, loyal service rendered. If you ever need anything in the way of recommends from me, I shall be glad to give them heartily. I know I shall never find anyone more careful and accurate in the drug department than you."

In her new field of labor in Albany, where she went a stranger, there is already favorable comment from the physicians and the public upon her work.

The success of Miss Seely's career has not made her conceited nor caused her to forget that there is yet much room for improvement and further endeavor. On the other hand, she is thankful she has been allowed to do her little toward proving that women are capable and should be allowed a place in pharmacy. She believes firmly that women of the right kind are especially fitted for this profession; that the pharmacist stands in much the same relation to the doctor that the wife does to the husband. The position of phar-

Treasurer

## W. O. N. A. R. D. Organization Ideals

In order that "Women in Pharmacy" may make its appeal both to non-professional and professional women, we present the first of a series of signed letters from various women who are prominent in organization circles. These little communications will reflect the opinions and aims of the foremost lay workers interested in broadening and strengthening the salutary influence of women in the field of pharmacy.

**T**HE action of the Philadelphia Convention in establishing a Scholarship is especially gratifying. By this means some worthy and ambitious student will be enabled to secure an education in Pharmacy.

"The Board of Directors of the W. O. N. A. R. D. will be very glad to receive the names of applicants. All our members and the women of their families are eligible. Particulars may be obtained either from myself or from our Secretary, Mrs. Nellie Florence Lee.

"This Scholarship is an important step and should tend to increase our membership, thus enabling us to accomplish more and more as time goes on. This is the earnest wish of all who have the welfare of the Organization at heart." (Signed) MRS. JESSIE F. WATERHOUSE, Chairman Board of Directors.

macist is not conspicuous nor is his or her work much before the public. Nevertheless one cannot deny that much of the physician's success depends upon the character and faithfulness of the compounder of the medicines he prescribes.

Miss Seely is a direct descendant of Puritan ancestry. On her mother's side she descended from Captain Roger Clapp of New England fame. Among her distinguished forebears is Captain Robert Seely, who came to New England with Winthrop in 1630. Her ancestors were among the early settlers of New York state.

In religion Miss Seely is a Presbyterian. She is a member of the New York State Pharmaceutical Association and was once awarded a prize for the excellence of a paper written for that body. She is a quiet, unassuming little lady, preferring to live simply and unostentatiously, believing there is nothing finer in the world for her than to spend her life in useful service for humanity.

## AROUND THE CIRCUIT

Louisville Chapter No. 11 held their October meeting in the assembly rooms of the Public Library. A new member, Mrs. George Boechman was welcomed. Professor Gordon L. Curry of the Louisville College of Pharmacy gave a stereopticon lecture on Botany which was very instructive and much enjoyed. On October 15th the Chapter gave a Five Hundred Party for their friends at the DeMolay Commandery, and a good time was the certain result.

"I believe the carrying out of the following resolution adopted at the Philadelphia Convention, 1914, will greatly benefit the coming generation and hope that each member will take it upon herself to do her part:

"Resolved, That greater effort be made by members of Chapters and individual members with young mothers, warning them against the use of narcotics and drugs for infants; also against the use of sample medicines left at the doors; also that speakers be sent to clubs and social centers to inform others of the dangers attending such use." (Signed) MRS. EMMA HOELZER, First Vice-President W. O. N. A. R. D.

"I sincerely hope to see the W. O. N. A. R. D. Scholarship a permanent feature of our work, and trust that through it we may be able to bring to the ranks of Pharmacy women whose work will be a decided asset to the profession as a whole." (Signed) MRS. ANNA J. GROENLAND, Treasurer W. O. N. A. R. D.

"Thought moves the world," but work keeps it moving. Let our slogan for the coming year be 'work.'" (Signed) MRS. LAURA B. WARN, Member Board of Directors, W. O.

## PANAMA-PACIFIC EXPOSITION

The dates from July 12th to 24th inclusive, 1915, are to be known in the Panama-Pacific Exposition Program as the "Pharmaceutical Period." That numerous features of unusual interest will be scheduled for these days is not to be doubted.

K. B. Bowerman, secretary of the California Pharmaceutical Association, has extended a cordial invitation to the ladies of the W. O. N. A. R. D. to be present and to arrange for a session at this time. This gentleman courteously offers to make arrangements for the Organization at practically any available date that may be selected.

With low railway rates, with ample hotel accommodations at reasonable figures, and with added attractions of the Exposition and of California, it is easy to believe that the year 1915 will be the accepted time for many to visit the City of the Golden Gate.

## Wisconsin's Historic Pharmacy Now Installed

A pioneer drug store, which will be of interest to druggists all over the country, has been made a permanent exhibit of the Wisconsin state historical museum at Madison. The pharmacy is stocked with an ample lot of phials, beakers, containers of various sorts and patent medicines of early days. Old-fashioned mortars, mills and quaint distillation equipment have their places in the interesting old store, and the shelves are stocked in accordance with old time standards. The material for the pioneer store, covering the period between 1835 and 1860, was collected by Prof. Edward Kremers, director of the school of pharmacy of the University of Wisconsin.

### Dr. Wiley Gives Birthday Dinner

On October 17th, Dr. Harvey W. Wiley celebrated his 70th birthday by giving a dinner party at Washington, D. C., to a few intimate friends, among them Dr. John Uri Lloyd, of Cincinnati, and Prof. Joseph P. Remington, the godfathers of his children. The dinner was followed by a "movie" entertainment, showing the former head of the Bureau of Chemistry with his wife and children on their farm at Bluemont, Va. Among the other guests were Prof. Chas. E. Munroe, of George Washington University, at one time Dr. Wiley's instructor at Harvard; Dr. W. D. Bigelow, a former associate; Dr. G. L. Spencer, who was one of Dr. Wiley's students at Purdue, and Dr. J. K. Haywood, of the Bureau of Chemistry. Much of the pure food served at the dinner was raised on Dr. Wiley's own farm.

On Oct. 19th Dr. Wiley attended another dinner at the University Club, Washington, at which he was installed as president of the National Association of Mouth Hygiene.

### S. A. Eckstein Celebrates by Working

S. A. Eckstein, president of the Wright Drug Co., first vice-president of the N. A. R. D., and one of the leading druggists in Milwaukee, celebrated his fifty-sixth birthday on Oct. 3. Mr. Eckstein, who said that he was fifty-six years young, observed the day by working at his store and attending to the business arising from the many organizations with which he is affiliated. Forty years ago Mr. Eckstein entered the drug store of I. N. Morton, when he chanced to see a "boy wanted" sign posted in the window. He informed Mr. Morton that he was the boy for the place and he was then told to take off his coat and set things aright in the store. At the end of the week he received an envelope containing \$2.

Besides owning his drug store and filling the office of vice-president of the N. A. R. D., Mr. Eckstein is chairman of the national legislative committee of the Wisconsin Ph.A.; chairman of the executive committee of the Milwaukee Ph.A.; president of Post B, Travelers' Protective Association; chairman of the press committee of the Wisconsin division, T. P. A.; supreme representative, Royal Arcanum; chairman of the Sane Fourth of July Commission in Milwaukee, and president of the Temple B'ne Jeshurun congregation.

### From Pharmacist to Health Board

DR. ALLEN J. McLAUGHLIN, who has been appointed State Health Commissioner of Massachusetts, under the new law which reorganizes the State board of health, is a registered pharmacist, with a certificate from the Michigan State Board. Dr. McLaughlin was born in London, Ont., June 26, 1872, graduated from the London Collegiate Institute, then went to Detroit, where he entered the drug business, and in 1892 passed the State board examination. He was appointed apothecary the same year in Harper Hospital, and in 1893 entered the Detroit College of Medicine, graduating in 1896, and taking up the active practice of his new profession for three years at Berrien Springs, Mich. He then entered the Government service as temporary assistant surgeon at the U. S. Marine Hospital, New York, remaining there two years,

when, for some months, he saw service in the hygienic laboratory at Washington. His next assignment brought him to the medical ward of the marine hospital in New York again.

In 1903 he was ordered to Naples, and while there was transferred to Hamburg to study cholera, which had broken out there. Later he went to Berlin to study cholera conditions in Prussia. The study of preventive measures for malaria at Naples, of conditions during the plague in Trieste in Austria, and cholera in the Philippines next came under his eye. In 1908 he was appointed assistant professor of public health at the Philippine Medical School. In 1910 he was placed in charge of an investigation of sewage pollution of interstate and international waters, and completed a sanitary survey of the great lakes from Duluth, Minn., to Ogdensburg, N. Y., and of the Missouri river from Sioux City to its mouth. Following the determination of a case of true Asiatic cholera in Boston, in July, 1911, Dr. McLaughlin was charged with putting into effect the new regulations regarding immigrants from infected districts. His salary in the new position will be \$7500.

### Pharmaceutical Personalities

—O. G. Poilvert, proprietor of the Maplewood pharmacy, Fall River, Mass., returned not so long ago from a three months' stay in France, most of that time being spent in the province of Normandy, where he visited his aged father whom he had not seen in 30 years. Mr. Poilvert also called on relatives in central and southern France, meeting nephews and nieces hitherto unknown to him, owing to his long sojourn in America. He was in Paris when the war broke out and witnessed the mobilization of the French troops. Unable to ship for home, he returned to Normandy and remained with his father until he succeeded in getting passage aboard the steamer Chicago, at Havre. In reviewing the situation in Northern France, Mr. Poilvert observed that the citizens responded to the call to arms most readily, marching to the front with apparently little concern.

—Capt. Isaac E. Emerson, who controls the Emerson Drug Company, manufacturers of Bromo-seltzer and other preparations, at Baltimore, got back from Europe about the first of October after a somewhat exciting experience as the result of the war movements on the other side. He sailed from New York the first week of July aboard the Vaterland, and was at Frankfort when the war broke out. He started motoring down the Rhine with the intention of going to Holland, but found himself unable to get gasoline, all of the supply having been commandeered for army purposes. He put his machine in storage and returned to Frankfort, where he stayed the greater part of the time, suffering little inconvenience and being treated with great courtesy by the Germans.

—E. H. Burfield, pharmacist at the E. P. J. Harms drug store, Hutchinson, Minn., and a companion, narrowly escaped drowning while hunting in a small steel boat on Bear Lake. The wind blew the boat around broadside to the waves, and it capsized. As it went over, both men grabbed its sides and were supported because of the air chambers with which the craft was equipped. The druggist had on heavy hunting clothing, a sweater and a pair of heavy rubber boots. He managed to work off the boots and to climb up on the boat and shed his coat and sweater. His companion meanwhile made the woods echo with his calls. Two boys responded by rowing out and bringing the men to shore. Mr. Burfield's automatic Remington lies in eight feet of water, place unmarked.

—**Lynn Fort**, of the Lamar & Rankin Drug Co., Atlanta, Ga., upon his return from the N. W. P. A. meeting at Indianapolis, was quoted in the local press of his city to the effect that during his trip through Kentucky, middle Tennessee and Ohio, where grain, hay and stock are raised, he was particularly impressed with the evidences of prosperity he saw, which were quite in contrast with those of the cotton belt. He expressed the opinion that any section which depends upon one crop alone is treading upon dangerous ground. He said: "I trust present conditions will bring so forcibly to the people of the cotton states the folly of the one-crop system that they will never depend so largely upon cotton as they have done heretofore."

—**Dr. A. R. L. Dohme**, president of Sharp & Dohme, manufacturing chemists at Baltimore, has thrown himself into the fight of the railroads for higher rates. He maintains that the petition of the railroads ought to be granted and has issued a statement to the effect that the American lines are carrying goods as cheaply as European roads in all cases, and from 25 to 75 per cent. cheaper than in some. He adds: "If the railroad credits are not established soon there can be no doubt that the greater portion of the six billions of the securities held abroad and of which the major portion is probably railroad securities, will be unloaded upon our markets at the very earliest opportunity."

—**Joseph Koenig**, a Cincinnati druggist, got back home recently after a highly exciting European trip, including two months spent in Germany after the outbreak of the war. He had almost given up hope of getting back for a long time, as he found on arriving at Rotterdam with a party of other American citizens that steamer reservations were made for many sailings ahead; but he was able to secure a ticket turned back by an American on the steamer Noordam, then four days past due and presumably a victim of the war, and when the steamer finally turned up he became one of her passengers. "There is no place like Cincinnati," declared Mr. Koenig.

—**A. M. Hopkins**, manager of the Dow string of drug stores in Cincinnati, is a golf fiend of the most virulent type, and he recently provided his friends who are similarly afflicted with a remarkable story of a tie game, which was the more remarkable in that his opponent was also named Hopkins. The two Hopkins set out to play the nine-hole course at the Hamilton County Club, one winning the first three holes, the other the next three, and tying the last three. Playing the course over again, the same thing resulted, and they decided to call it a draw and lay off for the day.

—**Theodore H. Busch**, formerly one of the best known druggists of Davenport, Ia., and his wife, Mrs. T. H. Busch, recently celebrated their 25th wedding anniversary at the Davenport Outing Club. Covers were laid for about 50 guests at the elaborate six-course dinner that was served. The club rooms were beautifully decorated for the occasion and the table was arranged in the form of a good-luck horse shoe. In the evening, Mr. and Mrs. Busch were assisted in entertaining their guests by their son Ralph Busch, a well-known jeweler of Davenport.

—**Walter O. May**, proprietor of the Red Cross pharmacy, in Piqua, O., for several years, recently disposed of the store to W. B. Sanders, of Cincinnati, who has been associated with Louis Heister, one of the best-known prescription pharmacists in the Queen City. Mr. Sanders took charge at once, as Mr. May desired to secure immediate release from the cares of business on account of his health, which has been poor for some time. He has not announced his plans for the future, further than that he will take a long rest.

—**F. H. Bentz**, of the Fort Wayne Drug Co., Fort Wayne, Ind., and Mrs. Bentz, recently entertained 75 or more guests, including 35 officials and employes of the company, at their beautiful country home, "Wildwood," Lima, Ohio. The affair was in the nature of an all day picnic, features of which were noon day dinner, an address by the proprietor, an inspection of house and grounds, songs by the "chorus," athletic contests, etc. The Fort Wayne contingent motored over to "Wildwood."

—**Ed. W. Calvin**, druggist and horseman, Newman, Ill., was recently seriously injured while exhibiting a team of spirited horses in the show ring. In turning suddenly the horses are said to have become frightened. They turned too short and the light rig was upset. Mr. Calvin was thrown out with considerable force, breaking his leg near the hip. His

shoulder bone was also broken and he suffered other injuries about the chest.

—**John J. Murphy** of South Boston, formerly a prominent pharmacist in that section of Boston, has been appointed to a position in the office of Mayor Curley of Boston, and will have charge of certain editorial work of the City Record. Mr. Murphy resigned his position as secretary to Congressman James A. Gallivan two months ago to become a candidate for the democratic senatorial nomination in his district, but failed to make it.

—**Fred W. Connolly**, one of the best known Boston druggists, returned from Europe early in September, after a varied experience in the war zone. With his wife and son he was in Frankfort when war was declared. He left Germany via Holland and reached home via Rotterdam, London, and Montreal, Canada. He spoke well of the treatment accorded him by the Germans, and praised the work of the American consuls.

**George H. Benkhardt**, for the last thirteen years advertising manager for the Smith, Kline & French Co., Philadelphia, has severed his connection with the company and is now seeking a business connection with a house that can use his special knowledge and ability. His experience covers a period of more than twenty years not only in advertising, but buying, selling and shipping as well.

—**Representative Thomas W. White**, of Newton, Mass., one of the most prominent Republicans in the State legislature, has been appointed by Governor Walsh as a member of the State Board of Efficiency and Economy. As the many duties require the occupant to give his full time to the position, it means his retirement from the drug business until the expiration of his term of office, at least.

—**H. J. Holst**, druggist of Bloomington, Nebr., who originated Brighten-up Day in his city last spring, was one of five in the entire country to receive either an honorable mention or a prize and a write-up, with illustrations, in a leading magazine of the country. The press of Bloomington expressed its appreciation of the desirable advertising which resulted to that city.

—**Ed. Engelbright**, druggist at Cook, Minn., who returned recently from Belgium, where he went to claim his interest in his father's estate, states that he saw enough of German operations while abroad to convince him that the Kaiser's army will triumph. His estate is at Liege and his property was damaged by the firing on both sides, his dwelling being badly shattered.

—**Charles E. Hoffman**, assistant manager of the Riker-Jaynes store at 143 Sumner street, Boston, and his wife, who was Miss Kathryn Brennan, were recently tendered a complimentary dinner at the Quincy house. Thirty of their friends were present. Following the dinner came a reception and dance in the hotel parlors. A purse of gold was presented in behalf of the party by C. A. Smith.

—**Charles L. Gapen**, druggist at Ottawa, Ill., who served as first lieutenant of Company C, Third Illinois regiment, during the Spanish-American war, has just received pay for part of his services at that time. Three years after the war he put in a claim for furlough pay. After years of red tape he has received a check for \$233.34, but it cost him \$71 attorney's fees to get the money.

—**William F. Silvers**, druggist, who is proprietor of the store at Onderdonk and Gates avenues, Ridgewood section, Brooklyn, has notified those in charge of his business that he has arrived in London but could not get steamer accommodations. He attributed his inability in this direction to the fact that so many Americans are endeavoring to leave Europe on account of conditions there.

—**A. S. Coody**, 30 years of age, a graduate pharmacist, secretary and treasurer of the Lucedale Drug Company, at Lucedale, Miss., president of the Mississippi State Pharmaceutical Association, an editor of "The Issue," a political journal published at Jackson, Miss., and active in State politics, is mayor-elect of his city. A pretty good record for 30 years!

—**Otto Lane**, owner of a drug store at Prospect street and Bloomfield avenue, Passaic, N. J., for 28 years, has mysteriously disappeared. He left a note asking his brother to manage the store for the benefit of his wife and daughter. His wife fears that because of business troubles he may have taken his life.

—**Carl Pftzing**, the Mason City, Ill., druggist, has received a letter from his son, Paul, who is living in Chicago, and who reports that he heard while on a recent trip through the stock yards that the English government had placed an order for a large number of the western bronchos that were broken in at the yards.

—**Eugene S. Bernadas**, druggist at 2800 Magazine street, New Orleans, had an exciting chase after a thief he discovered in the act of ransacking his store. Mr. Bernadas and the burglar raced backward and forward, until the latter made his exit through the broken window by which he had entered. Nothing was stolen.

—**Augustus Yergey**, a prominent Reading, Pa., druggist, will think some time before he again goes out for a ride on his mendacious bicycle. While out for a "spin" recently, he was precipitated over the handle bars of the wheel when the brake refused to work. His injuries, while slight, were sufficient to keep him from business for a week.

—**Thomas Aiken**, formerly with J. G. Godding & Co., Boston, is now manager of Thomas W. White's pharmacy in Newton, and since Mr. White's appointment as a member of the State Board of Efficiency and Economy, has full charge of the business.

—**H. J. Mentzer**, the Washington, Pa., druggist, for at least once will have to waive his exemption in the interest of the law. Mr. Mentzer has been drawn to serve as a juror for the special term of Common Pleas Court during the week of November 16, at Chambersburg, Pa.

—**E. V. McAllister**, the West Side, McHenry, Ill., druggist, presented a large McHenry pennant to George Brailsford, a baseball player, for the home run the latter made in a recent game. This is the second pennant this popular druggist awarded during the past season.

—**W. Q. Harris**, general manager of the Berry Drug Co., Columbia, Miss., was painfully burned when a bottle of hydrochloric acid fell from a shelf above his head and broke on the ladder upon which he was standing, the acid spilling all over both of his legs.

—**Professor Edward Kremers**, dean of the University of Wisconsin School of Pharmacy, recently delivered a lecture on "The Evolution of the Pharmacist and His Life," in the St. Louis College of Pharmacy. The lecture was illustrated with lantern slides.

—**George D. Case**, of Milledgeville, Ga., nominated for the position of State drug inspector by the Board of Pharmacy, will be appointed by Commissioner of Agriculture J. D. Price and will go into office July 1, 1915. The Georgia attorney-general has issued an opinion to that effect.

—**William M. Beall**, president of the Beall & Steele Drug Co., Steubenville, Ohio, is vice president and a director of the new Steubenville Bank & Trust Co., recently opened in that city.

—**W. B. Ackerman**, former proprietor of the Rexall drug store of Stroudsburg, Pa., has turned farmer, and so successful has he been on his farm at West Chester that he is preparing to build. Quite a change.

—**Thomas A. Burke**, assistant manager of the Riker-Hegeman Co. drug store at New Britain, Ct., and Miss Susan A. Murray, of Danbury, were married recently in the latter city.

—**Chester L. Woodbury**, druggist of Malden, Mass., and Miss Laurice B. Flagg, of Marlboro, were married recently at the home of the latter's parents. Following their honeymoon they took up their residence at Malden.

—**Carl T. Buehler** and Miss May Albright, of St. Louis, were married Sept. 30. Mr. Buehler is with the Metropolitan Pharmacy.

—**Clarence R. Sizemore**, chief chemist for Pfeiffer Chemical Company, St. Louis, and Miss Rose Mueller were married recently in Louisville, Ky.

—**Max P. Ladwig**, of St. Joseph, Mich., a member of the Knaak Drug Co., which has stores in St. Joseph and Stevensville, was married recently to Miss Martha Abraham.

—**John Wright**, druggist at Penrose, Colo., was recently married to Miss Alma Hunt, of Florence. Mr. Wright has just erected a new store building in his city.

—**F. R. Fleming**, recently of the Soo, now a pharmacist at Farrell's drug store, Munising, Mich., was recently married to Miss Louise Kenz, of Bond la Well, Wis.

—**Ed. Still**, manager of the Kahn drug store, De Kalb, Ill., fell from a ladder some time ago but at last report was recovering nicely.

—**Thomas Flynn**, pharmacist of Bloomington, Ill., is a patient at St. Joseph's hospital in that city. He is suffering from an affection of the throat.

—**Lucian D. Lyons**, the druggist at St. David, Ill., recently married Miss Zella Murphy, who has been employed at the Cuba (Ill.) pharmacy for several years.

—**George Tanner**, a druggist, Douglas, Ga., is reported to have shot and killed a negro, who first cursed and shot at him.

—**W. D. Lacy**, proprietor of the Red Cross drug store, Peoria, Ill., is out again after seven weeks in the hospital, as a result of two operations.

—**E. S. Smythe**, proprietor of the Smythe Drug Co., North Fort Worth, Texas, returned recently to his store after an illness of two months or more.

—**O. J. Ohlinger**, of Canton, O., has accepted the management of the Diver drug store at Alliance.

—**C. H. Mount** is now general manager of the Wherrett-Mize Drug Company, Atchison, Kansas.

—**Marcus Gerbrick**, druggist at Stanford, Ill., has been appointed postmaster of that city.

## OBITUARIES

### ROBERT A. CARSON

Robert A. Carson, president of Brannon & Carson Co., wholesale and retail druggists, Columbus, Ga., and one of the best known and most beloved citizens of that city, died at his residence after an illness of 12 days of typhoid fever. Mr. Carson had not been well during the past several years, but had been able to attend to business until a week previous to his death.

Mr. Carson was prominent in the business, social, educational and civic affairs of Columbus. He served for a number of years as president of the board of trustees of the Columbus public schools, and under his administration the school system was expanded and new buildings erected. He was formerly vice-president of the National Bank of Columbus, and was a director of this institution when he died. He was also a director of the City Mills Co. He had been engaged in the drug business for 43 years. He came to Columbus in 1871 from Macon county, where he was born and raised. He entered the employ of the late A. M. Brannon, who conducted a wholesale and retail drug business. Six years later he married Mr. Brannon's daughter. In 1879, the firm of Brannon & Carson Co. was organized, with Mr. Carson as president and general manager. He served actively in this capacity until his death. He was 61 years of age. One brother and two sisters survive him.

### RECENT DEATHS

—**Frank Cundall**, druggist of East Greenwich, R. I., and well known as a business man throughout Rhode Island, is dead. He was 61 years of age. Mr. Cundall was a member of Cundall & Earnshaw, druggists, East Greenwich, and proprietor of the Ocean View Hotel at Block Island. He was born at Mystic, Ct. In 1887 he bought out Congdon Brothers, druggists, East Greenwich, and two years later married Miss Effie Ball, the only daughter of the proprietor of the Ocean View Hotel at Block Island. Since 1882 he has managed that house. In the same year he took Arthur Earnshaw into the drug business. His annual custom was to visit his home in Ortega, Fla., each winter. He was past master of King Solomon lodge, A. F. & A. M., and a member of the Seventh Day Baptist church at Ashaway.

—**Charles D. Rounds**, druggist and banker of West Pullman, Chicago, was found dead in his bank. A gas jet was open, it is said. Twenty-two years ago Mr. Rounds came to West Pullman from Plano. He secured employment as a clerk in the village drug store. By his industry he was soon enabled

to buy the establishment. He made it the finest drug store in the outskirts of Chicago. According to the story, his first bank was unloaded upon him and Rounds unexpectedly found himself a banker. His various banking and other business enterprises proved very successful until the Lorimer-Munday claim of banks "went up." Just recently he was asked to explain \$20,000 worth of fictitious notes. His wife survives him.

—**William Wynn**, champion wing shot, and for many years a widely known druggist of Brooklyn, N. Y., died recently at the residence of his daughter from general debility after a long illness. Mr. Wynn had a store at Fulton and Bond streets for half a century. Dr. Wynn was best known as a crack pigeon shooter. For many years his name was at the head of most of the handicap wing shooting matches held on Long Island and he was also widely known throughout the country as a crack shot. He was born in Canada, near Niagara Falls, 80 years ago. He was a member of Altair lodge, F. & A. M., and Constellation chapter, R. A. M., and was one of the organizers of the Brooklyn Ph. A. A daughter and two grandchildren survive.

—**William Bernard Bird**, Boston, one of the pioneer drug manufacturers of the country, died at Brookline, Mass., of pneumonia which developed following an operation for appendicitis. He was 72 years of age. Mr. Bird was born in Brookline and attended the public schools of that town. He entered business under his father, who was of the firm of J. A. & W. Bird, dealers in extracts, chemicals, etc. He was a member of the Dry Salts' Club, the Boston Chamber of Commerce, and the Paint and Oil Club. He was known in downtown circles as one of the few remaining business men classed as "gentlemen of the old school." A wife, two daughters and one son survive.

—**William D. Burdette**, a pioneer business man and druggist of Marlboro, Mass., died at the home of his daughter in that city in his 80th year. He was born in Lancaster, and was educated in Newton and Allentown. In 1860 he went into the drug business, retiring in 1907. He was a member of the Marlboro school committee for nearly 25 years and its chairman for many years. He was a trustee of the Marlboro Public Library, associate justice of the Marlboro police court from the date of its founding until 1909, and a trustee of the Marlboro Savings bank since its inception. He was president of the bank for a time. One daughter and a son survive.

—**Charles Glass**, for many years a prominent druggist of Carlville and Mason City, Ill., died at his home in the latter city after an illness of four weeks. He was 70 years of age. He served for three years without furlough during the Civil war. At the close of the war he entered his father's drug store. About 30 years or more ago he went to Mason City, where he purchased a drug store and took up his residence. About a year ago, finding himself in poor health Mr. Glass returned to Carlville and built himself a home, in which he resided with his sister.

—**Joseph A. Irvine**, one of the most highly respected citizens and business men of Leesburg, Ind., died at the age of 67 after an illness extending over several months. Mr. Irvine located in Leesburg 30 years ago and was engaged in the drug and dry goods business for many years. He was postmaster for several years and 11 years ago organized the Peoples' bank of Leesburg. Of this institution he had been cashier for a number of years. He was a member of the Odd Fellows and K. of P. lodges. His widow and three sons survive.

—**John Tyler Granger**, one of the best known druggists of Lynn, Mass., died at his home of pneumonia. He had been in the best of health until stricken less than a week before his death. He was 45 years of age and had been in the drug business from the age of 15. Six years ago he entered the firm of Bulfinch & Granger. He was a member of the Bay State lodge, I. O. O. F., Lynn Encampment, the Lynn Historical society and the Massachusetts Ph. A. Mr. Granger was of a sunny disposition and had many friends.

—**T. R. McEwen**, veteran druggist of Youngstown, O., died at his home at Garrettsville, where he had lived for the past four years. He was well advanced in years, but his death was not expected so soon. Mr. McEwen conducted the Eagle drug store in West Federal street for some time, later forming a partnership with F. F. Lyons and still later going into

partnership with William Breaden and conducting a store on the South Side. A widow and one son survive.

—**James G. Anderson**, for 18 years part owner of the drug store at Bedford and Atlantic avenues, Brooklyn, N. Y., died at Guelph, Ontario. Mr. Anderson had been ill for several months and four months ago returned to his old home in Canada for rest. Bright's disease developed and death followed shortly. He had lived in Brooklyn for 20 years. For the last 13 years he had had as a partner A. C. Hutton, the firm name being Hutton & Anderson. He was unmarried.

—**Frederick Weismann**, druggist of Union Hill, N. J., who was once a member of the New Jersey legislature, committed suicide in his store at Union Hill by taking cyanide of potassium. He was released recently from the Hudson county penitentiary, where he served 18 months for the illegal sale of heroin and cocaine. He was 34 years of age and left a wife and two children.

—**Jules C. Richard**, the New Orleans druggist who was shot in the back by a salesman with whom he had done business, died at the Charity hospital after making a seven-day fight for his life. His spinal column was severed by the bullet which was fired while his back was turned to his assailant. The shooting occurred in Acme drug store No. 5, New Orleans.

—**Harry D. Hutton**, 53, druggist of Washington, D. C., was stricken with heart disease while in his store and died before the arrival of a physician. He was to have been married shortly. With Samuel L. Hilton, he had conducted his drug business for 25 years. He was a member of Dawson lodge, F. & A. M.

—**Thomas B. Whaley**, 35, died at his home at Norfolk, Va. He had been connected with the local drug trade of that city for years. Recently he conducted his own drug store at Ocean View. He was a member of Montauk Tribe, No. 55, Improved Order of Red Men. A widow, a son and a daughter survive him.

—**Charles F. Reichardt**, superintendent of the drug department of Colburn, Birks & Co., wholesale merchants, Peoria, Ill., died following a stroke of apoplexy. He was about 70 years of age, and had been with his firm 45 years or more. Two sons and one daughter survive.

—**Julius M. Furer**, one of the oldest druggists of Sheepshead Bay, N. Y., died at his home from complications brought on by advancing age. He was born in Germany, on May 24, 1860, and came to this country at 19 years of age. He settled in Sheepshead Bay more than 30 years ago.

—**James E. Cooney**, druggist, Rochester, N. Y., died after a long illness. Previous to death, he conducted the Cooney pharmacy at 888 Dewey avenue. He was secretary of the Rochester Pharmaceutical Society, in which capacity he had served for several years.

—**J. C. Huber**, 75, head of the Huber-Fuhrman Drug Co. and Huber Bros., Fond du Lac, Wis., and a former president of the common council of that city, died at his home after a long illness. He was born in Switzerland, but had lived here for more than 50 years.

—**George C. Schoettle**, formerly a druggist of Collinsville, Ill., and well known in Troy, died at his home after a long illness due to cancer of the stomach. He was 48 years old. His funeral was conducted under the auspices of the Masonic fraternity.

—**Dr. J. N. Murdock**, 86, a pioneer wholesale druggist and physician of Parkersburg, W. Va., is dead after a brief illness. A son, Allen C. Murdock, mayor of Parkersburg, survives.

—**R. E. Love**, druggist at Sparks, Nev., for more than six years, died at his home at Reno. He was a native of England and was 74 years of age. The body was shipped to Oakland.

—**Thomas Frost**, 75, for 48 years a druggist and 18 years postmaster at Siegel, Ill., died after a few hours' illness. He resigned as postmaster a week previous to his death.

—**Charles C. Dunbar**, druggist, died at his home in Baton Rouge, La. A wife and three children survive. He was a member of Jefferson lodge, F. & A. M.

—**Jesse Zimmerman**, 63, prominent druggist of Lockport, N. Y., for more than 40 years, was found dead in bed; heart disease.

—**Ernest Haberdosh**, 31, prescription clerk, Wakefield, Mass., found dead beside roadway; cause of death a mystery.

## Features of the National Wholesale Druggists' Annual Convention

**President Lattimer's Views on the Problem of Drug Distribution—Uniform Freight Classification Urged—Valuable Suggestions on Fire Prevention—Closer Co-operation with Pharmacists Advocated—Important Legislation—How the Buying Club System Works—Dr. William Jay Schieffelin's Resolution Relating to Railroad Rates—Conservative Buying Recommended.**

The fortieth annual convention of the National Wholesale Druggists' Convention, held at the Claypool Hotel, Indianapolis, was well attended. President George W. Lattimer's address was a comprehensive effort, containing some very pertinent observations on problems of current interest to the trade. In the various committee reports were incorporated much that should prove instructive to the retailer, as well as the wholesaler. In this direction, the reports of the committees on credits and collections and fire insurance, should receive special attention. Dr. Henry P. Hynson made an eloquent appeal for active participation by wholesalers in the affairs of the A. Ph. A. Dr. William Jay Schieffelin presented a strong special report on the railroad rate situation and his resolution calling for the opening of the case of the railroads was adopted. The list of officers who were elected was published in the October ERA. The association meets next year at the Hotel Potter, Santa Barbara, Calif., in the week beginning September 27.

### President Lattimer's Address

President Lattimer, after outlining general business conditions as affected by National legislation during the past year, got down to matters of more direct interest to the members and the trade. He averred that the association's connection with the Chamber of Commerce of the United States of America and the National Fire Protection Association had been beneficial. The association participated by voting on referendum No. 7 in regard to the creation of an interstate trade commission and referendum No. 8 on trust legislation for regulating business practices, sent out by the Chamber of Commerce to its membership. Both provisions have become laws.

Uniformity of state and national laws was strongly urged by President Lattimer. Anent the abolishment of the guarantee legend he asserted it to be a question whether this provision, because of its abuse by the dishonest, did not do more harm than good. Of the Harrison bill, he said, that while all would have preferred that it should stand as recommended by the Drug Trade Conference, the trade is to be congratulated upon the framing of such a measure, which, while commercially unprofitable, is yet so beneficial to the people.

The report was quite general in scope and developed many subjects. Almost the entire burden of a war tax on proprietary medicines would fall on the independent, full price retail druggist, and would thereby be class legislation of the most objectionable kind. Parcel post is increasing the details of the wholesale drug business materially. The drug trade will be obliged to adjust itself to the increased expense of smaller and more frequent orders. As to membership, while the number of wholesale druggists is gradually growing less, there is a very gratifying increase in the number of associate members. There are still more wholesale druggists in the country than are needed for the economic distribution of the class of goods handled by the drug trade.

The United States will undoubtedly profit more as a result of the European war than any other country in the world. Its manufacturers will surely be forced to produce many of the items now secured from foreign sources. The country has been shown very forcibly the need of improved marine shipping facilities.

President Lattimer's observations upon the problems of drug distribution are exceeding interesting. He said:

"The problem of the most economical, efficient and complete method of distribution from producer to consumer is to-day one of vital interest to the manufacturer, wholesaler and dealer in drugs and medicines. If, after careful investigation, the mail order, department store, chain store or co-operative buying club is found to be the most economical and efficient method, these will gradually supersede the old ways.

"According to the most advanced students of economics to-day the most complete, efficient and economical method for the distribution of drugs and medicines is through the manufacturer, wholesaler and retailer, owing to the immense variety and the wide distribution necessary to reach the sick in every section of the country."

### Treasury in Good Condition

Treasurer S. E. Strong reported a balance on hand in the sum of \$10,789. Total receipts had amounted to \$28,001, and total disbursements, \$17,211.

As chairman of the committee on membership, Benjamin A. Jackson, of Providence, reported that 30 letters had been sent out soliciting active members, and 850 letters soliciting associate members. Of follow-up postals, 854 had been sent out. In addition, Mr. Strong had written many personal letters to fellow jobbers asking their assistance. The results were hardly adequate for the large amount of labor involved.

The committee on membership proposed the following applicants, who were later elected:

Active members—Bagby Howe Drug Co., Louisville, Ky.; Burwell & Dunn, Charlotte, N. C.; Huntington Drug Co., Huntington, W. Va.; Fritts & Wiehl Co., Chattanooga, Tenn.

Associate members—Allen Pharmacal Co., Plainfield, N. J.; F. W. Berk Co., Ltd., London, England; Chicago Heights Bottle Co., Chicago Heights, Ill.; Daggett & Miller Co., Providence, R. I.; Davidson Rubber Co., Boston; Hynson, Westcott Co., Baltimore; Kopps Baby's Friend Co., York, Pa.; Liquid Carbonic Co., Chicago; Gerhard Mennen Chemical Co., Newark, N. J.; S. B. Penick & Co., Marion, N. C.; A. L. Webb & Sons, Baltimore; National Fruit Products Co., Boston; Jefferson Distilling and Denaturing Co., New Orleans, and Walker Soda Fountain Co., Chicago; De Vilbiss Mfg. Co., Toledo, O.; Gould Witch Hazel Co., Boston.

B. B. Gilmer, of Houston, Texas, chairman of the committee on credits and collections, reported that in response to a list of a dozen questions mailed to members he had received many frank replies. During the past year, only one member had adopted uniform terms on drugs and sundries—a change, which, if universal, the committee observed, would be of pronounced advantage. A considerable number reported a growing tendency on the part of customers to deduct cash discount after the stated period for such had expired. Most of the members so reporting, while recognizing the evil as a pernicious one, felt that they were forced to condone such offenses because of the attitude of competitors. Too much emphasis, in the opinion of the committee, could not be used in urging upon all the members the vital importance of requiring rigid adherence to specified terms. The replies showed that there had been no increase during the past year in the number of those who pay their bills within the cash discount period. On the other hand, it appeared that a greater number of days' sales are being carried by the jobbers.

This committee reported that over-solicitation continued as great an evil as ever. No firm will take the initiative. The committee did not believe that the arrangement suggested in the following question would accord with sound business principles: "Does the committee approve the closing of old accounts in notes (series forms) payable monthly, in amounts as agreed, all goods purchased thereafter to be paid for and discounted within the time specified, and the continued allowance of cash discount on current purchases where the notes, or any of them, have not been paid because of the customer's efforts to take care of current purchases owing to the cash discount feature?"

One member suggested that an interest rate of 10 per cent. on matured accounts would increase the number of cash discount customers and transfer a large part of the banking business done by wholesale druggists to the bankers, where it belongs.

The committee advocated fuller co-operation in the frank exchange of credit information. It recommended active interest in local or credit men's associations, and, through them, in the work of the National Association of Credit Men. It advised energetic assistance to efforts being made looking to the enactment of laws governing fraudulent statements made for the purpose of securing credit.

### Uniform Classification Needed

The report of the committee on transportation was presented by Chairman Lynn Fort, of Atlanta, Ga. Mr. Fort outlined the changes which had materially affected transportation during the past year, among these being the Panama

Canal toll exemption clause, the five per cent. increase in freight rates in Central Freight Association territory, the decision of the Supreme Court sustaining the ruling of the Interstate Commerce Commission governing the long and short haul clause, the readjustments of interstate express rates and the reduction in parcel post rates. The long and short haul ruling will encourage shipment from foreign markets at the expense of the local distributing centers. The five per cent. freight increase will cause an enormous additional cost to the shippers. The bill now before Congress providing for uniform freight classification should receive the support of every shipper.

The committee expressed the opinion that this country needs a permanent merchant marine large enough to take care of its commercial interests, and a navy strong enough to protect it. The committee asserted that the service rendered the drug jobber by the express companies is preferable to the parcel post, for the following reasons: Parcels are collected, receipts given for parcels, indemnity for loss or damage up to \$50 is provided without additional fee; special containers not required for liquids, and numerous commodities excluded from the mail are accepted for transportation. Chairman Fort expressed the opinion that all poisons and compounds containing poisons should be admitted to the mails, except those the handling of which would endanger the lives of the department employes.

#### Fire Insurance Suggestions

James W. Morrisson, of Chicago, presented the report of the committee on fire insurance, which was very extensive. Among its most important features were its reference to Supreme Court decision assuring the Insurance Superintendent of Kansas of his right to compel a reduction of insurance rates of about 12 per cent in Kansas, and denying the right of a reciprocal company to a license under a Missouri statute defining certain classes of indemnity contracts, prescribing regulation therefor, and fixing a license fee. The act was declared unconstitutional. Nevertheless, in the opinion of the attorney-general of Missouri, the same having been handed down following the decision in the above case, inter-insurance was not brought to an end in Missouri. On state regulation of insurance, Mr. Morrisson said, in part, that while discrimination between states probably does exist, the remedy may not be as simple as it seems, and that for any state, the only permanent way to materially reduce insurance cost is to reduce the fire loss.

The committee suggested that each member on his return home use his influence to help get a proper State fire marshal law if his State has none, or to strengthen an existing unsatisfactory one. The committee found it hard to believe that among all the cities represented in its membership there were but fourteen commercial organizations actively at work to prevent fire waste. It suggested that each member work with his local commercial organizations to lessen the fire loss tax on the business of his city. It recommended that the members take under consideration the inadequate insuring of drug stocks by retailers. Very often the retail druggist is not informed about insurance, and frequently knows nothing about policies or the companies issuing them.

Regular inspection of wholesale drug plants by some member of their respective organizations was urged by the committee. Hazardous articles should be properly safeguarded. Members should ascertain the defects they are charged for in their insurance policies. Some of these may be easily corrected. Each member should have the officer in charge of the nearest fire station familiarize himself with the plant. This may save valuable time in case of fire.

In the discussion which ensued following the presentation of the above report, G. Barret Moxley, of Indianapolis, heartily seconded the advice incorporated therein anent the necessity of the retailer keeping up his insurance. The wholesaler should check up the retailer, especially if he is inclined to carry a considerable line of indebtedness. "A fire extinguisher in a retail store will prevent many a fire," said Mr. Moxley, in approving another suggestion that the members offer fire extinguishers for sale to retailers. He also approved of the suggestion that the members endeavor to establish a Fire Prevention Day in their respective cities.

Certain features of the report of the committee on paints, oils and glass, chairman, W. T. Harper, of Ottumwa, Ia., are particularly interesting. In the words of the committee:

"The department of the wholesale drug business pertaining to proprietary lines of pharmaceuticals has not grown com-

mensurate with other lines of trade. It has been taken away from us by physicians being supplied by physician supply houses whose business has been taken away from our customers, the retail druggists. It also has been taken away from us by the proprietary pharmaceutical houses going with their lines direct to the retail druggist as preferred account. Between these two avenues of loss the inroads into that department of our business have kept it from increasing in volume as it should.

"The druggist sundries and stationery lines have been largely taken up by both exclusive stationery stores and by dry goods and department stores, so that this has had the effect of either depreciating the amount of sales in these lines or they do not keep pace with the increased volume that the business should show. Notwithstanding this curtailment, some of the wholesale druggists of the country are pushing this department of the business and are getting results. It has come to the attention of the chairman of this committee where a salesman representing the druggist sundries department of a wholesale drug house had annual sales amounting to \$100,000 in his territory."

Dr. Henry P. Hynson, of Baltimore, made an earnest plea in behalf of the American Pharmaceutical Association. He advocated a more active connection between the wholesale druggists and the A.Ph.A. As members they could exercise great influence. "There is no place in the world where you can do more effective work in this matter of making the American druggist a better business man and a better risk than you can in the Commercial Section of the A.Ph.A., and, therefore, I bid you all a hearty welcome to that section especially."

Dr. Hynson asked for the appointment of a committee of six to confer with similar committees from other National pharmaceutical organizations upon the establishment of a National congress to act upon questions of country-wide importance to pharmacy. President Lattimer stated that the legislative committee would have all the powers of acting as a conference committee as suggested by the speaker.

Harry B. Thompson, representing the Proprietary Association of America, stated that proprietary medicines escaped the war tax because the burden upon the druggist would be so great and the trouble involved in the collection of the revenue would be so disproportionate to the total revenue received from that source that it was not wise to impose the tax on proprietary remedies.

#### Important Legislation

In his report as chairman of the committee on legislation, the chairman, Charles A. West, of Boston, commented favorably upon "the most notable step" yet taken in the advancement of uniformity of food and drug laws, the establishment of a Division on Uniform Federal and State Laws by the United States Department of Agriculture. He commended this action for the warm endorsement of the members. His committee recommended that the association designate an official delegate each year to represent it at the annual meeting of the Association of American Dairy, Food and Drug Officials. One or more delegates should also be sent to the twenty-fourth annual conference on uniform State laws held in Washington Oct. 14th.

Mr. West asserted that never before in the history of the country had so many important bills been enacted in one year affecting the entire business community as during the past twelve months. He cited the tariff act, the new currency bill, completely reconstructing the banking and currency system and providing for foreign branches of domestic banks; the Federal Trade Commission law, the Clayton bill, supplementing the anti-trust laws, etc. He expressed the opinion that a general law is necessary to cover all evil commercial conditions now existing or which hereafter may be devised, thereby being sufficiently flexible to meet the changing conditions of commerce.

Discussing the question of price maintenance, Mr. West said that no doubt steps will soon be taken to establish improper price cutting as a species of unfair competition, and thereby establish a controlling precedent. It would hardly be practical to enact special law to provide against every individual unfair competition. A general law will be equally and generally effective.

Mr. West's committee reiterated its recommendation of the previous convention that as soon as the national narcotic law has been finally adopted consideration be immediately given to a national poison law. Anent the efforts to eliminate para-

graph one, section seven, of the Food and Drugs Act, respecting drugs sold under names recognized in the U.S.P. and N.F., the committee deemed it of importance that a suitable resolution should be adopted affirming the association's position and urging members to persuade their Congressmen and the members of their State legislatures to study the subject thoroughly and consider well the effect of such elimination. The committee's report included an extensive resumé of State legislation, a short history and resumé of the bichloride legislation attempted and enacted during the past year and outlined miscellaneous legislation affecting the wholesale trade.

The committee on proprietary goods, headed by William P. Ritchey, of New York, presented an interesting report. It was brought out that the regulations so far proposed by the postal authorities for the mailing of proprietary preparations containing quantities of so-called poisonous ingredients, have not proved of practical value to proprietary manufacturers and the general handicap to their mailing operations has not been appreciably reduced. It was also asserted by this committee that associate members should receive preference when orders are being placed by active members. The practice of advance dating was condemned as demoralizing and unprofitable. The practice of giving bonus goods was also condemned as an element of unsoundness and as conducive to speculative propensities in the conduct of business.

That a close insight into the actual workings of the buying club system shows that the system is not a step to create a closer relationship between producer and consumer, was the assertion of this committee. The committee was gratified to report a waning in buying club activities and no new undertakings on old lines are now in progress. Manufacturers are coming to realize that the system of buying clubs and chain stores cannot replace the jobber, as the combination is generally localized within neighborhood ranges, and is restricted in its selling operations. The committee was further gratified in being able to report that a number of manufacturers had increased their discounts during the year. The committee did not question the conclusion, previously presented, that small and frequent purchases are to a great extent the cause for the increased cost of conducting a wholesale drug business. In the drug, chemical and pharmaceutical branches this has been met by an increase in the selling price that covers the increased cost of handling.

#### Dr. Schieffelin's Resolution

Dr. William Jay Schieffelin, chairman of the special committee on railway rate questions, concluded an exceedingly interesting and pertinent report, in which he outlined the railroad rate situation and pointed out the crisis now confronting the railways, and, through the railways, the entire country, by introducing the following resolution, which was adopted:

"RESOLVED, That this association respectfully ask the Interstate Commerce Commission to reopen the rate case and consider the plea of the railroads for increased revenue."

Another resolution, also proposed by Dr. Schieffelin, was adopted. It follows:

"RESOLVED, That the Bureau of Animal Industry be requested to provide that all foreign biological laboratories exporting biological products for animal use shall be inspected under the same standard used in inspecting biological plants in the United States."

The committee on arrangements for 1915 meeting, through A. S. Brooks, the chairman being absent, reported that the Hotel Potter, Santa Barbara, Calif., had been chosen. The convention will be held in the week beginning September 27.

James W. Morrisson, chairman of the committee on workmen's compensation and employers' liability, agreed in his report with a Wisconsin member who had written in that it was his belief that a proper analysis of accidents happening on all insurance risks would develop that jobbers and big retail stores are paying many times more than it costs to carry the risk and that the manufacturer is paying less than it actually costs. The committee thought that the rates were based less on hazard than on what it was thought the traffic would bear. The committee believed that the insurance companies have a mistaken idea of the amount of hazard peculiar to the wholesale drug business.

The committee on commercial travelers and selling methods, headed by Lee M. Hutchins, of Grand Rapids, Mich., reported that if the annual get-together meetings could be followed by systematic committee work throughout the year either in zones or otherwise, a vast amount of good could be accomplished. The apparent inability to overcome over-solicitation and the allowance of cash discount beyond the reasonable terms, were other points touched on in the report. In replying to the committee's questions, it developed that from 5 to 40 per cent. of the business of the various members came in without solicitation.

In part, the report of the Board of Control, chairman, Charles Gibson, was as follows:

"The Board would like to see individual houses make greater effort to correct the abuse of allowing cash discount after the discount date has expired. It considered the record of having received only five per cent. of its business unsolicited as absolutely fatal to any business and an indication of inefficiency. The Board agreed with a previous report that the most successful travelers are those who are trained by the houses in which they are employed. To pay a traveler a fixed amount and permit him to pay his own expenses is a mistake—he will pass towns which should be covered. All prices should be fixed and established by an expert pricer in the home office. Collection by traveling men should be done away with as soon as possible. The Board recommended the use of maps and thumb tacks where they are not introduced."

The Board offered the following resolutions:

"RESOLVED, That the N. W. D. A. assist every effort being made for the enforcement of laws governing fraudulent statements made for the purpose of securing credit.

"RESOLVED, That we recommend to the members of our association in various States an effort to secure a bulk sales law."

#### Conservative Buying Recommended

The Board could not recommend too strongly conservatism in buying at present prices. The danger, it pointed out, was that members will be tempted to buy merchandise which will remain in stock after the market has begun to decline. "We all know how hard it is to sell goods on a declining market."

The Board recommended that fire marshal laws should be passed and put into effect in all States where this has not already been done; that the members should use their utmost efforts to prevent fire waste in the U. S., that members try to obtain proper legislation to bring reciprocal insurance companies under State supervision, that members take advantage of the information obtained through the association's membership in the National Fire Protection Association of Boston, etc.

The Board indorsed the suggestion that an advisory council of merchants and leading citizens, such as has been established in New York City, be instituted in all our large cities. It also indorsed the stand taken by the committee on the subject of uniform legislation. It approved the appointment of three delegates to the conference on uniform State laws held at Washington, October 14, 1914. The Board believed that the national bankruptcy act has failed of its purpose to afford proper relief to honest debtors and at the same time protect the interest of creditors. It recommended that effort be made through amendment to this act to so change the method of procedure under it that it may accomplish the purpose originally intended.

The Board presented resolutions commending the establishment of a division on uniform Federal and State laws by the U. S. Department of Agriculture, authorizing the appointment of an official delegate to attend the annual meetings of the American Dairy, Food and Drug Officials, indorsing the effort to legalize price maintenance, recommending and urging the enactment of a national poison law which will bring about uniform poison legislation, expressing hearty sympathy with the proposal to obtain practical and uniform legislation in regard to sale at retail of bichloride of mercury tablets, and requesting the press of the country to refrain from publishing reports of suicides and accidental poisoning by the use of drugs, chemicals, etc.

The Board recommended that the N. W. D. A. continue to co-operate with all organizations having for their object the standardization and proper labeling of drugs, chemicals, etc. The Board also recommended that the committee on legislation make a special study in regard to poison laws, and suggested that in case sellers omit the guarantee from the package it be given on each invoice. It agreed with the report that it is absolutely necessary for the jobber to have the date of purchase of goods returned for credit.

The Board offered resolutions incorporating the following points:

That the N. W. D. A. appreciates the action taken by a number of manufacturers during the year who have increased

their discounts to jobbers, that proprietors who have not already done so be requested to make reasonable concessions; that the N. W. D. A. condemn the practice of manufacturers in going for "goods" and that attention of manufacturers of proprietary articles be called to statistics compiled by W. A. Haven and that possible arrange a schedule that will afford them a margin of profit on fractional quantities that will compensate them for the additional expense and detail required to supply them to the trade.

Other recommendations and resolutions promulgated by the Board provided for the following:

The endorsement by the association of the bill now before Congress providing for a uniform freight classification; the presentation of a request that the railroad rate case be reopened and the plea of the railroads for increased revenue be considered; that the N. W. D. A. continue its membership in the Chamber of Commerce of the U. S. A.; that the incoming president appoint a committee of three to confer with similar committees of other organizations to confer upon the advisability of forming a congress of national drug and pharmaceutical bodies under the auspices of the A. Ph. A., and that the results of the conference be reported to the various organizations and to the A. Ph. A. at their annual meetings in 1915.

The report of the Board of Control was adopted as presented.

#### Entertainment Features

The entertainment provided for the wholesalers was various and in some features decidedly novel. Ranging from the president's reception in the ballroom of the Claypool to a special exhibition race on the great Speedway and a night tour of a magnificent pharmaceutical laboratory, operated as by day solely for this occasion, this phase of the convention program will establish a record in the history of the association. A musicale for the ladies at the home of Mr. and Mrs. J. K. Lilly, a tea tendered the ladies at the home of Mrs. William Scott, a banquet at the Claypool and a visit to French Lick Springs, where Thomas Taggart officiated as host, were other features.

No provisions had been made for the evening spent at the laboratories of Eli Lilly & Co., the committee having planned a theater party for that occasion. At a late date, it was obliged to announce the cancellation of the party and it was suggested that the guests visit the laboratories of the above company. The officers of the company acquiesced and the laboratories were kept in full operation. Nearly 500 convention guests visited the plant during the evening. President J. K. Lilly and Mrs. Lilly received, and special guides were placed in charge of the various parties, of which there were nearly 40.

Every department was in operation and the entire plant was brilliantly lighted from top to bottom. By following a selected route the time of the tour was reduced to two hours. After the tour, refreshments were served in the assembly room of the science building.

#### Ohio Ph. A. Opposes Tax on Drugs

Following a special meeting of the Ohio State Pharmaceutical Association held at Columbus, where some of the leading druggists of the State met to consider means of voicing their opposition to the tax on drugs and proprietary medicines proposed as an emergency revenue measure in Congress, Theodore D. Wetterstroem, of Cincinnati, made public the following telegram which was sent to the senators and representatives from Ohio on behalf of the organization: "The Ohio State Pharmaceutical Association most strenuously objects to the placing of the proposed tax on proprietary medicines, which in many instances are necessities. A similar tax was placed on proprietaries during the Spanish-American war, with the result that the manufacturer increased cost of same to the retail druggists by 6 per cent. This proposed tax would again increase the cost of proprietaries and add to the burden already borne by the druggists through the increased cost of all drugs caused by the war tax."

Mr. Wetterstroem stated, on his return to Cincinnati, that the Association will co-operate with the national organization in attempting to prevent any tax on drugs, on the ground that they are necessities, which should not be taxed. Another important step taken at the meeting was the appointment of a committee of three to meet with a like committee from the A. Ph. A. and with the authorities of the State University, to take steps toward the cultivation in Ohio of medicinal plants.

#### FREERICKS AGAINST PROPOSED AMENDMENTS

##### Believes Proposed Law Will Permit Commonwealth to Sell Drugs As Well As Insurance

Wisconsin druggists are in receipt of a letter from Frank H. Freericks of the American Druggists' Fire Insurance Co. of Cincinnati, Ohio, urging the pharmacists to vote against the constitutional amendments, which aim to allow the State of Wisconsin to engage in the insurance business, but which, it is believed will allow the State to engage in almost any line of activity. These proposed amendments will be voted upon this fall. Mr. Freericks expresses the fear that the State may sometime attempt to go into the drug business and he asks the druggists of the State to take action. The letter, sent out on the stationery of the American Druggists' Fire Insurance Co., says:

"If the State is to go into the insurance business how long will it be before the State will go into the drug business? The ingenious argument is made, that if the State goes into the insurance business, it will sell insurance cheaper. We know that the State cannot possibly sell insurance as cheap as we sell it, and believe that it will need to sell at a much higher price. In this particular case, it will also mean, to take bread and butter from thousands of men throughout Wisconsin, who are now in the insurance business to place it with men who are looking for political jobs.

"The greatest obstacle to proper political life is the political machine built up for individual purposes. If the State goes into the fire insurance, it will enable politicians to build up an enormous machine controlling thousands of men.

"The settlement of fire losses is frequently involved with differences of opinion. If the State goes into the fire insurance business, the policyholder will practically be compelled to take, in settlement for his loss, what some minor employe of the State department will decide to give him. If the insured is not satisfied to take what the State will give him, he, of course, can bring suit, but what chance does the individual policyholder stand against the State as compared with his advantage in case of dispute with an insurance company.

"Needless to say, we are asking your co-operation because of self interest."

#### Maryland Drug Firm Drops Ancient Name

What is said to be the oldest drug firm in Maryland and perhaps in the entire East has gone out of existence in so far as the name is concerned. This is the firm of Dawson & Jenkins, which was founded as far back as 1778 at Easton, Talbot county, Maryland, the place having been conducted under that name since then. The personality of the partners or the real ownership has changed from time to time, but the firm continued to be Dawson & Jenkins, until recently, when Thomas H. Jenkins, a descendant of an original member, withdrew from active business, and James Wright, the present owner, dropped the ancient device, deciding to go on under his own name. Mr. Wright had been employed in the store for years.

#### Seidlitz Manufacturers in Financial Straits

BALTIMORE, Oct. 15.—Attorney S. Howard Millikin and J. Frank Supplee, Jr., were appointed receivers for the Lemon Seltzer Seidlitz Company, manufacturers of seidlitz powders and other medicinal preparations at 7 South Gay street, in the Circuit Court No. 2 recently, and bonded in the sum of \$900. The bill of complaint, filed by H. Gamse & Bro., lithographers, alleged that the company owed them \$528.29, and was insolvent. The company consented to the receivership, stating that owing to the financial depression and inability to realize promptly on its large investments it was unable to meet its obligations.

#### Illinois Ph. A. Activities

The proceedings of the 35th annual meeting of the Illinois Pharmaceutical Association were recently distributed to the members. President Baum has appointed a political committee auxiliary to the legislative committee and which comprises two druggists from each county in the State, 102 members in all. Plans are now being made for amending the pharmacy law. A meeting of the Executive Committee of the Illinois Ph. A. will be held in Chicago in November to consider these plans and to take action on other association matters, including decision as to place of next annual meeting.

## DEVELOPMENTS EASE SOCIETY'S WORK

### Kings County Ph. S. Need Not Fight An Obnoxious War Tax and Is In a Stronger Position on 182

Since the October meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy, State Attorney-General Parsons has handed down his opinion and the Board of Health ordinance 182, and Congress has passed and the President has signed the war tax bill, from which medicines and proprietaries have been eliminated. These two events have placed a different perspective on much of the proceedings of that meeting, inasmuch as the members discussed at some length the injustice of the then seeming right of the Commissioner of Health to override the laws of the State and also the injustice of legislation which would make retail druggists alone pay the war tax on fixed price medications. The druggists are now in an excellent position for the prosecution of a test case, should the Board of Health make one necessary, while the other cause for agitation is removed.

Dr. Wm. C. Anderson, chairman of the legislative committee, reported on the Harrison bill situation to the effect that this measure was still in conference, having been passed by the House of Representatives in one form and by the Senate in another. The conference has yet to report and the bill probably will not pass at this session.

Wm. Morgan, chairman of the trade matters committee, was instructed to conduct the society's detail work on the basis of previous years. J. H. Rebfuss' suggestion that the committee distribute to physicians blotters containing official formulas was received with approval. Mr. Morgan suggested that the detail man advise physicians not to write prescriptions for high-priced or unobtainable foreign synthetics. Otto Raubenheimer suggested that it might be well to advise prescribing, where possible, sodium in preference to potassium salts. The committee was empowered to purchase 200 A.M.A. manuals of the U.S.P. and N.F. The sum of \$100 was voted the committee to continue its work. A recommendation that the society hold trade matters meetings once a month in the college building was referred with power to act to a joint committee consisting of the trade matters and affairs pertaining to pharmacy committees.

Otto Raubenheimer presented an interesting explanation as to why aspirin had gone up in price. He got his version from Hugo Schweitzer, he said. The duty on salicylic acid had been raised and it was hard to get. The duty, however, is only 10 per cent. But the acetic anhydride used in the process of manufacture is not made in this country and cannot be obtained from abroad. The manufacturers in this country now have to distill their own anhydride.

A proposition to shorten and coin synonyms for N. F. names was referred to a committee.

The sum of \$50 was voted for the use of the New York Pharmaceutical Conference.

Treasurer Adrian Paradis reported a balance on hand of \$351.82.

According to T. J. France, chairman the committee on supervision, the college has enrolled 185 juniors and 154 seniors, the largest classes in its history.

## N. Y. BRANCH HEARS ASSOCIATION REPORTS

The first meeting of the 1914-1915 season of the New York Branch of the A.Ph.A. was held at the New York College of Pharmacy on the evening of Oct. 19th, and although the program was largely routine, the meeting was a most enjoyable one. For the first time in many months so many members were present that the seating capacity of the meeting room was overtaxed, and several were forced to make use of other pieces of furniture besides chairs. Prof. H. V. Army presided, with Frank L. McCartney as secretary.

After the regular opening procedure, Dr. Geo. C. Dickman presented his report on the progress of pharmacy, which was cut rather short to make room for the many association reports to follow. In his abstract of recent legislative developments, Dr. Wm. C. Anderson related the progress and death of the amended Section 182 of the Sanitary Code. The feeling was unanimous that the conclusion of the whole affair was the only logical one, in view of the contradiction between the new section and the Boylan law.

Caswell A. Mayo then gave an interesting and amusing account of the late meeting of the A.Ph.A. at Detroit. He called

attention to the smoothness with which the machinery of the meeting had run, and brought in a number of personal touches which were enjoyed fully by all present. Dr. Wm. C. Anderson then presented his account of the meeting of the N. A. R. D. at Philadelphia in August, which was fully covered in the September ERA. Dr. Wm. Mansfield related his adventures at the New York State Pharmaceutical Association meeting at Saratoga Springs, and was followed by Dr. Jeannot Hostmann, with an account of the New Jersey Pharmaceutical Association meeting at Lake Hopatcong. The latter association seemed to be pressing the New York State association very hard in the matter of membership.

Mr. Mayo stated that the papers presented before the Scientific Section of the A.Ph.A. were not of transcending importance this year, and that in all probability the Ebert Prize would not be awarded. He spoke in such glowing terms of Prof. Edward Kremers' lecture on "Historical Pharmacy" that the chair appointed him an informal committee of one to endeavor to bring Prof. Kremers to New York to repeat the lecture. Discussion of the reports in lighter vein became general.

## Philadelphia Branch, A. Ph. A.

At the first regular monthly meeting of the Philadelphia Branch of the A. Ph. A. held on Oct. 6 at the Medico-Chirurgical College, Dr. F. E. Stewart called attention to the proposed tax on medicines by Congress and offered a resolution condemning the same, which was adopted and ordered to be sent to the proper officials at Washington. The full text of the resolution is as follows:

"Resolved, That the Philadelphia Branch of the American Pharmaceutical Association most earnestly protest against the imposition of a revenue tax upon medicines, because it becomes a discriminating tax upon retail druggists, in that it will not be paid by the manufacturer or the ultimate consumer, but by the retail druggist as can be shown by the history of the Spanish-American war tax."

The programme of the evening consisted of reports of the delegates to the various State and National pharmaceutical meetings held during the summer. The meeting of the A.Ph.A. was interestingly reviewed by Prof. J. W. Sturmer; Charles Rebfuss gave his impressions of the Philadelphia convention of the N.A.R.D., and Dr. R. P. Fischelis reported the events which took place at the meeting of the Pennsylvania Ph.A. at Buena Vista. Professor C. H. LaWall gave the monthly summary of current pharmaceutical literature.

J. H. Brewer and J. Atley Dean were unanimously elected to membership. President Cook read the resignation of Secretary-treasurer R. P. Fischelis and it was accepted with the regrets of the association. Professor J. Edward Brewer was unanimously elected to fill the vacancy and an auditing committee was appointed to verify the accounts of the treasurer.

Professor Cook in reporting to the committee on A.Ph.A. headquarters, stated that this committee had not concluded any definite plans owing to the resignation of the chairman, Howard B. French. The appointment of a new chairman was postponed until the next meeting.

The reports of the delegates were discussed by F. M. Apple, S. C. Henry and F. E. Stewart.

The next meeting will be held on November 3d, and the chief topic for discussion will be the preparations of the new National Formulary.

## Adulteration of Rose Oil—

Admixture of geranium oil may be recognized by the higher saponification number and refractive index, and the practice is now prevalent of adding stearoptenes, ceril, etc., to restore these figures to the proper values. The iodine number of several Indian or Turkish geranium oils lay between 230 and 250, that of the French oils between 170 and 176.3, while that of true rose oils was between 170.8 and 189.1. The refractive reading of Palmarosa oil and other oils used as adulterants is greater than 70. For French geranium oil it is more than 60, whereas no genuine rose oil had a greater value than 48, with 44 as the lower limit. Careful adulteration is very difficult to detect, and a determination of all constants is required. The Bulgarians are preparing a rose-concrete by extracting the flowers with benzin, over 300,000 kilos of roses being worked up in this way each year. The constants of this product are also given. (Petkow, Z. Oeffentl. Chem., 1914, p. 491.)

FROM AMONG THE ASSOCIATIONS

At its recent meeting of the American Medico-Pharmaceutical League, S. F. Brothers announced that 331 new members had been elected during the past 17 months. A letter from the New York State Department of Health was read, stating that it was to the effect that under the new law the signature of a prescribing physician was his full name, including the initial of his middle names, if he has more than one, and the surname in full. "John David Smith" would be written as "John D. Smith."

The Chicago Association of Drug Clerks at a recent meeting, presided over by H. L. Sherman, adopted a resolution endorsing a one-hour working day. This resolution will be circulated for signatures among all the clerks and employers in the city. As a motive for the movement the clerks point out that because they never get a day off in which to rest, they are likely to make mistakes and thus jeopardize human life.

Druggists of Yellowstone, Stillwater, Big Horn, Musselshell and Carbon counties, Montana, have organized the Midland Empire Retail Druggists' Association, and have elected as officers: President, Charles J. Chapple, of the Chapple Drug Co., Billings; vice-president, J. W. Corwin, Park City, and secretary, Fred Russell, Broadway pharmacy, Billings. The new organization aims to bring about a closer relationship among the members and to protect their co-operation.

The Missouri Valley Medical Society at its recent meeting, held at Colfax, Ia., endorsed the Harrison anti-narcotic bill.

The Douglas County (Nebr.) Retail Druggists' Association, through a committee, is arranging plans whereby the entire membership may attend the Panama Exposition. This will include many of the druggists of Omaha.

The executive committee of the Texas State Ph.A. met recently in the Chamber of Commerce at Dallas and adopted resolutions, which if enacted into law will practically eliminate the sale of habit-forming drugs except upon prescription. A revision of the State pharmacy law was also discussed, the members of the committee expressing the opinion that the law should be more exacting of applicants for license, etc. Among those in attendance were President Walter D. Adams, of Forney; Secretary E. G. Eberle, of Dallas, and John W. Covey, of Fort Worth.

The Iowa State Ph.A. executive committee, in session at Mason City recently, selected Clear Lake as the next place of meeting. Date of meeting will be June 8, 9 and 10.

The Arizona Ph.A. recently adopted resolutions strenuously protesting against the proposed amendment to the State constitution which would virtually prohibit the importation and sale of alcohol for any purpose, or under any pretense by druggists or other persons or by medical men in the treatment of the sick. The acting secretary was instructed to request the aid and support of the Arizona Medical Association in its effort to defeat the proposed amendment.

The Mississippi State Pharmaceutical Association, through President J. C. McGee, has purchased a bale of cotton at ten cents per pound. The members are being congratulated upon being good B-A-B'ists.

The Women's Club of the Allied Drug Trade of Chicago held its first fall reception and luncheon at the Hotel Sherman. A tableau of Chicago, presented by Mrs. George Miyen, assisted by Miss Florence Zuber and Miss Esther Pelikan, was the principal feature of the affair. Mrs. Louis Didier was in charge of the program, which consisted of songs by Mrs. Ruth G. Babler, violin solos by Arthur de Macy and interpretative dancing by Miss Marcella Briggs. Mrs. William Gallagher was social chairman of the day and was assisted in receiving the members by the club officers.

The members of the Greater New York Pharmaceutical Society, at its recent meeting at Saengerbund hall, Brooklyn, decided to fight for a continuation of the suspension of the enforcement of Board of Health ordinance 182. President Lewis asserted that the household remedies affected by the ordinance were needed in every home. Dr. Thomas Dixon, president of the Federation of the Medical Economic League, who was to have delivered the principal address at the meeting, was unable to attend, and sent his regrets.

The druggists of Brunswick, Ga., have organized and elected the following officers: President, J. Sidney Roberts; vice-president, A. S. Branch; secretary and treasurer, S. C. Josie. Every retail druggist in that city is a member. The organization will meet every month and will consider every question of interest to the local trade. The first business consummated was

to close all drug stores on Sundays between the hours of 11 A. M. and 2 P. M.

ANOTHER IMPOSTOR ACTIVE

EDITOR THE PHARMACEUTICAL ERA—

Reading in your October issue of two impostors plying their trade reminded me of an experience I had on September 13th. At about 2 P. M. of that day, which was Sunday, I received a phone call at my home in New York City; the caller gave the name of Mr. Shirley of the Standard Drug Co., Cleveland, Ohio, to whom we sell. He said that he had just arrived from Boston on his bridal tour, and saying that he would like to see me for a few minutes, asked for directions to reach my house. After his arrival we conversed for about half an hour, and then came his tale of woe, to the effect that while on the train his pocket had been picked by a fellow passenger, a young man, who had taken his purse with \$400, and his watch. I anticipated his request by offering \$5 or \$10, and he accepted the latter sum, saying that he would return it at my office Monday morning.

I asked for a card of identification, and he gave the natural explanation that all his cards, with the exception of one, had been taken with his purse. The remaining one read:

..... :  
: :  
: STANDARD DRUG COMPANY :  
: 9th & Bolivar Road :  
: Cleveland, Ohio :  
: Represented by W. E. SHIRLEY. :  
: :  
: .....

Which card I now have. When he did not arrive by Tuesday morning, I wrote to the Standard Drug Co., explaining the matter. They replied that their Mr. Shirley had no brother, nor did they have anyone else in their employ of that name; that the newcomer was a fraud, and that they had forwarded a complaint to the New York police. The description I gave the detectives was "man about 28 years old, dark complexion, smooth face, weight about 150 lbs., wore dark clothes, stiff black hat." As yet, I have heard nothing more.

Yours very truly,  
E. D. BRASHAW,  
c/o Robertson Candy Co.

New York, October 15, 1914.

W. O. N. A. R. D. Organization Rules

The following alphabetical rules for efficient organization work are being widely copied. They come from the ready brain of the Secretary of the W. O. N. A. R. D. They will bear careful reading and daily living. It has been proposed that this alphabet be printed upon a card and sold for the benefit of the General Federation of Women's Clubs.

- A.—Aid with your present at all meetings.  
Answer this question: What kind of an organization would yours be if every member in it were just like me?
- B.—Be on time, especially at Committee meetings.
- C.—Call on the sick; visit those in trouble. Co-operate.
- D.—Do not refuse to serve in any capacity when requested to do so.
- E.—Enthusiasm will put everybody to work, so nobody can shirk.
- F.—Faithful to every promise made.
- G.—Give unstintingly of love, trust and energy.
- H.—Hope for complete success in all work undertaken.
- I.—Ignore all slights.
- J.—Justice to all.
- K.—Keep in close touch as possible with your membership.
- L.—Loyalty to principles and the cause you are working for.
- M.—Meet all appointments promptly.
- N.—Never give up. Keep everlastingly at it.
- O.—Onward and upward. A little every day.
- P.—Put your best self into what you do and say.

- Q.—Quality of work, rather than quantity, be your aim.
- R.—Report everything of interest to the Club, but never gossip or make unkind remarks.
- S.—Stand back of the officers you have chosen.
- T.—Take hold and help lift, do not hinder others.
- U.—Use tact. Bear in mind always—it is not so much what we say, as how we say it, that arouses interest or provokes opposition.
- V.—Volunteer your services in every emergency.
- W.—Wide open eyes to see the wrongs you may help to right, and the great need of workers in every phase of life.
- X.—Exchange smiles.
- Y.—Yield not to indifference.
- Z.—Zealous for the good reputation of your organization.

NELLIE F. LEE,  
President Philadelphia Chapter No. 6  
W. O. N. A. R. D.

**LABELING OF MEDICINES**

**Pertinent Suggestions from the Bureau of Chemistry Regarding Manufacturers' Claims**

WASHINGTON, Oct. 15.—In answer to many inquiries as to proper labeling for medicinal preparations to comply with the Food and Drugs Act as amended, the Department of Agriculture, through the Bureau of Chemistry, has issued the following suggestions to makers and proprietors of medicinal preparations:

1. CLAIMS OF THERAPEUTIC EFFECTS.—A preparation cannot be properly designated as a specific, cure, remedy, or recommended as infallible, sure, certain, reliable or invaluable, or bear other promises of benefit unless the product can as a matter of fact be depended upon to produce the results claimed for it. Before making any such claim the responsible party should carefully consider whether the proposed representations are strictly in harmony with the facts; in other words, whether the medicine in the light of its composition is actually capable of fulfilling the promises made for it. For instance, if the broad representation that the product is a remedy for certain diseases is made, as, for example, by the use of the word "remedy" in the name of the preparation, the article should actually be a remedy for the affections named upon the label under all conditions, irrespective of kind and cause.

2. INDIRECT STATEMENTS.—Not only are direct statements and representations of a misleading character objectionable, but any suggestion, hint, or insinuation, direct or indirect, or design or device that may tend to convey a misleading impression should be avoided. This applies, for example, to such statement as "has been widely recommended for," followed by unwarranted therapeutic claims.

3. INDEFINITE AND SWEEPING TERMS.—Representations that are unwarranted on account of indefiniteness of a general sweeping character should be avoided. For example, the statement that a preparation is "for kidney troubles" conveys the impression that the product is useful in the treatment of kidney affections generally. Such a representation is misleading and deceptive unless the medicine in question is actually useful in all of these affections. For this reason it is usually best to avoid terms covering a number of ailments, such as "skin diseases, kidney, liver and bladder affections," etc. Rheumatism, dyspepsia, eczema and the names of many other affections are more or less comprehensive, and their use under some circumstances would be objectionable. For example, a medicine should not be recommended for rheumatism unless it is capable of fulfilling the claims and representations made for it in all kinds of rheumatism. To represent that a medicine is useful for rheumatism, when as a matter of fact it is useful in only one form of rheumatism, would be misleading; such statements as "for some diseases of the kidney and liver," "for many forms of rheumatism," are objectionable, an account of indefiniteness.

Names like "heart remedy," "kidney pills," "blood purifier," "nerve tonic," "bone liniment," "lung balm," and other terms involving the names of parts of the body are objectionable for similar reasons.

4. TESTIMONIALS.—Testimonials, aside from the personal aspect given them by their letter form, hold out a general representation to the public for which the party doing the

labeling is held to be responsible. The fact that a testimonial is genuine and honestly represents the opinion of the person writing it does not justify its use if it creates a misleading impression with regard to the results which the medicine will produce.

No statement relative to the therapeutic effects of medicinal products should be made in the form of a "testimonial" which would be regarded as unwarranted if made as a direct statement of the manufacturer.

5. REFUND GUARANTEE.—Statements on the labels of drugs guaranteeing them to cure certain diseases or money refunded may be so worded as to be false and fraudulent and to constitute misbranding. Misrepresentations of this kind are not justified by the fact that the purchase price of the article is actually refunded as promised.

**Chicago Drug Club Elects Schaper President**

At the recent regular meeting of the Chicago Drug Club, held at the Hotel Sherman, the following officers were elected:

President, Henry F. Schaper; first vice-president, Charles E. Knight; second vice-president, Joseph A. Swanson; third vice-president, H. M. Moffett; recording secretary, John Pteetz; financial secretary, John M. Schwalbe; treasurer, Carl A. Abrahamson; sergeant-at-arms, Iver L. Quales; member of board of directors, Ad. Umenhofer; chairman of the entertainment committee, Peter J. Roth, and vice-chairman of entertainment committee, W. C. Comstock.

Commodore Iver L. Quales officiated as toastmaster at the usual social session which following the meeting. A high-class program of five cabaret acts furnished the entertainment for the evening. Following this feature, a delicious "Dutch" lunch was served with plenty of liquid refreshments and smokes.

The membership of the club has now exceeded the 500 mark and more than two-thirds of the members were present on this enjoyable occasion.

**French Perfumers Victims of War**

M. Paul Jeancard, of the firm of Chiris, Jeancard & Cie., the well-known French perfume house, was badly wounded in one of the engagements on the French battlefields, and is now reported to be recovering at the Lyons Hospital.

M. Jean Sicard, of Pierre Sicard & Cie., another French perfume firm, joined his regiment at the front, and was reported as missing on September 22nd. Since that date no news has come from him, and it is believed that he has been killed.

The Grasse, France, "Revue" mentions MM. Morena and Henri Bompard, perfumers, as among those citizens of Grasse who are reported to have been wounded.

**Photographic Paste**

- Wheat flour ..... ½ pound
  - Alum ..... 1 dram
  - Boric acid ..... 1 dram
  - Water ..... ½ pint
- Make a smooth paste and add
- Acetic acid ..... 1 fl. ounce
  - Water ..... 1 pint
- Mix and heat with constant stirring until nearly gelatinous. If too stiff, add more water. When nearly cool add
- Oil of cloves ..... 20 drops
- Phenol or other preservative may be used if desired.

**Homeopathic Pharmacopoeia**

(W. H. W. & S.)—There are two homeopathic pharmacopoeias recognized by practitioners of the Hahnemanian schools of medicine in this country, viz., "The Pharmacopoeia of the American Institute of Homeopathy," published by Otis Clapp & Son, Boston, Mass., and the "American Homeopathic Pharmacopoeia," published by Boericke & Tafel, Philadelphia, Pa. As we have stated, both books are considered equally authoritative by homeopaths, and may be purchased through any dealer in medical books. The U.S. Pharmacopoeia is the only pharmacopoeia that is recognized by name in the text of the Federal Food and Drugs Act.

The Philippine Islands produce nearly 10,000,000 gallons of alcohol yearly. Most of the entire product is made from the sap of the pipa palm that grows in great abundance in various swamps of the country.

## SCHOOLS AND COLLEGES

### New York College of Pharmacy

The first meeting during the 85th college session, of the New York College of Pharmacy, was held October 6, among those in attendance being William H. Carpenter, Ernest Stauffen, W. R. Ryan and Robert Lehman, all of whom had graduated from Europe but a few days previous. They were gathered at the time war was declared. At this meeting, the graduating seniors who had passed the fall examinations, graduated.

Edward O. Agor, Edward A. Atwood, Edward Cragg, Jr., George Franceschi, Anthony Galateria, M. P. Gordon, Ludwig J. Grier, Abram S. Levy, Clarence S. Lord, Jerome L. Martin, Daniel W. Odell, Rose Ofrías, T. G. Osborn, Roy M. Todd, Duncan Rose, Robert Schwarsens, Samuel Siegel, Daniel M. Toomey and Samuel B. Wright.

On October 15, Dean Rusby gave a public lecture at Columbia University, on South America. On November 14, at the New York Botanical Garden, he will deliver a lecture on the effect of radium on field crops.

At the time the registration books for the 85th session were closed, the following totals had been reached:

Junior class, 287; senior, 168; first year university, 20; second year university, 19; post graduates, 5; food and drug course, 1; evening course, 13; special students, 7, and summer course, 32.

Of the last year's university class, the following are at the College of Physicians and Surgeons.

Louis V. Mango, Charles Weinreb, Benjamin H. Crystal, Harold T. Brotherton, Jerome H. Martus, Isidore Ritten and Harry Wirklich.

Edward Eichacker is at the Long Island Medical College.

An interesting collection of pharmaceutical, chemical and botanical works dating back to the 16th century are on exhibition in the library.

### University of Illinois School of Pharmacy

Two hundred students, 108 juniors and 92 seniors, is the total enrollment of the University of Illinois School of Pharmacy which has just opened its 55th session.

Miss Frances E. Wells, '05, was married September 23rd to Benjamin T. Robinson. Mr. and Mrs. Robinson will reside at Mortons Gap, Ky.

Andrew B. Helstrom, '11, and Miss Hilda C. Johnson were married at Minneapolis October 5th.

Thomas H. Wile, '05, of Texarkana, Ark., is the proud father of a girl, born September 22nd and who has been christened Frances M. Wile.

Karl V. Gambell, '14 and Miss Margaret M. Barr were married September 2nd. The young couple will reside at 1149 East 61st street. Mr. Gambell is pharmacist for Vander Bogart & Ross.

### Iowa State University College of Pharmacy

C. G. Park, '98, was called to Iowa City recently by the death of his mother, Mrs. Margaret Park.

Edward Schenkenberger, '09, who is now located at Fairview, Montana, recently underwent an operation for appendicitis.

The first Varsity football game of the season occurred October 2, the State Teachers' College being beaten 95 to 0.

Phi Delta Chi has announced the following pledges: Loron Marsh and R. E. Everly, Canton, Ill.; W. R. Jennings, Red Oak; R. E. Nejdig, Iowa City; C. A. Pates and H. S. Potter, Jefferson; W. F. Meads, State Center, and C. B. Anderson, Sheldon.

M. F. Coontz, '09, is again affiliated with the Red Cross Drug Co. at Waterloo.

F. E. Judy, '08, has sold his drug store at Council Bluffs to Mr. Schwan, of Wiota.

D. H. Schalekamp, '10, who has been in the employ of Schuster, at Cherokee, has purchased a part interest in a pharmacy at Sutherland.

Ernest Simpson, '11, has purchased the interest of his partner in the business of Simpson & Walters, Waterloo.

The Mortar and Pestle society entertained the new students on the evening of Oct. 2. Games and contests of special interest to pharmacists added pleasure to the occasion. Dean

Teeters spoke briefly of the advantages of membership in such an organization. Mr. Doden in behalf of the alumni spoke of the value of college and university spirit. Miss Campbell as president invited all to become members.

Among the members of the State Ph.A. legislative committee are the following graduates: J. H. Jericho, '80; J. H. Keneffick, '91; C. C. Narum, '06; J. M. Alexander, '07; R. W. Harvey, '07; J. D. Royer, '08; J. A. Anderson, '09; J. H. Rickman, '10, and E. D. Corr, '08.

Philip Sijtle, '09, of Clinton, recently made a short visit to the college.

W. T. Coffman, '04, was in the city recently. He is traveling for the Thompson Malted Milk Co. with territory west of Denver, in which city he resides.

Mr. and Mrs. Elmer Steele announce the marriage of their daughter, Emma Minerva, to H. E. Weld on September 16, at Richland. Mr. Weld graduated in 1912 and soon after went into business at Richland.

C. A. Scrimceour, '03, has disposed of his pharmacy at Belle Plaine to A. F. Bender.

P. K. Huston, of Allerton, Iowa, senior pharmonic, is a candidate for the varsity football team.

The Phi Delta Chi fraternity gave a smoker to the new students in the College of Pharmacy recently. Phi Delta Chi members stand high in scholarship and are real live boosters for the college.

### University of Oklahoma

The school year opened on September 24 with quite an increase in enrollment. The four-year course in pharmacy has eleven students. The school now offers the Ph.G. degree for two years' work and the Ph.C. degree for three years' work. The B. S. in Pharmacy degree will be offered for four years' work.

Professor C. H. Stocking, dean, attended the annual meeting of the A Ph.A. at Detroit.

Professor Edwin DeBarr, head of the department of chemistry, has returned from a year's study in Germany. Dr. DeBarr did research work in industrial and organic chemistry while abroad.

Howard Cain, Ph.C. '14, is located at Bristow, where he is engaged in pharmacy.

Clarence Nichols, B.S. '14, is enrolled in the graduate school of the University of Michigan.

C. P. Murphy, Ph.C. '13, was a visitor between trains the last week. He was on his way to inspect a couple of stocks of drugs with the idea of purchasing.

Charles Walls, who expects to take his degree in June, is representing the School of Pharmacy on the Varsity football team. He has been playing a good, consistent game at half back.

Claude Johnson has been appointed assistant in pharmacy for the school year in place of Paul Mills who was unable to return.

Edwin Houston, Ph.C. '12, writes that he and Mrs. Houston are very pleasantly located at Ardmore, where he has a good position in the Coleman Drug Store.

Rho chapter, Phi Delta Chi, is very pleasantly located this year in a ten room house on the Boulevard.

### NEWS FROM THE COLLEGES

The application of the Philadelphia College of Pharmacy for registration in New York State was denied by the New York Board of Regents at its recent meeting at Albany.

The Southern College of Pharmacy at its recent exercises, held at the Atlanta Theater, Atlanta, Ga., graduated 35 students. Dr. A. R. Holderby delivered the commencement address, and Dr. L. F. Stephens conferred the degrees.

Extensive plans are being made for the establishment of a drug garden at the University of Nebraska, at Lincoln. The garden will be one of the largest of its kind in the country. The pharmacy department at the present time has a small drug garden which is near the road testing laboratories, in which location the sun is too hot and the space available is too limited. While in the East this summer, Dean Rufus A. Lyman had a consultation with Dr. W. W. Stockeberger, who has charge of the government gardens at Washington. The latter was very much interested in Dr. Lyman's plans. The universities of Michigan, Wisconsin and Minnesota have drug gardens, smaller, however, than the one in making at Lincoln.

## BOARD EXAMINATIONS

### KANSAS

Ellsworth, Oct. 10.—W. E. Sherriff, secretary, announces the names of the successful applicants who took the recent examination of the Board of Pharmacy at Leavenworth as follows:

Pharmacists: J. Murrell Aldridge, Kansas City; Ernest E. Gates, Galena; G. G. Hall, Salina; Clarence R. Kenney, McFarland; Harry E. Price, Kansas City; Anthony K. Snyder, Winfield; Chris Yager, Hiattville; Louie K. Bacon, Holton; Wesley F. J. Bass, Leavenworth; Emsley L. Johnson, Lawrence; Ralph T. McAnly, Wellington; George L. Reif, jr., Leavenworth and Claude B. Wandell, Lawrence.

Pharmacists registered on diploma from recognized colleges of pharmacy: Charles A. Benkleman, McDonald; Earl L. Warren, Sedan; Wm. F. Rau, Wakefield; Sidney Grant Gwinner, Chamute; Roy L. Miller, Hays City; Tudor M. Stevenson, Oberlin; Albert J. Dowis, Cherokee; W. Lee Turly, Fredonia and Myrtle D. Randall, Cherokee.

Pharmacists registered by reciprocity: Charles H. Miller, Junction City; L. L. Mulnix, Potwin; Chas. W. Carlisle, Emporia and Wm. V. Drennan, Kansas City.

Pharmacists restored to the register: Leonard A. Doan, Pittsburg; J. J. Ebnother, Hill City; O. B. Rees, Great Bend; Fred J. Pfaff, Pittsburg; B. F. Mouser, Kansas City; Delton Sparr, Bluff City; F. B. Snyder, Wellington; Ray C. McCoy, Partridge; Geo. F. St. John, Kansas City; J. M. Hutchinson, Jewell City; A. J. Genette, Clifton; Francis A. Lake, Ozawkie; J. C. Jordan, Wichita; Harry Romigh, Wichita and G. J. Southworth, Medicine Lodge.

Duplicate certificates issued: W. H. Kinney, Coffeyville. Temporary certificates issued, L. H. McNaught, Girard; Glen Martin, Oneida and Fern L. Robertson, Udall.

Licenses were also issued to 219 merchants. The next meeting of the board will be held at Ft. Scott on Nov. 18 and 19. Applicants desiring to take the examination should notify the secretary at least five days before the meeting.

### IOWA

Des Moines, Oct. 10.—Twelve candidates out of a class of forty-one were successful in securing state pharmacy certificates at the recent examination. Their names follow: Fred S. Bryant, Des Moines; O. E. Ferguson, Dallas Center; J. R. Gurtel, Des Moines; Batzer A. Jessen, Arcadia; Bretislav Kubicek, Des Moines; Glen E. Mase, Washington; Irl D. Mix, Oskaloosa; Leo K. Nelson, Carroll; Walter A. Nigg, Merrill; Henry G. Ravelling, Rock Rapids; Charles E. Westering, Des Moines; Clarence Wraya, Bloomfield.

### NEW YORK

Albany, Oct. 15.—At the September examinations of the New York State Board of Pharmacy, held at New York City, Buffalo, and Albany, the following applicants were successful:

Pharmacists: Edward Martin Cole, Irving F. Richmond, George James Donovan, Leo Ganbarg, Abraham Lichterman, Julius Siegel, Orrin Hertz, Jacob Wesserman, Joseph Potechin, Alfred F. Calvelli, Nicholas Joseph Vitale, Louis Friedman, Robert Danchig, Samuel Bean, Isadore Hamburger, Herman Cohen, Anton J. Martinek, Herman Katzen, Kate Kramer, John D. A. Hogan, William Banchefsky, Edmund Bentkowski, Harry A. Bartholomew, Manfred Simon, Morris Stuzin, Edward Cragg, jr., Joseph Rollo, Alexander Kramer, Isadore Weissman, Bessie Weiss, Harry Edward Gittelman, Adolfo LoFaro, Moses A. Schoenwald, David H. W. Johnson, Max Rosen, Milton Fisher, Francesco Gliberti, Benjamin Jospoy, Carl Henry Hergert, Albert Stern, Jerome Francis Laverty, Nicholas LoVece, Edward J. Kodet, Abraham Kramer, Gaetano Portoghese, David B. Lawrence, Charles B. Laspia, Schlioma I. Krinker, Elmer Jannace, Lester E. Dougherty, Arthur Le Grande Jayne, Frank Mendola, Edward F. Cuffney, Charles J. Turks, Lynn E. Akins, Homer H. Bury, Claude Tolman Spaulding, Joseph J. Lojaco, John Abner Handy, Frank W. Tyler, Edmund S. Krysztafkiewicz, Ellis Everett Burdick, Neil E. Morgan, Thomas Francis Fletcher, Charles A. Mitchell, Warren Elmer Doll, David B. Ashton, Frank S. Hayes, Stanley J. Fisher, Roswell W. Kinnie, William Francis Loucks.

Druggists—George Randall Cogswell, Julius M. Reider, Asa B. Lemon, Edward W. Seifert, Harold Chandler Clark, William Cullman, George Katelus, Joseph Wolf, Joseph A. Algeo, Frederick Beverly Morse, Roy M. Barr, Harry Aaron Stetler, Ernest C. Stoll, Madison W. Washburn, Sherman Lynn Hickok, Everett Floyd Reid, William J. Lawson, D. Marshall Brown, Carl E. Miller, Carl J. Rizzo, Francis B. Casey, William F. Miller, Harold A. Granger, Patrick E. Kiley, Anthony G. Bankert.

### NEWS OF THE BOARDS

The Iowa State Pharmacy Commission is demonstrating that it is worth more than the \$30,000 per year it costs the State. It is now getting after the pedlars who are enabled to handle dangerous drugs through a clause in the State law which exempts dealers in proprietary medicines and domestic remedies. Under the law only registered pharmacists may dispense preparations containing opiates or intoxicating liquors, but the law has not until now been strictly enforced. The position of the board is reinforced by the fact that some years ago the attorney-general of Iowa ruled that pedlars could not sell drugs of such content. The commission is now requiring

that the manufacturers of medicines handled by pedlars submit labels that go on their packages. As the labels must state the exact amount of opiate or intoxicant contained in the medicinal preparation, the medicines which pedlars may not sell will soon be ascertained. The commission will get after those pedlars found selling the forbidden preparations.

The Kentucky Board of Pharmacy was recently upheld by the Court of Appeals at Frankfort when Chief Justice Hobson in an opinion affirmed the Jefferson circuit court, which had refused to C. C. King an order requiring the State Board to grant him a license on a certificate issued to him by the State of Georgia. A rule of the Kentucky Board is to the effect that certificates issued to pharmacists in other states will not be validated by it until after the holder has practiced for a year as a pharmacist in the state in which he secured his original license. The court held that the rule was a reasonable one.

C. Lewis Diehl, of Louisville, Ky., has been appointed to the Kentucky State Board of Pharmacy by Governor McCreary. He will serve for a period of five years and succeeds Robin H. White, of Mt. Sterling, former president of the Board. Mr. Diehl was recommended by the State Ph.A.

The Indiana State Board is conducting an investigation to ascertain just what conditions exist in the State as to the maintenance of "blind tigers" by druggists, and the sale without prescriptions of cocaine and other narcotics. Four registered drug clerks employed in drug stores not owned by pharmacists, were recently summoned to appear before the petition of the railroads ought to be granted, and has between "wets" and "drys," say the members of the Board.

The Illinois State Board of Pharmacy has revoked the licenses of John H. and Charles A. Montgomery, owners of a drug store at 2604 South State street, Chicago. The Board acted after reviewing the list of convictions and a case pending against the brothers, involving the sale of cocaine and other drugs without proper prescriptions. John H. Montgomery, a Democratic candidate for alderman of the Second ward last spring, on a charge of selling cocaine illegally was found guilty in a sealed verdict returned in a municipal court in Chicago on Oct. 1.

Despite the action of the Georgia State Board at Macon on July 24, when it recommended George Case, of Milledgeville for the position of State drug inspector, T. A. Cheatham, of Macon, remains in that capacity. As far as is known he has been a very efficient and satisfactory official. The law provides that the inspector can be removed only on definite charges, and no charges have been filed. It is further provided that the State commissioner must fill the position from among recommendations made by the Board of Pharmacy.

The Mississippi Board of Pharmacy, according to an open letter sent out by Secretary W. W. Ellis, of Fernwood, will see that the law relative to the registration of poison sales is enforced. Druggists must obtain proper poison registers and make the required entries. The board will also enforce the law requiring that drug stores must at all times employ a registered man.

### NEW INCORPORATIONS

The Long Drug Co., Columbus, O., capital stock, \$5,000; to conduct a drug store; incorporators, A. Y. Long, D. R. Long, H. H. Long and G. L. Long.

The Henry Lindholm Co., Cleveland, O., capital, \$25,000; to establish a "string" of drug stores; those interested are H. L. Lindholm, Georgia Lindholm, H. S. Cooper, Adele Cooper and L. E. Robinson.

The Thomas-Morrison Co., Struthers, O., manufacturing druggists; capital stock, \$10,000; incorporators, C. H. Thomas, J. H. Morrison, Mrs. C. H. Thomas, Mrs. M. E. Morrison and J. F. Pearce.

The Garrett Drug and Stationery Co., Bluefield, W. Va., capital stock, \$50,000; to handle drugs and similar lines; incorporators, R. M. Garrett, W. G. Given, R. R. St. Clair, S. H. Bradley and L. J. Cutler, all of Bluefield.

The Blau Medicine Co., Arctic, R. I., capital stock, \$100,000; chemicals and real estate; incorporators, Paul E. Gervais, Joseph Gendron, Alphonse Ouevillon, all of West Warwick.

Theatre Pharmacy Co., Mitchell, S. D., capital, \$25,000; incorporators, L. J. Welch, T. J. Spangler, Fred H. Scott, Wm. A. Scott and J. C. Wood.

Synthetic Chemical Co., Manhattan, capital, \$10,000; to do chemical business; E. E. Holmes, G. E. Holmes and W. E. Holmes.

The Dentor Co., Inc., Manhattan, capital, \$25,000; to manufacture patent dentifrice; incorporators, L. Bergman, J. L. Mendel and C. Schwartz, New York City.

The Royale Drug Co., Boston, capital, \$1500; incorporators, Harry B. Ross, Samuel A. Oppe and Catherine E. Noyes.

The Old Colony Chemical Co., Boston, capital, \$50,000; incorporators, Forrest A. Rowell, Parker H. Litchfield and George A. Webster.

W. A. W. Curry Corp., Manhattan, capital, \$250,000; drugs, etc.; incorporated, S. I. N. Vause, H. P. Freese and G. A. Knobloch.

The Acme Drug Co., Cleveland, O., capital, \$20,000; incorporators, R. S. Link, Joseph Goodman, Henry O. Wavio, William J. Scher and George A. Mitchell.

Broadway Pharmacy, Norwich, Conn., granted certificate of dispensing.

Central Pharmaceutical Co., Seymour, Ind., capital, \$100,000; incorporators, H. A. Washburn, W. C. Sumner, S. N. Quillen and others.

The Twentieth Century Medicine Co., London, O., capital, \$5000; incorporators, John Bramlet, H. C. Gist, G. H. Hartman and others.

Henry C. Blair, Jr., New York, capital, \$250,000; to do a general drug, chemical and pharmaceutical business, and to deal in hospital supplies and general merchandise; incorporators, T. L. Green, M. M. Hill and R. S. Fletcher.

Mitchell Medicine Co., Alexandria, La., capital, \$200,000; to conduct a general wholesale and retail drug business and stores in which drugs of all kinds may be bought, kept and sold, etc.

The Speedway Remedy Co., Shelby, O., increase in capital from \$100,000 to \$250,000.

Barber Medicine Co., Barre, Vt., capital, \$50,000; subscribers, Charles N. Barber and Bessie C. N. Barber, Jr., of Barre.

Crown Supply Co., New York, capital, \$25,000; to deal in barbers', druggists', merchants', vendors' supplies; incorporators, W. H. Pritchard, L. and F. Wiltshchek, 64 East 125th street.

Bay-Roma Tonic Co., capital, \$5,000; selling agents and distributors; incorporators, J. R. Roth, S. Rendel, M. A. Franzblau, 164 W. 110th street.

Beaucaire Drug Co., Inc., Manhattan, capital, \$25,000; drugs, chemical and toilet preparations; incorporators, R. W. Hallock, P. A. Van Heeden, J. F. Jack.

The Dean Drug Co., Los Angeles, Calif., has petitioned to have its name changed to the Dickinson Drug Co., W. R. Dickinson, president and general manager, having acquired a large amount of stock. The company when it was incorporated in 1897, was known as the Sale & Son Drug Co., the Tanner Drug Co. in 1901, the Off Drug Co. in 1903, and the Dean Drug Co. in 1907.

Kenyon & Wheeler, Great Falls, Mont., capital stock, \$40,000, of which \$300 has been subscribed; to do a general wholesale and retail drug business; incorporators, Frank O. Wheeler and Clarence E. Kenyon, of Great Falls and E. H. Lang, of Butte.

Ideal Chemical Mfg. Co., Pittsburgh, Pa., capital, \$20,000.

American Camphor Corporation, Wilmington, Del., capital stock, \$500,000; to manufacture, sell and deal in and with chemicals of all kinds; incorporators, Herbert E. Latter, W. J. Maloney, Oscar J. Reichard, all of Wilmington.

The Spalding Drug Co., New Haven, Ct., capital stock, \$35,000; officers and directors: President and treasurer, Clarence G. Spalding; vice-president, Arthur W. Malley; secretary, Edward B. Spalding of New Haven. The president holds 348 of the 350 shares of stock.

Elliott Drug Co., Elmira, N. Y., incorporators, E. L. Mayo, T. C. Gerity and H. W. Elliott.

Binghamton Hospital Supply Co., Inc., Binghamton, N. Y., capital, \$50,000, to deal in surgical, medical, chemical and scientific apparatus, etc.; incorporators, Herbert E. Woodward, Clarence L. French, Chas. E. Demeree.

The International Drug Co., Cleveland, O., capital, \$10,000; incorporators, M. E. Tettebach and others.

The Bauer-Tennant Drug Co., Cleveland, O., capital, \$10,000; incorporators, M. Tennant and others.

The Schaffner Drug Co., Ashtabula, O., capital, \$25,000; incorporators, J. E. Allport and others.

The Excel Drug Co., Battle Creek, Mich., capital, \$3,000.

Kensington Cork Mfg. Co., Pittsburgh, Pa., capital stock, \$10,000; treasurer, Albert C. Gutekunst, 1503 Lawrence st., Philadelphia; directors: Mary Stoy, Albert C. Gutekunst, George Thumm, all of Philadelphia.

E. E. Sutherland Medicine Co., organized under the laws of Kentucky with a capital stock of \$400,000, has been granted a license to do business in Missouri. Of the company's capital stock, \$10,000 is to be used in Missouri, in which State it has an office at St. Louis.

Mutual Soda and Seltzer Mfg. Co., St. Louis, Mo., capital, \$5,000; incorporators, Henry Scherf, J. J. McNamara and Chris Busse.

John Trulson Co., Princeton, Ill., capital stock, \$10,000; to retail paint, drugs, merchandise, etc.; incorporators, John Trulson, John M. Rombo and L. R. Davis.

The Cat's Eye Chemical Co., Rochester, N. Y., capital, \$10,000, company begins business with \$5,000; incorporators, S. A. Doody, E. F. Kelly and Chas. Schomski, all of Rochester.

Norwood Drug Co., Chapel Hill, Va., capital stock, \$10,000 authorized and \$2,000 subscribed; to do a general drug business; incorporators, E. G. Norwood, E. P. Norwood and M. E. Merritt.

Anti-Bacilli Remedy Co., Attica, Ind., capital, \$10,000; to manufacture chemicals and medicines; incorporators, W. C. Archer, B. S. Orr and J. Lake.

St. Louis Serum Co., National City, Cal., capital, \$2,500; to manufacture and sell anti-hog cholera serum; incorporators, Wm. G. Peters, Patrick Murphy and J. B. Messick.

Fragro Co., Inc., Manhattan, capital, \$100,000; to manufacture perfumes, toilet articles, etc.; incorporators, H. O. Coughlan, J. F. Curtin, S. A. Anderson, N. Y. C.

The Partola Mfg. Co., New York City, has increased its capital stock from \$125,000 to \$500,000.

La San Co., Covington, Ky., capital stock, \$1,000; to manufacture and sell medicinal preparations; incorporators, M. J. Brown, R. A. Flanagan and L. F. Brown, all of Kenton county.

The Milmore Corporation, South Bend, Ind., capital, \$5,000; to manufacture and sell chemicals, etc.; incorporators, H. C. Elmore, C. L. Miller, Charles A. Carlisle.

Vecto Chemical Co., New York City, capital, \$5,000; incorporators, Guenther Hoecker, A. F. Hansel, F. G. Law.

St. Marks Laboratories, Manhattan, capital, \$10,000; patent medicines; incorporators, H. Canter, C. C. Dillon and W. A. Schlaicht.

Fine Herb Co., Philadelphia, capital stock, \$10,000; treasurer, Lawrence F. deBayarde; directors: Horace F. McCann, L. E. deBayarde, Wayne Whipple, all of Philadelphia.

The Melbane Pharmacy Co., Wilkes-Barre, Pa., capital stock, \$5,000; treasurer, A. Ramsey Melbane; directors: D. C. Melbane, R. Ramsey Melbane, Donald Melbane, Rom. S. Melbane, all of Wilkes-Barre, Pa.

Proprietaries Eliminated From War Tax Bill

The war revenue bill, signed by President Wilson October 22, and which becomes effective December 1 insofar as the adhesive stamp taxes provided for are concerned, passed both houses of Congress with all reference to proprietary medicines eliminated. When first proposed, this measure included a provision for the taxation of such medicaments, but the united drug trade put up a strenuous fight against a tax which would be shouldered solely by the retail druggist. This opposition, and the anticipated high proportionate expense of administering the tax no doubt led to the action taken.

Provisions for adhesive stamp taxes which are of particular interest to the retail druggist follow:

Telegraph and telephone companies, one cent on each message over 15 cents.

Senders of telephone or telegraph messages on each over 15 cents, one cent. (Company must collect the telegraph or telephone tax from the person "paying for" the message.)

Perfumery and cosmetics and other similar articles: For and upon every packet, box, bottle, pot, phial, or other inclosure containing any essence, extract, toilet water, cosmetic, vasline, petrolatum, hair oil, pomade, hair dressing hair restorative, hair dye, tooth wash, dentifrice, tooth paste, aromatic cachous, or any similar substance or article, by whatsoever name the same heretofore have been, now are, or may hereafter be called, known, or distinguished, used, or applied, or to be used or applied, as perfumes, or as applications to the hair, mouth, or skin, or otherwise used, made, prepared, and sold or removed for consumption and sale in the United States, where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall not exceed at the retail price of value the sum of 5 cents, one-eighth of 1 cent.

Where such packet, box, bottle, pot, phial or other inclosure, with its contents, shall exceed the retail price or value of 5 cents, and shall not exceed the retail price or value of 10 cents, two-eighths of 1 cent.

Where such packet, box, bottle, pot, phial or other inclosure, with its contents, shall exceed the retail price or value of 10 cents and shall not exceed the retail price or value of 15 cents, three-eighths of 1 cent.

Where such packet, box, pot, phial or other inclosure, with its contents, shall exceed the retail price or value of 15 cents and shall not exceed the retail price or value of 25 cents, five-eighths of 1 cent. And for each additional 25 cents of retail price or value or fractional part thereof in excess of 25 cents, five-eighths of 1 cent.

Chewing gum or substitute therefore:—For and upon each box, carton, jar or other package containing chewing gum of not more than \$1 of actual retail value, 4 cents; if exceeding \$1 of retail value, for each additional dollar or fractional part thereof, 4 cents; under such regulation as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

Essence of Cherry

Table listing ingredients for Essence of Cherry: Benzoic acid 1 part, Acetic ether 5 parts, Benzoic ether 5 parts, Oenanthic ether 1 part, Glycerin 3 parts, Rectified spirit 100 parts.

Mix with an equal bulk of water and filter bright through kaolin.

Imitation Maraschino Essence

Table listing ingredients for Imitation Maraschino Essence: Essence of almond (1 in 10) 12 minims, Oil of neroli 2 minims, Essence of vanilla 20 minims, Essence of jasmine 4 minims, Alcohol 2 ounces.

Mix.

### SIDE CROP FOR GINSENG GROWERS

**Goldenseal Offers Possibilities, but Market Limited, Labor High, and Special Cultivation Necessary.**

WASHINGTON, D. C., Oct. 15.—Goldenseal is a native drug plant of admitted commercial value, which is rapidly becoming scarce, and farmers who have had experience with ginseng may find in goldenseal an admirable side or succession crop. This is the opinion of one of the U. S. Department of Agriculture's drug-plant specialists, whose pamphlet, "Goldenseal Under Cultivation," has just been issued as Farmers' Bulletin 613. Goldenseal, known to the pharmacist and physician as *hydrastis*, is native to open woodland where there is ample shade, good natural drainage, and an abundance of leaf mold. It is most abundantly found in Ohio, Indiana, West Virginia and Kentucky, though it grows west to Minnesota, south to Georgia, and in southern New York. It is not grown in Europe on a commercial scale and the United States exports quantities of this drug to Germany.

In general, drug plants are difficult to grow, labor costs are high, and the market limited. These drawbacks are true of goldenseal, but ginseng growers who are already equipped for the culture of exacting woodland plants, but whose ginseng crops have been attacked by pests and diseases, should meet with some success with goldenseal. The latter requires essentially the same conditions as the other crop, but is easier to grow being far less subject to disease and attacks from mice.

#### Steady Advance in Market Price

There began to be a commercial demand for goldenseal about 1860 and since then its use has become world-wide, although most of it is consumed in this country. It is valued solely for its remedial properties and was commonly used by Indians and early settlers as a remedy for sore mouth and inflamed eyes; also as a bitter tonic in stomach and liver troubles.

Until about the year 1880 the prices paid for crude goldenseal rarely ranged over 8 to 12 cents a pound, these prices, as a matter of course, being based on the actual cost of collecting and curing the material where it was abundant. In 1890, however the approaching scarcity of the root was manifested by rising prices, and at the close of the next decade the cost had advanced to an average of 58 cents a pound. Early in 1904 the price passed the dollar mark, the year closing with wholesale quotations varying from \$1.35 to \$1.50.

With the exception of slight fluctuations in 1912, which were apparently the result of overcollection, there has been a steady advance in the price of the dried root, both wild and cultivated. The prices paid to growers and collectors of goldenseal for the last three years have ranged from \$3 to \$4.25 a pound, and these prices are thought to afford a fair basis of profit in goldenseal culture, even after taking into consideration the rather exacting requirements of the plant and its relatively slow progress toward commercial maturity.

#### Not an Easy Crop to Grow

It costs about \$1,500 an acre, exclusive of the value of the land, to start a goldenseal plantation. This includes the average cost of propagating material, but makes no provision for irrigation during dry weather. Of course, special conditions, such as local cost of labor, lumber, and fertilizers will influence this estimate. This outlay might well discourage those who wish to cultivate the plant on a large scale, but small home and experimental plantings may usually be started

at a very small cost. In any case the plan requires special care and suitable conditions at all stages of its development.

Goldenseal takes considerable time to develop. If it is grown from seed under favorable conditions it only reaches its best development for market after about five years. If it is grown from root buds or by division of the rootstock, it reaches its best development in three or four years. Successful growers have outputs of about 2,000 pounds of dried root per acre after five years from seed. Better showings might be made by well-equipped small growers.

#### Limited Market and Danger of Overproduction

A market for goldenseal is found with the crude drug dealers and manufacturing druggists in most large cities. This root is also handled on commission and is readily purchased by fur buyers and traders in miscellaneous forest products. The estimated annual consumption, however, is only 100 tons, and as only about 500 acres would be needed to produce that amount, overproduction would be easy. Prospective planters should bear this in mind as well as the fact that this estimate makes no allowance for the wild supply of the root which is still a factor, although rapidly decreasing. The new bulletin referred to above, goes into great detail regarding methods of cultivation, and may be had free on application to the Division of Publications, U. S. Department of Agriculture, Washington, D. C.

### ONE DRUGGIST WHO KNEW HOW

As an example of how to approach the Senator or Congressman who represents you in Congress, when your business interests are threatened by proposed legislation, the ERA prints this letter from E. H. Cone, Inc., of Atlanta, Ga., to Senator Hoke Smith.

It is a straight-from-the-shoulder communication; tells its story quietly and effectively. Read it:

Atlanta, Ga., October 10, 1914.

HON. HOKE SMITH,  
Washington, D. C.

Dear Sir:

Re: War Revenue Tax on Druggists.

We fail to see the justice of the Government's policy of the proposed tax on druggists.

Why not tax every retailer in the United States?

Why tax us for selling merchandise that takes a less profit than many other lines?

Our sales of ready made medicines are half what they were ten years ago. Our overhead expenses are more.

I cannot understand why we are picked out as a tax target. The Government must have the Revenue; but why not take in more classes?

Hundreds of drug items have advanced since the war. Our loss. Alcohol has advanced twice—probably in anticipation of the tax. Our loss.

When you had in mind Gasoline Tax this seemed right. I own a machine and I am willing to pay a tax on gasoline. This will reach all classes.

Why not tax the auto manufacturer and his big profits? The classes, and not the masses, can stand the tax.

We fail to see the justice of exempting the hardware, clothing, department store and like merchants, and letting the "corner druggist" carry the load.

Why not tax the objectionable trading stamp and coupon?

It looks at a distance as if this tax act will stand for several years.

An investigation will show that 95 per cent. of the druggists in the United States are not breaking even on their drug sales. Were it not for cigars, soda water and sundries, one-half of them would go out of business.

We are willing to pay our share of taxes, but we protest against the discrimination made.

Will you not use your influence to have it equalized?

Very respectfully,

E. H. CONE, INC.

Hon. Schley Howard.

HOW TO REACH DEALERS

National Distribution Economically Secured Through the Business Press

By J. J. PHOENIX

Business, Brady Knitting Co., Delavan, Wis.\*

It is a well established fact that in every line of business there are in excess of 100,000 retail stores and traders.

Trade papers, trade journals and class journals find ready and increasing circulation in this great dealer army indicates that the business press which today is being covered with remarkable ability.

In my travels I gain the retailers' attitude toward the trade press. I interview merchants in my home town, Delavan, Wis., among 25,000 inhabitants, only 85 miles from Chicago, and in other towns, with keen competition locally and from nearby cities. I have seen in building up an excellent trade center. Out of 100 merchants questioned, three did not take trade papers—77 were subscribed for 18 trade and class journals.

Every salesman expresses his appreciation of and indebtedness to the journals he received.

The trade press is a tremendous utilizing force for good in business, and its influence is so powerful with the dealer—its power is never demanded. Primarily and rightly the trade merchant stands between manufacturer and consumer, guarding alike the interests of each, even though it has been said that the manufacturer must assume the responsibility for the sale of his product to the ultimate consumer.

Therefore it seems logical that the manufacturer and jobber desirous of distribution economically and quickly effected, should approach the dealers through the trade press. A case in point is a page from the autobiography of our company.

Some years ago the Brady Knitting Company brought out a new knit goods article of great promise. We were known to a small clientele with limited distributing power, and the jobbers' field was occupied with several makes of similar appeal. As the article was not only useful but invested with the style element, it was necessary to secure immediate and wide dealer connection. We put our problem up to the publishers of our dry goods trade papers. We had known these men for many years, they were friends and counselors in the problems connected with our retail store. We knew them as big, able successful men in the dry goods trade, and we followed their advice to undertake a mod est trade paper campaign in the leading clothing and dry goods journals. The results were immediate, were well nigh overwhelming. At an expenditure of less than \$6000 in trade papers and follow-up advertising we sold over 8000 new accounts with not a dollar of consumer publicity. True, we were fortunate in the article, the time and conditions, but the trade press publicity brought us the dealers' attention and our merchandise the rest. We then began national consumer advertising and hope ever to continue.

Nation-wide dealer acquaintance, good will and influence can be secured through this trade press advertising at a mere fraction of the cost of sufficient national advertising to create consumer demand forceful enough to make the merchants stock goods. I have in mind the experience of two makers of soft drinks. The first with small capital, used trade papers and personal solicitation—the first year on the verge of failure, in two years a fine business established, and then national consumer publicity constantly followed with great success. In the second case a really delicious soft drink was produced, and out of a \$100,000 capital, \$75,000 was spent in consumer papers, city dailies, magazines, temperance and church papers the first season. There were consumer inquiries, a smile here and there at the fountains and cafes, few dealers' accounts, and the waters of oblivion closed over another unsuccessful venture.

An article well advertised in the trade press has advanced letters of introduction that open the merchants' doors upon the salesman's arrival. Notice, this has been a hard year on the knit goods trade, the reduction in tariff let in much foreign goods, the mild winter left stocks upon merchants' shelves, the uncertainty as to the future frightened; all combined to hold up trade. Our company met the situation with increased

\* Paper read at the Ninth Annual Convention of the Federation of Trade Press Associations held in Chicago, Sept. 24-26th, 1914

trade paper advertising, colored inserts, featuring novelties, etc., and up to Sept. 1st our shipments exceeded any previous year. EXPERIENCE HAS TAUGHT US THE VALUE OF THE TRADE PRESS INTELLIGENTLY USED.

NEWSPAPER ADVERTISING INCREASED

St. Louis Druggists Using More Space—Special Appeals Employed in Effort to Capture Trade

Competition among the downtown drug stores in St. Louis is keener than ever. Where there was some advertising every few days several years ago, drug store advertising space has increased recently until drug store ads are as regular as the paper. Wolff-Wilson's advertisement carries the banner—"The Price Cutters." Judge & Dolph's slogan is—"The Price Makers." The five Johnson-Enderle-Pauley stores—four of them downtown—advertise cut prices. The Hook store has also gotten into the ad space.

But the stores are not relying on prices to capture all the trade. They make special appeals, such as, for instance, this latest one by Judge & Dolph stores:

MAKING IT SAFE TO BUY DRUGS

Precautions that seem almost unnecessarily severe and extreme are observed in all three of our stores. It costs us hundreds of dollars each month to render mistakes impossible, but it is worth it to be sure that neither inferiority or substitution—intentional or unintentional—frustrates the mission of drugs and medicines.

To such an extent do we enforce this care that when your physician prescribes, or you ask for, any make of any standard drug, none other, however meritorious it may be, is used. To a strict observance of this policy, adopted years ago, we base our belief that eventually every buyer of drugs in St. Louis will buy from us or insist on our methods being adopted by the druggists they patronize.

But why take chances? Make assurance doubly sure! Go to Judge & Dolph!

Johnson-Enderle-Pauley stores' advertisement leads with this appeal:

..... :  
: :  
: COURTESY—SERVICE :  
: :  
: To each individual customer, and to each :  
: individual who will become a customer, is :  
: the slogan and aim of every employe of the :  
: Johnson-Enderle-Pauley Drug Co. :  
: :  
: .....

The advertisement also carries the banner—"Five Quality Drug Stores"

Wolff-Wilson's also frequently carries advertisements with appeal other than that of the list of cut prices. One of their favorites for top lines is—"Get it at Wolff-Wilson's." Another favorite catcher—"Every Day is Bargain Day at Wolff-Wilson's"

Here is the appeal of the newest store, the Hook, which is part of an advertisement of cut prices:

"Delicious Sodas—Served with pure fruit syrups and the best ice cream obtainable. The scrupulous cleanliness that pervades the entire establishment has won the favor of discriminating folk.

"A Restful Retreat—Seven separate booths, each seating six persons, where you and your friends may partake of light refreshments served in a manner that will make you want to come again.

"A modern drug store where you get more or pay less. Not only do we sell at prices that are fair but we give you the kind of service particular people appreciate. You will find our clerks courteous and competent; prescriptions are filled only by graduate pharmacists of long training and thorough efficiency.

"Cut prices on everything everyday to everybody. It means that a child can buy as advantageously as the most experienced adult. It means that you can get what you want at a price within reason without having to haggle, not only to-day but to-morrow, next week and for all time that the Hook Drug Company continues in business.

"If the people of St. Louis really wish to lower the cost of living and keep it lower they will see that Hook Economy Drug Store is patronized. One Hook store in a community does more toward knocking out high prices than all the theories you can assemble."

## FROM THE BUSINESS FIELD.

**The Swift Specific Co.**, Atlanta, Ga., has joined the Buy-a-Bale-of-Cotton movement on a big scale and, it is reported, will buy between now and January 1 about \$100,000 worth of cotton at 10 cents per pound. R. L. Hood, manager, is quoted to the effect that his company's investigations prove conclusively that the resumption of normal business in the South depends on the cotton market. "Very little money is changing hands at this time even for payment of outstanding obligations and this condition is going to continue until there is some market for cotton." The company's directors were enthusiastic over the plan to purchase and retire 2000 bales of cotton at 10 cents per pound. The company, the report goes, is notifying every retail and wholesale druggist in the Southern States that it will take their cotton at 10 cents in payment for their purchases.

**The Powers-Kelly Drug Co.**, Waco, Texas, is in receipt of a letter from the managing director of the National Anti-Substitution league complimenting the drug firm upon its efforts to protect the public from being forced to accept substitutes for the goods they desire to purchase. The letter expresses the hope that the slogan, "Get what you ask for," will be accepted as a living truth in connection with Powers-Kelly's business methods. This firm has earned laudable publicity in another direction. It has hit upon an original method of helping along the B-A-B movement. In its window is a bale of cotton surrounded by 500 10-cent packages, the money realized on the sale of which will go toward the purchase of another bale. A crowd watches the cans disappear.

**Brown & Allen**, Atlanta, Ga., will open a magnificent new drug store at Whitehall and Alabama streets. The soda fountain will be a feature. The old and well known store of this company was founded 23 years ago and has had a most successful career. It was the meeting place of thousands of people every day. The soda fountain dispensed drinks by the million, and the drug and prescription department enjoyed a huge patronage. E. C. Brown, of the firm, asserts that the new store will measure up in every particular to the old one and will, in addition, make a stronger bid for popularity by reason of its increased and improved facilities for better service.

**The American Camphor Corporation**, incorporated for the purpose of manufacturing gum camphor, it is reported, has secured a building in Philadelphia, on the southeast corner of Lehigh avenue and Edgemont street. In this, says the report, is being fitted the pioneer plant in the manufacture of camphor in this country. Some of the product will be available for pharmaceutical purposes, but most of it will go to manufacturers of celluloid. Equipment for giving the factory an output of 25,000 pounds a day will be installed and by mid-winter the plant will be in complete operation. A by-product will be glauher salts, about five tons per day of which will be turned out.

**Haverhill** (Mass.) druggists are not likely to be haled into court because their weights have not been sealed, at least not for the present. The State Sealer of Weights and Measures had announced that he intended to consummate a general roundup, but on coming to town he discovered that the city sealer had not been supplied with the requisite apparatus, which costs about \$50. The local authorities argued that although they might be breaking the law by not purchasing the apparatus, they certainly would be breaking it by spending unappropriated money. And, anyway, they said, the law, which was passed last June, called for an "annual" inspection, and the druggists had until June 1915.

**Walker & Gibson's** new building at Albany, N. Y., now under construction and which will face Broadway at Orange street and extend through to Montgomery street, will be one of the show places of that city. It will have a frontage of 90 feet and depth of 200 feet. The wall will be of concrete reinforced with steel and overlaid with dark tapestry brick. It

will have a gray stone base and a very elaborate stone entrance with an imposing stone pillar at each side of the vestibule supporting a carved arch. The cornice will also be constructed of stone with a carved center piece above the main entrance. The equipment for handling goods in the building will be of the most modern sort.

**The Ellis-Lillybeck Drug Co.**, Memphis, Tenn., is being sued for \$100,000, damages by A. Thweatt, who formerly traveled for the drug firm. Thweatt, it is reported, was arrested some time ago and tried on a charge of embezzlement at the instance of his employers. He was acquitted. He claims his house owed him about \$1,400 and refused a settlement. He collected \$800, which he refused to deliver until he was accorded an accounting. According to the report, the company contends that even if they did owe him money, he had no right to appropriate collections to his own use, and that if he was not guilty of actual embezzlement there was at least probable cause for having him indicted.

**The Jacobs Pharmacy Co.**, Atlanta, Ga., has purchased the triangle at the intersection of the Peachtree and Roswell roads, at a purchasing price estimated to be approximately \$120,000 per acre. The plot contains about 5,000 square feet. The company will erect a two-story brick building, with ground space reserved for a drug store. The triangle thus sold has for a long time blocked the widening of the Boswell road. A petition will be presented to Joseph Jacobs requesting that he give a strip ten feet wide for the desired improvement. It is argued that the gift would be an advantage to Mr. Jacobs in that it would result in more street traffic and will make a proposed trolley line possible.

**C. R. Hillberg & Co.**, Brocton, Mass., has been dissolved and Frank T. Youngquist, a partner for 20 years, becomes sole proprietor of the company's Central street drug store. He relinquishes his interest in the Campello store of the company, of which Mr. Hillberg becomes the owner. Mr. Youngquist has managed the Centre street store for more than 20 years and was employed there for five years previous to taking charge there. It has grown from a small one-clerk establishment to one requiring the services of Mr. Youngquist and five assistants. The stores will continue under the same firm name.

**The Nagle pharmacy**, conducted by the late Thomas S. Nagle, at Allentown, Pa., for many years, has been purchased from David J. Nagle, executor of his father's estate, by Edwin F. Gehringer. The store is one of the oldest drug stores in the city, having been established by Wm. F. and E. J. Danowsky more than 50 years ago. Inquiries had been received from prospective purchasers of the store, but Mr. Nagle respected the wishes of his father in turning the store over to Mr. Gehringer, who had been in charge for the past six years. Mr. Gehringer is a Philadelphia C. P. graduate, also a post graduate of that institution.

**The Alton Drug Co.**, Alton, Ill., recently awarded 45 pieces of china dishes and 10,000 votes in the Booster campaign it is conducting, to the winner in its post card writing contest. The person who could write on an ordinary regulation size government post card the words "Alton Drug Company" the greatest number of times was to be the recipient of the dishes. There were 38 participants and all did fairly well. On many of the cards the writing was legible only with the aid of a glass. The young lady who won first prize wrote 5,895 words on the card. Second place wrote 5,508 words. The cards made an interesting window display.

**Andrew R. Cunningham**, proprietor of the Standard Drug store, 14 Gratiot avenue, Detroit, Mich., will celebrate the silver jubilee of his entry into the drug field of that city, by moving from 14 Gratiot to 155 Woodward avenue. After moving, Mr. Cunningham's five stores will each be known by the title, "Cunningham's drug store." The new store will have one of the largest photographic departments in the city. Twenty-five years ago Mr. Cunningham purchased a store at Monroe and Joseph Campau avenues, which he still conducts. He recently established a store in the Kresge building.

**Salem, Mass.**, druggists recently conferred with the mayor of that city who endeavored to impress upon them that if any of them had heretofore been engaged in the illegal traffic of liquor such a practice must be stopped immediately. If they were disobeying the law in this respect they would be treated in the same manner as all other illegal liquor sellers. A conviction for a violation of the liquor law would be conclusive evidence of the illegal use of their certificate.

**The Schempf Drug Co.**, Fort Atkinson, Wis., which succeeded to the ownership of the Lighny pharmacy, in that city, on September 5, has been sold to Winterburn Bros., of Marshfield, Wis. After purchasing the store, Mr. Schempf suffered a nervous breakdown and his family decided to sell the store immediately. The business will be under the personal management of C. F. Winterburn, Ph. G., for several years past a manager of the Sexton pharmacy, Marshfield.

**E. F. Mykrantz** has opened his seventh retail drug store in Columbus, Ohio, this latest link in his "chain" being located at North High street and Ninth avenue. Over 12 years ago, Mr. Mykrantz conducted a drug store in New York City, but was persuaded by relations to come to Columbus. He opened his first store at 23 South High street. Besides his stores, Mr. Mykrantz is interested in the exploitation of goods under his own name. He believes in "popular prices and advertising."

**Marion Huffman**, druggist, Bellaire, O., won the jury's verdict in a suit for damages recently brought against him. The plaintiff sued for \$1000 damages and alleged that she had been persuaded by the defendant when she entered his store to have a prescription filled. She charged, it is reported, that the druggist maliciously took hold of her and used improper language. The jury was out but a short time and returned a ballot favoring the defendant.

**The Georgian Pharmacal Co.**, Atlanta, Ga., through its president, James M. Lumley, has notified its patrons, it is reported, that it will accept in place of cash for bills due, and also for credit on a purchasing account during the coming year, two bales of cotton from each customer at 10 cents per pound. The company requests customers to "use your influence to prevent more than a 50 per cent. crop being planted next year."

**Clyde Grady**, will, in the very near future, re-occupy the building at Smith Mills, Ky., in which he conducted his drug store previous to the conflagration which destroyed that city August 30th. His old quarters are being remodeled and put in condition for the resumption of business at the old stand. Meanwhile, he is trying to cater to his patrons in a building too small for the amount of stock he carries.

**J. M. Diller**, druggist at Skilton, O., is being sued for \$5000 damages by Mrs. Nora McFarland. The plaintiff claims that on July 7 she applied at Diller's store to have a prescription for laudanum filled, but instead she was supplied with 60 cents' worth of a certain poisonous drug, she avers, which caused her to become so sick that she was unable to attend to her household duties for more than two months.

**Morrison's** new drug store at East Eighth and Cherry streets, Chattanooga, Tenn., has been formally opened to the public. The proprietor, Mark Morrison, is well known to Chattanoogaans, having formerly managed the Live and Let Live drug store, and his corps of salesmen, pharmacists and soda men will be recognized by acquaintances formed while they were connected with other local drug stores.

**The Collins Drug Co.**, Collins, Miss., owned by Otho S. Mayfield, has been thrown into involuntary bankruptcy and a receiver has been appointed to conduct the business. The petition alleges that Mr. Mayfield, while insolvent, transferred a portion of property to one or more creditors, and "concealed or removed a part of his property with the intent to hinder, delay or defraud his creditors."

**Reed's pharmacy**, Market and Marion streets, on the South Side, Youngstown, O., has established a branch to be known as Reed's Prescription pharmacy, at Burke and North avenue, North Side. The opening of St. Elizabeth's hospital has made a drug store in this section a necessity. A complete stock of surgical instruments will be carried. A soda fountain is another feature. Wayne Anderson is in charge.

**Otto Raubenheimer's** Verona pharmacy, 1341 Fulton street, Brooklyn, N. Y., recently received its annual visit from burglars. Their haul is generally worth about \$400 to \$500. This year they got only about \$100 worth of stock. Mr. Raubenheimer is indebted to a neighbor who resides above his store and whose walking around the apartment scared the thieves away.

**R. Douglas Mathews** and Glenn H. Tanner, doing business at Grand Rapids, Mich., under the name of the Hill Drug Co., have been sued for \$1,000 damages, alleged to have been caused by the defendants selling the plaintiff's husband intoxicating liquors. Plaintiff claims, it is reported, that this

is the probable cause of the neglect of the husband of herself and of his alleged abuse.

**M. R. Puckett**, proprietor of the Star drug store, Bartlesville, Kans., must pay \$800 to Mrs. Ida Pitcher, a jury, it is reported, having found that the plaintiff was damaged to that extent by the explosion of a bottle of gasoline which she had purchased from the drug store for wood alcohol. She sued for \$10,000 damages.

**Reid's pharmacy**, Columbus, Ga., is in the hands of a receiver, an involuntary petition having been signed by creditors. The receiver is quoted to the effect that Mr. Reid estimates his stock and fixtures to be worth approximately \$14,000. The total claims of creditors, it is said, will not exceed \$8,000 or \$9,000.

**C. Ernest Montanye**, of Gloversville, N. Y., and Henry Gross, of Johnstown, have purchased the pharmacy in South Main street, Gloversville, owned and conducted during the past year by George A. Ross, of Glens Falls. Mr. Montanye is a graduate of Albany C. P. and has had 16 years experience in the business. Mr. Gross is also an A. C. P. graduate.

**The Neuralgyline Co.**, Wheeling, W. Va., purchased the entire interest of J. G. Dodson, in The J. G. Dodson Medicine Co., manufacturers of Dodson's Liver-tone, Atlanta, Ga. The consideration in the deal, which occurred on October 1st, is said to have been around the million dollar mark. The new holders will inaugurate an extensive advertising campaign.

**Riker-Hegeman Co.** will open its third store in Philadelphia, having leased a store in the Vernon building, north-west corner of Germantown and Cheltenham avenues, in the business center of Germantown. The lease is for 10 years and involves the payment, it is said, of an aggregate rental of about \$100,000.

**The Owl Drug Co.**, of Hattiesburg, La., composed of F. E. and E. J. Williams, have answered to the bill of complaint filed against them by the Coca Cola Co., of Atlanta, Ga. They deny that they have been substituting a syrup of their own make for coca cola. They assert that they make a syrup, but sell it as their own product.

**The Yahr & Lange Drug Co.**, of Milwaukee, well known wholesale drug house, is now entirely settled in its recently purchased building at Chicago and East Water street. The structure is six stories high and has been remodeled into one of the finest wholesale drug establishments in the north-west.

**Charles Mauch**, Easton, Pa., has opened a branch laboratory at Northampton Heights, for the manufacture of medicines. A retail store will also be established at that place just as soon as the business justifies it. Mr. Mauch also intends to manufacture physicians' supplies, for which his experience particularly fits him.

**Demert Drug and Chemical Co.**, has leased the corner store in the Davenport hotel, Sprague avenue and Lincoln street, Spokane, Wash. The drug company has been located in the Whitten building, Post street and Sprague avenue, for years. The fixtures in the store will be in keeping with the tone of the hotel.

**A. Spiegel**, president of the A. Spiegel Co., Milwaukee, Wis., recently signed his check for the sum of \$50 to purchase a bale of cotton. The bale will be shipped to Milwaukee and exhibited in the firm's show windows. The idea is to thereby stimulate interest in the Milwaukee "Buy a Bale of Cotton Club" and to increase its membership.

**M. L. Palmer** and son have disposed of their drug stock at White, S. D., to A. H. Gazely. The building has been sold to S. A. Smith. Father and son will go to California. The firm of M. L. Palmer & Son was one of the oldest in White, having been in business for almost 25 years.

**Olsen's drug store**, Des Moines, Ia., won fourth prize in a recent window display contest held in that city. The prize was \$10 in cash. Artistic merit, originality and advertising value were the considerations in rating the displays. The contest was held during the Style show.

**The Southern Drug Co.**, of Houston, Texas, has notified the Chamber of Commerce of that city that it has been instructed to buy a bale of cotton for Eli Lilly & Co., Indianapolis. The latter firm, it was said, will buy a bale in every cotton State.

**The Crown Cork and Seal Co.**, of Baltimore, Md., has, according to a recent report, wired F. M. Gobright, manager

## How Sponges were Effectively Displayed in a Milwaukee Show Window

**T**HERE are few drug concerns in Milwaukee which offer more varied and unique window exhibits than does the A. Spiegel Co., operating successful stores at Grand ave. and West Water st., 124 Wisconsin st. and at 414 National ave. Besides featuring interesting and instructive displays in its windows, the Spiegel concern usually has some demonstration going on which attracts the attention of the public. Adolph Spiegel, head of the Spiegel concern, is a firm believer in the efficacy of window advertising. The picture shows an interesting exhibit of sponges and other bath articles on display in the West Water street windows of the main Spiegel pharmacy at Grand avenue and West Water streets. The figure standing in the center of the exhibit is made entirely of sponges, bath towels and chamois skins, and wears a pair of rubber gloves. The window attracted a great deal of attention and, as usual, brought much new business to the store.

of its Texas house at Dallas, to buy 6,000,000 pounds of cotton at 10 cents a pound. The Houston Chamber of Commerce has been instructed to buy cotton for this company.

**Otto Wernicke**, druggist at 1046 Gage street, Chicago, recently won his case in court, his landlord prosecuting him for alleged violation of terms of lease by selling intoxicating liquors. Jury also decided that the landlord should pay the costs of prosecution.

**Jeffersonville, Ind.**, druggists recently abandoned an arrangement by which all of the drug stores in that city were closed from noon to seven P. M. on Sundays. Some of the druggists operating soda fountains found that they could not afford to close on Sunday.

**The Florida Essential Oils Co.**, Jacksonville, is the reputed owner of a new industry which is being launched in Clay county, Florida. Work has been begun to clear 12,000 acres of pine trees and stumpage and as fast as cleared camphor trees will be set out.

**The People's drug store** is the style of the company which has purchased the Keller pharmacy at Union, S. C. It is composed of J. H. Wellborn and E. E. McLaurin, both of whom have for the past year or so been with the Milhous Drug Co. The store is being remodeled.

**E. B. Heimstreet**, well known druggist of Palmyra, Wis., secretary of the Wisconsin Ph.A., has purchased the bankrupt stock of Arno Fink, heretofore the only other druggist at Palmyra. The sale was made through a committee of Fink's creditors.

**Robert Glass**, druggist at Monroe and Second streets, Troy, N. Y., is being sued for \$10,000, damages alleged by a school teacher to have been incurred as a result of using, it

is reported, the chemical supplied her by the druggist in the place of the hair preparation she thought she had asked for.

**Charles W. Westenfelder**, proprietor of "Westie's" drug store, East Main street, Springfield, Ohio, has secured a patent on a dental preparation. He says it is the only patent granted upon a dentifrice, these preparations generally being exploited under trademarked designations.

**A. J. Pellens**, who entered the drug business at Seymour, Ind., in 1865, has sold his drug store on South Chestnut street to J. C. Erganbright, of Indianapolis. Mr. Pellens' health has been failing of late, it is reported, and he has decided to enjoy his remaining days.

**A. J. Duncan**, colored, a druggist on Main street, Bowling Green, Ky., has filed a deed of assignment, naming J. H. Barclay as assignee. The liabilities are placed at \$1500 and assets at \$200.

**The Parlor drug store**, Gulfport, La., which was adjudged a bankrupt, has filed a list of liabilities and assets, the former being given as \$21,816, and the assets as \$23,843. The referee ordered the sale of the stock.

**E. J. Carver** has purchased the drug stock of E. S. Crona, Boulder, Colo. Mr. Carver was formerly supervisor over the ten miles of fine road recently completed between Lafayette and Boulder, known as the Valley Road.

**Frank Fox**, formerly an assistant in the drug store of Bernhard Wolters, Havana, Ill., has purchased a store at Chandleville, in which he was a clerk for three years before coming to Havana. The firm name will be Fox & Lee.

**Henry A. Jones**, who for several years past has been in the employ of J. P. Thatcher, Westchester, Pa., will open his own drug store in the very near future. A new soda fountain will be a feature of the establishment.

**Samuel Fisher**, owner for the past eight years of the City drug store, Gas City, Ind., has sold the property to A. M. Caulkins, of Columbus, O. Mr. Caulkins at one time conducted stores at Columbus and in New York.

**George B. Clawson**, a prominent druggist of Troy, Ohio, it is reported, recently pleaded guilty to three charges of unlawful sales of cocaine. He was fined \$25 and the costs in each case. Two of the fines were suspended.

**The Wm. L. Shepard Mfg. Co.**, has located in the Connecticut bank building, Bridgeport, Ct., and will manufacture toilet specialties. The general manager is Wm. L. Shepard of Walnut beach.

**The Ensign Remedy Co.**, Battle Creek, Mich., according to a newspaper report, was recently given 24 hours by the City Sealer in which to clean up. The order followed an attack on the company by the State Board of Health.

**T. W. Thiesen**, president of the Red Cross Drug Co., of Racine, Wis., owner of five successful pharmacies in Racine, has purchased the stock and lease of the Public Drug Co., one of the finest stores in Kenosha, Wis.

**Cheboygan, Mich.**, stores close at 9:00 P. M. every night except Saturday. An agreement to this effect has been made by druggists of that city. It holds good until June 1st, 1915.

**Joseph M. Conley**, president and treasurer of the Conley Drug Co., 136-138 River street, Cambridge, Mass., has filed a petition in bankruptcy, scheduling liabilities amounting to \$2986, and assets, \$2600.

**Carter & Sattison**, Columbia City, Ind., is again the property of W. H. Carter. Charles Sattison was obliged to sell his half interest in the company's drug store because of poor health.

**The Physicians' Supply and Drug Co.**, 425 South Honore street, Chicago, was recently burglarized, \$800 worth of surgical supplies and instruments making up the loot. Padded bricks were used to break the window.

**Bruce Ellis**, formerly connected with several drug stores at Little Rock, Ark., has purchased the Frederica pharmacy, Capitol avenue and Gaines street, that city.

**The Riker-Jaynes** store at Worcester, Mass., celebrated its third anniversary in that city by conducting a special anniversary sale.

**Carl Dunlap** has moved his drug store at Wichita, Kans., from 617 East Douglas avenue, to the M. A. McClellan building at 618 East Douglas avenue.

**S. F. Porter**, has purchased and taken charge of the drug store, formerly the property of W. V. Spinning, corner Broadway and Second street, Peru, Ind.

**Puffer & Mauck**, of Burlington, and Strawn, Kans., has been dissolved, Mr. Puffer taking the drug store at Burlington. This establishment will be known as Puffer's pharmacy.

**O. R. Briggs**, of Colby, Wis., has erected an addition to his store, which gives him a floor space of 25 x 90 feet. New fixtures and a new soda fountain have been installed.

**E. O. Whipple**, proprietor of the Corner drug store at Waterloo, Wis., has remodeled his store. New fixtures have been placed in position and a larger stock is being carried.

**Central avenue pharmacy**, Tampa, Fla., formerly owned by T. S. Bretton, has been purchased by Marion Browning. New owner will put in a new stock.

**Harry W. Foeller's** drug store, Paterson avenue, East Rutherford, N. J., was entered by burglars recently and goods to the value of \$250 were stolen.

**Hendrick's Drug Co.**, Sterling, Ill., has jumped from tenth to seventh place, class D (cities having a population of 5,000 to 10,000), in the annual report of the United Drug Co.

**J. C. Weik** will open a drug store in the new building at Shuler and Bender avenues, East Hamilton, Ohio.

**Michael May** has become proprietor of a drug store at Andale, Kans.

## VIOLETIONS OF PURE FOOD LAW REPORTED

### False Therapeutic Claims, Omission of Content Statements and Substitutions Are Frequent

WASHINGTON, Oct. 20.—The Department of Agriculture has given public notice of judgments 2985 to 3241, imposed by the courts in cases brought by the United States involving violations of the Food and Drugs Act, most of them relating to misbranding or adulteration.

A fine of \$25 and costs of \$13.50 was imposed upon the American Union Cordial Co. of Penna., Inc., Allentown, for shipping in interstate commerce a quantity of "Ferro China Antimalarico Anti-Malaric Iron-Chincona American Union \* \* \*," the label for which product did not state the alcohol content.

Thirteen cases, each containing 12 bottles of Eckman's Alternative, seven of which were in the possession of the Richardson Drug Co. and six in possession of E. E. Bruce & Co., both of Omaha, Neb., were found to be misbranded, in that the label statements "Effective as a preventative for Pneumonia" and "We know it has cured and that it has and will cure Tuberculosis" were false, fraudulent and misleading. The product was ordered released to the claimant, the Eckman Mfg. Co., Philadelphia, upon execution of a properly conditioned bond of \$250 and payment of costs. The defendant filed a petition for a writ of error and the case is now pending in the Supreme Court.

Sentence was suspended in the case of the Magistral Chemical Co., New York, which shipped a quantity of a drug called "Nutrito" which was misbranded. Contrary to label statement, product contained pyramidon, not a U.S.P. article, and milk sugar. Defendant company entered a plea of guilty.

A fine of \$20 was imposed upon Burrough Bros. Manufacturing Co., Baltimore, for shipping a quantity of compressed tablets, acetanilid compound No. 5, which were adulterated and misbranded. Contrary to the label statement that each tablet contained 2½ grains of acetanilid, each tablet contained only 1.847 grains. The sodium salicylate was also below the professed standard. Defendant company entered a plea of guilty.

The court ordered the destruction of 539 wooden boxes and 322 pasteboard cartons of Wm. Radam's Microbe Killer, remaining unsold in the possession of D. W. Ham, Minneapolis. Product was shipped by the Wm. Radam Microbe Killer Co., New York, and was misbranded, in that the many statements regarding the curative and therapeutic properties of the product were misleading. The case was tried before a jury which returned a verdict in favor of the U. S.

A fine of \$10, with costs of \$12.95, was imposed upon the Wm. A. Webster Co., Memphis, Tenn., for shipping "Wine Coca Leaves," "500 tablets Acetanilid and Sodium Bromide Compound," "500 Tablets-Anti-Vomiting," "500 5-gr. tablets Aspirin Monoaceticacidester of Salicylic Acid \* \* \*," "Tablets Bismuth and Calomel Compound," "500 Tablets Cold," "500 Tablets Quinine Laxative," "500 Tablets Salol," and "500 Tablets Sodium Salicylate." The bismuth and calomel tablets were misbranded. The other products were misbranded and adulterated. In the first product the alcohol-content statement was misleading and a cocaine-content statement was absent. The other products were not in accordance with the professed standards under which they were sold. The defendant company entered a plea of guilty.

Fines amounting to \$125 were imposed upon James B. Horner, New York, for shipping "Oil Rosemary Flowers" and "Oil Red Thyme," both of which products were not in accord with the U.S.P. standards. The first contained 2.15 per cent. of ester calculated as bornyl acetate and 9.2 per cent. of total borneol. The second product contained turpentine, which is not an ingredient of the U.S.P. oil of thyme.

A fine of \$20 was imposed upon Moses Sexton, manager for M. E. Pywell, doing business as Robert T. Pywell, Washington, D. C., for shipping "Tinc. Iodine \* \* \*," which differed from the U.S.P. standard.

Pasquale Gargiulo, doing business as P. Gargiulo & Co., New York, was fined \$40 for shipping a quantity of Fernet Milano, which was misbranded. Product was labeled in the Italian language, and a transcription of label in part is as follows: "Fernet Milano Liquor Vermifuge (worm destroyer) \* \* \*." It was an imitation of Fernet Milano,

The consumption of white arsenic in the United States in 1913 amounted to about 7,200 tons, valued at \$570,000, of which 2,513 tons valued at \$159,236, was produced in this country as a by-product from copper and precious-metal smelters, and the remainder was imported largely from European countries. Increased domestic production is now possible.

a well-known article. The alcohol statement was absent. Product was manufactured in this country, not in Italy.

The court ordered the sale of one box of Dr. Hilton's Specific No. 3, remaining unsold on the premises of the John W. Perkins Co., Portland, Me. Label-statements that the products "kills the cold, prevents pneumonia, \* \* \*," etc., were misleading and constituted a misbranding. No claimant appeared for the property.

A fine of \$10, with costs of \$12.95, was imposed upon the Wm. A. Webster Co., Memphis, Tenn., for shipping "500 Pills Neuralgic," which were adulterated and misbranded. Contrary to label statement that pills contained 1.20 grain of morphine sulphate, they contained a much less quantity. While it was alleged in the information that the product contained from 0.0048 to 0.0051 grain of morphine sulphate, analysis showed that five pills of the product contained 0.0048 to 0.0051 gram of morphine sulphate.

The above company was fined \$10, with costs of \$12.95, for shipping "500 Diarrhoea Calomel" pills, which were adulterated and misbranded in that they contained much less than 1/16 grain morphine sulphate to each pill, the amount stated on the label. Further, package failed to bear a statement of quantity or proportion of morphine contained therein in type sufficiently large to comply with the requirements of paragraph c, regulation 17.

A similar fine and costs were imposed upon Wm. A. Webster Co. for shipping "100 Soluble Hypodermic Tablets, Morphine Sulphate 1/4 gr.," product containing only 0.21 grain per tablet.

A libel was filed for the seizure and condemnation of eight packages, each containing 12 bottles, of Smith's Agricultural Liniment, remaining unsold in possession of John D. Park & Sons Co., Cincinnati. Product was misbranded in that the label statements claimed curative and therapeutic properties which the drug did not possess. It was not a cure for rheumatism, diphtheria, sore throat, pneumonia, etc. Product was ordered restored to claimant upon payment of all costs and execution of proper bond.

The court ordered the destruction of eight wooden cases each containing six 12-ounce bottles of stramoline, remaining unsold in the possession of the Davis Bros. Drug Co., Denver. Product was misbranded in that it was represented on the label to be a specific for a number of diseases, including tuberculosis in all its forms. Product contained no ingredients capable of producing the therapeutic effects claimed for it or warranting the representations made.

It was also ordered that six cases of Dr. Sullivan's Sure Solvent be destroyed. It was alleged that the product had been shipped by the Dr. Sullivan Sure Solvent Co., Buffalo, and consigned to The Hall-Van Gorder Co., Cleveland. Misbranding consisted in that the product contained no ingredients capable of producing the therapeutic effects claimed for it.

Twenty-eight cases, each containing 24 bottles of so-called West Baden Sprudel Water, remaining unsold in the possession of Levi & Ottenheimer, Cincinnati, were ordered destroyed. Adulteration was alleged for the reason that product in part consisted of a filthy and decomposed animal substance. Contrary to the deceptive statements, designs and devices on the labels, product was not a natural spring water. To it had been added sodium sulphate, magnesium sulphate and a little sodium chloride. The West Baden Springs Co., West Baden, Inc., the bottler and shipper, and Levi & Ottenheimer, were given notice of the proceedings, but no claimant appeared. An order *pro confesso* was entered.

A libel was filed for the seizure and condemnation of one gross of a product called "Russell's White Drops," a drug alleged to have been shipped by the Russell-Medicine Co., Providence, R. I. It was misbranded for the reason that the packages failed to bear a true statement on the label of the quantity of alcohol and codeine contained in it. The statement, "Russell's White Drops contain 10 per cent. alcohol also 1/4 grain of codein per oz.," was not true. Product was not a safe and effectual remedy for babies and children teething, and would not soften the gums, reduce inflammation, correct acidity of the stomach, regulate the bowels, etc., which curative and therapeutic properties were claimed on the packages and labels. No claimant appeared and property was ordered destroyed.

Forty boxes of mint tablets, each containing 30 retail tin packages, remaining unsold in the possession of The E. W.

Dunstan Co., New York, and alleged to have been shipped by The Manufacturing Company of America, Philadelphia, were ordered destroyed. Counter display box was labeled: "U-ALL-NO Mint Tablets—5c. Each box contains 18 tablets." Confectionery contained more than five per cent. talc. No claimant appeared and product was ordered destroyed.

Two packages, containing 118 pounds of a product purporting to be oil of birch, in possession of J. H. Bowne, New York, and shipped by Holman Bros., Crandall, Tenn., or Mountain City, Tenn., were ordered destroyed. Product bore no marks or labels except the name and address of the consignee and express data, but was invoiced as birch oil. It consisted largely of methyl salicylate. No claimant appeared and property was ordered destroyed.

The court ordered the destruction of one package of alleged wintergreen leaf oil, remaining unsold upon the premises of the Fuller & Fuller Co., Chicago, and shipped by M. G. Teaster, Roan Mountain, Tenn. Methyl salicylate had been substituted in part for the article. No claimant appeared. A similar disposition was ordered made of four packages, containing 150 pounds, more or less, of a product purporting to be oil of wintergreen and oil of sweet birch, in possession of Magnus, Mabee and Reynard, New York, and shipped by R. H. Clawson, Cranberry, N. C. Methyl salicylate was employed as a substitute. Except for names and quantities judgments 3203 and 3204 are similar to those above noted. Two packages containing 117 pounds of a product purporting to be oil of birch, in possession of Antione Chris Co., New York, and shipped by Trivett and Ray, Beech Creek, N. C., were ordered destroyed, as was also one package, containing 76 pounds in possession of H. Cohen, New York, and shipped by J. T. Perry, Elizabethton, Tenn. Methyl salicylate was used in each product.

Methyl salicylate was the adulterant employed in the following cases:

One can, containing about 65 pounds of product purporting to be oil of birch, in possession of C. F. Polk, Troy, N. Y., and shipped by J. W. Hinkle, Elk Park, N. C. Shipping tag was inscribed "Oil of Birch." Product was ordered redelivered to C. F. Polk, upon payment of costs and execution of proper bond. Two packages, each containing 60 pounds of a product purporting to be oil of sweet birch, in possession of Dodge & Olcott, New York, and shipped by the Laurel Fork Distilling Co., Hampton, Tenn., were ordered destroyed. Product bore no marks, brands, or labels other than express tags with the name and address of the consignor. One can containing about 47 pounds of a product purporting to be oil of wintergreen, in the possession of C. F. Polk, Troy, N. Y., and shipped by V. B. Bowers, Elk Park, N. C., was ordered redelivered to C. F. Polk upon payment of costs amounting to \$27.95, and the execution of a bond in the sum of \$100. When this case was reported for action, no claim was made that the presence of methyl salicylate in the product rendered it unfit for food or that the product was deleterious to health. One package, containing approximately 37 pounds of a product purporting to be oil of birch, remaining unsold in possession of Dodge & Olcott Co., New York, and alleged to have been shipped by Trivett & Ray, Beech Creek, N. C., was ordered destroyed. Product was offered for sale and invoiced by the shipper as birch oil. One can, containing approximately 50 pounds of a product purporting to be oil of birch, in possession of C. F. Polk, Troy, and shipped by J. W. Hinkle, Elk Park, N. C., was released upon payment of costs and execution of proper bond.

## RECENT FIRES

- At Bantam, Ct., A. H. Kaehle, drug store burned out.
- At Gadsden, Ala., Vance Drug Co., fire in prescription department did \$1000 to \$2000 damage.
- At East Machias, Me., F. W. Kingsley, loss, \$5000. Fire did \$25,000 damage in village.
- At East McKeesport, Pa., C. N. Wilson Drug Co., \$6000.
- At Chicago, Riney W. Hartwig, loss about \$1800, fully covered by insurance.
- At New Haven, Mich., W. R. Twiss, store destroyed.
- At Pittsburg, Pa., W. B. Malloy, \$1000 damage, fire confined to rear of building.
- At Union Springs, Ala., Ravencroft Drug Co.; building was insured for \$16,500.
- At Lawrence, Mass., George G. Frederick's drug store, slightly damaged.

### Not Affected by the War

Parke, Davis & Co., of Detroit, and Eli Lilly & Co., of Indianapolis, announce that they are prepared to supply large demands at prices unaffected by war conditions. Parke, Davis & Co. are concentrating their promotion work on lines which in any event are removed from the price fluctuations of the drug market, namely, their biological products, especially the Antidiphtheric Serum, and the new Typhoid Phylacogen. The former is claimed to be the most widely used antitoxin on the market, which is due to the admirable equipment of the manufacturers, and the painstaking care with which the products are manufactured, tested, and standardized. The Typhoid Phylacogen has also been firmly established as regards its therapeutic efficiency, and druggists will do well to lay in stocks to meet the reasonable demand for these articles.

Eli Lilly & Company have, thus far, not been compelled to refuse any order for a reasonable quantity of any article in their price list. It is comparatively simple for a firm to decline to raise prices by discontinuing the manufacture of lines which can only be obtained at advances on account of the war; but the Lilly policy has been maintained, and representatives are instructed to accept all unspeculative orders. No advances have been made by the Lilly Company, we are informed, that were not strictly justified by the stress of market conditions.

### Developing the Hot Soda Business

The dispensing of hot soda during the winter months is getting to be more popular each year, and if you are making a special effort to further your sales in this department of your business, the ad of the J. Hungerford Smith Co., Rochester, N. Y., in the color section of this issue of the ERA will interest you. Beef Bouillon and Hot Chocolate are two of the most popular flavors in this trade, and it is essential that both you and your customers should be satisfied with the products you serve. If after considering the arguments therein set forth you feel inclined to give the "True Fruit" brand a trial, we feel sure you will experience no disappointment. Get a copy of the 1915 "True Fruit" price booklet before placing your Spring order. It describes several new and attractive items and contains the most liberal and handsome advertising offer the J. Hungerford Smith Co. has ever made. Turn to the color section of this issue and read about these Hot Soda Specialties.

### Pinex for Winter Coughs

The approach of winter brings, as usual, a stiff demand for Pinex. This cough remedy is sold under a wide open guaranty, backed by one of the strongest concerns in the proprietary field. Its advertising policy has always been a very liberal one, but this year the expenditure laid out is larger than ever, giving assurance of a continued demand. Unlike a good many proprietary concerns dependent upon foreign chemicals for some of their ingredients, the Pinex Company did not get caught by the outbreak of the European War. All its materials for a two-years' supply had been purchased and shipped before the war cloud appeared, so it is in position to supply the demand without interruption, from its distributing points at Ft. Wayne, Ind., Toronto, Canada, and London, England.

### Phenalgin as a Safe Analgesic

Efficient remedies for the relief of pain which produce no narcotic effects, with their distressing and oftentimes disastrous sequelae, are difficult to find, and for this reason the opiates, effective as they may be in soothing pain, are usually contraindicated. As a reliable analgesic and one which induces no drug habit, Phenalgin is particularly recommended by the manufacturers. They state that through the use of phenalgina the practitioner can promptly control painful menstruation, and that in the treatment of alcoholism, it may be relied on to relieve the unpleasant symptoms and to restore the victim to normal condition in a natural manner. In fact, Phenalgin is recommended in the treatment of all disorders or diseases in which pain is a prominent symptom, such as cephalalgia, gastro-intestinal complaints, la grippe, rheumatism, lumbago, malaria, neuralgia, neurasthenia and gout. Phenalgin affords prompt and satisfactory relief, without locking up the secretions or causing constipation.

### Eterno

"Eterno," yes, oftimes I am called everlasting. I come to you from the romantic hillsides of Southern France; from the rose laden fields of Bulgaria and from the historic old vale of Cashmere. I draw for you from Japan's fairest blossoms in that verdant land of the orchid. From the sweetest products of these, I am combined to bring to you not only the fragrance and spice of earth's sweetest bloom, but I trust a little of the sunshine and happiness they enjoy.

Lastingly yours,

ETERNO.

We are talking of the New Perfume made by Stearns—Perfumer—Detroit. Eterno has just recently been announced and has met with unusual popularity with the entire retail trade. It will be advisable to get in touch with the Stearns salesmen as soon as possible and get complete information about the special advertising features which are being offered to popularize this new odor.

### Anchor Brand Witch Hazel

The United States Pharmacopoeia specifically requires that distilled extract of witch hazel shall conform to certain standards. Such a product is the Anchor Brand Witch Hazel which the manufacturers state is guaranteed to contain 16% alcohol, and is made from 20 pounds of brush to the gallon U. S. P. standard alcoholic distillation. For sprains, bruises and superficial inflammations Extract of Witch Hazel is extensively used, and to obtain the best therapeutic results physicians direct that only a well made extract shall be used. Anchor Brand Witch Hazel is claimed to answer to all of these requirements and costs no more than the witch hazel you are now buying. It is manufactured by the American Chemical Co., whose announcement appears in the advertising columns of this issue of the ERA.

### Pabst's Extract Co.'s 27th Annual Offer

As an exemplification of the printing art the calendars of the Pabst Extract Co. have long been models of their kind, the great appreciation of this being shown by the fact that last year almost one in every ten of the retail druggists throughout the United States secured copies of the 1914 calendar. This year the company expects a still larger number to accept its liberal proposition, not only because Pabst Extract has gained a stronger hold upon the medical world, but because the Pabst Extract Panama Girl Calendar for 1915 is claimed to be by far the handsomest and most artistic of the many beautiful calendars the company has put out in recent years. For full particulars of how the druggist may receive a supply of these calendars for his customers, see advertising pages 4 and 5 of this issue of the ERA.

### Henry K. Wampole Co. Employees Will Dance

Announcements have been issued for the second annual dance given to their employees by Henry K. Wampole & Co., Inc., on Monday evening, Nov. 30, to be held in Martel's Drawing Room, 1710 N. Broad street, Philadelphia. The dance given by the company a year ago was a decided success, and the interest already evinced in the coming one is conclusive evidence of the good spirit created by these events among the employees.

### Hinds' Honey and Almond Cream Offer

As a method of creating interest in advertised goods the use of picture stamps has much to commend it, and many dealers have obtained most satisfactory results in encouraging collecting by boys and girls who are interested in getting full assortments of the picture or poster stamps from the different concerns in America that have issued stamps. A. S. Hinds has issued a beautiful series of twenty-four stamps, which are sure to attract attention and be wanted by collectors. For full particulars regarding Picture Stamps and how they may be used to create a demand for Hinds' Honey and Almond Cream, write to A. S. Hinds, Portland, Me.

### Adhesive Plaster Spool

**P**ERRY S. BAUER, assignor to Bauer & Black, Chicago, Ill., has been granted letters patent on an adhesive plaster spool, a reproduction of which is shown in the accompanying illustration (Patent No. 1,113,291). The spool has a circular groove formed in the inner face of each end wall extending about the entire periphery of said walls, and is combined with a cutter slidably engaging in the grooves and so attached that the cutter may be moved about the entire periphery of the spool. The end walls are bent outwardly adjacent their edges to form circular shoulders and upwardly and back upon themselves beyond the shoulders, in which the cutter rests, having its edges bent up and disposed between the upwardly and bent back portions of the walls, whereby the cutter is slidably and interlockingly engaged with the end walls and movable about the entire periphery of the spool.

### Apparatus for Producing Sulphuric Acid

This apparatus for producing sulphuric acid is the invention of Edward H. McFarland, assignor to the General Electric Co., New York, (Patent No. 1,112,424), is the combina-

1,112,424.

tion with the lead chamber of a sulphuric acid apparatus, of a blower for producing a draft through the chamber, and a device responsive to variations in the volume of gas passing out of said chamber and controlling the speed of the blower. The draft through the chamber is produced by an ejector nozzle to which air is delivered by a blower driven by a motor, a device responsive to variations in the volume of gas passing out of the chamber controlling the speed of the motor. An exit pipe from the chamber has a conical enlargement in which is located a disk float which is connected with means for controlling the supply of energy to the motor. The blower, when in operation, delivers air to the nozzle to the gases from the chamber through the exit pipe, thereby expelling them through the connected stack, as shown in the illustration.

### Tooth Brush

This device, the invention of Edwin H. Rodel, Cumings, N. D., (Patent No. 1,112,561), is a tooth brush which is the combination with a tubular supporting member: of a driven shaft rotatably mounted therein, a gear mounted on said shaft; a ferrule mounted upon the terminal of the tubular supporting member adjacent to the gear carried by the driven shaft; a driving shaft mounted for rotation in said bearings;

a gear mounted upon the driving shaft for meshing with the gear on the terminal of the driven shaft: means for rotating

1,112,755.

1,112,561.

said driving shaft, and a right angularly arranged handle secured to the side of the tubular supporting member.

### Poisonous Tablet and Antidote

Letters patent have been granted to John A. Bergstrom, Pasaic, N. J., on the poison medicinal tablet shown in the above illustration (Patent No. 1,112,755), the specifications naming (1) a poison medicinal tablet, provided with a cover containing an antidote: (2) the same, with a cover containing a mucilaginous antidote, and, (3) the same provided with a cover containing a vegetable antidote.

## PATENTS

### Granted September 22, 1914.

- 1,111,019—John E. Hamilton, Smythton, Pa. Tooth brush.
- 1,111,046—Jacob A. Ulman, Baltimore, Md., assignor, by mesne assignments, to The Anglo-American Patent Bottle Co., Ltd., London, England. Non-refillable bottle.
- 1,111,082—John D. Mulvehill, Spokane, Wash. Non-refillable bottle.
- 1,111,136—Benjamin F. Copp, Silver City, N. Mex. Hygienic dish for tooth powder or paste.
- 1,111,144—Harris Epstein and William Ciler, New York, N. Y. Tooth brush.
- 1,111,155—Charles E. Inglis, Ma'den, Mass. Non-refillable bottle.
- 1,111,228—Arthur A. Miller, Kapowsin, Wash. Bottle stopper.
- 1,111,249—Edwin C. Courtwright, Sedam, Kans. Gasolene strainer.
- 1,111,259—William F. Huff, Long Beach, Cal., assignor of three thirty-seconds to E. C. Newbury, et al. Sanitary bottle closure.
- 1,111,483—Arthur C. Mathewson, Lisle, N. Y. Telltale bottle.
- 1,111,644—John H. Castana, Gulfport, Miss. Process of extracting turpentine and rosin from wood.

### Granted September 29, 1914.

- 1,111,756—George J. Meyer, Milwaukee, Wis. Bottle rinsing and outside brushing conveyer.
- 1,111,788—Claude W. Ewing, Toledo, Ohio. Chemical mixer.
- 1,111,821—Alfred Bertheim and Paul Karrer, assignors to Farwerke vorm. Meister Lucius & Bruning, Hochst-on-the-Main, Germany. Arsenic antimony compound and process of making same.
- 1,111,923—Charles A. Seifert, Newbern, N. C. Bottle crate.
- 1,111,973—Milo T. Scholl, and Robert A. Gillespie, Pittsburgh, Pa. Device for applying bottle stoppers.
- 1,112,067—Gaetano Impellitteri and Antonino Impellitteri, New York, N. Y. Non-refillable bottle.
- 1,112,155—William C. Muench, assignor to Progress Machine Co., Indianapolis, Ind. Bottle feeding mechanism.
- 1,112,189—Charles W. Westefelter, Springfield, Ohio. Dentifrice.
- 1,112,211—Ingenuin Heckenbleikner, Charlotte, N. C., assignor to Southern Electro-Chemical Co., New York, N. Y. Method of manufacturing phosphoric acid.
- 1,112,300—Joseph C. Ligonar,utzgerald, Ga. Bottle carrier.
- 1,112,312—Jose S. Olica, Regla-Habana, Cuba. Chloroformer.
- 1,112,359—Irving S. Clope, Wilkingsburg, Pa., assignor to Empire Chemical Co., Atlanta, Ga. Process for extracting from woods their soluble contents.
- 1,112,424—Edward H. McFarland, Cincinnati, Ohio, assignor to General Electric Co. Apparatus for producing sulfuric acid.

### Granted October 6, 1914.

- 1,112,488—Uno A. Steppan, Norfolk, Conn. Funnel.
- 1,112,501—Henry E. Walsh, Chicago, Ill. Label holder.
- 1,112,530—Flor S. Pollitt, Cincinnati, Ohio. Vending device.
- 1,112,561—Edwin H. Rodel, Cumings, N. D. Tooth brush.
- 1,112,600—George J. Davison, assignor of one-half to Moses J. Summerfield, Richmond, Va. Cork extractor.

- 1.112.722—Max Scharff, assignor to Norsk Hydro-Elektrisk Kvaestofaktieselskab, Christiania, Norway. Process of effecting so idication of fluid nitrate of lime.  
 1.112.735—John A. Bergstrom, Passaic, N. J. Poisonous tablet and antidote.  
 1.112.853, 1.112.854—James A. Singmaster assignor to New Jersey Zinc Co., New York. Manufacture of zinc oxid, and apparatus for manufacturing same.  
 1.112.82—Otto Spahr and Louis J. Strause, assignor to Strause Gas Iron Co., Philadelphia, Pa. Bunsen burner.  
 1.112.875—Patrick J. Whelan, Douglas, Ontario, Canada. Cork extractor and fastener.  
 1.112.893—John C. Clancy, assignor of fifty-one one-hundredths to Portland Gold Mining Co., Colorado Springs, Colo. Making of Alkali cyanogen compounds.  
 1.113.054—Francis W. Sadler, Norristown, Pa. Soluble brush.  
 1.113.096, 1.113.097—Carl Bosch and Wilhelm Wild assignors to Badisene Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Process of producing hydrogen.  
 1.113.119—Frea W. Hoefler, Lyndhurst, N. J., assignor to Richard Meyer, Hoboken, N. J. Bottle closure device.

#### Granted October 13, 1914.

- 1.113.201—Perry S. Bauer, assignor to Bauer & Black, Chicago, Ill. Adhesive plaster spoon.  
 1.113.322—Albert T. Fletcher, Boston, Mass. Silver polish.  
 1.113.357—Joseph F. Lamb, assignor to Landers, Frary & Clark, New Britain, Conn. Vacuum bottle.  
 1.113.465—Peder T. Moller, Seattle, Wash. Cork extractor.  
 1.113.476—William H. Osmer, St. Louis, Mo. Dispensing cabinet.  
 1.113.604—Claude B. Davis and Dorsett A. Davidson, assignors to Cork Extractor Cor. of America, Richmond, Va. Bottle stopper.  
 1.113.648—Karl Karlson, Brooklyn, N. Y., assignor of one-half to George J. F. Wilford, New York, N. Y. Funnel.  
 1.113.652—Benjamin F. Klass, assignor of one-half to Joseph P. Ryan, New York, N. Y. Non-refillable bottle.  
 1.113.660—Louis Lerio, Mobile, Ala. Liquid receptacle.  
 1.113.713—Ludwig Taub and Hans J. Hahl, Elberfeld, Germany, assignors to Synthetic Patents Co. Inc., New York, N. Y. Acidyl derivatives of *o*-ortho-allylortho-benzoic acids.  
 1.113.714—Louis Taub and George Pickewirth, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Substance isolated from the apocynaceae and process of producing the same.  
 1.113.742—Rudolf Berendes and Erich Rietz, Elberfeld, Germany, assignors to Synthetic Patents Co. Inc., New York, N. Y. Magnesium salts of acylated aromatic ortho-oxy-carboxylic acids.  
 1.113.854, 1.113.855, 1.113.856—Frank O. Woodland, assignor to Engine Machinery Co., Worcester, Mass. Labeling machine.  
 1.113.857—Wallace A. Beatty, assignor, by direct and mesne assignments, to George W. Beadie, New York, N. Y. Process of manufacturing acetic anhydride.

#### TRADE-MARKS

#### Published September 22, 1914.

- 79,847—Co-operative Drug Mfg. Co., now by change of name American Drug Mfg. Co., Jackson, Tenn. Medicated stock food.

- 71,781—Dave Studebaker, West New York, N. Y. Medicinal salve.  
 79,084, 79,085—Philo Hay Specialties Co., Newark, N. J. Medicated soap.  
 79,367—Naamlooze Vennootschap Koninklijke Pharmaceutische Fabrik voorheen Brocades & Steeman, Meppel, Netherlands. Remedy for rheumatism, neuralgia, headache, etc.  
 79,658—David Bruenn, New Orleans, La. Antiseptic powder for venereal diseases.  
 79,844—Arthur E. Vinton, Muncie, Ind. A laxative tablet.  
 80,144—Manuel Arispe, San Antonio, Texas. Remedy for tuberculosis and lung diseases.  
 80,303—Solon Palmer, New York, N. Y. Perfume, complexion and sachet powders.  
 80,334—J. B. Pickelsimer, Asheville, N. C. Headache remedy.  
 80,361—Joseph M. Eaton, Los Angeles, Cal. Perfumes.  
 80,362—J. L. Gargaro, Memphis, Tenn. Compound for restoring gray hair to color.  
 80,376—Schwarzenbach Bros., Baltimore, Md. Remedy for rheumatism, neuralgia, etc.  
 80,543—Thomas L. Leeming, New York, N. Y. Non-poisonous germicides.  
 80,642—Gervaise Graham, Chicago, Ill. A laxative preparation in bonbon form.  
 80,648—Jaynes Drug Co., Boston, Mass. Creams for brown-tail-moth itch, ivy-poisoning, etc.  
 80,650—Jaynes Drug Co., Boston, Mass. Wafers and preparations for nervous and sick headaches.  
 80,659—Jaynes Drug Co., Boston, Mass. Liquid extracts and washes for destroying head-lice, crabs, etc.  
 80,703—Olive C. Prior, Middletown, N. Y. Face-cream.

NOTE—A, advanced; D, declined; C, correction; N, note.

**N**EW YORK, Oct. 22.—A study of the market reports for the past fortnight shows that there has been a gradual recession of prices for many articles which, a month ago, were either demanding fabulous prices or were practically unobtainable. Purchases, however, have been largely restricted to current requirements, and this lack of demand, together with the fact that considerable supplies have accumulated in warehouses here, have also developed price shading on the part of competing dealers in an effort to stimulate business. With few exceptions, all commodities are lower in price than they were shortly after the opening of the European war, but nearly all are higher than they were before hostilities began. Good quantities of most supplies are now coming forward, and but few shortages are anticipated. Among the more important advances noted are those for acacia sorts, alcohol, barium nitrate, calendula flowers, rose leaves, red oil of rose Kissanlik, naphthalene balls, colocyath, colchicum, elm bark, all forms, malva flowers, German aconite, belladonna, and valerian, and concentrated lactic acid. Among the more important declines are carbolic acid, picric, pyrogallic and salicylic acids, cacao butter, caffeine, guarana, ipocac, morphol, salicin, salol, santonin and many of the essential oils, particularly the Mexican essences. Potassium permanganate is considerably lower, the only potash salt indicating a lower trend in value. Opium, morphine, quinine, and the most of

the regular staples are stationary, so far as quotations appear, cod liver oil being an exception. The situation may be summed up in the statement that the absence of any buying demand is the chief cause of the sagging of prices which has characterized the market since our last report.

**OPIMUM.**—New arrivals of gum have been received from Greek and Italian ports by way of England and these have tended to ease the prices somewhat. However, jobbers' quotations remain unchanged at \$11@ \$13 for natural, \$12.50@ \$14.50 for granulated, and \$12.40@ \$14.40 for U.S.P. powdered. According to government statistics, the imports for the eight months of the year ending August were 258,704 pounds, valued at \$1,141,132, as against 491,030 pounds, valued at \$1,814,314 for the corresponding period of the preceding year. It is said that huge quantities of Indian and Persian gum are held in England, whence all shipments to the United States are coming.

**QUININE.**—The market still continues firm at 31c per ounce in 100-ounce tins, with a belief that domestic manufacturers will soon advance their prices. There is some demand for export, and it is believed that this is an article that is badly needed by the warring nations. At the recent auction sale held in Amsterdam, all of the 50,000 ounces of salts of British Pharmacopoeial quality offered were taken at the average price of 21½ florins.

**COD LIVER OIL.**—Und r keen competition and absence of demand, dealers have reduced prices and are now quoting 90c @ \$1 per gallon; in barrels, \$21@ \$23 each; half-barrels, \$11.50 @ \$12.50.

**GLYCERIN.**—There is some inquiry with quotations ranging from 35@ 40c per pound. Shipments from South America have been received in this market which under normal conditions would have gone to London, but on account of the war were deflected here.

**CACAO BUTTER.**—Is slightly easier and prices have been marked down to 34@ 38c per pound in bulk, and 36@ 40c for Dutch.

**MENTHOL.**—Keen competition has caused a recession in dealers' quotations and \$3.25@ \$3.50 per pound is asked for crystal. It is reported that the October-November crop in the country of production has been contracted for.

**SALOL.**—Following the recent decline in the price of phenol, domestic manufacturers have lowered their prices, and jobbers now quote \$1.40@ \$1.50 per pound.

**SALICIN.**—The arrival of liberal supplies has eased the situation materially, and the article is now obtainable at \$5.50@ \$6 per pound.

**SANTONIN.**—This article shows a decline, jobbers quoting \$3.75@ \$4 per ounce.

**CARBOLIC ACID.**—Last month's quotations have been considerably shaded, the belief existing that domestic manufacturers will be able to provide sufficient supplies to meet any probable demand. For crystal in bulk the prevailing quotations are 42@ 50c per pound; in 1-lb. bottles, 53@ 58c; crude, 10 to 95 per cent., 60c@ \$1 per gallon.

**CITRIC ACID.**—Recent heavy arrivals of this acid and citrate of lime from Italy and the West Indies have tended to ease the market, manufacturers, however, still continue to distribute their stock sparingly. Prevailing jobbers' quotations are 73c per pound in kegs, and 83@ 90c for less.

**IPECAC.**—With the arrival of fresh supplies, and under limited demand, all grades are lower, the following prices being asked: Caribagena, \$1.75@ \$1.90; powdered, \$1.90@ \$2; Rio, \$2.25@ \$2.40; powdered, \$2.45@ \$2.60.

**GUAFANA.**—Has declined to \$2.50@ \$2.75 per pound for whole, and \$2.75@ \$3 for powdered.

**CANTHARIDES.**—More liberal supplies are in evidence and holders have reduced their quotations to \$6.50@ \$6.75 per pound for Russian sifted, and \$6.90@ \$7.20 for powdered.

**COMBABA.**—South American, owing to recent arrivals from the country of production, has been reduced and is now obtainable at 60@ 70c per pound. Para is also lower and quoted at 65@ 70c.

**POTASSIUM PEFMANGANATE.**—Leading domestic manufacturers have reduced their prices, and the salt is now quoted at 52@ 58c per pound and 60@ 75c for pure powdered.

**ALCOHOL.**—Following the recent advance made by distillers of grain alcohol all grades have been marked up, the following quotations prevailing: Cologne spirit, U.S.P., barrels, per gal., \$2.80, less, \$2.90@ \$3.10; Commercial 95% U.S.P., barrels, per gal., \$2.70, less, \$2.90@ \$3.04, denatured, barrels and 1½-lb. casks, per gal., 38@ 42c. Methylc (wood) alcohol is also slightly higher, 55@ 60c per gal. being asked.

**MESSINA ESSENCES**—The deflection of supplies to this market, owing to the closing of European ports by the war, has not been without effect upon prices, as the following quotations will show: Bergamot, \$5.40@55.60 per pound; lemon, \$2.00@2.15; sweet orange, \$2.10@2.25. It is believed that the absence of consuming demand in Europe may cause a still lower price.

**OIL PEPPERMINT**—The market is depressed owing to the unusually large production of this year's crop and the absence of a consuming demand in Europe. Jobbers are quoting \$2.10@2.20 for New York, \$3.50@3.75 for Hotchkiss, and \$2@2.10 for Western.

**OIL PENNYROYAL**—This is also lower, \$1.85@2 per pound being asked.

**OIL HAARLEM**—Quotations are slightly lower than those of last month, \$3.40@3.60 being asked for Dutch. At the same time, raw materials have advanced, and this is reflected in an increase in prices in the Holland markets. The demand here is reported to be light and spasmodic.

**ERGOT**—Russian is in better supply and lower, whole being quoted at \$1.60@1.70 per pound by most dealers, and powdered, \$1.75@1.85.

**DANDELION ROOT**—German is in better supply, and in the lack of demand, has declined to 45@50c per pound for whole, and 50@55c for cut.

**CANARY SEED**—Augmented stocks of all varieties have caused dealers to revise prices, and Smyrna is now obtainable at 12@14c per pound.

**COUMARIN**—Increased stocks of this article are also in evidence, and holders have shaded to 60@65c per ounce.

**TARTARIC ACID**—The demand is light and quotations have declined to 68@78c for crystal, and 71@81c for powdered. Potassium bitartrate (cream tartar) is also lower, 55@60c per pound being asked.

**SALICYLIC ACID**—In sympathy with the decline in the price of carbolic acid, quotations for this article have declined to \$1.40@1.45 for 1-lb. cartons. Acid from gaultheria is quoted at 30@35c per ounce.

**THYMOL**—Is lower, \$9.50@10 per pound being quoted. It is reported that Great Britain will start extensive manufacture of this substance taking herself the output of ajowan seed of India, which heretofore has been taken by Germany.

**POTASSIUM CHLORATE**—In common with other potash salts the chlorate has advanced in price, 24@31c per pound being asked for crystal, and 28@33c for powdered.

**Uses of American Petrolax**

EDITOR THE PHARMACEUTICAL ERA:

We wish to contradict the assertion that the American Petrolax made from Pennsylvania paraffin oil is poisonous. It has been used by men, women and children for years for lubricating the intestinal tract, thus protecting the patient against disease, stimulating peristalsis and encouraging normal activity of the bowels. We guarantee our Petrolax to be free from acid or any foreign substance. We can supply it by the barrel or gallon as the customer may desire.

The writer has been an oil producer since 1865, and he knows thousands of people who are using the oil as a medicine. In cases of appendicitis it has been successfully used as an enema. Our physicians in the oil regions prescribe it for chronic constipation and get results. Cases of dandruff are immediately cured by our crude oil. The oil was found in the possession of the Indians when our armies came through the wilderness to the Great Lakes in 1776, and was used by them for rheumatism. The claim of dealers that our paraffin oil is poisonous is absurd.

Very truly yours,

AMBER OIL & REALTY CO.

P. O. Box 914, Warren, Pa.

**Nev-A-Hone Strop Stops Honing and Blade Expense**

Much has been written on razors and the mechanics of keeping them properly sharpened. In the advertising pages of this issue of the ERA the manufacturers call attention to their celebrated Nev-A-Hone Razor Strop which they state stops honing and blade expense. They also call attention to their Nev-A-Hone Razors, which are made in the U. S. from the finest quality of Sheffield steel and fully guaranteed. These specialties are offered to the trade at a price which affords 100 per cent. profit. See the Nev-A-Hone Razor Strop Co.'s advertisement for full particulars.

**Norwich Pharmacal Co. Protected.**

The Norwich (N. Y.) Pharmacal Company, which manufactures aspirin tablets, for some time has been annoyed by imitators of its goods. The United States District Court for the western district of Kentucky has just handed down a decision which permanently enjoins the Krieger Drug Company of Louisville, Ky., from using any "name or names, label, letter press, devices or arrangement thereof" identical with those employed by the Norwich Company. The costs of the action must be paid by the Krieger Company.

Shortly after the outbreak of the European war, which marked a sudden and violent increase in the price of aspirin, the Norwich concern became aware that its goods were being imitated. Investigation disclosed the fact that the Krieger Company, was merchandising an article bearing the printed name "Acetopyrine," which was compressed into five grain tablets, put up in bottles of 1000 and bore photographic reproduction of labels used by the Norwich company.

The Krieger people offered no defense, agreed to take up all of the imitated goods and make restitution to innocent purchasers. The imitations sold at about half price.

The Norwich firm also has begun action in the Supreme Court of Chenango County (N. Y.) to protect its interests against the Drug Products Company, alleging unfair competition in trade.

**Ormont Famous Camphor Ice**

Of the remedies employed at this time of the year for chapped hands, roughened skin, etc., there is none, perhaps, that is productive of better results than camphor ice. A specialty of this kind offered to the trade, and claimed by the manufacturers to be the only pure white product of this character, is Ormont Famous Camphor Ice, made by the Ormont Chemical Co., and advertised elsewhere in this issue of the ERA. It has been on the market for more than ten years and is put up in most convenient form—either flat or in tubes—for the user, at prices which afford a most satisfactory profit. See advertisement for particulars and write to the manufacturers for special offer.

**Norwich Display Fixtures**

The Norwich Nickel & Brass Co., of Norwich, Conn., have sent us a copy of its new catalog of display fixtures—a handsome book of some 400 pages containing fixtures of all classes of merchandise from adjustable mirrors to window reachers.

In these days of keen competition the proper display of goods is a subject that interests every live merchant. The Norwich Co. is probably the largest manufacturer of these goods, and it makes a great many articles that are very useful to druggists. Aside from the description of the fixtures themselves, one can get through a study of this catalog a lot of good ideas for the display of his goods and we strongly recommend every druggist to send for a copy, which we believe they will do if you mention the ERA.

**Ohio F. & D. Department's Display**

A drug display of considerable value, from an educational standpoint, was included in the exhibit of the Ohio Food and Drug Department at the fall festival held at Wilkesboro, O., recently. Among the items shown were samples showing the difference between adulterated and unadulterated articles; matters of information regarding the administration of the Ohio food and drugs law, and the law regarding weights and measures; packages and labels with analyses of fake, pure and impure drugs and patent medicines; and, perhaps the most interesting of all, a special display of the various utensils used in preparing and smoking opium, as well as cocaine and morphine syringes, and samples of the narcotics generally used by drug fiends.

**Imitation Essence of Maple**

Oil of Juniper .....	1 dram
Burnt sugar .....	2 ounces
Rectified spirit .....	3 ounces
Mix.	

**THE ERA COURSE IN PHARMACY**

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director ERA COURSE IN PHARMACY,  
c/o D. O. HAYNES & CO.,  
NO. 3 PARK PLACE, NEW YORK.

**HOW A MICHIGAN LAD CLIMBED THE LADDER**

As an example of what grit and determination can do for a young man who has no resources except these qualities to put him through the battles of life, we are glad to present to other aspiring young men in the pharmaceutical world the photograph of Mr. John Vander Werf, of Holland, Mich., who graduated from the ERA COURSE in Pharmacy on Oct. 5, 1914. Mr. Vander Werf entered the Course in April, 1913, at the age of 18, and immediately gave evidence of being far above the average student, judging from the excellence of his recitation papers. His clearness and originality of thought proved his thorough knowledge of all the subjects he studied, and his final average was 97 per cent.

JOHN VANDER WERF

While we have not had the pleasure of knowing him personally, save through his letters, the DePree Chemical Co., of Holland, Mich., in whose employ Mr. Vander Werf, has been for about six years, is entitled to speak from their own experience of him as a student and

worker, and this firm expresses its opinion in no uncertain manner, as the following letter shows:

"THE ERA COURSE IN PHARMACY,

"One of our employees, Mr. John Vander Werf, has asked me to give you such information as you might want regarding him for the story you propose to publish, and I am glad to say that you have here a real subject for a story.

"This lad came to this company some six years ago, an orphan, without friends, and started in as an errand boy, and then doing menial labor around the plant. He was so attentive to his duties, so loyal, and so thorough, and seemed to have such endless ambition, that he has forged ahead of dozens and dozens of employees that had been with this company longer than he had, and to-day is holding a responsible position as an assistant manufacturing pharmacists in our San-Tox laboratories. He is another example of what young men without education, without money, and without friends, can do if they but have that indefinable something that drives them to success.

"Yours very truly,

"CON DEPREE, General Mgr.,  
THE DE PREE CHEMICAL COMPANY.

"Holland, Mich., Oct. 10th, 1914."

**Matriculation Graduates to Oct. 23, 1914. Graduating Number. Average.**

The steamship Ruby, under American registry, arrived in Baltimore on Oct. 21, bringing in what is believed to be the largest cargo of cork ever imported. The consignment consisted of 1,098,360,000 cork discs, the duty amounting to \$114,412.

**Seattle Girl Wins W. O. N. A. R. D. Prize**

MISS Frances Edith Hindman, of the University of Washington College of Pharmacy of Seattle, Washington, was awarded the 1914 Ten Dollar Gold Prize offered by the W. O. N. A. R. D. to the young woman graduate registering the highest standing throughout her

MISS F. E. HINDMAN

course and in her final examinations, in the United States. Only those schools were allowed to compete which were of recognized standing in the Convention of Colleges of Pharmacy.

Miss Hindman was born in Baker City, Oregon, October 29, 1888. Her preparatory education was received in the schools of her home city. She entered the University of Washington College of Pharmacy, in September, 1908, and graduated with the degree of Pharmaceutical Chemist in June, 1910. In the fall of this same year she returned to the University to continue her work in the four-year course, and in her

senior year was made assistant in pharmacy and placed in charge of the laboratory instruction in drug assaying.

In June 1912, Miss Hindman received the degree of Bachelor of Science in Pharmacy. Much in love with her work, and greatly encouraged by the remarkable record she had made in her course of study so far, she again returned to the University in the fall of 1912 to continue the work for the Master's degree and was given the position of graduate assistant in Pharmacy with duties as laboratory instructor and assistant to Dean Johnson in the work of state chemist.

Washington was one of the first states to take up a systematic bacteriological study of foods and drugs, and during Miss Hindman's second year of graduate study, she was placed in charge of this bacteriological work.

In June, 1914, she received the degree of Master of Science in Pharmacy. Her major work for this degree was in pharmaceutical chemistry and included a historical and chemical study of the bark of *Rhamnus Purshiana*. The historical part of the thesis is being published in the *American Journal of Pharmacy*. The results of the chemical investigation will be published later in the same journal. Her minor work was in bacteriology. For the coming year she continues as a regular instructor in the College of Pharmacy and as assistant state chemist and bacteriologist.

This distinguished record has been supplemented by practical experience in pharmacy in the city of Seattle, Miss Hindman having registered as a pharmacist in Washington in January, 1913. In April, 1914, she was admitted to membership in Sigma Xi, the national honorary scientific society, and is also a member of Alpha Chi Omega fraternity of this University.

The Committee of the Women's Organization having the awarding of this prize in hand, found that a number of young women had taken very high standings and done most exceptional work, but the length of Miss Hindman's course—five years—and the superior excellence of her record passed all others. She is to be congratulated upon the success she has won. The recognition of the quality of her work in the form of the prize will surely be a life-long satisfaction to this earnest student of pharmaceutical matters.

**Photographic Mountant**

- Soft gelatin ..... 40 grams
- Distilled water ..... 120 c.c.
- Allow to soak for 24 hours and add
- Chioral hydrate ..... 20 grains

Heat on a water bath till liquid, or for about an hour, and then neutralize with a few drops of solution of sodium carbonate.

Another good mountant may be made by dissolving 2 ounces of dextrin in 6 ounces of boiling water and adding, when nearly cold 1 ounce of alcohol.

### DRUGGISTS AND THE STAMP TAX

In this issue of the ERA we devote considerable space to the law recently enacted by Congress to provide an increase in the internal revenue tax, more popularly designated as the "stamp tax act." Under this law, druggists, in common with other business men, are liable to the stamp tax imposed upon the issuance of commercial paper, and must pay a special tax as tobacco dealers, etc., but under Schedule B of the act, upon them is imposed the responsibility of placing or of seeing that stamps are placed on all perfumery, cosmetics, chewing gum, etc., that they may sell. The provisions of this schedule become operative today (December 1), and if he has not done so already, it behooves the druggist to quickly acquaint himself with what the act requires of him.

It is not necessary at this time to rehearse the various steps which led up to this legislation; the Act as it now stands upon the statute books is what most concerns the druggist. But THE ERA can say it believed it was the intention of Congress that the manufacturers should stand the expense of the stamp tax, and that as soon as it became assured that the measure would pass as the law did pass, it placed this matter directly before the manufacturers of such goods, requesting that they would give us for publication a statement of what they proposed to do. The argument was advanced that retailers could ill afford to provide the tax on these goods, for most of them were engaged in an industry that was already subject to special taxes, as well as general taxes, tobacco dealer's tax, etc., and that under the circumstances they could not pass the tax on to the consumer, because the amount would be too small to be added to the general retail price.

In the results of this campaign to aid the retail druggist we believe that we have done effective work, and it is for this reason that we are glad to present the statements of so large a number of manufacturers, the great majority of whom announce that they will pay the tax without increasing their prices, and some of whom even go further and state that they will furnish stamps for the goods the retailers may now have in stock and which were purchased long before the act passed. Such actions as these go far toward creating a spirit of co-operative interest between the retailer

and the manufacturer; that the manufacturer is wisest who considers and shows by his actions that the retailer's problems are his own, and that to be successful in the sale of manufactured goods, the manufacturer must help the dealer. Such an exhibition of helpfulness and loyalty makes friends and makes sales.

In many quarters there has seemed to be a lack of appreciation on the part of druggists as to the application of the law to their business. One or two have even told us that they supposed the authorities would inform them what they were to do to conform to the law. Never were men in a more mistaken position. It is "up" to the druggist himself to find out what the law requires and then to act accordingly. Ignorance excuses no one, and particularly when it comes to answering charges preferred by United States Revenue officials. Druggists should study the law in its entirety and more especially the requirements of Schedule B.

Many questions as to the interpretation of the law are likely to arise, but these will all be decided in time. For the purposes of the Act, soap has been decided not to be soap when it is advertised and sold as a beautifier of the skin, a rather strained definition, but it is given as an example of the rules of procedure that will apply in determining the taxability of the articles broadly enumerated under Schedule B. We shall use our best endeavors to keep druggists posted on the technical decisions that may be handed down by the Commissioner of Internal Revenue in the determination of points that arise under the law; but it will remain with the individual druggist to get in touch and to obtain a broad working knowledge of the Act.

#### IMPORTS AND PRICES

THE list of importations printed in each issue of WEEKLY DRUG MARKETS furnishes an excellent price barometer. Last week the arrival of drugs and chemicals from foreign countries was unusually heavy as compared with previous weeks since the beginning of the war in Europe, and the fact was quickly reflected in the downward tendency of quotations.

In the prices current of drugs and chemicals in original packages and the jobbers' prices current there are at present an average of more than three hundred changes each week. Such a market, while by no means active in the volume of trading done, displays sufficient variety to make it highly interesting to persons immediately concerned. Plainly, many a day will pass before normal conditions will be restored in the drug and chemical trade. In several well-informed quarters it is stoutly maintained that the present reaction is merely the "slack" preceding a strong upward movement. Persons holding this opinion base it upon the belief that when present stocks are exhausted many articles will be very scarce or wholly out of the market. Herbs and flowers from which many of our drugs are derived are grown in the very sections of Europe that so far have been the greatest

sufferers from the ravages of war. Furthermore in parts remote from the sound of cannon there is a dearth of the kind of labor needed to cultivate and harvest crops. Conscription has done its work thoroughly. Therefore with little or no production in prospect for next year, with only part of this year's yield harvested it would seem that henceforth there necessarily must be an illuminating relationship between importations and prices.

#### THE PLEA OF IGNORANCE FAILS

THE two cases of death from barium sulphide poisoning described in our news columns show striking similarities. In both instances barium sulphate was the substance in the physician's mind while writing the prescription, and in both cases the druggist dispensed sulphide. Again, both druggists were loud in their protestations that in many years of practice they had never been called on to dispense barium sulphate for internal use, and therefore concluded that the sulphide was intended. In one case the poisonous and evil-smelling sulphide even passed into the hands of the physician and was administered by him, without sight and smell warning him that something unusual was at hand. In spite of the deplorable blunder on the druggist's part, fatal outcome might still have been avoided here if the physician had been—if one may use the expression—technically alert; that is, if his senses had been keenly alive to the physical characteristics of the substance he expected to see and administer.

There cannot be two sides to the argument advanced by the Baltimore physician, that "sulph" in a prescription always stands for "sulphate." Such a statement, however sincerely made, is simply not in accord with the facts, and prominent authorities are agreed on this point. A prescription calling for "Barium Sulph." is dangerously ambiguous *per se*, and the physician is culpable for not having made his orders unmistakable.

Of chief interest to us, however, is the claim made by both druggists that never before had they been called upon to put up barium sulphate for internal use. This is a striking comment on the extent to which these two men failed to keep abreast of the times in their professional information. At least three chemical manufacturing houses in this country have had a specially prepared barium sulphate for internal use on the market for periods varying from six to thirteen months. More than two years ago the ERA contained references to the use of barium sulphate as a contrast medium in X-ray work, being substituted for the expensive bismuth salts. Other journals, both medical and pharmaceutical, have presented numerous accounts of the substance, with formulas for its administration. There has been ample opportunity for the druggist to learn that physicians were using barium sulphate internally, and to realize, if he lived in a town where Roentgen diagnoses were made, that he might be asked at any time to dispense it. It is futile for these two druggists to put forward in extenuation the claim that since a prescription for barium sulphate was unheard of,

therefore they might assume that the sulphide was really wanted. This argument proves entirely too much, because it can be applied to every remedy or medicinal agent past, present, or future. There was certainly once a time when morphine had never been prescribed by a physician, but we cannot believe that when the first prescription calling for the new alkaloid appeared, the pharmacist dispensed "something else." on the grounds that he had never, in fifteen years of experience, known a physician to order morphine for a patient.

We often hear that "professional" pharmacy is on the wane. But if two pharmacists had been a little more professional, and had made a sufficient effort to inform themselves as to what was going on in their world of activity, two accidents might have been averted, and one physician could have been given an excellent lesson on the need for absolute clearness in prescribing.

#### DEVIATIONS FROM STANDARDS PERMISSIBLE?

DRUGGISTS of this State will be interested in the opinion recently handed down by Attorney-General James A. Parsons in reply to an inquiry of the New York State Board of Pharmacy as to whether the statutes permit an omission of a prohibited drug from a standardized preparation, even though attention is called to such an omission. This question, as most ERA readers know, was prompted by the fact that the New York City Department of Health adopted an ordinance prohibiting the sale of all preparations containing narcotic drugs, including those permitted to be sold by the Boylan Anti-Habit Forming Drug law, with the further provision that "in dispensing, without a prescription, Stokes' Expectorant (found in the National Formulary) druggists will be expected to dispense it without the paregoric (opium), which is an official ingredient thereof." The omission of such narcotic, however, must be declared on the label, as "Stokes' Expectorant without paregoric."

Under the statutes of the State Food and Drugs Act, no variations are permitted from standards for drugs or preparations named in the Pharmacopoeia or Formulary, and yet here the position taken by the Attorney-General seems to favor such variations. He claims that the sale of a medicine which contains no opium at all, or other prohibited drug, cannot by any possible construction violate the Boylan law dealing with the sale of domestic or proprietary remedies. Further, according to his opinion, authority is given in paragraph 5 of section 237 of the State Health law to sell those preparations recognized by the Pharmacopoeia and National Formulary without the prohibited drugs, by labeling the preparation with the name found in the Pharmacopoeia or Formulary and indicating thereafter what has been omitted or withdrawn. In other words, when the preparation is sold by mere name alone, it should conform to the official standard. When a certain ingredient is omitted and the omission disclosed, a new or professed standard is provided which permits such sale, if the preparation conforms to the professed standard expressed on the label.

Such a sale, the Attorney-General holds, would not involve any violation of the Boylan law or of the section of the Public Health law which forbids the adulteration of drugs.

The opinion may be in line with the theory of the Federal Food and Drugs Act in permitting the sale or shipment into interstate commerce of any drug or preparation that conforms to its expressed standard, but it does not accord with the provisions of the State law, which, as we have indicated above, permits no variation from U. S. P. or N. F. requirements. According to the Attorney-General's opinion it will be permissible to sell camphorated tincture of opium (paregoric) without any opium at all, and the absurdity of labeling a preparation "without opium" which takes its name from that constituent is not surpassed by many of the curious anomalies that have been developed in legislation of this character. There may be birds that cannot fly, but the instances where naturalists have perverted nomenclature to express the fact are very rare. Moreover, the opinion is antagonistic to the Regulation regarding the misuse of names.

#### THE SODA FOUNTAIN'S ANNUAL PREVIEW

IN the automobile trade it is customary for trade journals to devote considerable space in the late summer and early fall to the new lines of automobiles to be put out by manufacturers for the following year. Our contemporary *The Soda Fountain* is convinced that something of a similar nature relating to the lines of soda fountains to be offered by the principal manufacturers would be of vital interest to buyers of these goods, and it has accordingly announced that the forthcoming December issue will be devoted to a "Preview" of the fountain trade and what the manufacturers will offer during the coming year.

All druggists who have soda fountains are interested in the improvements in the apparatus for dispensing soda water, and they have been quick to note all advances that have been made in the direction of sanitation and labor-saving devices. To this end *The Soda Fountain* has taken up the subject with every manufacturer who is an advertiser in that publication, and these represent practically all of the manufacturers in this line in the country, and has secured first hand information regarding new styles and types of apparatus which is sure to prove of value to every individual engaged in dispensing, but more particularly, to the man who wants to buy a soda fountain.

The December *Soda Fountain* is also recommended to all dealers who contemplate making changes in their fountain equipment, for it will place before them detailed information regarding the lines of goods offered by each manufacturer. Besides being informative, the material thus assembled will be suggestive, and will afford the druggist real help as to how he can best meet the conditions for increasing his business in this department during the coming year. To the prospective buyer, the issue will give him an exceptional opportunity to get an accurate line on the fountains offered by reputable manufacturers.

## BOOKS REVIEWED

**CHEMICAL TECHNOLOGY AND ANALYSIS OF OILS, FATS AND WAXES.** By Dr. J. Lewkowitsch, M. A., F. I. C. Consulting and analytical chemist, and chemical engineer in "soap manufacture" and in "fats and oils" to the city and guilds of London Institute. Edited by George H. Warburton. Fifth edition, entirely rewritten and enlarged. In three volumes, Vol. II, XIV + 944 pages, cloth, \$6.50. London, Macmillan & Co., Ltd.

The delay in the appearance of the second volume of this great work is due to the death of Dr. Lewkowitsch shortly after the appearance of the first volume, reviewed in the ERA of November last year. In a way, this delay has served a useful purpose in that it has given the editor scope for the addition of the most recent data up to the eye of publication. We are positive that the work will hold an important place in the literature of the subject.

This volume covers the commercial preparation of the raw materials used in the oils, fats and waxes industries; and methods of preparing, refining and examining natural oils, fats, and waxes, and detecting adulterations. In the arrangement followed, the analyst, by means of the tables placed before him, has a ready means of identifying any unknown oil or fat which he may have to examine. Next comes a discussion of those factors which influence the chemical composition, and then follows an outline of those adulterants most likely to be met with, together with tests for the determination of the same. The author notes that in the course of his investigations most of the color reactions so much relied upon in former years, have been found useless, and he therefore omits them from this treatise. The order in which the natural oils, fats, and waxes are enumerated by the author is determined by the magnitude of the iodine value, and this sequence is quite uniformly followed throughout the book. Chapter XIV, containing more than 900 pages, is devoted wholly to the technology of the subject, and constitutes in concise form a complete series of monographs of all known natural products of this description. In this volume, the French, German, and Italian names of each individual oil, fat, and wax are given, while botanical and zoological names are supplied in the form of indexes with page numbers referring to the text.

**PROCEEDINGS OF THE AMERICAN ASSOCIATION OF PHARMACEUTICAL CHEMISTS.** Seventh annual meeting, held at the Hotel Somerset, Boston, Mass., May 25 to 30, 1914. 8 vo., 318 pages, cloth.

The aims of this progressive association are very clearly set forth in this volume, and the various addresses and reports of committees presented at the Boston meeting are evidence, if evidence be needed, that the members are promoting a more enlarged and friendly intercourse among themselves and are doing a great deal "to encourage and preserve the highest standard in business and manufacturing conduct in true harmony with the ethics of the medical and pharmaceutical professions." One of the most illuminating and interesting parts of the book is that containing the report of the Committee on Costs and Overheads, particularly the paper by Prof. Edgar L. Patch of Boston, and the report of Dr. S. E. Masengill, of Bristol, Tenn. As an exposition of some of the problems of manufacturing economics, these contributions are noteworthy, while the conclusions drawn and hints therein given should prove helpful to all engaged in pharmaceutical manufacturing. The volume contains a list of the firms holding membership in the association, now numbering more than forty, a list of the officers and committees for the current year, and a number of full page half tone reproductions of the principal officers.

**A SHORT HANDBOOK OF COSMETICS.** By Max Joseph. Second English Edition, revised with Appendix. 12 mo., 97 pages, cloth, \$1. New York. E. B. Treat & Co.

This is one of the best little manuals that we know of on this subject, and the druggist will find it a most helpful addition to his library. According to the author, cosmetics is merely a department of dermatology, and to obtain good results in the art, the medical man will do so only as he has familiarized himself with the elements of that subject. As a matter of common knowledge, a large part of the cosmetics exploited today are not to be ranked as "beautifiers," for the

conditions which they seek to ameliorate are not reached by such compounds. Here the author would direct the physician and druggist aright, which he does by taking up each separate medicament and noting for which affections it is to be used. The druggist will find within the volume many new formulas for all kinds of cosmetics, while the hints given are all that one would look for in this latest book on the subject.

**WELLCOME PHOTOGRAPHIC EXPOSURE RECORD AND DIARY, 1915.**

This little annual, bound in the well known red, contains a mine of information as to exposure, development, etc., which every photographer needs, and also supplies answers to many questions which are frequently asked by amateurs but often left unanswered in the ordinary textbooks. To mention a few of the points covered, the book tells you how to tone bromides green, how much flashlight powder to use, how to intensify color plates, how to get warm tones on gaslight paper, about factorial development, photography at night, speeds of bromide papers, exposure for interiors, sepia or blue toning, staining prints, and dozens of other things that space will not permit us to enumerate here. Fixed inside the back cover is the "Wellcome Exposure Calculator," an ingenious device which, by a single turn of one scale gives the correct exposure for any plate or film at any time of day or year. By its use the photographer is able to effectively reduce the percentage of spoiled plates, thus considerably lessening lots of unnecessary expense. The book is issued in wallet form complete with lead pencil, and may be obtained of all photographic dealers and booksellers. Price in the United States, 50 cents.

**INDEX TO PATENTS, TECHNOLOGY AND BIBLIOGRAPHY OF CHINA WOOD OIL (Tung Oil).** Compiled and published by George H. Stevens, Irvington, N. J. and J. Warren Armistage, Newark, N. J.

This index of 135 pages, quarto size, and printed three columns to the page, really furnishes a key to the voluminous literature relating to this oil, the authors stating that it is a compilation of everything that has been written about Elaeococca oil (China wood oil), the whole representing something over 800 publications and nearly 200 patents, about 500 people, authors and experimenters being responsible for the various statements. The technology data to which this index refers has been reproduced from typewriter manuscript, the patent portion by photographic process, the whole being arranged on uniform sized sheets  $8\frac{1}{2} \times 11\frac{3}{8}$  inches and gathered in loose leaf binders into four huge books, comprising nearly 2,000 sheets, of which about 500 are blue prints. Only a small manuscript edition has been prepared, and sets will be made up only on orders, which may be sent to either of the compilers. If one may judge anything by the printed index, literature of the subject would appear to have been thoroughly scanned.

**THE PHYSICIAN'S VISITING LIST (Lindsay & Blakiston's)** for 1915.

This is the 64th year of the publication of this List, a work that has proved satisfactory to more than one generation of practitioners. The List is furnished in three editions, regular, perpetual and monthly, ranging in price from \$1.25 to \$2.50, according to style and size. Besides the blank leaves for visiting list, memoranda, addresses, accounts, obstetric and vaccination engagements, records of births and death, etc., there are many tables likely to prove useful to the busy physician, such as incompatibilities, metric weights and measures and their equivalents, doses, quarantine periods in infectious diseases, thermometric tables, etc.

**PROCEEDINGS OF THE TWENTIETH ANNUAL MEETING OF THE MANUFACTURING PERFUMERS' ASSOCIATION OF THE UNITED STATES, 1914.** 8 vo., 186 pages.

This volume contains the proceedings of the association held in this city last April, as also the several special addresses delivered before the members at that time. Of these the addresses of O'Brien Atkinson on "Sources of Credit Information," John Clyde Oswald on "The Future of Business," and of Gilbert H. Montague on "Monopoly and Price Cutting" will well pay perusal. According to Secretary Henderson's report, the membership on April 1 numbered 47 active, 63 associate, and 4 honorary.

## CORRESPONDENCE

### THE STANDARD DRUG CO.

Cleveland, Nov. 6th, 1914.

Editor *The Pharmaceutical Era*,  
Dear Sir:

We have your communication regarding War Tax Stamps. We have had notices from numerous companies manufacturing perfumes and toilet articles, stating that they expect to bear all the expense of this tax, notably Colgate & Co. and the manufacturers of Lyon's tooth powder.

We received yesterday a notification from Lehn & Fink, stating that they were advancing the price of Pebeco Tooth Paste to \$4.20 per dozen list. The strange part of this is that they think it necessary to advance their price on a tooth paste they had been listing at \$4 per dozen, which is made in America and which in our opinion does not cost any more to manufacture than Colgate's or any of the rest.

We think the druggists should take a stand against them in this case.

Sincerely yours,

THE STANDARD DRUG CO.

C. E. Roseman.

### LEHN & FINK

120 William St.

New York, Nov. 14th, 1914.

Editor *The Pharmaceutical Era*,  
Dear Sir:

Replying to yours of the 13th as to letters you have received from subscribers to the "Era" objecting to our advancing the price of Pebeco Tooth Paste, we beg to state that we shall bear the War Tax on all our proprietary toilet articles such as Crown Goods, Riveris Talcum Powder, etc. with the exception of Pebeco Tooth Paste. As to this preparation we are not entirely free under our arrangement with foreign principals.

Yours truly,

LEHN & FINK.

### Wood Alcohol Seller Not a Vermont Druggist

Editor, *The Pharmaceutical Era*:

In justice to the druggists of Vermont and the profession at large I desire to have published the facts relative to the Bisbee case at Bristol, Vt.

Dr. D. A. Bisbee sold, or at least is accused of selling and has not denied the fact, what he supposed was alcohol but which proved to be wood alcohol, and as a consequence 13 deaths have resulted so far. Naturally it has caused a great deal of comment and the various papers have stated that he was running a drug store, which is not the case. Bisbee is a graduate of a medical college and has practised as such, but as he had been confined in prison, his license as a pharmacist secured under the old regulation in force at the time the pharmacy law was passed, was revoked and upon his release from prison he again tried to secure a license but was refused examination by the Board of Pharmacy; later, his store was inspected by a member of this Board and he was compelled to take down all signs, etc., which would indicate that it was a drug store, but unfortunately the law in this state at present prevented closing the place entirely.

In view of the foregoing facts it seems unjust that pharmacy should be compelled to bear the stigma of such an outrage when he was no more to be classed with pharmacy than the ministry, for nothing but the fact that it is customary to call places drug stores that sell a few patents to cover something else, connected him with pharmacists as a class.

Trusting that you will give this the publicity it deserves I beg to remain,

Yours truly,

MASON T. BEEBE,

Secretary, Vt. State Board of Pharmacy.

Burlington, Vt., Nov. 9, 1914.

### Interchange of Certificates With Kentucky

Editor, *The Pharmaceutical Era*:

On page 529 of the November issue of your journal you make reference to the case of King vs. the Kentucky Board of Pharmacy sustaining the right of the board to make rules governing the interchange of certificates. The rule in question does not provide that the applicant must hold his certificate

for one year *after* being registered, as you state. Said rule was as follows:

No resident of this state or of any other state shall be deemed eligible for reciprocal registration in Kentucky upon the examination of the Board of Pharmacy of another state unless said applicant, at the time of taking said examination, shall have been a bona fide resident of said state and engaged in the retail drug business therein for a period of not less than one year *immediately prior* to said examination.

The purpose of the rule requiring applicants to have been engaged in the drug business in which applicant took his examination, for one year *before* taking the examination, was to break up the practice of applicants declining to take the Kentucky examination and going to other states and taking an admittedly easier examination.

Yours very truly,  
EDWARD BLOOMFIELD,

Attorney, Kentucky Board of Pharmacy.

Louisville, Ky., Nov. 9, 1914.

## How To Build A Prescription Business \*

By G. O. PATTERSON, Hawesville, Ky.

WHEN I was requested to read an article on this subject, my first inclination was to decline the invitation. I felt that the information that I might give would probably not be as valuable as that which could be obtained from other members of the Association, but after being informed that I might relate my personal experience in building a prescription business in a small town, I shall attempt to offer a few suggestions that may assist some of my fellow-druggists in localities similar to mine.

Since it is a foregone conclusion that the essential and vital point in this matter is to gain the confidence of your prospective patrons, I shall devote the greater part of this article to that item.

I can readily recall a little idea that came to my mind the first day after I started business—when a customer called for five cents' worth of senna leaves. The wrapping paper had not arrived, so I picked up a piece of newspaper, wrapped the package, started to write a label for it, and the customer remarked that it was useless to label it, but I answered that I did not want any article to leave the place unless it was plainly labeled, so that each customer might know what he or she had purchased. I am pleased to say that I have not varied from that rule, and I am sure that one practice has given me a prestige that is certainly worth while.

Another thing worth mention in the development of my prescription business is that no one in my employ is permitted to recommend nor offer for sale any secret formula preparation, either patent or proprietary. When asked to recommend such a preparation, we merely say that, since we have no way to know what this preparation contains, we do not feel that we can conscientiously recommend it, however it is advertised as a remedy for such a disease. In the greater per cent of cases of this nature we are asked to recommend a remedy. This we do if we feel that some simple remedy will have the desired effect. But if we see from a patron's talk that the trouble is more complicated, we listen in the most courteous manner, then suggest that he see his physician. While at times it is necessary to give details as to why it is better for him to see his physician, we have found that the time spent in that way usually results in getting a staunch prescription customer.

Along this line I might relate a peculiar condition I was brought into in one instance. While a customer was giving me a detailed description of the condition of her health, a young physician who had recently located in the town came into the store. After hearing what the lady had to say, I explained to her that it would be better to consult her physician, which she did. This physician had heard a part of the conversation, and after she had gone to his office and he had prescribed for her, he told her to take the prescription to a competitive store. But she informed him that she preferred my store, and she came and told me what he had said. When I went to see the physician about the matter, he remarked that I would have prescribed for the lady had he not come in

\*Read before the Kentucky Pharmaceutical Association, Lexington, 1914.

when he did. But I explained to him how necessary it is to hear full details before referring the customer to a physician. He accepted my explanation and today he is one of my closest business friends. A mention of this experience is to show that a clear understanding between physician and pharmacist should exist; and I believe that a satisfactory relationship will always exist if you will not stand behind your counter and consider your physicians enemies instead of co-operating with them on behalf of the profession.

When I began business the local physicians wrote practically no prescriptions, and there were quite a few of my customers who were going to physicians and specialists of more or less reputation. I felt that there was no reason why I should not get this foreign prescription business; so in order to get these patrons to bring their prescriptions home and allow me to fill them, I adopted a plan of visiting physicians and telling them and showing them that I was equipped to do this work and asking for their assistance, while on the other hand, I availed myself of every opportunity to show these patrons that I could and would gladly compound their prescriptions. After a short time I began to receive this out-of-town business. I gained a close business friendship with quite a few of the physicians from other towns and cities, and one year 75% of my prescription business was from foreign physicians. While frequently it was necessary to order items to fill these prescriptions, I was very particular to see that these were filled with dispatch, and I usually advised the physician when it was necessary to order the item. I found this plan was very satisfactory, and it established with them a confidence in me. They knew that I would give them what they wrote for and would offer no substitute.

The next step taken that has been advantageous in building my prescription business, as well as the general business, was I never pushed a non-secret; while I carry two lines manufactured by co-operative companies, I have not tried to develop that business, but I make a line of home remedies that I have established a very nice business on. I put these preparations up in regular prescription ovals, under a plain printed label, and wrapped in parchment paper. This makes a very neat and attractive package. I have been told often that to sell a foreign make preparation was more profitable than to take the time to make them at home, but I have always felt that I had rather have a customer call for the cough remedy that Patterson makes than to ask for Jones', and I firmly believe that the fact that these remedies are manufactured in my store has had quite a little bearing on my patronage and has to a great extent aided in establishing that confidence in our ability to compound prescriptions. You might wonder how my physicians feel about my line of preparations. Whenever this occasion arises, I explain to the physician that it is to their advantage that the public buy my make instead of patents, and the physician after being told about the combinations of such preparation, when he is called to see a patient and finds that they are taking one of these remedies, he will not say, "Why do you fool with patents?" but he will invariably say, "Oh, that is good, but I would suggest a change just now," and thereby giving you another chance at a future time. I have at times told physicians of the contents of some one of my preparations and have filled prescriptions for them. In this way the physician boosts my preparations instead of knocking them, as might be supposed.

As a result of these efforts, I am today selling more of my remedies than I am of all the patents recommended for the same purpose. But, let me say that myself or clerks never recommend one of my remedies when a patent is asked for, but we take particular notice of how the customer asks for a remedy, and if asked for a cough remedy, a blood purifier or a liver pill without specifying a particular make, we are on our job.

The greatest problem in building the prescription business is dividing the business from proprietary to U. S. P. and N. F. products. First, I made several of those products, and when one of the physicians would stop in, I would show him the process of manufacture and the finished product, and explain to him the advantage in using these instead of similar proprietaries. In the first place, the saving in price to his patient. That one point has won quite a few for me. And another point that it is well to mention is the fact that the laity does not become as familiar with the names of U. S. P. and N. F. products as they do with proprietaries. And along this line it is advantageous to urge the use of capsules and pow-

ders in preference to ready-made pills, tablets, etc. My argument in favor of this is: Mrs. A. comes in, says that Dr. B. prescribed some brown, red or green tablets for me, but they didn't do any good. I thought probably that they were inert, or old. I have frequently demonstrated to physicians that better results almost invariably come from medicines prepared in capsules or powders, instead of ready-made pills or tablets.

But with regard to U. S. P. and N. F. propaganda work, when preparing U. S. P. and N. F. preparations do not fail to call the physician's attention to the detail of preparing the preparations, and if the finished preparation has clear or bright appearance do not fail to mention it. These points always give you the opportunity for the necessary detail work, and if you fail to use these opportunities as they arise you will allow the specialty man to put one over on you. Understand I may have many friends among the traveling salesmen, and I admire their business ability, but I try to run my place on the idea that self-preservation is the first law of nature. Brother druggists, the one plan that I have found to be the most successful is that each of us knows that most active physicians have some pet formulas or combinations of drugs that they would like to have made in a staple preparation. After you once gain the confidence of the physicians in manufacturing U. S. P. and N. F. products, you can, from time to time, get these ideas, and by a little special effort on your part, you can work these formulas out into satisfactory preparation, and as soon as the physician sees it he will begin to use it as his own.

Now I have eight or ten preparations of my local physicians that they use most every day. Some might say that the physician might think he should have a commission on this business, but I have not found it so; I would not countenance anything of this kind, for I believe if the physician is given a square deal, and I will give him as much business as he gives me, the deal is perfectly square to each of us.

These preparations that I have made from the formulas of physicians are never sold except on prescriptions. Many times I have had calls over the counter for one of these preparations, stating that Dr. A had prescribed for Mrs. B; she told me that it was just the medicine for my trouble; but I always inform the customer that the preparation is a private formula of Dr. A which I make for him, and that I can not sell it without the consent of the physician. I have always found that this makes a favorable impression upon the customer for the physician, and it certainly takes well with the physician.

Now, gentlemen, I have tried to outline to you the plans that I have used from time to time, and the results of these efforts are gratifying when you consider that out of 1,000 prescriptions filled at my place from local physicians you will find the proportion of the prescriptions as follows:

5% Proprietaries.

5% Tablets or ready-made pills.

15% Preparations of my own make, not U. S. P. and N. F.

25% U. S. P. and N. F. preparations.

50% Chemicals or combinations in capsules, conicals or pills, suppositories; ointments, or lotions, made up as the prescription is written.

I have for a number of years endeavored, as the opportunity presented itself, to impress upon the minds of the public in my locality that a druggist should not attempt to practice medicine, as he lacked the necessary training by education or experience to diagnose or treat diseases, yet in his training he was compelled in a manner to know the action of drugs and the doses, but he was entirely without his sphere when attempting to prescribe. At the same time, I have endeavored to impress on them that the average physician is not trained by practical experience or school training to practice pharmacy, as the medical college does not attempt to teach the preparation of medicine, but only the application of it.

I have explained to the public at times of the protection against errors in combinations as well as dosage that an honest pharmacist endeavors to give the public, yet I never mention of the lives I might have saved by correcting errors; statements of this character are, to say the least, very unprofessional.

I have conducted this self-imposed campaign until today I have quite a number of people who will not employ a dispensing physician unless he will write a prescription.

I do not think I am encroaching on the medical profession when I say to the public that when a busy physician spends his time dispensing his drugs he is compelled to rely on the statements of the manufacturer or on the label of the prepara-

tion used, for it is impossible for him to familiarize himself with the processes necessary to prepare remedies; the physician who applies his time in reading and studying his profession instead of figuring the commercial end of dispensing his drugs, is better qualified to practice medicine and his patrons will get better service in the manner his prescriptions are prepared if they will insist on having their drugs dispensed by a qualified pharmacist.

The last and final question of building a prescription business is your charges. Do not attempt to build a prescription business with low charges for fear you will allow price to interfere with the quality. I have a reputation of charging high prices, but I have yet to hear that I have made a reputation of not supplying the best quality of drugs. As long as this reputation remains as it is, I am satisfied with the reputation I have in my locality; and while I may not reach the volume of business, I believe I will have the character of business that will remain satisfactory. I am sure I have never over-charged a man, considering the quality of service I endeavored to give. I do not believe in the idea that no prescription should be filled for less than 25 cents, for I have always made it a rule to fill small prescriptions, three or four capsules of any ordinary remedy, for 10 cents, believing this alone will aid prescription building, for if one makes a charge of not less than 25 cents for this character of prescriptions, the people will complain until the practice will compel physicians to begin giving out a few tablets, and if you are not careful this will lead to dispensing.

## Compensation Insurance

*Within the last five years various states have enacted laws providing for workmen's compensation in case of injury incident to employment, and we present herewith a synopsis of the California workmen's compensation, insurance and safety act which became effective on January 1 last. This synopsis, taken from the recently issued proceedings of the California Pharmaceutical Association, has been prepared with particular reference to the application of the law to druggists of that state, and many of the points brought out are common to all legislation of this character.*

### Compensation

**T**HE majority of the laws of the twenty-five states that have provided for compensation pay to the injured 65 per cent of their wages. This was the percentage under the Roseberry law, and it is maintained in the present California statute.

The new way of computing compensation, which is compulsory, excepting for agricultural pursuits and household domestic service, is based on the nature of the physical injury or disfigurement, the occupation of the employe, and his age at the time of the injury. This gives some men more money than other men, according to the schedule based on the three essentials referred to, for permanent injuries. In addition, there is provision for pensions, at a reduced rate, for those who are permanently and seriously hurt and who are unable to follow their vocations. In order to meet this extra cost, which affects very few men, the compensation payments do not begin until two weeks after disability. The Roseberry law provided for a waiting period of one week. It is believed the addition of the extra week will pay fully for the pensions of those who have been eliminated from the industrial field.

In order to receive compensation, injured workers must have been in the employment and the accident must "arise out of and in the course of" the business. Compensation can be denied if the injured person was intoxicated or guilty of wilful misconduct. The injured must accept compensation, and only has option to bring suit for damages when the employer is personally guilty of gross negligence or wilful misconduct, or has shown a wilful disregard of the life, limb, or bodily safety of the employe. It must be shown that the employer is guilty of these offences. It is impossible, under the law, to hold the employer for the act of a subordinate.

A casual employe is one who is employed outside of "the usual course of the trade, business, profession or occupation of his employer," and is not entitled to compensation if directly employed unless he works longer than one week. For instance, a man who is hired by a druggist to chop wood in a yard surrounding his house would be considered as doing work apart from the drug business and therefore coming under the title of

"casual employe." A drug clerk who is employed for a day is not a casual employe, because he does work within the line of the employer's business.

The death benefit is the equivalent of three years' annual earnings, not less than \$1,000 and not more than \$5,000. If there are no dependents, then all that is required from the employer is the payment of funeral expenses, not to exceed \$100.

### Medical Treatment

The compensation law requires full medical and surgical attention for injured wage earners for the first ninety days. The theory of this section is that compensation may be saved if the injured person can be restored to efficiency as speedily as possible, and, outside of that, there is the humanitarian viewpoint that considers each man or woman engaged in industry as a national asset.

The law makes it obligatory upon the employer, or the insurance company representing the employer, to furnish such medical, surgical and hospital treatment, including nursing, medicines, medical and surgical supplies, crutches and apparatus, as may be reasonably required at the time of the injury and within ninety days thereafter. If the employer, or the insurance company, neglects or refuses seasonably to provide this attention to the injured, then it is possible for the employe to secure the necessary care and charge it to the employer or insurance company.

### Insurance

Important indeed is the State Compensation Fund. The only practicable way for employers to protect themselves and to add the cost to the business is by carrying insurance. Realizing this, there are provided four methods: first, the State Compensation Insurance Fund; second, the regular insurance companies selling compensation coverage; third, mutual or inter-insurance companies; fourth, the employer to carry the risk himself. These methods are optional. The object of the State Compensation Insurance Fund is to sell coverage at a fair rate that will make sure that the injured men and women receive all that the law calls for, and will also have the advantage of reasonable cost for employers.

Insurance rates are based on not only the hazard of the industry, but the way that plants are safeguarded. The employer who installs all the protective devices possible, who places safety rails at the head of openings in floors and who takes all the numerous other precautions that are not only advisable but necessary, will be charged a lower rate than will the man who is careless in these respects. This means that there will be a premium for the careful and humane employer, and the cost of his installations for the protection of his employes will be repaid by the lower rates charged. The indifferent employer who is neglectful will have to pay a higher price for his insurance. As premiums are always based on the hazard of the industry, the prime object is to prevent all the deaths and all the injuries possible. This action is good for the nation, for the State, and it certainly should appeal to every man and woman, regardless of relations in industry.

Any employer who is insured in a reliable insurance company can be entirely relieved, by a process of substitution, from all responsibility for payments, regardless of how many deaths or injuries take place under the policy.

### Insurance Rates

The standard corporate casualty companies and the State Compensation Fund (California) write unlimited compensation insurance covering druggists at the following rates. Wholesale drug stores, including all store employes, 52c per each \$100 of payroll; retail drug stores, 35c per each \$100 of payroll; drug manufacturers (grinding medicine), \$1.05 per each \$100 of payroll. In connection with each of these classifications, the rate applicable to the employes whose duties are strictly in connection with clerical office work is 16 cents per \$100 of payroll. For salesmen, messengers and collectors, using public vehicles only, the rate is 21 cents per \$100 of payroll. For drivers of teams, and salesmen, messengers and collectors, using teams or automobiles, the rate is \$1.50 per \$100 of payroll. For drivers of commercial type autos, the rate is \$2 for each \$100 of payroll.

### Hair Tonic

Fluidextract of jaborandi .....	1 fl. ounce
Tincture of cantharides.....	½ fl. ounce
Soap liniment .....	1½ fl. ounces
Mix. Rub on the scalp daily.	

## Medicinal Plant Gardens

DR. W. W. STOCKBERGER

*Physician in Charge of Drug-Plant and Poisonous-Plant In-  
sectariat, Bureau of Plant Industry, United States  
Department of Agriculture*

It is not my intention in this paper to present a descriptive account of Medicinal Plant Gardens in general, or even to discuss the more important ones of this country, except in so far as reference to them may be necessary by way of illustration. It is my endeavor, however, to point out what to me appear to be the most popular misconceptions concerning the scope and function of such gardens, and to suggest how they may be made to increase their usefulness to materia medica and pharmacy generally.

For the purpose of this discussion Medicinal Plant Gardens may be regarded as falling under one of two general classes, the first being pedagogic, the second industrial. The pedagogic garden is naturally an adjunct of a school of pharmacy, or of a Botanic Garden. Its scope includes all medicinal plants that are adapted to existing soil and climatic conditions, supplemented by greenhouse facilities. Its function is to familiarize students with the habit and appearance of the entire living plant, some part of which is used as a plant drug, to supply the need for authentic specimens for observations and demonstration in the class-room, and to furnish materials for research work on the morphology and chemical constituents of drug plants. Necessarily it will be found desirable to grow a large number of species in this type of garden, but, owing to the cost of maintenance, the space which can be devoted to any one species will be very small.

The industrial garden, on the other hand, is an adjunct of public or private enterprises, the object of which is to give additional information concerning our agricultural resources. Its scope is the same as that of the pedagogic garden, but it differs very materially in function which is to serve for the determination of the adaptability of medicinal plants, not only to soil and climatic conditions, but to economic conditions as well. In the industrial garden, a large number of species will be tested on a small scale to determine whether the soil and climate are suitable for their growth, then the few promising ones must be tried out on an area large enough to yield reliable data on the actual conditions of commercial production. A considerable acreage of land is indispensable for this type of garden, if the results secured therein are expected to have much economic significance.

There is no lack of evidence that the general public often, if not as a rule, fails to differentiate the functions of the pedagogic and industrial gardens, since advice is freely sought from both regarding the production of medicinal plants for the sole purpose of deriving profit therefrom. It is also an open question whether this distinction in function is in every case clearly understood by those responsible for the management of medicinal plant gardens. Statements sometimes unguarded, or not properly qualified, and sometimes based upon inconclusive and insufficient data, have on several occasions inspired the imagination of writers for the popular magazines or daily press, and, as a result visions of large and easy profits have been portrayed under various alluring titles, as, for example, "Big Profit from Drug Weeds," "The Herb Grower Has a Chance at an \$18,000,000 Business," "A Profit of One Hundred Dollars Per Acre from Growing Medicinal Weeds." Moreover, the wide-spread interest in the possibility of growing medicinal plants for profit, which has been developed in this country during the past decade has been capitalized by a number of crafty promoters, who use the mails and the columns of journals and magazines to disseminate flamboyant advertisements of the enormous profits which may be made by growing certain medicinal plants. Frequently, the name of the plant is withheld until the victim has remitted from one to five dollars, for which he receives practically valueless instructions for the cultivation of some plant poorly adapted to our economic conditions. A typical get-rich-quick scheme, of this class, is explained thus: "It has to do with a certain plant which grows like a weed: it is cut and cured like hay and sells for 45 cents per pound, which is at the rate of \$900 per ton." The investment of one dollar brings the name of the herb with the further

information that the product of one acre will sell for \$1,800! As a matter of fact the commercial cultivation of this plant is almost unknown in the United States, and there is yet no established market for the American product.

These illustrations will account for the doubt which has arisen in my mind as to the propriety of purely pedagogic gardens being used as a basis for generalizing on the question of drug growing for profit. In agricultural experimentation, it is well recognized that the results from small trial plots must be interpreted with due regard for the large factor of error, which is always present. With proper care and attention, it is relatively easy to grow a luxuriant crop of any one of a number of drug plants on a square rod of good garden soil but what can be done under ordinary agricultural conditions on one or more acres can not be calculated therefrom by "a simple sum in arithmetic," as one writer has naively said.

There are numerous well authenticated instances in which the production of some medicinal plant has resulted in a fair profit, but there is yet no evidence at hand to justify the belief that satisfactory results can be secured without some practical experience in gardening, some knowledge of the requirements of crude drugs and due regard for economic conditions.

Every pharmacist and physician is or should be interested in obtaining crude drugs of highest quality and standard efficiency, but material progress toward the attainment of this end will not be favored by encouraging a large number of persons to become small producers. The result of small individual collections varying widely as to time, place and method of gathering is seen in the miscellaneous aggregates all too frequently found in our crude drug markets, and unless a perpetuation of this condition is desirable, little encouragement should be given to the suggestion that whoever has a small back yard available may become a producer of plant drugs.

The educational opportunity open to the pedagogic gardens is almost limitless. The dissemination of knowledge to countless individuals not having access to the garden itself regarding the history, geographic distribution, methods of preparation and uses of crude drugs may be accomplished through illustrated lectures and carefully prepared articles written for the less technical periodicals. Such misconceptions as, for example, that the production of ipecac in New England and vanilla beans in Iowa is a commercial possibility, or that stramonium is produced by a "melon weed" are all too prevalent, and should be corrected. But educational work along this line deserves little tolerance unless inspired by some motive more commendable than that of merely arousing interest in growing drug plants, otherwise the whole movement will sooner or later be discredited. Recently a reputable pharmaceutical journal published an article in which the writer set forth at some length the possibilities for the commercial production of a certain drug plant in the southwest. A request for further information brought forth from this writer the astounding statement that he had no personal knowledge of conditions in the southwest, but, *having grown this plant in one of the northern States*, he saw no reason why it should not be profitably grown in the southwest "on rocky and otherwise unprofitable land, on hillsides or arid desert soil." In this case, the motive was evidently merely the arousing of interest, and the writer mentioned displayed a fine disregard for the practical difficulties attending the growing of the plant in question which sharply localize the areas on which it may be economically produced.

The time is certainly ripe for injecting into discussions and recommendations regarding the cultivation of medicinal plants some of the sanity and discrimination which characterize conservative business operations. Such a course is necessary if the interest already aroused is to be retained and directed along lines productive of beneficial results. It should be remembered that the expense of agricultural operation varies widely according to location. In some localities, the outlay for farm labor will be three and one-half times as much as in others. Sometimes we find a low expense for labor associated with a heavy outlay for fertilizers, sometimes heavy expense for both labor and fertilizers, and, again, low expense for both. The complications introduced by these factors alone render it practically impossible to make any safe general statement as to the profitableness of drug growing. Furthermore, two localities separated by a distance of less than fifty miles may present a totality of conditions so different that a drug-growing enterprise which could probably be conducted at a profit

\*Read before the Scientific Section of the A. Ph. A. Detroit meeting, 1914.

in the one would with equal probability fail absolutely in the other.

I do not wish to be understood as taking the position that there is no opportunity in the cultivation of medicinal plants, for I have abundant evidence that given the *necessary favorable conditions* a fair return may be expected from several drug crops. On the other hand, I also have abundant evidence that hundreds of persons have received the impression that drug crops can be grown by anybody anywhere at a profit far in excess of that to be obtained from ordinary cultivated crops. I am convinced that in some cases optimism and enthusiasm have been allowed to outrun common sense, but if in the future due consideration is given to the fundamental principles of agricultural economics, I believe that a rational attitude toward commercial drug plant cultivation may be developed.

The founders of the several excellent pedagogic gardens which are now maintained in connection with certain schools of pharmacy have inaugurated a movement which promises much for the future of materia medica and pharmacognosy. It is sincerely to be hoped that their example will lead to the establishment of such gardens in connection with each of the 75 or more schools of pharmacy in the United States, and to an extension of the scientific study of medicinal plants. The problems demanding attention are very numerous, but some of the lines of study and investigation which need to be emphasized are those concerning the adaptation and acclimatization of medicinal plants, the conditions under which the active principles of plants are formed, and the behavior of the plants themselves under varying conditions of climate and culture. Moreover, the selection and breeding of medicinal plants not only promises to yield results of great practical importance, but also affords a field for the widest scientific activity.

It is to be regretted that at present there is no satisfactory way in which the investigations being made upon medicinal plants in different sections of this country can be properly correlated and reduced to form for definite comparison. Especially desirable is a practicable basis of correlation for studies of the variation in plant constituents due in part, at least, to differences in geographical location. When two more or less widely separated workers attempt to compare the results of their studies, it frequently happens that they experience the greatest difficulty in harmonizing their results. This is due in part to differences in the response which plants make when under different environmental conditions, in part, probably, to variations in the method of procedure followed in the cultivation, curing and analysis of the plant, and in part, no doubt, to differences in the genetic relationship of the plants studied by the respective investigators.

There seems to be an opportunity for some arrangement or mutual agreement between the representatives of our various medicinal plant gardens, under the terms of which, multiply samples of seeds or plants of common parentage could be distributed for the production of plants to be used experimentally. If under such an agreement, uniformity of treatment, throughout the processes of culture, curing and analysis could be secured, comparison of results would be much more profitable than at present, and the tabulation and summarizing of the results of experimental work conducted along the lines indicated in a number of localities would permit the drawing of conclusions having a significance far greater than those that can be reached by a single isolated worker. The suggestions here offered, contemplate nothing like a general co-operative investigation, but rather the adoption of what might be regarded as a standard method of procedure analogous to official methods of analysis, etc. The tabulation and summarizing of results might well follow individual publication, as no other course is likely to give satisfaction.

In conclusion, I wish to say that the resources of the experimental drug gardens of the Office of Drug-Plant Investigations, Bureau of Plant Industry, are open to any school of pharmacy desirous of starting a medicinal plant garden, as are also the facilities of that Office for effecting the distribution of material for experimental purposes, and for furthering the collection and compilation of data on the cultivation of medicinal plants under great diversity in conditions of growth.

**Pile Ointment**

- Powdered galls ..... 2 drams
- Powdered opium ..... 30 grains
- Purified lard ..... 1 ounce

Mix. Apply as necessary.

**Jottings from Great Britain**

*By our London Correspondent.*

**Effect of the War on the Drug Trade**

THE war has now been in progress for more than three months and still remains the sole topic of conversation; nevertheless business has more or less settled down to the new conditions and has assumed a more normal aspect. As a matter of fact, pharmacy has never been vastly affected by the war except that prices of drugs have been so much higher and the demand for fancy articles very much less. In many cases prices have receded from the high figures to which they jumped immediately after the war began, but in other cases they have continued to advance although not in any violent way. German synthetic drugs are getting rather scarcer, but there does not appear to be any likelihood of a famine; in fact there seems to have been a sufficient stock in this country to enable British drug merchants to send small supplies to France, Servia and Russia, special permits having been obtained from the Government, notwithstanding the proclamation prohibiting the export of such drugs.

English drug houses are now manufacturing some of the drugs which have hitherto been obtained from Germany but with the exception of acetyl salicylic acid and one or two others, this does not apply to synthetics, although I believe that several manufacturers have nearly completed their arrangements for making other synthetics. A firm which has shown considerable enterprise and ability in meeting the new situation is, you will be interested to learn, that of Burroughs, Wellcome & Co. This firm is selling cocaine hydrochloride of their own production and have been granted the right to work the patent processes for the manufacture of Salvarsan notwithstanding that the English factory of Meister, Lucius & Bruning is to be carried on under the supervision of an English controller appointed by the Board of Trade. So far, however, very few of the applications for licenses to use German patents and trade marks have been granted, but the word "lysol" which has hitherto been the property of Schuelke & Mayr, of Hamburg, is for the time being to be expunged from the register so that anyone may use it.

**Retirement of Dr. F. B. Power**

The many English friends of Dr. F. B. Power have learned with regret that early in December he intends to leave this country having retired from the Directorship of the Wellcome Research Laboratories in London, a position he has held for eighteen years. Dr. Power, who is returning to the United States, will be succeeded by Dr. Frank L. Pyman.

**Cultivation of Medicinal Plants in Great Britain**

The Board of Agriculture is endeavoring to encourage the cultivation of medicinal plants in this country, and with that object, has issued a pamphlet showing how largely dependent we are on the continent of Europe for our supply of such drugs. The pamphlet explains the best methods of cultivating and collecting such plants as belladonna, chamomile, aconite, herbane, valerian, digitalis, dandelion, etc., and also the best method of marketing them. Hitherto the English cultivator of these plants has not found the practice a very profitable one, but with supplies from Germany and Austria-Hungary cut off, there is even room for the small producer.

**Raspberry Cough Syrup**

- Wine of ipecac ..... 1 ounce
- Wine of antimony ..... ½ ounce
- Oxymel of squill ..... 2 ounces
- Syrup of tolu ..... 2 ounces
- Concentrated infusion of senega ..... 4 ounces
- Glycerin ..... 5 ounces
- Mucilage of acacia ..... 2½ ounces
- Raspberry vinegar, enough to make..... 20 ounces

Mix. Adult dose, one to two teaspoonfuls in water.

**Cold and Influenza Mixture**

- Sodium salicylate ..... 2 drams
- Potassium bromide ..... 2 drams
- Cinnamon water ..... 2 ounces
- Compound tincture of cardamom..... 2 drams
- Chloroform water, enough to make..... 8 ounces

Mix. Adult dose, one teaspoonful every 4 hours.

## SELECTED FORMULAS

### Perfume for Spraying in a Shop

The Editor of the London *Pharmaceutical Journal*, in answer to a querist who asks for a formula under the above title, hesitates to suggest seriously a suitable perfume. For perfuming any other kind of a shop than a pharmacy he suggests the following, which is a formula for toilet vinegar, the odor of which is pleasant under almost any conditions: Oil of bergamot, 48 minims; oil of cassia, 10 minims; oil of cloves, 30 minims; oil of lavender, 20 minims; oil of lemon, 48 minims; tincture of balsam of tolu, 96 minims; tincture of benzoin, 2 fl. ounces, alcohol, 10 fl. ounces, acetic acid, 2½ fl. ounces; distilled water to 20 ounces. This may be sprayed as it is or diluted with water. A French idea for perfuming the air is based on the fact, so it is stated, that powdered oxalic acid absorbs large quantities of the fragrant essences and retains the odors. The oxalic acid thus treated is divided into powders, each one being accompanied with a powder of sodium bicarbonate. When both powders are placed in a glass of water the fragrant constituents of the essences are driven off with the carbon dioxide, and are thus distributed about the room. Although the poisonous oxalic acid can be replaced by citric or tartaric acid, the first-named is said to serve the purpose best.

### Ointment of Rose Water (B. P.)

Rose water .....	5 ounces
White beeswax .....	4½ ounces
Purified borax .....	¼ ounce
Almond oil (by weight) .....	15¼ ounces
Oil of rose .....	12 minims

### Astringent Tooth Powder

Powdered cinchona bark.....	2 ounces
Ammonium chloride.....	½ ounce
Orris root .....	1 ounce
Catechu .....	6 drams
Myrrh .....	6 drams
Oil of cloves.....	5 drops

Powder each of the drug ingredients, then mix and sift.

### Witch Hazel Toilet Cream

Paraffin .....	150 parts
White wax.....	160 parts
White paraffin oil.....	890 parts
Sodium perborate.....	6 parts

Perfume, enough to suit.

Melt the paraffin and wax at the lowest possible heat, then add the paraffin oil, continue with gentle heat, constantly stirring. Add the sodium perborate to the water, previously warmed, then add to this the wax solution in a continuous stream; while cooling, add the perfume.

### Corn and Wart Remover

Lactic acid.....	1 part
Salicylic acid.....	1 part
Collodion .....	8 parts

Mix. Paint the corn or warts 3 times daily for two or three days.

### Compound Powder of Tragacanth

Tragacanth, in powder.....	15 grams
Gum acacia, in powder.....	20 grams
Starch, in powder.....	20 grams
Refined sugar, in powder.....	45 grams

Mix the powders intimately. This is the official formula of the new B. P. The powder is used as a suspending and emulsifying agent.

### Compound Stramonium Powder

Stramonium leaves, in powder.....	50 grams
Lobelia, in powder.....	6 grams
Anise fruit, in powder.....	12 grams
Tea leaves, in powder.....	6 grams
Oil of eucalyptus.....	1 gram
Potassium nitrate, enough to make.....	100 grams

Mix the oil with the powders, adding the potassium nitrate last. This powder is used several times daily for asthma. About a half a teaspoonful is pressed by the fingers into the

shape of a cone, which is then lighted at the top; the patient inhales the fumes as the powder burns.

### Metal Polishing Cream

Prepared chalk .....	4 ounces
Powdered soap .....	½ ounce
Kieselguhr .....	1 ounce
Ammonia water .....	6 ounces
Spirit of rosemary.....	2 drams

Mix.

### Celluloid Corn Remedy

Celluloid .....	5 parts
Camphor .....	5 parts
Salicylic acid .....	5 parts
Amyl acetate .....	25 parts
Acetone .....	25 parts

The celluloid must be of the clear variety such as is sold for making celluloid varnishes; it can be obtained in thin sheets from photographic dealers. Cut the celluloid into small pieces and macerate with the amyl acetate in a tightly stoppered wide-mouthed bottle. Dissolve the camphor and salicylic acid in the acetone and add the amyl acetone mixture and macerate for several days, shaking at intervals. When the celluloid is dissolved, the mixture is ready for bottling; it should be a clear syrupy liquid. Balsam of fir or castor oil in small proportion will make the film more flexible. This mixture is very inflammable and must be kept away from an open flame.

### Flavoring Paste (Imitation Vanilla)

Vanillin .....	10 parts
Coumarin .....	1 part
Gum tragacanth .....	2 parts
Powdered sugar .....	2 parts
Glycerin, Water, Starch, of each, sufficient to make a paste.	

Triturate the vanillin and coumarin with the powdered sugar and glycerin, and add sufficient water to make a thick syrupy mixture. Dissolve the gum tragacanth in hot water after it has been softened by soaking in cold water for a few hours, evaporate the solution (if necessary) to a thick mucilage, add the vanillin mixture and stir in sufficient starch to make a paste of the desired consistency. The glycerin is used to keep the paste soft. For use in collapsible tubes.

### Eczema Ointment

Resorcin .....	280 grains
Water .....	280 minims
Bismuth subnitrate .....	280 grains
Zinc oxide .....	280 grains
Prepared calamine .....	120 grains
Birch tar oil .....	140 minims
Lanolin .....	19 drams
Soft paraffin, enough to make.....	8 ounces

Triturate the resorcin, bismuth subnitrate, zinc oxide and calamine with the lanolin until a perfectly smooth mixture is obtained. Then gradually incorporate the soft paraffin previously mixed with the birch tar oil.

### Stearin Soap (German)

Sodium carbonate .....	56 parts
Water .....	300 parts
Heat on a water-bath; add gradually—	
Melted stearic acid .....	100 parts
Heat for half an hour, stirring the while; add—	
Alcohol (90 per cent) .....	10 parts

Continue the heat until a transparent, water-soluble paste has formed; then add a filtered solution of

Sodium chloride .....	25 parts
Crude sodium carbonate .....	3 parts
Water .....	80 parts

Continue to heat until the soap has completely separated. When cold, wash the soap several times with a small quantity of water, press strongly, cut, dry, and reduce to fine powder.

## FOREIGN ABSTRACTS

### FROM EUROPEAN LABORATORIES

#### Poppy Alkaloids Not Secretions—Determination of Saccharin—Poisoning by Phenolphthalein—Toxicity of Wood Alcohol

**A**LTHOUGH somewhat reduced in size, the pharmaceutical journals from abroad continue to hold a wealth of new material, and the reports of the peaceful activities of our colleagues in the war-stricken countries form a welcome contrast to the press dispatches. Among this month's abstracts we present a number of analytical methods. A strange case of poisoning by phenolphthalein is described by Roux. The toxicity of methyl alcohol, always in the public mind, is discussed by Kroeber. An interesting article by a French pharmacy inspector deals with the proposed limitation of the number of drug stores in that country. Copenhagen and other Danish cities are said to be provided with "automatic" pharmacies, which purvey various articles after closing hours.

#### Role of Alkaloids in the Poppy—

The significance of alkaloids in the economy of the poppy plant has never yet been fully explained. Great progress has been made in the analysis of the structure of the alkaloids themselves, but the mode of their formation in plants, and their importance in plant life, are not understood. Accordingly, Müller has studied the formation of alkaloids in the poppy plant in a quantitative manner. The seeds of *Papaver somniferum* are free of alkaloids. The latter begin to be formed about 14 days after germination. Subsequently an increase in the proportion of alkaloids occurs, until after blossoming the seeds begin to lay up a reserve store of albumen. The increase is not regular, but depends on the intensity of illumination in which the plants are growing. After long periods of cloudy weather the alkaloidal content may be reduced to mere traces. With maturity of the seeds, the percentage of alkaloids decreases. In plants which are grown from that time on in the soil, so that they have access to nitrogenous matter, alkaloids can be found even in the stalks and leaves, and in amounts which are quantitatively determinable. But if the plants are cut off from nitrogenous food, by growing them in nourishing solutions, no traces of alkaloid are to be found in the herb, and only qualitative traces in the capsules. From these facts the author concludes that the poppy alkaloids at the time of ripening of the seeds are used to build up albumen, and therefore are not specific secretions. (Müller, Arch. Pharm., 1914, p. 280.)

#### Investigations of Siam Benzoin—

The last exact studies of Siam benzoin were those of Tschirch and Lüdy. The latter found that Siam benzoin consisted mainly of a mixture of two esters of benzoic acid, the alcohols of which were designated by Tschirch benzoesinol and siaresinotannol. Free benzoic acid, vanillin, and a small amount of benzyl or cinnamyl benzoate was also found. Reinitzer has now succeeded in isolating a new colorless crystalline constituent, the benzoate of a hitherto unknown resin alcohol, called by the author lubanol. It was also shown that the benzoesinol is not combined with benzoic acid, but is in the free state. Closer study proved that the benzoesinol did not agree in its properties with that described by Lüdy. Reinitzer therefore concludes that the constituents of Siam benzoin are benzoic acid, siaresinol, and lubanol benzoate. This explains the crystalline nature of the resin, and the fact that it is milky and opaque. The amorphous outer crust is due to subsequent alterations. (Reinitzer, Arch. Pharm., 1914, p. 341.)

#### Adulteration in Rhubarb—

To prove the presence of *Rheum rhabonticum* in Chinese rhubarb, it is necessary to isolate the rhabonticin, which is not contained in *Rheum chinensis*. Ten g. of the powdered rhubarb are extracted by percolation with 60 per cent alcohol, until 26 g. of extract are obtained, which is evaporated at 80° to 7 g., and mixed with 10 cc. of ether. After standing for 4 hours, brownish crystals separate from the mixture. In a mixture of 75 per cent of *R. rhabonticum* with 25 per cent of the Chinese drug, the separation is complete after 24 hours,

while if the proportions are reversed, several days are required. Rhabonticin forms fine needles, insoluble in ether, chloroform, or petroleum ether; and slightly soluble on heating in acetone, or alcohol. It is colored red with alkalis, and evolves a bitter almond odor with diluted nitric acid. (Juillet, Ann. Droq. Salle & Co., 1914, p. 54.)

#### New Reaction of Cocaine—

The free alkaloid or its hydrochloride when heated with a few drops of concentrated sulphuric acid containing 2 per cent of hexamethylenetetramine, gives a wine-red coloration, which becomes more intense as the temperature rises. After a short time the color disappears and a brownish-grey sediment is left. The reaction, which is due to benzoic acid, and is not given by atropine, quinine, cinchonine, morphine, brucine, strychnine, apomorphine, codeine, or narcotine, is distinct with 1 mg. of cocaine. Papaverine under similar conditions may also give a wine-red color, which changes after a short time to yellow, reddish-brown, and orange. In doubtful cases papaverine may be recognized by the violet color it gives with sulphuric acid alone. (Pisani, Annali, Chim. Appl., 1914, p. 51; through J. Soc. Chem. Ind.)

#### Saccharin in Complex Mixtures—

In the case of solids, from 10 to 50 g. are warmed with a saturated solution of magnesium sulphate and magnesia for half an hour at 37-40°, the liquid being kept alkaline if necessary by the addition of magnesia. The mixture is allowed to stand, and a small amount of sodium tannate and strong alcohol may be used to make the insoluble matter settle perfectly. Then the liquid is made up to a definite volume with a saturated solution of magnesium sulphate and magnesia, filtered, and an aliquot part is acidified strongly with sulphuric acid, and extracted three times with a mixture of ether and low-boiling petroleum ether. The extract is then filtered, evaporated, the residue dissolved in sulphuric acid, and oxidized with potassium permanganate, the solution again being filtered and extracted with freshly distilled ether. This extract is now allowed to evaporate in a tared dish, the residue of saccharin dried in a desiccator, weighed, and identified by suitable tests. If the unknown is a liquid, saturate it with magnesium sulphate, warmed to 37-40°, for half an hour, with enough magnesia to give a distinct alkaline reaction. Then proceed as above. If much fat is present, the extraction with a mixture of ether and petroleum ether is preceded by an extraction of the alkaline solution with petroleum ether boiling about 100-120°. (Condelli, Annali Chim. Appl., 1914, p. 47; through J. Soc. Chem. Ind.)

#### Essential Oil from Cade—

The wood of the cade, *Juniperus oxycedrus*, yields from 1.6 to 3 per cent of essential oil, which can be used as a substitute for oil of cade in dermatology. It has a specific gravity of 0.925, and a rotation of -31.42°. The boiling point is between 330° and 360°, and the oil does not solidify at -15°. It is slightly soluble in water, dissolves readily in most organic solvents, and can take up large amounts of sulphur, menthol, salol, etc. (Huerre, J. Pharm. Chim., 1914, Vol. 10, p. 164.)

#### Detection of Methyl Alcohol—

Brochet and Cambier having noted that formaldoxime can be split into hydrocyanic acid and water, Vivario uses the reaction to detect methyl alcohol in alcoholic liquids, and finds that in the presence of hydroxylamine hydrochloride and caustic potash, methyl alcohol and its derivatives, including the chloride, iodide, phosphate, borate, acetate, and especially the sulphate, give potassium cyanide, while ethyl alcohol, acetaldehyde, acetone, acetal, and amyl alcohol do not. The reactions of hydrocyanic acid being well characterized, it is possible to detect less than 10 per cent of methyl alcohol by this method. The alcoholic liquid is brought by distillation to a strength where it contains about 80 per cent of alcohols. About 30 g. of the liquid are heated in a little flask for 7 hours, with half its weight of potassium hydroxide, and a thirtieth of hydroxylamine hydrochloride, with a few fragments of pipe stem. After cooling, dilute with water, add a little litmus, acidify with sulphuric acid. Then distil with steam, and collect the hydrocyanic acid, which is to be recognized by the Prussian blue

reaction. With a mixture of 2 g. of methyl alcohol and 18 g. of ethyl alcohol, there was a voluminous precipitate of Prussian blue, while with a 5 per cent solution the result was equally conclusive. Furfurol, if present, must first be removed. (Vivarío, J. Pharm. Chim., 1914, Vol. 10, p. 145.)

#### Preparation of Ethyl Galactoside—

After study of the optimum conditions for the formation of beta-ethyl galactoside, Bourquelot and Mougne recommend that the reaction take place in alcohol of 80 per cent, at temperature of 38-40°, in the presence of an excess of galactose. Two liters of alcohol are treated with 100 g. of galactose, 16 g. of emulsin, and maintained at the proper temperature. The mixture should be shaken frequently, and every week a new dose of emulsin should be added. The initial rotation of 1.27° passed after a month to 0.87°, and analysis showed that 54.2 g. of galactose had not combined. The excess of sugar was removed in the usual manner, with bottom yeast, and the galactoside extracted and purified. The yield was 34 g. of product. The beta-galactoside crystallizes in fine colorless needles, grouped in rosettes; it melts sharply at 161°. It does not reduce Fehling's solution. The rotatory power, -7.21°, and the melting point, do not agree with the data of Fischer and Armstrong. (Bourquelot and Mougne, J. Pharm. Chim., 1914, Vol. 10, p. 157.)

#### Fatal Poisoning by Phenolphthalein—

In support of the observations of Leger on the poisonous possibilities of this remedy, Roux reports a fatal case as follows: A young girl, of 19 years, suffering from measles, which had proceeded normally and were in the fourth day of eruption was given two pastilles of phenolphthalein as a purgative. A few minutes afterward, she was seized with internal cerebral phenomena and delirium, and tried to throw herself out of the window. On Roux's arrival, he found the patient in a state of coma, the lips and nails purple, and the reflexes were suspended. Injections of ether and apomorphine, to provoke vomiting and bleeding, were without avail, and the girl succumbed 40 minutes after ingesting the substance. (Union. Pharm., 1914, p. 306.)

#### A New Copaiba Balsam—

A copaiba balsam from the Brazilian state of Amazonas consisted of a light yellow thin liquid of normal odor and taste, forming an opalescent mixture with an equal volume of absolute alcohol, and a white precipitate with more alcohol. It is soluble in all proportions in chloroform, and has a density of 0.930. The optical rotation of the balsam is -40°, of the oil distilled from it, -35.3°, of the residual gum, -55°. Perugen and ammonia tests were negative. According to Caesar & Loretz, the adulteration of copaiba with African or Illurin balsam may be detected by distilling off the ethereal oil with steam, and studying its rotation, the oil of African balsams being dextro. Several true Maracaibo balsams, trade samples, Maturin and African balsams were thus tested. The true balsams were themselves dextro, but gave an oil that was laevo, and a more strongly dextro gum. African balsam has a low rotation, but gives a dextro oil, and a laevo gum. (Riedel's Ber., 1914, p. 27; through C. A.)

#### Automatic Pharmacy in Copenhagen—

At various points in Denmark, and especially in Copenhagen, where the practice is widespread, the exteriors of drug stores are fitted up with automatic dispensing devices, which operate after the store is closed in the evening. These distributors furnish, for a 10 or 25-ore piece, various small articles in common use, for which a prescription is not required, such as a bottle of arnica, a packet of antiseptic gauze, a solution of bichloride, or a purgative. The convenience of such an arrangement, both for the druggist and his customers, scarcely needs to be pointed out. (Schweiz. Apoth. Ztg., 1914, p. 559.)

#### Influence of Atmospheric Conditions—

In a previous communication, Burmann has pointed out the close connection between the alkaloidal or other content of certain medicinal plants, and the climatic conditions of the years during which the plants were growing. The study has been applied to digitalis, and a very close parallelism has been found between the content in digitalein, as determined by Burmann's modified Keller method, and the amount of heat which the wild plant has received during its growth. The plants were gathered near the same spot, during the months of flowering, July and August, and were stripped and pulped a few hours later, without any drying. At times, however, it was necessary to have recourse to rapid desiccation, which was done by means of dry air or a vacuum. These methods, when

the results were calculated back to the fresh plant, gave concordant results, and the desiccation seems to be much less drastic in its effects on the delicate constituents than the proposed sterilization with boiling alcohol. The mean annual temperature was not used, but instead Burmann took that of the months of May, June, July and August, corresponding to the period of the plant's growth. In addition, the rainfall and cloudiness were noted. The experiments extend to five years, from 1908-1912, and the results are very clear cut. (Burmman, Schweiz. Apoth. Ztg., 1914, p. 527.)

#### Toxicity of Methyl Alcohol—

Kroeber has thus summed up the recent literature on the poisonous properties of wood alcohol: Juckenack believed that formaldehyde, formed in the oxidation of methyl alcohol, was responsible. According to Harnack, the aldehydic formic acid, which is a product of the slow oxidation of wood alcohol, develops a strong toxic effect in *statu nascendi*, which it does not have when already formed. Other authors believe that the acid properties of formic acid deprive the blood of its necessary alkalinity, while oxygen is also abstracted for the oxidation. The view that carbon monoxide may be split off from formic acid is combated by von Buschka, since no carbon monoxide is found in the blood of victims. Ohlemann seeks the cause in a contamination of the formic acid with furfurol. Aronsohn holds that the evil effects are due to substances mixed with the methyl alcohol, and that the latter itself cannot be regarded as a serious poison. Kobert is of the opinion that idiosyncracies are at the bottom of the variable activity of wood spirits. Joffray and Serveaux consider methyl alcohol in a single dose to be harmless; on continued use it becomes poisonous, since alcohols low in carbon are difficult to oxidize, and hence accumulate in the system. Langyaard believes, on the basis of animal experiments, that methyl alcohol in small repeated doses is more poisonous than ethyl alcohol, but in a single large dose the reverse is true. Kroeber ascribes the occasional toxicity of methyl alcohol to the presence of methyl sulphate, which may be formed under certain conditions in the process of refining. (Schweiz. Apoth. Ztg., 1914, p. 520.)

#### Limitation of Pharmacies—

Garnal, inspector of pharmacies in the department of the Lot, in France, writes of the increase in the number of pharmacies since 1860. In that year there were in France 5,000 pharmacies, each one serving on the average 7,200 inhabitants. In 1875, the number had increased to 6,232, and each catered to only 5,700 inhabitants; in 1886, 8,100 pharmacists, or 1 to every 4,400 people; in 1896, 8,910 pharmacists, or 1 to 4,200; in 1900, 9,406 pharmacists, or 1 to 4,100; in 1912, 12,000 pharmacists, or 1 to 3,283 persons. In comparison, he presents the ratios in countries where limitation is in force, and where pharmacists enjoy greater material advantages, and higher moral and scientific consideration. In Germany, there is 1 pharmacist to 10,000 or 12,000 inhabitants; in Austria-Hungary, 1 to 13,000; Bulgaria, 1 to from 6,000 to 8,000; Denmark, 1 to 12,800; Norway, 1 to 16,000; Sweden, 1 to 19,000; Greece, 1 to 3,000; Rumania, 1 to 5,000; Russia, 1 to 30,000. The growth of pharmacies in France has been especially rapid in the large cities or centers of population. The enforced diminution in the number of students would result in the closing of useless pharmacies, but this disappearance should be made to take place in a logical manner, with regard to local needs. Garnal is in favor of establishing the number and class of pharmacies which will be authorized according to the density of population, the richness of the region, and local requirements. The proprietors of those pharmacies which are suppressed must be indemnified by an impost laid on the pharmacies which profit by their closing. Now, at present, there are 12,000 pharmacies for 39,000,000 inhabitants. Reckoning one for every 5,000 persons in cities of more than 50,000, and one for every 8,000 in the rural districts, it would be necessary to buy up 6,000 pharmacies, with a mean value of 6,000 francs, or 36 million francs total. If divided into 10 annual payments, the single payment would be 3,600,000 francs, from which must be deducted the money arising from the sale of stocks and effects, which would be considerable. Counting the total business as 230,000,000 francs, a tax of 2 per cent on the business done would suffice to cover all expenses. And no pharmacist should refuse, according to Garnal, to pay this tax, since the experience of all other lands has shown that limitation causes the value of a pharmacy to triple. (Bull. Sci. Pharmacolog.; through Schweiz. Apoth. Ztg., 1914, p. 473.)

## ? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

### Solubility of Ammonium Benzoate

(L. E. J.)—"We have some trouble in filling the enclosed prescription, and find it impossible to dissolve the ammonium benzoate. Will you please tell of some way by which we can make a solution?"

Here is the prescription:

Ammonium benzoate ..... 6 drams  
Peppermint water, enough to make ..... 6 ounces  
Mix. One teaspoonful in water after meals.

The solubility of ammonium benzoate in water is variously stated by different authorities, the U. S. P. giving the solubility as 1 part in about 10.5 parts of water, while the figures given by the new British Pharmaceutical Code are 1 in 6. However, the commercial salt is sometimes unduly acid, due to the loss of ammonia on keeping, becoming thereby very difficultly soluble. To overcome this, the salt should be neutralized with a little ammonia. Some authorities state that the neutral, freshly prepared salt is soluble in as little as 5 parts of water. To compound the prescription, first neutralize the ammonium benzoate with a little ammonia, as stated above, lightly rub it to a very fine powder in a dry mortar and there triturate with a little peppermint water to a uniform creamy paste, gradually adding more of the water until solution is effected.

Benzoic acid is soluble in from 281 (U. S. P) to 390 (B. P. C.) parts of water, so that if the ammonium benzoate contains any free acid, the difficulty of attempting to make a solution in the quantity of solvent like that given above, becomes apparent.

### Manufacture of Oxygen

(J. C. P.)—"I would like to find out how to manufacture oxygen in the gaseous state in quantities of 10 to 20 gallons, using potassium chlorate and manganese dioxide."

The method most used on a small scale at the present time, perhaps, consists in heating a mixture of 4 parts of potassium chlorate and 1 part of manganese dioxide. On the application of heat, the chlorate is decomposed, oxygen being evolved, as shown by the following equation:  $2\text{KClO}_3 = 2\text{KCl} + 3\text{O}_2$ , one kilo of the chlorate yielding 392 grams or 276 liters of oxygen, or 3.65 kilos of the salt being required for the production of 1 cubic meter of the gas. The action of the manganese dioxide is supposed to be catalytic, for the chlorate will yield oxygen when heated alone, evolution of the gas beginning at 370° to 380°. However, since the decomposition is exothermic (that is, heat is generated by the reaction), the evolution of the gas is liable to become very violent; hence the addition of a non-fusible oxide ( $\text{MnO}_2$ ), which causes the decomposition to begin at 240°.

The purpose of such a catalytic agent is to accelerate slowly occurring reactions; hence a steady current of gas is obtained at a much lower temperature, and without fusion of the chlorate and liability of explosion. This method is usually carried out in a copper or iron retort, with arrangements for feeding in about 1 pound of the mixture at a time, without disconnecting. In making oxygen by this method it is necessary to test the manganese dioxide to prove the absence of sulphides and impurities of an organic nature, for if these are present, they are liable to cause an explosion when the mixture is heated. The manganese dioxide which promotes the decomposition of the chlorate undergoes little or no decomposition during the heating process, while it is capable of yielding oxygen on heating; the reason for this is that the temperature of its decomposition is much higher than that of the chlorate. This method is but one of a considerable number that are commercially employed to manufacture oxygen.

"Oxone" is a trademarked name applied to sodium peroxide fused in cubes and containing a fractional percentage of a catalytic agent, the process being covered by U. S. Patents Nos. 788,256 and 884,563, the last-named expiring in 1922, and both held by the Roessler & Hasslacher Chemical Co., of this city. It is stated that 100 grams of the peroxide in this form furnishes about 13 liters of oxygen. Whether it is possible to manufacture these cubes so that they can be used to produce oxygen for burning with sulphuric ether in a gas jet for a moving picture machine, we are unable to state. We suggest you refer this part of your query to the manufacturers of "oxone," the Roessler & Hasslacher Chemical Co., 100 William st., this city.

### Sale of Carbolic Acid in New York

(M. G. F.)—The pharmacy law of New York State places the sale of carbolic acid under the provisions of Schedule B, which requires that before such poisons be sold the seller shall affix or caused to be "affixed to the bottle, box, vessel or package, a label with the name of the article and the word poison distinctly shown and with the name and place of business of the seller all printed in red ink together with the name of such poisons printed thereupon in plain, legible characters. He shall not deliver any of the poisons . . . until he has satisfied himself that the purchaser is aware of its poisonous character and that the poison is to be used for a legitimate purpose. The provisions of this paragraph do not apply to the dispensing of medicines or poisons on physicians' prescriptions."

The Sanitary Code of the Board of Health of the Department of Health of the City of New York provides (Section 67) that "no phenol, commonly known as carbolic acid, shall be sold at retail by any person in the City of New York, except upon the prescription of a physician, when in stronger solution than five per cent."

### "Huidlögolie": Allyl Sulphide

(J. C. P.)—"A lady customer asked me for the following drug: 'Huidlögolie,' also supposed to be 'allyl sulphide.' 'Huidlögolie' is a Norwegian name, and the drug is used for inhalation by consumptives."

Reference to Scandinavian dictionaries reveals that *hvidlög* is the Danish-Norwegian vernacular for "garlic," the word literally meaning "white bulb" (from *hvid*, white, and *lög*, a bulb). The corresponding term in Swedish is *hvitlök*, from *hvit*, white, and *lök*, onion. *Olje* is the Norwegian for "oil." It may therefore be assumed that "huidlögolie" is an attempt to spell the Norwegian term as it might sound to an ear familiar with English only. When it is remembered that garlic contains a volatile oil of which allyl sulphide is supposed to be a constituent, this opinion becomes conclusive. This oil is of a dark brownish-yellow color, heavier than water, and is decomposed at its boiling temperature. It may be purified by repeated distillation in a salt water bath, and is then lighter than water, of a pale yellow color, and not decomposed by boiling. The impure oil has an exceedingly pungent odor and a strong acrid taste, and, when applied to the skin, produces much irritation and sometimes even blisters. The reported analyses vary somewhat as to the content of allyl sulphide, although all agree as to sulphur in combination being a constituent of this oil. According to the United States Dispensatory, the oil may be often given with great advantage in chronic bronchitis and in the advanced stages of obstinate acute bronchitis. We have no information regarding its administration by inhalation.

You should be able to procure a copy of the Norwegian Pharmacopoeia through almost any importer of foreign books, preferably one residing in the Dominion, as then you would not have to deal with the intricacies of more than one rate of import duty, thereby lessening the net cost of the book when delivered to you. A handy little pamphlet, originally published by the *Pharmaceutical Review*, of Milwaukee, now the *Midland Druggist and Pharmaceutical Review*, of Columbus, Ohio, that may be of help on drug terms, is "Popular Scandinavian Names."

**Black Dye for the Hair**

A. P. C.—We can not give the formula of the proprietary preparation, nor do we quite understand your request for a formula for a "black colorless one bottle hair dye." However, the following are representative formulas for the "one-bottle type" as to dye the hair black (Standard Formulary):

Silver nitrate .....	2 drams
Ammonia water .....	1 fl. ounce
Lard oil .....	4 fl. drams
Distilled water, to make.....	8 fl. ounces

Shake the oil by shaking it with the ammonia water; dissolve the silver nitrate in the water, and add this to the oil solution. Let the mixture stand for some time with frequent agitation.

This liquid is to be applied to the hair by means of a tooth brush, being careful to apply it to all the hair and up to the roots; then wash up or shake the hair and expose it to the sun. The brush cuts the color. Age seems to improve the coloring property of this preparation.

Iron sulphate .....	2 drams
Glycerin .....	1 fl. ounce
Cologne water .....	1 fl. ounce
Rose water .....	14 fl. ounces

Mix. This is to be applied to the hair once or twice daily. It gradually darkens the hair.

From another source, we reproduce the following:

Pyrogallic acid .....	35 parts
Citric acid .....	0.3 part
Boroglycerine .....	11.0 parts
Water .....	100.0 parts

Make a solution. If the resulting solution does not impart the desired intensity of color, the amount of pyrogallic acid may be increased. The wash is applied evenings, followed in the morning by a weak ammoniacal wash.

**Nail Bleach and Cosmetic Rouge**

(M. C. C. Co.—Here are several formulas of the character you outline:

White castile soap .....	1 part
Hot water .....	16 parts
Solution of zinc chloride, 10% .....	q. s.

Dissolve the soap in the water, and to the solution add the zinc chloride solution until no further precipitation occurs. Let stand over night, pour off the supernatant fluid, wash the precipitate well with water, and dry at the ordinary temperature. Carmine may be added if necessary.

Powdered rottenstone .....	1 ounce
Heavy magnesium carbonate .....	4 ounces
Sodium perborate .....	2 ounces
Powdered silica .....	1 pound

Mix and tint if desired.

As a simple liquid "bleach" there is perhaps nothing better than a solution of tartaric acid (30 grains) in rose water (1 fl. ounce).

A "nail polishing stick" is made as follows, although the preparation may be worked up in stick form if desired: Putty powder, 8 ounces; carmine, 20 grains; perfume, sufficient; mucilage of tragacanth, sufficient. The powders and perfume are well mixed, then massed with the mucilage, and piped on a pill machine.

**Solid Rouge (Rouge en Pate)**

Carmine .....	30 grams
Talc .....	600 grams
Gum arabic .....	50 grams

Powder the ingredients as finely as possible, intimately mix them by trituration in a mortar, and then form into a paste by the careful addition of water. Pack in very shallow porcelain pots, about 1½ inches in diameter. A darker rouge for persons with brunette complexions is obtained by increasing the proportion of carmine. Many other similar formulas for nail and face cosmetics may be found in the Era Formulary.

**Shaving Cream**

(G. W. D.)—We cannot give a formula for the proprietary article. However, here are two formulas that have been recommended for producing satisfactory preparations of this character:

Curd soap .....	8 ounces
Almond oil .....	2 ounces
Glycerin .....	1 ounce
Spermaceti .....	½ ounce
Potassium carbonate .....	¼ ounce
Water .....	16 ounces

Cut the curd soap into shreds and dissolve it by the aid of a waterbath in 14 ounces of water. Dissolve the spermaceti in the almond oil, and while warm mix with it the glycerin, potassium carbonate and remainder of the water; transfer to a warm mortar, gradually and steadily incorporate the warm soap solution and continue to stir until a smooth paste is formed. With this incorporate a suitable perfume.

An English formula of the type designated under the title of "asptic shaving paste" (British Pharm. Formulary) is the following:

Hard paraffin, m. p. 55° .....	5½ ounces
Prepared suet .....	½ ounce
Soft soap .....	½ ounce
Tragacanth, in powder .....	½ ounce
Glycerin .....	½ ounce
Oil of lavender .....	½ ounce
Boiling distilled water .....	17 ounces

Place the hard paraffin and suet in a vessel surrounded by hot water, add the soap and boiling water, and vigorously beat the mixture until a smooth white emulsion is obtained. Remove the surrounding hot water, and gradually add the tragacanth, continuing the beating and stirring until the temperature has fallen below 50° C. When nearly cold, add the glycerin and oil of lavender. This product should have the consistence of a soft paste. It is said to obviate the use of a shaving brush and soap.

**Smelling Salts**

(Wm. L. G.)—Try one of the following:

Ammonium carbonate .....	2 pounds
Stronger water of ammonia .....	1 pound
Oil of bergamot .....	1 dram
Oil of lavender .....	2 drams
Oil of myristica .....	15 minims
Oil of cloves .....	15 minims
Oil of cinnamon .....	1 dram

Break the ammonium carbonate into small pieces in a large Wedgwood mortar, then pour over the salt the stronger water of ammonia with which the perfumes have been previously mixed. Cover the mortar and allow the mixture to stand for a few days to effect the conversion of the ammonium carbonate into monocarbonate. Reduce the whole to a coarse powder and keep closely stoppered.

Ammonium carbonate, crushed to a coarse powder, 6 ounces; sal ammoniac, granulated, 1 ounce; caustic potash, crushed fine, 2 ounces; orris root in coarse powder, 4 ounces; lemon peel, rosemary leaves, lavender leaves, all in coarse powder, of each 1 ounce; cloves, cinnamon, calamus, in coarse powder, of each ½ ounce; oil of bergamot, ½ ounce; oil of lemon, ¼ ounce; extract of musk or civet, ½ ounce; stronger ammonia water, ½ ounce. Mix them well together. Fenner recommends this formula "if something fine is desired without regard to cost."

The Era Formulary states that the base of smelling salts is ammonium carbonate, from which the ammonia slowly escapes. The carbonate is generally mixed with some aromatic powder or liquid, in which the lavender perfume is mostly predominating. A better base than ammonium carbonate is a mixture of potassium carbonate and ammonium chloride, from which the volatile ammonia is slowly generated. Care should be taken to have a container with a good stopper, for the secret of inexhaustible salts lies more in the stopper than in the salt.

**Cleaning and Polish Rags**

Immerse flannel rags in a solution of 20 parts of dextrin and 30 parts of oxalic acid in 20 parts of logwood decoction; wring out the rags gently, and sift over them a mixture of finely powdered tripoli and pumice stone. Pile the moist rags one upon another, placing a layer of the powder between each two. Then press, separate and dry.

## Some Phases of Commercial Pharmacy

*A symposium of views, which collectively pertain to the commercial aspects of pharmacy, were presented in the form of short papers read by their various authors at the recent meeting of the Wisconsin Pharmaceutical Association. As all of the subjects discussed are of interest to pharmacists generally, the more important papers are here presented in somewhat condensed form.*

### THE TELEPHONE AS A BUSINESS GETTER

By John J. Possehl, Milwaukee

**I**N the modern up-to-the-minute drug store, with its vast variety of sundries and sidelines, accommodation occupies a prominent place in the mind of the druggist. One of his best accommodations to the public is his telephone.

The telephone is a practical proposition. It is compact; occupies very little room; adds to the appearance of the store; is handy for use by the store; and, above all else, it brings the people to your store, brings them in touch with your clerks, and by tactful, courteous treatment, the customer is favorably impressed and may not purchase at that time, but he is sure to come again. It is only necessary that you be as pleased to have a person use your telephone as you are to make a sale, for you then have a new friend and future customer. Observation is one of the most human characteristics and it is but natural for the person using the telephone to look around as he does so. His eye notices something attractive on the counter. He reads the ad as he waits and incidentally purchases a cigar or a drink at the fountain, and, as a result of his observations, he will either buy some article now or a little later, or tell a friend that he noticed certain things at your place. This will result in continued sales.

There is one other part of the business which the telephone brings that otherwise would be lost. This is the telephone prescription. Quite often the physician becomes busy and, having little or no time in which to write the recipe, calls up the drug store and, because you have a telephone and your neighbor has not, you benefit thereby.

In many cities the telephone companies, originally through the N. A. R. D., have come to an agreement with the druggists whereby they share each other's profits. The telephone company pays the druggist a commission and, naturally, the druggist tries to obtain patrons for the telephone company, for in so doing he adds to his own profits through his drug department as well as by means of the telephone.

In conclusion, it is a means of co-operation. Quite often people come into the store and, upon finding that your price is a little higher than they expected, will go to another place, trying to obtain the desired article at a cut price. If the druggists will stand together, as they should, the price can easily be obtained. Use your telephone!

### DRUG STORE ADVERTISING

By E. B. Heimstreet, Palmyra

The location has a good deal to do with advertising. A system that works well in one location, will fall flat in another place, but here in Wisconsin where so many are in small towns, the same advertising will probably be successful.

First of all, I would use the personal letter. It is a little expensive, but it does pay. Read your papers and note new arrivals; if John Smith has just come to town, write to him, tell him you are glad to greet him as a neighbor and if he should want anything in the drug or toilet line, to come in and see you; it will bring him every time.

If you read of a new baby at Smith's, drop them a letter of congratulation and tell them about that nice toilet powder that will be so nice for the baby; half an hour each day will be sufficient to do it all.

Then have a mailing list and revise it every three months. You can get up an imitation typewritten letter for \$3.50 a thousand, and once in a while get out such a letter and send it to every person you can within ten miles—the idea of being personally addressed appeals to every one. I have had more than one tell me, "I came to trade with you because you send me such nice letters." Calendars are profitable in their way, and if you are in a small place, skip the fancy ones and get

the large ones with weather forecasts, and you will have an agent in every house where you put one.

If you are a little more ambitious, get up a little eight or ten-page book, use one page to tell of your store, and the rest of the book for receipts for liniments, ointments, etc., that have been given to you by people well known in your locality. In giving the recipes, give the names of the ingredients only, not the quantities, then they will come to you to have the formulas put up.

A little advertisement that has always paid me: purchase a half gross of small, cheap, dressed dolls, keep them handy, and when a customer with a child makes a purchase, hand the little one a doll. You need not say a word, but that little one will grab the doll and remember you for years.

Advertising for church fairs, etc.: Don't make a cash donation to a fair, but send an assortment of your own goods and give the proceeds. In this way you can make a larger donation and at the same time get your goods advertised. When you open your soda fountain in the spring, do not do it yourself, but go to some society and give them half the proceeds for that day. You will be surprised to see how little this will cost as an advertisement.

Loan your mailing list to good manufacturers only and have them put your imprint on the matter sent out. Of course, you will carry an ad. in your home paper, as it is as essential as light in your store. Keep your telephone number before the people. If the above hints are followed up by good window advertising, your store will be well known.

### ADVERTISING TO IMPROVE EARNING CAPACITY

By H. F. Zimmerman, Milwaukee

Since it is known that a pharmacy or drug store comprises a lot of articles which are advertised nationally, these articles are in demand generally, but the demand can be increased through the aid of the pharmacist by conspicuous display of such articles in his store. This applies not only to patent medicines and other sidelines, but to pharmaceuticals which in turn can be advertised to the immediate physicians through the aid of literature usually furnished by the manufacturer or by the pharmacist himself in getting up each week or month appropriate literature.

Advertising covers such a large territory that each individual should know which brings the best results. There are many methods of inducing the public to trade at the individual drug store and these comprise booklets, circulars, circular letters, postals and even bill board or moving picture slide advertising. To a certain extent, all are good business getters and should be made use of by the up-to-the-minute pharmacist.

As everything has a backbone, so has pharmacy. Reputation is the success of advertising and upon this depends the success of any individual who indulges in advertising. Reputation and success must therefore be backed by honor and upon these three depend the thriftiness of a pharmacist in any locality. To gain this reputation, the progressive pharmacist must, first, be careful in the kind of help he employs; second, his store must be clean; third, his treatment of his patrons must be, above all, courteous, and fourth, he must make use of the windows in his drug store.

The foregoing are the chief value methods of inducement as business getters for a pharmacist, and if intelligently worked, they will result in personal advertising which, in my estimation, is worth twenty to one of that of bought and paid for booklet, circular or any other advertising.

### TURN OVER YOUR STOCK

By L. G. J. Mack, Milwaukee

There is more money in turning over your stock five times a year at a net profit of 25 per cent than in turning over the same stock twice a year at net profit of 50 per cent.

It has been figured out that if the cost of doing business is 20 per cent to the druggist, every sale on which he makes a gross profit of less than 20 per cent means an actual loss to him. This theory is all right and is practiced to a certain extent, but the matter of turning over the stock must be considered at the same time.

For instance, an article costs 2½ cents a package, and selling at 5 cents, shows a profit of 50 per cent. Selling 3 packages for 10 cents, costing 7½ cents, pays a gross profit of only 25

per cent. But on the other hand the profit in money on each transaction is 2½ cents.

If your cost of doing business is now 25 per cent. on your gross sales and you increase the volume of your business to double or treble the amount with the same cost, the same clerk hire, the same interest on investment, the same rent, and the same store costs throughout, of course you naturally reduce the cost of doing business as far as percentage on the gross results are concerned, while you increase your profit even though the percentage on each sale is lessened.

Another illustration: Buy a gross of \$1 articles at \$96 to save 5 per cent in gross quantity; take the same articles and buy them in one dozen quantity, turning the gross over in a year and only getting 1 per cent discount, yet you turn your stock over twelve times a year, saving 12 per cent instead of 5 per cent, and practically no money invested, and at the close of the year you have made 7 per cent by turning over your stock.

## LEGAL DECISIONS

### Written Contract for Soda Fountain—Variance by Oral Agreement

In an action for the balance due on a soda fountain sold by the plaintiff to the defendant, the latter offered to prove by the plaintiff's agent and by the defendant that coolers were to be installed in the cooler boxes, which coolers were to be of a given capacity made known to the plaintiff's manager and draftsman in Philadelphia at the time the contract was drawn. The defendant also offered testimony to show that there was to be installed a soda water apparatus capable of furnishing cool soda. The trial court refused both of these offers. It found that the defendant purchased the fountain, that it was installed in his place of business, that \$530 was paid on account, that the plaintiffs made an allowance of \$41.50, leaving a balance of \$563.50, that the orders signed by the defendant, together with the plan and letter of acceptance, constituted a complete contract which bound the defendant, and that no oral testimony could be admitted as to the capacity and installation of coolers. This was affirmed on appeal.

The contract between the parties was in writing; that is, the defendant signed an order and approved the plan, and the order was accepted by the plaintiff. The order was directed to the plaintiff, and requested the delivery of the "following described soda water apparatus and appurtenances," and then followed a description of the structure, with a note that, if it was for counter service, then there were to be additional details. These details appeared in the order under the title "counter service details," in which the following is quoted: "One cooler box no coolers with milk pump and ½ gal. can in centre surrounded by four crushed fruit jars as per plan." It was not denied that the defendant furnished all that he was required to do according to the writing, but the defendant argued that the contract was incomplete, and that he was entitled to offer oral testimony to show what was required to complete it. It was held that the contract, as written, was complete. The defendant might have expected more, and he might during the negotiations have contracted for more, but, when the contract was put in writing, that expressed the result of the negotiations and oral testimony was not admissible to vary its terms. (*Green v. Watts*, New Jersey Supreme Court, 90 Atl. 667.)

### Saccharin in Drinks—Discrimination

In a prosecution under the Missouri act of April 7, 1911, prohibiting the adulteration of non-alcoholic drinks by the use of saccharin and other substances therein named, it appeared that the defendant sold a bottle of soda water containing one pint, which contained .0229 of one gram of saccharin. A copy of the report of the Remsen Referee Board to the Secretary of Agriculture of March 6, 1911, was introduced in evidence. This report contained the following main general conclusions reached by the referee board:

"(1) Saccharin in small quantities (.3 gram per day or less) added to the food is without deleterious or poisonous action, and is not injurious to the health of normal adults, so far as is ascertainable by available methods of study.

"(2) Saccharin in large quantities (over .3 gram per day, and especially above 1 gram daily) added to the food, if taken

for considerable periods of time, especially after months, is liable to induce disturbance of digestion."

According to the evidence, one would need to drink about 13 pints of the defendant's soda water in 24 hours before he would get to the danger point in the use of saccharin. If such was the case, said the court, the amount of saccharin in the defendant's soda water was not deleterious to health, for no one could be so addicted to its use as to consume that much. But, independent of the question as to whether such use of saccharin was deleterious, it was held that the statute is an arbitrary discrimination against the makers of soda water. It may be taken for granted that saccharin is or may be used in foods or drinks which are non-alcoholic. Whether it is deleterious to health or not, it is certainly an arbitrary discrimination to prohibit the use of saccharin in non-alcoholic drinks and not prohibit its use in other foods and drinks. If it is deleterious to health in one case, it would be so in the other. If it was the purpose of the Legislature to prevent the use of saccharin in soda water, not because saccharin is deleterious, but because it sweetens the soda water, then it is an arbitrary discrimination in favor of those who sweeten soda water with sugar. If the Legislature regarded saccharin as deleterious to health, it should have excluded it from all foods and drinks, and not merely from non-alcoholic drinks. If the purpose was merely to prevent the sweetening of non-alcoholic drinks it should have prohibited the use of any kind of sweetening in such drinks. (*State v. Empire Bottling Co.*, Missouri Supreme Court, 168 S. W. 1176.)

### Food and Drugs Act—"Added" Defined—Misbranding

In a proceeding to condemn a quantity of a syrup called coca cola on the ground that it was adulterated and misbranded, the Circuit Court of Appeals made the following rulings. Forfeiture was claimed under the Federal Food and Drugs Act. It was held that the word "added" in section 7 of that act, declaring that an article shall be deemed to be adulterated if it contain any added poisonous or other added deleterious ingredient which may render the article injurious to health, implies the existence of a standard, and an element necessarily used to create a standard is not added. If caffeine was the addition to coca cola, as the complainant claimed, what was the base? For 15 years before the passage of the act, coca cola had been an existing article of food. It was a compound; it had no distinctive base (unless water, by reason of its larger proportion); it was made up of water, sugar, caffeine, phosphoric acid, glycerin, lime juice, coloring matter, flavoring matter and "merchandise No. 5." The test that whether the deleterious ingredient is "added" is whether this ingredient is in its natural or in an artificial form may often be a useful aid in applying and interpreting the statute, but it cannot be applied where artificially compounded foods are under consideration. In construing clause 5 of section 7, it is necessary to consider section 8 of the act, providing that an article of food which does not contain any added poisonous or deleterious ingredient shall not be deemed to be adulterated or misbranded, in specified cases, and when so construed, the act requires a standard before there can be any added ingredient or adulteration.

The act, it is held, makes no distinction between compounds known at its date and those thereafter devised, but it does not absolutely forbid the use in any compound of any element that a jury may call deleterious. Congress, having selected and regulated the use of those things known to be particularly dangerous, has not wholly forbidden other things from which no serious danger need be anticipated. The word "added" may be construed as being used with reference to a possibly deleterious food ingredient beyond the quantity in which the ingredient is normally found in usual or customary articles of food, and no such ingredient should be considered as added, provided it is present only in the quantity in which it existed in common articles of foods generally known. So construed, caffeine is not an added deleterious ingredient of coca cola.

The compound known as coca cola was held not to be misbranded, the name being a distinctive name of the product of the manufacturer thereof and of nothing else. "Coca" is indicative of one article, and "cola" of another distinct article, and the combination was not descriptive of any substance or combination known until adopted by the manufacturer, and is still unknown as an appellation for any other substance on the market. (*United States v. 40 Barrels and 20 Kegs of Coca Cola*, C. C. A., 215 Fed. 535.)

## WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

### Greetings

**T**HE month of Christmas is with us again. The year has brought much for which to be thankful and much to regret. Our own country has been wondrously blessed and it is our earnest hope that peace and prosperity may continue within our borders.

During the months which have passed, much correspondence has come to my desk which has cheered and encouraged me in my work. Many have endeared themselves greatly through their letters and the helpful spirit of co-operation extended. That is just what this Department is for—that we may all come nearer together and be helpful to each other. In the year to come let us not forget what we may give as well as what we may gain, for the spirit of this Department is the Christmas spirit, throughout the entire course of the months.

I hope that peace and material blessings may be granted in full measure, pressed down, shaken together, and running over, for each and every one of the great ERA family. I hope that joy, the love of work, and the love of mankind, may fill the hearts of all, so that the New Year upon which we are soon to enter will be a golden one above all others yet lived.

A Merry Christmas—a very, very Merry Christmas, and the best and brightest of New Years.

I am, as ever,

Cordially and fraternally,  
EMMA GARY WALLACE.

### Machine, Pharmacist and Bank Book

**T**HE pharmacist who is not interested in increasing his or her bank account is a *rara avis*. This is an entirely laudable, even a *necessary* ambition, for prosperity is absolutely essential for self-preservation and efficient, up-to-the-minute service.

Many a fine pharmacist buys with discriminating care, selecting drugs of purest quality and of highest standard strength and test; he compounds his medicines with the consummate skill it has taken years and much experience to acquire; consigns them to high grade bottles, pasteboard boxes, *porcelin* jars, or tin containers—the best on the market; *and then spoils the appearance of the whole costly process by an indifferently written or blurred label.*

We sometimes forget that a chain is no stronger than its weakest link. A certain miner proved this to his undoing when he allowed himself to be lowered into the shaft of a mine by a chain which was perfectly sound, save for one rather weak loop of metal. His fellows were doubtful but he said he would take the risk. When his weight parted the chain taut, the untrustworthy link had exactly as much strain to bear as the good links. It parted and he was dashed to his death. No matter how sound the buying, the laboratory processes, the service, or the credit system, a poor labeling link may be responsible for serious disaster.

The customer sees the label. He scarcely gives the rest of the system a thought. Why should he? He knows nothing of it and perhaps cares less. His idea of the prescription work, in fact, is shaped by the neatness, legibility, and professional appearance of the label directions. This is perfectly natural and it follows that public opinion (and consequently patronage) will be influenced favorably or unfavorably, by the style of the prescriptions and prescription copies sent out, the ap-

pearance of letters, bills, and statements. In this last step of the work done, doctors, nurses, and customers judge the nature of the work back of it as progressive, thorough, efficient, or old-fashioned, careless, and weak.

For this, if nothing more, the pharmacist of to-day needs a typewriter especially adapted to the exigencies of the business. Anyone who is of average intelligence, can learn to run such a machine. It is merely a mechanical process, not a fraction as complicated as learning to read or write. It takes years to do that. A typewriter can be operated as soon as its workings have been explained. A little experience will develop satisfactory speed.

To meet the demand for a machine with a keyboard especially suited to the doctor and druggist, a machine has recently been placed on the market, at exactly half the price of an ordinary standard product.

In the language of the small boy, this is a "bird," for its operation is as light as a feather, the work is graceful, and as clear-cut as well-made type, black ink, and white paper can produce. It is delightfully handy to be able to touch a key and write the various symbols, Gt., M., fl., 5, 5, 9, etc. This is adequate to take care of all the store work or can be auxiliary to a regular office machine as the needs of the business demand.

Certain it is that neatly typewritten labels for prescriptions and packages, special timely letters to physicians and nurses (with the personal element such a letter possesses), calling attention to new products and branches of service, will bear fruit in the way of greatly increased business.

The saving of time is also an element not to be overlooked, for a better system is possible. Letters will be answered more promptly and carbons may be kept of replies, saving all chances of misunderstandings. A good scheme is to use the back of the letter from your correspondent for the carbon of your reply. This saves filing extra paper. Money or an unpleasant situation is often saved by *knowing* and being able to *prove* exactly what a bargain or agreement was.

In many stores, Post Office Sub-Stations are maintained which often tax one's time heavily in proportion to the income received. Sometimes a book-keeper has to be kept purposely to take care of this work. Another machine is available, of the combined typewriter-adding-machine variety, upon which the work may be done swiftly and accurately, several columns of footings being totaled or subtractions made automatically, from the working of the regular typewriter keyboard.

If any wholesale business is done, this marvelous machine is almost indispensable, as the cost is soon saved in time gained.

We often hear the cry, "It is not the material which costs so much now-a-days. It is the labor!" And this is true. Machinery is cheaper than human energy, takes no time off, and never goes on troublesome strikes.

There are things we need in our business, concerning which the question may well be asked, "Can we afford to be without them?" One man was interested in the last machine described, but felt he could not afford to purchase. The demonstrator asked for a column of figures to add taken from his ledger. As chance would have it, that first demonstration detected an error of two hundred dollars and that too, against him. It didn't take him long to reverse his original opinion.

A good machine, if in line with our needs, will save money on one end and increase the profits on the other end—a pretty sure way of accumulating a bank account, when all is said and done.

### Louisville Ladies Hear Interesting Talk on Blind

W. O. N. A. R. D. Chapter 11, Louisville, Ky., held its regular monthly meeting at the Public Library on Nov. 5th. A feature of the occasion was an address by Miss Susan B. Merwin, superintendent of the Kentucky Institute for the Education of the Blind, who dwelt at length on the advantages offered blind children. The members accepted the speaker's invitation to visit the institution.

MRS. CHARLES BRUNSTROM  
*Member Board Directors*

MRS. H. E. ROWE  
*Pres. Rock Island Chapter*

MRS. JOHN T. ROE  
*Member Board Directors*

## W. O. N. A. R. D. Organization Ideals

“OUR efforts this winter will be directed to the entertainment of our members and their families, at evening parties, thereby endeavoring to let our husbands forge their troubles, temporarily at least, and bring our families closer together socially.

“At our regular meetings a part of the afternoon will be spent in making articles to be donated to some charitable institution.

“Our earnest desire is to get the wife of every proprietor and drug clerk in Rock Island County to become a member of our Chapter and the National Organization.” (Signed) MRS. H. E. ROWE, Pres. Rock Island, Ill., Chap. No. 15.

“A reform that should be pushed vigorously, by our Local and National Associations, is a campaign for shorter hours for druggists and clerks, enabling them to spend their Sundays and winter evenings at home with their families.” (Signed) MRS. CHARLES BRUNSTROM, Member Board of Directors.

“Vacation days having passed. Mobile Chapter, in its quiet way, has opened its doors, but with a newness of purpose—a sort of revival of all that is best in mind and heart. Having the armor of faith, we hope to accomplish the first needs and purpose of the Organization:

“To bring together by the sweetness of congeniality, and helpfulness to one another, this band of men, working out the destiny of the man-loving and God-fearing pharmacist.

“Having learned for ourselves, we hope to teach the men that cake is bitter when a brother's home lacks bread—not the bread to satisfy material hunger, but the mental bread that strengthens the mind, the bread of sunshine and love; the bread of true fraternity.

“To-day is a small space, but as our days add into each month and year and life-time, so must their thoughts and sweet memories of Chapter 9 ever grow and accumulate into mighty forces for peace and brotherly love.” (Signed) MRS.

JOHN T. ROE, Member Board of Directors.

MRS. F. E. MCBRIDE  
*President W. O. N. A. R. D.*

“I think THE thing that would bring the most happiness to men and women and all concerned would be shorter hours and Sunday closing—that the druggists could be on a more equal basis with other business men and have more time for their families. This is what I hope the future has in store for the druggists.” (Signed) MRS. F. E. MCBRIDE, Pres. W. O. N. A. R. D.

### AROUND THE CIRCUIT

Miss Mabel C. Starr is the pharmacist in charge at the Methodist Episcopal Hospital, South Broad street, corner of Wolf, Philadelphia, Pa.

Mrs. F. E. McBride will surely be a very busy woman this year. Besides serving as president of the W. O. N. A. R. D., she recently acted as chairman of the local convention at the Youngstown, Ohio, State Federation meeting. This entailed a great deal of work. She is also chairman of Civics in the Ohio State Federation and chairman of Public Health and Sanitation, which is one of the most important standing committees of that influential body. She is president of the Youngstown Research Club, which she organized in 1894, and is one of the charter members of the Youngstown Women's Up-to-Date Club. Mrs. McBride organized the Youngstown W. O. N. A. R. D., of which she is president. These, with numerous other interests, keep her hands and her time fully occupied.

# NEWS SECTION

## MOSTLY PERSONAL

—MRS. FLORENCE S. JINTA, formerly of Baltimore, and later of Pekin, China, has returned to Washington, D. C., where she has enrolled as a student in the department of pharmacy of George Washington University. Mrs. Jinta has had her life filled with adventure and tragedy. Her husband, Takashi Jinta, a Japanese, was in the employ of the United States as an immigration inspector, and was murdered by Chinese tongs last year. With her two little sons, Mrs. Jinta then returned to China, to make her home with Capt. Tang, of the Chinese navy, her husband's foster father. Her children remain in China, and Mrs. Jinta intends to make it her permanent home. Her efforts here will be devoted to preparing herself for work in that country.

—MORSE S. ASCHER, of 329 John R. street, Detroit, Mich., thinks that all thieves are not as bad as they are painted. A young man entered his store one night recently, asked for a cigar, and instead of presenting some coin, presented a shiny revolver, and asked to be allowed to inspect the cash register. Mr. Ascher informed the visitor that he was only the clerk in the store, and was accordingly not made to deliver all his personal wealth in addition. Although the yield of the cash register was meager, only \$3.00, the robber thanked the druggist and left the store. Four years ago Mr. Ascher was made to stand and deliver four times within the twelvemonth, but this last experience is the first time that he has been thanked for his generosity.

—J. H. WEBSTER, proprietor of the drug store at 933 Lafayette avenue, Detroit, Mich., goes about his store "heeled," since he has been alarmed by the many recent holdups in his neighborhood, but his young clerk, Julius W. Smith, was unprotected when a bandit marched into the store, at 9 o'clock of a sunny morning, and persuaded Smith to take him to the cash register. The clerk tactfully introduced his visitor to the little till back of the soda counter, from which only \$28 were extracted. The robber evidently did not have his mind on his work, as he walked twice past the main cash register of the store and did not notice it, although he could have made a rich haul there. The holdup man finally escaped.

—WILLIAM F. SAWYER, of Boston, formerly secretary of the Massachusetts Board of Registration in Pharmacy, was one of the seven members who dined at the Revere house, Boston, recently, the remaining septet of 100 young men who half a century ago composed a literary and debating society in Falmouth, now the town of Hudson, Mass. Although the club has long since passed out of existence, the survivors, or as many of them as are able, gather once a year at the Revere house in Boston, and keep alive the memory of the early days. Dr. Sawyer acts as secretary of the "Once a Years," as it is now called, merely to notify his associates of the date of the dinner.

—W. W. CHERRY, a druggist at Orleans and Aisquith streets, Baltimore, had a trying experience one night recently, when, after going behind the prescription counter to measure out a quantity of witch hazel for a negro, he turned to see the pretended customer rifling the cash drawer. Dr. Cherry demanded of the negro to know what he was doing, and by way of answer the colored man thrust a pistol in his face and told him to throw up his hands. Dr. Cherry promptly dropped behind a counter, whereupon the robber went out. An examination of the cash drawer showed that several dollars were missing.

—MISS MADELINE GILMORE, of Cincinnati, Ohio, has the distinction of being the youngest woman pharmacist in the city, and one of the youngest in the State. She was graduated from the Cincinnati College of Pharmacy with honors in the class of 1912, only two years ago, as the youngest member of the class, and in October passed the State examination for registered pharmacists with flying colors. She took the assistant's examination some time before, qualifying easily. Since her entrance into professional work Miss Gilmore has been connected with the George E. Smith Pharmacy at Clark and Baymiller streets, Cincinnati.

—PRESIDENT A. L. KILLMER, of the Iowa State Ph.A., was recently quoted in the local press of his section of the State, to the effect that the N.A.R.D. was making no effort to raise and keep prices at a certain general level. The secretary of the State Board of Health has been agitating for an investigation by the State Attorney, alleging that the druggists in using the N.A.R.D. prescription price mark are violating the Sherman anti-trust law. The case of a State employe will be used as the basis of the investigation. It is said that the druggist looked at the "mark" and charged \$1.50.

—EDWARD F. KREKLER, drug clerk in Rapp's drug store at Longworth and Plum streets, Cincinnati, has filed suit for \$5,000 damages against a police lieutenant of that city, on the charge of false arrest. He alleges that on July 4 last, at about 1 a. m., when he was in charge of the store, the officer placed him under arrest and had him taken to the station in a patrol wagon, and that he was held until next morning without any charge being placed against him, and then released.

—LEONARD D. WORDEN, who for the past ten years has represented McKesson & Robbins and Schieffelin & Co. in the state of New York, has now gone into the real estate business in Watertown, N. Y., where he is making a specialty of the sale and purchase of drug stores. Mr. Worden is wellknown to the druggists of New York State, and especially qualified to assist them in the sale and purchase of stores. He has a half interest in two drug stores at Geneva, N. Y.

—MARSHALL M. BRADBURN, one of the best known druggists of the Crescent City, has been nominated to be U. S. examiner of drugs at New Orleans, and was sworn in on Nov. 4. Mr. Bradburn was a member of the Louisiana State Board of Pharmacy, having been appointed in 1908, and was the Board's examiner in chemistry, and chairman of the finance committee. He is also a member of the State Pharmaceutical Association.

—EUGENE POPE PURCELL, the well known druggist of Waynesville, N. C., was married Oct. 14 to Mrs. Julia Hopple South, of Clearwater, Fla. The wedding was a surprise to all their friends. Mr. Purcell was in the drug business for 16 years in Charlotte and Reidsville before coming to Waynesville, and is known to many in the trade, especially in central Carolina. He is connected with the Chautauqua Drug Co., and with the Haywood Orchards Co.

—LEANDER PARKHURST, president of the Ropes Drug Co., Lynn, Mass., has resigned his active business interests, and intends to demonstrate his belief in the "back to the soil" theory. For a number of years Mr. Parkhurst has been interested in the Blossom Finca Co., of Porto Rico, growers of the Blossom brand of fruits, and he will devote most of his time in future to the development of his large plantations in the Bayamon district of that island.

—T. N. EDWARDS, a well known pharmacist of Charlotte, N. C., has purchased the Charlotte Drug Co., with which he was formerly identified. Mr. Edwards has been in the drug

business for the past 16 years, and is widely known to the trade. He was formerly employed by W. M. Wilson, the veteran druggist of Charlotte, and later held a position with J. W. Bullock.

MAX TRIZLAF, a well-known druggist of Watertown, Wis., was married recently to Miss Ella Schoenleben, of Racine, Wis. The ceremony was performed by the Rev. J. F. Boerger of the St. John's Lutheran church and was followed by a reception at the home of the bride's parents, Mr. and Mrs. John Schoenleben. The newly-married couple took a wedding trip to New York and other eastern points.

JAMES B. MACK, for 34 years a representative of Meyer Bros. Drug Co., St. Louis, Mo., has left the road, and will take a needed rest. Mr. Mack began his business career at the age of 14, when he entered the drug firm of Smith & Ferguson, Springfield, Mo. After staying with this house for 12 years, he changed to Meyer Brothers, and has covered southern Missouri and northern Arkansas continuously since then.

ANTHONY SCHAICH, owner of Schaich's Drug Store, Reading, Pa., gave a complimentary dinner Oct. 29 to the officials and employes of the Neversink Mountain Railway Co., a terminus of which is located at the same point as Mr. Schaich's pharmacy. He congratulated all present on the courtesy and attention manifested by the railway employes toward passengers, both on the cars and in his place of business.

ELWELL HOYT, proprietor of the Crown Drug Co., Tacoma, Wash., was afforded novel entertainment on the night of Oct. 30 by the strange behavior of a man who entered the store, invited the druggist back into his own office, and held forth in various ways, pending the arrival of the police. The visitor was found to be Hugh McGovern, a patient who had escaped from the West Washington Hospital for the Insane.

CARLO VESPASIANO, a druggist at 114 Common street, Lawrence, Mass., was attacked on Oct. 14 by an unknown man, who entered as a customer, and without provocation or warning slashed Vespasiano's cheek from the mouth to the ear. The assailant had time to escape, and has not been captured. Fifteen stitches were required to close the wound.

R. W. HARTWIG, 800 Milwaukee ave., Chicago, Ill., was one of a party which recently spent a month in America's Switzerland, near Alberta, B. C. Leaving Chicago Sept. 5, the tourists, with guides, arrived at Robson's Pass Sept. 9, and returned to Chicago on Sept. 28. The party spent most of the time "roughing it," and game was plentiful.

HARRY SPRINGER, of Muscatine, Ia., delivered an address on "Price Cutting and its Demoralizing Effects," at the first annual conference of the University of Iowa Pharmacy College Alumni, held at Iowa City on Oct. 23. Mr. Springer is a graduate of the University, and has showed his loyalty to his alma mater by naming his store the S. U. I. Pharmacy.

FRANK C. GOODALE, of Lowell, Mass., one of the oldest druggists in that city, has retired from business. For 30 years he has been located at the corner of Central and Jackson sts., and has seen all those men who began business with him disappear from the horizon, with the exception of A. W. Dows.

DR. GEO. LEHMAN, formerly a Portsmouth, O., pharmacist, and now on the sales force of Parke, Davis & Co., recently was the victim of a severe attack of acute indigestion which almost ended his life. The seizure came at a hotel in Lancaster. He is now recovering at his home in Columbus.

J. N. MACKENZIE, owner of the Rexall drug store in Waukegan, Ill., retired from business on Nov. 7, and will locate anew in southern California, where he goes for the benefit of his wife's health. He has not yet decided whether he will re-enter the drug business.

GEORGE G. MUTH, of Muth Bros. & Co., wholesale druggists at Baltimore, has been taking a motor trip through the Catskills and the Mohawk Valley with a party of friends. Later he went by motor from Albany to Boston and through the White Mountains.

ALGERNON S. TYLER, late partner in the A. W. Larson drug store at Marshalltown, Iowa, was married recently to Miss Amy Snyder. After a honeymoon in Washington, D. C., and other Eastern points, Mr. Tyler will seek a new location for a drug store.

ANDREW CUNNINGHAM, head of the Cunningham system of drug stores in Detroit, Mich., gave a banquet to his employes Oct. 28, in commemoration of the twenty-fifth anniversary

of his starting in the drug business at 264 Joseph Campau ave.

L. P. J. HARMS, for 19 years a druggist at Hutchinson, Minn., has sold his store to Edward Scheele, and will move with his family to St. Paul, later visiting the Pacific Coast, where he may decide to take up his residence.

CHARLES E. McFORMICK, manager of the branch pharmacy of Hynson, Westcott & Co., at North and Linden avenues, Baltimore, was married on November 7, to Miss Annie E. Utermohle. The couple spent their honeymoon on a tour south.

H. E. WICH, who succeeded his father, C. L. Wich, in the proprietorship of the pharmacy at Patterson avenue and Stricker street, Baltimore, was married recently.

MARCUS GEBRICH, for many years a druggist at Stamford, Ill., has been appointed postmaster at that place, and will shortly open a postoffice in his new building.

HUGH W. TAGGART, a druggist located on Commercial st., Waterloo, Ia., was recently operated on at St. Francis Hospital, and is reported to be recovering favorably.

JOHN URI LLOYD, of Cincinnati, was a visitor in Dallas, Texas, recently, attending the Texas Eclectic Medical Association convention and the State Fair.

GEORGE JAY, druggist, of Shenandoah, Ia., has been appointed a member of the executive committee of the Commercial Club of his city.

#### DR. WILLIAM C. ALPERS HEADS A. P. H. A.

LaWall, Ruddiman and Brown New Vice-Presidents  
--Apple, Mayo and Army Elected to Council

DR. WILLIAM C. ALPERS, of Cleveland, Ohio, was elected president of the American Pharmaceutical Association in the recent mail ballot for officers and members of the Council, according to the announcement of General Secretary W. B. Day. Others elected are as follows:

First vice president, Charles H. LaWall, Philadelphia; second vice president, E. A. Ruddiman, Nashville, Tenn.; third vice president, L. A. Brown, Lexington, Ky.; members of the Council, Caswell A. Mayo, New York, F. M. Apple, Philadelphia, and H. V. Army.

The new president, who will begin his term of office at the close of the next annual meeting of the association, is well known as a practical pharmacist, educator and author. He opened a pharmacy in Bayonne, N. J., and in 1894 was appointed a member of the New Jersey Board of Pharmacy. In 1899, he was elected president of the New Jersey Pharmaceutical Association. He then became proprietor of a retail pharmacy in the metropolis. He has served several terms as president of the German Apothecaries' Society of this city, and has been connected with the editorial staff of the *Deutsch-Amerikanische Apotheker-Zeitung* of this city. Early in the present year he was appointed professor of pharmacy and dean of the Cleveland School of Pharmacy, a department of Western Reserve University, and assumed his new duties on Feb. 1.

DR. WILLIAM C. ALPERS

#### Druggist Convicted of Selling Narcotics

Samuel Goldmer, known for years as a reputable druggist at 920 Fourth avenue, Brooklyn, was sentenced to three months in the penitentiary following his conviction for the illegal sale of narcotic drugs to habitues. Many pleas for mercy were made in behalf of the druggist, but the court was determined that an example should be set to aid in ending the illegal traffic in banned drugs. According to the evidence, one drug addict kept a record for the police of the heroin tablets which he purchased of the druggist in quantities of 200, 400, 42, etc. It was asserted in court by the District-Attorney's representative that Goldmer, despite his well-established reputable business, was stooping to the illegal sale of drugs to the boys and girls in the neighborhood.

## OBITUARIES

### JAMES N. NORTH

James N. North, president of the American Soda Fountain Company, died November 1 at his home in Brookline, Mass., after a short illness, at the age of 73 years. Mr. North was born at Wilmot, N. S., September 10, 1841, and came to Boston as a young man, and attended the Boston schools. At the age of 17 he went to New Orleans where he entered the employ of an auctioneer. He was next employed as a clerk on a line of steamboats plying between New Orleans and Shreveport. At the outbreak of the Civil War he returned to Boston and enlisted in a Massachusetts infantry regiment.

JAMES N. NORTH

After the war he studied theology at the Harvard Divinity School, and was in 1870 called as an assistant to Rev. George H. Hepworth at the Church of the Messiah, this city. Shortly thereafter, he returned to Boston and became associated with James W. Tufts in the manufacture of soda water apparatus. He secured an interest in the Tufts business in 1876, and upon the organization of the American Soda Fountain Company in 1896, he was made treasurer of that corporation. In 1902, he succeeded James W. Tufts as president.

Mr. North was active in the affairs of the Unitarian denomination. He was also eminent in Masonry, and in the Grand Army of the Republic. He was a member of Edward W. Kinsley Post, and of the Military Order of the Loyal Legion. A son, two daughters and eight grandchildren survive him. His wife died July 14, 1913. I. F. North, a brother, is treasurer and general manager of the American Soda Fountain Company.

### John Rutger Planten

John Rutger Planten died on November 18 at his home, 207 Carlton avenue, Brooklyn. He was in his 25th year. Mr. Planten was the only son of H. Rolff and Ida Gilman Planten, and was a grandson of the late John R. Planten, for over 40 years Consul General of the Netherlands at the Port of New York, and a grandson of the late Smith Durrell Gilman, who was descended from the New England family of Gilmans. The deceased was a graduate of the Polytechnic Institute, a graduate of the College of Pharmacy, City of New York, and of the School of Pharmacy, Columbia University.

At the time of his death, the young man was employed in the capacity of chemist by H. Planten & Son, Brooklyn, manufacturers of pharmaceutical specialties, and of which his father, H. Rolff Planten, is the president. He was in a position to continue his research work at the College of Pharmacy and is believed to have overworked himself. His parents and two sisters survive him.

### Milton O. Waterbury

Milton O. Waterbury, vice-president of the Waterbury Chemical Co., of Des Moines, Ia., manufacturers of pharmaceuticals, died of Bright's disease at his home in Montclair, N. J., on November 15. His death was unexpected although he had been in ill health for some time. He was born in Cedar Falls, Ia., on October 23, 1869, and was educated in various schools in that state. He was trained as a chemist and at the time of his death was vice-president of the above-named company. He was also vice-president of the Waterbury Investment Company, of Des Moines. Mr. Waterbury had charge of the Eastern business of the Waterbury Chemical Company, and had his office at 37 Pearl street. In Montclair, he was prominent socially, politically and fraternally. He was a

thirty-second degree Mason, a member of the Upper Montclair county club and was on the board of governors of that organization. He also belonged to several social organizations. His wife, two sons, two brothers and two sisters survive him.

### John L. Parker

John L. Parker, prominent druggist of Birmingham, Ala., a former president of the Alabama State Board of Pharmacy, and for years president of the Birmingham Board of Education, recently shot himself to death with a 32 calibre Colt automatic revolver. He had been suffering acutely from asthma during the past 12 months and had ignored his physician's advice that he take a rest. The suicide took place in a remote cellar of the deceased's store. Mr. Parker's financial affairs were declared by his friends to be in an excellent condition and his estate, although unappraised as yet, is expected to reach a large figure. He owned nearly 30 acres adjoining the fairgrounds, where he raised flowers, and much improved property in Birmingham and elsewhere. It was stated that he had \$151,000 life insurance in force at the time of his death. Mr. Parker had served several times as alderman and once as president of the city council. He was a former president of the Board of Trade and chairman of the executive committee of the State Fair association. He was a member of various wellknown clubs, a 32nd degree Mason, a Shriner, and a Knight Templar. His widow and two children survive.

### Charles Eberle

Charles L. Eberle, one of Philadelphia's most prominent and well-liked men, died at his home, 6006 Greene street, that city, last month, and his funeral was attended only by his widow and male friends. Women were excluded from attending the funeral, not because any prejudice was entertained in this direction, but because Mr. Eberle disliked the gossip which he thought women were prone to engage in on these occasions. He was 77 years old, and was identified with various schools and civic enterprises for more than fifty years. He graduated from the college at Lancaster, later continuing his studies at the Philadelphia College of Pharmacy. In 1859 he purchased the drug store of Abraham Rex, at Germantown avenue and Church lane, the only drug store at that time in Germantown, and which he conducted for forty years. From 1872 to 1884 he was a member of the examining board of the Philadelphia College of Pharmacy and also a trustee of that institution. He was also interested in various other enterprises.

### Major Claude H. Sayle

Major Claude H. Sayle, 50, for many years of the firm of Sayle & Sholars, druggists, Little Rock, Ark., but lately a cotton broker of Memphis, died at his residence in Little Rock. Worry over the cotton situation is said to have been instrumental in causing his death. Upon rising, Major Sayle complained of his heart. A few minutes afterward he expired. Mr. Sayle had just arrived in Little Rock from Memphis, and was planning to re-enter the drug business in the former city. He quit the drug business five years ago, and up to that time had been engaged in it for 19 years. He was wellknown in fraternal circles, as a member of the Scottish Rite Masons, the Shriners and Elks. Major Sayle was a veteran of the Spanish-American war, during which he was a major of the Second Arkansas regiment. He was a graduate of the Kentucky Military Institute and of the Department of Pharmacy, Vanderbilt University. His wife and 19-year-old son survive.

### James W. Anderson

James W. Anderson, for many years one of the leading druggists of Urbana, O., died recently at his home in that city, after a long illness, due to a complication of ailments, his condition being such that during the latter months of his life he was unable to get about except in a wheeled chair. He was 87 years of age. He was born in Virginia in 1827, moving to Urbana when he was twenty-nine years of age. He entered the drug store of Dr. J. S. Carter, now owned by George W. Cramer, becoming a partner and later, the sole owner of the business. He afterward took Mr. Cramer as a partner, and sold the entire business to him in 1896, when he retired. Mrs. Anderson survives her husband, as well as two brothers and two sisters.

## RECENT DEATHS

—FRED LAMB, who had been employed at the Riker-Jaynes drug store at 158 Tremont street, Boston, ever since it was opened four years ago, and was assistant manager, died recently from morphine poisoning. He was accustomed to remaining late on Monday nights to finish up his work, and it was on a Monday night that the watchman saw him with his head resting on his hands on the desk. He seemed to be sleeping. Early in the morning, the watchman tried to rouse him, but without avail. The alarm was given to the hospital authorities and an ambulance took him away. During the forenoon he passed away without recovering consciousness. Lamb was a native of St. John, N. B., and had been employed in various Boston drug stores for 20 years. He was unmarried. He was recording secretary of the Drug Clerks' Union.

—CLINTON C. COOK, 49, Orange, Mass., died of heart disease at his home. He was the Republican candidate for representative in the fourth Franklin county district, but withdrew his candidacy because of his health. He was born in Hardwick and had been employed as a druggist at Athol, Boston and Barre. He came to Orange 16 years ago and opened his own store. While in Barre he was town clerk for four years. In Orange, Mr. Cook had been a member of the school committee for nine years and was also a public library trustee. He was a trustee of New Salem Academy and was chairman of the committee having in charge the construction of the Town Hall. He was an expert horseman and for many years was a starter and judge in numerous horse races at the county fairs in his section. His wife and a daughter survive.

—DR. AUGUST AREND, founder of the "chain" of A. Arend drug stores, Chicago, died at his home, 3966 Lake Park avenue at the age of 80. Two years ago last summer Dr. Arend leaped from a passenger steamer in midlake after writing a note to his wife in which he said he was tired of everything. The steamer put about and the old man was rescued. Dr. Arend was born in Cologne, Germany, and came to America in 1855. He entered business in Philadelphia the same year, but moved to Chicago in 1871 and opened his first drug store there at West Madison street and 5th avenue, from which the present "chain" of stores has grown. He sold out his interest in the stores 15 years ago. His widow, who was his second wife, and four children, survive him.

—JOHN A. HOFFMANN, 39, a druggist at Chase and Kirby avenues, Cincinnati, O., died recently at the German Deaconess Hospital following an operation. He was the son of Lawrence Hoffmann, a druggist of New Bremen, O., where he was born, and a brother, Walter, who is in business with the senior Hoffmann at that place, is one of the surviving relatives. Mr. Hoffmann had been in the drug business in the same neighborhood in Cincinnati for the past ten years. He was a member of the Masonic order. Besides his parents, his widow and a daughter and three brothers survive him. His brother Lawrence is a druggist at North Baltimore, O., four of the family having been engaged in the drug business.

—PAUL DE SPOTTE, a manufacturer of toilet articles, New York, one of the organizers of the Thirteen club, and for many years chairman of the Tammany organization in the old Ninth ward, died recently of apoplexy. He was 77 years old and came to this country in 1855. He was familiarly known as "Professor de Spotte," and often told his friends how P. T. Barnum engaged him to bleach the noted "white elephant" in 1884. He was the friend of William Barrett, Joseph Jefferson, William Florence and other famous actors of those days. He was a member of the Press club and editor of the American Hair Dresser. His wife, a daughter and two sons survive.

—MARTIN LYNCH, 80, druggist of Edinburg, Ind., died after an illness of almost three months. He was born in County Clare, Ireland, and came to America when 16 years old. He worked first at the cooper's trade and afterward as a clerk in the drug store of Kiefer & Rush. In 1861 he formed a partnership with Adam Mutz, now deceased. In 1898, Mr. Mutz retired and transferred his interest to his son, John R. Mutz. The latter remained a partner in the firm until Mr. Lynch retired and sold his interest. At the time this occurred Mr. Lynch had been in business in his city longer than had any other merchant there. An only daughter survives him.

—JOHN BENNING DANIEL, 70, prominent Atlanta, Ga., druggist, died after an illness of but 10 days. He was unmarried and lived with a sister. He was an elder in the First Presbyterian church, and was active in church work. He was a native Georgian, having been born in Lincolnton, Lincoln county. He had been in the drug business in Atlanta 49 years, coming to that city directly after the close of the Civil War, in which he served with distinction, entering the Confederate army when but 15 years old. He began his career as a clerk in the drug store of L. W. & L. S. Meade.

—JOHN C. SCHWARTZ, 62, wellknown druggist of Hamilton, O., died at his home of a complication of affections. While his health had been impaired for some time, he had been confined to his home for but a short while. He was born in Nuremberg, Germany, and at the age of three came to Hamilton with his parents. He was educated in the city schools and later became a drug store clerk. He studied pharmacy and opened his own store. He conducted drug stores with success at several locations in his city. In 1903 he retired from business.

—A. FRANCIS BARNES, for many years employed by the Elbridge Nash Drug Company, Inc., at 12 Union street, Weymouth, Mass., dropped dead on the night of Oct. 17, upon his return from the store. He rode home on a bicycle, and was putting the wheel away, when death overtook him. He was 42 years of age, and had spent his whole life there, filling important positions in the community. For three years he had served as a selectman, and for many years had been secretary of the Weymouth Agricultural and Industrial Society. He was eminent in Masonry. Two children survive him.

—A. FRANCIS BARNES, 42, South Weymouth, Mass., recently died of heart failure, 15 minutes after leaving his place of business for his home. He was a member of the Elbridge Nash Drug Co. He had served as selectman in his city for three years and as overseer of the poor for four years. He was a member of the Norfolk club, Orphans' Hope lodge A. F. & A. M., South Weymouth Improvement society and for several years was secretary of the Weymouth Industrial and Agricultural society. His two little daughters survive the deceased.

—GUSTAVE R. FRIES, one of the officers of the Alex. Fries & Bro. Chemical Co., of Cincinnati, died recently of pneumonia, at the age of 74 years. He had been associated with the company since its organization in Cincinnati in 1861. Mr. Fries was born in Germany, coming to this country at the age of 13, and was one of those who made the journey across the plains in '49, having many thrilling experiences at that time. A number of relatives survive him. He was a Mason, belonging as well to several business organizations.

—AUGUST WILLIAM BARGET, a retired druggist of Brooklyn, N. Y., and a member of one of the oldest families of Old Williamsburgh, died at his home, 764 Quincy street. He was born on old Ewen street, in the Sixteenth ward, 63 years ago, and his father, William Barget, was a pioneer druggist of that section. For 43 years he conducted a drug store on Fulton street, Jamaica, near the Rockaway road. He was a bachelor.

—SAMUEL W. CARPENTER, 68, of Waveland, Ind., died after a prolonged illness, during which he had suffered from a complication of diseases. He had been in the drug business for 18 years, having begun his career as a druggist at Delphi, O. The body was taken for interment back to his old home in Kentucky.

—E. L. WILLIAMS, a retired druggist of Carthage, Mo., is reported to have committed suicide by taking strychnine, having first written a note to the coroner, requesting that official to file his will and thanking him for attending to the trouble he had caused. He was 62 years old. He had been in poor health.

—JOHN W. GOODWIN, former resident of Millvale, Pa., died at the age of 72 years on his plantation near Cedarsburg, Va. He was a veteran of the Civil war and for 40 years resided in Millvale, where he conducted a drug store. His widow, three sons and two daughters survive him.

—FRANK COPE, druggist of Davenport, Ia., died of erysipelas supposed to have been induced by pulling a hair from his nose while shaving. He opened his Davenport store after having spent eight years on the road as a traveling representative.

# Application of the New Stamp Tax

Sections of the Act That are of Particular Importance to the Retail Drug Trade and the Instructions That Have Been Issued to the Perfumers—a Majority of Manufacturers Inform the ERA They Will Pay the Tax

Interesting Communications from the Men Most Concerned

THE law recently enacted by the 63rd Congress to increase the revenue and for other purposes, imposes upon druggists in common with other business men the payment of certain stamp taxes on commercial paper, etc., as outlined in Schedule A of the Act, while a special tax is imposed upon them as dealers in tobacco and those who sell to consumers wines and liquors, who, (from October 23 last) are required to keep track of such sales of wines and liquors and to settle with the Government for such sales until bottle and jug stamps are furnished.

According to Treasury Decision No. 2027, all dealers are required to keep an account of these sales from Oct. 23, pending receipt of appropriate tax stamps, and the form necessary to be used can be obtained of the Collector of Internal Revenue of the particular district in which the seller may reside. As outlined in the law, the tax accrues on all wines sold; two cents per quart on all still wines, 20 cents per quart on champagne and other sparkling or artificially carbonated wines, 6 cents a quart on liqueurs, cordials and similar compounds, domestic or imported, and proportionate tax rates for other quantities until stamps are furnished. Collection of the tax on this basis is to be made later on. As soon as the stamps are available, these are to be affixed to each bottle or container in which such wines or liquors are sold, the dealer receiving and selling, or offering the same for sale or consumption to any other person than a dealer being required to affix the stamps prescribed. The tax is not imposed on any still wine used by any rectifier, manufacturing chemist or druggist in the manufacture of any liqueur, cordial, or compound subject to any internal revenue tax imposed by the Act.

The law imposes a tax of one cent on every telephone and telegraph message for which a charge of 15 cents or more is made, and requires the company operating the lines to collect the tax. According to the instructions of the Commissioner of Internal Revenue for collecting this tax, the method of collection is wholly within the province of the companies receiving and transmitting the messages. An interesting ruling made by the Collector is that all overtime messages where the initial rate is less than 15 cents, but the total charge on account of the overtime brings the charge to 15 cents or more, are subject to the tax.

## Schedule B Effective Today

The requirements of Schedule B become effective today (December 1) and upon druggists is placed the responsibility of seeing that stamps of the required value are placed on all perfumery, cosmetics, chewing gum, etc. they may sell and which are enumerated in the Act. Proprietary medicines as such are exempted from the imposition of the tax, but from a study of the law it is somewhat difficult to understand how the authorities will determine whether a given toilet article is a cosmetic or a proprietary medicinal preparation, for almost all products of the cosmetic type are advertised to remedy certain affections. However, it is expected that general regulations for the execution of Schedule B which are now being formulated by the Internal Revenue Bureau and are soon to be issued will cover many of these points. The regulations in any event will not affect the general plan of taxing the products enumerated in the schedule.

The taxes are to be imposed on the retail prices of the goods, and as stated before, are to be paid by affixing adhesive stamps upon every packet, box, pot, phial or other container of the articles taxed. The schedule tabulated for ease of reference is as follows:

## Tax Schedule

Not exceeding 5 cents .....	1¢ cent
Over 5 cents and not exceeding 10 cents .....	1¢ cent
Over 10 cents and not exceeding 15 cents .....	3¢ cent
Over 15 cents and not exceeding 25 cents .....	5¢ cent
Over 25 cents and not exceeding 50 cents .....	11¢ cents
Over 50 cents and not exceeding 75 cents .....	17¢ cents
Over 75 cents and not exceeding \$1 .....	21¢ cents
For each additional 25 cents of retail price or value of fractional part in excess of 25 cents, $\frac{1}{5}$ ths of 1 cent.	

Many requests for more specific information regarding the cancellation of stamps and the handling of stocks on hand by the dealer, has caused the Commissioner of Internal Revenue to issue the following circular:

The proviso to Section 8, Act of October 22, 1914, reads as follows:

"That instead of cancellation by initials and date, the stamps on the articles enumerated in Schedule B shall be so affixed on the box, bottle, or package that in opening the same, or using the contents thereof, the said stamp shall be effectually destroyed; and in default thereof the party making default shall be liable to the same penalty imposed for neglect to affix said stamp as hereinbefore prescribed in this Act."

Section 22, however, authorizes the Commissioner of Internal Revenue to prescribe such method for the cancellation of stamps as he may deem expedient in lieu of the method prescribed in the Act.

Under this authority it is held that as to stocks of articles subject to tax under Schedule B, now in the hands of manufacturers and packed ready for shipment on orders not yet received, which stocks already packed in boxes or cartons remain in their hands on December 1st, and it is impracticable to unpack the boxes or cartons for stamping without serious loss, the stamps covering the entire contents of the container may be affixed to the container and canceled with the initials of the manufacturer and the month and year.

Where goods have been previously ordered for delivery at a future date, and same are already packed in shipping cases, to fill the order, and marked for shipment to purchaser, such goods may be delivered to purchaser without each article being stamped, provided purchaser is furnished with proper stamps to attach to taxable articles when case is opened.

Retailers receiving goods in such boxes or cartons bearing stamps should retain the stamped container until the contents are disposed of and will be held liable for tax on goods exposed for sale unstamped, unless they are able to produce such stamped containers as evidence that the goods have been taxpaid by the manufacturers.

Cased goods which have been removed from the place of manufacture to depots or warehouses prior to December 1, 1914, may be regarded as in the hands of the manufacturers as wholesalers and not as manufacturers, and should be stamped by the retailers before being sold at retail.

Where goods are usually offered for sale in small containers attached to display cards, stamps covering the tax on all attached articles may be affixed to the cards.

Where several articles, all taxable, or some taxable and some untaxable, are packed in boxes for sale as entireties, the stamps covering the taxable contents may be affixed to the box in such manner as to be broken on opening the boxes. If the outer coverings in such cases are fancy containers, which would be marred by attaching stamps to covers, or are of such character that it is impracticable to so attach the stamps that they will be broken on opening the article for use, stamps may be affixed to side or bottom of the container.

In all cases where stamps are so attached as to be broken when the article is used, cancellation is unnecessary. In all other cases cancellation of the stamps will be made by affixing initials with month and year.

Retailers who are required by law to stamp all taxable articles in their possession on December 1, 1914, or received unstamped from wholesalers, before offering same for sale at retail should in all cases where practicable stamp the individual bottle, can, pot, carton, or box, as usually sold and delivered to the customer.

In cases where this is impracticable the stamps may be affixed in one of the methods outlined above.

ROBT. WILLIAMS, JR.,  
Acting Commissioner.

The various sections of the Act of particular importance to the retail drug trade are the following:

### Affixing and Canceling Stamps

Sec. 8. That in any and all cases where an adhesive stamp shall be used for denoting any tax imposed by this Act, except as hereinbefore provided, the person using or affixing the same shall write or stamp thereupon the initials of his name and the date upon which the same shall be attached or used, so that the same may not again be used. And if any person shall fraudulently make use of an adhesive stamp to denote any tax imposed by this Act without so effectually canceling and obliterating such stamp, except as before mentioned, he, she, or they shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not exceeding \$50, or be imprisoned not more than six months, or both, at the discretion of the court: *Provided*, That instead of cancellation by initials and date, the stamps on the articles enumerated in Schedule B shall be so affixed on the box, bottle, or package that in opening the same, or using the contents thereof, the said stamp shall be effectually destroyed; and in default thereof the party making default shall be liable to the same penalty imposed for neglect to affix said stamp as hereinbefore prescribed in this Act.

Sec. 9. That if any person or persons shall make, sign, or issue, or cause to be made, signed, or issued, or shall accept or pay, or cause to be accepted or paid, with design to evade the payment of any stamp tax, any promissory note liable to any of the taxes imposed by this Act, without the same being duly stamped, or having thereupon an adhesive stamp for denoting the tax hereby charged thereon, he, she, or they shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding \$200, at the discretion of the court.

Sec. 10. That the collectors of the several districts are hereby authorized and required to furnish to any assistant treasurer of the United States or designated depository thereof, or any postmaster located in their collection districts, respectively, a suitable quantity of adhesive stamps, without prepayment therefor, and may in advance require of any designated depository, assistant treasurer of the United States, or postmaster a bond, with sufficient sureties, to an amount equal to the value of the adhesive stamps which may be placed in his hands and remain unaccounted for, conditioned for the faithful return, whenever so required, of all quantities or amounts undisposed of, and for the payment monthly of all quantities or amounts sold or not remaining on hand. And it shall be the duty of such collectors to supply their deputies with, or sell to other parties within their respective districts who may make application therefor, adhesive stamps, upon the same terms allowed by law or under the regulations of the Commissioner of Internal Revenue, who is hereby authorized to make such other regulations, not inconsistent herewith, for the security of the United States and the better accommodation of the public, in relation to the matters hereinbefore mentioned, as he may judge necessary and expedient. And the Secretary of the Treasury may from time to time make such regulations as he may find necessary to insure the safe-keeping or prevent the illegal use of all such adhesive stamps.

Sec. 17. That on and after December 1, 1914, any person, firm, company, or corporation that shall make, prepare, and sell, or remove for consumption or sale, perfumery, cosmetics, preparations, compositions, articles, or things upon which a tax is imposed by this Act, as provided for in Schedule B, without affixing thereto an adhesive stamp or label denoting the tax before mentioned shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than \$500, or be imprisoned not more than six months, or both, at the discretion of the court.

Sec. 18. That any manufacturer or maker of any of the articles for sale mentioned in Schedule B, after the same shall have been so made, and the particulars hereinbefore required as to stamps have been complied with, or any other person who shall take off, remove, or detach, or cause, or permit, or suffer to be taken off, or removed or detached, any stamp, or who shall use any stamp, or any wrapper or cover to which any stamp is affixed, to cover any other article or commodity than that originally contained in such wrapper or cover, with such stamp when first used, with the intent to evade the stamp duties, shall for every such article, respectively, in respect of which any such offense shall be committed, be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than \$500, or be imprisoned not more than six months, or both, at the discretion of the court, and every such article or commodity as aforesaid shall also be forfeited.

Sec. 19. That any maker or manufacturer of any of the articles or commodities mentioned in Schedule B, as aforesaid, or any other person who shall sell, send out, remove, or deliver any article or commodity, manufactured as aforesaid, before the tax thereon shall have been fully paid by affixing thereon the proper stamp, as in this Act provided, or who shall hide or conceal, or cause to be hidden or concealed, or who shall remove or convey away, or deposit, or cause to be removed or conveyed away from or deposited in any place, any such article or commodity, to evade the tax chargeable thereon, or any part thereof, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall pay a fine of not more than \$500, or be imprisoned not more than six months, or both, at the discretion of the court, together with the forfeiture of any such article or commodity: *Provided*, That articles upon which stamp taxes are required by this Act may, when intended for exportation, be manufactured and sold or removed without having stamps affixed thereto, and without being charged with tax as aforesaid; and every manufacturer or maker of any article as aforesaid, intended for exportation, shall give such bonds and be subject to such rules and regulations to protect the revenue against fraud as may be from time to time prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury.

#### SCHEDULE B.

Perfumery and cosmetics and other similar articles: For and upon every packet, box, bottle, pot, phial, or other inclosure containing any essence, extract, toilet water, cosmetic, vaseline, pe-

tratum, hair oil, pomade, hair dressing, hair restorative, hair dye, tooth wash, dentifrice, tooth paste, aromatic cachous, or any other similar substance or article, by whatsoever name the same heretofore have been, now are, or may hereafter be called, known or distinguished, used, or applied as perfumes or as cosmetics, and sold or removed for consumption and sale in the United States, where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall not exceed at the retail price or value the sum of 5 cents, one-eighth of 1 cent.

Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of 5 cents, and shall not exceed the retail price or value of 10 cents, two-eighths of 1 cent.

Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of 10 cents and shall not exceed the retail price or value of 15 cents, three-eighths of 1 cent.

Where such packet, box, bottle, pot, phial, or other inclosure, with its contents, shall exceed the retail price or value of 15 cents and shall not exceed the retail price or value of 25 cents, five-eighths of 1 cent. And for each additional 25 cents of retail price or value or fractional part thereof in excess of 25 cents, five-eighths of 1 cent.

Chewing gum or substitutes therefor: For and upon each box, carton, jar, or other package containing chewing gum of not more than \$1 of actual retail value, 4 cents; if exceeding \$1 of retail value, for each additional dollar or fractional part thereof, 4 cents; under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

That all articles and preparations provided for in this schedule which are in the hands of manufacturers or of wholesale or retail dealers on and after December 1, 1914, shall be subject to the payment of the stamp taxes herein provided for, but it shall be deemed a compliance with this Act as to such articles on hand in the hands of wholesale or retail dealers as aforesaid who are not the manufacturers thereof to affix the proper adhesive tax stamp at the time the packet, box, bottle, pot, or phial, or other inclosure with its contents is sold at retail.

There shall be an allowance of drawback on articles mentioned in Schedule B of this Act on which any internal-revenue tax shall have been paid, equal in amount to the stamp tax paid thereon, and no more, when exported, to be paid by the warrant of the Secretary of the Treasury on the Treasurer of the United States, out of any money arising from internal taxes not otherwise appropriated: *Provided*, That no allowance of drawback shall be made for any such articles exported prior to the date this Act becomes effective. The evidence that any such tax has been paid as aforesaid shall be furnished to the satisfaction of the Commissioner of Internal Revenue by the person claiming the allowance of drawback, and the amount shall be ascertained under such regulations as shall be prescribed from time to time by said commissioner, with the approval of the Secretary of the Treasury.

### Affixing Stamps to Perfumes

From the report of the Committee of the Manufacturing Perfumers' Association appointed for the purpose of conferring with the Commissioner of Internal Revenue, Washington, D. C., regarding the regulations covering the proper affixing of stamps to perfume and other toilet and cosmetic preparations, a copy of which has been sent to each member of that organization, we reprint the following instructions. The report is signed by the committee, C. F. Butz, Walter Mueller, and A. B. Calisher, chairman.

1—It is permissible to affix the stamps to any part of the container where it is not practicable to affix the stamps in such manner that they will be broken upon opening the container. If this is done, the stamps must be cancelled with the initials of the firm, the month, and the year, by perforation, writing, or rubber-stamping.

2—It is held that as to stocks of all articles subject to tax under Schedule B which are in the hands of manufacturers and packed ready for shipment on orders not yet received, which stocks are already packed in boxes or cartons remaining on hand on December 1, 1914, the stamps covering the entire retail value may be affixed to the box or carton and cancelled as described in paragraph one.

3—Where goods have been previously ordered for delivery at a future date, and are already packed in shipping cases and marked for shipment to purchaser, such goods may be delivered to purchaser without each article being stamped, provided the purchaser is furnished with proper stamps to attach to the taxable articles when case is opened.

4—Retailers receiving goods in boxes or cartons bearing stamps covering contents should retain the stamped container until the contents are disposed of. They will be held liable for tax on goods exposed for sale not stamped unless they are able to produce such stamped containers as evidence that the goods have been taxpaid by the manufacturers.

5—Goods packed in cases which have been removed from the place of manufacture to depots or warehouses previous to December 1, 1914, will be regarded as being in the hands of

the manufacturers as wholesalers and not as manufacturers, and should be stamped by the retailers before being sold at retail.

6—Where goods are offered for sale in small containers attached to display cards, stamps covering the tax on the total retail value of the articles attached to the card may be affixed to the card.

7—Where several articles, all of which are taxable, or some of which are taxable, and some of which are not taxable, are packed in boxes for sale as a whole, the stamps covering the taxable articles may be affixed to the box in such manner as to be broken on opening the box; or the individual taxable items in the box may have the proper stamps affixed to them instead of placing a stamp on the box itself.

8—On fancy packages which would be disfigured by attaching stamps to same, or which are of such a character that it is not practicable to so attach the stamps that they will be broken on opening the package for use, stamps may be affixed to the side or bottom of the bottle, jar, etc., contained in the package.

9—Retailers who are required by law to stamp all taxable articles in their possession on December 1, 1914, or received unstamped from wholesalers, before offering same for sale at retail, must in all cases where practicable stamp the individual bottle, can, pot, carton or box as usually sold and delivered to the customer. In cases where this is not practicable the stamps may be affixed by the retailer as outlined in paragraph 1.

10—Toilet water or perfume for spraying purposes is not taxable. But, each container used for this purpose must bear the following notice: "Free Sample. Penalty for sale, \$500."

11—All samples for free distribution must bear the following notice: "Free sample. Penalty for sale, \$500."

12—Bulk goods must bear stamps covering the retail value of the contents. The retailer is not required to put stamps on any goods taken from a properly stamped bulk package.

13—On goods sold by manufacturers in bulk to be repacked, refilled and relabeled in smaller containers, the manufacturer is not expected to pay the tax, but the tax must be paid by the repacker or refiller whose name appears on the label.

14—Combination sets, the contents of which consist of samples, and which are sold at retail may be stamped by placing stamps covering the retail value of the set on the outside of the box. In this case the free sample notice need not be affixed to the individual items in the set.

15—Stamps for tooth paste, cold cream, and other articles put up in individual cartons may be placed on the top flap of such carton where they will be broken when opened.

16—Original B/L and express receipt only need be stamped, not duplicate copies.

17—Where there is any doubt as to whether or not a certain article is taxable, we suggest that a full size sample of the article as it is offered for sale at retail, and any advertising matter pertaining to same, be sent to the Chief of the Law Division of the Internal Revenue Department, Washington, D. C., for a special ruling.

#### WHAT THE MANUFACTURERS ARE DOING

With a full appreciation of this War Stamp Tax as it applies to the retail druggists as well as to the manufacturers, as soon as the law was passed, we immediately took the matter up direct with a large number of manufacturers asking each one to let us know whether he intended to advance his prices or to stand the expense of these stamps himself.

In our communications to these manufacturers, we took the position that it was the intention of Congress that this Tax should be paid by the manufacturers, and should not be passed on to the retailers who had other special taxes, and who could not afford to pay the expense of these stamps. We also called their attention to the fact that the expense of the stamp was so small on each sale that it would be impossible for a retailer to advance his prices to cover the same.

We are glad to report that a great majority of the manufacturers have decided to stand the expense of these stamps and to make no advance in their prices. Indeed, many of them are offering to furnish stamps for their goods the druggist may have on his shelves when the law goes into effect on December 1.

Herewith we print a letter from President Spiehler of the Manufacturing Perfumers' Association and a short abstract of

what each manufacturer has stated in his communication to us:

#### MANUFACTURING PERFUMERS' ASSOCIATION Office of the President

Rochester, N. Y., Nov. 19, 1914

*Editor, The Pharmaceutical Era:*

Dear Sir:—

Replying to your favor of the 13th inst. would state that as written you in my previous letter, no action was taken at the meeting of the Manufacturing Perfumers' Association. The sentiment seemed to prevail that on account of deferred orders, it would be best to pay the stamp tax for the balance of the year at least.

Another meeting of the Association will be held sometime next month for the purpose of considering a proposition of appealing to President Wilson and Congress to repeal that portion of the stamp tax law pertaining to perfumery, cosmetics, etc., as this business is now overtaxed and the deferred orders, it would be best to pay the stamp tax for amount; estimated at \$150,000. And on account of the law being in effect for but one year, the burden will fall heaviest upon the manufacturers and the retail dealers throughout the country. May we solicit your aid editorially in furthering such a campaign?

Yours truly,

MANUFACTURING PERFUMERS' ASSOCIATION,  
A. M. Spiehler, President

#### Armour Soap Works, Chicago:

We are assuming the War Stamp Tax on Luxor toilet articles on shipments made after November 5th, and covering taxable articles in the dealer's hands on December 1st. After that date, our shipments will bear stamps.

#### Aschenbach & Miller, Philadelphia:

We are not at present prepared to answer your questions. Have not been able to get a full understanding of all of the conditions of the new Internal Revenue War Tax. As we understand it, we are at liberty to sell wines, cordials and liquors without stamps to dealers, and that it is the duty of the man who sells these articles to the consumer to attach the stamps.

#### A. P. Babcock Co., New York:

For the present, certainly during 1914, we will not advance our prices, and on all goods purchased before December 1, 1914, which remain unsold on that date, we will credit the dealer with the value of the stamps required for such goods.

#### Baldwin Perfumery Co., Chicago:

We will stamp all of our products. There will be no change in our list price or discounts. All retailers who have our goods on hand, purchased prior to December 1st will be obliged to stamp them when sold at retail.

#### C. C. Bittner Co., Toledo:

We will not increase prices on any of our merchandise to cover War Tax

#### Jno. Blocki & Son, Chicago:

During and after the great Civil War, I paid the War Stamp Tax; during and after the Spanish-American War I paid the War Stamp Tax, and I now propose to pay this new Stamp Tax which is not a War Tax.

#### Blue Ribbon Gum Co., Chicago:

We regret that a War Tax of 4c per box placed on chewing gum is more than this company is able to stand. Therefore, beginning December 1, 1914, we shall advance the price of our gum from 45c to 49c per box.

#### Calisher & Co., New York:

We have decided to stand the expense of the War Stamp on all goods of our manufacture going out of our factory after December 1st.

#### Carr Company, Inc., Los Angeles, Cal.:

Notwithstanding the large increased cost of manufacture of the Carr "Cucumber Creams," this company will not raise its price, and in addition expects to also pay the Stamp Tax.

#### Chesebrough Mfg. Co., New York:

We shall place War Tax Stamps required on all of our preparations which are taxable without any change in price at least during the year 1914. In addition we

have instructed our agents Messrs. Colgate & Co. to notify their customers that we will credit them with the amount of the value of the stamps on all vaseline purchased from October 28 to December 1st which remains in their stock unsold on December 1st and which is subject to taxation.

**Cincinnati Perfume Co., Cincinnati:**

We do not intend to raise the price of our articles and will stand all the expense incident to the new War Tax on our commodities.

**Colgate & Co., New York:**

For the present, certainly during 1914, we will not advance prices. Furthermore, for all goods purchased from us between this date and December 1, 1914, which dealers have in stock on December 1st, we will credit them with the amount of the value of the stamps required for such goods.

**Coralene Curative Co., Boston:**

On our Smelling Salts we will stand the shrinkage of 7 1/2c per dozen and jobbers and wholesalers will then figure discounts on the price remaining after the 7 1/2c have been deducted.

**Daggett & Ramsdell, New York:**

Although the cost of manufacture has been considerably increased by advances in prices of raw material, our prices and discounts will remain unchanged, and in addition we will pay the Stamp Tax.

**Dentoris Co., Minneapolis:**

There will be no advance in the price either at retail or wholesale on any of our goods due to the War Stamp Tax.

**C. B. Dolge Co., Westport, Conn.:**

It is our intention to stand this tax ourselves and not raise our prices to dealers or to consumers.

**J. E. Espey, Chicago:**

We shall make no extra charge for stamps on goods shipped and sold after November 10th, but we shall make no allowance for stamps on goods sold previous to this date.

**E. Fougera & Co., Inc., New York:**

We will bear the burden of the new Stamp Tax on all of our own importations subject thereto and will be pleased to credit our customers with the value of the stamps necessary to place their December 1st stock on goods in salable condition, purchased since October 1st. To secure this credit it will be necessary to send us an itemized list of such stock promptly on December 1st.

**Freeman Perfume Co., Cincinnati:**

We expect to pay the War Tax ourselves.

**J. M. Frewin & Co., Rockford, Ill.:**

We pay Stamp Tax on all our goods.

**Mary T. Goldman Co., St. Paul:**

We have decided to attach stamps at our expense on all our goods on and after December 1st.

**Gervaise Graham, Chicago:**

On and after December 1st on all goods of our manufacture we will add to each bill or invoice the cost of the Revenue Stamps. The jobber, we understand it, will do the same. The retailer in turn will add to his price the cost of the Revenue Stamp.

**Hall & Ruckel, New York:**

We will stamp all SOZODONT products and defray the additional cost of the stamps ourselves on all products manufactured and shipped from our laboratories on and after December 1st.

**Philo Hay Specialties Co., Newark, N. J.:**

We are not prepared at this time to make any definite statement as to our position one way or the other.

**A. S. Hinds, Portland, Me.:**

The increase in price of raw materials has added fully 50c to the producing cost of each dozen of our 50c size and this is sufficient to warrant the advance we are making on December 1st, when our list price will be \$4.25 instead of \$4.00. We are making no advance in the list price of our \$1.00 size, or our 25c Cold Cream.

**C. E. Holbrook, Attleboro, Mass.:**

Our prices will not be advanced.

**E. W. Hoyt & Co., Lowell, Mass.:**

We will assume the Tax and continue to sell at the same prices, discounts, terms, etc. as heretofore on Hoyts German Cologne in its three sizes, and on the dentifrice Rubi oam. On Hoyts Ten-Cent and Nickel Cologne it is imperative for us to increase the price, which will be a nominal one.

**Richard Hudnut, New York:**

We will fully assume the Internal Revenue Tax effective December 1st, 1914. We also agree to reimburse you for such stamps as may be required to cover all merchandise remaining in your stock on Dec. 1st provided shipment thereof was made on or after November 1st.

**Walter Janvier, New York:**

There will be no advance in price on any of the products handled by Walter Janvier and by B. F. Allen Co., viz. Pears' Soap, Beecham's Pills and Sheffield's Dentifrice.

**B. J. Johnson Soap Co., Milwaukee, Wis.:**

During 1914 at least, we will not raise the price of any of our goods on account of the Stamp Revenue Tax.

**Kolynos Co., New Haven, Conn.:**

The added expense of the Stamp Tax forces us at this time to advance the price on our goods by an amount sufficient to cover the Stamps and we beg to enclose price list effective Dec. 1, 1914.

**Kress & Owen Co., New York:**

We presume that our Dental Bottle will carry the Tax and we propose to bear the burden ourselves, i. e., we will stamp all packages sent out on and after December 1st.

**Lambert & Lowman, Detroit:**

We intend to bear the Stamp Tax ourselves on all of our preparations and up to the present time we have no intention of raising our prices.

**Lehn & Fink, New York:**

We shall bear the War Tax on all of our proprietary toilet articles such as Crown Goods, Riveris Talcum Powder, etc. with the exception of Pebeco Tooth Paste. As to this preparation we are not entirely free under our arrangement with foreign principals.

**Long Acre Cold Cream Co., New York:**

We will not increase our prices to the retailer.

**I. W. Lyon & Sons, New York:**

Relative to our paying the War Tax, we beg to advise you that we have not as yet made up our minds.

**McKesson & Robbins, New York:**

We do not intend raising our prices to cover the expense of the new War Stamps. All articles of our own manufacture will be stamped by us at our own expense.

**Mayor Walnut-Oil Co., Kansas City, Mo.:**

Our prices were established 15 years ago since which time everything entering into its manufacture has materially increased in price. Under these circumstances we are compelled to raise our prices to the jobbers 10c per dozen on each size, 50c and \$1.00, but no advance to the retail dealer.

**W. S. Merrell Chem. Co., Cincinnati:**

We only exploit a few articles covered by the Tax in question. Do not intend to advance our prices. Shall retain our present schedule bearing the burden of these stamps ourselves.

**G. B. Merriam, Lake Placid, N. Y.:**

The prices of our goods will not be raised because of the War Stamp Tax.

**Theodore Metcalf Co., Boston:**

We will not advance the price of goods of our manufacture requiring stamps, but will pay the Stamp Tax ourselves.

**Meyer Bros. Drug Co., St. Louis, Mo.:**

We have already advised our customers that we shall assume the payment of this tax on perfumes of our manufacture.

**Michigan Drug Co., Detroit:**

It is our intention to fully assume the expense of this tax on December 1 without any raise in prices for the present at least. On any goods shipped subsequent to Oct. 28 and in dealers' hands on Dec. 1, we will remit

them necessary stamps promptly on receipt of list made out Dec. 1 showing the amount of those goods which they have on hand unsold.

**Est. Henry C. Miner, Inc., New York:**

It is our intention to pay the War Tax which becomes effective Dec. 1.

**Morgan Drug Co., Brooklyn, N. Y.:**

It is our understanding that this tax applies only to our Palmer's "Hair-Success" dressing and we propose to pay such Tax without increasing our prices to the trade.

**Mother's Remedies Co., Chicago:**

All of our goods will carry the new War Stamp Tax at our expense.

**Mulhens & Kropff, New York:**

We are glad to advise you that the expense of these Stamps will be borne entirely by ourselves. Send us a memorandum of your stock of "4711" preparations on hand Dec. 1 regardless of when you bought them and we will send you promptly the necessary stamps for affixing to the packages.

**No-Scent Mfg. Co., West Somerville, Mass.:**

In reply to your inquiry as to Stamp Tax on our goods, wish to say that we are going to stand the Tax ourselves.

**Park & Tifford, New York:**

We are at present uncertain as to whether we will or will not pay for the War Stamps to be affixed upon the goods imported by us. As soon as a decision in this matter is reached we will gladly notify you.

**Peninsular Chemical Co., Detroit, Mich.:**

We have decided to bear the Tax ourselves instead of shifting it upon our retail friends.

**Puritan Pharmaceutical Co., St. Louis:**

In spite of the fact that perfume and manufacturing materials have advanced materially, we have no intention of making our dealers stand the Stamp Tax.

**Theo. Ricksecker Co., New York:**

We shall pay the Tax ourselves at least during 1914. We also agree to credit our customers with the value of the stamps required on all goods purchased from us on and after Nov. 1, 1914 which remain on hand Dec. 1, 1914.

**Paul Riger & Co., San Francisco:**

We have not raised the price on our goods by reason of the War Stamp.

**Smith, Kline & French Co., Philadelphia:**

We intend to stand the expense of the War Stamp on our preparations.

**C. H. Strong & Co., Chicago:**

We provide Revenue Stamps with no increase in price.

**Thompson's Carbolic Soap Co., Brooklyn, N. Y.:**

We do not yet know whether our goods would come under that law, but whether they do or not we do not intend to raise our prices.

**Tilden Co., New Lebanon, N. Y.:**

We shall not advance our prices on the articles affected.

**S. R. Van Duzer, New York:**

We do not intend to raise the price of our goods on account of the War Tax, nor do we wish the retailer to be put to any expense in this matter on our account. We shall place the stamps on all of our goods going out after Dec. 1st and to every retailer who will notify us of the quantity of our goods in his hands unsold on Dec. 1st we will send stamps to be affixed to such unsold goods.

**A. A. Vantine & Co., Inc., Brooklyn, N. Y.:**

We will pay the War Tax ourselves. A credit will be allowed for the amount of stamps required for the balance of our goods that you have on hand Dec. 1st if bought from us since Oct. 22d.

**Henry K. Wampole & Co., Philadelphia:**

It is not our intention to make any additional charge to the retail trade to cover the cost of stamps. We ourselves will assume that burden for we do not feel that it is in accordance with the spirit of the law that this tax should be passed along by ourselves to the retailer and by the retailer to the consumer.

**Wildroot Chemical Co., Buffalo, N. Y.:**

We are pleased to advise that we have decided to pay this tax on Wildroot Hair Tonic.

**J. B. Williams Co., Glastonbury, Conn.:**

For the present and until further notice we shall assume the expense of the War Stamp on such of our preparations as are liable to this tax.

**C. B. Woodworth Sons Co., Rochester, N. Y.:**

On and after Dec. 1st, 1914 we will attach the War Tax Stamps on all packages of our goods which require the stamps entirely at our own expense. We will also reimburse our customers for such stamps as are required on our goods that they have in stock on Dec. 1st, provided the same was purchased on or after Nov. 1st, 1914.

**Zona Toilet Co., Wichita, Kans.:**

We do not intend to raise our prices to the dealers on any of our goods on account of the Stamp Tax.

**PHARMACEUTICAL CHEMISTS' RESOLUTIONS**

**Directors Meet in this City and Act on Matters of Pertinence to the Profession**

At a meeting of the Board of Directors of the American Association of Pharmaceutical Chemists, held in this city on Oct. 26, and which was attended by George C. Hall, Dr. S. E. Basengill, B. L. Maltbie, Dr. A. S. Burdick, E. S. Holt, H. C. Moore, R. J. Strassenburgh, R. C. Stofer and F. L. H. Nason, resolutions were adopted to the following effect:

Approving the proposed Harrison bill in the form passed by the U. S. Senate, and urging its immediate adoption by the House of Representatives; expressing the appreciation of the board of the efficient work of J. Fred Windolph as a delegate to the convention of the Association of American Dairy, Food and Drug Officials at Portland, Me.; authorizing the distribution to members of reprints of Dr. Lyman F. Kebler's article on the manufacture of tablets; approving the appointment of the special committee on uniform food and drug legislation by the U. S. Chamber of Commerce and offering the support of the association in the work of that committee; recommending and approving a model law providing for the inspection and sanitation of all places devoted to the manufacture, sale, handling and distribution of medicinal preparations; urging a revision of the U. S. patent laws and authorizing and directing the president of the association to write to the President of the U. S. endorsing the Covington Trade Commission law.

By resolution the board urged that all foreign manufacturers of biological products intended for the treatment of animals be required to conform to the same regulations and inspection required of domestic manufacturers of such products, before importation into this country is permitted. This resolution also provided that a copy be sent to Dr. Melvin, chief of the Bureau of Animal Industry, U. S. Department of Agriculture.

The need of uniform food and drug legislation was urged in the following resolution:

Whereas, Uniformity of the Pure Food and Drugs laws means the most efficient laws, Federal, State and municipal, universally prevailing, affording thereby equal protection and a uniform standard of living for all the people of this great nation; and

Whereas, Such uniform laws deal equitably and justly with the interests of all concerned, whether manufacturer, dealer or consumer, and aid economy of production and distribution; and

Whereas, The Association of Dairy, Food and Drug Officials, the Commissioners on Uniform State Laws, the American Bar Association, the National Food Trades Conference, the National Civic Federation, the Chamber of Commerce of the United States of America, and several other associations and organizations are actively and favorably interested in the attainment of such uniformity; therefore be it

Resolved, That the American Association of Pharmaceutical Chemists hereby earnestly records its approval of such uniformity as being necessary in the general public interest and urges that every effort be made to the end that such uniformity may be as fully realized as possible.

**Women's Ph.A. on the Pacific Coast**

At the recent meeting of the Women's Ph. A. of the Pacific Coast held in San Francisco, the following officers were elected: President, Mrs. R. E. White, San Francisco; first vice-president, Miss Z. R. Nelson, Oakland; second vice-president, Mrs. May Birch, Orland; secretary, Miss T. Sala, Berkeley; treasurer, Mrs. R. Kane, San Francisco. Executive Committee: Miss E. Laird, Berkeley; Miss R. E. Nelson, Oakland; Miss M. Dolcini, Mrs. M. Low, and Miss P. J. Nast, San Francisco. Advisory Committee: Mrs. K. K. Voluntine, Palo Alto, Miss I. Goodman and Mrs. E. S. Flint, San Francisco. Other committees are scheduled to be announced by the president at the meeting to be held in San Francisco on Nov. 27.

## NEWS FROM ASSOCIATIONS

### G. A. S. GETS OPINION ON COMPENSATION ACT

#### Society's Attorney Hands Down First Authoritative, Although Unofficial, Opinion on this Law

Druggists of New York State have been in an unsettled state of mind about their inclusion under the provisions of the Workmen's Compensation Act ever since the enactment of that measure. While no one in authority has been found to designate just where or how the law applies to the druggist, nevertheless the retail trade has found no relief from its uneasiness.

As chairman of the N. Y. S. P. A. legislative committee, J. H. Rehfsue was obliged to report at Saratoga last June that up to the time of the convention he had been unable to secure a decision from the Compensation Commission as to the application of the law to "the average retail pharmacy where no power or machinery is employed in compounding medicine." The liability comparison could not at that time give him a definite opinion on the question. At the September meeting of the Kings County Pharmaceutical Society, Secretary A. E. Hegeman read a letter from the Commission to the effect that druggists were not mentioned specifically in the act, but might come under a paragraph relating to the handling of merchandise on "any dock, platform or place."

At the November meeting of the German Apothecaries' Society, S. V. B. Swann, chairman of that organization's committee on legislation, presented two communications, one an opinion on the scope of the act above referred to, prepared by the society's attorney, Charles A. Kalish, and the other, a letter from the manager of the State Insurance Fund, F. Spencer Baldwin. While the former has not the status of an opinion handed down by the attorney-general, and the latter merely announces that the manager of the State Insurance Fund is prepared to accommodate druggists, both communications are exceedingly interesting and pertinent. The text of Mr. Kalish's letter to the society follows:

"In reply to your request for an opinion as to the applicability to pharmacists of the Workmen's Compensation Law, I would advise you as follows:

"After a careful examination of the law I am of the opinion that it was not the intent of those who drew up the law to include pharmacists, but that Group 28, which is one of the Groups of Employment designated as being hazardous, comprises the following:

"Group 28. Manufacture of drugs and chemicals, not specified in group twenty-five, medicines, dyes, extracts, pharmaceutical or toilet preparations, soaps, candles, perfumes, non-corrosive acids or chemical preparations, fertilizers, including garbage disposal plants; shoe blacking or polish."

"Sub-division 5 of Section 3 of the Law reads as follows:

"Employment, includes employment only in a trade, business or occupation carried on by the employer for pecuniary gain."

"Under a strict construction of the foregoing, there is no doubt that an employe of a pharmacist who makes up nail polish, or cold cream, or hair oils, or kindred preparations which may be used for the toilet, or proprietary medicines such as headache or toothache preparations or tonics, even though prepared for the consumption of the customers of the particular pharmacists, so long as it is put up as a proprietary, would come within the law.

"Some doubt has been expressed as to whether this applies to soda water clerks or to errand boys not engaged in the work set forth in Group 28. This probably does not apply to them although no decision has been made thereon.

"I may add that I have taken up the matter with the Workmen's Compensation Commission, and was advised by the State Insurance Fund as per letter herewith.

"I would also state that it has been the invariable custom of this Commission since it has been organized, to be very technical and to resolve every doubt in favor of the law, and I feel sure that if any accident to such an employe should occur in a pharmacy, then the Commission would decide that this law applied against the pharmacist.

"Accordingly I would urge that every pharmacist comply with the provisions of the Act. If the druggist carries Em-

ployer's Liability Insurance, the additional amount of premium to include the Workmen's Compensation Law is comparatively small. On the other hand, some employers are insuring in the State Insurance Fund instead of relying on the insurance companies. This is a matter for each one's individual choice.

"The penalties for not carrying such insurance or otherwise complying with the law as to indemnity are quite severe in that the employe may bring an action in Court for damages for the injuries and it will not be necessary for him to plead or prove freedom from contributory negligence, and the employer cannot plead as a defense the negligence of a fellow servant nor risk of employment, nor contributory negligence of the plaintiff.

"Therefore, if this law be held to apply, the advantage of complying with the law is obvious, as the amount of damage recoverable by the employe under the Compensation Law is less than it would likely be under the ordinary action.

"It has been suggested that a test case be made, but I would not advise this course as practically the only satisfactory method of a test case would be to have an injured employe bring a suit at law, but if this were done unless the injuries were very trivial, the chances are first, that the Commission would decide that the Law applied, then an appeal could be taken to the Appellate Division and then to the Court of Appeals, but during this period, or rather from even the present moment, a druggist runs a serious risk of having some employe injured and being held liable under this law.

"Therefore, I would advise you that the law in its present verbiage and form applies to pharmacists and that you should comply therewith."

The following is in part the text of the letter from F. Spencer Baldwin, manager of the State Insurance Fund:

"While it may not have been the intent of the framers of the Workmen's Compensation Act to include retail druggists, it seems that the language in group 28 is broad enough to include all druggists who make up toilet preparations, patent medicines and the like. It is the practice of the State Fund to issue policies covering such druggists in accordance with the following resolution adopted by the commission on July 29, 1914:

"RESOLVED that the Manager of the State Insurance Fund be authorized to inform applicants for insurance in the State Insurance Fund that on all drug stores or other places where drugs and chemicals, medicines, dyes, extracts, pharmaceutical or toilet preparations, soaps, candles, perfumes, non-corrosive acids or chemical preparations are manufactured, policies may be issued."

### G. A. S. GIVES TO GERMAN RED CROSS FUND

#### Members Contribute \$1,456 to Suffering Compatriots—State Department Acknowledges Resolution

That the German Apothecaries' Society's contribution to the German Red Cross fund had been brought up to the sum of \$1,456.40, was reported by Treasurer Robert S. Lehman, at the November (5th) meeting of that organization. H. L. Rehse, of Richmond Hill, who alone had collected the sum of \$260, and who promised that he would surely collect \$500 for the fund, was given a special vote of thanks, President Dr. Charles F. Klippert voicing the same in behalf of the members. Mr. Lehman concluded his report by asserting that the prospects were excellent for bringing the society's contribution up to the sum of \$2,000.

Hugo Kantrowitz reported that he had received the acknowledgment of the State Department of the receipt of resolutions forwarded to Washington following the society's October meeting. These resolutions expressed to Hon. James W. Gerard, American Ambassador to Germany, the thanks and appreciation of the society for the hospitable reception and entertainment extended to the members of its European tour party, and especially for the generous assistance to those of the party, who, unfortunately, were detained in Germany. Two copies of the resolutions were beautifully engrossed. One copy was sent through Secretary of State Bryan to Ambassador Gerard, and the other was sent to Mr. Bryan himself. Mr. Kantrowitz received the thanks of the society for his work in connection with the preparation and delivery of the resolutions.

Secretary Carl Baum read a request from the Germania Society that the members purchase nicely-framed pictures of the German Emperor, profit from the same to be contributed

to the German Red Cross fund. Most of the members subscribed.

Otto P. Gilbert, chairman of the entertainment committee, reported that the usual fall kommers would be dropped this year because of the war. He recommended that the members contribute to and take part in the grand bazar to be held at the Armoiy, Park avenue and 34th street, December 5th to 20th, for the benefit of the German and Austrian Red Cross funds.

President Dr. Klippert appointed as a nominating committee to report at the annual meeting on December 3rd, the following: S. V. B. Swann, C. F. Schlessner, Wm. Oettinger, H. H. Blomeier and August Volland.

Louis P. Freess, of 38th street and 3rd avenue, proposed by George T. Riefflin, was elected a member.

Otto Herting, of Philadelphia, delivered an interesting lecture on the "Important Pharmaceutical and Medical Minerals."

At the October meeting of the German Apothecaries' Society, Professor Dr. H. Thoms, of Berlin, Dr. Richard Firbas, of Vienna, and Professor Dr. A. Tschirch, of Bern, were elected honorary members.

## BROOKLYN DRUGGISTS LEARN OF STAMP TAX

### Provisions Are Explained to Members of Kings County Ph. S., Who are Advised as to Interpretations

The stamp tax on cosmetics, etc., was the subject of considerable discussion at the November meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy. Dr. William C. Anderson, chairman of the legislative committee, presented the pertinent features of the provisions of the war revenue measure which applied to retail pharmacists. At the end of each month, he said, the druggist must make out a report to the effect that no taxable article made by himself has been disposed of contrary to law. The druggist must affix the proper stamps to the goods of his own make on hand on December 1. The stamps must be so placed that they will be broken when the package is opened. Goods of other manufacturers in stock which are subject to tax must be stamped when sold.

Dr. Anderson called attention to the fact that refraining from stamping one's entire taxable stock might lead to disastrous carelessness. On the other hand, the druggist might by stamping his entire taxable stock be paying the tax when the law is repealed, and at that time customers will know by the stamp that they are getting old goods.

The question was raised as to whether toilet preparations such as bay rum, glycerin and rose water, simple ointments used as cosmetics, "five cents worth of cold cream," witch hazel, etc., were taxable. The answer was that rulings on these articles must be obtained. It was pointed out that the N. A. R. D. was already actively engaged in securing many pertinent interpretations. J. H. Rehfuss strongly advised that members desiring rulings in this direction should forward their interrogations to the society's legislative committee which would turn the same over to the N. A. R. D. legislative committee. The latter body was in a much stronger position to work with the authorities at Washington than the individual druggist could possibly be, and whereas the authorities might be arbitrary with the individual, they would give the legislative committee an opportunity to argue. Injudicious solicitation might result in some very disastrous rulings.

Dr. Hy. J. J. Kassebaum inquired whether nasal and mouth washes and similar preparations would be classified as medicines, and Dr. Anderson expressed the opinion that they were medicines. The latter also stated that the tax would be imposed on the basis of the selling price printed on the package and not on the cut price. If an article bore the printed price \$5 and sold at \$4, it should be stamped on the basis of the former figure.

Dr. Anderson reported that if all objections had been withdrawn the Harrison bill would now be a law. He asserted that this measure was absolutely necessary. "You can't enforce a state anti-narcotic law, no matter how good, unless there is an adequate National law. Pedlars are evidently purchasing out of the State and are selling in New York City." That the New York City Board of Health awaits the opinion of the Corporation Counsel as to its power to enforce sanitary code ordinance 182, was also reported by Dr. Anderson. The State Attorney-General has rendered an opinion that the ordi-

nance is without effect because it conflicts with the Boylan law. The Board may withdraw or amend the ordinance, or, if by any chance the Corporation Counsel should not agree with the Attorney-General, it may make a test case necessary.

Otto Raubenheimer, chairman of the committee on affairs pertaining to pharmacy, called attention to the two cases of barium sulphide poisoning reported on another page of this issue. Dr. Joseph Kahn asserted that he had known in his own experience of three cases of poisoning from this sulphide. He recommended as a treatment for such cases viz.; giving (1) a soluble sulphate to form barium sulphate; (2) milk and water, half and half of each; and (3) opium in small quantities to counteract the eye symptoms, with the application of heat and stimulants for the heart.

Dr. Hy. J. J. Kassebaum, the society's detail man, reported that he was now calling on physicians in the Williamsburg section. He thought that the members should supply him with lists of the physicians they wished him to call upon, as under present arrangements he had largely to direct his own efforts. With a little co-operation on the part of the members he might net better results. Dr. Anderson advised Dr. Kassebaum to pin down to cases those physicians alleging deviations in official preparations prepared by druggists. He said Dr. Kassebaum would often find that the physician was complaining upon hearsay information and was not familiar with the product.

As chairman of the committee on supervision, Thomas J. France reported that there were 365 students in attendance at the college.

The treasurer's report showed a balance on hand of \$510.

The trade matters committee had a balance on hand of \$39.41. It was voted the sum of \$100.

## RIKER-HEGEMAN CO. TO TRAVEL "RIGHT ROAD"

### Mr. Cahoon Says So at Academy of Medicine Meeting—Says He Speaks Only for Own Company

Edward B. Cahoon, director of Riker-Hegeman Co. did not agree with the Health Board of this city on the propriety of that body's proposed proprietaries ordinance. He expressed himself to this effect in the course of a ten-minute talk before the Section on Medicine, of the New York Academy of Medicine, at its recent meeting at Hosack hall. Mr. Cahoon made it plain, however, that if the Board of Health pointed out such a course as the road for it to travel, Riker-Hegeman Co. would put "both feet" in that road and travel it. Mr. Cahoon took pains to observe that he represented his firm of druggists and no other retail druggists in this city, a distinction no doubt appreciated by some of his audience.

Mr. Cahoon was one of six speakers, whose discourse on the general subject of patent medicines made a very interesting and pertinent symposium. As one speaker expressed it, he had been requested to mount the platform with his hat "full of rocks" to throw at patent medicines. But, from a pharmaceutical point of view, there was little in the entire program, excepting Dr. Emerson's exposition on the proposed amendments to the Sanitary Code, that any pharmacist could object to. In fact, it would be surprising if the opinions of the professional practitioners present on the first four subjects enlarged upon, and those of any good citizen, were not identical.

The speakers and their subjects were as follows:

"Advertised remedies for cancer," Professor James Ewing, Cornell University Medical School; "The damage to tuberculosis patients by self-administered remedies," Alfred Meyer, M. D.; "The evil of the so-called cures for the narcotic drug addictions," Ernest S. Bishop (read by another); "Survey of the proprietary medicine question," Walter A. Bastedo, M. D.; "The proposed amendments to the Sanitary Code relative to proprietary medicines," Haven Emerson, M. D., and "The druggists' and manufacturers' position relative to proposed amendments to the Sanitary Code relative to proprietary medicines," Edward B. Cahoon, director of Riker-Hegeman Co.

## A. D. S. Annual Convention at Madison Sq. Garden

The American Druggists' Syndicate will hold its annual convention at Madison Square Garden, January 18-23, simultaneously with a "Made in the U. S. A." drug exhibit. The drug show held at the Garden last winter, on the occasion of the syndicate's annual convention, at which considerable space was devoted to A. D. S. products, was largely attended.

## NEW YORK BRANCH HEARS FINE PAPER

### "Estimation of Cineol in Oil of Eucalyptus" Develops Interesting Discussion at November Meeting

A timely, well-balanced and expeditious affair was the November meeting of the New York branch of the American Pharmaceutical Association, held at the New York College of Pharmacy and called to order by Chairman Professor H. V. Army. Joseph L. Turner read an excellent paper on "Estimation of Cineol in Oil of Eucalyptus," which had been prepared by himself and Ralph C. Holmes. As should be done when an organization has a feature on its program, the minutes and extraneous business were dispensed with. And the meeting adjourned at a reasonable hour.

Since, as Secretary of the Council Joseph W. England reiterated by letter at this meeting, papers prepared by A. Ph. A. members must be reserved for initial publication in the *Journal*, Messrs. Turner and Holmes' effort may be only briefly referred to in this report. Only the Committee of Revision will profit by an early perusal of the entire paper, since the branch by motion instructed the secretary to forward a copy to Professor Joseph P. Remington.

Mr. Turner read the paper. Despite the amount of research work done on the estimation of cineol in oil of eucalyptus it still remained an unsettled question. The permanganate and resorcinol methods, being based on wrong premises, were inaccurate. The latter is to be made official and will be responsible for the entrance of an inferior product in commerce. The speaker enlarged upon and explained at length the various steps in these two methods. He also referred briefly to the phosphoric acid, hydrobromic acid and other old methods.

The paper gave much space to the method originated and preferred by the two authors. This was an arsenic acid quantitative method and depends upon the formation of cineol arsenate, the addition of petroleum ether if the sample is rich in cineol, the use of absorbent papers for the complete drying of the arsenate, the decomposition of this product over the water bath, collection of the cineol by cooling, etc. Mr. Turner presented this method in detail and made many interesting observations relating to it and other methods.

The properties of the doubly purified cineol differed as to the source of the preparation. The product obtained by the resorcinol method gave higher results than that obtained by the arsenate method. The arsenic method is not scientifically exact but is preferable for practical purposes to others.

The paper was discussed by Otto Raubenheimer, B. L. Murray, Dr. Wm. Mansfield, Dr. Curt P. Wimmer and others. Mr. Turner closed the discussion. Mr. Murray stated that he and his assistants had not been able to get results with the U. S. P. method. Dr. Mansfield explained the secretion of oil in the eucalyptus leaf, and a jar of leaves was passed around for examination. Dr. Wimmer regarded the method as "too good to be true" and hoped the Revision Committee would have time to test it out. Mr. Turner concluded by impressing on the members that the directions for the method had been made most explicit and should be closely followed by beginners.

Thomas D. McElhenie, as a member of the A. Ph. A. Council, reported that the working pharmaceutical exhibit proposition now before the parent organization was favored by some and disfavored by others. To some it seemed best to time the 1915 A. Ph. A. convention with that of the American Medical Association and to hold an exhibition on that occasion, but not to hold a so-called "working exhibit" which would cost several thousand dollars and which the general public in attendance at the Exposition would not notice. C. O. Bigelow reported that the New York College of Pharmacy as an institution had voted against the working exhibit proposition last Winter.

Chairman Professor Army brought before the house the suggestion that the branch invite Dr. Edward Kremers, of the University of Wisconsin, to address the members on "The History of Pharmacy." Mr. Bigelow advised, however, that the College of Pharmacy had a special fund for the purpose of presenting such features as that prepared by Dr. Kremers. The matter was closed, awaiting report from Caswell A. Mayo, who has it in hand for the college.

Mr. McElhenie exhibited to the members a bottle of hair tonic or dandruff preparation bearing the name and address "Arthur Rhodes, Lowell, Mass." which stated on the carton that the preparation contained 40 per cent. methyl alcohol. Mr. McElhenie had already summoned his customer to the store and informed her of its wood alcohol content. He intended to

bring the matter before Dr. Emerson, of the Department of Health.

Treasurer Dr. Joseph Weinstein reported a balance on hand of \$90.

A lecture on "Colloids," by Dr. Curt P. Wimmer, and a joint lecture by Dean H. H. Kusby and Dr. Wm. Jay Schiefelin on "Radium" will be features on the program of ensuing meetings.

### Chicago Branch A. Ph. A.

The Chicago Branch of the A. Ph. A. held the first monthly meeting for the season at the University of Illinois School of Pharmacy Building on October 29. In the absence of President Jas. H. Wells, Vice-President W. B. Day presided.

The program of the evening included the presentation of five editorials on the Convention activities of the pharmaceutical associations represented in Chicago.

Harold H. Bruun presented in poetical form his impressions of the Illinois Ph. A. at the Fox Lake meeting, the first ever held by the association at a summer resort, and because of the large attendance and success of the business sessions, has been favorably criticised by all in attendance.

J. W. Morrisson represented the N. W. D. A. He made the assertion that of the 262 members of that association, practically every member was represented at the convention held at Indianapolis. He dwelt on the value of resolutions and committee reports in creating and molding uniformity of opinion, not only among the members, but among retail druggists and others allied with pharmacy, and also the general public. He told of the very prompt and energetic measures employed to defeat the stamp tax on proprietary medicines endorsed by the Drug Trade Conference, and of the increased co-operation between the various branches of the drug business.

Editor Hugh Craig of the *Journal* of the National Association of Retail Druggists spoke for that organization, presenting in a very earnest and striking manner the important activities of the recent Convention, describing the forces that had been brought to bear to obtain wise amendments of the Harrison bill—the national anti-narcotic law, the preparations made for increased U. S. P. and N. F. propaganda work, the new ideas for proprietary medicine control, etc. Secretary Thos. H. Potts, also of the N. A. R. D., told of the hundreds of telegrams and thousands of letters that had been sent out within the last few days in the endeavor to kill the Senate amendment of the war tax revenue law for a stamp tax on proprietary medicines. He also strongly urged a united front of all drug interests, and stated that the enlarged motto of the N. A. R. D. now was organization, co-operation and co-ordination.

The A. Ph. A. Convention activities were discussed by Professor C. M. Snow, who summarized the interesting features in a most attractive way, dwelling especially on the U. S. P. and N. F. work. Messrs. Craig, Gathercoal and Becker were appointed a committee to present a summary of the programs for the meetings of the Branch to be held during the coming season.

### Cincinnati Branch

A subject of professional interest was handled before the Cincinnati Branch of the A. Ph. A. by Dr. A. O. Zwick, on "Poisoners, Ancient and Modern." The talk revealed a vast amount of research on the part of Dr. Zwick, and also carried with it a number of decided thrills, which were fully enjoyed by the druggists as well as by the ladies present. The occasion was the opening session of the winter course, and was celebrated by an excellent dinner, after which President E. H. Thiesing outlined the season's work to be taken up by the branch.

The branch now has a membership of fifty. The officers for the current year are President, E. H. Thiesing; vice-presidents, F. W. Weissman and I. E. Kutchbauch; treasurer, Julius Greyer; secretary, Charles A. Apmeyer. Executive Committee, Dr. A. O. Zwick, C. T. P. Fennel, and Charles G. Merrell.

### Proposed Morgantown, W. Va., Branch

Druggists residing in Morgantown, Fairmont and contiguous towns in West Virginia, have petitioned the parent body for the creation of a local branch to be known as the Morgantown, W. Va., Branch of the A. Ph. A. The petition was signed by seventeen druggists and others interested in pharmacy from the first-named city, and seventeen others, residing in Fairmont, Pine Grove, Keyser, Jaeger, Richwood, Clarksburg, Huntington, Sutton, Piedmont, Welch, Terra Alta, and Hastings, Pa.

### Philadelphia Branch

Professor Charles H. LeWall introduced a resolution at the November meeting of the Philadelphia branch of the American Pharmaceutical Association, held at the Philadelphia College of Pharmacy, protesting against the opinion of the Chief of the Bureau of Chemistry, in which the latter states that the word "dram" unqualified means 1/16 of an avoirdupois ounce. This resolution, and another, protesting to the editors and publishers of Pearson's Magazine against the publication of a certain article, were as follows:

The Philadelphia branch of the American Pharmaceutical Association do hereby

**RESOLVE**, That we emphatically disagree with the opinion of the Chief of the Bureau of Chemistry of the United States Department of Agriculture as expressed in General Information Opinion No. 66, issued July, 1914, in which he states that the word "Dram" unqualified means 1/16 of an avoirdupois ounce.

This is contrary to all pharmaceutical teachings and usage, and as the use of the word would largely be applied to medicinal products the impression created by the use, thus authorized, of the word would be misleading and might lead to serious results. The word dram, unqualified, should be held to mean 1/8 of an apothecaries (or Troy) ounce, which is 60 grains.

The Philadelphia branch of the American Pharmaceutical Association do hereby

**RESOLVE**: That we protest most energetically to the editors and publishers of Pearson's magazine against the publication of the article "Pills and Piracy" by Sloane Gordon, in the November issue of the magazine and condemn it as unfair and misleading in that it takes no cognizance of the care and skill exercised and the high educational attainments required to conscientiously practice pharmacy and avoid errors in the preparation and dispensing of physicians' prescriptions. If the underlying principle upon which the author's article is based be admitted then harbers would only charge for the soap used in a shave and authors would only be permitted to charge for their paper and ink.

We not only ask that such articles be refused in the future but that some editorial expression of error or regret at the publication of the article in question be made in one of the issues of the near future and that this resolution be sent to the editor of Pearson's magazine and to the various pharmaceutical journals for publication.

A feature of the program of the evening was the reading of a paper on "The Use and Therapeutic Value of the Popular Animal Glands," by Dr. C. E. deM. Sajous. Dr. Wm. Jay Schieffelin read a paper discussing "The Use of Standardized Radium Emanations in Medical Practice." W. L. Cliffe, F. E. Stewart and H. C. Wood participated in the ensuing discussion. M. Franklin Apple was unable to present "The Review of Current Pharmaceutical Literature." He was called out of town by the illness of his father.

### N. Y. POLICE GET AFTER SUNDAY SALES

#### Conference Members Unanimously Agree Not to Sell Goods Which Most of Them Do Not Deal in

That the police of this city are renewing their efforts to stop the sale on Sunday of certain articles handled by some drug stores, was reported at the recent meeting of the New York Pharmaceutical Conference, held at the New York College of Pharmacy. It developed that a list of articles which shall not be sold on Sunday had been agreed upon by certain druggists in the Broadway district. The conference was asked to adopt this list in order to give it a sort of official pharmaceutical endorsement which would gain some consideration at the hands of the Police Department in case a pharmacist should be prosecuted. The list was practically unanimously adopted, but not before Peter Diamond and Dr. Joseph Kahn had put up a strong minority fight. Mr. Diamond said that he would not subscribe himself not to sell a list of articles, not one item of which did he carry in his store. He was willing to agree to sell nothing but medicines on Sunday, but the list presented did not apply to real drug stores.

The list is as follows:

Kodaks, cameras, printing frames, developing solutions, photo paper, photo glassware, photo trays, photo racks, photo lamps, photo tanks, photo tripods, photo carrying cases, electric lamps, electric flashlights, electric heating devices, electric flat irons, electric toasters, electric fans, electric hair dryers, bath room fixtures, out door thermometers, bric-a-brac, hand mirrors, memorandum books, blank books, hand bags, pocket books, picture books, dolls, toys, canes, playing cards, poker chips, cut glass, coat hangers, pocket knives, alarm clocks, jewelry, shoe polish, Pullman slippers, bathing caps, bathing shoes, bath mats, bath towels, whisk brooms, pine pillows, automobile hats and picture frames.

Tea, coffee, table oils, olives and such other food stuffs carried by druggists to be sold only during delicatessen hours.

Dr. Wm. C. Anderson reported that S. V. Gibson, of the New York Telephone Co. had informed him that his company

was working on a plan whereby the person 'phoning would pay the one-cent war tax on calls costing 15 cents or over. According to the latter, a small per cent. of the long distance calls are made over the slot machine 'phones. At any rate, the entire responsibility for the collection of the tax would be taken from the retail druggist.

Dr. Anderson also reported that, according to Dr. Haven Emerson, of the Department of Health, the Corporation Counsel had disagreed, in what seemed to Dr. Anderson a very informal sort of an opinion, with the opinion of the Attorney-General that health ordinance 182 was "without effect." Mr. Diamond quoted the Corporation Counsel to the effect that the Board has 182 under consideration and will probably amend it in the near future. Mr. Diamond also presented a lengthy report on the work of the attorney retained by the Conference. The entire discussion was concluded by the adoption of a resolution continuing the sub-committee with power.

The pharmaceutical members of the Advisory Council to the New York City Board of Health are unanimously opposed to the whole proposition, incorporated in the proposed Health Board ordinance, that the formulas of proprietary medicines be either published on the label or registered with the Board. This was the gist of another report made by Dr. Anderson. The pharmaceutical contingent were supposed to be in the position of aiding in the "strengthening" of the proposed ordinance, but to lapse into the vernacular, they could not even "see" the measure.

At the time of the presentation of the above report, according to Dr. Anderson, the proposed ordinance provided for the registration of the formulas with the Board. Such a regulation while it would not immediately make public proprietary formulas, as would their publication on the label, would permit their publication in the shape of evidence upon the instruction of a court. To bring this about would merely require the bringing of a suit by anyone who might claim that a certain proprietary did not accomplish the expected results. The Board of Health got no encouragement from the pharmacists on the Advisory Council, although the corporation drug stores were represented on this occasion for the first time. This is interesting, for the reason that, as we go to press, these stores are observing health ordinance 182, which is not enforced.

Dr. Anderson did not think that the Board of Health would be deterred in its determination to adopt the proposed measure.

Chairman Dr. Anderson also reported that the Board of Health would in the near future pass an ordinance prohibiting the distribution from house to house of samples of medicines.

It should be observed that the meeting reported by Dr. Anderson was not a meeting of the Advisory Council, but was an invitation affair to which the pharmaceutical members of the Advisory Council were invited. The same people were present but the auspices were unofficial.

### L. K. Liggett on South American Opportunities

Louis K. Liggett, president of the United Drug Company, Boston, was the guest of the Plymouth Advertising Club recently at Plymouth, Mass., and he spoke on business conditions. He was not optimistic over the prospect of South American trade opportunities, saying:

"The campaign to boom our export trade with South America and other markets usually supplied by England, France and Germany, while praiseworthy, does not appear to have the elements of success back of it, for South America is financially broke, with practically no credit, and furthermore American manufacturers do not understand the foreign markets and conditions. To get and keep this foreign trade necessitates special training and education, all of which means years of preparation. Before we could capture the South American markets, the war would be over. Then when this event comes, the price of labor will be reduced in these warring countries, probably 40 to 50 per cent. and with the desire to increase their volume of business, America, with her wealth, will be the logical market, with a result that this country, under our present tariff laws, will be flooded with foreign-made goods, with which our manufacturers will find it impossible to compete.

"Foreign countries export about 53 per cent. of their products, while America exports only about 5 per cent. and after the war is closed, there is every reason to fear a tremendous influx of competitive goods."

## CHAMBER OF COMMERCE BOARD AT WORK

### Committee on Food and Drug Control to Co-operate with Federal Bureau to Secure Uniform Legislation

The special committee appointed by the Chamber of Commerce of the U. S. A., to study uniform food and drug regulations, has begun its important task, and has adopted resolutions commending the efforts of the Federal Bureau in the Department of Agriculture. The personnel of the committee is as follows: Chairman, W. M. McCormick, of McCormick & Co., Baltimore; A. J. Porter, of the Shredded Wheat Co., Niagara Falls, N. Y.; John A. Green, of the National Association of Retail Grocers, Cleveland; B. L. Murray, of Merck & Co., New York; and Theodore F. Whitmarsh, of Francis H. Leggett & Co., New York. Mr. Murray has been appointed chairman of the sub-committee on drug control, and Mr. Porter, chairman of the division on food control.

The following resolution was adopted at the first meeting:

Resolved, that this committee hereby earnestly and heartily endorse the establishment of the bureau in the United States Department of Agriculture, particularly concerned with Federal and State cooperation in the enforcement of the food and drug control laws, thereby promoting equal and uniform enforcement of such laws, believing that this work is distinctly in the public interest.

Another resolution, unanimously adopted, purports to shed some light on what the committee's views are regarding uniformity:

Uniformity as the committee would define it involves the highest degree of efficiency in food and drug control which it is possible to have prevail universally and equally in every part of the nation. The Federal, State, and municipal laws and their regulations would, if perfect uniformity were attainable, reach the level of full and complete efficiency—and thereby afford equal protection and uniform standards of living for all the people. Uniformity accomplished places merit and the general public interest over local, political, and geographical divisions. This committee will therefore direct its efforts and consideration towards the accomplishment of uniformity. The committee cannot but feel impressed with the magnitude, the importance, and the seriousness of this work. It cannot but feel the need for the closest study of the subject. Again the committee cannot but feel the necessity for the fullest and most cordial cooperation between itself and the officials and all others concerned. The committee will of necessity act deliberately and slowly, making certain of each step, considering only the important problems of national character.

## NEW LIFE INJECTED INTO N. J. PH. A.

### Executive Committee meets in Newark, hears Favorable Financial Report and plans June Meeting

The executive committee of the New Jersey State Pharmaceutical Association met recently at the Continental Hotel, Newark, to discuss matters of interest to that organization. Those present were: C. J. McCloskey, Jersey City, and L. P. Langbeinz, Elizabeth, members of the committee; President H. C. Gallagher, Jersey City; Secretary Frank C. Stutzlen, Elizabeth; Treasurer James Foulke, Jersey City; Ex-President Charles W. Holzhauser, Newark; Member of the State Board David Strauss, Newark, and James C. Field, Asbury Park.

The books and accounts of the former treasurer were audited. Treasurer Foulke reported on the present condition of the funds of the association, which report was considered by the committee as a good one considering the short time Mr. Foulke had been in office.

It was also reported that many of the Congressmen elected favored the passage of the Stevens bill. Plans were outlined for the annual meeting at Spring Lake in June next. Local Secretary H. W. Crooks reported that in a short time he would be able to fix the exact date of meeting. Mr. Crooks expressed the belief that it would be the largest meeting in the history of the association. The aim of the executive committee this year is to put new life and vigor into the affairs of the organization, and to make the association so valuable that no pharmacist in the State can afford to remain without the organization.

Mr. Strauss, chairman of the membership committee, reported that an active campaign had begun for new members. He stated that he expected to have the largest number of new members that had ever been proposed at any former annual meeting.

Arrangements were made to print the proceedings of the 1914 meeting as soon as sufficient funds are at hand.

## SCHOOLS AND COLLEGES

### University of Maryland

The members of the University of Maryland Department of Pharmacy are elated over the fact that the number of students this year represents a great increase over last year and really sets a new mark, the increase being emphasized in view of the fact that the other departments of the university are hardly up to their former strength. The junior class in pharmacy this year contains not less than 75 names, which is fully double the number on the roster last year and revives memories of the most flourishing days of the Maryland College of Pharmacy, the predecessor of the department. This gain naturally makes the members of the teaching staff feel highly gratified. The increase holds out a promise that next year a further gain will be made, in juniors, while the senior class will also be much stronger because of the increase this year. There is every indication that the facilities of the department will have to be enlarged to take care of the influx. Dr. Charles Caspari, Jr., is the dean of the faculty.

Dr. G. A. Stall, one of the graduates of the Department, has been made assistant to Dr. J. Carlton Wolf in the dispensing division.

### University of Illinois

F. C. Dodds, secretary of the Illinois Board of Pharmacy, recently addressed the classes in pharmacy, the junior class on Nov. 10, and the senior class on Nov. 11. The addresses were confined to a discussion of the Illinois pharmacy law, pointing out the meaning of the various sections and its requirements for candidates for license as apprentice, assistant pharmacist and registered pharmacist; the conditions under which practical experience is accepted by the board; the restrictions upon pharmacists or clerks coming from other states or from foreign countries; the requirements regarding the preservation of physicians' prescriptions; the explanation of the cocaine section and the operation of the law in general. The address was closely followed by the students, who fully appreciated its value and helpfulness. It is planned to follow the precedent thus established with similar lectures to be given at each session.

### University of Iowa

The Junior class has elected the following officers: President, R. E. Everly, Canton, Ill.; vice-president, J. C. Lick, Dubuque; secretary-treasurer, Lucile S. Shircliff, Solon; yell leader, W. R. Jennings, Red Oak.

Phi Delta Chi held the first initiation of the year at the College on the evening of October 23. The initiates were W. R. Jennings, Red Oak, Ia., C. A. Pates and R. S. Potter, both of Jefferson, Ia.

The Mortar and Pestle Club recently began its program for the year. Professor Bohumil Shimek gave a most interesting talk about his experiences in Europe during the past summer, dwelling especially upon the conditions of life among the common people. He also told some very interesting things which show the contrast between systems of education in universities there and in America. At the second meeting on Nov. 3 G. J. Zopf talked on "What Constitutes an Efficient Drug Clerk."

C. B. Burnside, Ph. G. '12, Ph. C. '13, of the Schlegel Pharmacy, Davenport, writes that he has been asked to give a course of lectures on chemistry to a class of nurses at Mercy Hospital, that city.

Phi Delta Chi celebrated Founder's Day on November 2 with a banquet at the Hotel Jefferson. Dr. C. S. Chase acted as master of ceremonies, and this toast program was carried out: "The Pharmacy College and Phi Delta Chi," Dean W. J. Teeters; "Our Grand Council," A. B. Wagoner; "Fraternity," Professor R. B. Davis; "The History of Phi Delta Chi," Professor R. A. Kuever; "E. Pluribus Unum," Dr. W. J. Karslake; "The View Point of the Pledge," W. R. Jennings; "The Fraternity House," L. K. Fenlon. Phi Delta Chi fraternity was founded at the University of Michigan thirty-one years ago. Nu Chapter at the University of Iowa is in good condition and its record of scholarship is of the highest order.

J. C. Bailey, of the N. A. D. C., was in the city recently and presented the Association's cause to the students.

## St. Louis College of Pharmacy Celebrates Golden Jubilee

A group of notable pharmacists who were photographed in front of the fern house at Shaw's Botanical Garden, St. Louis, at the time of the recent college celebration. Among those whose features many readers will readily recognize are (from left to right): 1, William Mittelbach, Boonville, Mo.; 2, Prof. F. J. Walling, Minneapolis, Minn.; 3, Dr. O. A. Wall, Sr.; 4, Prof. Charles Caspari, Jr., Baltimore, Md.; 5, Prof. James M. Good; 6, Dr. Charles E. Caspari, St. Louis; 7, Prof. Joseph P. Remington, Philadelphia; 8, Dr. Otto A. Wall, Jr.; 9, Dr. H. M. Whelpley; 10, Dr. Otto F. Claus; 11, Wm. K. Ihardt; 12, L. A. Seitz; 13, Charles Geitner; 14, Theo. F. Hagenow; 15, Prof. Francis Hemm; 16, Wm. C. Bolm; 17, Dr. J. C. Falk (president of the college).

St. Louis, Nov. 12.—The two big days and the two big nights of the formal celebration of the semi-centennial of the St. Louis C. P. closed in a burst of eloquence at the Planters Hotel last night, when more than 500 persons, representing all sections of the country, attended the college banquet. The feast closed the program formally but the celebration isn't over—it won't be over until the St. Louis College of Pharmacy has a new home. That's the ambition—and St. Louis College of Pharmacy has a record for progress.

The program of formal exercises at Central High School auditorium on the evening of Nov. 10 is sufficient indication to the pharmacist of the success of the first night's celebration: "Announcement," Dr. H. M. Whelpley, dean; "St. Louis College of Pharmacy," Col. C. P. Walbridge, ex-president; "American Pharmacy," Prof. Joseph P. Remington, Philadelphia; "The Student Body," Dr. Joseph L. Boehm, class of 1896; "Pharmacy During the Existence of the St. Louis College of Pharmacy," Prof. Charles Caspari, Jr., Baltimore; "The Relation of the United States Pharmacopoeia to the Public," Dr. James H. Beal, Scio, Ohio; "The Possibilities of the St. Louis College of Pharmacy," Prof. Frederick J. Walling, Minneapolis, Minn.

At the banquet the toastmaster was Frederick W. Sultan. The toasts: "Greetings," Dr. John C. Falk, president; "The Faculty," Dr. H. M. Whelpley, dean; "The Alumni," William C. Bolm; "College Days of the '60's," Dr. Otto A. Wall, Sr.; "Presentation of Portrait of Dr. Charles O. Curtman, professor of chemistry, 1879-1889," Mrs. Ida Curtman Falk, his daughter; "Acceptance on Behalf of the College," Dr. F. W. Freirichs; "College Days of the '70's," Dr. Henry Schwarz, '76; "The Pharmaceutical Press," Henry R. Strong; "College Days of the '80's," Dr. Otto F. Claus, '82; "Guests," Prof. Frederick J. Walling, U. of Minn.; "College Days of the '90's," Dr. Oscar H. Elbrecht, '97; "College Finances," Solomon Boehm, '86; "College Days of the '00's," J. A. Wilkerson, '00; "College Days of '14," Walter S. Hunter; "Absentees," Dr. Charles E. Caspari.

At the High School auditorium and at the banquet there were programs of orchestral music.

Among those participating in the celebration were about 500 graduates of the institution. One of the events of the two days of entertainment was a visit to Missouri Botanical (Shaw's) Garden. On this outing, and at the High School and at the banquet, there were a number of women guests. At the banquet there was a vote taken on the question of whether it was advisable to make high school graduation or its equivalent a pre-requisite for entrance to a college of pharmacy as a student or for examination before a State Board of pharmacy. The vote was 164 in favor and 103 against such a prerequisite requirement. Prof. Charles E. Caspari of the St. Louis College of Pharmacy gave a banquet at the University Club in honor of his father, Prof. Charles Caspari, Jr., of Baltimore.

The St. Louis College of Pharmacy was established in the fall of 1864. Among the founders and first officers were Dr. George Englemann, Dr. Montrose M. Pallen, Dr. John T. Hodgen, Henry Shaw, Col. John O'Fallon, Dr. Enno Sander, Eugene Massot and Maurice W. Alexander. After preliminary consultations, a meeting was called for Nov. 3, 1864, to take definite action in regard to establishing a college in St. Louis. This meeting was held in the office of Dr. Montrose M. Pallen, who acted as chairman, with Eugene Massot as secretary, and a committee was appointed to draw up a constitution and by-laws.

On Nov. 11, 1864, another meeting was held in the hall of the St. Louis Medical College, on Seventh Street and Clark Avenue, which was largely attended by physicians and pharmacists. Dr. John T. Hodgen presided and Dr. J. S. B. Alleyne acted as secretary. The constitution and by-laws were adopted and the St. Louis College was formally established.

Lectures began in the fall of 1865. Lecture courses have been given every year since, except in the winter of 1869-70. The legal existence of the college dates back from March 19, 1867, when a charter was obtained. After several changes in location, the college acquired a more permanent home, in 1873, in the Insurance Exchange Building, southeast corner Broadway and Olive Street, now occupied by the National Bank of Commerce, where the fifth floor was occupied by the college

pharmacy. In 1884 to 1886, was opened in a new building at 412 South Sixth Street, especially built for college purposes. It was leased by the college. In October, 1892, the college moved to its own building, at 2108-2110 Locust Street, which it now occupies. The present building is being built on the old site and the neighborhood is changing to a business section, so that a change of location will in time become most imperative. A committee has been appointed to consider this matter and plans for a new building and location have been completed.

OF THE SIX colleges of pharmacy in this country that are fifty years or more old, St. Louis College of Pharmacy is one. It has its own building and is devoted exclusively to the college pharmacy. It has been upheld by many successful and famous officers on the part of its members, and its faculty, to all of whom great credit is due. The college is not a money-making scheme, but if it were discontinued its property would revert to the state educational institutions. Therefore, it appeals to the good will of all for their support in its efforts to help elevate pharmacy in this country.

The Committee on Semi-Centennial which planned and had charge of the great event, was composed of the following members: Solomon Boehm, Wm. C. Bohm, Charles E. Caspari, Otto F. Claus, Theodore F. Hagenow, Henry O. A. Huegel, Edward Malinckrodt, George R. Merrell, Theodore F. Meyer, William H. Theiler, H. M. Whelpley and Jerome A. Wilkerson.

## BARIUM POISONING—STRIKING COINCIDENCE

### Druggist in this City and One in Baltimore Fill Prescriptions with "Sulphide" and Patients Die

A remarkable coincidence in the filling of almost identical prescriptions with the same poison and with the same fatal results occurred recently when a druggist in this city and one in Baltimore, in the same week, filled physicians' orders for barium sulphate, to be used preparatory to X-ray examinations, with barium sulphide, the patient in each case dying shortly after. Both druggists claim that they have never in their experience dispensed barium sulphate. To each it seemed obvious that he was dispensing the only medicament that the prescription called for.

Isaac Harkavay, druggist at 216 Clinton street, this city, filled a prescription calling for "barium sulphate, two ounces," by sending a bottle of barium sulphide, labeled as such, to the physician. The patient died and the druggist and two physicians, Dr. I. J. Hoffman and Dr. Joseph Barsky, were held in \$5,000 bail each, awaiting the coroner's inquest.

According to Mr. Harkavay's statement to an ERA representative, he had been accustomed for some time to deliver poisons upon proper order to one of the physicians, by Lizzie Goldstein, whom the druggist thought was a janitress. On the above date, this woman came to the store and presented what was really a prescription, bearing the name of Dr. I. J. Hoffman and calling for "barium sulphate, two ounces." Mr. Harkavay says that the order was almost illegible, but he had to admit that he could make out the "barium sulphate" and knew that it did not read "barium sulphide." He says that he had a bad headache at the time and was very busy putting up prescriptions. He thought the physician had made a mistake and was guided by the fact, as he says, that in his entire twelve or thirteen years' experience in the drug business, he had never sold barium sulphate. He had put up barium sulphide in the compounding of hair-removing preparations, and had only the day before used six ounces of the sulphide for this purpose. He had taken this amount from an eight-ounce bottle, bearing Merck's label, on which was stated in comparatively large letters "Barium Sulphide." Mr. Harkavay showed the ERA representative a similar bottle and anyone capable of reading English could read the label three or four feet away from their eyes.

Mr. Harkavay says he picked up the barium sulphide bottle with its approximate two ounces in it, handed it to the woman and said: "Here's the bottle; show it to the doctor." According to newspaper report the two physicians named used the sulphide, instead of the sulphate, and the patient, William Goldstein, a manufacturer, died soon after. According to the report Mr. Goldstein had been requested to come to the physi-

cian's office without having eaten his breakfast and the sulphate was to have been used preparatory to an X-ray examination.

### Faulty Abbreviations Cause City Council to Act

BALTIMORE, Nov. 2—George R. Jones went to the pharmacy of the Associated Drug Stores, handed the clerk, Harry Leeds, a piece of paper from Dr. Albert H. Carroll, of the University Hospital staff, which bore the words "barium sulph." The clerk gave Mr. Jones the required amount of barium sulphide instead of barium sulphate. Mr. Jones was taken ill and died in St. Luke's Hospital on October 23. He had been suffering from stomach trouble, and went to the University Hospital where he was advised to submit to an X-ray examination. Dr. Carroll instructed him to take barium sulphate as a preparation, and gave him the paper which he presented at the pharmacy.

At the inquest, Dr. Carroll insisted that "sulph." in a prescription always meant "sulphate" and never "sulphide." He stated further that barium sulphide and barium sulphite were unknown to standard works of materia medica as drugs to be taken internally. With this contention, S. A. Nattans, general manager of the Associated Drug Stores, took issue, maintaining that the best authorities in pharmacy, including the leading druggists of Baltimore, agreed that "sulph." as an abbreviation, might mean "sulphate," "sulphide" or "sulphite." In this he was supported by Dr. Henry P. Hynson, professor of pharmacy and dispensing at the Department of Pharmacy, University of Maryland; by Dr. Charles Caspari, jr., Pure Food and Drug Commissioner of Maryland, and by others. Harry Leeds, the clerk who put up the sulphide, stated that in his 23 years' experience he had never filled a prescription for the sulphate.

The city council took immediate action, and has before it an ordinance which prohibits pharmacists from filling prescriptions written in abbreviated terms. The penalty is a fine not less than \$25 nor more than \$100, or imprisonment, or both fine and imprisonment for not more than three months.

### Baltimore Bowlers Start Balls Rolling

Baltimore, Nov. 16—The Baltimore Drug Trade Bowling Club has been re-organized and commenced active work at the Diamond. The club consists of four teams, representing James Baily & Son, the Armstrong Cork Co., McCormick & Co., and the A. Baumgartner Co. The officers elected at the recent meeting are: President, George M. Armor, McCormick & Co.; vice-president, Andrew Baumgartner, A. Baumgartner Co.; treasurer, William E. Smuck, Henry B. Gilpin Co.; secretary, Harry Cann, Henry B. Gilpin Co.; team captains, William Jahries, James Baily & Son; R. E. Leutbecher, Armstrong Cork Co.; Henry Grauling, McCormick & Co., and Henry Kornmann, A. Baumgartner Co.

As in former years, there will be a number of prizes awarded at the end of the season to the leaders, and contests will also be arranged with picked teams from New York and Philadelphia.

### Perry Pharmacy Made \$20,000 per Year

That the profits of Perry's pharmacy, in the World building, New York, were \$20,000 a year for the three years prior to the death on July 13, 1913, of Dr. Charles J. Perry, the founder, was disclosed recently when the transfer tax appraisal of the estate was filed. According to the report, Dr. Perry left a total estate of \$181,827, and a net estate of \$176,964. The estate goes in equal shares to his brother, Jeremiah W. Perry; his half-brother, William A. Perry, and his half-sister, Mrs. Fanny O'Connell.

The appraisal of Dr. Perry's interest in the Perry Pharmacy Association, the corporation conducting the drug store, showed that the corporation has a capital stock of \$40,000, consisting of 400 shares, of which Mr. Perry owned 200. The stock in the drug store was valued at \$14,000, and the fixtures at \$1,000. The good will brought the value of the stock up to \$185 a share. Walter Lauder, secretary of the association, testified that Dr. Perry drew only \$1,500 a year salary as president and manager. Lauder received \$3,500 as secretary. The corporation pays \$25,000 a year rent. It is understood a certain candy merchant would be willing to pay twice that rent for the location. The lease is good until 1921 and cannot be transferred or sublet.

## ADJUSTING CUSTOMERS' COMPLAINTS

### Standing Behind the Goods Sold, or Problems of the "Money-Back" Policy in Business Building

IT is getting to be something like an axiom with retail druggists that the part of the business relating to prescriptions and medicines is nowadays a minor detail, compared to the wide variety of merchandise in other lines handled. Growing out of this undoubted fact, is the important conclusion, evidenced by leading members of the trade everywhere, that not only are the principles of successful merchandising applicable to the drug business, but they are almost essential there, if the business is to be successful.

And yet, although this is plainly the case, there are a good many retailers who fail to recognize the fact. The proverbial druggist is accommodating to a fault, as witness the ancient jokes about the sale of postage stamps and the free use of his city directory by everybody in the neighborhood; but, while the essence of good merchandising is this same accommodating spirit, somehow or other the druggist as a rule seems to stop just short of realizing this in a practical way. The exceptions are practically always the conspicuous successes of the business.

For example—the way some members of the trade handle certain cases, or permit their employes to handle them—there was a customer not long ago who came into a leading drug-store with a very definite complaint about a hot-water bottle which she had recently purchased. She told the clerk who waited on her, very emphatically, that she had paid a good price for the article, that she had been given to understand that it was first class, and that, notwithstanding these things, it had promptly sprung a leak, resulting in considerable inconvenience and annoyance. She had it with her in evidence, and handed it over with a conclusive air.

"Are you sure you bought this here?" cautiously inquired the clerk, looking at the hot-water bag suspiciously, and handling it in a manner which indicated clearly that he did not think much of it.

"Of course I am sure I bought it here!" retorted the customer, warmly. "Didn't you hear me tell you I did? Do you mean to say you don't believe I got it here?"

"Oh, no, nothing like that!" the clerk hastened to reply. "Still, it doesn't look like our stock, and it just occurred to me that perhaps you had made a mistake, and—"

"Young man," interrupted the customer grimly, "it is impossible that I could make a mistake about a thing of that sort. My memory is perfectly good, and the facts are just as I related them. Are you going to make that hot-water bag good, or not?"

The clerk hesitated, still examining the bag dubiously.

"Well, we don't exchange rubber goods, as a general rule," he finally said. "You can take it up with Mr. Jones, if you want to, but I don't think he'll do anything for you. No, he isn't in just now, but he will be back some time this afternoon, I think. If you'll stop in again—"

But here the irate customer flounced out of the store, leaving a trail of inarticulate remarks regarding the business methods of the store; and inasmuch as she did not return, one way of looking at the matter is that the store saved the cost of a new hot-water bag to take the place of the one which had fallen down on the job. Taking a little broader view, however, and considering the fact that from a regular customer she was turned forthwith into an ardent enemy of the store, which meant the loss of her business as well as, possibly, that of some of her friends, the net gain to the store could hardly be considered as anything worth while.

Besides, if, as might have been the case, the goods were faulty in some respect, the chances were very much that the manufacturer would have made good on them. The average manufacturer stands behind his wares pretty stoutly, as a matter of good business, and the retailer should by all means do the same, not only in cases where he knows he has the backing of the manufacturer, but also where he is marketing the goods on his own responsibility, without a maker's mark or brand or guarantee behind him. He should do this simply for the reason that any other course will lose him business, whereas a policy whose cardinal principle is to stand firmly behind the goods he sells will just as certainly make friends, which means that it will make business.

"Regardless of whether or not the manufacturers of our goods back them up in case of defects of any kind, we make them good to our customers, entirely without question," declared the head of a company operating several prosperous drug stores of the modern sort in a large city recently. "The only alternative is such that we simply don't care to accept it. That is, in order to turn down a customer with a just complaint about goods, we have to argue with him until we both get sore, and send him out with a grievance against us which he will never forget. He becomes a walking advertisement of infinite harmfulness to us.

"Believing this, as we do, we frequently adjust complaints in which the customer is in the wrong. Our position in such cases is that the value of the merchandise is not sufficient to offset the bad effect upon our business of a dissatisfied customer; therefore, we take the choice of practically giving the goods away rather than have the customer feel that we are not willing to treat him well. Inasmuch as our published policy is to treat our customers rather better than most, we can't afford to back down, even in cases where we could show an impartial judge that we are right.

"Then, too, as I say, in many cases the goods are backed by the manufacturer, so that if there is a real defect there is no loss whatever to us, as the maker credits us with such goods when they are returned. Our experience has been that the average manufacturer, even without having made any specific promise along this line in advance, is willing to do the fair thing where his goods fail to make good; and with this knowledge, we find no cause to hesitate where the customer can show us a fault.

"Results have abundantly justified us in following this policy without exception. It is only very seldom that cases of abuse on the part of customers arise. Most of the time when goods are brought in with a complaint, the kick is justified; and the instructions we give our sales force are to adjust such matters promptly and without argument. It makes our customers feel very friendly toward us, and they spread the news around, much to our benefit. Of course, our store managers are usually called upon to handle these adjustments; but they never find it necessary to send a customer away angry on this score, because they follow out the policy which we have found the most practical and profitable in this respect—the money-back policy."

In every line of retail business nowadays the leaders are doing this same thing. Realizing fully that just as a satisfied customer is the best possible advertisement, a dissatisfied customer is a powerful handicap, they take the view, as one big store manager put it, that the customer with a complaint is always right; and, with this view, there is never any trouble in adjusting complaints in a way which makes a friend for the store, and, in many cases, involves no loss to the business. It is only a very short-sighted merchant nowadays who will haggle and hesitate about adjusting small matters, saving a few cents and losing a customer's good-will.

### "DANDELION ROOT" FOUND PART CHICORY

#### Oil of Cinnamon Leaf is Substituted for Oil of Cinnamon and Yellow Colors Contain Arsenic

Washington, Nov. 20.—The Department of Agriculture has given notice of judgments \$242 to \$351, imposed by the courts in cases brought by the United States involving violations of the Food and Drugs Act, most of them relating to misbranding or adulteration.

Two bags containing 300 pounds of a product purporting to be cinnamon root, remaining unsold in possession of Lawrence S. & Gerish, New York, were ordered destroyed. Product was alleged to have been shipped by Smith, Kline & French Co., Philadelphia. Each of the bags bore the words "Dandelion Root," although the product consisted in substance of chicory. No claimant appeared.

A fine of \$100 was imposed upon Vincenzo Marrone and Robert L. Linn, Utica, N. Y., for the shipment of a quantity of so-called leave or cottonseed oil which was adulterated and misbranded. Product was labeled "Olio Puro Soprattino Raffinato, D. Angelo Lucca, Italy," "Cotton Seed Oil." Product consisted wholly or in part of corn or sunflower seed oil (?), in conformity to impression given by label was not of foreign manufacture. Pleas of guilty were entered by defendants.

Sentence was suspended in the case of Ungerer & Co., New York, which firm shipped a quantity of oil of cinnamon which was adulterated and misbranded. Product was labeled: "Oil of Cinnamon Ceylan-Jeuneard Fils & Cie-Cannes, France, Ungerer & Co., New York." Oil of cinnamon leaf had been substituted in whole and in part for the genuine oil of cinnamon. Defendant company entered a plea of guilty.

A fine of \$200 and costs was imposed upon E. V., M. V., I. G. J. and J. Kohnstamm, and W. Longfelder, co-partners, doing business as H. Kohnstamm & Co., Chicago, for shipping a quantity of so-called yellow egg shade coal tar color used as an ingredient in the preparation and manufacture of confectionery products. Product was labeled: "Atlas Colors for Confectioner's use H. Kohnstamm & Co., New York (Chicago Yellow Color Egg Shade Coal Tar Color Guaranteed Harmless). We guarantee the contents of this package to contain no coloring matter other than that of the seven colors permitted (in certificate form) in F. I. D. 76 < >." It contained arsenic, as arsenious oxide. Defendants entered a plea of guilty.

A fine of \$30 was imposed upon John N. and Bert Hickok, doing business as J. N. Hickok & Son, New York, for shipping a quantity of lemon yellow color which was adulterated. Product was labeled: "Non-Poisonous Color—Soluble Lemon Yellow—John N. Hickok & Son, 85 Murray St., New York." It contained arsenic. A plea of guilty was entered on behalf of defendants.

A libel was filed for the seizure and condemnation of nine packages containing approximately 468½ pounds of a product purporting to be oil of birch, remaining unsold at New York, alleging that product had been shipped by J. B. Johnson, Hickory, N. C., and charging adulteration and misbranding. Product bore no marks or labels except the name and address of the consignee and express data, but was invoiced as birch oil. It consisted largely of methyl salicylate, which was substituted for the pure oil. Judgment of condemnation and forfeiture was entered, and court ordered that product be redelivered to James B. Johnson, claimant, upon payment of costs and execution of bond in sum of \$750, one of conditions being that product should be relabeled in conformity with the Food and Drugs Act.

Two cans of a product called oil of wintergreen, remaining unsold at Boston, were ordered destroyed. Product was alleged to have been shipped by Frank P. Dowe, Spring Glen, N. Y. Containers were labeled in part: "Oil Wintergreen Leaf \* \* \*." Tags on containers were labeled in part: "From Frank P. Dowe, Distiller of Pure Oil Wintergreen from the Leaf Extract of Witch Hazel, Spring Glen, Ulster Co., N. Y." Product contained less than 25 per cent. of oil of wintergreen. No claimant appeared.

### Workmen's Compensation in Maryland

Baltimore, Nov. 16.—At the last meeting of the Baltimore Retail Druggists' Association a special committee was named, consisting of M. S. Kahn, David R. Millard, of Morgan & Millard, and John I. Kelly, to confer with the Insurance Commissioners having charge of the enforcement of the new

Workmen's Compensation act, relative to the question whether the law applies to retail druggists or not. Under the law employers of labor are liable to damages for accidents to their employes sustained in the course of their labors, and this has resulted in the insuring of such risks with casualty and other companies. The retail druggists are not certain that they come within the scope of the law, and in order to set at rest all doubt on the subject the special committee was directed to confer with the proper authorities and ascertain their views. The new law was discussed at some length at the meeting, and a diversity of ideas developed. The prevailing belief among pharmacists, however, is that the retailers are not affected by the law, since they are not employers of labor in the generally accepted sense of the word.

### AMERICAN REMEDY FOR HOOKWORM

#### Baltimore Oil of Wormseed Suggested as a Possible Substitute for Thymol as an Anthelmintic

Baltimore, Nov. 16.—The interference with foreign trade due to the war, and the resultant restrictions upon the imports of the United States have brought into conspicuous notice again a product which is produced almost wholly in Maryland, as a substitute for thymol, formerly used in the campaign against hookworm in the South. This product is wormseed oil, which, according to Dr. Murray G. Motter, technical assistant at the Hygienic Laboratory of the Public Health Service at Washington, has great possibilities, especially at this time. In discussing the subject recently, Dr. Motter is quoted as saying:

"As indicated by the name, wormseed oil has long had a reputation as an anthelmintic. The plant from which the oil is distilled grows in waste places from New York to Florida. It has, however, been cultivated, particularly in Maryland, and the oil has been known as Baltimore oil in contradistinction to the Western product, which is no longer much of a factor. While the oil is almost wholly a Maryland product, the seed is said to be harvested in considerable quantities in Florida.

"In view of the fact that October is the time of harvest and that with the diminished or disappearing supply of thymol the demand will be still further increased, every effort should be made not only to husband this year's crop of wormseed oil to the best advantage, but to provide for a largely increased seeding here next spring.

"Physicians having hookworm cases under their care should give this remedy a thorough trial and report promptly their results to the medical journals. Data of this kind would aid in rehabilitating a truly American remedy, said to have been used by the Indians as a vermifuge before the landing of Columbus, and in helping the American medical profession to do without some of the products which, hitherto, have been almost wholly 'made in Germany.'"

### SUES M. C. DOW FOR \$75,000 DAMAGES

Cincinnati, Nov. 17.—A suit of considerable interest to druggists on account of its nature, as well as to the general public, was that recently tried in this city. Jeannette L. Cameron, daughter of a former United States Senator and a writer of some note, being the plaintiff, against M. C. Dow, head of the Dow drug stores. Miss Cameron alleged in her petition, in which she asked damages of \$75,000, that she had sent a boy to the Peables' Corner store of the Dow string to buy some Epsom salts, in August, 1913, and that he was given a mixture containing white arsenic instead. She claimed that she took the mixture and became a helpless invalid in consequence, appearing in court on a cot.

The defense denied that any such error had occurred, pointing out the indefiniteness of the proof, and alleging that if Epsom salts had been requested, it had been sold. Medical evidence was introduced on both sides, that for the plaintiff being to the effect that there were symptoms of arsenic poisoning, while that for the defendant went to the point that the symptoms might have been due to other causes, and also that they were not pronounced enough to indicate arsenic poisoning beyond question. It was also suggested by the defense that a mistake might have occurred at the plaintiff's home. After a trial lasting several days, the case went to the jury, which was unable to agree on a verdict and was finally discharged. The case may be tried again, and will be fought to a finish by Miss Dow, who is quite confident that no such mistake as that alleged occurred.

## FROM THE BUSINESS FIELD.

The **A. Spiegel Co.**, Milwaukee, Wis., recently received what is said to be the first bale of new cotton ever shipped to that city. It rested on the sidewalk in front of the company's drug store for a day or so, thousands of people viewing it. The bale was the first one purchased and shipped to Milwaukee since the "B.A.B." movement began. It weighed a little less than 500 pounds and was raised by a tenant farmer near Red Oak, Ga. It cost \$47.10 exclusive of freight. It was to have been donated to a committee planning a bazaar to raise funds for a local home for working girls. Like the oyster in the stew at the church fair, this bale of cotton has gone a long way in a good cause.

The **Croom-Stebler-Hudson Drug Co.** has been organized at Shreveport, La., to take over the old business of the Carter-Mayfield Drug Co., at 326 Texas street, articles of incorporation having been filed. For 20 years this business was under the management of Leon M. Carter. Messrs. Hudson and Stebler have for the past four or five years been connected with the Shreveport Drug Co. A thorough renovation of the store will be a feature of the change of management. The senior member of the firm is C. S. Croom, merchant and capitalist of Mooringsport. The other two partners will be in active charge of the business. The company is capitalized at \$25,000.

"The **Sun Drug Store.**" will be the style of the old Eagle Pharmacy, at Corpus Christi, Texas, recently purchased from the receivers, the San Antonio Drug Co., by A. F. Weir, a former employe of the receivers. Mr. Weir was also previously connected with the Thomas' Model pharmacy and Treadwell's. This drug store has been in operation for about one year in the Jones building, and had been in charge of the owner, L. L. Moore. On September 28, it was sold to the San Antonio Drug Co., which acted as receivers. Mr. Weir will open the business at 417 Mesquite street. The interior has been remodeled and Mr. Weir will add new goods to the stock.

**Mrs. Caroline Rhein.** who sued the Associated Drug Stores in Baltimore to recover \$2,000 damages for alleged assault and battery got a verdict for one cent in Part 2 of the Superior Court on October 26. It appears that a package with \$82 had been taken from the safe and placed on the counter for the bookkeeper at the store on Saratoga and Eutaw streets. Mrs. Rhein, who said she believed the package contained some free gift and was intended for her, put it in her satchel. She complained that afterward, when she was called back from a department store to correct the mistake, her satchel was opened and she was treated roughly.

The **Dayton (O.) Pharmacal Co.** was recently placed in the hands of a receiver, on the petition of W. F. Harbison, a stockholder and creditor, who declared that the receivership was necessary on account of the pressure of creditors, and that if the company is left unhampered for a year it will be in excellent condition. Its business is principally confined to the manufacture and sale of chemical supplies for physicians. The Company was incorporated in 1911 with a capital stock of \$10,000, and has assets of \$4,400, with liabilities of \$3,600. Edward E. Duncan was appointed as receiver.

**Frank S. Smith,** one of the oldest and best known druggists of Auburn, N. Y., was fined \$1,000 and his license was cancelled. He was indicted on two counts for violating the Boylan law. The District Attorney called attention to the fact that the plea of guilty disfranchised Mr. Smith and revoked his license to practice pharmacy. He stated that he thought the people would be satisfied with the imposition of a fine. The judge stated that he would have to take some drastic action as a warning to others not to sell drugs in violation of the law. The fine was paid.

**Haverhill, Mass.,** druggists have been using weights of which more than 25 per cent. were defective. The city sealer of weights and measures recently completed his inspection and made the above discovery. The trouble was caused, in his opinion, because the weights had never been previously sealed, the city not having the necessary apparatus. He confiscated 127 weights which were in poor condition. Out of 827 weights 210 were below standard. One weight which should have

weighed 70 grains, weighed but 64, having lost over five grains during its 30 years of usage.

**Somerville, Mass.,** ministers called a public meeting in the Y. M. C. A. hall of that city in order to organize among the citizens a movement against the granting of druggists' liquor licenses. By registered letter they asked every political candidate in their territory to state his attitude toward druggists' and "pony express" licenses. The ministers have found, it is reported that the records show 31,969 liquor sales by 38 druggists holding sixth class licenses and 790 sales by three druggists having eighth-class licenses, which permit sales only on a physician's certificate.

**Charles M. Dodson,** who has conducted a drug store at Berlin, Wis., for the past 23 years, has sold the pharmacy to Dr. E. C. Neuman and R. J. Hoyer, both of West Bend, Wis. Riemer and was one of the oldest drug stores in Wisconsin. Mr. Dodson will reside in Berlin, where he will continue to manage the Opera House. Dr. Neuman and Mr. Hoyer, the new proprietors, have conducted a pharmacy at West Bend for some time. They will remodel the Dodson store and install a new soda fountain.

The **Jarecki Chemical Co.**, of Cincinnati, held recently its annual meeting at Sandusky, O., when all of the directors were re-elected, except that Eli Winkler was elected to the board to succeed Isaac Winkler. The officers are Gustave Jarecki, president and general manager, and F. E. Sprunz, secretary and treasurer. The reports of the officers indicated a very successful year for the company, and prospects for business during the coming year, on account of the war and other conditions in the trade, were declared to be even brighter.

The **May Drug Co.**, Pittsburg, Pa., was recently convicted of selling cigarettes to a minor. The minor was 17 years of age, but looked of age to the clerk. Counsel for the defense contended that if druggists were held down to the letter of the law, purchasers of cigarettes, no matter how young, but who appeared to be more than 21 years of age, would be obliged to furnish affidavits as to their ages before they could receive accommodations at a drug store or tobacco store. The judge failed to agree with this contention.

**M. C. Dow** will soon establish the eleventh store in the string of Dow pharmacies in the corner of the ground floor of the handsome new Gwynn building, at Sixth and Main streets, Cincinnati. The building is one of the most strikingly beautiful in the city, being 12 stories in height, and of very unusual design; and the big store-room on the corner, which is much the largest of the several into which the ground floor is divided, will be finished in a manner which is in keeping with the rest of the building.

The **Gunn Pharmacy** and the **Gunn Drug Co.**, Birmingham, Ala., have filed petitions in bankruptcy and a receiver has been appointed. He has instructions to operate the two stores as going concerns until further orders from the court. The liabilities of the Gunn pharmacy are estimated at about \$8,000, with assets approximately worth \$10,000. The Gunn Drug Co. recently opened for business in a new store building and its liabilities are scheduled at \$10,000, assets, estimated at \$20,000.

**F. J. Rogers,** of the export bureau of the Board of Commerce, Detroit, Mich., recently had in his possession for a period of five days a complete list of drug firms doing business in South America. The list belonged to the United States Government and Mr. Rogers permitted Detroit business men who were interested to examine it. Letters from several countries seeking trade relations with the United States were also open for inspection.

The **Dayton Pharmacal Co.**, Dayton, O., has had receivership proceedings instituted against it by W. F. Harbison, who declares that of the defendant company's liabilities of \$3,600 the sum of \$813 is due him. Assets of the company are said to be worth \$4,400, but the plaintiff asserted it was necessary to file the suit to prevent detrimental action by creditors and forced sale. A receiver was appointed under \$5,000 bond.

The **Williams-Donnell Drug Co.**, Norfolk, Va., was recently advised by the city Board of Control that it had no power to annul the contract which the company had made to supply the city home with medicinal supplies. The company submitted to the Board an itemized list showing the advances in prices of drugs since the beginning of the war in

Verdict. The contract is effective from July 1, last, to July 1, 1915.

**Joseph L. O'Hara**, druggist, at 26 West Market street, Chicago, N. Y., has filed a voluntary petition in bankruptcy. His creditors' claims and liabilities aggregating \$15,332 and assets amounting at \$7,000. The latter consist of stock and store fixtures. About half of the debts are represented by loans made to family relatives when he entered business 12 years ago. A bank has a note of \$5,000 that is listed among the liabilities.

**Mrs. Mabel Cope**, widow of the late Frank C. Cope, formerly of Chicago, at Dayton, Ind., was recently granted a decree of divorce. Her annual income of \$12,000 per year until the estate is settled. The income is to be paid to the estate to be worth \$750,000. The settlement was made in accordance to the extent of the estate of \$850,000. She stated that she and the mother of the late Frank Cope were jointly heirs to the estate.

**Katz & Besthoff**, New Orleans, La., has taken an additional lease on the grocery building at 732 Canal street. The company will spend \$1,000 remodeling and painting the company's store and its factory department and in renovating the front with a stucco and plate glass structure. The remodeling of the store's ice cream and soda water's machinery and as has been accomplished.

**C. S. Blair**, a pioneer druggist of Milwaukee, Wis., has sold his business to the Chicago Drug Co., recently organized at Wausau, Wis. The Wausau concern has moved its stock from that city to Mesomer and added it to that of Mr. Blair's. Mr. Blair has been engaged in the drug business at Mesomer for 35 years. Harry Hackbart, of Wausau, one of the owners of the Chicago Drug Co. is in charge.

**The Alfred Vogeler Drug Co.**, Cincinnati, is being sued by the United Cigar Stores Co. Plaintiff would compel defendant to occupy a store room at the northwest corner of Fifth and Walnut streets at an annual rental of \$2,500. Judgment was asked for \$700 as the first month's rent. The cigar company says that the room was leased in 1908 by parties who assigned it to the drug firm.

**The Stucky Pharmacy**, Beaver Falls, Pa., has broken ground for the construction of its new building, which will be located at the corner of Tenth street and Seventh avenue. The proprietor of the new drug store is also proprietor of the Red Cross pharmacy at New Brighton. The store will be arranged with a balcony for the display of musical instruments.

**F. W. Mueller's** drug store was recently formally opened at Tenth and Oregon streets, Oshkosh, Wis. Late last March the Mueller store was burned, and, as the old store building was too far gone to repair, Mr. Mueller immediately purchased the property and planned a new store building. Music and souvenirs for the ladies were features of the opening.

**Rousseau & Brown** recently opened a new drug store in the Chilson block, Woonsocket, R. I., after 33 years in business elsewhere in that city. The solid mahogany fixtures are a feature of the store. Increased space and better facilities for handling a growing business are other features incidental to the change in address.

**St. Cloud, Minn.**, drug stores will close during the winter months at eight o'clock in the evening. On Saturdays and Great Northern shop pay nights, the drug stores will remain open until the regular summer closing hour. The closing agreement will probably hold until April 1st, when the opening of the soda season will require longer hours.

**E. D. Miller**, druggist at Murray, Ky., filed a voluntary petition in bankruptcy listing his assets at \$12,000 and liabilities at \$13,000. The failure is said to be caused by the closing of the Bank of Hazel, at Hazel, Ky., and the failure of the Hazel Mercantile Co. in which Mr. Miller owned 60 shares of stock.

**Walding, Kinman & Marvin Co.**, wholesale druggists, Toledo, O., have purchased the drug stock and fixtures of the Thomas A. Huston & Co. drug store at 217 Summit street, for the sum of \$60,000. A six-year lease on the store building failed to attract any bids and was withdrawn by the auctioneer.

**The Walworth Chemical Co.**, established at Sheboygan, Wis., about four months ago, has retired from business. Harry G. Walworth, who owned and operated the company, says that the big advance in the imported chemicals which he used made it impossible for him to continue in business.

**The Charlotte Drug Store**, Charlotte, N. C., was re-

cently closed by order of the city and county tax collectors. The amounts due were very small and the report concluded that some adjudication might be arranged. The store has been conducted by a stock company for the past several years.

**The Witt Drug Co.**, Witt, Ill., recently closed its doors. Business in this, until recently thriving town, has been very depressed, the miners making hardly enough to live on, let alone pay their old debts. The Witt Drug Co. enjoyed a big business, it is said, until a month or so ago.

**Harvey H. Barsh**, a stockholder of the McGill Remedy Co., Bluffton, Ind., is being sued for \$500 damages, plaintiff alleging that defendant persuaded her to purchase \$500 worth of stock by asserting that the company was sound financially when such was not the case.

**The W. H. Carr Medicine Co.**, Peoria, Ill., recently broke ground for its \$4,000 factory building, which will be located at the corner of Washington and Voris streets. It will be of brick and will cover a ground space of 50x150. It will be three stories high.

**Scates & Co.**, druggists with stores at Caribou, Fort Fairfield, and recently at Washburn, where they were burned out, have, it is understood, purchased the site on which their store stood and will erect a new store at once. The contract has been let out.

Until April 1st, Winona, Minn., druggists will close their stores at 8:30 o'clock P. M., except on Sundays and Mondays. On Sundays the drug stores will be closed from one to six in the afternoon and after eight o'clock in the evening.

**La Crosse, Wis.**, retail druggists have decided not to advance their prices, despite the advances which they themselves are paying on certain imported chemicals and goods. They are endeavoring to carry American goods, wherever possible.

**Samuel Kahn**, of Newark, N. J., and a graduate of the New York College of Pharmacy, has acquired the Highland Park (N. J.) pharmacy on the corner of Cedar and Raritan avenues. Mr. Kahn has had 20 years experience in the drug business in Newark.

**The National Drug and Chemical Co.**, Toronto, Canada, is carrying on an extensive campaign in the Dominion through its large organization to educate Canadians to buy Canadian-made goods whenever they are equal in quality to foreign products.

**George C. Koehler**, for the past five months connected with the Park Hotel Pharmacy at Madison, Wis., and a druggist of 12 years experience, has purchased an interest in the Murphy pharmacy at 1951 Winnebago street, Madison.

**Arthur W. Quan**, who for the past 15 years has been connected with various pharmacies at Madison, Wis., is erecting a new building in Greenbush, one of the suburbs of Madison and will open a new pharmacy shortly after January 1.

**F. W. Mueller** has opened a new pharmacy at Tenth and Oregon streets, at Oshkosh, Wis. Mr. Mueller's former building was destroyed by fire last March and the structure which he has erected is one of the finest in Oshkosh.

**The Melville Pharmacy**, Pittsfield, Mass., has filed a petition for dissolution. Petition states that all debts have been paid and that there are no assets or liabilities. Capital stock was \$5,000 and corporation was organized in 1909.

**William R. Dacey**, druggist at Dorchester, Mass., has filed a voluntary petition in bankruptcy, admitting liabilities of \$4,842, with no assets. P. F. Dacey is the only secured creditor. He holds a claim for \$2,200.

**The Lion Drug Store**, La Porte, Ind., formerly in the building once occupied by the Trees Pharmacy, is now located in the Wunch building, on Lincolnway. Larger and better arranged quarters are there afforded.

**Frank McDonald**, treasurer of the Appleton Pharmacy, Inc., at 449 Tremont street, Boston, filed a petition in bankruptcy, October 20, in behalf of that company; liabilities, \$3,782; assets, \$1,600.

**John Zoesch**, of Butternut, Wis., has sold his pharmacy to his brother, Emil, who is now in possession. Emil Zoesch had been connected with a pharmacy at Mellen, Wis., for several months.

**G. G. Mason**, of the Mason & Tarr Drug Co., Jefferson

City, Tenn., purchased the entire interest of Dr. H. L. Tarr in that business. Mr. Mason will continue the business under the old name.

**The Pittsburg (Pa.) Wholesale Drug Co.**, a new concern in Pittsburg, has leased the six-story building at 713 Grant street. The company is under the management of F. J. Crosson.

**The Read Drug and Chemical Co.**, Baltimore, Md., whose building was damaged by fire several months ago, has awarded contracts for extensive renovation and improvements.

**W. R. Smith**, trading as the City Drug Store Enterprise, at Meridian, Miss., has filed a voluntary petition in bankruptcy, placing his liabilities at \$3,948, and his assets at \$2,760.

**R. D. Rouse** has sold his interest in the Thames Drug Co., Beaumont, Texas, to J. P. Gudger, of the Gulf Pipe Line Co. Mr. Rouse is managing Rouse's drug store No. 2, at Houston.

**William J. Snow**, druggist at Nahant, Mass., recently filed schedules in bankruptcy placing his liabilities at \$6,427 and his assets at \$6,216. There are over 30 creditors.

**The Elkton (Va.) drug store**, stock and fixtures, was sold recently to R. E. O'Rear, of Clearbrook, for \$4,150. The business will be conducted as usual.

**The Lancaster (Pa.) Drug Co.** will build a large four-story warehouse directly in the rear of its present building at 42 North Prince street.

**The Koss-Kreizinger Drug Co.** will occupy the one store in the beautiful, new, \$100,000 "First Safe Deposit block" in Fremont, Neb.

**Buena Pharmacy**, 1002 Montrose Boulevard, Chicago, has filed schedule of bankruptcy, placing liabilities at \$9,532, and assets at \$13,340.

**The Broadway Pharmacy, Inc.**, Spokane, Wash., has been sold by F. R. Robertson to James L. Cook for a consideration of \$3,300.

**Joseph E. B. Lovering**, formerly employed at the Independent drug store, Amesbury, Mass., has purchased the pharmacy at Smithtown.

**The Appleton Pharmacy, Inc.**, Boston, Mass., has filed schedule showing liabilities amounting to \$3,782 and assets \$1,600.

**James Bergman**, 702 Amsterdam avenue, this city, has filed schedules showing liabilities of \$21,309 and assets amounting to \$9,180.

**Druggists** of Ensley, Ala., will close every evening at 8:30 o'clock, excepting on Saturday and the pay days of the steel plant.

**Herman Orlewitz**, druggist at 2140 Seventh avenue, this city, who began business in 1883, has made an assignment.

**Rushville, Ill.**, business houses, including the drug stores, will close at 6:30 P. M. during the winter months.

**W. W. Lundberg**, druggist at Glenwood City, Wis., has enlarged his quarters in the Syndicate building.

**The King Pharmacy**, Augusta, Ga., is now located in its new quarters at Broad and McKinney streets.

**The B. & B. Pharmacy** was recently opened by Ernest J. Bryant and Vincent Ballenger at Bellefontaine, O.

**R. B. Arnold**, of Lake Geneva, Wis., has erected an addition to his store and has enlarged his stock.

### RECENT FIRES

At Gatesville, Tex., R. M. Arnold's drug and jewelry store; \$12,000 damage, covered by insurance, and \$60,000 damage to neighboring concerns.

At Estherwood, La., fire destroyed the pharmacy and office of J. F. Francis, and several small buildings adjoining. Loss \$1,500.

At Richmond, Va., Frey's Drug Store; loss not stated, but slight.

At Thorne, N. D., C. W. Rogers' drug store destroyed by fire from overheated furnace. Loss \$12,000.

At Callahan, Fla., Callahan Pharmacy; loss \$2,000, and partly insured.

At Des Moines, Ia., Namur Drug Store, in Masonic Temple, wrecked, with a loss of \$35,000.

At Turlock, Wash., J. D. Eastman Drug Store destroyed, with loss of \$3,500, insurance \$2,150.

## Homeopathic Pharmacy

Some interesting points relative to homeopathic pharmacy were brought out in a recent special lecture delivered by Dr. John A. Borneman, professor of pharmacy of Hahnemann Medical College and Hospital, before the Philadelphia College of Pharmacy. In introducing his subject, the speaker asked his audience whether they believed in allopathic or homeopathic pharmacy. In the first year course of 90 hours given in the Hahnemann Medical College, one-third of the time is devoted to homeopathic pharmacy, and two-thirds to allopathic pharmacy. During the third year the students receive 15 hours of instruction in practical homeopathic pharmacy in the hospital pharmacy connected with the institution.

The speaker then called attention to the new Homeopathic Pharmacopoeia of 1914, which he said was, in some ways, probably a year ahead of the U. S. Pharmacopoeia. The book contains no compound remedies, all are simples, and each drug is treated by itself. The mother tincture represents a one-tenth drug strength, and is made from fresh plants whenever possible; foreign plants sent from Europe, etc., are preserved by alcohol until they can be made up. There are some exceptions to the use of fresh plants, as in the case of ipecac and cinchona. No provision is made in the present pharmacopoeia for standardizing the preparations, but it is expected that this will be done in succeeding editions. The metric system of weights and measures is used. The utensils in use for pharmaceutical manufacturing are about the same as those used in other pharmacies, but scrupulous care is taken in cleansing them after use. The alcohol is carefully selected and is of 87 per cent strength. The preparations used include those from the animal, vegetable and mineral kingdoms. The homeopathic pharmacist must gather his own plants, the time of gathering being quite important, a regular schedule for this work being provided. The roots when gathered are carefully cleansed, sometimes washed, and moisture content noted, for which allowance is made in preparing the tinctures.

The drugs are generally macerated 7 days in two gallon bottles, each bottle being shaken ten times, twice a day. The speaker thought that the process of making tinctures by the maceration of fresh drugs was an excellent one, as it provided for the retention of the volatile constituents. At the present time most homeopathic physicians prefer low tinctures (or potencies). The "mother tincture" is designated by "1X," which represents a drug strength of 1/10. To make the second dilution, one part of the mother tincture, four parts of water and five parts of alcohol are taken, the resulting dilution representing a drug strength of 1/100 and is designated by "2X." The third dilution or potency is designated by "3X" and represents a drug strength of 1/1000. Homeopathic pharmacists pride themselves upon their triturations, which consist of one part of chemical to nine parts of milk sugar, triturated for hours, separate mortars being used for the different triturates; in the case of odorous drugs, the trituration is done in separate rooms. The strength of the triturates is indicated in a manner similar to that designating the strength of the tinctures.

Pellets can be medicated by pouring tinctures over them, five No. 40 pellets absorbing one minim of tincture. Tablets are very carefully made and tested, sometimes by the aid of the microscope. Sugar pills are made in copper kettles lined with wood, in much the same manner as ordinary pills are coated, granulated sugar forming the foundation. The tincture presses and stills are gold lined.

In concluding his address Dr. Borneman said that a homeopathic pharmacist must be absolutely honest, a statement which should apply also to others. After the address the speaker gave a practical illustration of the manufacture of red mercuric iodide tablets, and also showed a number of lantern slides illustrating various pharmaceutical processes.

### Insecticide Manufacturers Organize Association

The Insecticide Manufacturers' Association, an organization made up of manufacturers of insecticides of this country, has been incorporated in this State. The incorporators are:

W. F. Oburg, Merrimac Chemical Co.; Frank Hemingway, Hemingway & Co., Inc.; W. H. Phillips, W. F. Devoe & C. T. Reynolds Co.; M. A. Blanchard, James A. Blanchard Co.; Alfred Renshof, Morris Herrmann Co.; Mr. Coleman, Sanitos Co.; W. H. Rose, Interstate Chemical Co.

It is expected that a general meeting of manufacturers of insecticides will be held in this city on December 14.

## BOARD EXAMINATIONS

### California

San Francisco, Nov. 16.—Louis Zeh, secretary of the California Board of Pharmacy, announces the names of the following persons who were granted registration at the recent meeting of the board:

Assistants—James L. Faulkner, Joseph B. Swm, Charles C. Brockman, George Trezise, Clarence A. Hull, John R. Quinn, Harry J. Schwarz, Arthur A. Pittenger, Marion G. Shulman, Earl J. Sear, Chas. B. B. Zeller, William M. Nuttall, Harry Tobenkin, William H. Hansen, William E. Price, Robert O. Bagley, Iver E. Johanson, Sister S. McCabe, Harold E. Welcome, Albert T. A. Stern, Floyd Teeter, Roy C. Paterbaugh, John Johnston, Wm. J. Schallback, Harold Houlhan, M. L. Burke, George G. Johnson, E. W. McCracken, Grover C. Stadler, Glen W. Brace, Thomas D. Chilton, Andree Vade, Sister Laurence, John H. Albert.

Licentiate—Royal A. White, William J. Norton, Clarence Powell, Lee Holtzman, Wm. Vorwerk, Fred I. Siskel, Edward Riebsanic, R. E. Bell, Harry E. Wilt, Peter B. Feely, Mary Jennings, Ray L. Miller, Dorothy Van Deuse, C. J. Doran, I. Elmer Macom, G. L. Robinson, William E. Cavanaugh, Thomas H. Smith, Chase Wood, Samuel H. Watters, Lawrence E. Creeden, Robert E. Miller, Carlisle Laughlin, Geo. T. Pomeroy, Oscar C. Bley, Olav Kaarho, Clarence F. Bowers, William E. Armington, Daniel J. Sullivan, Arthur L. Booth, L. C. Diggs, Clair E. Hadsell, Louis G. Kading, Bernard Herman, R. C. McNight.

Credentials—Daniel S. Wallace, R. R. Sutton, Chas. S. Gibson, Henry W. Brockman, Carl A. Kiebler, James Z. Magill, Edward T. Graucher, Joseph K. Crague, Alrik Hammar, Jas. P. Minnehan, Fred E. Morgan, Angel C. Nuno.

The next meeting will be held at Los Angeles on Jan. 11, 1915, the examinations commencing on Jan. 13, and in San Francisco on Jan. 18, the examinations commencing on Jan. 20.

### Delaware

Wilmington, Nov. 15.—At the second quarterly meeting held by the Delaware Board of Pharmacy at Newark last month, ten applicants were examined for pharmacist's license and two for assistant's license. The following were passed as pharmacists: Frank P. Coione, Yorkers, N. Y. and Marian W. Tingle, Philadelphia, Pa. Thomas J. Phillips, of Wilmington, was granted an assistant's license. The next meeting for examination will be held at Newark on Jan. 6, 1915.

### Illinois

Springfield, Nov. 16.—At the October meeting of the Illinois Board of Pharmacy, held in this city, the following applicants passed successful examinations:

Registered Pharmacists—J. H. Garretson, Taylorville; Sister Augustine Groesch, Springfield; Ernest S. Hoehn, East St. Louis; John M. Lee, Springfield; J. H. Pfaff, Centralia; Robert E. Roche, Peoria; Wm. A. Schneeberg, Alton; L. A. Wolfe, Springfield.

Assistant Pharmacists—L. W. Callahan, Tremont; James M. Dulaney, Paris; John B. Griebel, Bunker Hill; Frank H. Lierman, Cbampaign; Jos. A. Michael, Decatur, O.; O. Otto, Peoria.

Local Registered Pharmacists—Henry A. Dinges, Red Bud, and Harry H. Harding, Ashland.

### Kentucky

Frankfort, Nov. 16.—At the meeting of the Kentucky Board of Pharmacy recently held in Berea, a class of twenty-three applicants was examined and the following passed as registered pharmacists—Chas. F. Bartholomew, Ft. Thomas; Robert B. Creech, Louisville; E. W. Foertmeyer, Bellevue; Geo. L. Holliday, Paducah; Orin Lee, Middlesboro; Herbert T. Ransdell, Owenton; John B. Robinson, Georgetown; W. B. Schultz, Middlesboro; E. C. Wines, Jr., Richmond.

The following qualified as assistants—M. D. Aitken, Flemingsburg; Chas. D. Anderson, Richmond; A. B. Brooks, Paducah; Walter J. Herp, Louisville; Jas. B. McQuown, Gasgow; Owen R. Ware, Middlesboro.

At the annual meeting held at this time Prof. G. Lewis Diehl, Louisville, qualified as the newly appointed member of the Board, succeeding Robin H. White, whose term expired. G. Orville Fatterson, Hawesville, was elected president for the ensuing year, while J. W. Gayle, Frankfort, was re-elected secretary, and Edward Bloomfield, Louisville, was re-elected attorney and inspector. Covington was decided upon as the next place of meeting.

### Maryland

Baltimore, November 16.—The Maryland Board of Pharmacy has announced the result of the examinations for applicants for registration as pharmacists and assistants held last month, the following having passed:

Pharmacists—George J. Ayd, David J. Gitomer, Baltimore; Lawrence Nichols Frampton, Arlington; Schafer B. Blair, William A. Bentz, Williamsport; Howard C. Hopkins, Oxford; Woods D. Balliere, Watsontown, Pa.; Charles Rafone, Frederick Sircusa, New York.

Assistants—Miss Emma H. Belbot; John P. Irwin, John M. Litch, Clarence Schwarzenbach, Bradley Henry Waltz, Baltimore; Charles Hugo Jahelka, Hamilton; Gifford L. Potts, Elkton, and Miss Carville Brain Boyd, Clearfield.

The board also disposed of various other matters. It is composed of H. Lionel Meredith, Hagerstown, Md., president; Ephraim Bacon, Baltimore, secretary; David R. Millard, Baltimore, treasurer; J. Fuller Frames, Baltimore, and William C. Powell, Snow Hill,

### Missouri

E. G. Cox, secretary of the Missouri Board of Pharmacy, Craig, Mo., has made public the following list of successful candidates who took the examination recently in St. Louis:

Registered Pharmacists—M. C. Adamson, St. Joseph; Chas. C. Cump, Montgomery City; William W. Franklin, Hume; Francis J. Hemm, St. Louis; Louis O. Kloeckner, St. Louis; Robert W. Kinnison, St. Joseph; Frank LaRue, Dexter; Junius B. Linn, Canton; Joshua E. Marsden, St. Louis; John Wasem, St. Louis.

Assistants—Edward Hoppe, St. Louis; Benjamin Norton Gerson, St. Louis; Charles F. Lanwermyer, St. Louis; Edison Tribble, Bloomfield; Wm. S. VanCleve, Malden; J. H. Workman, Portageville.

The next meeting of the Board will be held at Jefferson City on Jan. 11, 1915.

### Montana

Butte, Nov. 16.—Thirty-six applicants were examined by the Montana State Board of Pharmacy at the recent meeting held at Helena, the following being successful and will be granted licenses as registered pharmacists—R. E. Black, Roundup; Carl A. Brye, Glasgow; W. H. Hewson, Great Falls; Raymond V. Love, Havre; Benjamin F. Owen, Billings; George F. Moses, Poplar; Jay A. Miller, Red Lodge; Clinton J. Poe, Medicine Lake; Cressie D. Parhorst, Billings; Walter Ritter, Helena; Ralph L. Stewart, Chicago; L. L. Robertson, Havre; Mark Vornholt, P. C. Vornholt, Poplar; C. F. Wiswall, Billings; Floyd Williams, Lewiston; William H. Young, Baker.

Several registered assistant pharmacist certificates were also issued. The present board members are F. A. Schueber, Livingston, president; W. R. Montgomery, Butte, secretary; Emil Starz, Helena, treasurer.

### New Jersey

Bridgeton, Nov. 16.—Secretary Jorden has prepared the following list of successful candidates who passed the October examination:

Registered Pharmacists—Edward A. Bank, Brooklyn, N. Y.; Ira N. Breit, Newark; Basil Bruno, Long Branch; George J. Burch, Hightstown; John Carlson, Cranbury; Peter Cocuzza, Elizabeth; Herman Cohen, Brooklyn, N. Y.; Henry B. Decker, Haddon Heights; Frank S. De Leon, New York, N. Y.; Aaron Dixon, Butler; John Eby, Philadelphia, Pa.; Milton Fisher, Brooklyn, N. Y.; Louis W. Fuchs, Newark; William J. Galbraith, Hackensack; Sigmond Gardner, Somerville; William A. Gardner, Jersey City; Eleanor M. Gartland, Philadelphia, Pa.; Harry Goldwag, New York, N. Y.; Isidore Goldstein, Paterson; Karl E. Hahn, New York, N. Y.; William D. Hall, Philadelphia, Pa.; Richard H. Hamilton, Jersey City; Alessio Maria, Newark; David Kangisser, Paterson; Bernard Katsin, Lakewood; William Keeshan, Jersey City; Edward Kodet, New York, N. Y.; Agnostino Lettieri, Newark; Paul Levinson, Brooklyn, N. Y.; Nathan Lifshitz, New York, N. Y.; Roy P. Lodge, Atlantic City; Joseph Marino, Newark; John Miraglio, Hoboken; Pinchus Mucha, New York, N. Y.; Charles A. Muller, North Bergen; Reginald P. Osborne, Brooklyn; N. Y.; Elmer E. Pine, Jersey City; Louis Porreca, Hackensack; Joseph Potechin, Newark; Russell R. Reed, Rahway, N. J.; Arnold A. Renson, Jr., North Bergen; Frederick Rescigno, New York, N. Y.; George H. Rowland, Annandale; Frank Saduzzi, Newark; Joseph Schlein, Hoboken; Edith M. Schofield, Atlantic City; John W. Seager, Westfield; Isidor Shalit, Bayonne; Harry Schwab, Jersey City; Edwin R. Spangler, Ephrata, Pa.; Albert R. Struckmann, West Hoboken; Herman N. Sussles, Ridgefield; Louis F. Thumser; Claude H. Umlauf, Philadelphia, Pa.; Gustave H. Wetzel, Newark; Oscar K. Whipple, Jr., Bridgeton; Charles A. White, Philadelphia, Pa.

Registered Assistants—William Amdur, New Brunswick; Edmund Buttykay, Lodi; Elmer H. Macdonald, Hackensack; Mark Rigg, Burlington; Percy L. Walling, Westfield.

The next meeting of the board for examinations will be held at Trenton on Jan. 21 and 22, 1915.

### New York

Albany, Nov. 16.—According to Secretary Warren L. Bradt, of the New York Board of Pharmacy, the number of penalties received during the month of October and the nature of the violations were as follows:

Sale of proscribed drugs .....	2
Junior violation .....	13
Adulterated and deficient pharmacopoeial products .....	11
Deficient and adulterated prescriptions.....	8
Methyl alcohol present.....	2
Non-registration of pharmacy.....	3
Total .....	39

### North Dakota

Fargo, Nov. 16.—As a result of the recent examination held by the Board of Pharmacy in this city, the following were granted registered pharmacist licenses—Frank E. Fullman, Jamestown; D. W. C. Hall, Dickinson; E. C. Zimmerman, Casselton; and Sister M. Cuthberta, Fargo.

Those securing licenses for assistant pharmacist were—F. B. Hanson, Fergus Falls, Minn.; Clarence B. Hay, Asaracka; Edwin O. Larson, Devils Lake; Harold Williamson, Ray; and W. H. Woodard, Bismarck.

Owing to the fact that a change in the state laws was made requiring that applicants must have had at least one year in a reconized pharmacy school and after 1915 two years in such school, there was not a very large class of applicants this time and it will probably be several years before classes will be as large as formerly. The next meeting will be held at Fargo on June 15, 1915.

**Vermont**

Burlington, Nov. 16.—At the quarterly meeting of the Vermont Board of Pharmacy held at Montpelier, eight applicants took the examination, the following obtaining full registration: Miss Horstense Merrill, Swampscott, Mass.; A. Altieri, Yonkers, N. Y.; P. Principe, New York City; and L. H. Whitney, Waterbury, Vt. Hector Huard, Winooski, was granted an assistant's license. No successor has yet been appointed to fill the vacancy caused by the resignation of D. F. Davis, of Barre, president of the board, who felt that he could not devote the necessary time to the work. His colleagues have expressed their appreciation of his work and state that his resignation constitutes a distinct loss to the board and to the cause of pharmacy in the State.

**Virginia**

At the meeting held at Richmond on October 20, there were 30 applicants for examination. Of this number, the following were given certificates as registered pharmacists—J. J. Harris, Culpepper; R. C. Morehead, Wytheville; W. B. Dabney, (colored) Petersburg; Abraham Caplan, Richmond; F. A. Lozaw, Middletown, N. Y.; B. L. Brannon, Norfolk; H. P. Hargrave, (colored) Roanoke; J. E. Manning, Portsmouth; W. M. Yearby, Richmond; C. H. Berryman, Wytheville.

Registered as assistants on the registered pharmacist examination—C. W. Ray, Welch, W. Va.; P. H. Dinwiddie, Durham, N. C.; F. F. Lyon, Oxford, N. C.

Seventeen applicants took the examination for certificates as registered assistant pharmacists. Of this number the following were successful—W. E. Manlove, Norfolk; J. B. Holland, Richmond; L. J. Hen'ey, Tappahannock; D. W. Paulette, Farmville; J. N. Dickson, Norfolk; J. A. Patterson, Richmond.

The following were registered by reciprocity—H. C. Greear, Appalachia, from Georgia; M. Beach, Norfolk, from Florida; L. J. Cohen, Phoebus, from Maryland, and G. R. Ridgeley, Richmond, from District of Columbia.

Examinations are held by the Board in Richmond on the third Tuesday of January, April, July and October, respectively. All applications must be filed with the Secretary at least ten days prior to examination date.

**Wisconsin**

Madison, Nov. 16.—At the meeting of the Wisconsin Board of Pharmacy held in this city the following were granted certificates:

Registered Pharmacists—Aloysius J. Dettlaff, Milwaukee; Raymond T. Le Mieux, Green Bay; Clarence H. Mees, Clintonville; Joseph F. Meyer, Chilton; Helmer A. Roen, Menomonie; Joseph B. Zych, Jr., Milwaukee; Arthur S. Hessler, Antigo; Felix J. Idziorek, Milwaukee; P. Amos Gruett, Racine; Walter J. Pergande, Milwaukee; Rex E. Mather, Milwaukee; Edwin B. Rennebohm, Milwaukee.

Registered Assistants—Roy Hutchinson, Duluth, Minn.; Hans A. Hansen, Madison; Walter Gargen, Milwaukee; Lester B. Hansen, Racine; Albert A. Lohr, Milwaukee.

The next meeting will be held at Madison on Jan. 12-15.

**NEW INCORPORATIONS**

Wawel Drug Co., Chicago, Ill., capital stock, \$3,000; incorporators, Sylvanus G. Levy, A. B. Lipson and Thomas M. Whitson.

Chelsea Drug Co., Memphis, Tenn., capital, \$10,000; incorporators, John C. Bell, C. E. Hillis, S. C. Sims, M. L. Bullaca and Isaac A. Peres.

Milburn Drug Co., San Antonio, Texas, capital stock, \$20,000; incorporators, T. H. Milburn, C. L. Milburn and T. Milburn.

Climax Chemical Co., New York City, capital, \$5,000; chemical and mechanical products; incorporators, F. W. Foucar, A. L. McDonnell and Isador D. Brokaw.

The Murdock Drug Co., Indianapolis, Ind., capital stock, \$5,000; to operate retail drug stores; directors, T. H. Bowlsman and Daniel G. Sullivan, Indianapolis, and Luther J. Murdock, Bloomington.

Dame Nature Co., Chicago, capital stock, \$50,000; to manufacture and deal in all kinds of toilet articles; incorporators, Basil D'Emo, Richard H. Mather and William A. Sheehan.

Capital Drug Co., Hartford, Ct., capital stock, \$7,000; officers and directors: President, Max Goldfield; secretary-treasurer, Louis Goldfield, of Hartford; L. L. Card.

Mason Laboratories, New York City, capital stock, \$20,000; chemists, druggists, bacteriologists; incorporators, Morris A. and Ray E. Mason and Aaron Moseson.

Royal Drug Label Co., New York City, capital, \$3,000; Louis Epstein, M. Lapides, C. Bison.

Ideal pharmacy, Milwaukee, Wis., capital, \$25,000; incorporators, T. L. Baarth, R. H. Baarth and Otto Baarth.

Durex Chemical Works, Inc., New York City, capital \$288,000; general chemical and drug business; mining, etc.; incorporators, M. Toch, N. Y. C.; H. E. Baer, Mount Vernon, and A. C. Reid, Jersey City, N. J.

American Veterinary Medicine Co., Dover, Del., capital \$250,000; the business of chemists, druggists, etc.; incorporators, M. Poole, S. Falk, R. J. Connolly, New York City.

Marvel Products Co., Pittsburg, Pa., to compound, sell and deal in and with proprietary medicines, either wholesale or retail; manufacture and deal in chemicals, dye stuffs, paints, oils, etc.; incorporators, S. C. T. Dodd, Carroll C. Robertson, both of Pittsburg, and Fred L. Workman, Duquesne, Pa.

A. E. Rea Drug Co., Ltd., Ottawa, Ont., capital stock, \$50,000; incorporators, T. F. Carrie, Toronto; Lefebvre Brownhill, G. E. Clapin, and others, to manufacture surgical instruments, etc.

E. C. Hachney Laboratories, Inc., Dover, Del., capital, \$150,000; to manufacture and sell intravenous, its products, alkalies and chemicals of all kinds; incorporators, W. C. Arnold, Philadelphia; F. A. Moorshead, Lansdowne, Pa., and J. M. Satterfield, Dover.

Nature's Remedy Co., Belfast, Me., capital stock, \$50,000; to manufacture, buy, sell, export, import and generally deal in patent medicines, drugs, formulas and preparations of every kind, class and description, etc.; officers and directors: President, H. A. Bennett; treasurer, E. F. Hanson; Wentworth V. Lander, Clarence E. Tuller and Maurice W. Lord.

Bio Chemical Co., Manhattan, N. Y., capital, \$10,000; to make import and deal in drugs, medicines, physicians' and hospital supplies; incorporators, Morris Pitzerman, Morris Schoenwald and Louis Weinberg.

Coast Wide Chemical Co., Manhattan, N. Y., capital, \$50,000; to make and deal in disinfectants, chemicals, physicians' and hospital supplies; Garfield and Alex S. Force and G. J. Turner.

Rankin-Butner Drug Co., Winston-Salem, N. C., capital, \$10,000; incorporators, T. A. Butner, W. H. Rankin and others.

Licht's pharmacy, Brooklyn, N. Y., capital, \$10,000; directors, H. E. Licht, Harry Licht and Aaron Licht, of Brooklyn.

Radium Spray Co., Brooklyn, N. Y., capital, \$10,000; drugs; E. A. and C. J. Hubbell, of Brooklyn, and C. A. Macheny, New York.

International Drug Co., Cleveland, O., capital, \$100,000; incorporators, M. E. Tettelbach, E. J. Wohlgenuth, R. R. Schwartz, A. L. Dietz and J. H. Backowski.

Schaffner Drug Co., Ashtabula, O., capital, \$25,000; incorporators, J. E. Allport, H. E. Allport, H. R. Martinson, K. C. Gahl and H. Stephens.

Vonberg's pharmacy, New York City, capital, \$10,000; drugs, chemicals, confectionery, smokers' articles, etc.; incorporators, Mary E. Conroy, Alex Gordon and Peter A. Lee.

Lloyd Preparation Co., Buffalo, N. Y., capital, \$50,000; to carry on a manufacturing business of drugs, medicines and toilet preparations; directors: J. C. McDowell, D. C. Palmer, L. J. Rosen, John Duchmann, jr., J. C. Leilly, jr., Al. Robinson and Howlett E. Robinson.

Midland Chemical Co., Chicago, capital, \$125,000; to manufacture chemicals and chemical compounds, etc.; incorporators, W. T. Sheffield, Fred Huettman and F. R. Hubalick.

Harrison-Peterson Drug Co., Muncie, Ind., changed its name to Harrison Drug Co.

Cherox Co., Valparaiso, Ind., capital, \$5,000; to deal in medicines; directors, H. K. Brown, J. L. Meagner and J. F. Griffin.

Cosmopathic Medical Institute and Compounding Co., Portland, Me., capital, \$50,000, of which \$1,000 is paid in; organized for purpose of acquiring all formulas, anatomical charts, mechanical devices and remedies now held by Edward E. Hosmer, of Swampscott, Mass.; officers: President, H. R. Foss, of Portland; treasurer, A. E. Anderson, of Portland.

Cythera Toilet Co., Richmond, Va., capital, authorized from \$1,000 to \$25,000; to manufacture and sell toilet articles of every description; officers: President, W. J. Farrow; secretary and treasurer, F. B. Snyder.

Turner Drug Co., Altoona, Pa., capital stock, \$16,000; directors: H. W. Turner, Jennie B. Turner and Charles E. Walters (treasurer), all of Altoona.

Wiley Dandruff Remover Co., Toledo, O., capital, \$10,000; incorporators, F. E. Wiley, C. C. Banting, H. H. Stalker, J. W. Banting and W. O. Kiraocic.

Umekalabo Chemical Co., Inc., Manhattan, capital, \$25,000; to do a general manufacturing business and to manufacture remedies; incorporators, S. S. Ryckman, E. A. Sprong, I. V. Russell, N. Y. C.

Easterwood-Patillo Drug Co., Athens, Texas, capital stock, \$8,000; incorporators, J. W. Easterwood, J. T. Patillo and J. S. Easterwood.

Oakdale Drug Co., Louisville, Ky., capital stock, \$3,000; incorporators, L. P. Krieger, J. W. Krieger and J. A. Krieger.

Demers Bros., Sanford, Me., capital stock, \$10,000; to conduct a general drug business of compounding and manufacturing medicines, drugs and various preparations; officers: President Telephor Demers, and treasurer, Phidelem S. Demers.

Zimmer Chemical Co., Clifton, N. J., capital stock, \$15,000; to deal in chemicals and drugs of all descriptions.

Charles F. Grosholz, Inc., to manufacture, buy, sell and deal in brushes, combs, soaps, sponges, chamois, water bottles, rubber goods, toilet and proprietary articles, perfumeries, medical and surgical supplies, druggists' sundries and other articles of a similar nature; incorporators, Alice E. and Charles F. Grosholz, jr., and Emmet J. Ross.

The Bauer-Tennant Drug Co., Cleveland, O.; capital stock, \$10,000; incorporators, W. M. Tennant, N. R. Weidman, H. G. Wilk, L. H. Wintermuth and N. E. Heabler; to manufacture drugs and chemicals.

The Acme Drug Co., Cleveland, O.; capital stock, \$20,000; incorporators, Rose Fink, Joseph Goodman, Henry O. Wavro, William J. Scher and George A. Marchison.

The W. N. Carr Medical Co., Peoria, Ill., incorporated under the laws of West Virginia; capital stock, \$35,000; incorporators, John G. Heberling, Wilbur H. Carr, Jerry Tippy, John E. Ingersoll, and Leonard F. Ingersoll.

The Gadsby Co., Eau Claire, Wis.; capital stock, \$30,000; incorporators, Fred. H. Gadsby, Helen L. Gadsby and Thomas L. Gadsby; to handle all kinds and sorts of drugs and other lines of merchandise.

### An Attractive Advertisement

The large color inset in this issue of the ERA is sure to attract the attention of readers. The inside pages are miniature reproductions of the attractive advertising matter which the J. Hangerford Smith Co. of Rochester, N. Y. will supply to its customers during the coming season. These reproductions were made by the photograph color process and represent the actual signs and colors shown in the originals, of course, very much enlarged in size. However, they serve to give one a fair idea of the original designs. In the selection of these signs the J. Hangerford Smith Co. have not only added advertising value to the dealer, fully realizing that the sales of "True Fruit" Soda Fountain Requisites will vary largely upon the success of the soda water business. The advertising must be good advertising in order to attract the business directly through the dealers to whom this advertising matter is supplied.

The general success of this company is a typical illustration of how things can be accomplished through intelligent cooperation with dealers. The expense of the company for advertising is very small. This character is probably larger than that of any other business in the soda fountain trade. Their policy is to share their money in helping dealers, and the wisdom of this is amply proved by the large and satisfactory business they have secured for their products. The entire assortment of advertising matter shown in this reproduction is furnished free with an order for only \$28 worth of their "True Fruit" flavors.

### Bathing Shoes

Many druggists are now handling bathing shoes which make a very attractive side line, easy to sell in those localities where there is any possible demand, do not call for large investment and goods that do not depreciate in value and pay the dealer a very liberal profit. Among our new advertisers in this issue of the ERA is the John H. Parker Co., of Malden, Mass., manufacturers of an attractive line of bathing shoes which they wish to call to the attention of the drug trade. This company is an old established house, first started in 1865, by the father of the present head. Their chief line is rubber shoes with leather soles, but they have made bathing shoes a specialty for many years.

The John H. Parker Co., a typical New England house, established their reputation on the quality of their goods and fair dealings with their customers. They insist that all goods shall be satisfactory and their line of bathing shoes is one of the most complete and desirable lines manufactured. In goods of this character a dealer cannot afford to take any chances on selling customers something that is cheap and shoddy, or poorly made, for such goods are sure to cause dissatisfaction. Druggists who want a satisfactory line of these goods can make no mistake in getting in communication with these manufacturers.

### Tinctures from a Business Standpoint

Elsewhere in this issue Parke, Davis & Co. advance some salient reasons why the retail druggist should carry and specialize in tinctures bearing their label. There is much to be said in favor of the line of reasoning therein set forth. The average druggist has not the time and means to prepare and standardize the long line of tinctures demanded in present-day medication. He must depend, for the most part, upon the manufacturing pharmacist. Then, he wants to be certain that the tincture which he dispenses is therapeutically efficient and of definite medicinal strength. The question, "What brand?" is singularly pertinent. Manifestly the manufacture of so important a line of medicaments should not be intrusted to the inexperienced or to those who are hampered by lack of facilities. There is comfort, therefore, in this assurance of Parke, Davis & Co.: "Our tinctures are made from thoroughly tested drugs by expert pharmacists; they are accurately standardized; they are true to label." And there is force in the assertion that it pays the druggist to carry and dispense a line of tinctures that he knows are true and honest. It pays in dollars and cents. It pays in prestige with physicians. It pays in personal satisfaction.

### Concentrated Nitrous Ether

Concentrated Nitrous Ether enables pharmacists to prepare small quantities of Spirit of Nitrous ether, U. S. P., in relatively small quantities with ease at any time. The Mallinckrodt Chemical Works direct that in using their Concentrated Nitrous Ether for this purpose, both the ether and the alcohol

should be as cold as possible, so as to reduce the loss of Nitrous Ether by evaporation to the lowest possible minimum. In transferring the Ether from the Mallinckrodt tubes, after the tips have been broken off, the small end of the tube should be inserted just under the surface of the alcohol, when the warmth produced by holding the tube in the hand will force all of the Ether out into the alcohol. The spirit thus made should be transferred to perfectly clean and dry, tightly stoppered bottles and stored in a cool place.

### The Rapid Fire Suppository Machine

Every well regulated prescription department requires a suppository machine and the "Rapid-Fire" machine made by the Rapid Fire Co. of Woodbury, Conn. fully covers this requirement. This machine was formerly made by the Bent Mfg. Co. and has been on the market for the past ten years. It is used in practically all of the colleges of pharmacy, is economical and easy to operate, with no waste of material. These machines are stocked by all of the best jobbing houses. Be sure and ask for the Rapid-Fire.

### Neve-A-Hone Strop Reduces Shaving Expenses

The one big point which the manufacturers claim for the Neve-A-Hone Razor Strop is that by its use it reduces all shaving expenses to a minimum. In the case of many men this expense amounts to \$10 to \$15 annually. The Neve-A-Hone Strop is claimed to absolutely stop all honing, giving the razor a sharp velvet edge 365 days in the year without any expense whatever. This saving repays the cost of the strop at the end of the first year, and after that it is really a money maker, for the life of the strop is more than five years. Within this time the man using a Neve-A-Hone Strop will have saved from \$5 to \$7.50 on honing alone, while the man using the old-fashioned styles will have paid out a similar amount. The satisfaction in using a really sharp razor is self-evident. The Neve-A-Hone Razor Strop Co. state that their strop is the only one on the market that is sold under a positive guarantee to cure dull razors, or money back, and the fact that they have not been asked to refund on a single strop in the last four years shows the general satisfaction that has been obtained by those who have used this strop. For an illustration of this "cure for dull razors," see the advertising pages of this issue of the ERA.

### The Superior Quality of Lilly Capsules

The doctor who never specified Lilly capsules for his prescriptions was very much surprised when he saw the first prescription his druggist had filled in which the Lilly capsules were used. He examined them closely and found that there were no scraps, no imperfect capsules; that the capsules were uniform in size and highly transparent, the ends did not cave in, and the capsules joined easily and closed securely. After this critical examination, the doctor told the druggist that he never supposed there was such a difference in empty capsules, and that thereafter the druggist should use the Lilly capsules for all of his prescriptions. The druggist was well pleased, of course, for he had found a superior capsule that cost no more than an ordinary make, and he had also pleased a doctor who had sent him a lot of good paying business. If there is anyone who would like to demonstrate the superiority that Eli Lilly & Company claim for their capsules, a sample may be had for the asking.

### Attractive Counter Display Sign

The Geo. Wm. Hoffman Co., of Indianapolis, manufacturers of the well known Bar-Keeper's Friend powder metal polish, are now redeeming the signatures from their cartons by giving attractive playing cards. They are also sending free to the drug trade a very attractive counter display sign which advertises their U. S. Metal Polish Paste. This company have for many years enjoyed the sale in each of these two lines, and we are pleased to number them again among our advertisers.

# PATENTS AND TRADE MARKS

## MEDICINE DROPPER

**T**HIS device, the invention of Ralph M. Myers, Muir, Mich., (Patent No. 1,116,833) is a cropping attachment for liquid containers, consisting of two tubular members mounted in a stopper for the mouth of the container, one of the tubular members terminating at the inner end of the stopper, and the other extending downwardly into the main body portion of the container, the tubular members forming means for the dispensing of the liquid from the container. A pivoted lever mounted in the stopper automatically operates the con-

1,116,670.

1,116,833.

tainer stopper, the actuation of the lever being facilitated by a handle, between which and the lever a coil spring is interposed, the spring normally holding the stoppers in the mouth of the tubular members, and operating the tube closures.

### Bottle Protector

Ella G. Brewer, of this city, has devised the bottle protector shown in the accompanying illustration (Patent No. 1,116,670). The specifications cover the combination with a fragile bottle or the like provided with a stopper, a removable protecting bag therefor, said bag comprising an outer covering, a relatively smaller inner bag of waterproof material attached thereto at a point adjacent its opening, filling material confined between the covering and inner bag, and a draw string adapted to close the mouth of the bag to cause the padded portion of the bag to completely surround the bottle and stopper and, also, engage the stopper and retain it in position, substantially as described.

### Corking Machine

Under the above title Cuthbert Gentle, Dorchester, Mass., assignor to Thomas H. Bowdidge, Boston, Mass., has invented the machine reproduced herewith (Patent No. 1,117,029). It consists of a corking head, having, in combination, a longitudinally moving plunger, and a pair of cork compressing rolls arranged with their axes substantially at right angles to the line of movement of the plunger. There is also in combination a cork delivering tube, the pair of rolls being arranged through openings in the tube, while the plunger in operation drives the cork in past the rolls into the neck of the bottle.

### Powder Container and Dispenser

This device is the invention of Franz A. Fuller, assignor to the J. E. Mergott Co., Newark, N. J. (Patent No. 1,115,062).

1,117,029.

1,115,062.

It consists of a container for powder, comprising a tube closed at one end and provided at its other end with a lid or cover, said lid or cover comprising an open ended tubular extension, an apertured hollow cap provided with oppositely arranged lugs of the hollow cup and the other end to the powder breaker.

## PATENTS

### Granted October 20, 1914

- 1,113,953—Chas. R. Browning, Madrid, Neb. Non-refillable bottle.
- 1,114,006—Hermann Kestner, Mulhausen, Germany. Method of embedding thin printed labels made of gelatin in transparent soap.
- 1,114,017—James J. Morgan, Chicago, Ill. Process of manufacturing alcohol from garbage.
- 1,114,083—George J. Welch, Wanganni, New Zealand. Non-refillable bottle.
- 1,114,105—Lonis H. Brinkman, assignor to General Industries Company, New York, N. Y. Bottle-capping machine.
- 1,114,278—Frank E. Mariner, assignor to The Pensacola Tar & Turpentine Co., Gull Point, Fla. Treating rosin.
- 1,114,325—Benjamin T. Winchester, Windsor Hills, Md., by mesne assignments, to Sharp and Dohme, Baltimore, Md. Capsule machine.
- 1,114,589—Thomas J. Daly, Middletown, Conn. Non-refillable bottle.
- 1,114,646—Lajos Pap, Arad, Austria-Hungary. Tooth brush.

### Granted October 27, 1914

- 1,114,734—Alex. B. Davis, assignor to The Eli Lilly and Company, Indianapolis, Ind. Chlor-methyl-omega-brom-propyl-carbinol and process of producing same.
- 1,114,735—Alex. B. Davis, assignor to The Eli Lilly and Company, Indianapolis, Ind. Ketone and process of producing same.
- 1,114,843—William H. Wright, Duluth, Minn. Ammonia still.
- 1,115,044—Frank S. Washburn, Nashville, Tenn. Process of making ammonium phosphate.
- 1,115,061—John B. Foster, Newark, N. J. Tooth brush holder.
- 1,115,062—Franz A. Fuller, assignor to The J. E. Mergott Co., Newark, N. J. Powder container and dispenser.
- 1,115,224—Calvin D. McAllum, De Kalb, Miss. Syringe.
- 1,115,405—Benjamin W. Davis, Chicago, Ill. Receptacle for liquids.
- 1,115,444—George E. Le Clair, Flint, Mich. Attachment for bottles or jars.

### Granted November 3, 1914

- 1,115,561—Frederick O. Northey, New Orleans, La., assignor to Parke, Davis & Co., Detroit, Mich. Syringe.
- 1,115,507—George H. Sherman and Arthur G. Sherman, Detroit, Mich. Vaccine container.
- 1,115,608—Gustav Spiess and Adolf Feldt, Frankfort-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brunning, Höchst-on-the-Main, Germany. Double salts of gold hydrocyanic acids and process of making same.

- 1,115,609—Gustav Spiess and Adolf Feldt, Frankfurt-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Dicanthardylchloride-diaminononaurocyanid and process of making same.  
 1,115,613—Gustav Spiess and Adolf Feldt, Frankfurt-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Salts of the aurothiosulfuric acid and process of making same.  
 1,115,646—Hermann Wronker, Frankfurt-on-the-Main, Germany. Machine for printing labels.  
 1,115,694—Henry C. Greene, Medford, Mass., assignor to Boston Bottle Wiring & Labeling Co., Boston, Mass. Label affixing machine.  
 1,115,976—Leonard Rose, New Orleans, La. Non-refillable bottle.  
 1,116,014—Marcellus B. Clarke, Akron, Ohio. Hot water bottle.  
 1,116,308—Bernard MacDonald, South Pasadena, Cal. Acid proof air nozzle and valve.

#### Granted November 10, 1914

- 1,116,398—Paul Ehrlich and Alfred Berthelm, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Dihydrochlorid of diaminodioxarsenobenzene.  
 1,116,493—Gustav K. Schimmel, Detroit, Mich. Hypodermic syringe holding attachment for bottles.  
 1,116,523—Albert Westlake, New York, N. Y. Bottle.  
 1,116,670—Ella G. Brewer, New York, N. Y. Bottle protector.  
 1,116,676, 1,116,677—Henry B. Cooley and William S. Bacon, New Britain, Conn., assignors to The American Paper Goods Co., Montclair, N. J. Drinking cup.  
 1,116,683—Anton C. Eggers, New York, N. Y., assignor to Good-year's India Rubber Glove Mfg. Co., Naugatuck, Conn. Hot water bottle.  
 1,116,837—Ira T. McCready, Oak Park, Ill. Cork tapering machine.  
 1,116,833—Ralph M. Myers, Muir, Mich. Medicine dropper.  
 1,116,879—Jean M. Garain, Convent Station, N. J. Suspensory bandage.  
 1,116,880—Aristide W. Giampietro, Tampa, Fla. Machine for extracting essential oils and removing peeling from citrus fruits, etc.  
 1,116,881—Aristide W. Giampietro, Tampa, Fla. Flexible knife for the extraction of essential oils and removal of peeling from any spherical fruit.  
 1,116,932—John J. Schwartz and Lou R. Strauss, New York, N. Y. Jacket for hot bottles.  
 1,116,972—Harry Becker, Hull, Mass. Non-refillable bottle.  
 1,116,983—Leon W. Brown, New York, N. Y. Bottle cap.  
 1,116,990—Peter Bushman, Algiers, La. Non-refillable bottle.  
 1,116,993—Frederick E. Carlson, assignor to Landers, Frary & Clark, New Britain, Conn. Support and spacer for vacuum bottles.  
 1,117,008—Moses H. Drennan, St. Louis, Mo. Holder for nursing bottles.  
 1,117,016—Arthur Falk, assignor to Falk Tobacco Company, New York, N. Y. Dispensing package.  
 1,117,029—Cuthbert Gentle, Dorchester, Mass., assignor to Thomas H. Bowdidge, Boston, Mass. Corking machine.

#### Granted November 17, 1914

- 1,117,242—Ferdinand Putz, Cassel, Germany. Microscope.  
 1,117,327—Marcellus B. Clark, Akron, Ohio. Water bottle.  
 1,117,352—Paul Ehrlich and Paul Karrer, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Alkali metal salts of 3,3-diamino-4,4-dioxarsenoben-

- zene combined with copper and process of making same.  
 1,117,358—Edwin Euston, assignor to Euston Lead Co., St. Louis, Mo. Process of making basic carbonates of lead.  
 1,117,371—Otis G. Graham and Adam Kilian, Portland, Ore. Means for sealing bottles.  
 1,117,431—Ira P. Olds, Santa Rosa, Fla. Funnel.  
 1,117,533—Samuel W. Taylor, assignor to The Crown Cork and Seal Co., Baltimore, Md. Apparatus for applying closures to bottles.  
 1,117,551—Silas E. Coleman, Oakland, Cal. Fume hood for chemical laboratories.  
 1,117,585—Ludwig Marschall, New York, N. Y. Flying machine.  
 1,117,764—Floyd J. Bell, assignor of one-half to E. J. Prenatt, Meadville, Pa. Cork remover.  
 1,117,792—Benjamin F. Colby, Boston, Mass. Bottle seal.  
 1,117,850—Jeremiah D. Hull, Richmond Hill, N. Y. Non-refillable bottle.

#### TRADE MARKS

#### Published October 20, 1914

- 49,634—Carl Haciner, Washington, Pa. Remedy for chronic, specific, and gonorrheal rheumatism, etc.  
 70,852—Christopher C. Scif, Barham, La. Remedy for venereal diseases.  
 70,027—Robert Crandall, Middletown, N. Y. Ointment for inflammation of udders, caked udders, and spider-teat of cows.  
 72,055—C. C. Truax & Co., assignor to Grocers Co., Toledo, Ohio. Porous plasters.  
 72,679—South Texas Drug Co., San Antonio, Texas. Hair oil, arnica salve, etc.  
 73,727—Atkieselskabet Cals Nutranol-Fabrik, Copenhagen, Denmark. Medicinal tonics and flesh builders.  
 75,392—Achille Sclavo, Siena, Italy. A blood depurating tonic.  
 76,212—M. L. Mooney, Shamrock, Texas. Liniments.  
 76,429—Danish Butter Colour Co., Blauenfeldt & Tvede, Copenhagen, Denmark. Butter coloring materials, arnotto liquids, and cheese rennets.  
 77,943—John H. Wood Co., Philadelphia, Pa. Sage quinine hair tonic, perfume, etc.  
 78,055—David W. Baldwin, Seattle, Wash. Laxative remedies.  
 78,239—Ford Medicine Co., Dotham, Ala. Liver pills, croup and pneumonia salve, etc.  
 78,470—Basil D'Emo, Chicago, Ill. Laxatives.  
 78,840—The C. B. Woodworth Sons Co., Rochester, N. Y. A tooth powder and tooth wash and tooth paste.  
 78,912—J. Milton Wade, Oklahoma, Okla. Tobacco cure.  
 79,458—Mary P. Hynson, New York, N. Y. Salve for the prevention of skin irritation.  
 80,085—Edward E. Burns, Madison, Neb. Concentrated cough syrup.  
 80,110—Dombalagian & Nouskhajian, Lynn, Mass. Rheumatism remedy.  
 80,311—Horace Wilcox, Wakefield, R. I. Shaving cream and toilet soap.  
 80,408—Saenger Bros., Shreveport, La. Remedy for the liver and kidneys.  
 80,528—Diamond Chemical Co., Brooklyn, N. Y. An emulsifier.  
 80,640—The Curittie Company, Inc., West Hoboken, N. J. A salve for medicinal purposes.

NOTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, Nov. 23.—The most noticeable characteristic of the above changes in prices for the period under review is the large number of declines, many articles being very much lower than the lowest quotations reported a month ago. The advances are accentuated by the smallness of the number reported, the more important being carbolic acid, phosphoric acid, both U. S. P. and syrupy; chamomile flowers, cochineal, ipecac root (Carthagena), insect powder, nutmegs, oil of gaultheria leaf, black pepper, salol, liquid storax and tartar emetic. As is customary near the close of the year, buyers have been restricting their purchases to current requirements, and this fact together with the desire on the part of a considerable number of holders to realize on their stocks, has not been without influence on prices. Importations have been rather light in some quarters, but the export situation has shown some improvement, particularly in the line of heavy chemicals, acids, alkalies, etc.

**OPIMUM**—Quotations are lower than they were a month ago, jobbers asking \$9.75@10.25 per pound for natural, \$12.50@13.50 for granulated, and \$12.40@13.50 for U. S. P. powdered. The supply on hand is fairly large, but it is believed that further advances will develop, as the cessation of shipments from Turkey and all its possessions renders it impossible to duplicate existing supplies. According to Government statistics, the importations for the nine months ending September 30, 1914, were 271,926 pounds, valued at \$1,210,274, as against 532,575 pounds, valued at \$2,315,978 for the corresponding period last year.

**MORPHINE**—Following manufacturers' quotations, jobbers have marked down prices for this alkaloid and all of its salts, as follows: Alkaloid, 1/8 oz. vials, \$6.75@8.7 per ounce; acetate, 1/8 oz. vials, \$5.85@6.95 per ounce; hydrobromide, 1/8 oz. vials, \$6.25@8.50 per ounce; hydrochloride, 1/8 oz. vials, \$5.70@8.90 per ounce; sulphate, 1-oz. vials, \$5.45@5.60 per ounce; in 1/8 oz. vials, \$5.70@5.90 per ounce. There is some demand for export.

**CODEINE**—Domestic manufacturers have also lowered their quotations on this alkaloid and its salts, the present jobbing prices being \$7@7.50 per ounce for the alkaloid, \$6.50@7 for phosphate, and \$6.75@7.25 for sulphate.

**QUININE**—While outside lots of foreign sulphate are being offered at the basic figure of 26 cents in 100-oz. tins, jobbers are quoting from this figure up to 30 cents, with the usual

advances for smaller packages. Reports are persistent that there is a heavy foreign demand and that eventually this will cause an advance in prices. Shipments of Java cinchona bark will be made direct to the United States following several recent sales where the bark was bought for delivery here instead of being sent to Amsterdam as in former years. Advances from Holland state that 50,000 ounces of quinine salts which were to be offered at the auction two weeks ago were withdrawn when no bids in excess of 22½ florins a kilo could be obtained. No changes are reported in the quotations for other quinine salts.

**MENHOL**—Replenished stocks have caused local holders to reduce prices, crystals being obtainable at \$2.90@3 per pound. Reports from London indicate an improved demand there and higher prices are looked for.

**TARTARIC ACID**—Conditions are easier following the arrival of additional supplies, jobbers now quoting 55@60c per pound; powdered, 60@65c per pound.

**CREAM TARTAR**—In sympathy with tartaric acid, powdered cream tartar has been marked down to 40@45c per pound.

**CREOSOTE**—Following a revision of schedules by manufacturers, jobbers have marked down prices for beechwood grades of U. S. P. standard and now quote \$1@1.25 per pound.

**COPAIBA**—Supplies of all varieties have recently arrived in this market and prices are lower, both South American and Para being obtainable at 55@65c per pound.

**OIL LEMON**—The market in Sicily holds firm, according to latest advices, but with constantly arriving shipments the price situation here has marked a decline, and jobbers ask \$1.65@1.75 per pound.

**OIL ORANGE**—The market appears to be overstocked and prices are lower, bitter being quoted at \$3.25@3.50 per pound and sweet at \$2@2.15 per pound. Predictions are made that from now until early Spring the demand will be small for all Messina essences, and owing to abundant supplies prices may go still lower.

**OIL MUSTARD**—Both the artificial and essential grades are lower, the former being obtainable at \$2.75@3 per pound, and the latter at 50@65c per ounce.

**OIL SASSAPARAS**—In the face of a more pronounced demand this oil has advanced to 85@95c per pound.

**OIL ANISEED**—Has declined to \$2@2.25 per pound. The reason for this seems to be in the fact that large amounts of money are tied up in holdings, and that foreigners are only willing to do business on a spot cash basis.

**OIL PEPPERMINT**—Arrivals of new crop goods have largely increased supplies in this market and all grades are lower, the following quotations representing the range of prices: New York, \$1.85@1.95; Hotchkiss, \$2.75@3; Western, \$1.80@1.95. Exports to Europe have declined considerably during the last two months.

**OIL CLOVES**—Following a recent decline in the spice, this oil has been reduced to \$1.30@1.45 per pound.

**SALICIN**—Has further declined, and is now obtainable in jobbing quantities at \$5.25@5.50 per pound.

**SANTONINE**—Is also lower and now quoted at \$2.85@3 per ounce.

**SILVER NITRATE**—Following a reduction in the cost of bar silver this salt in crystals has been marked down to 44@48c per ounce; fused cones, 45@49c; stick (lunar caustic), 48@51c.

**CAFFEINE**—Keen competition has induced manufacturers to revise their prices on citrated, which jobbers now quote at \$5.75@6.50 per pound.

**COUMARIN**—More liberal supplies and lack of demand have caused a lowering of quotations to 30@40c per ounce.

**ERGOT**—Recent accumulations of stocks and light orders is given as the reason for lower prices for Russian, which is now quoted at \$1.40@1.50 per pound for whole, and powdered at \$1.60@1.75.

**GUARANA**—The arrival of large supplies in this market which in former years were sent to Germany has caused a notable decline in prices, and good quality gum is now obtainable at \$1.75@1.90 per pound for whole, and \$2@2.15 for powdered.

**THYMOL**—Stocks are in good supply and quotations have been lowered to \$6.50@7.50 per pound.

**VANILLIN**—Increased supplies are in evidence and revised quotations show a decline to 45@55c ounce.

**IPECAC**—Despite recent arrivals of Carthagena quotations show an advance in jobbers' prices, \$2.10@2.20 being asked for whole, and \$2.25@2.35 for powdered. Rio is unchanged in price, but is firmly maintained at last month's quotations.

**ALOES**—Socotrine is lower at 30@36c per pound. Cape is unchanged. During the eight months ended August last exports of aloes from the Union of South Africa totalled 638,772 pounds valued at £7,947, compared with exports of 393,470 valued at £4,533 during the corresponding period in 1913.

**CAMPHOR**—Large arrivals are reported and the demand light, with a reduction in quotations to 65@70c per pound in barrels for refined; 68@73c per pound for 1/4-lb. squares, 75@85c for powdered, and 55@60c for Japanese.

**CANTHARIDES**—Sifted Russian is in good supply and lower at \$6@86.75 per pound; powdered, \$6.75@87.

**MAGNESIUM SULPHATE**—Competition among manufacturers and lack of demand has caused an easement in prices, and jobbers now quote 3 1/2@5c per pound.

**LYCOPODIUM**—Increased offerings and a lack of demand are responsible for the decline in quotations, 80@85c per pound being asked.

### WEEKLY IMPORT REPORTS

*Weekly Drug Markets* is making a feature of reporting in detail the imports of drugs, chemicals, perfumeries, etc., at the port of New York. These arrivals are of interest not only to manufacturers and jobbers, but to pharmacists and physicians as well. The reports include Monday's manifests of each week and furnish an excellent line on market supplies.

### NEW HOME FOR SHARP AND DOHME

**Structure Embodies New Architectural Ideas and is One of the Finest Business Buildings in Baltimore**

Baltimore, Nov. 16.—Sharp & Dohme, manufacturing chemists at Howard and Pratt streets, have moved into their new addition, on Pratt street, which has been erected at large cost. The six story and basement edifice has a front of rough faced brownish-gray brick, with antique green trimmings, a recessed facade, and ornamental balcony running along the sixth floor, with wide cornice and other attractive architectural features. The style may be called a modified Italian. The building covers a space 70 by 70 feet, and will give the company about 35,000 square feet of additional floor space, counting the basement, which is roomy and well lighted. There has also been erected in the court an engine house, large enough for a new engine and electric generator of about twice the capacity of the one at present in use, and other machinery, which will give ample power and other facilities.

The first floor will be taken up with the city order and delivery and stock room departments. The second floor also will be used as a stock room. On the third floor will be the pill department. On the south half of the fourth floor will be the tablet finishing machinery and other appliances, while the north side will be taken up with hypodermics and other high priced drugs.

On the fifth floor will be the offices, with private rooms for the officers, a board meeting room, a reception room for visitors and other conveniences. The cashier and assistants, together with the bookkeepers, will also be on this floor, the ceiling of which is packed with mineral wool, so as to deaden sound and keep down dust. On the sixth floor are to be the gelatine machines. There are steel vaults on every floor, and the plant is equipped with automatic fire apparatus and safety devices.

The new machinery to be installed is of the most advanced type and so constructed as to eliminate superfluous handling. Complete provision is also to be found for the comfort of the employees, who will have rest and lunch rooms, lockers and other conveniences. The architects, Ellicott & Emmart, in drawing the plans, have endeavored to embody in the new structure the latest architectural ideas, but also to meet the special requirements of the company. This they have done and the structure is an ornament to the neighborhood, and one of the most attractive business buildings in the city.

### Brooklyn Druggists Addressed by Dr. Jacob Diner

Dr. Jacob Diner, pro-Dean of Fordham University School of Pharmacy, recently addressed a meeting of pharmacists held at the Brooklyn College of Pharmacy. A point developed by Dr. Diner in the course of his remarks was that the physicians were largely responsible for the introduction of proprietary medicines.

### PHOTOGRAPHIC BUSINESS UNAFFECTED BY WAR

**Picture Making Days Are Not Over — Interesting Interview with Fred K. Townsend of the Seneca Camera Co.**

“THE photographic business of America is proceeding on the even tenor of its way, unaffected by the great war. Retail dealers can take heart and be reassured, while professional and amateur photographers should know as well, that picture-making days are not over.” So Fred K. Townsend, treasurer and general manager of the Seneca Camera Mfg. Co., expressed himself to a representative of the ERA who considered himself fortunate in being able to visit the complete and modern plant of the company in Rochester a short time ago. The Seneca Camera Mfg. Co., as almost every one interested in photography knows, stands next to the Kodak Company in size, and successfully competes with the latter in the excellence of its goods.

“I realize, of course,” continued Mr. Townsend, “that this announcement will come as a great shock to our ‘war correspondents’ here at home. These imaginative gentlemen have been doing their level best to have the photographic trade tied up from the Atlantic to the Pacific, but they have failed utterly, and you can say for me that my announcement is official.”

“Why, I have read in the daily papers that there would never be any more glass plates for use in this country, because there was no flat glass made in this country, for the only flat glass manufactured was that made at Liege, Belgium, and there would never be any more. And for photographic paper! the Germans had ceased to make it, the mills were all shut down, the people who knew the secret process were all dead, and the art was a lost one. And the simplest chemicals used in photography, the small supply in existence, had risen to prices in the radium class. The same conditions were ascribed to lenses, because the glass came from Jena. And there was to be no leather for covering cameras, because Russia was shut off! Well, you can see for yourself that our business is running full tilt, and we are not back-ordering anything.”

Mr. Townsend convinced the ERA representative that the camera industry would not suffer through an impossibility to secure raw material, a fact which druggists and dealers of the country should realize. And he also added, “the interest in amateur photography was never so great, nor the opportunity to start a retail camera shop ever so good.”

### Major's Cement in New 10-cent Size

The Major Mfg. Co., of this city, are sending a letter to druggists calling attention to their new 10-cent size of Major's Cement, a 1/4-dozen of which they will send free to druggists who do not carry it in stock and who will make a request for the same on the postal sent to dealers by the company. This new size is being extensively advertised, and is a good seller, and druggists should have some in stock to supply the demands they are sure to have for it. Like the wellknown 15c size of Major's Cement, the 10c size is put up in neat and attractive display boxes, and when placed on the show case the cement sells itself. Write to the company for particulars.

### J. Hungerford Smith Co. Reduce Prices

The J. Hungerford Smith Co., of Rochester, N. Y., announce that on account of the reduction in the price of sugar, they have reduced prices in their list to the prices which prevailed previous to the advances made in August. The only exceptions to this reduction are the prices of their Walnut Sundae, which remains at \$24 per dozen, and Fruit Acid, which remains at \$4.50 per gallon.

### Ohio Board Suspends Licenses for Year

The Ohio State Board of Pharmacy at Columbus, on November 7 announced the suspension for a year of Robert Biegman, of Cincinnati, who was charged with being addicted to the use of intoxicating liquors, and of C. Edwin Snyder, of Zanesville, for a similar period, the board declaring that he had admitted forging a certificate as a registered pharmacist when he was in reality only an assistant pharmacist. It is stated that both men will get their licenses back at the end of the suspension period if their conduct in the interim is satisfactory.

# THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures, it can be completed in a year or less, depending on the experience of the student; its cost is merely nominal. A complete Prospectus can be had by addressing:

DIRECTOR ERA COURSE IN PHARMACY,  
D. O. HAYNES & CO.,  
NO. 3 PARK PLACE, NEW YORK

## CLIMBING THE LADDER IN OHIO

How an Ambitious Young Lady is Laying the Foundations for a Pharmaceutical Career

THIS young lady, at 21, is about to initiate to LEA... (text continues) ... Her own words, "I started in business with the Columbus Drug Co. as a sales... with instructions that I should learn to sell all the side lines, such as cigars, perfumes and toilet articles. Having a liking for the business, I put out my... with considerable vigor. Later I concluded that I would like to learn to run my business and become a pharmacist. But as I was unable to attend the course of pharmacy, I concluded to take up your Course, with what results you are already known."

MISS HELEN M. DAVIS

"I started in business with the Columbus Drug Co. as a sales... with instructions that I should learn to sell all the side lines, such as cigars, perfumes and toilet articles. Having a liking for the business, I put out my... with considerable vigor. Later I concluded that I would like to learn to run my business and become a pharmacist. But as I was unable to attend the course of pharmacy, I concluded to take up your Course, with what results you are already known."

"This was my mind of the drug business, and was permitted to make up formulas and preparations under the direction of the proprietor."

Your Course has been very beneficial to me. The instructions said that I was led to look up and study a great many things that I could have overlooked from an instructor, and I feel that your Lectures have been of an undoubted benefit to me. I will cheerfully recommend your Course to anyone having the desire to learn the drug business."

## When Preparing for College

Mr. Roy C. Grant of Warsaw, Ill., is no more fortunate than the majority of young men employed in drug stores, as he intends to spend two years at a college of pharmacy. But as the first step in his order to obtain a first ground work for his later studies, he enrolled as an ERA Course student, and finished to mark with great credit to himself. His opinion of the Course is contained in a letter recently received from him:

"I am eighteen years of age, and will graduate from the Evansville High School next spring. I have had twenty months' experience in the drug business at Pearce's Pharmacy, under Mr. Edward Pearce. I expect to enter a college of pharmacy at the next fall session, and take a two-year course. I will then take up pharmacy as my future vocation."

"After taking the ERA Course in Pharmacy, I find that it is well worth the time and money in fact to such an extent that I would not take twice the price for what I have learned. Pharmacy is not learned in a single day, but by gradual steps. The ERA Course is the first step in the preparation of a good pharmacist."

## Passed Two Boards

Your Course was a great help to me in passing both the Illinois and Indiana State Boards for full registration.—HARRY S. SPONGBERG, Rockford, Ill.

In regard to the ERA Course in Pharmacy, the fact that

Lectures about Kentucky Board examination speaks for itself. I would advise any person expecting to take the State Board examination to enroll as a student, in addition to attending college if possible. However, I did not go to college, but I studied at home and used your Lectures"—CHAS. F. BARTHOLOMEW, Ft. Thomas, Ky.

## Graduates to November 20, 1914

Matriculation No.	Name	Graduating Average
574	Joseph A. Morris, Fall River, Mass.	94
575	Miss Helen M. Davis, Akron, Ohio	96
583	Chris F. Bartholomew, Ft. Thomas, Ky.	93

## Advertises a Square Deal Policy

The Columbus Drug Co., of Hamilton, O., has been using this policy to good effect, not so much in advertising its goods as in placing its square-deal policy before the public. A recent advertisement on this subject ran as follows: "We know that we cannot continue to increase our business unless we give the people a square deal. It makes no difference whether you buy a sponge or a cigar, a box of our fine chocolates or a stick of our toothache wax, a man's comb or a brush for baby's slicked locks, a glass of our delicious soda-water or a hot-water bottle we want you to be satisfied, so that you will come again. We take a personal interest in this business and in the patronage of our customers. Let this be an urgent request that if at any time you feel that the article that you bought has not given the full value expected, you will give us the pleasure of personally adjusting your complaint. More we cannot do, and we would not do less."

## Wisconsin Insurance Amendment Defeated

Wisconsin druggists who listened to the appeal sent out some time ago by the American Druggists' Fire Insurance Co., of Cincinnati did their share in bringing about the decisive defeat of the proposed ten amendments to the constitution. The two amendments which aimed to establish a system of state insurance and the two which the druggists were asked to vote against, were simply snowed under by adverse votes, the vote against ranging from four to one to ten to one. The proposed amendments were so broad in their construction that they might have allowed the state to engage in any line of business, the drug business included.

## Manufacturers Make Exhibit for Dentists

Boston, Nov. 15.—The recent exhibit in connection with the 20th annual meeting of the Northeastern Dental Association at the Copley Plaza, resembled in some respects a drug exposition. The large ball room was used for the exhibition, and among the exhibitors were the Charles H. Phillips Chemical Co., New York; the Laboris Chemical Co., Minneapolis; the Denver Chemical Co., New York; the Vernac Chemical Co., New York; the Kress-Owen Co., New York; Hance Brothers & Co., Philadelphia; and the American Apothecaries, Astoria, N. Y. Other allied exhibitors included Colgate & Co., the Kolyne Co., and Horlick's Malted Milk Co.

## Stock of Riker-Hegeman Co. at \$5 per Share

Riker-Hegeman Co. stockholders, at a recent special meeting, voted to change the par value of the stock from \$100 to \$5 a share. The number of common shares was increased from 100,000 to 20,000, and the preferred from 50,000 to 1,000,000. The preferred stock may be retired at any interest date at \$5.50 at the option of the directors upon three months' notice.

## Statement of Ownership, Management, etc.
